**ABSTRACT**

This review of the literature related to counseling women, based on a computer search of the ERIC database, emphasizes the need for decision-making skills to cope with social change and the women's movement. The influence of locus of control on decision-making is reviewed along with theories about motivational factors for women and students. Role perception, role conflicts, multiple roles, life satisfaction, midlife career changes, and reentry problems are discussed, and programs designed to cope with these changes are described. Implications for counselors are also suggested. The document concludes with the actual annotated computer search used for the literature review. (JAC)

## INTRODUCTORY NOTE

First there was the *Searchlight* series--computer searches with abstracts of the ERIC database on topics of major interest and importance to ERIC/CAPS users and helping professionals in the field. Then came the *Searchlight Plus* series, computer searches of the topics in most demand PLUS in-depth analyses of the documents in the search. The opening narrative in each *Searchlight Plus* highlights certain documents, identifies major issues and trends, describes the historical background and existing programs, and points out the implications of the information for the work of human services professionals. For those who need succinct, timely, and practical information but lack the time to examine the total collection of data, the *Searchlight Plus* is the "perfect package." For a complete list of current topics in both series, please contact the ERIC/CAPS Publications Department.

## COUNSELING WOMEN FOR LIFE DECISIONS

Mary Frenza

We would like to believe that decisions are made as a consequence of some rational process... All too often decisions are rationalizing rather than rational, "psychological" rather than logical. This is particularly likely to be the case when commitment to behave in some way, to pursue one alternative rather than another occurs in the absence of the decision maker's full awareness and ken.

(Kellerman, 1978, p. 11)

A review of the literature on the counseling of women reveals that decision-making skill is a central need of women today. Indeed, all too often women's decisions have been without the decision-maker's "full awareness and ken," a response to others' expectations rather than the result of skilled decision-making.

Rapid social changes, most prominently the rise of the women's movement of the last decade, have increased both opportunities and expectations for women. Many women feel anxiety, frustration or confusion because they are unprepared for the real choices that have become available. Even when they do choose they are unable to act unless others approve. Expanded opportunity does not necessarily bring the ability to choose (Scholz, Prince, & Miller, 1975).

Yet this ability to choose for oneself is a main component of mental health. Locus of control, which is an individual's perception of the origin of events, determines the way he/she shapes his/her

life. An external locus of control, which places the origin of events in such outside forces as fate or luck, produces an unwillingness to make decisions because decisions are seen as having little to do with outcomes. An internal locus of control places the origin internally in one's own behavior and produces a sense of power and importance about one's decisions and actions (Schlossberg, Troll, & Leibowitz, 1978). Research indicates in a variety of ways that women generally have little sense of being in control of their own lives. Locus of control studies show that people who score as external are more depressed (Radloff & Monroe, 1978), and mental health data show that women are more depressed although no "sicker" than men (ED 130 215). Depressed people are also characterized by feelings of helplessness and low self-esteem and a sense of hopelessness (ED 158 159).

Radloff and Monroe (1978) investigated the influences in a woman's life that might lead to helplessness and depression. In particular, they examined the feminine stereotype which portrays women as dependent, passive, nurturing, docile, submissive, incompetent, and unsuccessful. The findings revealed that people see females as being in need of more help than males and that in actual behavior they provide more help to females than to males. The researchers concluded that this socialization for dependence is in fact "helplessness training" and that since "the actions of girls are less likely to have consequences than the actions of boys...girls are more likely to depend on other people and fail to develop important skills" (p. 204).

White's competence theory of human development posits a universal human need to expand, explore and achieve mastery over the environment (Schlossberg, et al., 1978). Central to a theory of the

healthy adult development of women is the concept of competence or efficacy; at the heart of that concept is the active mastery of one's life (ED 130 215). The same social changes that have brought about increased opportunities and expectations for women and the resultant anxiety and ambivalence have provided the opportunity and necessity for helping professionals to encourage and facilitate women's growth toward mastery and active life choices. "A primary goal of the counseling process is to enable the client to gain a feeling of control over his/her own life" (Schlossberg, et al., 1978, p. 20).

### Theories of Women's Motivation

Much recent research on women's lives has focused on women and careers. Careers are defined broadly to encompass not just a single occupation, but rather "a time-extended working out of a purposeful life pattern through work paid and unpaid" (Hansen & Rapoza, 1978, p. XV). The literature has examined the socialization process, focusing on the ways in which parents interact with their children and the effects of that process on women's motivation and aspirations.

It seems that the attitudes and motivations that underlie the career aspirations, plans and decisions of women are the inevitable products of social norms and the socialization process that put women into powerful psychological conflict as they are forced to cope with vocational choices.

(Hansen & Rapoza, 1978, p. 97)

Vicarious achievement motivation, fear of success, lowered risk-taking behavior, difficulties in goal setting and reduction in academic self-confidence and aspiration have all been identified as factors in socialization practices and as inhibitions to women's aspirations, achievement and career choices. In studying the relationship between socialization and achievement orientation, Lipman-Blumen and Leavitt (1978) concluded that the socialization of women for dependence means that affiliation becomes a woman's primary means of mastering her environment. Some women, therefore, meet achievement and mastery needs vicariously through the achievements of others such as husbands or children. This vicarious achievement ethic also suggests that the marital and maternal roles, largely vicarious in nature, are the most appropriate for women. Research on individuals high or low in motive to avoid success shows wide methodological differences which need to be recognized. Fear of success as a variable inhibiting women's achievement may be unfounded. Alper (1978) suggests that it is necessary to examine whether those motivated to avoid success actually differ in real life achievement situations. She concludes that the shifts in role expectations now occurring may increase women's expressions of achievement.

Interest in life planning for men and women has emphasized the importance of goal setting for both the actual attainment of goals and the psychological effects of success. That significant numbers of women seem unable or unwilling to engage in the goal setting process is also related to affiliation needs. They have been expected to lead their lives through others as wives and/or mothers and therefore find great difficulty in assessing their own needs and potential. In attempting to satisfy

significant others a woman may forsake the freedom to decide how her life will be played out (EJ 214 607, ED 176 194).

### Theories of Adolescent Motivation

Many investigations of women's aspirations have studied the motivational development of young girls. The literature reveals that the significant difference between males and females in achievement orientation surfaces in adolescence. Before that age school performance for girls, especially during the elementary grades, is often superior to boys; however, beginning in the high school years, girls decline in relative academic achievement and in their personal aspirations (ED 179 458). Rapoza and Blocher (1978) found that there was a trend toward lowered educational and vocational plans for high school girls even when they placed more importance on grades than boys and when their academic self-estimates were higher than boys. The researchers concluded that academic values and self-concepts do not translate into the same kinds of plans and aspirations for girls as they do for boys. "Other considerations possibly in the form of role expectations apparently intervene to lower aspiration" (p. 172).

This reduction in girls' aspirations correlates with the notions of traditional sex-role behavior and appropriate masculine and feminine personality traits and occurs at the same time that sex-role identity is established. The result is a reluctance to undertake life plans that threaten the feminine image (ED 016 065). While the earliest influence on an individual's sex-role identity or image derives from the home, other influences such as school and peers also affect role definition.

Beginning at birth parents convey specific role expectations to children. These messages include presumptions about their children's educational and occupational directions. Little girls are taught not to compete and are encouraged through the choice of toys and games to show nurturing dependent behavior and to demonstrate their "natural role" through mothering (ED 179 458, ED 127 855).

The education system plays a significant part in the sex roles students assume and by extension influences their role definition. From preschool through postsecondary education, educational materials portray people in traditional sex roles. Math and science curricula are not encouraged for girls even though the implications of this poor mathematics training are great. A high mathematical aptitude as measured by standardized tests has been proved for females to be the best predictor of career plans in the sciences and professions, as opposed to plans to be a homemaker. Yet a study conducted at the University of California-Berkeley found that only 8% of freshmen women had taken a fourth year of high school mathematics as compared to 57% of freshmen men, despite the fact that without the fourth year of math a student is excluded from most science, business education, and many social science majors. The research suggests that one way to provide young women with the opportunity to choose between traditional and nontraditional life plans might be to require that all students take more mathematics (ED 142 906, ED 127 855).

Sex-role definitions accepted by peers sway adolescents' definitions of their own identity. Particularly important individuals such as boyfriends influence young women's decisions about their future. Adolescent girls are often encouraged to seek status through appearance and sexual attractiveness. This leaves development in other areas unfinished, allows "image" to define worthiness, and establishes

a passive manner of acquiring identity (ED 185 493). The teenage girl who passively or unknowingly accepts the feminine stereotype for identity, especially as it relates to the marital and maternal roles, is characterized by lack of planfulness (Hansen & Rapoza, 1978).

Girls who become pregnant in their adolescent years are often characterized by this absence of futurity--the ability to judge the present in terms of a perceived future. They feel unable to exercise choices in their lives and lack decision-making skills. They find pregnancy acceptable because it is for them the easiest route to adult status and self-worth (ED 179 861). Counselors have noted that what in many girls seems to be career/life planning often merely masks their interests in marriage and consequently prevents any investment of energy in real life planning (EJ 223 182). Burlin's (1976) investigation of the occupational aspirations of adolescent women showed that the majority chose innovative occupations only as their ideal choice. Although they indicated an awareness of a broad range of occupations, they also showed that they did not feel free to pursue them.

#### Programs for Adolescents

Two assumptions underlie most programs designed to remedy/facilitate young women's growth toward active choices. First, if overconforming other-directedness is the cause of the lowering of girls' aspirations, any attempt to propagandize will only prove counter-productive; that is, the result is likely to be "false compliance" (Rapoza & Blocher, 1978; Guidette, Glitzer, & Greenwood, 1976).

