ABSTRACT

This is one form of three performance checks booklets (A, B, and C) for two texts of Level III of the Intermediate Science Curriculum Study (ISCS). These two texts are Winds and Weather (WW), and Crusty Problems (CP). The 12 performance checks booklets for Level III are considered one of four subdivisions of a set of individualized evaluation materials for Level III of the ISCS. This booklet (form C), developed to assess the students' achievement of the objectives of WW and CP of Level III, contains a set of performance checks which are equivalent to the performance checks of the other two forms (A and E). Each performance check has its own 'code number which indicates the urit number and identifies whether it is based on core materials or excursions. Directions for students' use of performance checks are also included. (HM)

FOREWORD

To implement an educational approach successfully, one must match the philosophy of evaluation with that of instruction. This is particularly true when individualization is the key element in the educational approach. Yet, as important as it is to achieve this match, the task is by no means simple for the teacher. In fact, without specific resource materials to help him, he is apt to find the task overwhelming. For this reason, ISCS has developed a set of individualized evaluation materials as part of its Individualized Teacher Preparation (ITP) program. These materials are designed to assist teachers in their transition to individualized instruction and to help them tailor 'their assessment of students' progress to the needs of all their students.

The two modules concerned with evaluation, *Individualizing Objective Testing* and *Evaluating and Reporting Progress*, can be used by small groups of teachers in inservice settings or by individual teachers in a local school environment. Hopefully, they will do more than give each teacher an overview of individualized evaluation. These ITP modules suggest key strategies for achieving both subjective and objective evaluation of each student's progress. And to make it easier for teachers to put such 'strategies into practice, ISCS has produced the associated booklets entitled *Performance Objectives, Performance Assessment Resources*, and *Performance Checks*. Using these materials, the teacher can objectively assess the student's mastery of the processes, skills, and subject matter of the ISCS program. And the teacher can obtain, at the moment when they are needed, specific suggestions for remedying the student's identified deficiencies.

If you are an ISCS teacher, selective use of these materials will guide you in developing an individualized evaluation program best suited to your own settings and thus further enhance the individualized character of your ISCS program.

NOTES TO THE STUDENT

Now that you have completed several chapters, excursions or resources, and selfevaluations, you are ready to help your teacher determine how well you are doing. The performance checks in this book will provide your teacher with this information. Then your teacher can help you with things you may not understand and can keep a record of your progress.

Read the next section carefully₅₅. It explains some important things about the performance checks in this book, and it gives you specific suggestions for using them.

What You Need To Know about Performance Checks

1. You do performance checks when you are ready. Performance checks are somewhat like the questions in the selfevaluations you do them when you are ready, not when the whole class is ready.

2. Your teacher or both of you decide how many you do. 'Your teacher or you'and your teacher together will decide which ones you should do. You are not expected to do all of the performance checks.

3. There are three forms for each performance check. Every performance check is written in three forms A, B, and C. (The title of this booklet tells you whether it is Form A, B, or C.) Usually the answers for each form are different. When you do a check, you will use only one form. The A, B, and C forms are always in different booklets. Within each booklet all the performance objectives for the same unit are listed together. A unit contains two or three chapters and their related excursions or resources. These units are in numerical order. I ach unit has performance checks based on core materials and performance checks based on excursions or resources.

4. Teach performance check has its own number. The number ' is in the outside margin of the page and will look like this: WW-03-Core-17A, WW-01-Exc 2-1-2A, CP-03-Core-17A, or CP-01-Res(3-2A). These numbers mean

orm of the ci heck number WW⁴ 01 - Exe

CP*- 01 - Res

check number

form of the check

resource number

numbe

resource material

INCUISION

material

5. Each performance check is separated from the other. There is a line before each performance check and one after it. Some performance checks have several parts, so do everything called for between the lines. If there is no line at the bottom of a page, the check is continued onto the next page. 6. Sometimes you will need to use equipment. If special materials are needed, they will be in boxes labeled with the same number and sometimes the same letter too as the performance check for which you need them.

