ABSTRACT

Developed during 1975-76 by 40 primary teachers and 10 elementary principals from 12 small school districts in 2 Washington counties and first used during 1976-77 in more than 20 districts, this K-3 mathematics curriculum is designed to assist district compliance with Washington's Student Learning Objectives (SLO) Law, which requires identification of student learning objectives and evaluation of each student's performance related to the attainment of the objectives. Specific learning objectives for mathematics, suggested activities, monitoring procedures and possible resources used in teaching to the objectives are presented, following the unique Small Schools Curriculum format. Mathematics goals for the entire K-12 curriculum and areas of study for K-8 are outlined. Included in the scope of the K-3 curriculum are counting (serial, objects, order), equality and inequality, reading and writing numerals, place value, addition, subtraction, multiplication, division, story problems, common fractions, geometric shapes (square, circle, triangle, rectangle), simple graphs and measurements (time, money, linear, volume, weight, temperature). APPRECIATION

Many educators have been involved in the development of the Small Schools Curriculum materials. Of these, Robert Groeschell, now retired from the office of the State Superintendent of Public Instruction, deserves special recognition for his insight, leadership and support in initiating the Small Schools Curriculum Project.

In order to provide assistance to small school districts, a curriculum assessment was conducted by Mr. Groeschell in the spring of 1975. The findings of this assessment pointed out the need for the development of curriculum guidelines to assist small districts in identifying learning objectives and in planning for program implementation. These findings were used to provide the basis for originally funding the Small Schools Curriculum Project.

Appreciation is extended to Dr. Charles Murray, Superintendent, and the staff of ESD 189 for providing meeting space, equipment and resources which facilitated the development of the Small Schools Curriculum materials.

Additional appreciation is given to the pilot districts and ESDs 171 and 189 for their assistance in field testing and revising the primary Small Schools Curriculum materials.

INTRODUCTION

The Small Schools materials were developed through the cooperative efforts of three levels of educational organizations: local, regional, and state. Forty primary teachers and ten elementary principals from small districts in Snohomish and Island Counties (Arlington, Darrington, Granite Falls, Lake Stevens, Lakewood, Monroe, Snohomish, Stanwood, Sultan, South Whidbey and Monroe Christian School), developed and sequenced student learning objectives for grades kindergarten through third in five curriculum areas: reading, language arts, mathematics, science and social studies. Suggested activities, monitoring procedures and possible resources used in teaching the objectives were identified and each student learning objective was correlated to the State Goals for Washington Common Schools and to broad program goals.

On the following pages you will find the Small Schools Mathematics Curriculum Materials for grades kindergarten through third. Included are student learning objectives, suggested activities, suggested monitoring procedures and possible resources. These materials were developed during 1975-76, and were piloted during the 1976-77 school year in more than twenty small districts within the state. Pilot districts included the districts which originally developed the materials, as well as Methow Valley, Chelan, Entiat, Orondo, Leavenworth, Peshastin-Dryden, Washtucna, Wahluke, Royal City, Wilson Creek, Othello and Quincy. Personnel from ESDs 189 and 171 assisted with the implementation of the pilot materials by providing regional organization, coordination, technical assistance and secretarial services. Data collected from the pilot districts were used to modify the materials in preparation for publication and statewide distribution.

Original funding for the project was made available through a Title IV, Part C grant awarded to the Lake Stevens School District. Technical assistance in the development of the winning proposal was provided by ESD 189 and SPI. Since November, 1975, funds for the project have been available through the budget of the Superintendent of Public Instruction, Division of Curriculum and Instruction. ESD 189 and the office of the Superintendent of Public Instruction have worked cooperatively to provide participating districts with curriculum assistance, organization leadership, editorial services and the publication of materials. Curriculum Specialists from Washington colleges, universities, and local school districts also assisted with the development of materials.

ORGANIZATION OF THE SMALL SCHOOLS MATERIALS

Book covers and objective pages for all Small Schools materials have been color-coded for each subject: Reading--green, Language Arts--yellow, Mathematics--blue, Social Studies--buff, and Science--pink. Following each colored objective page there are several pages which identify activities, resources and monitoring procedures which may be used when teaching to the

objectives. See page viii of this book for a more detailed explanation of the format. On that objective page all objectives for an area of the scope are identified. Within each curriculum book the objectives have been correlated to the goals for the Washington Common Schools and to the Small Schools Program Goals for that subject area.

Accompanying the Small Schools curriculum books are resource assessment booklets for reading, language arts and mathematics, grades K-3. Within each assessment booklet test items are provided for a selected number of Small Schools objectives. The suggested test items may be used directly by teachers to assess student performance, or they may serve as models for other test items to be developed by the classroom teacher.

Another booklet containing only the Small Schools objectives is available. This booklet contains objectives for reading, language arts and mathematics, grades K-8, and for science and social studies, grades K-3. Also within this booklet are the program goals and the scope for each curriculum area.

RELATIONSHIP TO THE SLO LAW

The purpose of this book and all other Small Schools materials is to assist teachers with the improvement of curriculum and instruction. In addition, it is expected that many smaller districts lacking curriculum personnel will find this book helpful in complying with the SLO law. (This law requires districts to identify student learning objectives and to evaluate each student's performance related to the attainment of the objectives.) Contained within this book are many more objectives than any district would choose to identify as their SLO objectives. In order to provide districts with assistance in identifying objectives which might compose their SLO list, selected objectives are marked with an asterisk (*). These objectives have been selected with the understanding that they serve only as a model when using the Small Schools materials in helping district personnel meet the requirements of the SLO Law.

For more information concerning the SLO Law, see the Handbook for School District Implementation of the Student Learning Objectives Law available from the office of the State Superintendent of Public Instruction.

FORMAT

One unique feature of the Small Schools Curriculum is the format or arrangement of information on the page. The format was developed in order to facilitate the transportability of the product by allowing districts to personalize the curriculum materials to meet their own educational programs. The Small Schools Format provides a simple arrangement for listing objectives and identifying activities, monitoring procedures, and resources used in teaching.

Page One

The first format page lists the sequence of student learning objectives related to a specific area of the curriculum for either reading, language arts, mathematics, science or social studies. For each objective a grade placement has been recommended indicating where each objective should be taught and mastered. The grade recommendation is made with the understanding that it applies to most students and that there will always be some students who require either a longer or shorter time than recommended to master the knowledges, skills and values indicated by the objectives.

Columns at the right of the page have been provided so district personnel can indicate the grade placement of objectives to coincide with the curriculum materials available in their schools. District personnel may also choose to delete an objective by striking it from the list or add another objective by writing it directly on the sequenced objective page.

Mathematics									
Whole Numbers: Addition									
addition is the combining of numbers.		108	1-1						
an addend is one of a set of numbers to be added. (4) + 1 = 9		111	1-2						
a sum is the total of all addends.		111	1-2						
that adding zero to a number does not affect the sum.		111	1-2						
the addition facts with sums to nine. (mastery)		112	1-2						
the addition facts with sums to 18. (mastery)		112	1-2						
that the order in which two numbers are added does not change their sum (commutative property), i.e., 4 + 5 = 9 or 5 + 4 = 9.		119	2-1						
when adding three or more numbers the way addends are grouped does not affect the sum (associative property), i.e., (4 + 2) + 3 = 9 or 4 + (2 + 3) = 9.		141	4-1						
add two two-digit numbers without renaming (carrying), i.e., 21 + 32 = 53.		142	1-2						
add three or more one-digit numbers.		141	1-2						
add two three-digit numbers without renaming (carrying), i.e., 121 + 234 = 357.		147	2						
add three or more two-digit numbers with a sum of less than 100 without renaming (carrying), i.e., 21 + 23 + 4 = 58.		149	2-1						
add any numbers with two or more digits that require renaming (carrying), i.e., 28 + 48 = 76.		151	2-1						
add any three or more two-digit numbers, i.e., 19 + 56 + 788 = 270.		151	1-2						
add any two or more three-digit numbers with renaming.		155	1-2						
add any two or more four-digit numbers with renaming.		155	1-2						
add any two or more five-digit numbers with renaming.		155	1-2						

add quickly and accurately sums of addition facts

On the second format page, one or more objectives from the first format page are rewritten and suggested activities, monitoring procedures and possible resources used in teaching to the objective(s) are identified. The objectives are correlated to the State Goals for Washington Common Schools and to broad K-12 program goals. The suggested grade placement of the objectives and the activities is indicated and, wherever applicable, the relatedness of an objective to other curriculum areas have been shown. Particular effort has been given to correlating the materials with the areas of Environmental Education, and the use of the newspaper in the classroom.

Below is an example of a completed second format page. Teachers and principals in local districts may personalize this page by listing their own resources and by correlating their district goals to the student learning objectives.

<p>Title: Nine Holes Group Size: pairs of students Materials: 2 tagboard strips with 9 holes, 2 cubes, one cube marked with numbers 0-5 and another cube marked with numbers 0-4 plus an extra 0, 9 golf tees for each student (18 total)</p>  <p>Procedure:</p> <ul style="list-style-type: none"> • Teacher directs as follows: <ul style="list-style-type: none"> (a) First player rolls the dice. (b) Player adds the addends and says the equation aloud (e.g., "zero plus five equals five"). (c) Player then puts a golf tee in the hole representing that sum (5). (d) The next player takes a turn, following the same procedure. (e) The first player to fill all 9 holes with golf tees wins the game. (f) When there are only 2 or 3 holes left to 	<p>Student often uses manipulative aids or other aids.</p> <p><u>Mastery of addition facts with sums to nine implies that a student responds to oral or written queries without hesitation. That is, if asked "What is 6+3?" or if shown $\begin{matrix} 6 \\ +3 \end{matrix}$ or $\begin{matrix} 6+3 \end{matrix}$ in written form, the student responds instantly from memory. Check <u>one</u> student at a time.</u></p>	<p>D'Augustine, Charles H., <u>Multiple Methods of Teaching Mathematics in the Elementary School</u>, Harper and Row, 1973, pp. 91-93</p> <hr/> <p>District Resources</p>

DEFINITION OF FORMAT TERMS
Small Schools Curriculum Project

Subject indicates a broad course of study. The subject classifies the learning into one of the general areas of the curriculum, i.e., reading, mathematics, social studies.

Specific Area indicates a particular learning category contained within the subject. Within the subject of reading there exist several specific areas, i.e., comprehension, study skills, word attack skills.

State Goal indicates a broad term policy statement relating to the education of all students within the State of Washington. In 1972, the State Board of Education adopted 10 State Goals for the Washington Common Schools.

District Goal generally reflects the expectations of the community regarding the kinds of learning that should result from school experience. These goals are employed mainly to inform the citizenry of the broad aims of the school. When district goals are correlated to student learning objectives, community members are able to see how their expectations for schools are translated daily into the teaching/learning process of the classroom.

Program Goals are K-12 goals which do not specify grade placement. These goals provide the basis for generating subgoals or objectives for courses or units of study within a subject area. Program goals are used as a basis for defining the outcomes of an entire area of instruction such as mathematics, language arts or social studies.

Student Learning Objectives

Three major types of learning objectives which have been identified are knowledge, process and value objectives.

Knowledge Student Learning Objectives identify something that is to be known and begins with the words, "The student knows...". Knowledge objectives specify the knowledge a student is expected to learn. These objectives include categories of learning such as specific facts, principles and laws, simple generalizations, similarities and differences, etc.

