ABSTRACT

In 1980, North Carolina's migrant education program adequately met legislative requirements and national program objectives: all local project evaluation reports indicated successful attainment of a majority of objectives. State priorities were met through implementation of approximately 60 projects conducted through local educational agencies. Program continuity was implemented through various strategies, including efforts to coordinate the North Carolina program with those in other states. Approximately 14,000 migrant students were served in more than 100 schools during the regular school term; 31 summer programs were offered for migrant students. Each project used teachers or paraprofessionals for supplementary individual or small group instruction in areas of deficiency. More children were served in 1980 than in previous years, and 15 new projects were initiated. Numerous staff development activities contributed to the success of local projects. Lack of suitable instructional space was the most common program weakness reported. Other problems included lack of trained personnel, lack of parental interest and involvement, and laxity in following requirements of the Migrant Student Record Transfer System. Project strengths included favorable teacher-pupil ratios, individualized instruction, and cooperation of other agencies in providing needs of migrant families. Tabular data and recommendations for state and local program management are included. (CM)

PREFACE

This is the fourteenth annual migrant education program evaluation report compiled by the North Carolina Department of Public Instruction. When the first of these evaluation reports was prepared, the state director of the migrant education program compiled a summary of information submitted by the LEAs. This compilation of information submitted to the U. S. Department of Education indicated that there were migrant education projects operating in 12 LEAs. These 12 projects served a total of 548 migrant children at an expenditure of \$120,545.

The years between that first report and this report have been years of growth in the program and service to migrant children. The number of LEAs conducting special programs for migrant children has increased by a factor of five. There are presently 63 LEAs in the state which are conducting migrant projects. More important than the number of projects operating in the state are the number of children being served and the level of service they are receiving. These aspects of the program have increased tremendously; for now we are reporting more than 13,000 children enrolled in the program, and expenditures have reached more than five million dollars.

Along with the growth of the program, changes in program administration and operation have taken place. Some of these changes involved the evaluation of the program. For two years the evaluation of the program was conducted under a contract with the Learning Institute of North Carolina. Following that it was carried out through an agreement between the migrant education section and the Division of Research in the Department of Public Instruction. Eventually the cycle made its complete round and the total responsibility of preparing the annual evaluation report was shifted back to the migrant education section where it was in the beginning.

This is the seventh year since the full responsibility of preparing the annual evaluation report was shifted back to the state migrant office. It is also the seventh year since the responsibility for preparing the local project evaluation reports was shifted to the local project director.

Information in this annual report relates to the 1979-80 school term projects and the 1980 summer projects. The information has been consolidated into one report in order to meet the federal requirements of an annual evaluation report. Every effort has been made to include all essential information while at the same time restricting the size of the report to that which is necessary to fulfill the federal requirements and make a maximum contribution to the improvement of future migrant education programs.

The contributions of Mary Clarke, Arch Manning and Dan Pratt are acknowledged with appreciation. It was through their careful review of local project activities, knowledge of the impact of the local projects on the education of migrant children, and analysis of the local project evaluation reports that determinations could be made relating to the degree to which the local projects met their objectives. They were also involved in selecting and describing the noteworthy and exemplary components of the projects in which they worked.

Special recognition is given to Y. A. Taylor for the outstanding job he did in compiling the information contained in this annual evaluation report. It was through his leadership and ability that the tremendous volume of information generated at the state level and in the 63 local educational agencies was collected, organized, consolidated and edited, then presented in a concise and meaningful report.

Gratitude is also expressed to Mrs. Beatrice Griner for her assistance in proof-reading the manuscript and to Mrs. Jewell Jeffreys for her work in typing, collating and binding the publication.

Robert E. Youngblood.

PROGRAM CRITIQUE

The priorities, in rank order, of the state migrant education program are:

1. Program continuity
2. Summer programs for interstate and intrastate migrant children
3. Regular school term programs for interstate and intrastate migrant children.
4. Staff development activities
5. Migrant Student Record Transfer System
6. Programs for formerly migratory children

These priorities are met through the implementation of approximately 60 projects which are conducted through local educational agencies. During the entire process related to delivering services to the migrant children, the state migrant office provides assistance and consultation. The major steps in providing educational services to the migrant include identification, recruitment, project development, project operation and project evaluation.

Program continuity ranks highest among the priorities in the North Carolina migrant education program. This priority was met through various strategies which included several efforts to coordinate the program in North Carolina with those in other states. The state was represented at the East Coast Regional Workshop at which 21 east coast states cooperated in the development of strategies to deliver some degree of continuum to the migrant child's instructional program.

Other examples of the interstate cooperation which have a bearing on the continuity of programs for interstate migrants can be cited as a result of the participation of the State Director and migrant staff personnel in national and regional conferences on migrant education.

Projects conducted during the summer for interstate and intrastate migrants have the second priority in the North Carolina migrant education program. During 1980 thirty one (31) LEAs offered services to these students. These projects had the following advantages over the regular school term projects: more adequate school facilities; better trained instructors; more available equipment and materials; more flexibility of scheduling; fewer curriculum restrictions; more positive community support, and more coordination with community agencies.

Regular school term projects are the third priority of the state migrant programs. Approximately 14,000 migrant students were served in 63 LEAs during the 1979-80 school year. These students were scattered throughout more than 100 separate schools. The mere logistics of delivering supplemental services to eligible students during the regular term is a determining factor of project design. Instructional services were rendered to students by all regular term projects. Each 1980 project used teachers or paraprofessionals (tutors/aides) for supplementary individual or small group instruction in areas of deficiency.

The majority of the projects emphasized remedial reading. Where well established Title I reading projects also served the migrant students, mathematics was a frequent offering. On the basis of needs assessment, projects provided instruction in social science and natural science in their offerings.

All of the local project evaluation reports indicated the successful attainment of a majority of their objectives (see Tables IX and X). This determination was based upon a large number of instruments which were used to document progress. Monitoring reports, achievement test scores, news releases, minutes of meetings, schedules of staff activities, and other instruments were all used to document the attainment of the project objectives.

Analysis of test results indicates an increase in achievement as compared to reported gains in previous years. It is apparent that much emphasis was placed on recruitment and enrollment of children in migrant education projects during 1979-80. There was an increase in the number of children served during both the regular school term and the summer term. This increase in enrollment was due in part to the initiation of fifteen new projects during the year.

During the regular school term some of the instruction was provided within the regular classroom. In most instances, however, the migrant teacher or tutor worked with individuals or small groups of students in areas set aside for this purpose. There was quite a range in the quality of facilities available for these activities -- from shared office space to elaborately equipped learning labs. Lack of suitable instructional space was the most common weakness reported in the program. Occasionally the time required for the tutor to travel between schools was reported as a weakness.

Other problems cited as deterrents to successful programs were the lack of trained personnel to work in the project, the lack of parental interest and involvement in the educational program for the children, and the laxity observed in following the procedures and requirements of the Migrant Student Record Transfer System.

Some clerks had a tendency to accumulate a large number of student records before transmitting them to the terminal operators. Some records were transmitted with careless errors and incomplete update information on academic and supportive services received by the children.

Factors most often mentioned as project strengths were favorable teacher-pupil ratios, individualized instruction, and the cooperation of other agencies in providing for the supportive needs of the migrant families.

The staff development activities sponsored by the state migrant office were a significant factor in the success of the local projects. During the regular school term, workshops were sponsored to improve the competencies of the teachers and tutors in the areas of reading and mathematics. The summer staff development efforts concentrated on reading, mathematics and cultural arts.

Other staff development activities sponsored by the state migrant office included sessions for record clerks and project directors in the procedures of the Migrant Student Record Transfer System.

In addition to the state-sponsored workshops, each LEA project included some locally planned in-service education for their staff. The end result of these staff development activities has been the improvement of the local projects and better services to the migrant children who have been enrolled in the program.

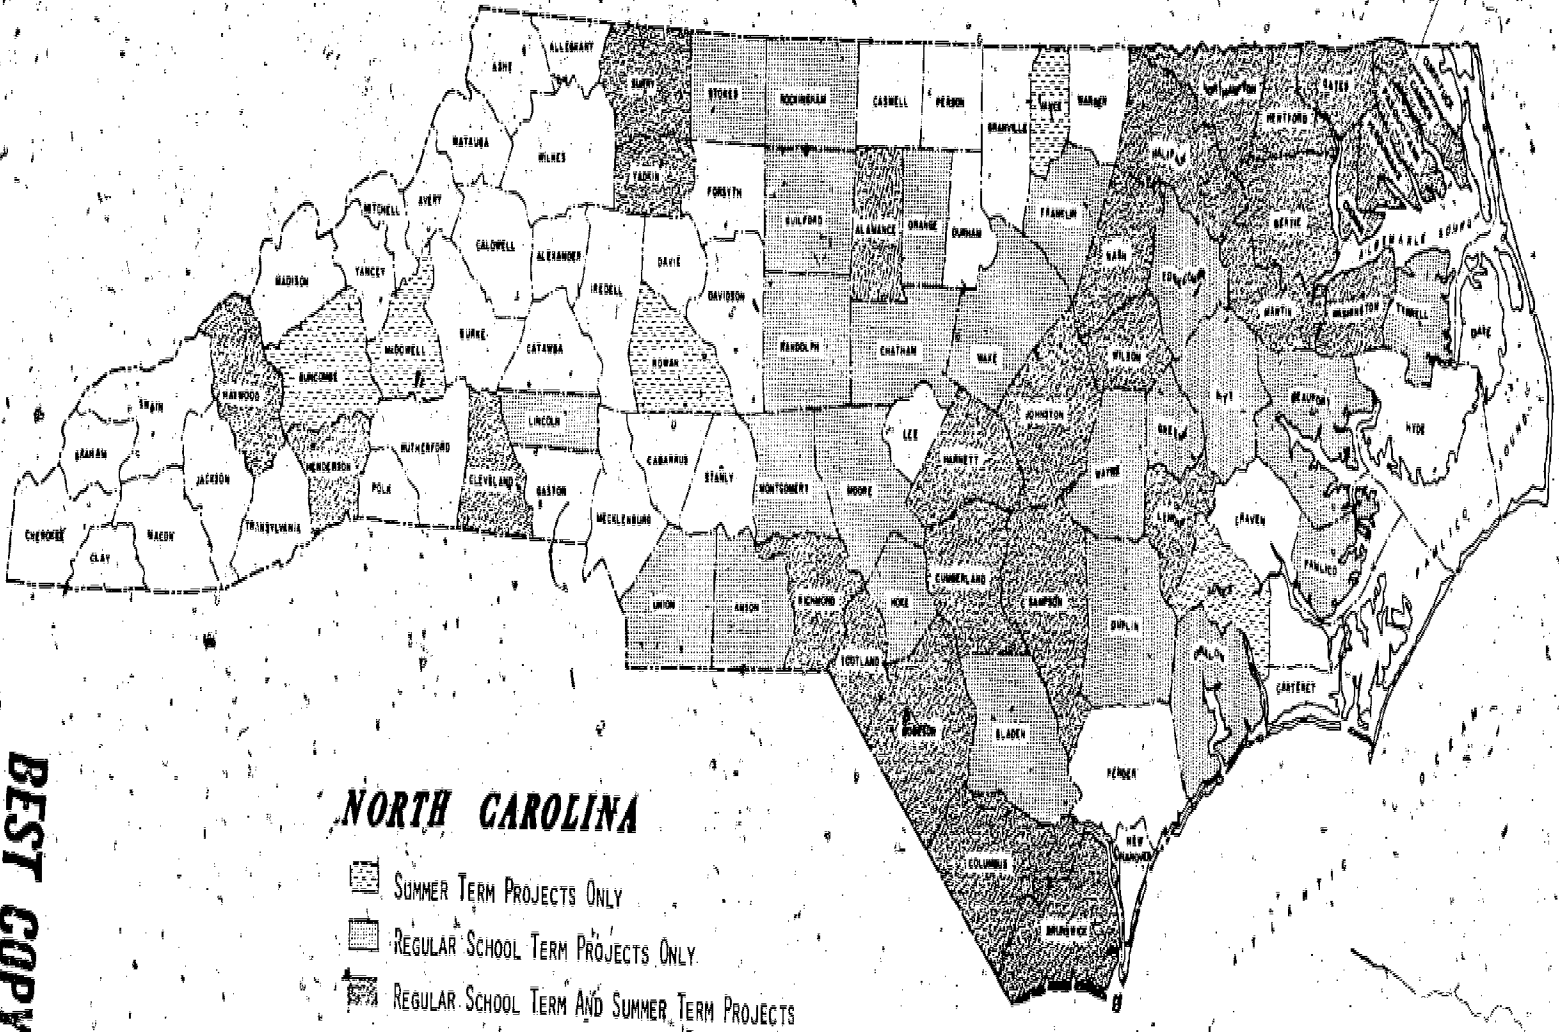

The cooperation between the State migrant office and the LEAs is one of the strong points of the program. The service provided through the migrant consultants has resulted in a strong bond between the SEA and the LEAs and an outstanding rapport with local project administrators and school officials. This understanding and cooperation has made it possible to bring about necessary changes in local project designs with a minimum amount of confusion and frustration.