7. Some performance checks have two or more answers. If more than one answer is correct, you must select all the correct choices. In such cases, selecting just one answer is not enough.

8. Some performance checks have no answers. Occasionally, you may be asked to do something that is impossible and to explain your answer. If so, say that the task is impossible and explain why.

9. You share books of performance cheeks and YOU DO NOT WRITE IN THEM. Write your answers on other paper. Give the number and form of the performance check for each answer you write. If you are to draw a graph, a chart, or a map, your teacher may provide you with grid paper or a copy of the chart or map.

10. Your teacher or his assistant will collect and mark your checks. And sometimes you must ask him to watch or assist you as you do a check.

11. Sometimes a review procedure will be suggested. If you can't do a performance check, you may be asked to review a part of the text or a self-evaluation question. You may then be checked on the same material, so be sure you understand the material you review. Get help if you need it.

Winds and Weather

WW

Indy placed a dish-of cold water in a sealed observation box, as shown below. The dots represent air particles.

01-Core-1C

Which of the diagrams above best shows how the air particles will be scattered in her observation box?
 Explain the reasons for your choice

Below there are three bags. Each is open at the bottom and each sontains air. The WW small dots represent air particles. 01-Core-2C

[1] Which bag contains the warmest air?]

2. Explain your answer on the basis of what the particle model says about heat and matter particles.

About ten minutes before Ted takes some friends for a ride in his motorboat, he **WW** dampened the seats. A practical reason for his action would be that **01-Core-3C**

- a. he wants to make the seats slippery so his friends will sit in the bottom of the boat where it's safer.
- b. wet seats will cause fish to be attracted to the motorboat.
- c. he knows that water will make the seats hotter, which might make his friends decide not to go with him.
- d, he believes that water spread on the seats will cool them and make them more comfortable for him and his friends.

Dufing his science class, Glenn set up the apparatus shown below and formed a mist without any trouble. A few days later when Meredith tried to do the same activity, she had great difficulty. In order for her to get any mist at all to form, she first had to cool the flask with cold water. Why might Meredith have had trouble forming a mist when Glen did not? WW 03-Core-1C

03-Core-2C

Betsy set up the materials shown below? She turned the light on for 5 minutes and then measured the temperature of the air 4 cm above the surface of the water and of the air 4 cm above the surface of the dirt.

Is the air warmer above the water or above the dirt?
 Explain your answer.

Mrs. Jones, a ninth grade science leacher, placed a piece of ice on a wooden block in the observation box as shown below. Copy the diagram onto your answer sheet, or get a copy of it from your teacher. Then draw arrows to indicate the direction of motion of the air throughout the entire box.

WWThe diagram below shows a house built by the seashore. Select the arrow that best03-Core-4Cindicates the wind direction on a hot, sunny day.

03-Core-3C

On the shore of a very large lake on a warm summer day, there is generally a cool breeze blowing onto the land from over the lake. Which statement below explains the reason for this cool breeze?

- a. The cooler air above the lake moves in over the land surface, causing the warmer air over the land to rise.
- b. There is less air over the lake than over the land.
- c. The air over the lake is warmer than the air over the land.
- d. The relative humidity in the air above the land is greater than in the air above the lake.
- e. The waves on the lake cause the air to be blown over the land.

The weather map below shows a cold front approaching Denver, Colorado.

Select the weather changes you would expect to occur as the cold front approaches and passes through.

- a. As the cold front approaches, the sky will cloud over, primarily with cumulus and cumulonimbus clouds.
 - b. The temperature will drop as the cold front passes through.
 - c. The wind will shift so it blows from the southwest as the cold front passes through.
 - d. The barometer will fall as the cold front approaches, and then rise as the cold front passes through.
 - e. There will be many cirrus clouds in the sky.
WW The weather, map below shows a warm front approaching Bakersfield, California. 03-Core-20C

List the letters of all the weather changes you would expect as the warm front approaches and passes through.

