#### ABSTRACT

A study examined the management needs of public sector employees in the city of St. Louis, Missouri. A total of 287 St. Louis city service managers and supervisors were asked to assess their need for training in areas related to 12 job dimensions. The average study respondent was a white male (47 years of age) who supervised 13 employees and who was at the first level of supervision. The following supervisory dimensions were cited as the areas in which the need for training was greatest: discipline, motivation, human relations, performance management, and planning. A considerable similarity in self-reported training needs was found to exist among all of the sample subgroups when the data were analyzed by race, age, sex, level of supervision, and number of employees supervised. Older, nonwhite, and female supervisors expressed the greatest need for management development training. Older supervisors reported a greater need for training in problem solving skills and first-level supervisors expressed the greatest need for training their own subordinates. (MN)

St. Louis. Missouri 63121-4499

This study describes self-reported training needs on 12 job dimensions which were examined for 287 St. Louis City Service managers and supervisors. These managers and supervisors were predominantly white, males at the first level of supervision whose average age was 47 and who supervised an average of 13 employees. The supervisory dimensions for which there was the greatest perceived need for training were: discipline; motivation, human relations; performance management; and planning. Training needs analysis was also performed on five subgroupings of supervisors: by age, race, sex, level of supervision, and number of employees supervised. Overall, there was considerable similarity across all of the subgroups in the perceived need for training in the five dimensions listed above. Training needs unique to distinct subgroups include: (a) Training (of own employees) for first level and young supervisors, and (b) Problem Solving skills training for older supervisors. The greatest need for training across all supervisory dimensions was voiced by (a) older, (b) nonwhite, and (c) female supervisors. The least important training need was Counseling.

70:1

<sup>\*</sup> This study was funded by a grant from the Office of Continuing Education & Extension, School of Business Administration, University of Missouri-St. Louis and was conducted under the co-direction of Dr. Mary D. Zalesny and Dr. W. Franklin Spikes.

# AN IDENTIFICATION OF MANAGEMENT TRAINING NEEDS OF PUBLIC SECTOR EMPLOYEES

This paper is divided into three sections: (a) a summary description of the managers and supervisors providing responses to the Training Needs Survey administered by the Department of Personnel, (b) a description of the reliability of the twelve dimensions tapped by the survey, and (c) a description of the perceived training needs of the group overall and of the managers and supervisors grouped by age, race, sex. supervisory level. and number of employees supervised.

#### Demographic Characteristics of Respondents

Responses were available for 287 of the 567 managers and supervisors to whom the training needs survey had been distributed (response rate = 51%). The majority of the sample was male (87%), white (71%), and at the first level of supervision (50%). The average age was 47 years and the average number of employees supervised was 13.

#### Reliability of Training Needs Dimensions

Prior to the analysis of each of the twelve supervisory dimensions on which training needs were assessed, the dimensions were examined for their internal consistency reliability. The higher the internal consistency among the items that make up each scale, the greater the likelihood that the items are in fact measuring the same dimension. Rather than analyzing all 48 items separately, they could be grouped into the dimension each was expected to measure.

#### Description of Perceived Training Needs

Assessment of perceived training needs was performed in the following manner. First, the 5-point training needs scale was collapsed into three classifications: no perceived need for training, little to some perceived need for training, and considerable to great perceived need for training. These three perceived training need categories could then be matched with the three importance ratings of each supervisory dimension (i.e., not important to job performance, important to job performance, and very important to job performance).

Second, the importance and perceived training need scores for the four items comprising each supervisory dimension were averaged into separate importance and training need scores for each dimension. Third, the number of managers and supervisors reporting every possible combination of importance and training need score was calculated. This analysis provided information on the percentage of managers and supervisors who perceived different training needs for dimensions that varied in their perceived importance to the supervisors' job performance (i.e., not important, important, and very important to job performance). The data to be reported focuses on those dimensions considered by the respondents to be important and very important to their job performance and for which they perceive a considerable to great need for training.

#### Overall Analysis

Of the twelve supervisory dimensions tapped by the training needs survey, the five dimensions considered very important to job performance by the greatest number of supervisors were:

Planning	(61%)
Time Management	(61%)
Discipline	(60%)
Motivation	(60%)
Assigning Work	(60%)

The five supervisory dimensions seen as important or very important to job performance <u>and</u> perceived as having the greatest need for training were:

Discipline	(42.9%)
Motivation	(42.9%) (42.9%)
Human Relations	(42.1%)
Human Relations Performance Management	(41.1%)
Planning	(37.7%)

The supervisory dimension seen as least important to job performance and perceived as having the least need for training was Counseling (27.9%). for each of the above dimensions, approximately 40% or more of the respondents considered these important to very important to their job performance and also felt a considerable need for training in these areas. Of the five dimensions for which there was the greatest perceived need for training, three were also considered very important by almost two-thirds of the supervisors (i.e., Discipline, Motivation, and Planning).