Second, it is at that critical point in the development of sex-role identity in adolescence that interventions can be most appropriate and effective (EJ 217 313, ED 179 458).

Several curricular interventions to promote non-stereotypic education and training have been developed for middle school and high school students (ED 201 563, ED 179 458, ED 177 389). Common goals are (1) to expand students' self-concepts to include a wide range of possibilities for behavior, (2) to increase decision-making abilities and confidence in making decisions, (3) to reduce stereotypic attitudes toward particular school subjects, and (4) to increase academic performance in those subject areas traditionally viewed as more appropriate for either males or females. Curricular materials for these programs have been developed according to a decision-making model. The model includes activities that allow students to gather knowledge in such areas as math, social science, language and physical education and to learn and practice personal and group decision-making within the content areas.

Other curricular strategies include: (1) addition of courses or programs in women's studies; (2) direct involvement of women students in career guidance policy-making; (3) introduction of more diversity into role model activities; (4) encouragement of mentoring; (5) provision of financial, counseling, and decision-making information about postsecondary educational options; (6) development of a basic library of non-biased books, films, and program materials; and (7) provision of accurate information about women's activities in the world of work (ED 177 389, ED 166 564, ED 121 327).

Counseling interventions outside the regular curriculum have also been used to broaden adolescent awareness of the effects of sex-role stereotyping, to encourage more flexible attitudes toward

appropriate male and female behaviors, and to increase career/life planning and information seeking. Group counseling can help individual participants gain a sense of power and autonomy by providing support and reality testing; it has proven useful in moving adolescent girls toward more androgynous sex-role behavior (EJ 217 313). Peer social modeling, using video tape, reinforcement and stimulus materials containing occupational information, has been used effectively to increase adolescent girls' involvement in career/life planning exploration (EJ 223 182).

### Multiple Roles

No human being should be only a role, no identity should be based in only one anchor. Life is long and to provide meaning for a whole life and integrity for a self throughout life one needs more than a single anchoring role....I come to know my essential self by observing those things about me which transcend roles, remain constant across roles. If I am only a single role--like a child or a slave--then I have no means of distinguishing between those aspects of my behavior which stem from role demands and those which reflect my essential self. (ED 197 250)

A major difference between the sexes is the extent to which young women still prepare for adulthood by romantically anticipating whom they will marry. In a recent study, 60 women aged 35 to 55 were asked which of the four psychological tasks described by Levinson had been important to them in young adulthood: constructing a dream, forming an occupational aspiration, finding and relating to a mentor, and creating a relationship of love. Only the task of creating a relationship of love had been significant for them. They had assumed they would work, but it was not really important because

they expected to marry and be supported (ED 197 250). This basic difference in sexual identity has been described in terms of two early life dreams--the Relational Dream, which is formed around relationships with others especially through marriage and motherhood, and the Individualistic Dream, which is formed by the need to become an autonomous self through forming a career identity. In our culture the latter is of course the male position, the former the traditional female position (ED 190 777).

Rand and Miller (1978) propose, however, that a new cultural imperative is emerging, that of marriage and career. They suggest that while the importance of marriage and childrearing holds in adolescence, a change occurs in young adulthood toward work and marriage. Women can have values, self-concepts and life styles from both traditional and modern patterns. Women interviewed about their current life choices emphasized that an either/or dichotomy between an Individualistic or Relational psychological stance is unrealistic. They feel that a developmental process evolves in which one moves back and forth between the two positions (ED 190 777).

Two phenomena have contributed to women's awareness of options and the limitations or insufficiency of maternal status: the possibility of complete fertility control, with the ability to direct one's life by deciding if and when to have children, and the increasing incorporation of women into the paid work force (ED 178 861). Van Dusen and Sheldon (1978) summarize these significant social and cultural changes in terms of

the declining importance of the family life cycle in the woman's total life cycle--the diminishing social importance of the distinction between married women and those who are unmarried (never married, no longer

married, not yet married)...little doubt now exists...that these trends will exert a profound effect on the family, the economy, social values-- and, of course, the changing bases of self-identification and sex roles.  
(p. 94)

The girl or woman who is prepared, knowledgeable, and aware of the many possibilities for combining various roles at different times in her life, of the increasing necessity of combining roles, and of the problems involved in combining roles faces the future from a far better position than the girl or woman who thinks or acts only along traditional lines of marriage or work (ED 018 558). Preparing girls for multiple roles emerges as the major challenge.

The notion that adults must be able to function as economic providers appears simple, even a cliché, if one is thinking about men, but it still remains controversial when applied to women. However, the norm that a young woman should marry and be economically dependent on her husband is no longer viable. She is likely to have a number of years in which involvement in meaningful work and the capacity for economic self-support are critical. A variety of factors contributes to this likelihood: (1) a rising divorce rate that increases single-parent, woman-headed households; (2) the persistence of inflation that often necessitates two incomes; (3) a lengthening life span that may mean a financially insecure widowhood; and (4) the combination of fertility control and a longer life that produces perhaps 40 years free from child care. Failure to prepare women for occupational competence results in a developmental disability that eventually culminates for many women in difficulty in coping with the circumstances of their lives. The prevention of this developmental difficulty is a crucial task (ED 197 256).

## Role Conflicts

For many women the possibility of multiple roles in itself produces conflict and stress. Some cannot begin evaluating their lives, since any assessment might reveal that they do not determine their own life styles. Even asking the questions, "Who am I?" and "What do I want to do?" may be destructive. The realization that the self is reflected and relational, existing only as long as there is a relationship, can be devastating (ED 197 250). For many women still limited by a narrow definition of female social roles and by their own view of themselves, the increasing acceptance of atypical sex-role life styles provokes intense sex-role conflict. This is especially the case with regard to the homemaking versus career choice, and the result is increased psychological pressure and conflict (EJ 227 026, ED 197 239).

A growing body of literature documents the stresses and pressures faced by women who do combine multiple roles. Most of the current literature deals with career women, defined as holding jobs which require a high degree of commitment and have a continuous developmental character. The literature also explores the conflicts faced by women in dual-career families in which husband and wife are committed to both family and career.

The woman who combines family and career roles is seen as living in two worlds in which the criteria for success are discrete and to a large extent mutually exclusive (EJ 241 947). She faces two distinct types of problems, practical ones and psychological ones. Practically, the time

limitations of role overload are a major problem for the working mother. She is typically fulfilling the roles of wife, mother, employee, and housewife. Traditionally, women have had the major responsibility for the management of the home and the rearing of children. Studies have shown that although attitudes toward this division of labor have changed, the actual division of home responsibilities has changed little. The professional woman has a great deal of her time consumed by household chores and responsibilities, and she remains the primary psychic parent (EJ 241 947, EJ 231 692).

The careers of professional women can suffer as a result of time limitations. Working fewer hours than men can have consequences in limited productivity and visibility, limited inclusion in formal and informal networks, and their selection of the kinds of specialties and areas of work. The result is a disadvantageous position in professional life (EJ 231 692).

By far the most stressful area for the working mother is meeting the role demands of childrearing as well as achieving on the job. Most mothers' concerns center on the emotional rather than the physical needs of their children. Current philosophies of childrearing emphasize the development of a positive, independent self-image for the child; humanistic rather than authoritarian discipline techniques; and the mother's responsibility for most of the child's success or failure. Such demanding standards of parenting along with personal achievement needs and external time demands make the career mother particularly vulnerable to stress. This stress often takes the form of fatigue, emotional depletion and feelings of guilt. This guilt is often related to a perceived neglect of the maternal role, to an internal value system perhaps no longer accepted at the cognitive level, but still reacted to at an emotional level (EJ 249 622, EJ 241 947, EJ 231 692).

Another problem for many working women stems from the incompatibility of the qualities of the traditional wife and mother and those of a successful professional: nurturance, emotionality, and dependence versus aggressiveness and rationality. This incompatibility has meant that a successful working woman is often viewed as acting improperly in terms of her sex role. As a consequence she may be subject to anxiety, guilt and even social sanctions (EJ 231 692).

Although the male role is significant, it is apparent that women hold the unique new social role-- establishing an integrated wife/mother/career identity. This intrapersonal integration of work roles, domestic roles, and the personality characteristics associated with each does not solely constitute the work of the career mother. Rather the difficulty lies in the fact that it is the woman alone who must attain this identity integration (Skinner, 1980; ED 190 777):

The literature on dual career couples implies that stress is inherent in the dual career life style and indicates both internal and external sources of strain. The traditional family pattern in which the husband's career is considered as primary can result in role strain for the professional married woman. Although opportunities for the wife's career often enter into decisions about job moves, an egalitarian orientation is not usually carried out in final decisions, and consequently the professional wife experiences more stress. Other research suggests that institutional constraints are at least in part responsible for highly traditional actual job decisions (Skinner, 1980). There is some evidence that husbands are not ready to accept career wives who are as successful as they are nor wives who are more successful. As a result many women do not feel free to pursue their careers fully unless their husband's self-esteem is not threatened (EJ 231 692).

### Multiple Roles and Life Satisfaction

Dual career families and couples evidence varied strategies for coping with the strains of their chosen life style, and much of the research on these families has been designed to measure the success of such strategies in reducing stress. Coping patterns within the family structure can be active or reactive (which can be viewed more as a defense than as a coping process) (EJ 068 877). Active measures include both stress optimization and stress mitigation techniques. Stress optimization, the acknowledgment that dual career stress is inevitable and preferable to the stress of alternative life styles, is a key technique used by dual career couples. Stress mitigation techniques involve role redefinition, both structural (altering external, structurally imposed demands) and personal (changing one's personal concept of role demands); setting priorities among and within roles; compartmentalizing work and family roles; and compromising career goals. Reactive measures involve role expansion techniques in which the individual attempts to improve and satisfy all life style demands (Skinner, 1980; EJ 068 877).