One example of cooperation between the state migrant office and the LEA is through the use of cassette recordings of the highlights of the local evaluation reports. The local staff has an opportunity to respond to the comments made in the evaluation report and file these comments with the state office. This open line of communication and feedback system helps to strengthen the relationships between the SEA and LEA.

Another example of the cooperation between the state migrant office and the LEAs was the support of the State Migrant Parent Advisory Committee. This organization was formed during 1976 and has played an important role in gaining parent support for the program since that time.

One of the most significant accomplishments of the state program was the cooperation with other agencies to provide supporting services to the migrant education program. Through this cooperation the Migrant and Seasonal Farm Workers Association provided a limited number of personnel to work in the migrant education programs.

CHAPTER I

INTRODUCTION

For several years the evaluation of the North Carolina Migrant Education Program and its individual projects was done cooperatively by the LEA personnel and the state office. The LEA supplied the information on the local projects and the state office prepared both the individual local project reports (approximately 30) and the annual summary evaluation report of the total North Carolina migrant education program. From the very first year of the program involvement of the local project personnel has increased. By 1974 the primary responsibility for evaluating the local migrant projects became the responsibility of the local project directors. These local project evaluation reports were based upon the project objectives and the evaluation design approved in the local project application. The state migrant education section continued its responsibility of preparing the annual evaluation report for the state migrant program.

Although procedures have been subject to change, the goals of the evaluations conducted by the migrant education section have remained nearly constant. The first goal has always been to use evaluation procedures and findings to stimulate improvement in the educational offerings for the migrant children and youth who visit North Carolina. The second goal has been to collect and process all information necessary to fulfill federal and state evaluation requirements.

In previous years a significant number of local project personnel were used to assist in the evaluation of a project other than their own. Although this intervisitation among the projects provided some information which could be used in the evaluation report, its greatest benefits were in the staff development area and in the exchange of program information. Therefore, this practice of intervisitation as an evaluation tool was discontinued in 1975.

Although the total evaluation process is planned to support the first goal of evaluation, the delay in preparation and printing of the final report makes it difficult to implement immediate changes in project operations based upon the published findings. On-site conferences provide immediate feedback to the local project directors, however, and recommendations for strengthening the project may be transmitted even before the evaluation report is completed.

Since there is some delay in the production of the annual evaluation report, and since a very small percentage of the North Carolina project staff members work in the migrant program on a year-round basis, a dissemination technique was needed so that all staff members would have the opportunity to become aware of the results of the project evaluation without an extended delay. Since 1972, this need has been satisfied through the use of cassette tapes. A tape containing the highlights of the project evaluation is delivered to the local project director or LEA contact person who then assembles those members of the migrant staff who were employed in the migrant project. They listen to the tape and record their own reactions to the evaluation report. This procedure aids in dissemination of information and provides feedback to the state office.

The LEA project director has ultimate responsibility for collection of much of the evaluation data which is required in order to satisfy regulations and guidelines. Consequently, each director is responsible for the accurate completion of enrollment forms, migrant student record transfer system information, test data, and the annual project evaluation report. This information is submitted to the state migrant education office where information is summarized and data is analyzed. Copies of the annual state evaluation report, along with appropriate documentation, are bound and submitted to the U. S. Office of Education upon request.

CURRENT EVALUATION PROCEDURES

Prior to beginning evaluation planning a set of state program objectives was developed. This set of objectives supports the national program goals of migrant education while specifically reflecting North Carolina emphasis. The local project objectives included in the local project applications were developed in harmony with the state program objectives while reflecting specific local emphases and project activities.

The consultants who assisted the local project personnel in the preparation of their project applications emphasized two standards for LEA objectives: (1) local project objectives should be supportive of the state objectives, and (2) they should be measurable by an objective instrument or a recognized subjective technique.

The local project evaluation reports were prepared by the local project directors who submitted them to the state migrant office. The assigned state consultant for each project reviewed the evaluation report and other information on file in the state office relating to the project. A judgement was made as to the degree to which each project objective was achieved and this judgement was compared with that contained in the local evaluation report. Any discrepancies between the two assessments were noted.

During the operation of the summer migrant projects, the state continued to conduct two full-day on-site visits to each project during the peak operation periods. These evaluation visits were conducted by the state consultants, and findings made during the visits were shared with the project staff.

The annual state evaluation report was prepared after collecting appropriate data from the Migrant Student Record Transfer System and reading and processing all available information from local projects. Among the most significant sources of information were project evaluations, test data and monitoring reports. As in previous evaluations, the basis for the evaluation was the comparison of program (and project) outcomes with the objectives approved in the project applications.

Attainment of the state objectives is dependent, at least in part, upon the successful attainment of the objectives of the local projects. Attainment of the state objectives is described in Chapter II.

INTERAGENCY COOPERATION

A part of the effort to serve migrant children North Carolina is the cooperation of the State Education Agency with other agencies which have responsibilities for serving migrants. The Division of Migrant Education is represented on the State Advisory Committee on Services to Migrants. This organization meets six times a year for the purpose of sharing information and planning effective, cooperative activities within the respective role of each member agency in order to meet more effectively the needs of the migrant families who come to North Carolina to harvest our crops. The director of the state migrant education program serves as a member of this interagency committee.

NATIONAL PROGRAM GOALS

Goals for the national migrant education program are based on legislative mandates to establish or improve supplemental programs of instruction and supportive services for the children of migratory workers in agriculture and fishing. The mobility of migratory children requires agreement among states in the development of comprehensive national goals. Each state is responsible for developing a state plan for migrant education which reflects the national program goals in order to assure educational continuity through coordination of programs and projects among the states. Local project objectives provide a base for project activities which fulfill state objectives and national goals.

The national goals for migrant education assist the states in the development of their individual plans for migrant education in keeping with requirements of the migrant program regulations. They are extremely important in assuring educational continuity and coordination and provide the foundation for the total operation of the migrant education program. State objectives developed with these goals in mind; and the activities of the local migrant projects lend their support to them.

The following is a statement of the national goals for migrant education. The State Education Agency will provide:

1. Specifically-designed curricular programs in academic disciplines and vocational education based upon migrant children's assessed needs.
2. Success-oriented academic programs, career options and counseling activities, and vocational skill training that encourage migrant children's retention in school and contribute to success in later life.
3. Communication skills programs which utilize migrant children's linguistic and cultural backgrounds.

4. Supportive services that foster physical and mental well-being, when necessary for migrant children's successful participation in the basic instructional programs, including dental, medical, nutritional, and psychological services.
5. Programs developed through interagency coordination at the federal, state, and local levels.
6. A component for meaningful migrant parent involvement in the education of their children and in which the cooperative efforts of parents and educators will be directed toward the improvement of the migrant children's academic and social skills.
7. Staff development opportunities that increase staff competencies in the cognitive, psychomotor and effective domains.
8. A component to properly identify and enroll all eligible migrant children.
9. Preschool and kindergarten programs designed to meet migrant children's developmental needs and prepare them for future success.
10. For the establishment of dissemination policies and procedures for the development and evaluation of dissemination materials which will promote an awareness of:
 - A. Program intent;
 - B. Intra-and interstate program development;
 - C. Contribution of migrants to the community; and
 - D. Total effect of the program.
11. Assurance that sequence and continuity will be an inherent part of the migrant child's total education program through:
 - A. The development of a system to facilitate the exchange of methods concepts, and materials; and
 - B. The effective use of the MSRTS for inter-and intrastate communication in the exchange of student records.

STATE OBJECTIVES

In developing projects at the local level, each LEA is free to establish its own project objectives, but is held responsible for supporting the state objectives which are as follows:

1. During the 1979-80 program year the SEA will assist in the identification and enrollment of migrant children and youths in the migrant education projects as indicated by a record of student enrollment and the establishment of at least 10 new projects.

2. During the 1979-80 program year the SEA will assist in the development of programs of instruction in the academic disciplines according to the assessed needs of migrant children as indicated by a record of technical assistance provided to the LEAs.
3. During the 1979-80 year the SEA will promote activities designed to advance the migrant child's social growth and group interaction skills as indicated by the inclusion of these activities in at least 50% of the local projects.
4. During the 1979-80 year the SEA will provide for a program of supporting services in the areas of medical, dental, nutritional, and social services for migrant children as indicated by the inclusion of these activities in at least 50% of the local projects.
5. During the 1979-80 year the SEA will provide technical and consultant services in the planning, operation, and evaluation of local migrant projects as indicated by a record of at least two monitoring visits to each local migrant project.
6. During the 1979-80 year the SEA will provide for the extension of total services to migrants through interagency cooperation and coordination as indicated by a record of participation in at least two cooperative projects with other agencies and organizations.
7. During the 1979-80 year the SEA will provide supplementary programs of instruction to improve the occupational skills of migrant youths as indicated by the inclusion of these activities in at least 25% of the local migrant education projects.
8. During the 1979-80 year the SEA will promote the active involvement of migrant parent advisory councils in the local migrant education projects as indicated by a record of at least two meetings of the State Migrant Parent Advisory Committee.
9. During the 1979-80 year the SEA will cooperate in the interstate exchange of student records through the Migrant Student Record Transfer System as indicated by a record of at least 90% accuracy in transmittals by the MSRTS terminal operators.
10. During the 1979-80 year the SEA will provide opportunities for improving staff competencies in the use of innovative and effective teaching techniques through preservice and inservice education as indicated by a record of at least 5 workshops conducted by SEA personnel.
11. During the 1979-80 year the SEA will promote interstate cooperation and program continuity for migrant children as indicated by participation in at least 3 national or regional program activities.
12. During the 1979-80 program year the SEA will provide opportunities for supporting personnel to improve their competencies through appropriate training as indicated by a record of at least 5 staff development activities.

13. During the 1979-80 program year the SEA will evaluate the academic and social progress of migrant children in the local projects on the basis of objective and subjective data as indicated by a summary of test data attached to the State Annual Evaluation Report.
14. During the 1979-80 program year the SEA will promote fiscal management procedures commensurate with legislative requirements and program guidelines as indicated by information derived from the state consultants' monitoring reports.
15. During the 1979-80 program year the SEA will provide for appropriate dissemination of program information as indicated by the publication and distribution of at least 2 newsletters.

PRIORITIES OF THE STATE PROGRAM

The priorities of the state migrant education program are as follows (listed in descending order):

1. Program continuity
2. Summer programs for interstate and intrastate migrants
3. Regular school term programs for interstate and intrastate migrants
4. Staff development activities
5. Migrant Student Record Transfer System
6. Programs for formerly migratory children

CLASSIFICATION OF MIGRANTS

For purposes of this report the migratory children are classified as interstate, intrastate and formerly migratory. These categories of migratory children are defined as follows:

INTERSTATE MIGRANT - A child who has moved with a parent or guardian within the past year across state boundaries in order that the parent, guardian or other member of his immediate family might secure temporary or seasonal employment in an agricultural or fishing activity.

INTRASTATE MIGRANT - A child who has moved with a parent or guardian within the past year across school district boundaries within a state in order that the parent, guardian or other member of his immediate family might secure temporary or seasonal employment in an agricultural or fishing activity.

FORMERLY MIGRATORY CHILD - A child who has been an interstate or intrastate migrant as defined above but who, along with his parents or guardian, has ceased to migrate within the past five years and now resides in an area in which a program for migratory children is provided.

IDENTIFICATION AND RECRUITMENT

Identification and recruitment of students for migrant education projects is extremely important. Adequate time for travel and an aggressive school employee seem to be key ingredients. In many projects the Rural Manpower Service representative is quite helpful. It should be recognized, however, that many eligible migrants are not associated with crews which are registered with the Rural Manpower Service. In these cases it is the responsibility of the LEA to use any or all of the other resources available to recruit and enroll the eligible migrant children. Since there are no guarantees that excellent recruitment efforts will result in enrollments, it is necessary to emphasize recruitment on all occasions.

PROGRAM DEVELOPMENT

Prior to the beginning of the 1979-80 school term and again before the beginning of the 1980 summer migrant projects, state migrant education consultants and the local education agencies having or expecting an influx of migrant children made a survey within the LEAs and gathered data from available sources in the local unit to determine the number of eligible migrant children who might be enrolled in an educational program. After this information was compiled, a consultant from the Division of Migrant Education met with LEA personnel and assisted in developing the project proposals to be carried out by the local units. The project activities were based upon an assessment of the needs of the migrant children identified, programs already in operation in the LEA which had a bearing upon these needs, and availability of personnel to conduct a successful project. Objectives for each project were developed so that some measure of the impact of the migrant education project could be determined.

Development of the project application included consideration of evaluation design and plans for disseminating project information.

Regular school term projects were developed so that they would supplement the services which were available to the migrant children from the regular state supported school operations, local sources and other federal programs. Activities were planned to meet the special needs of the migrant children which were not being fully met.