#### Analysis by Age

To facilitate the analysis of training needs by age of manager or supervisor, the respondents were divided into three age groups: (a) 36 years and younger, (b) 37 to 56 years old, and (c) 57 years and older. These groupings were based on the average supervisory age and the distribution or range of ages around the average. Approximately 17% of the ages were represented in the first group, 68% in the second group, and 17% in the third group. The five top supervisory dimensions for each age group are shown below. As with the overall analysis, counseling was the lowest ranking supervision dimension for each age group.

36 and Younge	er	37 to 56 Years		57 and Older	
Motivation	(40.7%)	Discipline Performance	(44.8%)	Human Relations	(50.8%)
Training Discipline Performance	(39%) (37.3%)	Management Human Relations	(44.2%) (42.4%)	Motivation Problem Solving	(47.6%) (46.1%)
Management Assigning	(33.9%)	Motivation	(41.8%)	Discipline	(42.8%)
Work	(33.9%)	Planning	(38.8%)	Planning Performance	(39.7%)
				Management	(39.6%)

Two things are worth noting about these findings. First, the greatest needs for training are reported by the two older supervisory groups. Second, although there is considerable similarity in the perceived training needs of each group, there are also several training needs specific to the different age groups represented by the respondents. Unique to the youngest supervisors is the perceived need to acquire skills in providing Training to employees and in Assigning Work. Among the training needs specific to the two older groups of supervisors is a perceived need for Human Relations and Planning skills training. For the youngest group of supervisors, these two dimensions tied at a rank of sixth of 12. Finally, Problem Solving skills were seen as being important to the oldest group of supervisors and in need of training.

#### Analysis by Race

Although there was a sizeable number of black respondents represented in the sample, the percentage of respondents in other nonwhite ethnic categories was too small to analyze separately. Consequently, the respondents were divided into only two racial categories: white and nonwhite. The top five supervisory dimensions representing high importance to job performance and high perceived need for training are:

Nonwhite		White	
Discipline	(54.9%) (53.7%)	Human Relations	(38.5%) (38.0%)
Motivation	(53.7%)	Motivation	(38.0%)
Performance			
Management	(51.2%)	Discipline	(37.5%)
•		Performance	
Problem Solving	(51.2%)	Management	(37%)
Planning	(51.2%) (51.2%)	Planning	(37%) (32%)

Although there is considerable overlap in the dimensions identified by both groups as having a considerable to great need for training, the nonwhite respondents perceive a much greater need for training than do the white respondents. Indeed, although only the top five dimensions are listed here, Appendix B shows that a large portion of the nonwhite respondents perceive considerable need for training in all 12 supervisor dimensions. Once again, the dimension ranked lowest in perceived need for training is counseling. However, the percentage of nonwhites perceiving a need for counseling is as high as the largest number of white supervisors perceiving a considerable training need on any dimension.

#### Analysis by Sex

The analysis of training needs by sex are given below.

Females		Males	
Performance			
Management	(51.4%)	Motivation	(43.2%)
Discipline	(45.9%)	Discipline	(42.4%)
Human Relations	(43.2%)	Human Relations Performance	(42.0%)
Problem Solving	(43.2%)	Management	(39.6%)
Planning	(43.2%)	Planning	(36.8%)
Motivation	(40.5%)	Problem Solving	(35.6%)
Leadership	(40.5%)	the state of the s	

While there is considerable similarity in the rankings for the two groups, female respondents indicate a greater overall need for training than do males. This is especially evident in the larger percentage of female than male supervisors who perceive a considerable need for training in Performance Management. Counseling was the lowest ranked training need for males; time management was the lowest ranked training need for females.

#### Analysis by Supervisory Level

Because of the large number of supervisory levels represented in the sample (i.e., 10) and the small number of respondents in high levels, only three supervisory levels were used. One contained all of the first level supervisory personnel, another contained second level supervisors, and another contained third level supervisors and above.

First Level		Second Level		Third Le	evel
Motivation	(45.8%)	Human Relations	(46.9%)	Motivation	(45.3%)
Discipline	(45.1%)	Discipline	(39.5%)	Discipline	(42.2%)
Performance		Performance		Performance	
Management	(43.7%)	Management	(35.8%)	Management	(42.2%)
Human Relations	(43.0%)	Motivation	(35.8%)	Planning	(40.6%)
Training	(40.8%)	Problem Solving	(34.6%)	Communication	(34.4%)
		•		Problem Solving	(34.4%)

Although the differences in perceived training needs are not very large across the three supervisory level groups, there appears to be a slighter great need for training voiced by personnel in the first supervisory level across all of the supervisory dimensions. Also, a large percentage of first level supervisors perceive a considerable need for acquiring skills in providing training to their subordinates than do higher level supervisors. For all supervisory levels, counseling was the lowest ranked need.