- a. The temperature will rise as the warm front passes through.
- b. The barometric pressure will fall as the warm front approaches and passes through.
- c. There will be a south wind as the warm front approaches.
- d. As the warm front approaches, the sky will cloud over with cumulus and cumulonimbus clouds.
- e. The barometric pressure will rise as the warm front approaches and passes through.

The arrows in the diagrams below represent the directions of air movement.

WW 03-Core-21C

Which diagram best represents a warm front?
 Which diagram best represents a cold front?

Andrea measured the air temperature at the earth's surface. It was 28.1°C. She **WW** knows that the air temperature decreases at an average rate of about 1.0°C per **03-Exc 5-1-1C** 100 m. Calculate the air temperature at an altitude of 780 m above the earth's surface at the time Andrea took her measurement.

Cindy measured the dew point at the earth's surface: It is 14.5°C. She knows that **WW** the dew point of air decreases at an average rate of 1.0°C per 550 m. Calculate the **O3** Exc 5-1-2C dew point at 1280 m above the earth's surface when Cindy took her measurement.

He used these measurements to find that the relative humidity was 8% and the dew same point was 11°C. The height of the cloud bottoms can be obtained using the follow-

Height of cloud bottom in meters = $122 (T_{air} - T_{dew point})$

Use Mason's information to calculate the height of the cloud bottoms on July 13.

CF

| CP 02-Core-17C | Get cutout block CP-02-Core-17 from your teacher. What caused the sedimentary layers to deform as shown in the cutout block? |
|-------------------|--|
| CP 02-Res 5-1C | Get rock samples D, I, and M from the CP Rock Check Kit. Also get a hand lens, a steel nail, and dilute HCl. Open your textbook to the rock test key on pages 45 through 47. Write the letter of each sample, and state if it is igneous, sedimentary, or metamorphic. |
| CP 02-Res 6-1C | The four test tubes shown below contain the same substance which was cooled from a liquid to a solid at different rates. On your answer sheet list the numbers of the test tubes in the order of the rate from slowest to fastest at which the substances in |

each was cooled.

| CP 02-Res 6-2C | Get a hand lens and, from the CP Rock Check Kit, samples A, G, and L. These are three igneous rocks. Each one cooled and solidified from a molten material. Observe each rock carefully with the hand lens. |
|-------------------|---|
| | Using the letter on each, list the rocks in the order that you think they cooled, from fastest cooling to slowest cooling, How did you decide the order? |
| CP 02-Res 7-1C | Examine the plotograph that your teacher has labeled CP-02-Res 7-1C. How was the layer that the arrow points to formed? |
| CP 02-Res 7-2C | Lionel put a small amount of dilute HCl onto some rocks he had collected. Imme- diately bubbles appeared on the rocks. 1. Name the rock that reacts with HCl in this way. 2. What are the rocks made of? |

1,

Elaine found a rock near her home, She observed that it was composed of one kind . CP of material, and the grains were noninterlocking. She concluded it was sedimentary. 02-Res 8-1C Using her "Mineral Classification Chart," she determined that the single visible component was feldspar. She then applied HCl to the rock, and it began to bubble. Since feldspar does not react with HCL what would cause the HCL to bubble? Get cups CP-02-Res 8-2a and CP-02-Res 8-2b. Examine the sand in both cups. CP 1. What difference do you notice in these two samples? 02-Res 8-2C 2. Explain how this difference could occur in nature? From the CP Rock Check Kit take samples K and J. Also get a hand lens and some CP 02-Res 9-1C dilute HCL 1. Determine whether each is a sandstone, a shale, or a limestone. 2. Explain how you know? Get rock samples E, F, and N from the CP Rock Check Kit. The map below shows CP where ISCS shale and metamorphic rocks are found. Assume that the intensity of 02-Res 10-1C metamorphism is greatest in the southeast part of the map. KEY metamorphic ISCS shale

Zone¹ Zone² Zone²

In which zones would you most likely find each of the three rock samples you have been given?
 2. Explain your answer.

<u>53</u>

Full Text Provided by E

The block diagram below illustrates rock strata that have been compressed into folds. Select the letter of the arrow which indicates the direction of the applied force that caused the rocks to fold.