Summer projects for migrant children were generally the only school programs in operation during the summer months. Accordingly, they could focus directly on the most urgent needs of the migrant children. They emphasized language arts and mathematics but also provided experiences and activities in cultural enrichment, development of positive self-image and the improvement of physical health and emotional maturity.

STATE PROGRAM MANAGEMENT

After the project activities and project budget were developed, the application was submitted to the state migrant office where it was reviewed by the fiscal affairs section and an educational reviewing committee. Modifications

were made if necessary and the applications were approved and funded. The project review and approval in the state migrant office were generally accomplished within a few days from the date the project was received.

The resulting basic pattern of services to migrant students was relatively stable, with the instructional services in both regular term and summer projects responsive to the identified needs. Regular term projects always supplemented the state curriculum and were generally planned while keeping in mind Title I services available to eligible migrants. Summer projects were considerably more inclusive, especially in the area of supportive services. Vocational training and exposure to career information formed the core of summer school offerings for migrant students of secondary school age.

During the operation of the projects by the local school officials, a consultant from the Division of Migrant Education with assigned responsibilities made periodic monitoring visits to the LEA. For summer term projects there was a minimum of two monitoring visits in each project, and each regular school term project was monitored at least three times. The purpose of the monitoring visits was to check on the effectiveness of recruiting efforts, review administrative requirements and procedures, evaluate the instructional program, and encourage the use of all available resources in providing for the needs of the migrant children.

During the 1979-80 school year, migrant education projects were conducted in sixty-three (63) local school administrative units (see Table I). Of these, thirty-two (32) did not operate summer migrant education projects for various reasons; insufficient concentration of migrants in the area during the summer, lack of available qualified staff, etc.

NEW PROJECTS

In 1980, the joint LEA-SEA surveys resulted in the establishment of fifteen new projects. Some of the areas showed no concentration of migrant families; in others there were strong indications that significant numbers of migrants were or would be in the area. In some instances, the state migrant education office was unable to prevail upon the local school officials to establish a program to serve the eligible children. Figure I indicates the effectiveness of the surveys in identifying the presence of migrant children and establishing projects to serve them.

The fifteen new projects developed in North Carolina this year resulted from LEA-SEA surveys. Projects were planned, funded and initiated in Anson, Buncombe, Cleveland, Franklin, Jones, McDowell, Onslow, Randolph, Rowan, Stokes, Union and Vance counties and Fairmont, Kings Mountain and Reidsville City school districts.

STAFF DEVELOPMENT

The state of North Carolina was represented at the East Coast Regional workshop in Philadelphia, Pennsylvania in February, 1980. Individuals at this workshop participated in activities designed to provide interstate continuity

in the education of migratory children and greater efficiency in the administration of migrant education programs. North Carolina migrant education program personnel presented six different topics during fifteen of the sessions at this regional workshop.

One of the staff development efforts undertaken by the State migrant office was the upgrading of teaching skills in reading and mathematics. Two workshops in each subject area were conducted by subject matter specialists. More than two hundred teachers and aides attended these workshops which were conducted in Fayetteville and Williamston.

The staff development activity which affected the greatest number of migrant staff members in North Carolina was the three-day workshop conducted at Fayetteville, North Carolina. More than 400 professional and para-professional local migrant project staff members from the LEAs conducting summer projects were in attendance. The workshop emphasized the procedures for entering skills on the students' transfer records and the identification and recruitment of eligible migrant children into the projects. Instruction was also provided in the teaching of reading, mathematics and the cultural arts.

The workshop was planned by the State migrant staff with consultant help from local project personnel. Specialists and consultants from the Migrant Student Record Transfer System, were used as consultants and discussion leaders in the workshop.

The state migrant staff evaluated the effectiveness of the workshop. It was the opinion of the staff, based upon their own observations and the reactions and comments from workshop participants, that the workshop was an outstanding success.

STATE PROGRAM EMPHASIS

The state migrant office continues to give attention and supervision to program management, local surveys to identify migrant children, monitoring of local projects, staff development activities, parent advisory committee functions, and assessment of administrative effectiveness. Efforts and attention in these areas have resulted in the most effective migrant program ever to be conducted in North Carolina.

CHAPTER II

FINDINGS

CHILDREN SERVED

During the 1979-80 school year migrant education projects were operated in 63 local educational agencies. These projects enrolled 2,129 interstate migrants, 2,174 intrastate migrants, and 9,499 formerly migratory students.

Thirty-one local education agencies operated migrant education projects during the summer of 1980. Enrollment in these programs included 1,271 interstate migrants, 786 intrastate migrants and 3,085 formerly migratory students.

Of the 18,944 children served under this program during the 1980 fiscal year 3,400 were interstate migrants, 2,960 were intrastate migrants and 12,584 were formerly migratory. Enrollment figures indicate that a larger percentage of interstate migrants were served during the summer, and enrollment of intrastate migrants was higher during the regular school term. Secondary school enrollments were higher during the regular school term. This is probably because the secondary school youths are involved in farming operations during the summer and choose not to enroll in a school program.

Information extracted from the state testing program indicates that during the regular school term, 55.6% of the migrant children were black, 34.8% were white, 17.9% were American Indians and 1.7% were Hispanic. None of these children were enrolled in non-public schools. All the migrant education projects in North Carolina were operated through the public schools.

GRADE PLACEMENT

Grade placement for secondary school students in summer migrant projects was no problem since the activities were essentially ungraded. Students from ages 14 to 20 received the same vocational and cognitive instruction. In the regular school term programs the children in both the elementary and secondary schools were placed in classes with other children according to their ages and previous progress as indicated by school records or assessments conducted by the teacher.

During the summer projects the local project administrators generally placed the elementary school children in groups based upon age, physical maturity and emotional development according to the teacher's best judgment and available records. Since the instruction in the summer projects was largely individualized, there was considerable range in grade placement, and instruction within each group was based upon age, remedial needs, physical development and peer associations.

INSTRUCTIONAL ACTIVITIES

Projects were conducted for migrant children at both the elementary and secondary school levels. While most of the regular school term programs were directed toward elementary school children, there were a few secondary school students enrolled in the programs. Instruction for these students was directed primarily toward meeting their specific needs as identified in the individual needs assessment.

The emphasis in the regular school term projects was in supplementing and reinforcing instruction in language arts and mathematics for elementary school children. Supportive services in these projects were held to a minimum since these needs were generally taken care of through other sources of funding. A minimal amount of health and social services were provided, however, when other sources of funding were inadequate or unavailable.

During the regular school term the instructional phase of the migrant projects was essentially tutorial in nature. Teachers and aides were employed to work with the migrant children on an individual basis. The classroom teacher assessed the deficiencies of migrant children and prescribed, sometimes in combination with the migrant teacher, the instruction to be performed by the tutor.

As far as possible, the summer term projects were planned so that they would meet the primary instructional needs of the students as well as their secondary supportive needs. Secondary school students were involved in prevocational and occupational instruction, while the primary emphasis in the elementary school was in language arts, reading and mathematics. All projects recognized the need for recreation and the improvement of self-image.

During the summer migrant projects the instruction varied from tutorial to large group activities. The summer migrant projects were conducted at school sites and the children were transported to the school in school buses. Most of the instruction was in small groups or on an individualized basis. Some activities were suited to large group instruction.

In the regular school term projects there was considerable coordination between the migrant project activities and other school programs. Since migrant projects are typically small, Title I directors are often responsible for the coordination and administration of the migrant program. Title I also supports the migrant program through the local inservice activities as well as health services when these services are provided by Title I. In all projects the locally funded supporting services are available to the migrant students.

Except for migrant education projects, summer school operations are relatively rare in North Carolina. Three projects, Camden County, Haywood County, and Pasquotank County did operate Title I Programs. Basically, however, program coordination during the summer was limited to the provision of facilities, equipment, and materials, some training and services by LEA personnel who are employed 12 months, and the involvement of the school principals.

SUPPORTING SERVICES

During the regular school term, supporting services were severely limited because of the emphasis on instruction to supplement existing programs and the conscious effort not to supplant any available services with migrant funds.

Summer migrant projects were generally the only activities in operation in the LEAs, making it necessary for the migrant project to place more value on the supporting services required in order to make the project successful. In most cases the summer migrant projects provided transportation, food services, health services and recreation. A majority of the projects also provided some clothing. In some cases the clothing was donated by social service organizations and in other cases it was purchased with project funds.

One of the state services which supports the successful operation of the migrant program was the record transfer system. Each LEA participated in the system by sending student data to the teletype terminal operators for transmission to the Migrant Student Data Center in Little Rock, Arkansas.

The Northeast Regional Education Center served as a support base for the migrant education projects. In addition to serving as the teletype terminal location for the Migrant Student Record Transfer System, it also serves as a repository for professional education films which were available on a free loan basis to LEAs for use in their migrant education staff development efforts.

The purchase of equipment under the migrant project was held to a minimum. Only that equipment which could be shown to be essential to the success of the instructional program was approved for purchase. Each LEA was required to maintain an inventory of equipment purchased under previous migrant projects. Title to all equipment was with the state migrant office, and it was understood that items of equipment would be transferred from one LEA to another when they were no longer used for the purpose for which they were intended in the LEA which purchased them.

COORDINATION WITH OTHER PROGRAMS

Throughout the migrant education projects in North Carolina there was a high degree of coordination and cooperation with other agencies. This was strongly encouraged through the regular meetings of the State Advisory Committee on Services to Migrants. During 1980 the state migrant office was represented on this state-wide interagency coordinating committee. Other agencies represented on this committee and a brief description of the services they provided to migrant families are as follows:

Farmers Home Administration - Provides supervised credit to improve farm dwellings and promote economic development of the rural population.

- U. S. Department of Labor, Wage and Hour Division - Administers federal wage and hour law and provides for enforcement of the Farm Labor Contractor Registration Act.
- N. C. Employment Security Commission, Rural Employment and Training Service - Provides job development, job placement and improvement of employability skills.
- N. C. Agricultural Extension Service - Provides educational programs in agricultural production, marketing, family living and community resource development.
- N. C. Human Relations Council - Serves as an advocate of migrant families in promoting progress toward a life of equal opportunity, justice and dignity.
- N. C. Department of Community Colleges - Provides basic adult education and occupational skill training for migrants and crew leaders and English as a second language to those who have little or no English-speaking ability.
- N. C. Department of Human Resources, Migrant Health Service - Provides out-patient and in-hospital care to migrant farmworkers and their families.
- N. C. Department of Human Resources, Sanitary Engineering Division - Acts as the enforcement agency for the act regulating the sanitation of farm labor camps.
- N. C. Department of Human Resources - Division of Mental Health - Provides in-patient, out-patient educational and consultant services in mental health.
- N. C. Department of Human Resources, Division of Social Services - Provides assistance in meeting the basic financial and social needs of eligible clients.
- N. C. Department of Human Resources, Division of Vocational Rehabilitation - provides assistance to physically or mentally handicapped in returning to gainful employment.
- N. C. Department of Justice, Office of Attorney General - Renders legal assistance in the drafting of legislation relating to migrant workers.
- N. C. Department of Labor - Administers the Occupational Safety and Health Act of North Carolina and coordinates a wide range of programs of inspections, education and consultant services.

- N. C. Department of Natural and Economic Resources and Community Development - Assists in formulating statewide employment and training policies and administers programs under the CETA legislation.
- N. C. Department of Agriculture - Food Distribution Division - Makes food service programs available to eligible groups and individuals.
- N. C. Economic Opportunities Office and Community Action Agencies - Provides information and technical services to community action agencies which renders service to individuals in the areas of self-help housing, day care, counseling, consumer education and job development, placement and follow-up.
- Church Women United in North Carolina - Contributes health kits, sheets, blankets and clothing to migrants and employs seminarians to provide chaplaincy services for them.
- Migrant and Seasonal Farmworkers Association - Provides for vocational training, work experience, manpower service and a wide range of support services to migrants and seasonal farm workers.
- N. C. State AFL-CIO - Works through its local community service committees to provide counseling, information, legislative program support and assistance in assuring that migrants are accorded their legal and civil rights.

In addition to the member organizations of the State Advisory Committee on Services to Migrants, its meetings are regularly attended by representatives from the Governor's office and personnel from local migrant councils and local community action agencies.

STAFF UTILIZATION

The regular school term migrant education projects in 63 LEAs employed a full time equivalent of 270.39 staff members. The pattern of staffing is indicated by Table VII. The number and responsibilities of the program staff of the summer migrant projects is indicated on Table VIII. Figures on these tables represent both full-time and part-time positions and are reduced to full-time equivalent staff positions. Non-professional supporting personnel such as bus drivers, janitors and lunchroom workers have been included in these tables.

Table IX provides information on the instructional staff-pupil ratio for the 31 summer projects. Teacher-pupil ratios are not reported for regular school term projects as they could be very misleading without a consideration of schedules and pupil contact times.

COMMUNITY INVOLVEMENT

Community involvement in the regular school term migrant projects showed a marked increase over past years. This is attributed to several factors, among them the activities of the State Migrant Parent Advisory Committee and the impact that this committee had on the local projects.