## Analysis by Number of Employees Supervised

For this analysis, the median number of respondents was used to classify the respondents by the number of employees supervised. Use of the median provides an approximately equal number of respondents in each group. Managers and supervisors were classified as having either (a) 11 or fewer employees or (b) more than 11 employees reporting to them.

11 or Fewer Employees		More than 11 Emplo	yees
Discipline Performance	(44.3%)	<b>Human Relations</b>	(41.9%)
Management	(43.7%) (43.7%)	Motivation	(41.9%)
Motivation	(43.7%)	Discipline Performance	(41.2%)
Human Relations	(42.4%)	Management	(38.2%)
Training	(42.4%) (39.7%)	Planning	(37.5%)

There are strong similarities between the rankings for the two groups. Also, there is relatively little difference in the dimension rankings of importance and need for training. However, supervisors who supervise 11 or fewer employees perceived greater need for training across all of the supervisory dimensions. Counseling was the lowest ranking need.

#### Training Recommendations

The data collected as a result of this research provide clear indications as to both areas of training needs and those management-realted issues which were viewed as being important to job performance by the respondents in this study. Keeping these data in mind, the following training recommendations are offered. In order to establish a comprehensive training program, it is suggested that the City of St. Louis Department of Personnel institute a three phase training program for managers and supervisors. Each phase of the recommended program is described below.

#### PHASE I: Management Skill Development Core Curriculum

The first portion of the proposed comprehensive management skills development program would consist of approximately sixty hours of training. It would be designed to meet the self-identified training needs of first level supervisors who comprised sample in this study. The basic intent of Phase I is to provide the participants with a common foundation of skills and knowledge which would be directly related to their day-to-day on the job supervisory responsibilities.

Specific topical areas to be addressed in this protion of the program would include:

- \* Motivation
- \* Managing Interpersonal

Conflicts

- \* Leadership Skills
- \* Working with Groups
- \* Communication Skills

- \* Performance Appraisal
- \* On the Job Training
- \* Planning, Organizing
  - and Controlling
- \* Employee Interviewing

It is recommended that each of these topics be presented in stand alone modules of three hours in length. Obviously certain areas will require a greater amount of time to present. In these instances multiple three hour sessions should be offered.

In certain instances it may be advisable to allow second line managers to attend and participate in all or selected protions of this program. In such cases it is recommended not to mix in the same group first level managers with the second line manager to whom they have directing reporting responsibilities.

#### PHASE II: Advanced Management Skill Development Program

The second portion of this program would consist of further study in the content areas identified in Phase I. These sessions would be offered to first level supervisors who completed the sixty hour program and to second level managers who have specific interest in a given topic. It is proposed that these sessions be offered in six to eight hour full day blocks and be limited to a maximum of two full days of training. Advanced training in the areas of employee relations, motivation and discipline, leadership and communication skills would be offered in the second phase of the proposed management development skills program. Approximately thirty hours of training would be offered in Phase II of the program.

Approximately 78 percent (223 of 287 respondents) in the sample were first or second level managers. Phase I and II of this program would thus meet the training needs of nearly eight of ten managers within the organization.

#### PHASE III: Specialized Management Skili Development Programs

The final content phase of this program is designed to meet the specific needs of third level and above managers. Approximately 63 or 22 percent of the respondents were identified as being in this category (36 Third Level; 19 Fourth Level; 3 Sixth Level; and 6 Seventh Level and Above).

Phase III of this program would consist of free standing topic specific workshops and seminars developed around the areas identified by these levels of managers. Specific topics include motivation; discipline; performance management; planning; communication skills; and problem solving.

This phase of the program would be designed solely for upper level managers with attendance being restricted to those members of the organization with significant practical experience and wide ranging supervisory and managerial responsibilities.

The final training-related recommendation concerns implementation of a program evaluation and assessment process. It is suggested that in addition to conducting an ongoing training program such as the one that was described above, a process which evaluates the effectiveness of the graining activity and the educational needs of managerial and supervisory personnel be put in place. Data should be continuously collected and examined in order to assure that existing training programs are meeting the needs of the participants. Likewise, as new needs emerge, such a process would provide an opportunity to collect appropriate information about such needs and implement appropriate training activities to meet them.

#### APPENDIX A