One study has investigated how female parents in dual career families view their professional and personal roles and compared the effectiveness of the two coping strategies of role redefinition and role expansion. The researchers found that while women using role expansion techniques suffer high role conflict, women using either technique experience stress. The women in both groups, however, consistently described demands and expectations related to the maternal and not the professional role. The findings suggest that women choosing the dual career life style may be well trained to handle professional but not family conflicts, and that this inability stems from unresolved emotional conflicts

about the maternal role (EJ 249 622). Further, although role redefinition, where one deals directly with the environment and actively attempts to alter demands, seems to be more directly effective for long term conflict reduction and satisfaction, it is not used as commonly by women. Even when they do use it, they may be less effective because of female socialization practices that have rewarded less confronting and less aggressive coping patterns (EJ 068 877).

Finally, there is evidence to suggest that the relationship between multiple roles and life satisfaction is high (EJ 249 622, ED 197 250). Professional women do not view their many roles as only an additional burden, but see the increased conflict as more than offset by the increased resources, privileges and enhanced sense of personal worth.

#### Mid-Life and Mid-Career Change

A static view of adulthood which focused on the state of being an adult and implied that the adult years are stable was almost universally accepted until recently (Schlossberg, et al., 1978). New theories of adult development advanced by social scientists and psychologists recognize that the content of adulthood is not unchanging. Some theorists maintain that the changes adults face correlate with chronological age. Others emphasize the impact of an individual's unique experiences on his/her life. Researchers following the first theoretical model have studied middle age in terms of predictable events, the inevitable changes that occur across the life course (Targ, 1979).

The literature on women describes three psychological characteristics that often occur in mid-life, defined either by chronological age (usually 45-64) or by the coincidence of predictable events such as children leaving the home. The mid-life woman is described as having low self-esteem and a pervasive lack of confidence in her own abilities, stemming from the sparse utilization of talents in a competitive and rewarding environment that the home, due to over-exposure and boredom, no longer provides (ED 116 064). The second characteristic is depression, which correlates with the necessity of accepting that children leave home and become independent. Known as the "empty nest syndrome," this is often concurrent with the loss of youthful appearance and the ability to bear children. The woman socialized to define her identity exclusively in terms of family and motherhood can experience severe emotional stress (ED 185 493). An identity crisis is the third problem which may arise in mid-life, particularly for the woman who has devoted a major portion of her energies to the attainment of other people's goals. Many such women have lost sight of their own needs and long-term goals and experience a sense of "directionlessness" (ED 116 065). Adherence to traditionally defined sex roles clearly is increasingly dysfunctional and less rewarding for women by mid-life (ED 158 159).

In addition to the emotional difficulties of inevitable life changes, common but unanticipated changes can produce many problems for adult women. Differences in life expectancy compound the age differences of the sexes at marriage, and by middle age one in ten women is widowed (ED 185 493). Divorce and marital separation are also common; a larger percentage of women will be divorced or widowed by their middle years (Targ, 1979). Divorced or widowed women who have been full-time homemakers face the problem of becoming both emotionally and economically self-sufficient.

These changes for adult women can be experienced either as a crisis or as a transition and an opportunity to develop a new sense of self. Current research on women indicates that many, but not all, women experience the "empty nest" stage as a positive period in their lives. Anticipatory socialization (anticipating and planning for the "empty nest" period) and involvement in alternative roles are the reasons cited for transition rather than trauma (Targ, 1979). The findings suggest that women of all ages can be educated to anticipate the consequences of their life choices and patterns and to plan for the contingencies of their later years (ED 158 159).

### Reentry

Confronting economic needs and searching for identity and self-confidence, many women seek a career change from wife and mother to student or paid worker (EJ 169 327, ED 120 567). They must overcome a number of social and psychological barriers, e.g., job discrimination, lack of marketable skills, guilt feelings for "selfishly" pursuing personal goals, and the tendency to downgrade their own abilities (ED 185 493).

Programs and activities geared to the 18-21 year-old do not meet the needs of these women, and a variety of counseling interventions designed to help the mid-career change, reentry woman is described in the literature (EJ 223 011, EJ 169 327, ED 195 652, ED 194 826, ED 156 982, ED 101 796). Some of the important goals of these programs are as follows: (1) to promote self-confidence and self-respect; (2) to encourage, support, and emphasize the necessity of self-responsibility; (3) to offer

a strategy and means of gathering information both about oneself, including values, interests, abilities, personality style, background experiences, and situational factors, and also about the world of work, career options and educational requirements and possibilities; (4) to teach and encourage the use of all available resources, including family, friends and professional contacts; (5) to teach a variety of skills, including decision-making, goal setting, assertiveness, communication, risk taking, stress and time management and job hunting; and (6) to encourage and facilitate life planning and an orientation toward the future.

Many programs use a workshop format (EJ 223 011, EJ 169 227, ED 194 826). Within that format a decision-making model such as the one proposed by Tiedeman and O'Hara (1963) is often used to increase facility in goal setting and decision-making. That model defines two main stages for making any decision: anticipation, involving exploration, fantasy, role playing, and trying alternatives; and implementation, involving the crystallization of one's decision. The model promotes development and awareness of personal desires, allows for the integration of those desires with an occupation or life style, and provides the steps for a woman's actualization of her ideal self (EJ 169 327).

Some programs have been built around a self-directed learning model which focuses on developing coping strategies for change. The model utilizes planning by both participants and leader, with the leader functioning primarily as a resource person and facilitator. For women who are generally less skilled in self-direction and self-responsibility, the model is especially appropriate and encourages a confident, active approach to life/career planning (ED 194 826, ED 185 493).

Additional workshop techniques to implement specific goals are: (1) the "time line" exercise, the autobiography, and the development of an "ideal" self and job (self-awareness and values identification); (2) interest inventories and ability and aptitude tests (gathering information about self); and (3) small group interactions and presentation of role models (increasing self-confidence and self-responsibility).

Other formats for reentry programs include curriculum-based counseling interventions, e.g., study techniques, women's studies, psychology of women courses, seminars, support groups, limited apprenticeship programs, resource centers, and individual counseling. Women who have participated in counseling intervention programs have been found to be more self-identified, not as socially or other-identified, more free, less anxious, less burdened by past reactions, more confident, and more interpersonally competent (EJ 233 011).

#### Implications for Counselors

Counselors can realistically conceptualize the problems of women who seek treatment by recognizing that adjustment models of mental health are inadequate for dealing with women whose difficulties originate in the social conditions of their lives. The cause of depression in many middle-aged women, for example, is related to socialization into the traditional female role. Standard treatments will not address the source of this problem. The job of the counselor becomes not supporting personal adjustment to these social conditions, nor allowing a focus on social conditions to become an escape

from personal change, but rather encouraging individual responsibility for environmental change (ED 185 493).

An intervention strategy of importance to both environmental change and the counseling of women is marital and family therapy. Women suffer the effects of sex-role stereotyping not only in the context of the larger society, but also within the context of the family. It is doubtful that women can change without the family being involved in treatment. The stereotyped behaviors and attitudes are part of a dynamic equilibrium, and an isolated attempt to change the women may increase family members' motivation to maintain that equilibrium (EJ 144 396).

Finally, while it is true that the client's dependent role in traditional therapy models can reinforce women's problems with passivity and dependence, counselors need to be aware of the danger of replacing one set of stereotypes for another, of substituting new, more liberal biases for older ones (EJ 144 396). Knepelkamp, Widick and Stroad (1976) point out that whether feminist, traditional, or inbetween, a client needs to be provided with diversity, with a variety of perspectives on women's roles and ways to create her own role, rather than be encouraged to make an early commitment to a particular life role. Sexist values in the therapist can block the client's development, but so might a therapist's concern with the "right" or "liberated" attitudes.

### Summary

Studies comparing groups of homemakers and employed women in 1971 and 1978 found that although many more women were working in 1978 than in 1971, the sense of satisfaction and the level of happiness in their lives did not differ for the two groups (ED 197 250). While many women have taken hold of their lives, many more are threatened because they have lost the security of knowing what is expected of them. Value change generates confusion and the reality of choices can create cultural ambiguity and personal uncertainty; however, having no choices will ultimately bring frustration. Counselors can increase women's awareness of possibilities and abilities to choose, enabling them to live as they prefer.

**An Investigation of the Abortion Decision Process.**

Shaw, Paul C.; And Others

Psychology: A Quarterly Journal of Human Behavior, v16 n2 p11-19 Sum 1979

Language: ENGLISH

Document Type: JOURNAL ARTICLE (080); RESEARCH REPORT (143)

This study indicates that in deciding to have an abortion many women are motivated primarily by personal and pragmatic considerations. The influence of significant others, particularly the sexual partner, seems to be an important source of support in this difficult decision. Women pay a short-term psychological price for this freedom. (Author)

**Coping Styles of Women Medical Students.**

Davidson, Virginia M.