Another factor which has resulted in effective community involvement is the assignment of the responsibility for making home visits to a member of the migrant project staff. Where the local project charged one or more persons with this responsibility, home-school coordination, recruitment, and general community interest in the project has been improved.

Nurses, home-school coordinators, liaison aides, social workers, supervising principals, instructional personnel and individuals from other agencies serving migrants played an important part in soliciting involvement from the community agencies as well as cooperation from the parents of the migrant children.

During the summer projects in 1980, one of the local projects took advantage of the availability of personnel from Migrant and Seasonal Farm Workers Association. They used this person to assist in carrying out the instructional phase of the program. This aide worked under the supervision of the LEA project director, but was paid through the Migrant and Seasonal Farm Workers, Incorporated. One aide was assigned by the Migrant and Seasonal Farm Workers Association to work at the Northeast Regional Education Center to assist the teletype terminal operators. This was an outstanding example of interagency coordination and cooperation.

Also, during the 1979-80 program year the migrant education section cooperated with the Migrant and Seasonal Farm Workers Association by providing for the record keeping requirements of their day care centers through the already established Migrant Student Record Transfer System.

Local advisory committees have been established in each area served by a migrant education project. The State Advisory Committee assisted the local councils in their work through annual regional or statewide meetings. Information was shared and plans developed that enabled each agency to use its resources to the maximum benefit of the greatest number of migrants.

Field trips served as one medium for encouraging parent and community involvement in project activities. The use of volunteers from the community on field trips had some tendency to carry over into other aspects of the program.

Some of the summer migrant projects had excellent community involvement as indicated by the number of adult volunteers other than migrant parents who donate their services to making the local project a success. These volunteers served as instructors, instructional aides, lunchroom workers or as resource individuals to enrich the experiences of the migrant children.

INTERSTATE PLANNING

One of the activities which indicates the interstate coordination of the North Carolina Migrant Education Program with similar projects and programs in other states was the Eastern Regional Migrant Education Conference held in Philadelphia, Pennsylvania. The State Director of Migrant Education served on the program planning committee for this conference which brought together migrant program personnel from 21 states, and four members of the state migrant staff served as program presenters during the conference. In addition to this involvement personnel from local projects presented workshop sessions during the conference.

Each LEA operating a migrant education project complied with all regulations and procedures of the National Migrant Student Record Transfer System.

National conferences for State Directors and other program personnel were conducted during the year and were of some value in publicizing program information and administrative requirements. The State Director participated in these conferences and disseminated relevant information from them within the state.

Interstate planning and cooperation is also demonstrated by the fact that North Carolina acted as host to one of the public hearings on proposed rule making for the national migrant education program.

PROGRAM STRATEGIES AND ATTAINMENT OF STATE OBJECTIVES

An attempt has been made to state the goals and objectives of the state migrant education program in specific and measurable terms. Each stated objective was attained to a greater or lesser extent. Progress toward meeting these objectives is evident by the reports of monitoring visits to the LEAs by the state migrant consultants. These regular monitoring visits by the state consultants along with the activities sponsored and conducted by the state migrant education office is the basis for the judgement that each state objective was met as indicated below.

There were many strategies included in carrying out the functions required to meet the state objectives. These strategies were developed into a calendar of activities and projected over the fiscal year.

The review of the 1979 State evaluation report by the U. S. Department contained a suggestion that the strategies used to achieve the objectives of the state program might be placed in closer proximity to the objectives. As a result of this suggestion the state evaluator has revised the reporting format so that the statement of the objective is followed by (1) the strategies used to achieve the objective and a statement relating to the degree of attainment of the objective along with a brief statement upon which the attainment of the objective was based.

The state program objectives, strategies planned to meet the objectives and the progress made in attaining the goals set forth in the objectives are as follows:

Objective 1: During the 1979-80 program year the SEA will assist in the identification and enrollment of migrant children and youths in the migrant education projects as indicated by a record of student enrollment and the establishment of at least 10 new projects.

Strategy: Assisting in the identification of migrant children - Each of the state consultants assisted in the identification and recruitment of migrant children throughout the year. One staff member devoted a major portion of his time to this function.

Achievement of the objective: This objective was fully attained as indicated by the identification and enrollment of 18,944 children in the migrant education projects during 1979-80. Of this number, 2,326 were enrolled in one of the 15 new migrant education projects which were established during the program year.

Objective 2: During the 1979-80 program year the SEA will assist in the development of programs of instruction in the academic disciplines according to the assessed needs of the migrant children as indicated by a record of technical assistance provided to the LEAs.

Strategy: Providing technical assistance to the LEAs - This responsibility was carried out by the state program coordinator and four state consultants. Technical assistance was provided throughout the year as required.

Achievement of the objective: This objective was fully met as indicated by the fact that the state migrant consultants worked with LEA personnel in the development of 63 projects during the regular school term and 31 projects during the summer which offered instruction in the basic disciplines.

Objective 3: During the 1979-80 program year the SEA will promote activities designed to advance the migrant child's social growth and group interaction skills as indicated by the inclusion of these activities in at least 50% of the local projects.

Strategy: Reviewing project applications - The review process for summer project applications was accomplished in April and regular school term project applications were reviewed during the months of July and August, when appropriate program components were suggested if they were not included in the project application during the planning stages.

Achievement of the objective: This objective was fully met as indicated by the inclusion of activities in 47 of the local projects which were designed to advance the migrant child's social growth and group interaction skills.

Objective 4: During the 1979-80 program year the SEA will provide a program of supporting services in the areas of medical and dental health, nutrition and social services for migrant children as indicated by the inclusion of these activities in at least 50% of the local projects.

Strategy: Assisting in the planning of the regular school term projects and the summer term projects - This strategy was carried out by the state program consultants during April, July and August.

Achievement of the objective: Thirty-three of the sixty regular school term projects and twenty-three of the thirty-one summer term migrant projects included health services as one of their activities. Therefore, this objective was fully met.

Objective 5: During the 1979-80 program year the SEA will provide technical and consultant services in the planning, operation, and evaluation of local migrant projects as indicated by a record of monitoring visits to the local projects.

Strategy: Monitoring LEA projects - This strategy was carried out throughout the year. Each regular school term project was visited at least four (4) times by a state consultant and each summer term project was monitored at least twice.

Attainment of the objective: This objective was fully met as indicated by approximately 300 monitoring visits which were conducted in the local migrant projects by the migrant consultants. On each of the monitoring visits by a state consultant the project records and reports were checked; certification of eligibility forms were reviewed; attention was given to the coordination of the migrant project with other school programs; parent advisory committee involvement was noted; recommendations for improving the operation of the project or keeping it functioning according to the project proposal were made; and technical assistance was given in the operation of the project.

Objective 6: During the 1979-80 program year the SEA will provide for the extension of total services to migrants through inter-agency coordination and cooperation as indicated by a record of employment in the projects.

Strategy: Cooperating with other agencies - This strategy was carried out throughout the program year.

Attainment of the objective: This objective was fully met. During the year there was a high degree of cooperation between the state migrant education program and the Migrant and Seasonal Farm Workers Association. Two persons who worked in the migrant education program were paid through this

organization. The state director of migrant education served as a member of the Advisory Committee for the Migrant and Seasonal Farm Workers Association.

There was an excellent relationship fostered between the state migrant program and the National Education Association - North Carolina Association of Educators (NEA-NCAE) migrant project which was responsible for the dissemination of a slide-tape program relating to migrant education in North Carolina.

A description of other interagency activities is included in this evaluation report.

Objective 7: During the 1979-80 program year the SEA will provide supplementary programs of instruction to improve the occupational skills of migrant youths as indicated by the inclusion of these components in at least 25% local migrant education projects.

Strategy: Assisting in planning the regular school term projects and the summer term projects - This strategy was carried out during July and August of 1979, April, 1980 and as new projects were initiated.

Attainment of the objective: Analysis of the project information available in the state migrant office indicates that this objective was only partially met. Twenty-five percent of the local migrant projects did not have an occupational component in them. During the summer program the percentage of LEAs offering this kind of instruction approached 25% when six of the 31 units included occupations among their offerings. Since the instructional program during the regular school term is supplementary to the on-going program in the school, there was not a significant number of students who were identified as having unmet needs in the area of occupational instruction.

During the summer programs 19.3% of the projects offered occupational instruction. The percentage of projects which offered this instruction during the regular school term was 8.1.

Objective 8: During the 1979-80 program year the SEA will promote active involvement of parent advisory councils in the local migrant education projects as indicated by a record of at least 2 meetings of the State Migrant Parent Advisory Committee.

Strategy: Planning workshops for migrant parents - This strategy was carried out in October, 1979 and April, 1980.

Attainment of the objective: This objective was fully met. Two meetings of the State Migrant Parent Advisory Committee were held during the program year. At these meetings the parents were involved in learning activities which would enable them to become actively involved in their local projects. One group of parents demonstrated how to make puppets, write scripts and become actively involved in the learning activities with their children through the use of puppets. Other topics at these workshops included group activities on how children learn through (1) Touch, (2) Smell, (3) Sight, (4) Hearing and (5) Experience.

Objective 9: During the 1979-80 program year the SEA will cooperate in the interstate exchange of student records through the Migrant Student Record Transfer System as indicated by a record of at least 90% accuracy in transmittals by the MSRTS terminal operators.

Strategy: Supervising MSRTS transactions in North Carolina - This responsibility was carried out throughout the year. The MSRTS operations were under the supervision of one of the state consultants and were carried out by four teletype terminal operators. All state consultants monitored this aspect of the program at the LEA level.

Attainment of the objective: This objective was fully met. Records from the Migrant Student Data Center in Little Rock indicates that more than 45,842 transmittals were processed through the system during the program year. There were 3,210 errors detected in these transmittals. This is an accuracy of 92.99%, which exceeds the expected performance in this area.

Objective 10: During the 1979-80 program year the SEA will provide opportunities for improving staff competencies in the use of innovative and effective teaching techniques through pre-service and inservice education as indicated by a record of at least 5 workshops conducted by SEA personnel.

Strategy: Planning and conducting preservice and inservice workshops - Five major workshops were planned and conducted during the year.

Attainment of the objective: This objective was fully met. Planning language arts workshops was a major activity which was carried out by the state migrant staff and representatives from LEAs during September and October. The two resulting reading workshops were conducted in November. Outstanding educators from LEA's in North Carolina and consultants from other states were used as program presenters in these workshops.

Planning mathematics workshops was one of the activities carried out during November, December and January. The planning was conducted by the state migrant staff and staff members from the Division of Mathematics, Department of Public Instruction. As a result of this planning, two mathematics workshops emphasizing teaching methods and materials were conducted. Mathematics specialists and supervisors of mathematics education from North Carolina were used as consultants in these workshops.

Planning summer staff development activities began in March. Division directors in the Department of Public Instruction participated in this planning along with members of the state migrant staff and representatives from the LEAs.

The resulting workshop was the highlight of the staff development program sponsored by the state migrant education program.

Objective 11: During the 1979-80 program year the SEA will promote interstate cooperation and program continuity for migrant children as indicated by participation in at least 3 national or regional program activities.

Strategy: Participating in regional and national program activities - These activities were planned during the time that the State Plan was being developed.

Attainment of the objective: This objective was fully met. State migrant education personnel were represented at the National Migrant Education Conference at Phoenix, Arizona, the East Coast Regional Workshop in Philadelphia, Pennsylvania and at the State Directors meeting in Silver Spring, Maryland. The State Director served as a member of the program committee for the National Migrant Education Conference at Phoenix and is President-Elect of the State Directors of Migrant Education.

Objective 12: During the 1979-80 program year the SEA will provide opportunities for supporting personnel to improve their competencies through appropriate training as indicated by a record of at least 5 staff development activities.

Strategy: Conducting staff development activities for supporting personnel - This strategy was carried out in 5 major workshops and on an individual basis with project personnel as the need arose.

Attainment of the objective: This objective was fully met. At the same time that the two reading and mathematics workshops were conducted for instructional personnel, supporting personnel working in the area of recruitment, and student records were given instruction on these supporting areas. Sessions were also planned for program administrators, recruiters, record clerks, social workers and nurses at the summer workshop conducted in June.

In addition to the group activities for recruiters and record clerks which were provided at the workshops, individual instruction and training was given to the local project personnel as the need arose. Recruiters and record clerks in new projects participated in special training programs as the project was initiated.

Objective 13: During the 1979-80 program year the SEA will evaluate the academic progress of the migrant children and the effectiveness of the local migrant projects on the basis of objective data generated at the local project level as indicated by summaries of test data which will be attached to the State Annual Evaluation Report.

Strategy: Reviewing local project evaluation reports - This was done by the state evaluator during July, August and September, 1980.

Attainment of the objective: This objective was fully met. The local project evaluation reports submitted to the state migrant office were reviewed by the state program evaluator and the state consultant who worked with the projects.

A judgement was made regarding the degree to which each project objective was attained.

The results reported in this annual program evaluation which will be transmitted to the U. S. Education Department are based upon all information and documentation available to the state migrant program, including a summary of scores derived from the statewide testing.