An example of a Knowledge Student Learning Objective is: "The student knows guide words in a dictionary indicate the first and last words on the page."

Process Student Learning Objectives identify something the student is able to do, and begins with the words, "The student is able to...". These objectives are associated with the rational thinking processes of communication, inquiry, problem solving, production, service and human relationships.

An example of a Process Student Learning Objective is: "The student is able to associate a consonant sound with the letter name."

Value Student Learning Objectives identify only the type of values which foster the context of the discipline. These objectives are thought to be most uniformly and consistently approved by society as supporting the major aims of the discipline.

An example of a Value Student Learning Objective is: "The student values the role of plants in his/her daily life."

Suggested Learning Activities describe the behavior of both the teacher and students. The instructional strategies employed by the teacher, as well as the activities undertaken by the students, are included in this section. Each activity includes materials, group size and procedures.

Suggested Monitoring Procedures indicate informal methods for determining the progress a student is making towards the attainment of the objective. These methods include techniques such as teacher observation, student interest and attitude surveys and recording results of classroom instruction.

Possible Learning Resources indicate materials, teacher-made or commercially produced, which are needed by both the teacher and students in order to accomplish the learning activities.

GOALS FOR THE WASHINGTON COMMON SCHOOLS

1. As a result of the process of education, all students should have the basic skills and knowledge necessary to seek information, to present ideas, to listen to and interact with others, and to use judgment and imagination in perceiving and resolving problems.
2. As a result of the process of education, all students should understand the elements of their physical and emotional well-being.
3. As a result of the process of education, all students should know the basic principles of the American democratic heritage.
4. As a result of the process of education, all students should appreciate the wonders of the natural world, human achievements and failures, dreams and capabilities.
5. As a result of the process of education, all students should clarify their basic values and develop a commitment to act upon these values within the framework of their rights and responsibilities as participants in the democratic process.
6. As a result of the process of education, all students should interact with people of different cultures, races, generations, and life styles with significant rapport.
7. As a result of the process of education, all students should participate in social, political, economic, and family activities with the confidence that their actions make a difference.
8. As a result of the process of education, all students should be prepared for their next career steps.
9. As a result of the process of education, all students should use leisure time in positive and satisfying ways.
10. As a result of the process of education, all students should be committed to life-long learning and personal growth.

MATHEMATICS PROGRAM GOALS
(K-12)

1. The student values the study of mathematics for its usefulness and application to everyday life.
2. The student develops the ability to communicate with precision and confidence using the vocabulary and symbols unique to mathematics.
3. The student develops the concept of number and numeration including counting, place value, reading and writing numbers, various numbering systems, number theory and scientific notation.
4. The student develops general mathematical concepts of time-space relationships; equality-inequality; measurement; function; graphs, charts and tables; probability and statistics; and geometry.
5. The student develops accuracy in using the computational skills of adding, subtracting, multiplying and dividing.
6. The student develops the ability to use problem-solving techniques.
7. The student develops the knowledge and use of the structure of mathematical systems and real numbers.
8. The student knows and is able to use the symbols, elements, operations and structure of the following number systems: whole numbers, integers, rational numbers, real numbers and complex numbers.

Suggested Activities: Grade(s) K

Suggested Monitoring Procedures

Possible Resources

Title: I Spy
Group Size: small group
Materials: any small object

Mini-Test: "Counting to 10"
Group Size: one student
Procedure:
 . Teacher asks student to count from 1 to 10.

Baratta-Lorton, Mary, Mathematics Their Way, Addison-Wesley, 1976, pp. 98-99, 112-113

Procedure:

- . Teacher selects a student to be "it" (or other students may select a classmate).
- . Selected student hides an object while the rest of the students close their eyes and count to 10.
- . Students then open their eyes and search for the hidden object.
- . The player who finds the object becomes the one who hides the object next.

Title: Circle Counting
Group Size: groups of 10 or less
Materials: none

District Resources

Procedure:

- . Ten or less students stand in each circle.
- . One student is assigned to be the counting starter.
- . The starter tells the groups to "begin counting". Each student counts in order and the one who says the last number in the circle sits on the floor. The next student begins once more; the last sits down.
- . Activity continues until one student remains standing.

Suggested Activities: Grade(s) <u> K </u>	Suggested Monitoring Procedures	Possible Resources
---	---------------------------------	--------------------

Title: Bounce Counting
Group Size: whole class or small group
Materials: ball

Procedure:
 . One student bounces a ball while the students count: "one, two. . . ten."

Title: The Striking Clock
Group Size: entire class
Materials: a rhythm instrument, triangle and striker or a bell .

Procedure:
 . Students stand in a circle with feet spread and rock from side to side as they say the poem below.
Poem: "We are swinging pendulums
 Hanging from a clock.
 As we count the hours struck,
 We rock and tick and tock."
 . One student stands in the center of the circle with a triangle to strike the hour when the poem has been said.
 . The students count as each hour is struck.

Group Size: entire class
Materials: poems

Procedure:

- Teacher reads poem and demonstrates action. Students then recite and follow the action as indicated.

TEN FINGERS

I have ten little fingers
 And they all belong to me.
 I can make them do things.
 Would you like to see?
 I can shut them up tight
 Or open them wide.
 I can put them together
 Or make them all hide.
 I can make them jump high,
 I can make them jump low,
 I can fold them quietly
 And hold them just so.

---	---------------------------------	--------------------

FIVE LITTLE FROGGIES

Five little froggies sat on the shore,
 (open hand; extend fingers. Push down one
 finger as each frog leaves.)
 One went for a swim and then there were four.

Four little froggies looked out to sea,
 One went swimming, and then there were three.
 Three little froggies said, "What can we do?"
 One jumped in the water and then there were two.
 Two little froggies sat in the sun,
 One swam off and then there was one.
 One lonely froggie said, "This is no fun."
 He dived into the water and then there was none.

GRASSHOPPERS

Ten little grasshoppers sitting on a vine;
 (hold up ten fingers; fold one down at each count.)
 One ate too much corn, and then there were nine.
 Nine little grasshoppers swinging on a gate;
 One fell off, then there were eight.
 Eight little grasshoppers started off to Devon;
 One lost his way, then there were seven.
 Seven little grasshoppers lived between two bricks;
 Along came a windstorm, then there were six.
 Six little grasshoppers found a beehive;
 One found a bumblebee, then there were five.
 Five little grasshoppers playing on the floor;
 Pussycat passed that way, then there were four.
 Four little grasshoppers playing near a tree;
 One chased a buzzy fly, then there were three.
 Three little grasshoppers looked for pastures new;
 A turkey gobbler saw them, then there were two.
 Two little grasshoppers sitting in the sun;
 A little boy went fishing, then there was one.
 One little grasshopper left all alone;
 He went to find his brothers, then there was none.

 . Ask student to count from 1 to 100.

Grossnickle, Foster E., Discovering Meanings in Elementary School Mathematics, Holt, Rinehart and Winston, 1973, pp. 126-127

 D'Augustine, Charles H., Multiple Methods of Teaching Mathematics in the Elementary School, Harper and Row, 1973, pp. 70-72

Computation and Structure, The Nuffield Corporation, 1967, pp. 42-43

Procedure:

- . Teacher calls on someone to begin counting to 100. After a short time, the teacher says "stop" and calls on another student to continue where the first student left off.
- . Teacher continues this process with students until 100 is reached.

Title: Student Counting
Group Size: whole class
Materials: none

District Resources

Procedure:

- . Designate one student as the counting starter.
- . Agree on the order in which the students are to "count off",
- . Starter begins with "one".
- . Other students count in turn and in sequence.
- . As soon as the last student "counts off", the counting starter picks up the counting sequence and the students continue to count.
- . The student who counts off "100" stands and becomes the new counting starter.

Variation:

- . Student could count backwards from 100 to 1.

Title: Hangers and Clothespins
Group Size: individual
Materials: 10 hangers and 55 clothespins, 3"x5" tagboard strips with numerals written 1-10

Procedure:
 . Teacher fastens tagboard cards on hangers. Teacher directs student to put the appropriate number of clothespins on the hangers.

Title: Pincushions
Group Size: individual
Materials: 3" squares of cardboard, pincushions cut from foam rubber, glue, 55 large-headed pins, container for pins

Procedure:
 . Teacher marks tagboard strips with numerals and corresponding dots from 1-10. Teacher glues pincushions on tagboard strips.
 . Student then puts the appropriate number of pins into cushions.

Mini-Test: "Counting Objects to 10"
Group Size: one student
Materials: small box
 10 counters
Procedure:
 . Ask the student to count the counters and to place each counter in the box as it is counted.

Title: Counter Toss
Group Size: small group
Materials: bags containing sets of counters from 1-10

Procedure:

- . Each student selects a bag and records estimate of number of counters in the bag.
- . When all have recorded their estimates, the bags are spilled on a rug or table.
- . In turn, the students touch each counter as they count aloud.
- . When all have counted in turn, the student(s) who estimated the counters correctly stand.

Title: Count to 50
Group Size: small group
Materials: blocks, cubes, tongue depressors

Procedure:

- . Each student is given cubes, blocks, etc. to count to see how many are in a group of a hundred.
- . If the students come up with 50 each, they exchange with a classmate to check the figure.

Title: Count The Squares
Group Size: individual or small group
Materials: 1/2" graph paper

Procedure:

- . Students are directed to count 50 squares and to draw a line around the area enclosing the 50 squares.

Variation:

- . Students may color or mark each square as they count.

Title: My Count
Group Size: pairs
Materials: small box, 50 counters

Procedure:

- . Student counts as counters are placed one at a time in a box.
- . Student records the number of counters that were counted.
- . The other student takes the counters out of the box one at a time counting aloud.
- . The final "out loud count" is compared with the recorded count.

Title: Counting by Two's
Group Size: partners
Materials: teacher-made card marked with even numbers 0-38, etc.,
2 4
30 counters, 2 game cards (3"x5" matrix with arrangements of multiples of 2 from 2 through 40--vary the arrangements on the two cards.

Sample of one game card:

4	10	8	20	12
2	26	4	30	24
22	16	40	36	6

District Resources

Procedure:

- Teacher designates student (or partners select one) to shuffle numeral cards.
- Students place the cards face down between them.
- Students take turns turning over the top card one card at a time.
- Students place a counter on a numeral that means 2 more than the numeral on the card just turned over.
- The first player to cover all the numerals in a row or column wins.

Extension:

- Count student's shoes, eyes, ears by one's, with emphasis on the idea there are pairs of each.
- Count sets of two's by one's, emphasizing the even (e.g., one, two, three, four, etc.).

Student Learning Objective(s) The student is able to count by 5's to 100.

---	---------------------------------	--------------------

Title: Popsicle Sticks
Group Size: entire class
Materials: 10 popsicle sticks per student,
beans (at least 10 per student),
glue

Procedure:

- . Teacher gives each student a set of popsicle sticks and at least 55 beans.
- . Teacher suggests that the student make a set of bean sticks by gluing one to ten beans on each of the 10 sticks.
- . When the glue is dry, the students play a game of ordering their bean sticks, placing them from first to last.

Variation:

- . Students may color the bean sticks different colors (for example, the first bean stick red).