Journal of Medical Education, v53 n11 p902-07 Nov 1978

Reprint: UMI

Language: ENGLISH

Role strain is discussed as it occurs in the context of presenting complaint and treatment, and issues of feminine sexuality and role adjustment are examined. It is suggested that medical schools can increase their awareness of how sex bias and institutional sexism affect the mental health and well-being of women students and can make appropriate remedies. (Author/LBH)

After examining societal factors that shape the role of  
vocational education, this paper presents instructional  
delivery and faculty development models designed to meet the  
vocational education needs of contemporary society. The report  
first identifies, as part of a model for educational  
viability, three forces affecting vocational programming:  
society's demands for a trained workforce, the individual's  
demands for fulfilling employment and upward mobility, and the  
subject matter taught in response to the demands of both. The  
interaction of these forces is then examined in an historical  
review of the development of vocationalism in American higher  
education. A discussion follows of forces currently affecting  
vocational education, including increasing fiscal conservatism  
and the diversity of students and their needs and demands. The  
paper then presents four models for increasing educational  
effectiveness: (1) a student/achievement model, which depicts  
student success as a function of his/her ability to define and  
work toward personal goals; (2) a model for individualized  
instruction, which gears the instructional and adjunct  
operations of a college toward meeting the learning objectives  
of students; (3) a counseling model designed to increase  
retention by helping the student to set and achieve realistic  
goals; and (4) a faculty growth model, which provides  
incentives and support. Diagrams illustrate the models. (JP)

**Nontraditional, Female, Commuter Students: Coping with College.**

Rogers, George W., Jr.  
1981 9p.

EDRS Price - MFO1/PCO1 Plus Postage.

Language: English

Document Type: PROJECT DESCRIPTION (141)

Geographic Source: U.S.; Kentucky

Journal Announcement: RIEFEB82

The unique needs of nontraditional, female, commuter students at Northern Kentucky University were examined as a result of active recruitment of nontraditional students in the dwindling market for traditional college students. Women over the age of 25 are entering Northern Kentucky University, bringing unique personal and career problems. Problem areas include: (1) an undue amount of self-inflicted pressure to have all A grades, (2) test anxiety, and (3) a lack of emotional and/or physical support from family members. Northern Kentucky University is attempting to be supportive by offering counseling on realistic academic goals for persons whose academic skills may be rusty from lack of use; on reduction of test anxiety through rational-emotive therapy, relaxation training, systematic desensitization, and the Learning Assistance Center with reading, writing, mathematics, and study skill tutoring; and on family support of the female returning to the campus. A family meeting or council may be necessary as a period of exchanging ideas and as a time to outline goals, dreams, and the need for family support. It is argued that the nontraditional student needs an extensive period of orientation to college with an emphasis on setting realistic academic goals. In addition, campus support groups and counseling groups may be useful for intervention with possible family difficulties resulting from this quest for higher education. The students who can take hold of their lives, realistically evaluate their skills and capabilities, and utilize campus resources can probably overcome most adversities and make their college experience both positive and fruitful. Document Type: RESEARCH REPORT (143); CONFERENCE PAPER (150)

Geographic Source: U.S.; Texas

Journal Announcement: RIEDEC81

A process theory of coping developed largely by Robert F. Peck (one of the authors), a sentence completion instrument, and data concerning the manner in which college women cope are considered. Peck proposes that a person going through optimal coping confronts the problem, attempts one or several types of activities in order to resolve the situation, persists in obtaining a solution, and generally resolves the problem in an effective and self-satisfying manner. A semi-projective instrument consisting of 34 sentences that pose the following five types of problems was developed: achievement, interpersonal relations, authority, aggression, and anxiety. The instrument is scored by categorizing the responses according to dimensions such as overt problem solving, emotional expressiveness, aggressive response, and attempt to control affect. The categories are then evaluatively scaled on the dimensions of confrontation, engagement, and coping effectiveness. To assess coping in adults with this instrument, a group of college women, mostly junior and senior education majors, were asked to complete the instrument on two occasions five weeks apart, as well as to complete questionnaires about achievement motivation, personality characteristics, and their interpersonal interaction style. It was found that the instrument is reliable and has utility for the assessment of coping. Additionally, it was found that women who were pursuing a somewhat typical female occupational goal (elementary and secondary school teaching) demonstrate a broad range of coping, from highly adaptive problem solving to marginal adaptation, noncoping, or avoidance. Good copers exhibited work values associated with high achievement, and personality characteristics such as internal locus of control. (SW)

Geographic Source: U.S.; Pennsylvania

Journal Announcement: RIEDEC81

The paper reports on the evaluation of Project ESPIRIT (Educational System in Parenting for the Retarded with Infants and Toddlers), a home based program for normal children of retarded mothers. Research problems are cited, such as instability of the experimental group. Preliminary results of analysis of four treatment variables and the criterion measure, the Bayley Scales of Infant Development (BSID), indicated that the BSID for seven project infants remained at or above the statistical average of the test for all three administrations. In addition, investigation of time utilization indicated a steady improvement in how available project and client time was used. (CL)

Journal Announcement: RIENOV81

This paper describes a model for an adolescent girls group used as an adjunctive therapy to focus on the issue of maturity. Background information about the group members is provided and the group is described as an ego-supportive group which functions to maintain areas of positive functioning and to aid in the development of personal resources. Interventions focusing on the issues of identity, autonomy, and relationships are discussed and methods used by the group to address goals and to promote a tolerable level of anxiety are presented. The effectiveness of the model in diffusing the

anxiety associated with both the issues and the process of developing increased intimacy with peers and adult leaders is detailed. Factors regarding the decision to use two female therapists as group leaders are also reviewed. (NRB)

Journal Announcement: RIESEP81

This paper evaluates a program designed to help middle school students develop confidence and skill in decision making regarding their sex roles and achievement goals. Specific purposes of the program (called the Self Concept and Decision Making Middle School Curriculum Program) were to help students experience expanded self-concepts in relation to their identity as females and males, enjoy increased ability and confidence in making decisions for themselves, and exhibit fewer stereotypic attitudes toward particular school subjects. Students were involved in a variety of activities in four subject areas--math, language arts, social studies, and science. Activities, focusing on personal and group decision-making skills, included (1) a social studies unit in which students found out how rules changed over time and how people can choose and define their roles, (2) a language arts unit in which students compared and analyzed female and male language, (3) a unit on collecting and interpreting quantitative data while examining economic and career-related issues about females and males, and (4) a science unit on female and male characteristics from the point of view of genetics and environment. Test scores and attitude inventory results of 630 students who participated in the program were compared with scores of 234 students in control schools. Findings indicated that program participants made achievement gains in the content of the curricular components and acquired more flexible perceptions of occupational, school, and family roles for females and males. The conclusion is that a middle school curriculum program can have a significant effect on pupil's achievement, sex role perceptions, and decision making. (DB)

Journal Announcement: RIESEP81

A program for treating the incestuous family is presented which concentrates on group treatment for female adolescent incest victims between the ages of 12 and 17. Two groups which have met weekly for one year are described in terms of the girls' progress. Suggestions are offered to insure treatment success, including: (1) the ideal time for referral to treatment; (2) a flexible group structure; and (3) group facilitation by both a male and female therapist to stimulate an integrated family. Behavioral stages and the feelings experienced during group treatment are described, with an emphasis on the primary curative components as the emotional closeness and the sense of identification generated by a warm and supportive setting. Document Type: TEACHING GUIDE (052)

Geographic Source: U.S.; Maryland

Journal Announcement: RIEAUG81

This paper describes a university course on counseling women designed to provide an integration of: (1) a general cognitive understanding of women, along psychological, physiological, sociological, and developmental dimensions; (2) a recognition and understanding of cognitive-developmental theory as a framework within which to counsel women; and (3) counseling strategies for working with a female population. Emphasis is on the importance of developing each class member's personal awareness of the issues related to women and their roles in society. The cognitive-developmental basis of the course is presented and its influence on the course is described, including the encouragement of students to assess their own cognitive development and to view the subject matter from a broad perspective. The theoretical foundations of the course and the developmental instruction model used in its design are discussed. The history of the course is briefly reviewed and the application of the course process design to other settings is recommended. A course outline is also provided. (NRB)

Document Type: RESEARCH REPORT (143); CONFERENCE PAPER (150)

Geographic Source: U.S.; Illinois

Journal Announcement: RIEAUG81

Much of the research on bereavement and its consequences fails to account for social network factors. A sample of widows participated in a comprehensive national study to determine factors that enhanced or lessened their psychological well-being shortly after the death of their husbands, and over time. Two groups responded, those in the Crisis Phase, i.e., widowed for less than 18 months, and those in the Transition Phase, widowed between 19 months and 3

years. Widows who reported remarriage or a lack of grieving were excluded. Bradburn's Affect Balance Scale was used to measure psychological well-being in terms of support sources. Results indicated that widows in the Crisis Phase benefitted most from parental support, followed by support from widowed or single friends. As problems and adjustment tasks of widows varied through the phases of widowhood, so did her support needs and salient support sources vary. (Author/KMF)

Geographic Source: U.S.; Georgia

Journal Announcement: RIEAUG81

Few counseling services are available to or utilized by rape victims, which implies that many women turn, instead, to their social networks for support. Research literature suggests that anxiety is reduced and coping skills are enhanced when a victim uses her interpersonal social network for support. Unfortunately, many women have the same attitudes toward rape that are held by society, i.e., that rape is precipitated by the victim, and they are hesitant to tell persons in their social networks about their assault. Data from a rape crisis center revealed that most victims planned to tell at least one other person about the rape incident and that a significant relationship existed between plans to tell others and subsequent success in followup counseling. The results suggest that the family has a significant impact on rape victims; family members are most often turned to for support, yet are the most difficult individuals with whom to discuss the rape. For most women, the crisis intervention contact is the only contact she will experience with a trained counselor. It is important that the counselor, in addition to offering professional counseling, encourage the victim to use her social network for support. The new emphasis on the social support system of the victim can help the woman in her recovery process. (RNB)

Document Type: RESEARCH REPORT (143); CONFERENCE PAPER (150)