Objective 14: During the 1979-80 program year the SEA will promote fiscal management procedures commensurate with legislative requirements and program guidelines as indicated by information derived from the state consultants' monitoring reports.

Strategy: Monitoring the fiscal operations of the local projects - This function was carried on throughout the year.

Attainment of the objectives: This objective was fully met. The state migrant consultants assisted the local school officials in the development of the local project applications and in the development of a budget to support the project activities. During the regular school term the consultants monitored the operation of each local project four times during the regular school year and twice during the summer to assure that the project was being carried out according to the approved project application and all other program and fiscal requirements. Fiscal operations were monitored on the occasion of each monitoring visit and a written report of the monitoring visit was sent to the LEA officials.

Objective 15: During the 1979-80 program year the SEA will provide for appropriate dissemination of program information as indicated by the publication and distribution of at least 2 newsletters.

Strategy: Gathering and organizing newsworthy events and project reports. This activity was carried on throughout the year.

Attainment of the objective: This objective was fully met. During the program year the state migrant staff collected and reported some of the newsworthy happenings in the state. Migrant Matters, a periodical newsletter, was published four times during the year. One edition provided highlights of the outstanding features of the local projects, one concentrated on the activities of the State Migrant Parent Advisory Committee, one dealt with the growth and expansion of the state migrant education program and one provided a pictorial review of one of the exemplary projects in the state.

Other dissemination efforts included the distribution of a slide-tape program developed cooperatively with the National Education Association and the North Carolina Association of Educators.

At the local level the program was given considerable coverage by newspapers. Also, several radio and television stations made announcements

about the program and produced documentary programs for feature broadcasts.

LOCAL PROJECT OBJECTIVES

The regular school term projects were supplementary in nature and were directed specifically toward those needs of the migrant students which were not being met adequately in the regular school program. Forty-six (46) of the projects included an objective relating to improvement in language arts; forty-seven (47) included mathematics in their projects; twenty-six (26) included an objective relating to students' social adjustment and thirty-three (33) included a health service objective. Among the other objectives during the regular school year were those relating to parent involvement, staff development, natural science and social studies.

There continues to be improvement in the statement of objectives in the project proposals. This can be attributed to insistence by the state consultants that the LEAs include measurable objectives relating to all phases of project operations in the project proposals. The evaluation of each project was based upon the set of objectives in the project application. All of the local project objectives were supportive of the state program objectives. In addition to specific performance objectives in each instructional area, the projects included objectives relating to staff development, dissemination of information, clerical responsibilities, project evaluation, fiscal reporting, parent advisory committee activities, health services, recruitment, social growth, and community involvement.

Objectives for both the regular school term and the summer term were the primary basis for evaluating the success of each LEA project. A judgement was made on each objective in each project as to the degree of attainment. Every available source of information bearing upon the objective was used in making this judgement. The most heavily relied upon document was the local evaluation report prepared by the local project director and his staff. Other sources of information used in this evaluation effort were reports of state consultant monitoring visits, reports from news media, and reports from state program consultants who worked in the LEAs during the operation of the projects.

Summaries of the degree to which each objective in each LEA project was attained are contained in the appendix of this report.

DISSEMINATION

Dissemination of program information at the local level included news releases to local newspapers, coverage by local radio and television stations, reports to local boards of education and other local groups, pictures, slides and tape recordings which were presented to selected audiences, and the distribution of newsletters.

At the state level there was a periodic dissemination of information through the publication of Migrant Matters. This newsletter was directed to local migrant project directors, school superintendents, advisory committee members, personnel in the State Education Agency, and the U. S. Department of Education. Additional news releases from the Division of Public Information were sent to newspapers, radio, and television stations, wire services and other news media.

Other methods of disseminating program information were the reports given at the periodic meetings of the State Advisory Committee on Services to Migrants and through the State Migrant Parent Advisory Committee.

One dissemination effort is worthy of special note. During the year the state migrant office continued its cooperation with the North Carolina Association of Educators in a project funded by the National Education Association in the dissemination of a slide-tape program describing the migrant education program. This slide-tape program has been duplicated in large numbers and shared with local project directors who have found it effective in promoting migrant education among a variety of audiences. It was shown at local and area meetings of the professional education associations and recognition was accorded to those who were serving the migrant children in the local schools.

As a recognition of the effective interagency cooperation and community support of the migrant education program, the NEA-NCAE presented an award of excellence in the education of migrant children to the Harnett County schools. This award, the only one of its kind in the nation, was presented to the chairman of the Harnett County School Board by Governor James B. Hunt, Jr. Roy Fuentes of Washington, D. C., Manager of Migrant Education Programs for the NEA, made a special trip to Raleigh for the presentation. Marion Stallings represented the North Carolina Association of Educators at the presentation and Vicki Barefoot represented the NEA-NCAE migrant education task force.

ANNUAL STATEWIDE TESTING PROGRAM

In April, 1980 a battery of achievement tests was administered to students in the first, second, third, sixth, and ninth grades throughout North Carolina. A Prescriptive Reading Inventory and a Diagnostic Mathematics Inventory was administered in grades one and two. The California Achievement Tests were used in grades three, six and nine.

This report includes a summary of student performance for the entire student population in the state, as well as for the total student population enrolled in the migrant education program.

Student performance is reported in grade equivalent scores and percentile ranks because these indices traditionally have been used throughout the nation, including North Carolina, and are more familiar than other derived scores.

It should be pointed out that the test publisher did not report grade equivalent scores in spelling at grade nine. The publishers believe that the grade equivalent score is not an appropriate score for spelling at this level because average performance in spelling beyond the sixth-grade level typically increases very little, or may even decline.

The grade equivalent scores and percentile ranks for the norm-referenced tests at the third, sixth, and ninth grades were calculated from representative samples of students in the nation. The interpretive scores for the criterion-referenced tests at grade one and two are estimated scores that were derived by the publisher by correlating scores from the criterion-referenced tests with scores from norm-referenced tests given at the same-grade levels.

In light of the fact that the normed scores for the criterion-referenced tests at the first and second grades are estimated and the scores are higher than anticipated, CTB/McGraw-Hill was requested to provide appropriate comments relative to the establishment of estimated scores and the performance of North Carolina students on the reading and mathematics tests. CTB/McGraw-Hill's comments on these points are as follows:

The average estimated CAT C & D normed scores derived from the *Prescriptive Reading Inventory* (PRI) for Total Reading and from the *Diagnostic Mathematics Inventory* (DMI) for Total Mathematics at Grades 1 and 2 seem higher than would be expected in light of the actual CAT-C scores obtained at Grades 3, 6, and 9, and in relation to past experience in North Carolina. CTB/McGraw-Hill has rechecked and verified the accuracy of its estimating and processing procedures and has established beyond reasonable doubt that the test results reported are valid measures of the levels of achievement of students in the schools of North Carolina.

The publisher has analyzed the changes in performance between Grades 2 and 3--in which Reading goes from slightly above average (3.1) at Grade 2 to average (3.7) at Grade 3, and in which Mathematics goes from well above average (3.3) at Grade 2 to slightly above average (3.9) at Grade 3. It is the publisher's conclusion that this apparent anomaly in the test results could be due to several reasons, including the following:

1. The students in Grade 2 have, as a group, a relatively stronger instructional background in both Reading and Mathematics than students in Grade 3.
2. The skills measured at Grades 1 and 2 lend themselves more readily to improvement through direct instructional intervention, including drill-type activities.
3. The skills measured at Grade 3 and above are more complex and less amenable to improvement through instructional change. Mathematics concepts and applications, in particular, require a certain level of reading skill if the student is to understand the problem and be able to respond to it correctly.

CTB/McGraw-Hill is continuing further study into this difference in performance. (They add, however, that) it is clear that students in North Carolina are performing above the national norm in Reading at Grade 2 and in Mathematics at both Grades 1 and 2. This is an accomplishment of which North Carolina educators should be proud. They should attempt to maintain and extend the programs which have brought about these excellent results.

In contrast to the above average achievement in reading and mathematics for the state as a whole at grades one and two, it should be pointed out that the reading achievement for the migrant children in grades 1, 2 and 3 who were included in the testing program was from slightly below to well below (1.5), (2.4) and (2.9) the national norm. In mathematics the scores for these same children are slightly above the national norm in grades one and two (1.9 and 3.0) and slightly below (3.5) the national norm in grade 3. In grades 6 and 9 the migrant program scores are well below the national norms in both reading and mathematics.

Further analysis of the scores reveals that the migrant children are below the state averages at all levels on all tests. While the deviation from the state averages is very small in grade one, there is a marked difference noted in grades two, three, six and nine.

When the migrant program scores are plotted on a graph against the national norm the achievement lag of the migrant students is revealed. Such a graph demonstrates very dramatically that as the migrant students progress in school they continue to fall further and further behind in expected academic progress.

One bright note revealed by the reading and mathematics scores from the statewide testing program over the past 3 years is that the lag between achievement levels of the migrant children and the national norm is decreasing. This is shown very graphically on Tables VII and VIII.

OTHER FINDINGS

The 1979 annual evaluation report contained several recommendations. These recommendations could be divided into two groups--one dealing with SEA program management and the other with LEA operations. They served as guides for the improvement of the operation of programs and projects. The recommendations made by the state evaluator in that report were followed in varying degrees as indicated below.

The state migrant office should require the LEAs to conduct needs assessments according to the provisions contained in the Migrant Education Administrative Guide.

The evaluator notes that there were only two projects in the regular school term which did not have an objective in their project application relating to needs assessments. These projects were in Harnett and Pitt counties. Also, there were two projects during the summer, Chowan and Scotland, which did not contain an objective relating to needs assessments.

While this is an improvement over past years, this evaluator sees room for further improvement in this area of program planning and development.

2. *The state migrant office should continue to seek improvement in the continuity of the educational programs of migrant children.*

The first priority of the state migrant education program is to achieve a high degree of program continuity. Activities which can be cited to indicate an effort in this direction are the participation in the Migrant Student Record Transfer System, the participation of the state and local projects at the east coast regional migrant education conference, the attendance of the state migrant program director at other regional and national conferences, and the use of out-of-state consultants in the State-sponsored workshop in North Carolina.

Probably the greatest single activity to provide continuity of program for the migratory children is the recording of education skills on the students' records. The state educational agency should continue to cooperate with the national migrant data center in this effort. It should also continue the training of local project personnel in the procedures necessary to carry out this function and refine the processes so that they can be carried out with the greatest efficiency and least probability of error.

3. *The state migrant office should continue to provide technical assistance to local school personnel in conducting surveys and developing new migrant projects.*

Experience during the past year demonstrated that a concentrated effort to identify migratory children can bear positive results. During the period covered by this report 15 new projects serving more than 2,000 children resulted from the surveys conducted in the local school units by members of the state migrant staff. Such efforts should be continued in those areas of the state where there seems to be a likelihood that sufficient numbers of children might be located to make it feasible to develop a project for them.

4. *The state migrant office should revise the migrant education program forms.*

The forms which were used in conducting school surveys were revised and updated several times during the year in an effort to find the most effective instrument for the initial identification of eligible migrant children.

Pending changes in program regulations and operational procedures made it inadvisable to make significant changes in other program forms.

With the publication of new regulations and new interpretations relating to the program this recommendation should be continued and new emphasis should be given to the reviewing and revising program forms.

5. *The state migrant office should cooperate with local migrant projects in conducting MSRTS enrollment validation studies.*

This recommendation was not followed this program year. The state migrant office encouraged the local project personnel to validate the enrollment of migratory children in their projects by using the Periodic Enrollment Validation Reports (PEVR), but there was no validation activities carried out jointly between the LEAs and the state migrant office.

During the year there have been some questions on eligibility of certain children raised by the LEA personnel. These questions and the possible misidentification of children points up the desirability of enrollment validation by the SEA in cooperation with local project administrators.

6. *The state migrant office should revise program publications in order to keep them up-to-date.*

This recommendation was followed to a degree. Some changes were made in the publications distributed through the state migrant office, particularly those publications which relate to identification, recruitment and enrollment of migratory children and those policies and procedures relating to the operations of the transmittal of student data to the Migrant Student Record Transfer System.

7. *The state migrant office should continue to cooperate with other governmental and private, non-profit agencies in providing comprehensive services to migrant families.*

This recommendation was followed. The cooperation with other governmental and private, non-profit agencies providing services to migrant families is well documented in this report. This cooperation was of such a magnitude that it was considered to be an exemplary component of the state migrant program.

8. *The state migrant office should continue to use effective evaluation procedures.*

This recommendation was followed. Evaluation procedures have been developed which fulfill all of the requirements in the program regulations. The methods and procedures used in the evaluation of the program and projects in North Carolina have been described in Chapter III of this report as an exemplary portion of the North Carolina migrant education program.

9. *The state migrant office should continue to support the State Migrant Parent Advisory Committee activities.*

This recommendation was followed. Personnel from the state migrant program staff worked with the officers of the State Migrant Parent Advisory Committee

in a consultant capacity. Assistance was rendered in locating appropriate meeting facilities and in developing effective and meaningful agendas for the meetings. Workshop presenters were screened and recommended; news media coverage was arranged; notices of meetings were sent to the local project directors and local PAC chairpersons; and programs for the meetings were printed.

