#### Abstract

The purpose of this study was to determine the effects of Teachers Teacining Teachers, a peer coaching program, upon public school educators' attitudes toward various professional and perscnal factors. A total of 27 educators participated from November, 1987 to May, 1988. At the conclusion of the study, tests were administered to all participants. Two attitude surveys were also administered to students to determine their perception of their teacher's effectiveness. A TESA Proyram Evaluation Survey was also administered to the participants. The mean scores were compared to determine the project's effectiveness. The results indicated that the teachers were parforming the objectives of the program as demonstrated by the post test scores. The program appears to have been effective in improving teacher attitude, enhancing collegial support, and in increasing the students' perception of their teachers' effectiveness. Project participants indicated general approval of the project and the instruction they received. They were less enthusiastic about lessons on higher level questions, touching, and desisting. Statistical data from the study are displayed in tables and a copy of the questionnaire is appended. (Author/JD)

Abstract

The purpose of this study was to determine the effects of Teachers Teaching Teachers, a peer coaching program, upon public school educators' attitudes toward various professional and personal factors

A total of 27 educators participated from November, 1978 to May, 1988 At the conciusion of the study, tests were administered to all participants. Two attitude surveys were also administered tostudents to determine the ir perception of their teacher's effectiveness. A TESA Program Evaluat ion Survey was also administered to participants The mean scores were compared to determine the project's effectiveness

The results indicated that the teachers were performing the objectives of the program as demonstrated by the post test scores. The program :"pears to have been effective in improving teacher attitude, enhancing collegial support and in increasing the students perception of their teachers' effectiveness.

Project participants indicated general approval of the project and the instruction they recelved. They were less enthusiastic about lessons on nigher level questioning, touching, and desisting.

## Background of the Problem

Professional mortality is eroding both the number and the quality of our nation's teachers in an unprecedented fashion, the onee revered teaching profession is now the target of potshots from sources as varied as the media, the Department of Education, and justifiably concerned parents Combined with the inherent stress of the job, these factors cause approximately 50 percent of teachers to leave the profession within five years ( $p$ 33) Further, Stone (1987) reveals that among the first to leave are the most academically able

What can be done to stop the mass exodus of the "best and brightest?" What help can be given to those who are struggling on the front lines in our classrooms? Rodriguez and Johnstone (1986) remindus that "teaching can be a very lonely profession" (p. 99). As any strategist knows, a single soldier can never win the entire war. Just as the G.I. In the foxhole receives assistance, supplies, and guidance from an entire support network, so should the teacher be revitalized, encouraged, and challenged by a similar system.

One of the most effective methods of providing that system seems to be through a collegial support group. Within the confines of such a group, teachers could begin to think of one another as resources (Bang-Jensen, 1986, p. 62) and learn by sharing their successes and fallures with one another (Westcott, 1987, p. 30). Colleagues, according to Alfonson and Goldsberry (1982), have "the value of proximity, immediacy, and a first-hand knowledge of the other's workspace" (p 101 ). Who, then could be better equipped to help teachers maintain their current levels of effectiveness and challenge them to strive for higher levels than fellow teachers?

Unfortunately, administrators sometimes "fail to recognize the considerable knowledge and expertise in their own teaching staffs" (westcott, 1987, p. 30). As a result, many inservice brograms are one-day sessions which Smith-Westberry and Job ( $19 \varepsilon 弓$ ) believe are viewed by teachers as "disorganized, dull, and irrelevant to their needs" ( $p$ 135) in addition, Rodriguez and Johnstone (1986) note that teachers resist having others "diagnosing and prescribing for them" ( $p$ 87). Perhaps the worst fallure of these inservice efforts is the lack of any follow-through (Van Cleaf \& Reinhart2, 1984, p. 167). Obviously, real growth is more probable through a program that
offers "follow-up practice, coaching, and peer support" (Rodriguez \& Johnstone. 1986, p 88) The solution, then, would appear to be some type of collegial group

Among the different approaches under the broad spectrum of peer collaboration, "coaching" is the one selected for this Vigo County study. Coaching, as defined by its originators, Joyce and Showers (Servatius \& Young, 1985, p 50), is "a follow-up by a supportive advisor who helps a teacher correctly apply skilis learned in training." Servatius and Young (1985) were responsible for establishing a pilot program in Santa Clara County, Callfornia, through the Educational Development Center, which offers programs to 33 local school districts The most productive outcome of the successful first year was that "teachers who recelve both training and coaching re implementing the trained skills correctly and consistently" (p. 53). This contention is supported by others, including Martin Brooks (1985) who states that "peer teaming and peer observation are critical" (p. 26) to the implementation and success of the Cognitive Levels Matching Project in Shoreham, New York. Additionally, VanCleaf and Reinhartz (1984) claim that the success of their "Perceivers and NonPerceivers" program is largely due to the members of the teams coaching one another (p 170).