Geographic Source: U.S.; Virginia

Journal Announcement: RIEJUL81

The single-parent, woman-headed, post-divorce family has

become an increasingly prevalent family form and one which merits further research attention in order to identify competencies and stresses characteristic of this lifestyle. The life situations of a sample of women (N=47) were investigated in terms of their perceived levels of competence in three life roles (parent, social participant, self-supporter). Their role-specific perceived competencies were related to evaluations of life satisfaction. Subjects were interviewed in their homes and administered a battery of self-report instruments. Results suggest that the parenting role is clearly an area of high perceived competence. Most women felt least competent in the self-support role, while the social participant role was also an area of diminished perceived competence. Greater specificity of the roles examined would yield more detailed data for understanding the stresses and strengths in the family of single parent divorced women, and is recommended. (Author/KMF)

Journal Announcement: RIEJUL81

This guidebook was developed to aid mothers who are attending school or training programs and also have preschool or school-age children at home, to find new approaches to their complicated life situations. Based on the experiences of 215 women in Allegheny County Pennsylvania (Pittsburgh), the booklet describes some of the problems they faced as they went through their educational programs, and shows some of the practical, workable ways in which they attacked their problems, i.e., their strategies. The guide is divided into two sections. Section 1 describes six "case histories" of women in various marital, family, income level, and social status situations (composites drawn from many women in these categories), and relates their problems with money, child care, relationships to husbands and other family members; it then shows how they are coping and makes suggestions about how they could attack their problems more effectively. Part 2 presents some ideas for women preparing to start an educational program. Topics covered include choosing a school or training program, financial help, child care, choosing a career, and support networks. Names and addresses of potentially helpful organizations, as well as suggested references, are provided. The book concludes with a list of model programs for school administrators, counselors, trainers, and teachers that address the needs of women. (KC)

This book is a compilation of papers reporting and interpreting new research on women presented at the 1979 conference, "Women's Life Cycle and Public Policy," held at the University of Michigan. The papers focus on ways that women's lives may differ from men's, and on adaptations, both individual and social, that may encourage equal participation and satisfaction in society. The materials are divided into nine sections: (1) women's development (life-cycle theories); (2) women's involvement in multiple roles; (3) stages in family life (individual development of men and women); (4) issues in the workplace; (5) changes, transitions, and crises; (6) life satisfaction (well-being); (7) women and health; (8) women's education; and (9) women's lives and public policy. A brief index and information about each author is provided. (Author/CS)

Language: English

Document Type: PROJECT DESCRIPTION (141); CONFERENCE PAPER (150)

Geographic Source: U.S.; Massachusetts

Journal Announcement: RIEJUN81

In this document, personal experiences in counseling working women are recounted to add the dimension of personal ambivalence to the body of knowledge about discrimination against women, particularly the weak self-concept of women vis-a-vis their position in the work force. The paper begins with a discussion of role learning, in which women exist in a double-bind which forces them to choose between being a healthy woman and a healthy human being, with the result that many women devalue themselves. Women's self-concept in relation to work is outlined in four categories of ambivalence: (1) guilt over allegiance to the wife/mother role; (2) allegiance to the feminist version of the correct female role; (3) self-identity and self-concept; and (4) the need to be validated by men. Illustrative anecdotes from case histories are presented with a description of treatment methods, consisting of exploring personal value systems relative to an ambivalent self-concept in the working world, and making choices between conflicting values. PROBE, Potential Reentry Opportunities in Business and Education, is a program designed to assist people, primarily women, who are reentering the labor force or school after working in the home for a number of years. Funded by the Higher Education Act, Title I, and administered by The Pennsylvania State University, PROBE is based in Dauphin County Library, Harrisburg, Pennsylvania. The program has two primary components. The counseling/networking component includes information/referral counseling, a job availability service, a resource center, workshops, and support groups. The

business/industry component consists of employer contact, information sharing luncheons, and seminars. During the first year (May 1978-April 1979) contact has been made with approximately 850 people. The majority of participants have been women. More women than anticipated have recent job experience, but they want or need job or career changes. PROBE is seen by these participants as being able to help by (1) giving information, (2) one-to-one counseling, and (3) job hunting, self-awareness, job survival, and family engineering workshops. This paper describes a child/parent center for mothers and preschoolers, the Child in the City Programme, which was developed at the University of Toronto. First, the context within which the center was developed is presented: The neighborhood in which the center is located is considered high risk because of the great degree of social isolation; social services have not been successful in the area; and government policy recognized the need for developing alternative social support systems like the center. Next, the center itself is described. The two-stage program emphasizes the provision of support for mothers of young children so they can take advantage of opportunities outside their homes. The center also has staff to support other efforts to provide services to parents. The final section of this paper reports on a pilot evaluation of the program. Data were collected through interviews with mothers who were participating in the program. The findings indicated that some objectives of the program are being met effectively. Positive changes in mental health, physical health, and amount of participation in the community by mothers increased as length of time in contact with the center increased. Tables of data are appended. (MK)

This presentation describes a course, "Lifework Planning."

designed to help women evaluate their current job status and plan career changes commensurate with long-range life goals. The framework for the program is self-directed learning, through which women develop coping strategies for change. Participants and leaders make mutual decisions regarding course, content, and participants map out individual goals. The presentation lists several characteristics of life-planning programs: (1) they are developmental, helping women to accept changes in life plans as natural outcomes of developing needs and values; (2) they promote self-confidence; (3) they are supportive, involving friends and family and the program group itself in providing feedback and encouragement; (4) they emphasize taking responsibility for one's own life; (5) they offer strategies and means for gathering information about career options and about one's own interests, abilities, and values; (6) they show participants how to use all available resources for career development; and (7) they teach such career-related skills as assertive communication, stress and time management, and goal-setting. The presentation gives examples of these program traits as they have been realized in Lifework Planning groups. The appendix provides a course outline. (Author/CS)

The development of a course on the counseling of women is presented with a list of core topics, the bases for counseling women. The course topics include psychological and sociological factors, developmental theory, sex-role learning, perception of the female role, bias in counseling and testing, career choice, psychopathology, group counseling, and counselor training programs. The emphasis on research identification and skill development is discussed. Guidelines for therapy with women are described in terms of: (1) socialization and sex-role development; (2) discriminatory practices; (3) the counselor's role; (4) behavioral contracting; (5) client rights; (6) career development; and (7) needs of special populations. Student reactions to the course as well as obstacles encountered in teaching such a course are indicated. (Author/HLM)

Geographic Source: U.S.; Tennessee

Journal Announcement: RIEMAR81

Interviews were conducted with 30 single women between ages 30-40 in an investigation of the life styles of never-married women. Two-thirds of the respondents reported that, as teenagers, they had established approximate ages for marriage: most expected to be married by age 25. Women who expect to marry see single life as temporary, and may delay making life changes that could be affected by future marriage. By age 30, two-thirds of the respondents had changed their perceptions on the likelihood of marriage. Although marriage remained a possibility, most respondents saw it as less likely than in the earlier past. Many changed their life styles as they

approached age 30. A return to school was the modal form of change. Singles are often asked to account for why they have not married. The reasons they give depend on the person asking, the situation, and their satisfaction with life. Most are happy with their present life styles and anticipate adjusting to being single as they get older. A few anticipate that lack of companionship might lower future life satisfaction. (NRB)

This monograph concerns the role of the student personnel worker in counseling adult students, especially female students. Reasons why women return to college and their utilization of a student personnel department are reviewed. An analysis of admission requirements for adult students and an outline of institutional activities that promote sex equity are included. Specific recommendations are made for changes that will enhance educational opportunities for women in higher education. It is suggested that colleges must update admissions practices to eliminate barriers for women, employ women as successful role models, design special programs for women, and change existing attitudes and biases regarding the education of women. The appendix contains modules for counselor training workshops that promote sex equity. (NRB)

Journal Announcement: RIEJAN81

Findings are presented from a study of the midlife dual career family (in which both members of the couple are professionally employed and are highly committed to their work, and where there may or may not be children present). Focus is on the attitudes, perspectives, and personality characteristics of the dual career wife, and distinction is made between the woman who has been in a continuous career pattern since her 20s and the midlife woman who is newly entered into a professional career. Data referred to throughout the discussion is drawn from a series of in-depth case studies of dual career families which included twenty-three people (eighteen of them women) who ranged in age from twenty-two to fifty-two and in education from high school equivalency to Ph.D. Three issues (common themes, tasks, and dilemmas) are examined which relate to intrapsychic development: (1) emergence of contrasexual opposites (independence vs. interdependence), (2) transition to the second half of life, and (3) awareness of death. The other three issues dealt with examine individual development as related to the larger social structure: (4) the additive nature of the dual career woman's concept of career, (5) relationship to aging parents, and (6) midlife women's view of other women. Finally five strategies of coping and adaptation identified from the case material are described: structural changes occur in the traditional marriage pattern, one or both partners take up a stagnant position in terms of growth, one or both partners assume a regressive position, marriage system dissolves, and enhanced opportunities are found for growth and individualism for both partners. (JT)

**Intervention to Improve Mother-Infant Interaction and Infant Development.**

Crittenden, Patricia M.; Snell, Martha E.

1979 27p.

EDRS Price - MF01/PC02 Plus Postage.