10. *The state migrant office should continue its efforts to improve program operations through staff development.*

This recommendation was followed. Workshops activities are described in Chapter I of this report.

The following recommendations from the 1979 State Annual Evaluation Report relate to LEA program management.

1. *The local educational agencies should provide bilingual-bicultural programs for Spanish-speaking children in their migrant projects.*

The LEAs with any non-English speaking children enrolled made efforts to provide instruction in the children's native language. Bilingual programs and English as a second language served many migrant children who were bilingual in English and Spanish.

2. *The hours of operation of local summer migrant projects should be during the part of the day which would allow the greatest number of migrant children to receive the greatest benefit from the program.*

It is noted that despite the recommendation of the previous evaluation report two of the summer projects were operated at odd hours, afternoons, evenings and into the night. It was also noted during monitoring visits that young children were attending programs which extended into the late evening.

Information contained in the age-grade report which was compiled by the Migrant Student Data Center in Little Rock, Arkansas indicates the children in these two projects ranged from four to 21 years of age.

One of these programs operated from 3:30 p.m. to 7:30 p.m., the other from 4:30 p.m. to 10:00 p.m. It is unreasonable to expect children who are as young as four years of age to benefit from a school program that extends to 10:00 p.m. or even to 7:30.

In one of the LEAs operating a migrant education project in the late evening hours a purported survey was taken among the migrant parents to determine their preference as to operating hours of the project. An examination of the survey form shows that it is more of an announcement that there would be a project operating at the hours already decided upon rather than a survey to determine the time most preferred by the parents.

Information available to the state migrant office indicates that 37 parents responded to the questionnaire indicating that they would send their children

to the project during the hours specified.

These situations seem to indicate that the projects are designed for the convenience of the staff rather than for the benefit of the children. This evaluator has serious doubts about their effectiveness and their economic feasibility in terms of student gains which can be demonstrated.

3. *The local educational agencies should continue to make a concerted effort to enroll all eligible children and youths at the secondary school level in the regular school term migrant projects.*

This recommendation was apparently followed by the LEAs. A comparison of the age-grade reports for the 1979 and 1980 program years indicate that there was an increase in enrollment of more than 1,200 children who were 15 years of age or older. The percentage of children in this age range increased from 19.6 to 23.1.

4. *Local project directors should make every reasonable effort to secure supporting services from other agencies and organizations.*

This recommendation was apparently followed. Local project evaluation reports indicate that supporting services were provided by the local departments of public health and social services, the rural manpower service, local migrant health projects and other organizations and community action agencies.

5. *Local education agencies should give attention to the development of individual written educational plans for each student enrolled in the migrant education program.*

This recommendation was followed to some extent. There was more evidence of individual written education plans for the students during the summer months. Even so, many of the regular school term projects also followed this plan of instruction.

6. *Local project directors should give more emphasis to the established priorities of the state program.*

This recommendation related to the first and second priority of the state program (program continuity and summer school projects for migratory children). Analysis of the local project emphases indicate that little attention was given to the recommendation. Even though a total of fifteen new projects were developed, there was an increase of only two in the number of summer projects which were operated.

7. *Local recruiter-clerks should be punctual in transmitting student information to the Migrant Student Record Transfer System terminal operator.*

There was a concerted effort on the part of the state consultants to have the local recruiter-clerks keep their record transmittals up-to-date. This was also emphasized at each of the workshops conducted for recruiter and record clerks. Therefore, it is the judgement of this evaluator that the results observed indicate that this objective was met.

CHAPTER III

PROGRAM EFFECTIVENESS

PROGRAM FOCUS

In considering the effectiveness of the North Carolina Migrant Education Program, it is necessary to take into account the different types of projects being operated within the state. Regular school term projects enroll formerly migratory children in great numbers. Regular school term projects also enroll smaller numbers of intrastate migrants and the interstate migrants who are home-based in North Carolina. These projects are supplementary in nature and are designed to strengthen instructional programs offered through state, local and other federal sources of funding. Summer term migrant education programs are focused more directly on the needs of interstate migrants and provide a full range of instructional and supporting services.

TESTING RESULTS

The emphasis upon documenting achievement of project objectives with gain scores continued in 1979-80. 100 percent of the projects submitted summaries of pre-test as well as post-test scores. Students who entered North Carolina migrant projects during the first three months of the regular term stood an excellent chance of being tested with one of the six most frequently used achievement tests. The most frequently used tests in order of frequency reported were:

- California Achievement Test
- Iowa Test of Basic Skills
- Gates-MacGinitie Reading Test
- Stanford Achievement Test
- Metropolitan Achievement Test
- Wide Range Achievement Test

In past years the use of different tests and score types ranging from grade equivalent to raw scores severely limited the statistical comparisons which could be made. Migration and absences from school on the day tests were administered made it quite difficult to obtain two sets of measures on the same students over any reasonable span of instruction. Given these difficulties, it was almost impossible to report gain scores representative of three or more projects with more than thirty students at the same grade level on the same test. Therefore, we departed from this method of reporting in 1979 and are now relying solely upon test scores derived from the state-wide testing program.

Comparisons of the migrant childrens' scores are made with the average achievement scores for all children tested in North Carolina and against the national norms. The status of the migrant children tested in North Carolina in 1980 is also compared with the scores reported at the same grade levels in 1978 and 1979.

In making this comparison it should be pointed out that the test scores reported in 1978 were for those children who were participating in a supplementary instructional program in one of the local migrant projects. Scores reported for migrant children in 1979 and 1980 included all migrant children tested, even though they might have been achieving at or above grade level expectancy, and therefore not being given supplementary instruction in a local migrant education project.

The difference in the way the scores were reported in 1978 and 1979 might have caused some distortion of results making it appear that the migrant children made greater gains than they actually did. Scores from the 1980 testing program, however, were reported on all children who were eligible for services in the migrant education project whether they were being provided with any supplementary services or not. The same pattern of gains are noted in the 1980 scores that were recorded in 1979.

What is significant in the scores reported during this school term is that the migrant children are achieving at a rate below the national norm, and below the average achievement level of the children tested in North Carolina. Examination of Figures V and VI also show very graphically that the achievement of the migrant children fall further and further behind as they continue through the grades.

From the reading test scores available it appears that there was a continuation of the pattern of gains which were reported in 1979. The same pattern of gains also were noted in mathematics, the principal difference being that the gains between 1979 and 1980 were not quite as great as those recorded between 1978 and 1979.

It is noted that over the range of grades represented, the deficit in mathematics is less than the reading deficit. In view of what is known about the average achievement of North Carolina students (the 1972 state assessment revealed that sixth grade students were around nine months behind the test publisher's norm), achievement test results for migrant children indicate that reading should continue to be emphasized and that mathematics should continue to receive attention.

Table XI and Figures VII and VIII showing achievement trends may be the most revealing information to come from the testing programs for migrant children in North Carolina. These results, extracted from North Carolina's annual testing program, demonstrates the mounting deficit suffered by the migrant children as they continue in school. This achievement pattern is similar to those reported in previous evaluation reports. This is true even though the source of statistics reported in years prior to 1977-78 was a compilation of test results from many different tests administered by the LEAs. Reported results since 1977-78 included a combination of scores from locally administered standardized tests and state-wide testing results, and the test scores reported since that time have been derived entirely from the state-wide testing program.

The results of standardized tests administered at the local level were reported to the state migrant office, and individual test scores were entered on the students' records. This achievement data was filed by the state migrant office but was not used in compiling this report.

All test results indicate that North Carolina migrant students are progressing at a rate comparable to most compensatory education students, and that over a four-year period gains in reading and mathematics have been improved. Statistical methods by which portions of these gains may be attributed to the regular school offerings and the supplementary migrant programs were not employed in this evaluation. Such elaborate measures could be recommended, but such evaluation designs would far exceed the state evaluation requirements and would possibly exceed the limits of financial feasibility.

EXEMPLARY PROGRAM COMPONENTS

For years it was the policy of the Division of Migrant Education to recognize exemplary activities in the local projects. This was valuable in bringing about some desired changes in other local projects. The 1974 evaluation report discarded this practice of highlighting one local project and one activity carried out at the state level. From that time until 1979 the state migrant office presented one outstanding characteristic of each of the projects operated within the state.

In 1979 the state evaluator included a more detailed description of two projects which seemed to hold unusual promise of success in meeting the needs of migrant children.

There was a period of several years when only the highlights of exemplary components of summer migrant projects were selected for inclusion in the annual evaluation report. The selection of noteworthy project components now takes into consideration both regular school term projects and summer term projects. Therefore, the outstanding features of the local projects contained in this report may relate to either type of project.

The SEA is continuing its practice of recognizing exemplary activities in the local migrant education projects. Pointing out the strengths of one project may assist another to eliminate a weakness or to initiate changes which will result in better, more effective services to the migratory children.

The activities which were selected for special mention in this report were those considered to be strengths of the local projects by the project director and the state migrant consultant.

In addition to the strengths noted in the local migrant education projects, the state evaluator has elected to highlight four activities which relate to the state administration and management of the program. These program activities have been examined, and it is the judgement of this evaluator

that they deserve special mention in this annual evaluation report.

The descriptions of the SEA activities in program evaluation, staff development, parent involvement and identification and recruitment are followed by the comments relating to strengths of the local projects which were considered to be outstanding.

SEA State Program Evaluation

The evaluation of the state migrant education program is described briefly in Chapter I of this report. It is exemplary in many respects. The evaluation procedure begins at the time that the initial plans for the program activities are developed and continue until the publication of the finished report.

The state program administration and the activities of the state program personnel are evaluated separately from the local projects. This evaluation is based upon the degree to which the SEA personnel achieved the objectives which were developed at the beginning of the program year. At the suggestion of the U. S. Department of Education these objectives have been re-stated in measurable terms and the success in achieving the objectives is determined by actual performance.

Correspondence on file from the Deputy Assistant Secretary for Migrant Education states that "the analytical design follows the program requirements as defined in... Title I Migrant Education Program Regulations as well as... the Title I General Provision Regulations..."

He also states that the state evaluation report "is evidence that the state has taken a leadership role..." in the evaluation process.

In the overall evaluation process the local project director is responsible for evaluating the local project activities. The local project evaluations are reviewed by the state evaluators and the results of this review are included in the annual evaluation report.

A unique feature of the evaluation of the local projects is the taped evaluation report which is prepared by the state consultant which monitored the project during its operation. The taped report accompanies the written response of the state evaluator and state consultant to the local evaluation report prepared by the local project director. Where disagreement on any part of the local evaluation report exists, the state program personnel can point out these disagreements and give the basis for the state evaluator's position.

The taped evaluation is used as a basis for discussion of the local project director's findings and the state evaluator's review. It is made available to the local school superintendent and all of the local project personnel. After each person involved in the project has had an opportunity to listen to the tape they may use side 2 of the same tape to make any response which they feel is indicated to any of the statements or review findings of the state evaluator or state consultant.

This taped evaluation and response allows a dynamic 2-way communication channel between the SEA and the LEA, and the state program evaluator feels that it is an exemplary activity worthy of replication in other states.

SEA Staff Development

One of the areas in which North Carolina has received the plaudits of the U. S. Department of Education is staff development. A brief overview of the staff development activities sponsored by the state migrant office is included in Chapter I of this report.

Not only did the state program promote and sponsor staff development activities, 62 out of 63 local projects during the regular school term and 28 out of 31 summer projects included staff development among their project activities.

The topics covered in the state-sponsored staff development workshops included identification and recruitment, MSRTS procedures and skills training, instruction in teaching reading, mathematics and cultural arts, and improving effectiveness of the migrant parent advisory committees.

In addition to the staff development activities sponsored by the SEA for local project personnel, 22 SEA and LEA staff members were involved as program presenters at the East Coast Regional workshop in Philadelphia, Pennsylvania in February, 1980.

The presentations were made during 18 of the workshop sessions and covered the topics of identification and recruitment, reading, bilingual instruction, staff development, interagency coordination, mathematics and parent involvement.

These formal workshops organized by the State Education Agency provided instruction above and beyond the individual instruction which was provided to the local project personnel by the state consultants in the course of their routine monitoring trips to the LEAs.

The state sponsored staff development workshops in mathematics, reading, cultural arts, identification and recruitment, parent involvement and MSRTS procedures provided instruction for more than 400 different local staff members. The cumulative contact hours of instruction in these state-sponsored workshops was in excess of 12,000 hours.

SEA Migrant Parent Advisory Committee

The North Carolina State Migrant Parent Advisory Committee was organized in 1976. Since that time it has grown in size, and importance to the operation of the state migrant education program.

Each local migrant PAC elects one parent to regular membership on the State Migrant Parent Advisory Committee. Associate memberships in the state committee are open to members of the state migrant staff and members of the local PACs. However, associate members, according to the constitution and by-laws adopted by the committee are non-voting members. This arrangement provides equal representation for each of the local areas within the state.