Title: Moving Counters
Group Size: individual, small group
Materials: 10 counters per student

Procedure:

- . Give the following directions to students:
(in reference to the initial position)
- (a) Place the counters in line from left to right.
- (b) Remove the third counter.
- (c) Place the second counter above the first counter.
- (d) Place the fourth counter below the fifth counter, etc.

Title: Covered Number Line
Group Size: small group
Materials: 10 9"x12" laminated numerals, 10 9"x12" laminated covers

Mini-Test: "Before, After, Between"
Group Size: entire class
Materials: written exercise as below

Grossnickle, Foster E., Discovering Meanings in Elementary School Mathematics, Holt, Rinehart, Winston, 1973, p. 123

Procedure:

- Teacher tapes laminated numerals in a number line. Tape covers on the number line to facilitate covering and exposing the numerals.
- Teacher uncovers any number and asks students what number comes before, what number follows.
- Uncover every other number and ask students what number comes between the two numerals.

Procedure:
 . Ask students to complete the following:

<u>Before</u>	<u>After</u>	<u>Between</u>
___ 4	1 ___	5 ___ 7
___ 6	9 ___	8 ___ 10
___ 1	7 ___	3 ___ 5

Keiley, Jeanne, Learning Mathematics Through Activities, James E. Freel * Associates, Inc., 1973, p. 24

Hundreds Board

Title: Long Doggie
Group Size: individual
Materials: 9"x12" tagboard dachshund, 9"x12" tagboard numerals, 0-10

Procedure:

- Teacher places tagboard numerals in reverse order face down on a table.
- Teacher directs students to take the first number (0) and place it between the head and the tail.
- If the student can name the next numeral, he/she may place that number next to 0.

District Resources

Process continues until the student has completed the game or said an incorrect number.

Suggested Monitoring Procedures	Possible Resources
---------------------------------	--------------------

Title: Bureau of Missing Numbers
Group Size: small group
Materials: none needed

Teacher observes student's responses or verbal questions.
 See previous Mini-Test.

Procedure:
 . Teacher says to class: "Today you may be detectives and investigate some missing numbers. Listen carefully for their descriptions. If you think you know the answer, raise your hand."

Examples:
 "Attention all detectives! We have a missing number. It is even. It comes between 5 and 10. Can you identify it?" (6 or 8)

"Officer's attention! Pick up a blue car doing just over 90. How fast is it going?" (91)

"Robbery at the bank! Attention all squads! The robber got just under \$1,000. What did he/she get?" (\$999)

Title: Fishbowl
Group Size: small groups
Materials: tagboard cards (3"x5"), fishbowl

Procedure:

- . Teacher directs students to make cards 3"x5". Put the numerals on it to 1,000. Place the cards in a fishbowl.
- . One student draws out a card and names the number that comes before or after it.
- . All the correct answers receive 1 point. The player with the most points after all the cards are drawn is the winner.

Variation:

- . The student draws two cards and names any numeral that comes between. Give a point for a correct answer.

Title: Mailing Time
Group Size: one student
Materials: 9 envelopes, 9 letters, 8 word stamps

Paper and pencil test
 Teachers elicit verbal response
 Teacher observes daily activities in the classroom

Baratta-Lorton, Mary, Workjobs, Addison-Wesley Publishing Co., 1972

Procedure:
 . Have students match the letters to the envelopes.
 . Student determines if there are enough stamps for each envelope.

Kennedy, Leonard M., Models in the Elementary School, Belmont, California, Wadsworth Publishing Co., Inc., 1967. pp. 2-11

Title: Musical Chairs
Group Size: small or large group
Materials: matched number of chairs with students

Mini-Test "Matching Objects"
Group Size: one student
Materials: 6 counters
Procedure:

Kelley, S. Jeanne, Learning Mathematics Through Activities, James E. Freel & Associates, Inc., 1973, pp. 18-19

Procedure:
 . As music is played, students circle around the chairs. The teacher moves a chair, stops the music and a student who fails to find a chair is eliminated. Repeat.

. Teacher forms 2 sets of counters, a set of 3 and a set of 3 counters.
 . Teacher asks student to match the 2 sets

Liedtke, Werner, Mathematical Experience, Primary Division, Encyclopedia Britannica Publications, Ltd., 1974, pp. 12-14

Title: Dot Cards
Group Size: one student
Materials: index cards

Pagne, Joseph N. (editor), Mathematics Learning in Early Childhood, National Council of Teachers of Mathematics, 1976, pp. 131-133

Procedure:
 . Place the cards dot side down. Student picks a card. He/she must match the dots one-to-one with a set of objects. Students may select any set of objects. Students may continue the game until the have been matched correctly

Suggested Activities: Grade(s) <u>K-1</u>	Suggested Monitoring Procedures	Possible Resources
---	---------------------------------	--------------------

Title: Matching Jars and Lids
Group Size: one
Materials: set of jars (varying in style)
set of lids (varying in style)

Procedure:
. Have students match lids to jar by screwing lids on jars.

Title: Color Match
Group Size: one
Materials: 5 tongue depressors, 5 crayons of different colors

Procedure:
. Teacher colors each tongue depressor with a different color crayon.
. Match each colored tongue depressor to a crayon of the same color.

Title: Number Cans
Group Size: individual
Materials: 9 orange juice cans covered with contact paper, round adhesive labels, tongue depressors (may be spray painted to resist soil)

Procedure:
. Teacher puts dots on each can having a different number of dots from 1-9.
. Student places tongue depressors into the can as indicated by the dot on outside of can.

Title: Sets
Group Size: small or large group
Materials: paper, crayons

Mini-Test: "Comparing Sets"
Group Size: one student
Materials: 7 counters
Procedure:

May, Lola J., Teaching Mathematics in the Elementary School, New York: The Free Press (Macmillan Co.), 1970, pp. 23-25

Procedure:
 . Each student draws a set on a piece of paper using no more than nine members to the set.
 . Select a student to come to the front of the group and show his/her set to the class. Ask the student who have a set with more members, fewer members or the same number of members to show their sets.

- . Teacher forms 2 sets, one with 4 counters, the other with 3 counters.
- . Student compares the 2 sets using any method and determines which set contains "more than" or "less than" the other.
- . Then ask the student what must be done to make one set "equal to" the other.

D'Augustine, Charles H., Multiple Methods of Teaching Mathematics in the Elementary School, Harper and Row, 1973, pp. 59-61

Title: Dots
Group Size: small group
Materials: 12 3"x5" index cards on which are drawn sets of dots (1 to 5)

Schminke, C. W., Teaching the Child Mathematics, The Dryden Press, Inc., 1973, pp. 100-105

Procedure:
 . Place the index cards face down in the rows of 4 each. A student turns over one card and then a second. If the second card has fewer dots than the first, the student keeps the pair.
 . If the second card has more dots or the same number of dots, both cards are turned face down, and the other player gets a turn.

Ginsburg, Herbert, Children's Arithmetic, The Learning Process, D. Van Nostrand Co., 1977, chapter 2

Bean Sticks

District Resources

Variation:
 . If the second card has more dots the student keeps the pair. If the cards have an equal number of dots, the cards are turned down.

Title: Equalities and Inequalities
Group Size: partners
Materials: 2 sets of cards (symbol and word cards)

=	equal	>	greater than
<	less than	12 cards in each set.	

Henderson, George L., Let's Play Games in Mathematics, National Textbook Co., 1970, p. 34

Procedure:

- . One player lays down one card at a time.
- . The partner must match each card, e.g.

<	<	or	<	less than
---	---	----	---	-----------

- . If the match of cards is correct the player keeps both cards.
- . If the cards do not match, the cards are placed in a discard pile.
- . After all cards are played, record the number of cards that were kept.
- . Reverse roles.
- . The winner is the player who took the most cards.

Title: Symbol Cards 1 2 3 etc.

Group Size: three students

Materials: two sets of numeral cards (1-9);
cards about the size of regular
playing cards; three symbol cards
marked "<", ">" and "=" e.g.,

Henderson, George L., Let's Play
Games in Mathematics, Vol. 3,
National Textbook Co., 1970, p. 14

District Resources

102

Procedure:

- . One player takes the symbol cards, sits between the other two players, and turns the symbol cards face up.
- . The other two players each take a set of numeral cards (1-9), shuffle them and place them face down in front of each other.
- . The player to the left of the player having the symbol cards takes one numeral card and turns it face up.
- . The player to the right of the player having the symbol cards takes a numeral card off the top of the deck and turns it face up.
- . The third player places the correct symbol card (>, <, or =) between the two numeral cards. If the correct symbol card is played, the player who played the correct symbol card keeps both numeral cards and takes back the symbol card that was played.
- . If the wrong symbol card is played, the two numeral cards are placed in a discard pile.
- . After all the numeral cards have been played, the player with the symbol cards counts and records the number of numeral cards he/she has.
- . Players exchange positions until all three have a turn playing the symbol cards.
- . The winner is the player who took the most numeral cards.

Student Learning Objective(s) The student is able to compare the sets of objects by the use of symbols ">", "<" and "=".

Suggested Activities: Grade(s) 1-2

Title: Greater Than, Less Than Wheel
Group Size: individual, partners or group
Materials: 5"x7" cards of railroad board, one for each student

Procedure:

- Using a brad attach a 3" circle in the center of the rectangle, allowing the circle to rotate. Cut parallel slits in each side of the circle.
- On the circle mark symbols for "less than" and "greater than" and "equal".
- Use strips of paper or vinyl to slide through the slits showing numbers 0 to 9. (Ends of strips can be glued together to form loops so they won't slip out.) Students can help making these cards.

- Partners use card, moving number strips and adjusting symbol wheel to make a true statement. Partners check each other. Or, one student can move both number strips and the partner can adjust the symbol wheel to make a true statement.

Suggested Monitoring Procedures

Mini-Test: "Symbols"
Group Size: small group
Materials: set of 3 symbol card cards for each student and counters

Procedure:

- Ask the students to form a set of four counters on their left and a set of five on their right.
- Place the correct symbol card between the two sets of objects.
- Ask the students to form a set of two counters on their left and a set of five counters on their right.
- Place the correct symbol card in position.
- Form equivalent sets so that card is used.

Suggested Monitoring
Procedures

Possible Resources

Title: Step Board Trace

Group Size: individual

Materials: step board

Procedure:

- . Have students place paper over numerals of a step board and trace the numerals.

Title: Writing Numbers Rhyme

Group Size: individual/entire class

Materials: paper, pencils

Procedure:

- . As students practice writing the numbers, teach them the following rhymes:

0 A zero goes around for a ride with nothing inside.

1 A straight line down is one - that's fun.

2 Around and back on a railroad track - two, two, two.

3 Around a tree and around a tree - is three.

4 Down and over - then down once more - that's four.

5 Five goes down and around. Put a hat on and see what you've got.

6 Down to a loop. A six rolls a hoop.

7 Across the sky and down from heaven - that's seven.

8 Around to me; away around; down and back to me; then cross up and away.

Title: Numerals and Stars
Group Size: individual
Materials: laminated cards with the numerals
0-10 on them, marking pencil

Procedure:

- . Teacher writes numerals 0-10 on the laminated cards. Student draws on sets of stars corresponding to the correct numeral.