Language: English

Document Type: RESEARCH REPORT (143)

Geographic Source: U.S.; Virginia

Journal Announcement: RIEOCT80

The relationship between aspects of mother-infant interactional behavior (vocalization, smiles, mutual eye contact, and facing position) and the infant's developmental level was investigated through both observation and intervention efforts. A sample of 33 primiparous mothers (mean CA of 22 years) from low income families and their infants (mean CA of 8 months) were videotaped during interactions with each other. Analysis showed that maternal position during interaction (facing, partially facing, or behind the infant) was strongly related to the frequency of maternal interactional behavior and indices of infant language and cognitive development. Intervention to teach mothers to use the facing position showed that change in position was related to increases in both maternal interactional behavior and infant development. The intervention involved use of the videotapes, informal discussion and role play activity. The results were considered relevant for intervention with infants at risk for developmental delay, abuse, and neglect. (Author/SS)

Geographic Source: U.S.; Washington

Journal Announcement: RIEDCT80

A project was conducted to design and field test a pre-vocational program of recruitment, instruction, advising, counseling, and placement for women considering careers in science and technology fields. Additional objectives were to directly assist women in coping with constraints inhibiting them from entering such fields and to compile the program elements and project results into a useful, transportable guide for other institutions of higher education in the state of Washington. A set of methods was devised to locate suitable students, increase faculty awareness of the project, identify and gain support of successful science/technology resource women in the community, and create an advising booklet. Instructional procedures emphasized the development of an integrated career counseling course that focused upon individual decision making within a supportive interpersonal environment. A pre- and post-test design was utilized that included unpublished tests, standardized tests, and case studies. By the completion of the course, approximately 68% of the 54 participants were actively planning to enter sci/tech careers. Twenty-two women were engaged in training in a sci/tech field along with an additional 10 training for other careers. Over 90% of the participants obtained a clear confirmation. Additional accomplishments pertained; to increased convictions with regard to the necessity for college supportive systems as crucial for such a project and course. Revisions based on participant reactions were made and the component retested. (Author/BM)

This guide is one of a four-book series on female development designed to provide a model for a sex-fair graduate training program in counseling, educational psychology and career education. It concentrates on sex roles in American society, examining the variables which contribute to sex-role stereotyping, and developing strategies for moving toward androgyny. The book consists of three units dealing with: (1) sex-role stereotypes in America; (2) sex roles across cultures; and (3) sex roles in American institutions. Units are divided into several lessons each containing a rationale, learning objectives, facilitator instructions, and suggested references. The appendix contains an annotated bibliography of additional media resources. (Author/NRB)

Journal Announcement: RIESEP80

This second of four workshop modules in the Project ASPIRE (Awareness of Sexual Prejudice is the Responsibility of

Educators) series deals with developing awareness of how sex-role stereotyping affects the vocational and life-style aspirations and decisions of students. (See Note about other modules.) The module helps workshop participants (1) explore how perceptions of sex roles influence interactions with and reactions to students; (2) explore stereotypes which have historically limited female or male participation in specific occupations; (3) become aware of the present realities of the labor force, of the changing career options for men and women, and of the positive and negative aspects of such choices; and (4) become sensitized to the need for sex fairness in instruction and career guidance. Workshop facilitators are provided with instructional guidelines, participant activities, and supplemental reading materials. Examples of the seventeen participant activities include "Index for Reality," "The Myth and the Reality," and "Design a Sexist School System." Each suggested activity is presented in this format: reference to objective, awareness level, purpose, logistics, materials, time required, process, and variations. It is recommended that at least two activities be chosen to treat each module objective. An appendix contains ten participant readings and one facilitator reference to support specific activities, an index for educators, and a preliminary guide to the assessment and evaluation of sexism in educational contexts. Document Type: PROJECT DESCRIPTION (141); EVALUATIVE REPORT (142)

Geographic Source: U.S.; Missouri  
Journal Announcement: RIESEP80

A project funded by a Women's Educational Equity Act grant provided women greater access to and awareness of nontraditional career opportunities and gave successful Kansas City, Missouri, professional women greater visibility in the community. The three components were (1) an internship program during which a woman intern was placed under supervision of an established woman professional working in a nontraditional career area, (2) a Reference Bank composed of women professionals in nontraditional career areas for use by women seeking specific career information, and (3) a Speakers Bureau with talented women from various career areas available to speak about women's career possibilities and provide encouragement for women considering nontraditional careers. Evaluation of the internship component included evaluative questionnaires completed by interns and supervisors, verbal critique in informal conversation, and informal follow-up of the interns. The internship program proved valuable for women interested in testing a decision concerning specific career areas and committed to gaining additional training necessary to qualify for a particular occupation. Development of a Speakers Bureau and Reference Bank were natural outgrowths of the internship program because of the professional contacts made while identifying supervisors. (Appendixes, amounting to two-thirds of the report, include project materials and evaluation forms and results.) (YLB)

Journal Announcement: RIESEP80

Intended as a resource in developing and conducting programs to encourage talented female students in broadening their career options and to increase positive self-awareness, this manual provides step-by-step procedures for replicating a fourteen-session diagnostic/prescriptive career development program for grade 11. Section 1, Program Overview, describes the six-phase Project CHDICE (Creating Her Options in Career Education) process: screening, selection, diagnosis, prescription, career development program, and assessment. Diagnostic instruments are provided. Section 2, Introduction to Special Groups, discusses four areas of diagnosed needs: Defining and Valuing One's Self, Achieving Success, Asserting One's Self, and Coping with Success. Section 3 discusses program use. Section 4 is the Core Project CHDICE Career Development Program with four different variations for the individualized needs of participants diagnosed in the four areas (section 2). Goals, duration, related activities (handouts), materials needed, a suggested group leader script, and special group changes are included in the detailed directions for conducting each of these sessions: Off to a Good Start, Women's Many Options, Learning about My Interests, Learning about My Abilities and Values, Career Information Workshops I-III, Gathering Career Information, Beginning to Plan, Testing Reality, Selecting a School and Paying for It, Making Decisions, Getting That Job, and Wrapping It Up. An extensive bibliography is provided. (YLB)

Geographic Source: U.S.; Ohio

Journal Announcement: RIEAUG80

This study compared infants born to narcotic addicted mothers with infants born to nonaddicted mothers and described the potential of an intervention program. Infants of five addicted women were matched with infants of five nonaddicted women on the basis of age and socioeconomic class of the mothers and on the basis of gestational ages, birth weight and Apgar scores of the infants. Data collection and intervention were performed during three time periods. During Phase I addicted women were solicited and interviewed from drug treatment centers for participation. During Phase II mothers were interviewed in hospitals and infants were assessed neurologically and developmentally. Phase III began in the infants' homes at age one week and terminated at age three months. Four types of homemade materials were employed for perinatal education. Pre and post maternal care and home environmental assessments were performed. Infants differed significantly along several dimensions on the basis of maternal addiction status. After intervention infants exhibited increases in alertness, motor maturity, self-quieting behavior, and mean Bayley Mental and Motor scores. (Author/MP)

Document Type: RESEARCH REPORT (143); CONFERENCE PAPER (150)

Geographic Source: U.S.; North Carolina

Journal Announcement: RIEJUN80

This paper reports on three longitudinal studies of the relationship of mother-infant interaction (and other maternal characteristics) to child development. The goal of the research program was to find a way to break the chain of events that lead to mild mental retardation. The first study of 1,000 North Carolina first grade children showed that the child's race and the mother's level of education at the time of the child's birth accounted for 27 to 29 percent of the variance in performance on three measures of intelligence and achievement. The second study examined the effects of an intensive intervention day care program with ancillary family services on the mother-child dyad and on the child. Fifty-seven children who had family characteristics most predictive of school failure were identified and followed during the first three years of life. The IQ of mothers in an untreated control group continued to predict her attitudes, interactional behaviors, and the child's development at three years of age. In the experimental group, the relationship between maternal IQ and child IQ was reduced to nonsignificance. Preliminary findings from the third study of mothers participating in a home visitation program indicate that the control-group mother spends more time involved with her child. Four tables of explanation and statistical documentation are included. (Author/RH)

Document Type: CONFERENCE PAPER (150); RESEARCH REPORT (143)

Geographic Source: U.S.; Kansas

Journal Announcement: RIEJUN80

A four-week career workshop was designed to provide college women on a large midwestern campus with information about sexism, sex roles, career planning, and career resources in an effort to sensitize them to past sex role biases. Portions of a 28-minute color video tape (not included in this document) were presented to the subjects and discussed each week in small groups. The video tape presentation is a direct application of a model depicting factors affecting both sex role socialization and career planning processes. A sample of the women (N=60) was divided into treatment and control groups. Treatment effects were assessed by means of five career and sex role instruments in a pretest-posttest-control group design. Results indicated that the treatment subjects spent more time thinking about career planning; described themselves as more masculine; and reported investigative, social and enterprising careers as more appropriate career choices than did control group subjects. Future research is recommended to sensitize students to the effects of sexism and past sex role socialization on career decision making. (Author)

This report describes a research project which (1) assessed personal-social barriers to female entry into non-traditional jobs, (2) developed a treatment program to assist women in overcoming those barriers, and (3) determined program impact. A project overview, the first of four major sections, precedes a survey on barriers (section 2). Following a literature review concentrating on the areas of stereotyping of occupations and barriers to women's entry, the methodology and results of the study are presented: population identification and selection (teachers, secretaries, and nurses who had considered but not pursued a male-dominated occupation), instrumentation, data tables, survey instrument efficiency, and deterrent identification. Survey materials are appended. Section 3 presents an educational program with the topics: pursuing a non-traditional occupation, interference, career decision making, self-assessment, career requirements, planning for acquisition of job skills, job entry, and coping on the job. Designed for self-directed study or workshops, the course consists of eight units with objectives, text, exercises, and references. (All printed instructional materials are included.) The final section includes a literature review on the outcomes of related programs and analysis of assessment data on the program. Methodology and results are given, including population, pre- and post-testing, followup, program impact and data tables. Evaluation instruments are appended. (YLB)

Document Type: CONFERENCE PAPER (150); PROJECT DESCRIPTION (141)