Officers of the state PAC are elected by the membership and, along with the State Director of Migrant Education, serve as the executive committee of the organization.

The committee holds two meetings during the year at which time members are informed on effective ways for parents to become involved in the education of their children.

The committee provides in-put into the planning of the migrant education program, makes recommendations regarding the operation and evaluation of the programs and projects, disseminates information on resources to meet the needs of migrant children, provides workshops and seminars to help local migrant councils understand their role and responsibilities, and generally presents a united front in support of educational programs for migrant children.

Because of its organization and effectiveness, the State Migrant Parent Advisory Committee has become a noteworthy part of the state migrant education program.

SEA Identification and Recruitment

One of the most important responsibilities the SEA has in the migrant education program is the identification and recruitment of eligible children. The state migrant program has an outstanding record in this area of responsibility.

Much of the success which has been realized in the identification of eligible children is due to the Identification and Recruitment Guide which was developed by the SEA staff and the instruction which was given to LEA personnel in its use.

Strong emphasis by the SEA on the importance of identification and the availability of an easy-to-follow guide made it possible for already established projects to increase their membership and project participation. Local project personnel were assigned specific responsibilities for the identification function in many of the LEAs.

The greatest visible result of the identification and recruitment efforts within the state has been brought about as the result of one staff member at the SEA level who has been assigned the primary responsibility of conducting surveys in LEAs which do not have migrant education projects. As a result of the surveys conducted by this staff person fifteen new projects were organized in the state last year.

The establishment of fifteen new projects in the state is an outstanding achievement. The most important part of the achievement is that more than 2,000 children may be given the supplementary instruction they so desperately need. The establishment of these new projects and the service which is rendered to the eligible children is possible only because of the activities in identification and recruitment which were supported and carried out by the SEA.

ALAMANCE COUNTY

Alamance County is to be commended for the wealth of available curriculum materials used to motivate children to learn through an effective individualized instructional program.

ANSON COUNTY

Anson County was unique for the one to one tutorial assistance and the use of materials especially adopted to the needs and learning levels of the children.

BEAUFORT COUNTY

The Beaufort County project is saluted for its outstanding coordination between the instructional aides and the regular classroom teachers. The aides met with each child's teacher each Friday to plan the necessary learning activities for the next week.

BERTIE COUNTY

Bertie County is recognized for outstanding achievement of all project objectives which were written to present real challenges to the project staff.

BLADEN COUNTY

One of the primary strengths of the Bladen County migrant project continued to be the efforts made by the instructional staff to promote migrant students self confidence.

BRUNSWICK COUNTY

A noteworthy feature of Brunswick County migrant project was the effective identification and recruitment efforts made by the central office staff.

CAMDEN COUNTY

Camden County is commended for the inclusion of a migrant resource teacher in its regular school term project to work closely with the students' classroom teacher - providing individual academic continuity.

CHATHAM COUNTY

The major strength of the Chatham County project is the dedication of the project staff and their special rapport, interest, and enthusiasm as they relate to the students being served.

CHOWAN COUNTY

The thematic learning approach allowed the wide variety resources available in the historic town of Edenton to be used in the Chowan County summer migrant education project.

CLEVELAND COUNTY

Cleveland County is to be commended for the excellent beginning made in migrant education. The state evaluator attributes this excellence to the commitment of the central office personnel involved with the project and the dedication and demonstrated abilities of the migrant project staff.

COLUMBUS COUNTY

One of the strengths of Columbus County's regular term migrant education project was the high degree of correlation between the regular classroom teachers and the instructional personnel involved in the migrant education program.

CUMBERLAND COUNTY

A noteworthy feature of Cumberland County's summer migrant education project continues to be the effective utilization of commercial and teacher-made instructional materials.

DUPLIN COUNTY

The Duplin County migrant education project was characterized by the efforts of the instructional staff to improve the self-confidence of the migrants through parent conferences, and observation of the project by migrant parents.

EDGECOMBE COUNTY

Edgecombe County's migrant education project is to be commended for the outstanding achievement of the migrant children in the areas of reading and mathematics.

GATES COUNTY

An outstanding feature of the Gates County migrant project was the local in-service training conducted prior to the summer phase of the project.

GREENE COUNTY

One of the strength of Greene County's migrant education project was the staff's utilization of creative writing to elicit positive responses from students.

GUILFORD COUNTY

Guilford County is to be commended for the rapport established along with the cooperation and dedication of the personnel who were involved in the project and were responsible for its success.

HALIFAX COUNTY

The laboratory settings at White Oak and Dawson Schools continue to be exemplary components of the Halifax County's regular school term migrant project. Individual Education Plans and contingency contracts were used with each student.

HARNETT COUNTY

Interagency and community participation in Harnett County summer migrant education program continues to be outstanding:

HAYWOOD COUNTY

Strengths noted in the migrant education program in Haywood County included recruitment, record keeping and individualized prescriptive educational plans for each of the migrant children.

HENDERSON COUNTY

Henderson County is to be commended for its efforts to examine and evaluate instructional material in order to determine that which will be most effective in meeting the needs of the migrant children.

HERTFORD COUNTY

Hertford County is commended for the highly successful secondary school component in its summer school project for migrant children.

HOKE COUNTY

Effective use of a highly individualized mathematics program continues to be the major strength of Hoke County's migrant project.

JOHNSTON COUNTY

The effectiveness of individualized instruction in the summer migrant education project was outstanding. As a result of the flexibility of the staff, small class size and the informal learning atmosphere students exceeded expectations.

LENOIR COUNTY

A noteworthy feature of Lenoir County's summer migrant education project continues to be the token reward system. This system enables the instructional staff to elicit positive responses from students in an informal Olympic-like atmosphere.

LINCOLN COUNTY

One of the strengths of the Lincoln County migrant project is the positive approach to motivating children to achieve to their maximum ability. "Friday Fun Day" or game day and positive rewards for accomplishment serve to reinforce learning as well as to motivate.

MARTIN COUNTY

Martin County is commended for carrying out a highly successful summer migrant education project built around the theme of "Life's Theater."

MAXTON CITY

A noteworthy feature of Maxton City's summer migrant project was the use of a reward system which made it possible for a child to "earn" a T-shirt by successful completion of a reading program.

MONTGOMERY COUNTY

Montgomery County was unique in that its small group individualized instruction, along with good communications between classroom and migrant teachers helped to meet specific needs of each child.

MOORE COUNTY

A noteworthy feature of Moore County's migrant education project is the classroom atmosphere which is friendly, colorful, and child centered; where the child feels relaxed and at-home yet is stimulated and motivated to learn.

NASH COUNTY

The in-service training program for the teachers and instructional assistants continued to be exemplary again during Nash County's regular school term migrant project. Once a week from 1:30 to 3:30, the entire staff engaged in training sessions -- including the use of teaching techniques, and methods, learning games, etc.

NORTHAMPTON COUNTY

An exemplary component of the Northampton regular school term migrant project was the use of the IEP's developed by the migrant teachers. The number and quality of the resource personnel who rendered their time and service toward enriching the summer migrant project was also noteworthy.

ONSLOW COUNTY

The most outstanding feature of Onslow County's migrant project was the recruitment of migrant children. As a result, more students are eligible for supplemental services.

ORANGE COUNTY

The migrant education program in Orange County was coordinated with other exceptional children programs. Teachers and students made materials for specific needs and learning activities.

PASQUOTANK COUNTY

The coordination of the migrant education project with summer activities for Title I, LD and ESL programs is to be commended.

PERQUIMANS COUNTY

The summer migrant project in Perquimans is commended for securing a variety of resource personnel to enrich the program for the migrant children.

PITT COUNTY

The exemplary component for the Pitt County migrant project is the coordination of the project instructional program with that of the classroom teachers. The diagnostic test information was shared with the classroom teachers, and information was exchanged between the migrant staff and the regular teachers relating to instructional areas which needed attention.

RANDOLPH COUNTY

The special attention and interest extended to the children by the aides in Randolph County have helped to stimulate the children to learn and to make improvement in their work.

RED SPRINGS CITY

One of the strengths of Red Springs City migrant education project continues to be the effective utilization of ideas and techniques introduced during staff development workshops.

RICHMOND COUNTY

Outstanding features of the Richmond County migrant education program are the very strong and effective individualized instructional program, cooperative relationship with other agencies and organizations, and the very capable teaching staff which has made the program very effective.

ROBESON COUNTY

A noteworthy feature of Robeson County migrant project was the effective utilization of commercial and teacher-made teaching materials.

ROCKINGHAM COUNTY

The Rockingham County project was characterized by flexibility and adaptability. The training, experience and dedication of the migrant project staff added strength to the instructional program.

ST. PAULS CITY

A noteworthy feature of St. Pauls City's migrant education project was the variety of teaching techniques used by the instructional staff to meet the individual needs of migrant children.

SAMPSON COUNTY

One of the major strengths of Sampson County's migrant project was the effective utilization of multi-level instructional materials.

SCOTLAND COUNTY

Scotland County's summer migrant education program gave priority to fulfilling the academic needs of eligible migrant students with emphases on instruction in reading, providing for the total well-being of the student at school, and teaching children that one must work for what one gets.

STOKES COUNTY

The primary strength of the Stokes County migrant education project was the individualization of instruction in a program designed to meet the specifically identified needs of the children.

SURRY COUNTY

The Surry County project director notes the dedication and qualifications of the migrant project staff as its primary strength.

TYRRELL COUNTY

The Tyrrell County migrant project is commended for the attractive and conveniently located tutorial station at the Tyrrell Elementary School, and the friendly, personal interest of the two math aides in assisting their students.

UNION COUNTY

The strengths of Union County's migrant education program are the one to one instructional assistance and the positive and supportive feedback from parents which have increased positive self-concepts by students.

WAKE COUNTY

Coordinating the migrant project with other local agencies was noteworthy in Wake County's migrant education project. Through referrals made by the recorder/recruiter many migrant students received aid they normally would not have received.

WASHINGTON COUNTY

The Washington County migrant project is to be commended for extending tutorial services to the high school during the regular school term.

WAYNE COUNTY

A noteworthy feature of Wayne County's migrant education project continues to be the Contempo Lab Program, a diagnostic/prescriptive approach which enabled the students to gain experience in dealing with everyday-life problems.

WILSON COUNTY

The Wilson County migrant project is recognized for the effective and intensive recruitment efforts which resulted in a significant increase in the enrollment of eligible children.

YADKIN COUNTY

Strengths noted in the migrant education program in Yadkin County included a high percentage of staff members who were bilingual in English and Spanish, and an instructional program carried out in English and Spanish which was designed to meet the individual needs of the children enrolled in the program.

CHAPTER IV

SUMMARY AND RECOMMENDATIONS

SUMMARY

All available information indicates that the North Carolina Migrant Education Program is adequately meeting the legislative requirements and the national program objectives. It is meeting the state goals for the program and has developed an effective procedure of delivering services to eligible migrant children through indirect operation of project activities through the local educational agencies. Correspondence from the Department of Education indicates that the North Carolina Evaluation Report "follows the program requirements as defined in...Title I Migrant Education Regulations."

The SEA has done a good job of pulling together individual LEA evaluation reports into a cohesive analysis of the degree to which program objectives have been achieved. The greatest value of the report is derived from the effective use made of it at the State and local level in providing constructive feedback and guidance for future program improvement.

Priorities set the emphasis, and objectives give the focus to the state program. Exemplary activities were noted in the state program administration and the regular and summer term projects in the LEAs. The recommendations of the local project directors were carefully analyzed and the state migrant staff made their own recommendations for improving local projects.

The practice of presenting the evaluation report findings to the LEAs by means of a recorded tape was continued. The taped evaluations also contained reactions to the local project directors' recommendations.

Program support for the state migrant education program was obtained through cooperative agreements with the Migrant and Seasonal Farm Workers Association.

A total of fifteen (15) new projects were initiated during the year. All local projects used some form of achievement testing to document attainment of objective. In addition, the annual statewide testing program provided more than 12,000 test scores for migrant children. An achievement status calculated from these scores reveals that, compared to national norms, the migrant children face mounting deficits as they progress through the school grades. This achievement status also shows that the migrant children are below the state averages in all areas, and that the achievement of migrant children is approximately the same as that of children enrolled in the regular ESEA Title I programs in North Carolina.

RECOMMENDATIONS

Recommendations for continued improvement and greater effectiveness in the migrant education program fall naturally into two categories - SEA program management and LEA project operation.

In addition to the following general recommendations relating to SEA and LEA program management, it should be noted that specific recommendations for the individual migrant education projects were made in the State's evaluation of the local project. These recommendations are contained in the written and taped reports which have been prepared for each of the LEAs.

SEA PROGRAM MANAGEMENT

1. *The Division of Migrant Education should require the LEAs to conduct needs assessments according to the provisions contained in the Migrant Education Administrative Guide.*

One of the requirements set forth in the migrant program regulations is the assessment of the needs of migrant children. If the migrant program is to meet its mandate "to meet the special educational needs of migratory children of migratory agricultural workers and migratory fishermen" it first becomes necessary to find out what those needs are.