Title: Show and Write
Group Size: individual
Materials: counters, paper, pencil

Procedure:

- . Make 10 sets of counters.
- . Let set one contain one object.
- . Write the numeral representing the set.
- . Let set two contain two objects.
- . Write the numeral representing the set.
- . Let set three contain three objects.
- . Write the numeral representing the set.
- . Continue making sets until the last set is made with ten objects.
- . Write the numeral representing the last set.
- . Put the numerals in order from one to ten.
- . Have students use these sets when writing the numerals to ten.

Title: What's Your Hangup?
Group Size: small group
Materials: clothesline, paper socks with the number words on them, clothespins

Mini-Test: "Critical Number Words"
Group Size: one student
Materials: cards with the critical number words printed on them

- Procedure:
- Hang a clothesline (or wire) across one end of the room (e.g., between two tables or across the bottom of a bulletin board).
 - Mark regularly spaced intervals with a magic marker along the rope.
 - Provide one or more sets of "socks". Each sock should bear a number word.
 - Provide a sack of clothespins and a sack for the socks.
 - Ask students to order the numerals in each set and hang them at the proper intervals.

- Procedure:
- Ask the student to shuffle the critical number words and place them face down on a table.
 - Student turns over the number words one at a time and reads the number words to the teacher or his/her partner.
 - Words are placed in two piles when read, the "correct" pile and the "incorrect" pile.
 - At the end of the Mini-Test student copies and studies any number words that were incorrect.

Title: Show Me The Number
Group Size: whole class
Materials: 1/2" graph paper and 12" x 18" construction paper

Procedure:
 . Fold construction paper in half length wise, then fold up 4" from the bottom.

Cut 1/2" graph paper in groups of 10 and in individual units.

Example:

295

Teacher asks: "Who can show me 3?"

Pagne, Joseph N. (editor), Mathematics Learning in Early Childhood, N.C.T.M., 1976, pp. 143-147

District Resources

296

Suggested Activities: Grade(s) 2

Suggested Monitoring
Procedures

Possible Resources

Keep asking for numbers with a single digit, then ask, "Who can show me 12?" Some students will respond with 12 ones and some will use a ten stick and two units or ones. Teacher can then talk about the differences. Keep calling numbers until the students have the idea.

Game: Show Me A Larger Number

Ask the student to show a number with the paper squares then write their number on a sheet of paper and slip under flap.

Example:

Under flap place a paper with 25 on it

Teacher comes around, says a number and the student lifts flap and shows the teacher.

- Divide class into two teams. Again have each student make a number, record that number and place under the flap.
- Pass out 6 markers, counters, bottle caps or beans to each student.
- Have one team get up and read as many numbers as they can within a certain time period. One or two minutes. Each time they name a number correctly the other students gives up a marker. The object is to read as many numbers as you can and collect as many markers as you can.
- If a student calls out a number incorrectly that student must give up a marker.
- Teacher calls time and the other team has a turn.

Title: What Three-Digit Number Am I?
Group Size: entire class
Materials: paper/pencil

Procedure:

. Record Who I Am.

(a) I have three digits: 2,4,6.
I am the largest number possible. _____

(b) I have three digits all the same.
I am between 250 and 400. _____

(c) I have three digits: 2,3,5.
I am even. My tens digit is 5. _____

(d) I have three digits: 3,6,9.
I am between 550 and 700, and I have 9 in one's place. _____

(e) I have three digits. I am less than 400.
My tens digit is greater than my ones digit.
My ones digit is greater than my hundreds digit. My digits are: 5,7,3. _____

Level of Difficulty: Recommended as an activity for your "front runners" or the more able.

Mini-Test: "Place Value"
Group Size: entire class
Materials: written exercise as below

Procedure:
 In what place is each underlined digit?

_____ 239 _____ ones
 _____ 567 _____
 _____ 375 _____

Experiences in Mathematical Ideas, Vol. 1, National Council of Teachers of Mathematics, 1970, pp. 11-18

Title: Expanded Notation Cards
Group Size: small group; entire class
Materials: cut a set of Expanded Notation Cards
 Be sure that they fit together. Place the cards together so that the longest is on the bottom up to shortest on the top. The notch on the lower right corner of each card should match. When the cards are all together, they are in their standard form.

Procedure:

- Teacher calls out a 3 or 4 digit number. Student then puts the appropriate cards together to show the number.
- Example:
- Teacher says 3,742. The student puts down 3,000, places 700 on top, then 40 on that and finishes by placing 2 on the very top. By holding the number at the notched corner, the student can display 3742. The teacher should be sure to include some numbers with zero in them, i.e., 3402. The student would have no tens card but only 3000, 400, and 2.

Paper and pencil test with items like the following:
 $3567 = (3) \text{ thousands} + (5) \text{ hundreds} + (6) \text{ tens} + (7) \text{ ones}$
 and
 $5 \text{ thousand} + 4 \text{ hundreds} + 0 \text{ tens} + 3 \text{ ones} = (5,403)$
 Circle the number that has 6 hundreds:
 3762 6372 7632 3726

K 1 2 3 4

The student knows:

- . addition is the combining of numbers.
- . an addend is one of a set of numbers to be added. $4+2+3=9$
- . a sum is the total of all addends.
- . that adding zero to a number does not affect the sum.
- . the addition facts with sums to nine. (mastery)
- . the addition facts with sum to 18. (mastery)
- . that the order in which two numbers are added does not change their sum (commutative property), i.e., $3+5 = 8$ or $5+3 = 8$.
- . when adding three or more numbers the way addends are grouped does not affect the sum (associative property), i.e., $(1+2) + 4 = 1 + (2+4)$

D'Augustine, Charles H., Multiple Methods of Teaching Mathematics in the Elementary School, Harper and Row, 1973, p. 83

Pagne, Joseph N. (editor), Mathematics Learning in Early Childhood Education, NCTM, 1976, p. 167

Bead Fact Finder

District Resources

Procedure:

- Students will work in pairs. One student will divide the beads into two sets, e.g., 6 and 4. The other students will count the beads in each set, e.g., 6 and 4. The student then will count them all together, i.e., 10. Now the students change jobs. The counting student now makes the sets and the set making student does the counting. They continue making as many sets as they can noting their sets always add to 10.

Teacher asks: "How many combinations can you make?"

- Give students an opportunity to combine and determine the sum of a variety of sets of objects such as chips, students, books, sticks, etc.

Variation:

- Give students worksheets to record answers.

Possible Resources

. Instructions for use:

- (a) Place answer pieces on the matching problem regions on the inside of the box lid.
- (b) Put the bottom of the box inside the lid. Press down firmly and turn the box and lid over. If each piece has been put in the correct place, the picture will have been put together and can be seen by removing the lid.

Title: Speedo - (Game)

Group Size: large group

Materials: spinning wheel marked 0 to 9, equation cards without answers:

$3+5=$

(Make cards for every possible addition with sums 9 or less)
(If equation cards are 1"x3", they can all fit into a cottage cheese carton, and the spinner wheel can be made on the lid for a completely stored game.)

Procedure:

- . Leader gives each student four equation cards. Students lay them on their desks and study them.
- . The leader spins the spinner and calls out the number. Any student who has an equation card whose sum is that number, calls out "Speedo". The first person to call out gets to read his/her equation card. If it makes a true equation, he/she gets to turn that equation card face down. (If the equation card does not match the number called out, the student does not turn over the equation card and if he/she has any cards turned over from previous turns, he/she must turn one back up.)

Title:

Group Size: individual

Materials: ditto copy of cut away worksheet or tagboard cut up in squares, scissors (if worksheet is used)

Procedure:

- . Cut out the squares. Fit them together so that the edges that touch name the same numbers.

Example:

Variation:

- . Match other cards to all sides of original card.
- Diagram of cut-away worksheet:

Suggested Activities: Page(s) 2-3

Suggested Monitoring Procedures

Possible Resources

Title: Solitary
Group Size: individual
Materials: cards with addition facts to 18 and sums to correspond to the facts. Include ten, twenty, or twenty-five facts.
Example: Cards 3"x2"

6+2	8
2+9	8

Procedure:

- . Shuffle the cards.
- . Place them face down on the table in a pile.
- . Turn up one card at a time, placing it face up on the table, not in the pile.
- . When a fact and a sum match place them in a separate pile face up.

7+1	8
1+7	8

- . Continue until all the cards have been matched.

Title: Search 'n Circle
Group Size: individual
Materials: worksheet of Search 'n Circle

Procedure:

- . Give copies of this number puzzle to students.
- . Ask them to follow the written directions. (See below.)

Written directions:
Circle 10 addition equations.

Variation:
Circle 10 subtraction equations. Can you find more?

Example:

$$\begin{array}{r} 7 \\ - 9 \\ \hline \end{array}$$

Variation:

- Write the number fact, say 9×9 , and then the answer you think it is, say 18. Then peek to see if you are right.
- Counters can be used if needed.

Title: Spin-A-Sum

Group Size: pairs

Materials: 9x12 sheets that look like the following. These should be laminated or covered with contact paper, crayon.

District Resources

Procedure:

- Each student needs a sheet like the above and a crayon. In turn, the students spin their own spinner and determine the difference. They then

Suggested Activities: Grade(s) 3

Suggested Monitoring
Procedures

Possible Resources

mark the answer with an "x" on the 3x3 grid (e.g., the spinner points to +4. The answer, 11, is marked with an "x" on the grid only once. The

11	8	9
11	17	10
8	X	14

next player follows the same procedure on their own 9x12 sheet. The first player to get 3 in a row wins.

Up and down, across, etc. When they are finished, the student wipes the

sheet off with a paper tissue for the next player.

Note: See following page for directions on how to make a spinner.

District Resources

282

283

DIRECTIONS
CONSTRUCTING SPINNERS

Of the several ways that spinners may be constructed, the method described below is one of the simplest.

Materials needed: spinner dial(s)
chipboard on which to mount spinner dial(s)
clear self-stick plastic
spinner arrow(s) - ticket board or plastic
No. 4 (1 inch) brass fastener(s)
small washer(s)
plastic drinking straw
glue
masking tape

- Step 1 - Cut spinner dial to fit chipboard or vice versa.
- Step 2 - Attach spinner dial to chipboard.
- Step 3 - Cover spinner dial with clear self-stick plastic: overlap, fold over, and secure plastic to underside of chipboard (cut off the excess plastic at each corner so that it will fold neatly without "bunching" up).
- Step 4 - Make a small slit at the center of each spinner dial with a pointed Exacto blade. (Do not make the slit any larger than needed in order to be able to force through a brass fastener -- see Step 9.)
- Step 5 - Cut a 5mm length of plastic drinking straw for each spinner.
- Step 6 - Make a small washer from ticket board for each spinner if you do not have a metal washer. (Just punch a quarter-inch hole and trim to a hexagonal shape.)
- Step 7 - Make a spinner arrow from ticket board or plastic for each spinner: the arrow should be about one-half inch wide and from two to two and a half inches long. The hole should be punched as nearly in the middle as possible.
- Step 8 - Put the piece of straw, arrow and washer on the brass fastener: make sure that the straw is inside the washer and arrow holes and that the arrow is nearest the head of the fastener.
- Step 9 - Push the fastener through the slot in the spinner board, bend the fastener prongs flat against the chipboard and use masking tape to hold them in this position.

If assembled correctly, the small piece of drinking straw will hold the head of the fastener away from the spinner dial and the washer will keep the arrow from rubbing on the dial, allowing it to rotate freely.