Coaching is, ideally, an on-going process of teachers coaching or training one another (Showers, 1985, p. 44). It provides a uniquely individualized form of instruction which provides the advantage of being both emotionally and professionally supportive (Stone, 1987, p 34). in fact, Snowers (1985) says that coaching has several purposes'

1. To build a community of teachers who cont inuously engage in the study of their craft
2. To develop the shared language and set of common understandings necessary for the collegial study of new knowledge and skills.
3. To provide a structure for the follow-up to training that is essential for acquiring new teaching skills and strategies (p.33-34)

Although the presentation of every new skill begins with an assigned, trained coach, each team member, by the latter development of a skill, is wile to be both coach and student. Through the process of coaching, teachers are brought to a point of collaboration and sharing, which, according to Bang-Jensen (1986), is an "effective, efficient way to improve instruction and to
encourage teacher growth" (p. 56) Confidence, both in themselves and in the support group, inevitably begins to have a positive effect on teachers' performances in the classroom and on their attitudes toward teaching and the educational environment

Servatius and Young (1985) offer possible reasons for the success of coaching The first is accountability, the fact that collegial support and commitment is in the same building, not in the central office Second, support and companionship develop among the team members, extending beyond the learned skill Third, specific feedback is o'feredso par' cipants are encouraged in correct skill implementation and helped with observed difficuities (p 53).

In response to a survey of inservice education, one consultant reported that his most successful results came from "continuous work with a school" (Tomlinson, 1986, p 110) if an outside consultant has the best success when his work is done on an on-going basis, the apparent solution to teacher inservice training is to use those who are already present on a continuous basis and already familiar with the school, the personnel, and the needs to be successful, however, such a program must, before preparation and presentation, determine the needs of the participants (Smitn-Westberry, 1986, p 135) and then reflect those needs. Additionally, proper follow-through will continue to supply both professional and emotional support just such an approach to peer coaching, the Teachers Teaching Teachers program, was used in the Vigo County study The anticipated results are that the experimental group which participated in the coaching will indicate an adequate positive perception of their colleagues, the ir students, the adm:Inistration, and themselves and will view their profession and the methods of staff development more favorably

If Teachers Teaching Teachers is an effective staff development program, then the attitude and belleis of participating teachers and their students should improve signif cantly

General statement of the problem What effect will Teachers Teaching Teachers have on public school educators?

Specific statement of the problem: Will the Teachers Teaching Teachers program enhance, both personally and professionally, the attitudes and perceptions of the participants as well as their students opinions of them?

Hyootheses: Following are the six hypotheses needed to test the effectiveness of the Teachers Teaching Teachers program

1. Teachers Teaching Teachers participants will show adequate or above scores on an instrument which measures teaching strategy.
2. Teachers Teaching Teachers participants will show adequate or above scores in feeling tone.
3. Teachers Teaching Teachers participants will show ade, juate or above scores in causing students to experience success
4. Elementary students of Teachers Teaching Teachers participants will rate their teachers effectiveness as adequate or above.

ל Secondary students of Teachers Teaching Teachers will rate their teachers' effectiveness as adequate or above

6 Participants will indicate positive opinions about the instruction they receive.

Method
Subjects. Twenty-seven piofessional educators participated in the training program. All were employed by the Vigo County School Corporation in Terre Haute, Indiana.

Ireatment All subjects attended regular sessions of the Teachers Teaching Teachers program. They were instructed by a cadre of teachers who had previously completed the training

Assessment. Subjects were tested at the conclusion of the training. Students of the participants were similariy tested The following affective measures were used to measure progress.

| * | MEASUREMENT | ITEMS |
| :---: | :---: | :---: |
| (1) | Teaching Strategy | 10 |
| (2) | Feeling Tone | 9 |
| (3) | Success | 13 |
| (4) | Total of 1, 2, and 3 | 32 |
| (5) | Elementary Students |  |
|  | Perception of their teachers | 17 |
| (6) | Secondary Students |  |

In addition, an elọen item TESA Program Evaluation Survey was administered to 18 participants. Tests were machine scored. All measures have yielded reliabilities above 90 in previous administrations Examples of each of the scales and the frequencies of responses are contained in Appendix B of this report.