02-Res 18-1C

CP

CP

02-Res 21-1C

02-Res 19-1C

The data below concern two different mountains from different mountain chains. 1. Which one do you think is older?

2. Explain your answer.

| • | | |
|-----------------------------|-------------|---------------|
| CHARACTERISTICS | MOUNT TWIRL | MOUNT SPIRAL |
| Height of peaks | 12,000 feet | 8,000 feet |
| Steepness of mountain sides | very steep | gentle slopes |
| Nature of valley | narrow | broad |

Glacial ice can form from snow. Describe the process by which this happens. CP 02-Res 20-1C

57

Dave suggested that each of the following climate conditions would always result in changing the size of a glacier.

- a. Snowfall in the winter which is exceeded by the loss from melting and evaporation in the summer
- b. Snowfall in the winter which is equalled by the loss from melting and evaporation in the summer
- c. Eighty inches of snowfall per year
- d. Eighty-five inches of snowfall per year
- e. Snowfall in the winter which exceeds the loss from melting and evaporation in the summer

Ruth disagreed, saying that only some of those conditions would result in a change in a glacier's size. Which options would cause a_{g} acier's size to change?

Get a blank map of Australia from your teacher. Study both the average precipitation map and the elevation map shown below. On the basis of these two maps, where do you think river systems originate in Australia? Indicate your selections by shading those large general areas for each location on your blank map. CP 03-Core-2C

ERIC

.

A stream table was used to determine how long it would take for 50 grams of a sand-gravel mixture to be eroded. The slope of the table was varied, but the amount of water used was the same for each trial. Study the data table below carefully. State how you think the slope of the stream table and the rate of erosion of the stream trough are related.

| HEIGHT OF STREAM TABLE'S UPPER END ABOVETTS LOWER | TIME TO OF A SAN MIXTURI | TIME TO REMOVE 50 g. OF A SAND-GRAVEL MIXTURE (in sec) | | | |
|---|--------------------------------|--|--|--|--|
| END Q (in cm) | Trial 1 | Trial 2 | | | |
| 5 | , 21 | 20 | | | |
| () | 12 | 12 | | | |
| . <u>ا</u> 3 . · | [*] 8 | 7 | | | |

Study the stream profile shown below.

- * 1. Select the letter showing where a gravel deposit might form.
- 2. Explain why it would form there.

Examine the following list of statements. Each describes a change or an event that

- CP 03-Core-7C could occur in some region of the United-States. Write the letter of any of the changes listed below that would almost immediately increase a river's kinetic energy.
 - a. Thundershowers
 - b. Springtime warn-up in the mountains
 - e. Removal of large rocks from the river bed
 - d. Warm breezes blowing over the desert

CP

03-Core-6C

CP 03-Core-8C The graph below shows the crossion rate at a certain location on the St. James River for one year. What could be the major cause for the rate of crossionato vary as shown in the graph?

CP 03-Core-9C.

If you could vary the conditions of a stream as you can a stream table in the laboratory, it would change the effect of the water flow. Get a copy of the following table (CP-03-Core-9C) from your teacher. Complete each box of the table by writing + to show that the change increases the effect, to show that it decreases the effect, and 0 to show that it has no effect.

| CHANGE OR DIFFERENCE | POTENTIAL ENERGY | KINETIC ENERGY | EROSION RATE |
|---------------------------|---------------------|---------------------------------------|---------------------------------------|
| Smoother bed | F F | | |
| Less water | •.` | · · · · · · · · · · · · · · · · · · · | |
| Lower the starting height | | | · · · · · · · · · · · · · · · · · · · |
| Harder bed | · | <u>%</u> | |
| Steeper, slope | | | `.`. |

CP ' 03-Core-10C Which of the following features are formed when a river's kinetic energy has been a reduced? Choose all the correct answers.

- a. Stream channels
- b. Spits
- c. Sandbars
- d. Undercut banks
- e. Potholes

Different areas have different causes of erosion, depending on climate and geography. Erosion is often caused by flowing water, wave action, glaciers, and wind. What is the chief cause of erosion at each of the four areas numbered below on the map of the United States?