Geographic Source: U.S.; New York

Journal Announcement: RIEMAY80

This program seeks to prevent adolescent pregnancy and childbearing through a community-based feminist social service program serving teenage girls. This OAWN program, Discovery and Awareness for Women Now, was initiated as a result of the Women's Movement which has had a serious and positive impact on the lives of most adult women. Yet, teenage girls, particularly the low-income girls in this local community, were virtually unaffected by these changes. Three major program goals have been: (1) to increase awareness, and to develop the skills for taking advantage of existing options for young women; (2) to develop more positive self-images; and (3) to become involved in activities that promote physical and mental well-being and expand social horizons. Activities, trips and sex education were provided in response to staff's perception of the girls' needs. The pregnancy prevention approach addresses the issues of control, decision-making and future orientation, so the girls will become responsible for their own lives. (Author/BMW)

Due to rising violent crime rates, crime and fear of victimization have joined health, income and housing as major concerns of older Americans. This guide proposes solutions which reflect the best available information. The three main sections focus on rape of women over 50, its prevention, and education programs and training aids. The guidelines are designed primarily for use by planners, administrators and housing site staff; organizations that provide services for older people; law enforcement agencies; and other agencies involved with assuring the safety of the elderly. The objectives are to: (1) sensitize the reader to the special vulnerability of older women and to the issue of rape; (2) increase knowledge regarding prevention, program planning and the avoidance and protection activities for older women; and (3) provide the reader with education and training suggestions, materials and resources necessary to carry programs beyond the planning phases. Document Type: CONFERENCE PAPER (150); POSITION PAPER (120); REVIEW LITERATURE (070)

Geographic Source: U.S.; Florida

Journal Announcement: RIEAPR80

The paper examines the self-concepts of males and females in relation to academic achievement and describes a current educational intervention project at the junior high school level. A major portion of the paper reviews literature on sex differences for the variables of sex-role and achievement orientation. The literature reveals significant differences between females and males in their orientation toward achievement. Aspirations and expectations appear correlated with notions of traditional sex-role behavior and appropriate masculine and feminine personality traits. Research also indicates that curriculum intervention projects are more effective in changing notions about sex-role behavior with adults rather than children. The final section briefly describes the goals of the current project. Goals are to expand students' self-concepts to include a wide range of possibilities for behavior and to increase their academic performance in subject areas which have been traditionally viewed as more appropriate for either males or females. Materials have been developed for a social studies unit, Decisions About Roles. Students have the opportunity to gather knowledge, examine their values, explore alternatives, make decisions and then act upon them. Pre- and posttests for the unit include sex-role inventories, occupational attitudes and aspirations, and participation and confidence in decision making. (KC)

This guide focuses on the needs of high school\* women students. It attempts to help counselors develop open attitudes and non-discriminatory policies and practices in educating and training women for satisfying, non-stereotyped careers and life-roles. The manual provides separate, creative program strategies that vary in importance, difficulty, commitment to policy change, traditional nature, and pre-implementation planning; none is prerequisite to another. Strategies are offered to initiate a vocational readiness program, to expand career options for women, to involve women students in career guidance policy-making, to organize student career awareness groups, to introduce more diversity in role model activities, to encourage mentoring, to locate sex-fair guidance inventories, to remediate the curriculum with women's studies, to develop school-community cooperative activities, to provide inservice training for staff, and to obtain current and specific career resource material for young women students. To aid the final strategy, seven separate resource lists suggest a basic book collection, films, miscellaneous program materials, other publications and resources, national women's professional organizations, national women's organizations, and national organizations for job discrimination and women's rights. (Author/LS)

Journal Announcement: RIEFEB80

Some antecedent causes of the resistance or inability of women to set goals are explored. Aspects of socialization and education which determine the decision-making and goal-setting behavior of women in adolescence and in maturity, are delineated. The thesis is put forth that political and societal institutions are, to a great extent, responsible for the inability of women to set formal or informal goals. Hall's (1972) model of coping strategies suggests three general mechanisms for dealing with goal-setting: Type I concerns structural role definition; Type II considers prioritizing role appropriate activities and Type III involves reorientation of role in response to others. A fourth type which may be added to this model includes a broader re-definition of existing social and political structures. Type III may elicit the most support from significant others in coping with conflict. Types I, and IV would elicit least support and be most difficult to accomplish. Types I and IV are most closely related to long-range goals in that they require restructuring not only of role but of societal institutions. Strategies which consider each coping mechanism may include self-awareness, other awareness and societal awareness. An integrated analysis of goal-training and attainment places emphasis on individual, institutional, and societal remedies and removes traditional responsibility from women themselves. (Author)

Document Type: RESEARCH REPORT (143)

Geographic Source: U.S.; Iowa

Journal Announcement: RIEDEC79

A study was conducted primarily to determine the impact of low-cost, replicable procedures for increasing exploration of and preference for careers in science and technology on the part of high school females with potential for such careers. Three-hundred and ninety ninth-grade females with above average academic ability were randomly assigned to an intervention group and a control group. Interventions included a non-sex-restrictive interest inventory supplemented with group discussions of career planning in general and science/technology careers in particular. In addition, a sample of 1,017 twelfth-graders was selected who were not planning majors in science or technology but who had high ability test scores and grades in science and math. These students were also randomly assigned to an intervention and a control group. Both groups received the usual ACT (American College Testing) Assessment score reports and interpretive booklets. However, the intervention group received two later mailings. The first mailing contained a letter calling attention to the recipients' high potential for careers in science and technology, a list of examples of science/technology programs at colleges of each student's choice, and a copy of a booklet entitled "Women in Science and Technology: Careers for Today and Tomorrow." The second mailing contained a list of resource books/materials on career planning and an invitation to return a postcard requesting additional information on specific occupations. Statistical analyses of the outcome data for both groups indicated that the interventions were not effective in accomplishing project objectives. (BM)

Journal Announcement: RIENDV79

The lack of women in top administrative positions in education has often been dismissed as attributable to role conflict. The available research literature is examined to determine if there is evidence of role conflict, and, if present, if role conflict prevents women from functioning adequately as educational administrators. Three possible types of role conflict that may result when individual needs clash with normative standards and/or institutional expectations are personality conflict, role-personality conflict, and role-role conflict. Personality conflict is defined as occurring when aspects of an individual's personality are in conflict with other aspects of that same individual's personality. Role-personality conflict is the belief that women simply do not possess the personality traits necessary to perform the role expected of any administrator including that of any educational administrator. Role-role conflict for women is based on the assumption that women simply cannot handle two or more roles simultaneously. Styles of coping with role conflict are identified as role redefinition, personal reorientation to roles, and reactive role behavior. Role conflicts for women administrators do indeed exist; however, we can hardly conclude that this renders women less efficient or effective if they choose to make educational administration their major role in life. As part of a symposium that identifies research and policy implications of selected aspects of a two-year, multi-university effort to increase equity for women in education, this paper presents a five-phase intervention model used in the production of multi-media instructional modules to enhance equity for women. The paper explores each phase (design, production, validation, dissemination, coordination) and underscores the implications for those who are or wish to be involved in advancing women's equity through the creation of training materials. Discussion focuses on the description of activities undertaken within a multi-university effort to achieve the goals specified for this project. (Author/MLF)

These papers make suggestions for further exploration into the problems of sex and gender research. Edmund Gordon presents a historical perspective on the sociopolitical implications of sex and gender and discusses attitudinal variables which affect the classification of women. Ann Lieberman describes the history of women in the work force, their problems and breakthroughs, and their prospects for the future. Robert Brannon compares the stereotyped roles which men have played in the past with their portrayals in the media today. He shows that today's male is facing difficulties as a result of the changing role of women. Maxine Greene discusses the role of women in literature and suggests that literature can provide a resource for women to remake and transcend the traditional conditioning of their roles. Maria New addresses the problem of ambiguous sex in the newborn, presenting biological antecedents, the diagnostic procedures, and the appropriate medical intervention. Elizabeth Hagen points out various reasons for inconsistencies in several areas of sex-difference research. Patrick Lee reviews some of the major theories of sex-role differentiation and mentions factors which should be taken into consideration in the development of a new theory of sex-role socialization. Several factors indicate that there is a relationship between economic conditions and crime among black women. Crime statistics show that outside of the misdemeanors of drunkenness and disorderly conduct, black women tend to be arrested for larceny and prostitution, both economic crimes. The fact that black women are at the bottom of the economic ladder lends more support to the economic theory of crime causation. In spite of the attempts of some authors to explain black crime through the theory of aggression, statistics show that black female criminality is substantially different from black male criminality in that it is less violent. Studies also indicate that the victimization rate for black females is much less than the rate for black males, but is much greater than the rate for white females. The two most prominent areas of victimization are rape and spouse abuse. Several programs initiated or supported by black women (the Multi-Area Rape Crisis Council of Atlanta and the Coalition of Concerned Women of Chicago) demonstrate that crime prevention is not the exclusive domain of the police and that black women can serve as a potential resource for crime prevention programs. However, as long as black women are on the bottom rung of the economic ladder, are heads of households and are subjected to racial oppression, they will continue to commit economic crimes. Document Type: RESEARCH REPORT (143)