Analysis. Summary results were analyzed by a chi square and a goodness of fit test. The Statistics with Finesse statistical packing was used to perform the statistical calculation Results were tested at the 05,.01,.001, and the .0001 levels.

The Chi-Square Test was used to ascertain whether there was a difference between the obtained frequency of responses to the questionnaire and an hypothetical equal frequency of 20 percent of the answers for each response

The goodness of fit test sought to determine whether the frequency of responses was normaily distributed.

Responses to the TESA Program Evaluation Survey were totaled and averaged.

Complete results are contained in Appendix A of this report A summary of the results is contained in Tables IAand IB Table II contains the frequency of responses from project participants Tables III and IV contain the frequency of response from students whose teacher participated in the project from the table, it can be observed that participants considered themse ives to be adequately perrorming the teaching skills that the project sought to promote Furthermore, teachers were rated as more than adequate in these skills by both elementary and secondary students. Both tests of statistical significance give evidence of the magnitude of the difference between adequate or average ratings and the above average ratings that were demonstrated by both the teachers and the students.
it is a fair generalization that all measures demonstrat a that the project at tainedis goals in that the teachers are now performing the ir instructional tasks in a manner that the project attempted to encourage.

Results from the TESA Program Evaluation Survey are contained in Table $V$ and Table VI from Table $V$ it can be observed that participants were generally receptive to the type of instruction they received. Participants seemed to be particularly impressed by the knowledge, underst.anding, and entnusiasm of their TESA instructors

Table VI contains the frequencies of responses to questions which asked which units they considered most effective They considered iessons on equal responjing, providing clues, affirmation/correction, and praise to be most effective There was less enthusiasm about lessons on higher level questioning, touching, and desisting.

## Discussion

This study sought to demonstrate the effectiveness of a project called Teachers Teaching Teachers for the improvement of teacher morale and teacher and student attitudes toward teaching effectiveness. The particular techniques used for this project included a collegial support network and coaching. The results were positive Both teachers and students gave ratings of adequate or above to teacher strategy, feeling tone, success of students, and teacher effectives.

The hope for a project such as Teachers Teaching Teachers are not only the short term gains, but the long term eifects. If such a project is contindally practiced within the school system not only teacher effectiveness but also teacher retention will be greatly improved

Additionally, if students percelwe the ir teachers as effective, potentially more learning may occur and the value of the teaching profession may increase in the public eye.

To determine the possibility and validity of such gains for schools, more studies need to be conducted. Once a Teachers Teaching Teachers project is implemenrea, it should be maintained and follow-up studies should be conducted to determine thie long-term effects of this prnject

## PROFESSIONAL EDUCATOR SELF-EVALUATION

DIRECTIONS: Please answer these questions about how you feel the instruction in your classroom has changed during the past three months. Please draw a circle around the answer that is most appropriate. (Administrators answer the questions in terms of how they relate to participants of this program that are teaching at their school).

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| I Never | Decreased | Stayed | Increased | Done Regularly <br> Do This |
|  | The Same |  |  |  |

## Teaching Strategy

1. I call on each student to answer questions, read aloud, or do problems on the board as of ten as 1 call on any one else.
2. Each student has to be prepared for the class because they never know when the teacher is going to call on them.
3. I stand close to students' desks to talk to them and to check their classwork.
4. I move around the room and speak to to students and/or touch them as I pass their desks.
5. I move students around a lot so that no one has to sit in the back all the time.
6. I expect students to think because I ask them questions they have to think about before they can answer them.

I give students help when they need it.
8. I give students suggestions about how to improve their work.
9. I sometimes touch students in a friendly way.
10. I challenge students by expecting them to think instead of remembering answers from their books.

## Feeling Tone

11. When students break idles, they know what the consequences will be.
12. I show courtesy to students by saying "Thank you" and "please" when I talk to them.
13. I respect my students.
14. I care about my students.
15. When I call on students to answer a question, I give them time to think before they have to answer.
16. I compliment students on personal things, like the way they look or things they do which are not a part of their work in class.
17. I am interested in what my students do outside of school.
18. I know about the pets, hobbies, family, trips taken and other personal items of my students.
19. I like my students.