Student Learning Objective(s) <u>The student knows that the order in which two numbers are added does not change their sum. (commutative property) e.g., 3+5 = 8, or 5+3 = 8.</u>	State Goal	1,7,10

Title: Fido Facts
Group Size: individual or small group
Materials: 11 heavy duty paper plates (small size)
 20 brads (brass fasteners)
 brown railroad board
 1 9x12 red construction paper
 glue or rubber cement
 Teacher makes 20 dog ears from brown cardboard and 10 dog faces (on plates)
 On each ear write a numeral 0-9. (There will be 2 ears for each number.) On the dog's red tongue write a number 0-11.

Individual students can show teacher commutative property using counters and recording on paper using equations.

D'Augustine, Charles H., Multiple Methods of Teaching Mathematics in the Elementary School, Harper and Row, 1973, pp. 85-87

Baratta-Lorton, Mary, Mathematics Their Way, Addison-Wesley, 1976, pp. 181-182

Kelley S., Jeanne, Learning Mathematics Through Activities, James E. Freel and Associates, Inc., 1973, p. 36

District Resources

Procedure:

- Students choose a plate, look at the number on the tongue, and find two ears whose sum equal that number. Fasten ears to dog with brads.

The students will see that the sum will remain the same no matter which side of the dog either ear is placed. They will also find that there are various combinations of numbers making one sum.

The previous numbered page in the original document is

Suggested Activities: Grade(s) <u>2</u>	Suggested Monitoring Procedures	Possible Resources

Title: Pebbles In A Bag
Group Size: small group or whole class
Materials: paper bag, pebbles

Procedure:

- Have a student put several pebbles in a bag as the class observes. (Class watches, hears, pebbles drop, and participant feels pebble.) Record the number of pebbles on the board.

- Have another student add more pebbles to the bag. Write the number sentence on the board.

- Class guesses how many pebbles are in the bag. A student can then remove all the pebbles from the bag and answer the equation.

- Leave the equation on the board, going through steps 1 through 3 again, only reversing the equation to read $5+3=8$.
- Have the students "make a rule" about the two equations. (Elicit the law of commutativity.)

Student demonstrates commutativity using objects and recording number sentence.

Marks, John L., Teaching Elementary School Mathematics for Understanding, McGraw-Hill, 1965, p. 154

E.S.D. 109

Film: F-1887a "Commutativity"

District Resources

Student Learning Objective(s) A. The student knows that when adding three or more numbers the way addends are grouped does not affect the sum, associative property, e.g., $(1+2)+4 = 1+(2+4)$. B. The student is able to add three or more one-digit numbers.

Title: Trains
Group Size: 4
Materials: 2"x3" cards with numerals 0-4 on the cards

Procedure:

- Three students stand one behind the other, each holding a numeral card. The "conductor" looks at each card and adds orally " $2+3=5$ and $5+1=6$ ". Then, the "conductor" begins adding the numbers in reverse order, " $1+3=4$, $4+2=6$ ". If the two sums do not agree, and the "conductor" is wrong, the "conductor" is fired and a new "conductor" takes over. If the "conductor" is right, the "conductor" gets to add again. The "train" picks new or different numbers for the "conductor" to add.

Mini-Test "Grouping Property of Addition"
Group Size: one student
Materials: 10 or more counters
Procedure:

- Ask the student to create a physical model of the problem $1+2+4$ with counters.
- Student shows:
 -
- Ask student to group counters $(1+2)+4$, then $1+2(2+4)$ and compare results.
- Are their sums the same?
- What do you conclude?

D'Augustine, Charles H., Multiple Methods of Teaching Mathematics in the Elementary School, Harper and Row, 1976, pp. 88-90

Suggested Activities: Grade(s) 3-4

Suggested Monitoring
Procedures

Possible Resources

- . To play the game, all players begin at start. A non-playing official will hold the answer sheet to check the answers.
- . Player throws the dice and moves the number of patches indicated.
- . The player must work the problem on which he or she lands and call out the answer.
- . If the player does not have the correct answer the player must go back to the starting point.
- . The first player to reach the finish is the winner.

Title: Newspaper Idea

Group Size: individual or small group

Materials: newspapers, scissors, paste,
pencil and paper

Procedure:

- . Give students a list of groceries needed for dinner. Have the students locate the advertised price of the items in the newspaper. Then, have them cut and paste their grocery list with the prices to a plan sheet of newsprint. Last, have the students total the price of the items listed.

Title: Weigh-In

Group Size: small group

Materials: bathroom scale, paper and pencil

Procedure:

- . Have the students weigh themselves on the scale and record their weight. Then have the students determine the total weight of the group by adding all the individual weights.
- . Extension: Have students compare their total group weight to the weight of a car, truck, refrigerator, water bed, etc. This will force the students to research (ask questions of the
arts or read) about the specific items.

- Student makes the rocket blast off by working problems correctly from bottom to top.

Mini-Test: "Related Sentences"

Group Size: entire class

Materials: exercises to develop the related subtraction sentences from given addition sentences

Procedure:

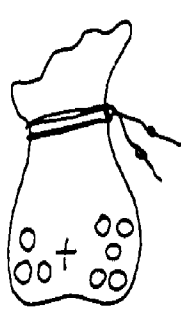

- Write the related subtraction sentences for:

3 + 4 = 7 _____
 4 + 3 = 7 _____

District Resources

Variation:

- Teacher draws rocket on blackboard and students place answers on a separate piece of paper.

Suggested Activities: Grade(s) 2-3

Suggested Monitoring Procedures

Possible Resources

Title: Basic Fact Wheel
Group Size: pairs of students
Materials: tagboard, compass, scissors,

Give ten problems in the form $4+2=6$. The student should give subtraction form $6-2=4$.

Kennedy, Leonard M., Models for Mathematics in the Elementary School, Belmont, California, Wadsworth Pub. Co., Inc., 1967, pp. 80-82

Procedure:

- Each student begins with ten points, chips or any object that could refer to points.
- The first student takes his/her turn by moving the window on the wheel spinner, adding 4 to show a number (2, for example); the second student gives the answer 6. A point is lost if the answer is incorrect.
- Turns alternate in choosing the basic facts. The answer to each basic fact will appear in the window on the opposite side of the wheel as:

District Resources

332

333

Suggested Activities: Grade(s) 2-3

Suggested Monitoring Procedures

Possible Resources

. The game ends when one student has lost all the points. Notice that one side of the basic fact wheel shows one operation; the other side shows the opposite operation.

Title: Flash Cards

Group Size: pairs

Materials: tagboard, felt marker

Procedure:

. Make flash cards with addition facts on one side and subtraction opposite on the other side.

Example:

Front

Back

$4 + 2$

$6 - 2$
 $6 - 4$

. Give each pair of students 20 cards. One student flashes and the other student gives the opposite fact(s) in subtraction or addition form. If the student gives the right answer, he/she gets the card.

. After each student has the opportunity to be a flasher, each adds their total cards. The one that has the most cards is the winner.

District Resources

Student Learning Objective(s) <u>The student knows that subtracting zero from a number does not affect the sum.</u>	State Goal	1.7.10
	District Goal	
	Program Goal	6,7

Related Area(s) _____

Suggested Activities: Grade(s) <u>1</u>	Suggested Monitoring Procedures	Possible Resources
---	---------------------------------	--------------------

Title: Concentration
Group Size: 2 or 3 players
Materials: make two sets of cards, one with equations where 0 is subtracted from a number--example:

4-0=?	5-0=?
-------	-------

Second set of cards will have the corresponding answer to the equation cards--example:

4	5
---	---

Procedure:

- Teacher shuffles both sets of cards together and lays all cards face down in 5 or 6 rows.
- Student, in turn, turns two cards over.
- If cards match, student keeps the pair and gets another turn.
- If the cards do not match, they are placed face down in former positions.
- The game ends when all cards have been taken by the players and the student with the most pairs wins.

Paper-pencil test, or students give verbal response to flash cards.

Mini-Test: "Subtracting Zero"

Group Size: entire class

Materials: exercise in subtraction with zero as the subtrahend

Procedure:

. Ask students to circle problems where the difference is the same as the minuend.

Example:

6	2	8	5	9
-0	-1	-2	-0	-8

Title: Barn Spin
 Group Size: individual or teams of two and four
 Materials: make barn wheel and subtraction cards from heavy tagboard

Mastery of subtraction facts with sums to 18 implies that a student responds to oral or written queries without hesitation. That is, if asked, "What is 13-7?" or if shown $\begin{array}{r} 13 \\ -7 \end{array}$ or $\begin{array}{r} 13-7 \end{array}$ in written form, the student in written form, the student responds instantly from memory. Check one student at a time.

May, Loia M., Teaching Mathematics in the Elementary School, New York The Free Press, (Macmillan Co.), 1970, pp. 61-67

(fold up on dotted line to hold cards)
 Attach wheel to barn with paper fastener.

Have subtraction facts on cards.

District Resources

Suggested Activities: Grade(s) 2-3

Suggested Monitoring Procedures

Possible Resources

Procedure:

- . Teacher deals the cards to the students or teacher can select one student to deal.
- . Each student takes turns spinning the spinner. The player tries to spin a sum that is found on one of the playing cards. If the sum matches the card held by the player, the subtraction card is placed in the barn pocket.
- . The object is to get rid of all the cards.

Title: Subtract A Square
Group Size: individual
Materials: worksheet

Procedure:

- . Teacher directs student to fill in the correct answer in the blank squares.

-

Subtract A Square

↓	9	6	3
	5	2	3
	4	4	

- . Teacher directs students to subtract across and down.

District Resources

Student Learning Objective(s) A. The student knows the subtraction facts with sums less than nine. (mastery) B. The student knows the subtraction facts with sums of 18 or less. (mastery)

Title: Subtraction Cards
Group Size: small group
Materials: write 20 subtraction combinations on cards with sums less than nine; write the answers on 20 other cards.

See previous page for suggested procedure.

Pagne, Joseph N. (editor), Mathematics Learning in Early Childhood, NCTM, 1976, pp. 178-180

Procedure:

- Teacher mixes the cards and deals six to each of four players (teacher may select one student to deal).
- Teacher directs students to lay the remaining cards in the set of 40 face down on the table. For example, suppose the following were one player's cards:

15 -5	8 -4	10	18 -8	4
----------	---------	----	----------	---

- The student may lay down one pair (15-5) or (18-8) with the same answer card (10), as only one combination card and one answer card may be used at the same time.
- Teacher directs student to tell the other player that he/she has a 15-5 and wants its answer. If the other player has the card, he must give it to the requesting player and the first player then puts down another pair.
- The player may continue to call for a combination card until he/she fails to receive a mate for it.

District Resources

Suggested Activities: Grade(s) <u>2-3</u>	Suggested Monitoring Procedures	Possible Resources
---	---------------------------------	--------------------

Then the player must draw. If the card drawn is a match, player may draw again. If card is not a match, player gives up turn.
 . The first player to lay down all the cards in pairs is the winner.