CP 03-Core-11C

For each of the pairs of letters, select the location where the river will flow faster. Assume that all parts of the river have the same slope.

- 1. Location a or b
- 2. Location c or d
- 3. Location e or f
- 4. Location g or h

The diagram below shows a stream table setup. Water will be allowed to flow at 5 ml/sec from the reservoir into the stream channel. The level of water in the lake will be kept constant.

CP 03-Res 29-1C

- 1. Select the maximum depth (q, r, s, t, or u) to which the channel will be cut.
- 2. Select the letter of the statement below which explains why you chose that depth.
 - a. Channel depth is controlled by the level of the lake.
 - b. Channel depth is controlled by the bottom of the stream table.
 - c. Channel depth is controlled by the rate of flow.
 - 'd. Channel depth is controlled by time.

Below is a diagram of a lengthwise section of the river in a delta.

1. Did the river flow from L to M to N during the time of deposition? 2. Explain your answer. CP 03-Res 32-1C

N M L

- CPStudy the diagram of the stream bed and its key below. The arrow shows the direc-03-Res 33-1Ction the water flows.
1. Write the letter of any place where a waterfall could form.
 - 2. State the reason for your choice.

CP 03-Res 34-1C

The map below shows the paths of several gullies. Copy this map onto your answer sheet or use the one provided by your teacher.

1. Use an arrow labeled *flow* to show the direction water will flow in one/of the gullies.

2. Use an arrow labeled growth to show the direction in which one of the gullies will tend to grow.

Look carefully at the two diagrams below.

- * I. Select the letter of the diagram showing a beach which has been attacked
- , by high-entergy waves.
 - 2. State the evidence that supports your answer.

Diagram b.

The diagram below shows a shoreline with a sand beach and the water level at low tide. Suppose a hurricane hit the shoreline with high waves and winds for ten hours.

1. Explain how the beach would be affected.

2. Include in your explanation a diagram of the beach area after the hurricane passed through.

Study the three changes along a shoreline listed below. For each change, state whether it is evidence of high-energy wave action or low-energy wave action.

CP 04-Core-3C

CP

CP

04-Core-2C

04-Core-1C

- 1. Accumulation of sand offshore, a bench
- 2. Gravel and solid rock covered by sand
- 3. Gravel and solid rock exposed where sand was once located

Copy the diagram below, or get a copy of it from your teacher. Suppose waves erode sand at point A.

04-Core-6C

- 1. Shade in the place most of the sand is likely to be deposited.
- 2. Show the path of the sand with arrows.

Tracy Arm, which looks like a lake between two mountains, is a fiord in Alaska. CP San Francisco Bay on the West Coast of the United States is an estuary. What is the difference between a fiord and an estuary? **CP 04-Core-7C**

The following are features that are formed along shorelines. Select any features which are commonly associated with rocky or steeply inclined shorelines.

CP 04-Res 38-2C

- a. Spits
- b. Benches c. Caves 3%
- d. Pinnacles
- e. Deltas

Copy the diagrams below, or get copies of them from your teacher. Diagram 1 shows wave fronts approaching a bay. Diagram 2 shows wave fronts approaching a headland. Draw in more wave fronts on each diagram to show changes in the shape of the fronts that would occur as they move to the shore. CP 04-Res 40-2C

Copy the diagrams below, or get copies of them from your teacher. Diagram 1 shows wave fronts approaching an opening between two barriers. Diagram 2 shows wave fronts approaching a single barrier. Draw more wave fronts toward the land to show any probable changes in their direction as they move shoreward past the barriers.

CP 04-Res 40-3C

- CP 04-Res 42-1C
- The graph below shows the tidal record at Kwajaleiu Atoll for 12 days. 1. Estimate the mean sea level from this graph. (Estimate it; do not calculate it.)

2. Which group of readings did you consider to estimate the mean sea level?

CP 04-Res 43-1C Which of the three diagrams below shows the relationship among the earth, the moon, and the sun which would produce the highest tides in the ocean?