## Success

20. When a student answers a question, the teacher tells them right away if their answer is correct or not.

21. I want my students to do well in school.
22. I show students who do well that I am pleased.
23. I praise students who answer questions correctly or do well on classwork.
24. When students do really good work on an assignment, I tell them exactly what is good about the work.
25. I tell students why I like what they accomplish.
26. I show students' work to the class and praise what they have done.
27. When students have troubles answering a question, I give them clues to help them get the answer.
28. I listen to students when they talk to me, even when I am busy.
29. Students know that I am listening to them because I look at them when I talk to them.
30. I understand how students feel when something bad or good has happened to them.
31. I accept the feelings of my students.
32. If a student treaks a rule ori disobeys me, they are made to feel that I still like them even though I am upset about what she/he did.

32. When I break a rule or disobey the teacher, I know that she/he still likes me even if she/he is upset with what I did.

# TESA - PROGRAM EVALUATION SURVEY 

District:
Frequencies of Responses are in Tables $V$ and $V I$

Please check the appropriate answer to each tlem below.

| Sex: | Male $\square$ | Female ${ }^{\text {a }}$ |  | Years in profession: |  | 1-50 | 6-10 | 11-15 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age: | 20-25 $\square$ | 26-30 $\square$ | 31-3j $\square$ | 36-40 | 41-45 | $46+$ |  |  |
| Your major arsignment: Admer |  |  | Administrator i- | Aide $\square$ | Counselo |  | Teacher 0 | Other ${ }^{\text {e }}$ |
| Grade | vel assignm | ent: K-3 | 4-6 Б | 7.8 - | 9-12 | College | University |  |

## PLEASE CIRCLE THE NUMBER THAT BEST REPRESENTS YOUR ANSWER TO THE QUESTION ASKED.

1. To what degree were the objectives of the TESA program clearly communicated to you?.
2. High $1 \quad 2 \quad 3 \quad 4 \quad 5$ Low
3. To what degree were the methods employed by the instructor(s) effective in achieving the objectives?
4. To what degree did the instructor(s) demonstrate a thorough knowledge and understanding of TESA concepts?
5. To what degree did the instructor(s) succeed in communicating TESA concepts?
S. To what degree did the instructor(s) demonstrate enthusiasm for the TESA program?
6. To what degree did the TESA program introduce you to new professional ideas?
7. High 12345 Low
8. High 123445 Lew
9. High 12345 Low
10. High $1 \mathrm{I}_{2}^{\prime} \begin{array}{lllll}3 & 4 & 5 & \text { Low }\end{array}$
11. High 1
12. To what degree did the TESA program provide you with applied and functional knowiedge and practices?
13. High 1
14. To what degree did your involvement in the TESA program result in positive changes in your attitude and behavior toward perceived "lows"?
15. To what degree was the program well organized and managed?
16. High 1
17. High 12345 Low
18. What is your overall rating of the TESA program?
19. High $1 \quad 2 \quad 3 ` 4$ Low
20. Do you believe TESA should continue as a staff inservice training program in your district?
21. Yes $[$ No Undecided $\square$

> UNIT

StRand a RESPONSE OPHORTUNITIES

StRand b FEEDBACK

1 IA Equilable Distribution of Re. sponse Opportunities
2 2A Individual Helping
3 3A Latency (waiting ume for student to respond)
4 4A Delving, Rephrasing, and Giving Clues
s SA Higher Level Questioning
1B Affirmation or Correction
2B Praise of Learning Performance
18-Reasons for Praise
4B Listening
5B Accepting Feelings
strand C
PERSONAL REGARD
1C Proximity (within arm's reach of student)
2C Courtesy
3C Personal Interest and Compliments
4C Touching
5C Desisting

In the above diagram of the Interaction Model, each of the interactions has been coded according to UNIT-STRAND (e.g., Latency - 3A, Courtesy $=2 \mathrm{C}$ ). In the spaces below, prioritize the three (3) interactions you believe were most effective in bringing about positive change with your perceived "lows"; then prioritize the three which you believe were the least effective.

| Code |  |
| :--- | :--- |
| 1st most effective <br> 2nd most effective <br> 3rd most effective | Ist least effective <br> 2nd least effective <br> 3rd least effective |