Title: Blocks and Boxes
Group Size: small group
Materials: 12 blocks for each student, 3 boxes for each student

Mini-Test: "Showing Division as the Inverse of Multiplication"
Group Size: one student
Materials: 12 or more counters
Procedure:

May, Lola J., Teaching Mathematics in the Elementary School, New York: The Free Press (Macmillan Co.), 1970, pp. 117-124

Procedure:

- Give the students each 12 blocks and 3 small boxes. The students are to fill the boxes with 4 blocks in each box. Ask students how to find the number of boxes needed and develop the sentence:
 $\underline{\hspace{2cm}} \times 4 = 12$.
- Then explain another way to find the answer. Since we are dividing 12 blocks into groups of four, we can write $12 \div 4 = \underline{\hspace{2cm}}$. Ask students to find the missing factor in $\underline{\hspace{2cm}} \times 4 = 12$ and explain that $12 \div 4 = 3$.

Use your counters to form an array to show $3 \times 4 = 12$

Marks, John L., Teaching Elementary School Mathematics for Understanding, McGraw-Hill, 1965, pp. 126-138

Pagne, Joseph N., Mathematics Learning in Early Childhood, National Council of Teachers of Mathematics, 1976, p. 187

grades 3-4

Title: Division Wheel
Group Size: individual or small group
Materials: tagboard, compass, scissors, brass fasteners (pairs). Make 2 circles of tagboard and paste them together. On the face write the numbers 1 through 9 and on the reverse, write the product of 1 through 9 multiplied by the factor you are working with. (Example: Using 8 as the factor, the numbers would be 8, 16, 24, etc.) Cut a

Now use this array to show $12 \div 4 = 3$.

- In this number sentence what does the 12 refer to? (the entire set or product)
- What does the 4 refer to? (the number in each set)
- What does the 3 refer to? (the number of sets)

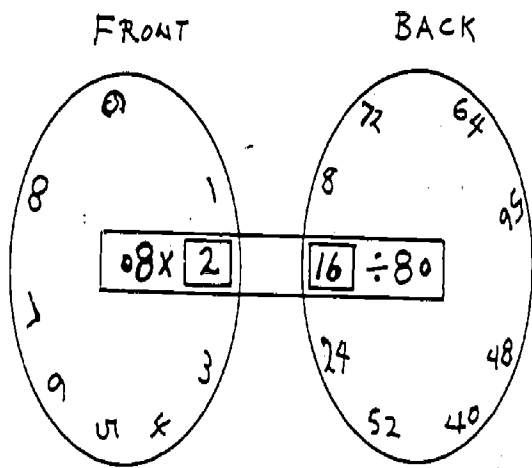

District Resources

---	---------------------------------	--------------------

Title: Concentration
Group Size: 2-4 for each set of cards
Materials: set of Concentration cards -- sets need not be the same, but should be set up as follows:
 (a) 20 to 30 cards
 (b) separated into 2 equal stacks
 (c) make matching pairs of cards -- on one card a multiplication fact (2x6 or 2x6=12) and on the other card the division fact that is the inverse of the multiplication fact (12÷6 or 12÷6=2). Be careful not to duplicate facts (e.g., don't use the above cards, and cards for 6x2 and 12÷2, in the same set unless students are quite experienced with the concept.

Paper-pencil test as follows:
 A random list of multiplication facts in the left-hand column -- without answers. In the right-hand column, a list of matching division facts in a different order.

Students are to draw lines from each multiplication fact to the matching division fact.

Example:
 4x6 30-5
 5x2 24-8
 3x8 28-7
 4x7 24-6
 6x5 10-2

Record the number correct.

Kelley, S., Jeanne, Learning Mathematics Through Activities, James E. Freel and Associates, Inc., 1973, p. 79

District Resources

Procedure:

- . Mix cards thoroughly.
- . Place cards in rows, upside down on the playing surface.
- . First player turns over any 2 cards, laying them down in place. If they match (e.g., 2x6 and 12÷6) the player can pick them up. If they don't match, they must be turned over and left in place.
- . The next player turns over any 2 cards of his/her choice. If they match, they are picked up; if not, they are turned over again.
- . Players continue until all matching pairs have been picked up.

Title: Beat The Bounce
Group Size: small group
Materials: one ball

Basic Facts Mastery
 Mastery of the basic facts implies the ability to respond to oral and written queries without hesitation. That is, the student recalls the basic fact from memory immediately when asked.

Pagne, Joseph N. (editor), Mathematics Learning in Early Childhood, National Council of Teachers of Mathematics, 1976, p. 261

Procedure:

- . One student takes a ball and holds it at shoulder height.
- . The student with the ball calls out a subtraction phrase (e.g., 9-2).
- . Then the student calls out the first name of another student in the group.
- . As the name is called, the ball is dropped.
- . The student whose name is called has to respond with the correct answer before the ball hits the floor.
- . If he/she does respond correctly, that player gets to be the questioner.
- . If he/she misses, the original student gets to continue dropping the ball.
- . The teacher or a monitor records the facts that are missed by individual students.
- . At the game's end, each student studies the facts he/she missed.

Title: Problem-Solving
Group Size: small group
Materials: story problems

Procedure:

- Teacher writes one verbal problem at a time on the chalkboard for oral discussion.
- Each problem presents the students with four tasks:
 - What does the problem ask?
 - What are the important facts?
 - What information is not needed?
 - Write a number sentence for each problem. Solve.

Sample Problems:

A. Susie bought a piece of cake for 40 cents, ice cream for 25 cents, and a ball for 69 cents. How much did she spend for food?

B. There are 3 basketballs, 2 footballs, 5 hockey sticks, and 4 tennis balls in the gym. How many balls are there in all?

Mini-Test: "Extra Information in Problems"
Group Size: entire class
Materials: problems with irrelevant information (see below)

Procedure:

- Read the following problem carefully.
- Decide what is asked.
- Try to write a number sentence that illustrates the problem.
- Solve the problem and indicate in the space after "Extra Number" any number that was not needed. For Example: On Tuesday 230 of the 240 children at Halley School were present. The principal said that the largest number absent any day that week was 15. How many were absent on Tuesday?
 Answer _____
 Extra Number _____

Title: Pieces of Pie
Group Size: individual or small groups
Materials: ditto sheet with pies or circles divided into parts of 1/2, 1/3, 1/4, paper plates cut into 1/2, 1/3 or 1/4 and a complete (whole) paper plate, counters to nine for 1/3 groupings, counters to ten for 1/2 groupings, counters to eight for 1/4 groupings

Student will orally identify the shaded fractional unit of different shapes divided into fractional parts of 1/2, 1/3 or 1/4 correctly.

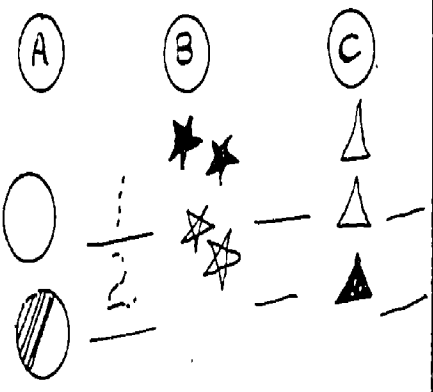

Pagne, Joseph N. (editor), Mathematics Learning in Early Childhood, National Council of Teachers of Mathematics, 1976, pp. 200-201

The student will be able to identify counters grouped in 1/3, 1/2, 1/4 orally.

Suydam, Marilyn N., Classroom Ideas from Research on Computational Skills, National Council of Teachers of Mathematics, 1976, pp. 31-32.

Mini-Test: "Write The Fraction"
Group Size: entire class
Materials: shape exercise as below

Procedure:
 . Write the fraction for the shaded part of each set.

Procedure:

- . Teacher directs students to color one of the two pieces, one of the three pieces and one of the four pieces on the ditto sheet.
- . Students show teacher one-half of the plate, then one-fourth and one-third of a plate.
- . Direct students to separate counters into equal groups such as two groups, three groups, four groups and thus realize that the counters have been divided into 1/2, 1/3, 1/4.

Suggested Monitoring Procedures

Possible Resources

Title:
Group Size: entire class
Materials: construction paper--several 6"x6" and one large 18"x21", colors, scissors, pencil

Given models of halves, thirds and fourths, the student can read and write the correct fractions.
Mini-Test: "Identifying Models"
Group Size: entire class
Materials: exercise with fractional models to label
Procedure:
 . Label the shaded part of each fractional unit.

Pagne, Joseph N. (editor), Mathematics Learning in Early Childhood, National Council of Teachers of Mathematics, p. 198
 Kelley S., Jeanne, Learning Mathematics Through Activities, James E. Freel and Associates, Inc., 1973, p. 27
Health Elementary Mathematics, Dilley-Rucker-Jackson

Procedure:
 . Have the students fold a piece of construction paper in half. Now have the students draw a half of an object. Cut it out. Color only one-half of the object. Now label the colored part "1/2"?

District Resources

Suggested Activities: Grade(s) 2

Suggested Monitoring Procedures

Possible Resources

Title:

Group Size: entire class

Materials: cut squares, rectangles and/or circles about 4"x4", crayons

Procedure:

- . Have students divide (by folding) a square or rectangle into thirds--3 equal parts. Have them color on one of the parts and ask for the fraction of the square that is colored.

- . The fraction of the colored part is one-third.
- . The paper could have been folded long ways and any one of the three areas be colored in.

- . Divide into fourths. Color one part. The fraction of the colored part is one-fourth.

- . The student pastes 12 of the best models he/she made on a 18"x21" construction paper in any order.
- . The student now writes the fraction for each model.
- . Have some students show their models and read the fractional part which is colored.
- . Continue the activity having students color in the given fraction square.

Suggested Activities: Grade(s) 3

Title: Fractions on File
Group Size: individual
Materials: worksheets, file box for sheets -- teacher prepares several sheets of varying levels of difficulty (see diagram)

Teacher covers the pages with plastic and files them in order. Provide answer sheets so students may check own work.

Procedure:

- Teacher directs student to take a sheet and answer the questions by writing a number sentence below the diagram.
- Teacher directs student to check answers and proceed to more difficult fractions.

(See back for example.)

Suggested Monitoring Procedures

Teacher flashes card. Student responds orally by reading the number sentence, including "greater than", "less than" or "equal to".

Examples of flash cards:

Mini-Test: "Comparing Fractions"
Group Size: entire class
Materials: fraction exercise as below

Procedure:
 . Compare. Use < or >.

$\frac{3}{4} > \frac{1}{3}$	$\frac{2}{3} < \frac{2}{4}$
$\frac{1}{2} > \frac{1}{3}$	$\frac{1}{4} < \frac{1}{3}$

Suggested
Grade Placement
District
Placement

K 1 2 3 4

The student knows:

- . the positional terms, i.e., left, right, top, bottom, in front of, behind, below, next to, on, above, middle, between, inside and outside. 257- K-1
- . the term "line segment" refers to part of a line and has two endpoints. 259- 2-3
- . a line segment is named by its endpoints. 259- 2-3
- . a pentagon is a closed shape with five sides. 261- 3
- . a hexagon is a closed shape with six sides. 261- 3
- . an octagon is a closed shape with eight sides. 261- 3
- . the radius is a line segment from the center of a circle to a point on the circle. 263- 3-4
- . the diameter is a line segment that goes from one side of a circle to another and passes through the center. 263- 3-4

The student is able to:

- *. identify geometric shapes: square, circle, triangle and rectangle. 265- K
- *. locate positions, i.e., left, right, top, bottom, in front of, behind, below, next to, on, above, middle, inside and outside. 257- K-1
- . identify congruent shapes, i.e., circles, squares, rectangles, triangles. 267- K-1
- . identify the left side and right side of objects. 257- K-1
- . use a straightedge to draw line segments to form recognizable shapes: square, rectangle and triangle. 269- 2-3
- . name a line segment by its endpoints. 259- 2-3
- . identify an angle and a right angle. 255- 2-3
- . put a radius or diameter on a circle. 263- 3-4

521

Student Learning Objective(s) A. The student knows a pentagon is a closed shape with five sides. State Goal 1, 10

B. The student knows a hexagon is a closed shape with six sides. C. The student knows an octagon District Goal

is a closed shape with eight sides. Program Goal

Related Area(s) _____

Suggested Activities: Grade(s) 3

Title: Shapo
 Group Size: entire class
 Materials: two dittos similar to those illustrated below, markers (beans, etc.), teacher-made set of small calling cards (2 of each) for game. On each card write a label for one of the figures shown. Need a master list for all combinations listed.