It was noted from the local evaluation reports that some LEAs did not have a specific objective relating to needs assessment. While this evaluator concedes that needs may be assessed without having a project objective relating to this program function, it seems reasonable that such an objective would serve to remind local project personnel of this requirement.

It was also noted that even though this objective was included in the 1978 and 1979 annual evaluation report, appropriate action was not taken by SEA staff personnel to assure that it was followed. Therefore, it is the recommendation of this evaluator that the state migrant staff review the local project applications for the specific purpose of determining whether they have included a project objective relating to assessment of students' needs. If it is found that such an objective is not included in a local project application, appropriate action should be initiated.

2. *The Division of Migrant Education should continue to seek improvement in the continuity of the educational programs of migrant children.*

The first priority of the state migrant education program is program continuity. Activities which can be cited to indicate an effort in this direction are the participation in the Migrant Student Record Transfer System, the participation of the state and local projects at the east coast regional migrant education conference, the attendance of the state migrant program director at other regional and national conferences, and the use of out-of-state consultants in the State-sponsored workshop in North Carolina.

Probably the greatest single activity to provide continuity of program for the migratory children is the recording of education skills on the student's records. The state educational agency should continue to cooperate with the national migrant data center in this effort. It should also continue the training of local project personnel in the procedures necessary to carry out this function and refine the processes so that they can be carried out with the greatest efficiency and least probability of error.

3. *The Division of Migrant Education should continue to provide technical assistance to local school personnel in conducting surveys and developing new migrant projects.*

Experience during the past year has demonstrated that a concentrated effort to identify migratory children can bear positive results. During the period covered by this report 15 new projects serving more than 1,500 children has resulted from the surveys conducted in the local school units by members of the state migrant staff. Such efforts should be continued in those areas of the state where there seems to be a likelihood that sufficient numbers of eligible children might be located to make it feasible to develop a project for them.

4. *The Division of Migrant Education should revise the migrant education program forms.*

Changes in program regulations and new interpretations of existing regulations makes it necessary to assess the effectiveness of program forms in carrying out program functions. For this reason it is recommended that attention be given to the revision of existing forms in order to keep them in line with program requirements.

5. *The Division of Migrant Education should cooperate with local migrant projects in conducting MSRTS enrollment validation studies.*

Program credibility is maintained through validation of the enrollment of migrant children in the program. Discrepancies in the enrollment of children in the local projects and in the migrant student record transfer system should be held to a minimum. Also, there should be no question about the eligibility of any child enrolled in the program to participate in program activities and derive benefits from program funds. Therefore, it is recommended that the Division of Migrant Education, with assistance and cooperation of the LEAs, carry out validation studies in the local migrant projects.

6. *The Division of Migrant Education should revise program publications in order to keep them up-to-date.*

As new regulations are published and new interpretations are given to existing regulations, it becomes necessary to revise the manuals and guides used in the administration of the projects. Therefore, it is recommended that the Division of Migrant Education make a careful study of the various program guides and other publications. Where the information is erroneous or out-of-date, the publication should be revised to conform with program requirements. Two of the publications which are in need of revision are the Record Clerk's Manual and the Migrant Education Administrative Guide.

7. *The Division of Migrant Education should continue to cooperate with other governmental and private, non-profit agencies in providing comprehensive services to migrant families.*

In the past there has been a high degree of cooperation by the state migrant education office with other agencies of government and private, non-profit organizations. This has resulted in the extension of services to eligible families, reduction of the overlapping services by the agencies involved, open lines of communications among the agencies, and understandings of the areas of responsibilities of each agency and the services which each is able to provide.

One of the organizations through which this cooperation is effected is the State Advisory Committee on Services to Migrants. Through interagency discussions, migrant children have been provided health and social services support through the Department of Human Resources, day care services through the Migrant and Seasonal Farm Workers Association (MSFA), psychological services through the Division of Mental Health and supplementary school support through MSFA. Dissemination of program information and public support of the program has been provided through a joint project of the National Education Association and the North Carolina Association of Educators.

This support through other agencies and organizations has allowed the Division of Migrant Education to concentrate its efforts on the academic progress of the migrant children and to extend educational services to a greater number of eligible children.

In order to realize the financial advantage of this kind of support in future programs, it is recommended that this kind of interagency cooperation be continued.

8. *The Division of Migrant Education should continue to use effective evaluation procedures.*

The evaluation process for the migrant education program has experienced changes throughout the years. As these changes have occurred the evaluation process has become more effective and the evaluation reports have reflected a more accurate picture of the achievement and status of the migrant children enrolled in the program. The state evaluation report, the local project evaluation reports and the taped evaluation of the local projects have become outstanding instruments for the improvement of services to migrant children. The evaluation process has been improved and refined to the point that it is being cited in this report as an exemplary activity.

Because of the positive manner in which the local reporting on cassette tapes has been received, the meaningful use of statistical information from a state-wide testing program has been used and the recognition which has been directed to the evaluation practices in North Carolina, it is recommended that these and other effective procedures be continued.

9. *The Division of Migrant Education should continue to support the State Migrant Parent Advisory Committee activities.*

North Carolina's State Migrant Parent Advisory Committee has been in operation for more than two years. During this period of time it has provided

a valuable tool for the support of the migrant education program and an open forum for parents. In the meetings of the local parent advisory committee local concerns are brought to light. Representatives from the local committees bring these concerns to the State Migrant Parent Advisory Committee and as they are aired, solutions are developed through interaction with appropriate program personnel.

In order to continue to strengthen the parent committee and to maintain the support of the parents, it is recommended that the state migrant office continue its support of the committee and its work.

10. *The Division of Migrant Education should continue its efforts to improve program operations through staff development.*

The staff development activities sponsored by the Division of Migrant Education have been the source of pride in the past. Through these efforts there has been a noticeable improvement in the quality of program offerings and project organization. Still there is a need for such activities, particularly in view of the changing requirements of the program from the national level.

Record clerks and recruiters need to be constantly up-dated on skills and techniques and provided instruction in new procedures required to implement new phases of the Migrant Student Record Transfer System.

Local project recruiters should be given assistance in order to understand the importance of their jobs and to learn how to accomplish it most effectively.

Local project directors and other local project staff members should be involved in workshops where they can improve their techniques in evaluating their migrant education projects.

It is therefore recommended that the state migrant office maintain a constant effort to meet the staff development needs of all persons involved in the education of migrant children.

LEA PROGRAM MANAGEMENT

1. *The local educational agencies should provide bilingual-bicultural programs for Spanish-speaking children in their migrant projects.*

This recommendation is continued from previous evaluation reports. Notable progress has been made in the area of bilingual instruction since this recommendation was first made. Many projects have employed Spanish-speaking teachers or aides and some projects have provided bicultural and Hispanic cultural instructional materials to be used by children with little or no English-speaking ability.

Notwithstanding the progress that has been made by some local projects in providing bilingual-bicultural programs for non-English speaking children, it is recommended that in those projects where children with little or no

English-speaking facility are enrolled, every effort be made to provide a meaningful program of instruction in the children's dominant language and that English be taught as a second language.

2. *The hours of operation of local summer migrant projects should be during the part of the day which would allow the greatest number of migrant children to receive the greatest benefit from the program.*

It is noted that despite the recommendation of the previous evaluation report some projects are operated at odd hours, afternoons, evenings and into the night. It was also noted during monitoring visits that young children were attending programs which extended into the late evening. They were unable to participate fully in the project activities because of sleepiness and fatigue. This evaluator has some serious doubts about the effectiveness of such programs. It is his strong belief that such projects are not effective, that they are non-productive, that they are not economically feasible in terms of demonstrated student gains and that the children would benefit more from program activities if they were carried out during the morning and early afternoon hours.

Children would be able to participate more fully during the earlier part of the day because they would be more alert.

These are also the times when the parents are normally working in the fields and would appreciate having the children cared for in a learning environment. Therefore, it is recommended that the local educational agencies give careful consideration to such factors as recruitment, age of pupils, attendance, transportation, food service, program coordination, etc., and schedule project activities for the convenience and benefit of the greatest number of migrant children.

3. *The local educational agencies should continue to make a concerted effort to enroll all eligible children and youths at the secondary school level in the regular school term migrant projects.*

An analysis of the age and grade placement of migrant children enrolled in the migrant education program seems to indicate that much attention continues to be given to the enrollment of the eligible children in the elementary schools.

Even with a degree of added emphasis on enrolling eligible children in the secondary school into the projects last year, there was little increase in the number of enrollments of secondary school youths. It is therefore recommended that all eligible children in the LEA, regardless of grade level, be enrolled in the migrant project and entered in the Migrant Student Record Transfer System.

4. *Local project directors should make every reasonable effort to secure supporting services from other agencies and organizations.*

This recommendation is repeated from previous evaluation reports.

Through the activities of the State Advisory Committee on Services to Migrants the Division of Migrant Education has been able to establish lines of communication with other agencies and organizations serving migrant families. Information on programs and services is available from each of the member organizations of this committee. It has been through the exchange of information and establishment of these lines of communication that the Division of Migrant Education has been able to secure personnel from the Migrant and Seasonal Farm Workers Association. This cooperative effort should be continued.

There should also be a concerted effort on the part of local project directors to secure the services of other agencies. Home-school coordinators and other liaison personnel should seek the assistance of local departments of health, social services, other governmental agencies and private non-profit organizations so that the delivery of their services will have an impact on the migrant family. Any assistance from these agencies would give indirect support to educational programs for the children in the family who are enrolled in the migrant education program.

While it may be easier, simpler and possibly quicker to provide supporting services by planning and budgeting for them in the migrant education project application, it should be remembered that funds available under this program are to be used for educational purposes. If the project attempts to provide excessive supporting services to the migrant children, it may be usurping the responsibility of some other governmental agency or providing a duplication of service to the migrant family.

5. *Local education agencies should give attention to the development of individual written educational plans for each student enrolled in the migrant education program.*

In addition to the assessment of student needs, regulations for the program (paragraph 116.47) require that the state educational agency encourage LEAs to provide for each child enrolled in the program, "an individualized written educational plan (maintained and periodically evaluated)..."

Local project directors and project planners should insure that the provision of the regulations is carried out. Individualized programs of instruction should be based upon individual needs assessments and individual performance should be evaluated in terms of specific objectives. Performance objectives should be individualized to the needs, program of study and abilities of the individual for whom they are developed; and the entire program, including performance objectives, should be evaluated periodically to assure that the individualized program of instruction is relevant to the needs of the student and that the student is making satisfactory progress toward meeting the stated objectives.

Individualized written programs of studies for some of the migrant children have been observed in summer school programs. Such prescriptive programs have been observed less frequently during the regular school term projects.

Analysis of test results seem to indicate that in those projects where individualized programs of study are written for the pupils, and where constant evaluation of student progress, modification of the written prescription and methods of instruction are carried out, there is a decided increase in the rate of pupil achievement. It is therefore recommended that all project administrators give close attention to this program requirement.

6. *Local project directors should give more emphasis to the established priorities of the state program.*

The first priority of the state program is to provide for continuity in the education of migrant children. The second priority is the establishment of summer projects for currently migratory children. Analysis of enrollment figures from the summer projects of 1978 and 1979 indicates that there has been a net decrease in enrollment of currently migratory children. This decrease has occurred despite the overall increase in enrollment and the establishment of fifteen new projects in the state during the period covered by this report. Over the three year period from 1977 to 1980 there has been a decrease of 311 currently migratory children enrolled in summer projects while the increase in total enrollment during that same period of time has been 1,431.

If the State migrant program is to reach the maximum number of currently migratory children it will be essential to provide projects to serve them. Therefore, it is the strong recommendation of this evaluator that the local project administrators initiate whatever action is necessary to develop summer migrant projects in each of the LEAs where a concentration of migrant children has been identified, and that a concentrated effort be made to identify and enroll the currently migratory children into the projects.

7. *Local recruiter-clerks should be punctual in transmitting student information to the Migrant Student Record Transfer System terminal operator.*

It is impossible to emphasize too strongly the necessity for punctuality in transmitting student information to the terminal operator so that it can be placed on the data base. Recruiters and clerks should complete the necessary certification of eligibility forms on the students as they are identified. Following this identification and certification, there should be no delay in transmitting enrollment information (either the MDT or record transfer form) to the terminal operator. This enrollment data should not be retained at the project level until large numbers of documents are accumulated, but should be sent to the terminal as the documents are completed. This may mean that a communication to the terminal operator might be dispatched two or three times per week during periods of initial project enrollment. After the greater masses of children have been enrolled in the record transfer system the need for such frequent communications may diminish so that a once a week transmittal of enrollments, up-dating information and withdrawals will maintain an acceptable level of operation.

It is important to enroll a child in the record transfer system as quickly as possible, but it is just as important to transmit up-date and withdrawal information to the terminal operator as the information is generated or when the child withdraws from the project or the project ends.

North Carolina has enjoyed a high degree of proficiency in its MSRTS activities, but even greater proficiency can be demonstrated if local recruiters-clerks or other responsible project personnel will follow this recommendation.