A.

○	○	△	○
□	⊂	□	□
○	○	L	△
L	⊂	△	⊂
△	□	(○

B.

S	H	A	P	O

Under S pentagon	Under H circle	Under P pentagon
---------------------	-------------------	---------------------

hexagon	square	curve
octagon	right angle	closed curve
triangle	rectangle	

Suggested Monitoring Procedures

Hold up shapes and ask students to name them orally.

Mini-Test: "Matching Shapes With Word Names"

Group Size: entire class

Materials: "shapes and names" picture

Procedure:
 . Each student is asked to match word name with shape

HEXAGON

SQUARE

OCTAGON

Possible Resources

---	---------------------------------	--------------------

Title: Circle Center
Group Size: large group
Materials: worksheets with large and small circles drawn on them (at least one sheet per student), pencil

Procedure:
 . Have students cut out the circles and find the center by folding each circle in fourths. The center is where the folds meet.
 . Discuss with students the following: The fold from the center to the edge is the radius and the fold that goes all the way across is the diameter.

Check the worksheets. Give a test sheet with several circles drawn on them. Have students draw in the radius or diameter of the circles.

Mini-Test: "Circle Names"
Group Size: entire class
Materials: circle exercise (as below)

Procedure:
 . Match the picture with the words.

D'Augustine, Charles, Multiple Methods of Teaching Mathematics in the Elementary School, Harper and Row, 1973, pp. 310-311

District Resources

Title: Radius and Diameter
Group Size: large group
Materials: worksheets with circles in which the radius and diameter are shown, pencils.

Procedure:
 . Distribute worksheets to the students. Have students point out the radii and diameters as they are marked on the circles.

Suggested Activities: Grade(s) <u>3-4</u>	Suggested Monitoring Procedures	Possible Resources

Title: Shape Walk
Group Size: entire class
Materials: various materials (see below)
 experience chart

Teacher has a model of the four shapes. Teacher points to each one as the student identifies it by name.

L.A.P. L-02012-P from ESD 109
 IMC
 Kelley, Jeanne S., Learning Mathematics Through Activities, James E. Freel and Associates, Inc., 1973, pp. 45-46

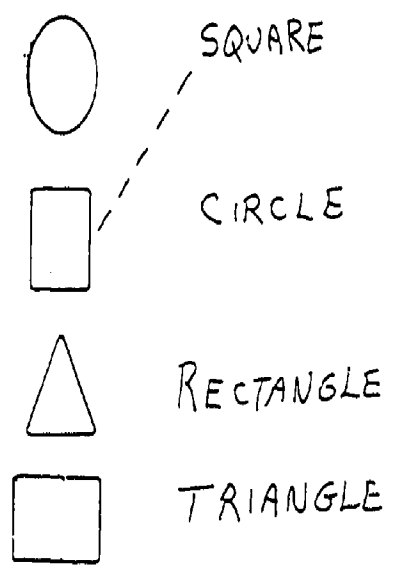

- Procedure:
- Take students on a "shape walk". Encourage them to notice the different kinds of shapes of things in their environment.
 - Have students list on experience chart the objects and their shapes seen on the walk.
 - Have students draw pictures of things seen on the walk.
 - Teacher passes out various materials to students and asks them to see how many different ways they can make shapes.

Mini-Test: "Match Geometric Shapes and Word Names:
Group Size: entire class
Materials: shape exercise as below
Procedure:
 . Ask each student to match geometric shapes and word names.

Henderson, George L., Let's Play Games in Mathematics, Vol. 3, National Textbook Co., 1970, pp. 23-24

District Resources

Title: Shapes
Group Size: entire class
Materials: various materials

- Procedure:
- Teacher passes out various materials and lets students make as many shapes as possible from them.

Suggested Activities: Grade(s) <u> K </u>	Suggested Monitoring Procedures	Possible Resources
---	---------------------------------	--------------------

Title: Shape Lunch
Group Size: small or large groups
Materials: luncheon food (cottage cheese, lunch meats, cheese, bread or biscuit dough, cookie cutters, knives, rolling pin, paper plates, popsicle sticks, ice cube trays, fruit juice)

Procedure:

- . Have a small group of students roll out biscuit dough and use the flat shapes to cut the dough.
- . Give another group dull knives and suggest they cut cheese and luncheon meat into circles, squares, triangles and rectangles.
- . Teacher places a scoop of cottage cheese on each plate, noting that the scoop is in the shape of a circle.
- . Have part of the class prepare popsicles in ice cube trays for dessert.

District Resources

Suggested Activities: Grade(s) 2-4

Title: Birthday Graph
Group Size: entire class
Materials: record sheet, graph paper with 1/2" squares, crayons, colored pencils or felt tip pens, student folders or other record of student's birthday

- Procedure:
- . Teacher lists the 12 months on the record sheet.
 - . Teacher asks students their birthday month.
 - . Teacher records by grouping students' names according to their birthday months.
 - . Constructing the graph: Using the long side as the bottom of the graph paper, put the scale for the number of students having a birthday per month on the left side; put the months of the year across the bottom, spacing evenly across the page.

Suggested Monitoring Procedures

Teacher gives students bar graph together with questions about the interpretation of the graph. Number of correct answers indicates ability to interpret graph.

Teacher gives students a set of data and a blank sheet of graph paper. Instruct students to construct a bar graph using given data. Check for correctness (compare with a model graph).

Teacher gives students a topic for a graph (e.g., numbers of different reading books in the room). Ask students to collect data and make graph. Compare with model graph for accuracy.

Post a bar graph with some "high interest" information in a convenient place. Observe which students take time to examine the graph and which do not.

District Resources

Suggested Activities: Grade(s) <u>2-4</u>	Suggested Monitoring Procedures	Possible Resources
---	---------------------------------	--------------------

- . Construct the bars for the graph either by:
 - (a) Writing the name in squares above the month (1 square per name), lightly coloring those squares with name in them, or,
 - (b) Coloring one square for each student who has a birthday in a given month.

Variation:

- . For additional practice, students can construct another graph, ordering the months from the most number of birthdays to the least number of birthdays or vice-versa.
- . Other ideas for graphing:
 - Number of students having different hair color.
 - Number of students having different color eyes.
 - Number of cars of different make or color in teachers' parking lot.
 - Number of books read by students in a month.
 - Number of one-syllable, two-syllable or three-syllable words on a page.
 - Pets.
 - Game scores.
 - Time spent during silent reading, etc.

Title: Pet Graph
Group Size: large group
Materials: flannel board, small colored flannel-board squares, animal cutouts, yarn

Students make a picture graph of the days they are present in school.

circles, magic marker pen, yarn

Procedure:

- . Teacher directs each student to cut a 9" circle and write his/her name in the circle (teacher may have to write the names for some students).
- . Teacher attaches yarn to each circle and places the circles on the bulletin board to represent the birthdays for that month. Don't forget the summer birthdays.

JUNE BIRTHDAYS

District Resources

Student Learning Objective(s) The student knows the names of the months in sequence.

State Goal

Title: Calendars
Group Size: entire class
Materials: 12"x18" sheets of colored construction paper, ditto master of calendar outline, variety of art materials dependent upon selected art motif for each month

Mini-Test: "Months"
Group Size: one student
Procedure:
 . Student recites names of months from January to December to teacher.

Thyer, Dennis, Teaching Mathematics to Young Children, Holt, Rinehart and Winston, 1971, pp. 168-169

Procedure: (this is a continuing project)

- . Teacher directs students to fill in the calendar outline with month, year and days of week. Students fill in numerals. (Check to see that students begin the month on the correct day.)
- . Teacher attaches calendar form to lower part of 12"x18" colored paper. Use the remaining area for design representing specific month.

Examples: Art Motifs:

- Sept.: sponge paint
autumn tree
- Oct.: torn paper (black)
Halloween shapes
on orange and
black
- Nov.: trace hand for
body of turkey on
yellow

Suggested Activities: Grade(s) <u>2</u>	Suggested Monitoring Procedures	Possible Resources
---	---------------------------------	--------------------

Title: Month Riddles
Group Size: small group
Materials: paper, pencil

- Procedure:
- . Teacher directs groups to write riddles for each month of the year, using representative holidays as clues (weather or special events are also good clues).
 - . Exchange riddles among groups.

Title: Birthday Graph
Group Size: individual
Materials: graph paper (1/2") for each student, pencil, crayon

- Procedure:
- . Teacher surveys class to determine how many birthdays are in each month.
 - . Teacher organizes data and makes a bar graph showing number of birthdays per month.
 - . Teacher directs students to copy the bar graph on their sheets.

Title: Model Clocks
Group Size: entire class
Materials: paper plate for each student, blue paper strips, red paper strips, 1 brad for each student, crayons or pencils

Mini-Test: "Clock Hands"
Group Size: one student
Materials: clock
Procedure:
 . The student orally explains that the short hand is the hour hand and the long hand is the minute hand.

Thyer, Dennis, Teaching Mathematics to Young Children, Holt, Rinehart and Winston, 1971, pp. 157-158

Procedure:

- . Teacher cuts red strips to represent hour hand on clock, or directs students to cut the strips a certain length (short).
- . Teacher directs students to mark numerals on the paper plate (demonstrating to students how to do it).
- . Teacher directs students to attach red strip to paper plate.
- . Students practice telling time by hour, moving hour hand to the different positions.
- . Teacher then directs students to place blue strips on clock (representing minute hand).
- . Proceed to practice with minute hand; then with both hour and minute hands.

Procedure:
. Tell how much money:

Silvey, Linda, Money Matters, Creative Publications, 1973, pp. 7-9
Coin stamps and stamp pad

Record Sheet	
	Amount
1. _____	
2. _____	.70
3. _____	
4. _____	
5. _____	

District Resources

Procedure:
 . Teacher instructs students to count money shown on a card.
 . The student records whether the money shown on the card has the same value as a dollar or not, with a yes or no on the appropriate line. If the answer is no, the student puts down the value of the money on the card.

Suggested Activities: Grade(s) 2-3

Suggested Monitoring
Procedures

Possible Resources

Title: Dollar Exchange
Group Size: 2-4 or more
Materials: play "coins", enough to include
100 pennies, 50 dimes, 50 nickels,
25 quarters, 24 half-dollars, 25
dollar bills; a box (for bank); a
spinner marked as follows:

Procedure:

- . Teacher places coins in a bank.
- . Students take turns spinning the spinner.
- . The number a spinner points to indicates the amount of money a player can withdraw from the bank.
- . When players have accumulated a dollar in change, they may exchange the coins for a dollar bill.
- . The player with the greatest number of dollar bills at the end of the game wins.

Student Learning Objective(s) The student values estimation as a useful skill in money measurement. State Goal

District Goal

Program Goal

Related Area(s) _____

Suggested Activities: Grade(s) 2-3 Suggested Monitoring Procedures Possible Resources

Title: Best Estimator
Group Size: 2 students
Materials: picture of items to purchase that have been priced

- Procedure:
- . Each student chooses one of the priced items in the picture (see other side).
 - . Each then estimates the total cost of the items that were chosen and writes the estimate on a piece of paper. The estimate is to the nearer dollar.
 - . The two students work together to find the exact total. A point is scored for each player whose dollar estimate was correct.
 - . Play again, choosing two items each. Score 2 points for each correct estimate.
 - . Play again, choosing three items each. Score three points for each correct estimate.
 - . Start over with one item each.
 - . The student who is first ahead by four points is the winner.

K 1 2 3 4

The student knows:

- . the term "centimeter" refers to a metric unit of linear measurement. 329- 1
- . the term "inch" refers to a customary unit of linear measurement. 333 1
- . the term "meter" refers to a metric unit of linear measurement equal to 100 centimeters or 10 decimeters. 335- 2
- . the term "foot" refers to a unit of linear measurement equal to 12 inches. 337- 2
- . the term "yard" refers to a unit of linear measurement equal to 3 feet or 36 inches. 339 2
- . the term "half-inch" is a unit of linear measurement. 341- 3
- . the term "quarter-inch" is a unit of linear measurement. 343 3
- . two quarter inches equal one-half inch. 343 3-4
- . four quarter inches equal one inch. 343 3-4
- . four quarter inches equal two half inches. 343 3-4
- . the term "kilometer" is a metric unit of linear measurement. 345 3-4
- . the term "perimeter" refers to the linear measurement around a given space. (geometry) 347-3-4
- . the term "mile" is a customary unit of linear measurement used to indicate distance. 355 3-4

The student is able to:

- *. compare size using the following terms: longer, smaller, largest, smallest, taller, tallest, longest, shortest, same. 349-K-1
- *. measure an object(s) using centimeters. 329- 1
- *. measure the length of an object(s) using inches. 333 1
- *. measure length using a meter stick. 335- 2
- *. measure length using a foot ruler. 337- 2
- *. measure length using a yardstick. 339 2
- *. estimate lengths. 351-2-3
- . measure a specific length to the nearest half-inch. 343 3-4
- . measure a specific length to the nearest quarter-inch. 343 3-4
- . measure the perimeter of a simple geometric figure. 347 3-4
- . compute distance in miles. 355 3-4

The student values:

Activity(s)

Activities: Grade(s) 2-3

Suggested Monitoring Procedures

Possible Resources

Size: entire class
Materials: a strip of cardboard or a string that has been pre-measured to equal foot, yard or a meter, a record sheet, a set of objects (or objects in the classroom)-- can list some on the chalkboard

Use the record sheet in 3 columns shown, putting length of the cardboard or string in the blank:

Longer than	About the same as	Shorter than
_____	_____	_____

Use the objects in the set or observing objects in the room, estimate if they are longer than, the same or shorter than, the model. Record estimates in the appropriate columns on the record sheet.
 Students, one at a time, or in small groups (or pairs), can use the model to demonstrate that an object is longer than, about the same or shorter than the model. Mark mistakes or make corrections.

Teacher observes success during the listed activity.

Keep a record of success in doing the activity on several different occasions.

Mini-Test: "Estimating Lengths"

Group Size: one student

Procedure:

- Ask student to find objects that he/she estimates to be the same or different in length.
- Ask student to tell why these objects are the same or different and determine the logic of the answers.
- Ask student to estimate distances between two places in the room, and tell why he/she estimates a difference.
- Determine whether estimates and reasoning are logical.

Title: Discover My Pattern

A cubit is the distance from the tip of your middle finger to your elbow when your fingers are spread out as far as possible.

Group Size: one, small group or class

Materials: paper, pencil

Henderson, George L., Let's Play Games in Mathematics, Vol 2., National Textbook Co., 1970, pp. 20-21, p. 30

Procedure:

- . Choose 10 objects to measure and record your answers on a chart like this:

Object	Number of Spans	Number of Cubits
Door		
My Desk		
Etc.		

District Resources

- . Find a pattern in your chart.
- . If you can find a pattern, what does it mean?

703

703

Student Learning Objective(s) A. The student knows the term "mile" is a customary unit of linear measurement used to indicate distance. B. The student is able to compute distance in miles.

Suggested Activities: Grade(s) 1-3

Suggested Monitoring
Procedures

Possible Resources

Title: Cups and Quarts

Group Size: individual, small groups

Materials: cup and quart measures, beans, rice,
etc.

Procedure:

- Teacher instructs students to fill the cup with beans, then pour them into the quart measure. Students continue to do this, counting the number of cups used to fill the quart measure.
- Use the same procedure for above questions.

Note: Students need time by themselves, filling and refilling containers of many sizes, when developing concept of capacity. It is recommended that several jars or bottles and materials like beans, rice, etc., be available to students for practice in comparing and predicting capacity of containers.

Title: Cups, Pints, Quarts, Gallons
Group Size: individual or small group
Materials: paper, paste, magazines, label

Observe and record the success of the students as they do the activities.

L-00360-P LAP
 ESD 109 collection

Procedure:
 . Students make a chart with 4 columns labeled:

Cup	Pint	Quart	Gallon
Coffee Tea	 Paint Thinner	 	Gasoline

. List things (words or pictures) that would usually be measured with the different measures.
Note: Before introducing this activity, ask students to check at home, in stores and neighbors' homes and with parents, etc., about liquids and container sizes. On the following day, have students make the charts, using knowledge gained out of school, along with labels or pictures of products which they were able to secure. Display charts around the room.

Suggested Activities: Grade(s) 2-3

Suggested Monitoring Procedures

Possible Resources

- Using five other containers, have students first estimate whether each container will hold less or more than a liter, or a liter exactly. Record on the record sheet. Students then check the estimates by following directions in the first paragraph.
- Using the plastic bucket or large pan and the liter measure, have students place a given number of liters of water in the large container, e.g., measure five liters of water into the bucket.

Title: Liter Measure
Group Size: entire class
Materials: 5 different containers (#10 can, dishpan, pail, large bowl, sink), one liter measure, water

Teacher observes the student as the measurement is being done.

Kids' Stuff Math

Procedure:

- Copy the following table:

Container	Estimated Number of Liters	Actual No. of Liters
#10 can		
Dishpan		

- Record your liter estimates.
- Have five different students fill each container using the liter measure. Students record to the nearest liter the actual number of liters.

Title: Measuring Activities
Group Size: 10 students at a time
Materials: 1 metric bathroom scale (for entire group)
 5 balance scales and metric weights
 5 cans of soup, corn
 5 tea bags
 10 oranges
 2 kg dried beans
 5 cans of coffee
 5 boxes of crackers
 5 bars of soap
 1 large box of laundry detergent
 5 boxes of cereal
 5 pennies
 5 large books

Teacher observation of individual student weighing objects

In small groups, have the student demonstrate ability to weigh objects, e.g., marbles.

Have students weigh several objects, recording the weights on a record sheet. Teacher checks sheet for accuracy.

Mini-Test: "Nearest Kilogram"

Group Size: one student

Materials: empty 3 lb. coffee can, water supply, kilogram weights, simple balance

Laycock, Mary and Watson, Gene, The Fabric of Mathematics (A Resource Book for Teachers), Hayward, California: Activity Resource, 1971, pp. 140-142

Metric Bathroom Scale

District Resources

Procedure:

Teacher directs students to weigh each object and record the weight:

Soup _____g
 Cereal box _____g
 15 beans _____g
 1 tea bag _____g.

Procedure:

Ask each student to fill the 3 lb. coffee can with water to determine its weight to the nearest kilogram.

Suggested Activities: Grade(s) 2-3

Suggested Monitoring Procedures

Possible Resources

. Teacher directs students to estimate the weight of the following objects, then weigh them:

	<u>Est.</u>	<u>Actual</u>
Can of corn	___g	___g
Crackers	___g	___g
10 pennies	___g	___g
1 orange	___g	___g
Can of coffee	___g	___g
1 large book	___g	___g
1 large book	___kg	___kg
Student	___kg	___kg

. Teacher directs students to measure out the following portions, then check for accuracy:

- (a) 1 kg of oranges
- (b) 500 g of laundry soap
- (c) 250 g of dried beans

---	---------------------------------	--------------------

Title: Grams
Group Size: entire class in groups of 2 or 3
Materials: Collect a set of the following for each group of 2 or 3 students:
 1 metric scale (a balance scale with weights, a kitchen scale or a combination of these scales as available)
 a variety of items to weigh such as:
 can of soup
 a book
 several coins
 a ruler
 bags of dried beans or pebbles, or paper clips
 an orange
 a pencil
 a tablet
 a ball of clay

Teacher observation of individual student weighing objects.
 In small groups, have the student demonstrate ability to weigh objects, e.g., marbles.
 Have students weigh several objects, recording the weights on a record sheet. Teacher checks sheet for accuracy.

Laycock, Mary and Watson, Gene, The Fabric of Mathematics (A Resource Book for Teachers), Hayward, California: Activity Resource, 1971, pp. 140-142

Centicubes

Mini-Test: "Gram Measures"
Group Size: one student at a time
Materials: 10 crayons, 10 pencils, chalkboard eraser, 5 pencils, simple balance, gram weights, chart to complete

District Resources

Procedure:
 . Teacher directs students to:
 (a) Weigh 10 of the objects and record the weight in grams. Make a record of your observations.
 (b) Take several objects not weighed before and:
 1. estimate their weight
 2. measure their weight
 3. make a record of the estimate and actual weight

Procedure:
 . Ask student to estimate the weight of each in grams and then to find weight of each.

Guess	Actual Weight

10 crayons
 10 pennies
 chalkboard eraser
 5 pencils

702

Suggested Activities: Grade _____

Suggested Monitoring
Procedures

Possible Resources

Est. Actual

3 g _____ g paper clip

_____ _____ g pencil

(c) Using beans, coins, paper clips or something similar, students:

1. Select an amount equal to a given weight; then weigh to see how accurate the estimate was.

Example:

Find 500 g of paper clips: Actual wt.

. Centicubes: Centicubes are a versatile and useful metric tool for primary students. Each edge is 1 cm, each surface 1 cm^2 ; volume 1 cm^3 ; weight 1 gram. The weight is surprisingly accurate. They come in 10 attractive colors, are durable, non-toxic, etc.

Title: Gram Measurements

Group Size: small group

Materials: various objects less than 50 g, 50 centicubes for each student

District Resources

Procedure:

. Teacher directs students to:

(a) Find 7 objects you estimate to be less than 50g

(b) Students complete the chart:

<u>Object</u>	<u>Est. Wt.</u>	<u>Measured Wt.</u>
---------------	-----------------	---------------------

giant can

paper clip

2 washers

(c) Put the objects in order, lightest first.

(d) Try again with 7 other objects, Teacher asks:
"Are your estimates improving?"