Geographic Source: U.S.; Michigan

Journal Announcement: RIEJUL79

A quasi-experimental field research project was carried out in twenty intact classrooms in eight different schools in the central area of the upper peninsula of Michigan across two semesters. Five hundred and twenty-two public school students participated in a static-group comparison research project, designed to effect changes in student sex role stereotypic attitudes and information accuracy regarding women's activities in the world of work. The intervention in this two-by-two-by-two-by-three factorially designed research project was carried out by two counselor-teachers, members of the project team. They went into the experimental condition groups once a week and presented, through a variety of approaches, information about career choice options for men and women. Though findings did not carry out the hypotheses of the research staff, some important information did emerge that will be useful for further attempts to eliminate sex stereotyping in vocational education and occupations. Results included some minimal influence of the urban-rural dimension and the treatment dimension upon sex-role stereotypic attitudes, no effects upon information accuracy scores, and a significant treatment effect upon career choice shifts. (Appendixes include (1) facsimile of test instrument, (2) lesson plan outlines for fifth, ninth, and twelfth grades, (3) description of role model teams, (4) teacher and student evaluations, (5) individual student data, and (6-9) Newman-Keuls Procedures. Journal Announcement: RIEJUN79

Focusing on counseling programs and support services for increasing the participation of women (postsecondary level) in occupations traditionally dominated by men, a study examined opportunities, needs, and support systems relevant for women seeking to enter either nontraditional professional or nonprofessional occupations. The data collected covered the following categories: opportunities in nontraditional professional occupations; characteristics of women choosing traditional and nontraditional professional occupations; counseling/support services for women in math, science, and management; role models used to increase nontraditional participation; counseling services/resources for college women; counseling services aimed at changing change agents; legislative support for women entering nontraditional occupations; participation of and support programs for women in nontraditional, nonprofessional occupations; and apprenticeship training. Positive trends were identified in several nontraditional occupational fields where female enrollments in professional training have increased during the past decade. Seen as a result of several factors rather than the result of any one programmatic effort, these increases were facilitated by legislation and efforts by states and institutions to recruit more women. Promising projects were identified that aimed at influencing educators, parents, and students to change their attitudes and behaviors. (BM)

The shelter for battered women described in this report was established for three purposes: (1) to provide assaulted and battered women and their children refuge from domestic violence; (2) to enable women to identify viable alternatives to life-threatening situations and encourage self-reliance; and (3) to act as an advocate for change within the community and in those systems responsible for providing services to assaulted and battered women and their children. The report itself is a detailed final evaluation of the program for the fiscal year ending June, 1978. A few of the areas covered are funding sources and appropriateness of funding; staff positions and salaries; goals and objectives; functions performed by the shelter; and deficiencies and recommendations for improvement. course to specific circumstances in each of four other regions; field-testing of the adapted curricula in schools located in the four regions outside the Northeast; evaluation of the original and adapted curricula through a pre-post testing procedure; and development of a manual to facilitate the adaptation of regional curricula to specific circumstances of other localities. The Survey of Occupational Career Interests was used to survey 248 females and 191 males for purposes of developing the initial curriculum in the first year. The adapted version, Profile of Occupational Interests, was used in the second year to survey 953 males and 952 females. The four field test sites were divided into control and experimental groups (those receiving elaborate support services and those who did not). Evaluation indicated the development team/nondevelopment team variable was not significant but that student change was significantly more positive in the experimental classes. (JC)

This publication discusses the use of risk strategy for the organization and management of health care services for mothers and children. Individuals and groups with an increased expectation of complications or disease are defined as being "at risk" and the aim of the health services should be to identify them as early as possible and to intervene in order to reduce the risk. Specific components of this approach are described in some detail. These include (1) identification of characteristics of women and children associated with increased risk of undesirable outcomes, (2) development of methods for detecting at-risk individuals in local conditions, (3) training of health care personnel in these methods, and (4) provision of methods to prevent or ameliorate undesired outcomes. An example is given of a decision pathway--a possible approach to the selection of intervention strategies based on defined outcomes, risk factors, resources, constraints and manpower availability. Also included are a list of the basic components of a health information system and a brief discussion of the field testing of local risk strategies. Appendices give further examples of risk factors, scoring systems for assessing risk, and intervention strategies; notes on resource allocation and evaluation methods; and examples of ways to expand general program objectives. Middle age is a phase of the life cycle marked by poorly defined boundaries and declining status. Studies reveal that depression is more likely to occur during middle age than during any other phase of the life cycle. In addition, research has verified that depression occurs more commonly in women than men. A sociological analysis of factors which differentially influence men and women in middle life is presented. Factors which may account for the higher incidence of depression among middle-aged women are identified and discussed. Some suggestions are advanced for the prevention and treatment of depression in women in middle life. (Author)

Document Type: CLASSROOM MATERIAL (050)

Journal Announcement: RIEDEC78

The program described in this handbook is a pre-admission counseling program dealing with the specific needs of the mature woman student. It encourages her to explore her educational and career options, making it possible for her to enroll in a career-oriented study program if she so chooses. The book operates on the assumption that it is no longer enough to work at a menial position outside the home, as it was no longer enough to stay home to wash diapers and wax floors. It assumes that women want meaningful work and meaningful lives, but often do not have the confidence, skills, training or experience to meet the demands of their aspiration. The goal of this handbook is to share the program experience and methodology with counselors, teachers, and administrators in order to assist them in implementing pre-admission counseling programs for mature women. This annual report cites activities of the Montgomery County Commission for Women during 1976 which aimed at decreasing sex discrimination practices and serving women's social needs. The document is presented in six sections. Section I presents an overview of the counseling and information services provided by the Commission in areas such as credit, housing, health care, drug and alcohol abuse, legal services, employment, child care, child custody, and domestic law. Section II presents a directory of commission and staff members. Section III summarizes reports of the Commission's committees on economics, education, and law and legislative action. The committees' objectives were to improve the economic environment for women in Montgomery County, assist school systems in assuring non-discriminatory hiring practices, and support nondiscriminatory legislation. Section IV describes activities of the Commission staff in areas of community interaction, research, reporting, and public relations. Section V lists 1977 commission publications. Section VI, the bulk of the report, describes the background, objectives, organization, and programs of A Woman's Place (AWP), the Commission's resource and activity center. Since its creation in 1976, the AWP has handled requests for employment and career counseling for over 6,000 clients, and offered support groups and courses to 1,000 persons. In addition, commissioners and staff have given speeches and conducted workshops for over 2,000 Montgomery County residents. An appendix concludes the document. (Author/DB)

The major purpose of this study was to assess the effect of increased parental involvement in an intervention program. The program was structured to follow a prescribed mode of parent-child activities and parent-teacher communications and activities all having reference to the child's educational experiences, particularly those involving reading. Evaluations were made in terms of behavioral and attitudinal changes observed among participating parents and teachers, as well as by a number of child indices. These included: (1) level of self-esteem; (2) motivation to learn; (3) academic attitudes; and (4) reading achievement. Results suggest that the relationships between family and school environments warrant further emphasis by educators. (Author/BP)

Journal Announcement: RIEFEB78

The family is the basic physical and emotional support system in American society. Dysfunction of a family member may reflect family dysfunction and certainly affects the well-being of other family members. Disturbances in the mother can have profound effects on family functioning and child development, as mothers bear most of the responsibility for care of children and household management. Alcoholic women living with their children are recognized as a treatment population needing special environmental support as part of their recovery. The training of paraprofessional service providers who work with the family at their own home on a full-time basis can provide valid and needed services. These helpers are trained to engage in activities ranging from childcare and household tasks to motivating family members to learn and apply problem solving techniques, while helping the mother through a treatment program for her alcoholism. The services are short-term and crisis oriented, designed to help all family members develop long-term therapeutic programs utilizing community facilities. This technique has shown positive results in an independent evaluation, and can be replicated in other populations with family crisis problems. (Author)

In Polk County, Iowa, criminal justice agencies and concerned citizens work together to lessen the burden on the rape victim and to increase the chance of ultimate conviction and sentencing in rape and sexual assault cases. The Rape/Sexual Assault Care Center offers medical and social supportive services to victims, aids law enforcement and criminal justice personnel in the investigation and prosecution of sexual assault offenders, and educates the public and professional community about rape and sexual assault. Since the center was created, impressive improvements have been seen in police clearance rates for rape cases, in willingness of victims to press charges, and in the rate of convictions. This booklet contains chapters on Project Development and Organization, Victim Services Coordination, Criminal Justice Support, Community Education, and Results and Costs. (Author/BP)

Document Type: BIBLIOGRAPHY (131)  
Journal Announcement: RIEJAN78

This paper offers a detailed review of the literature concerning sex differences in the learning of mathematics. It identifies cognitive, affective and educational variables which have been either shown or hypothesized to contribute to sex-related differences in mathematics learning. The author analyzes each study in detail. One important finding is that many studies crediting boys with more mathematical ability than girls were carried out on populations in which the boys had actually studied more math than the girls. The author believes that if the amount of time spent learning mathematics is equated for males and females, educationally significant sex-related differences in math performance will disappear. Much evidence is presented to support this belief. She concludes with recommendations in three areas: (1) directions for research; (2) intervention or demonstration projects; and (3) general considerations to optimize the chances that the money spent will accomplish its goals, i.e. to improve females' participation in mathematics now and in the future. (Author/BP)

The New Occupational Student: Mature Adult Woman (NOSMAW) was a preadmission counseling program in four community colleges which sought to encourage women to explore their educational and vocational potential. This program consisted of a series of workshops which focused on self-awareness activities and provided college and career information. In addition, 20 community college counselors received training in the Motivation Advance Process. A framework for a peer counseling program was established as a post-admission service for the women. Recruitment through mass media, cultural clubs and parents' associations resulted in 672 women attending an initial orientation session. Three hundred forty-one women from various socioeconomic and ethnic backgrounds were accepted into the program. Seventy-six percent of the women completed the program and 72.5% (189 women) subsequently applied for college. The majority of women enrolled in occupational programs. Among the most popular choices were A.A.S. programs in traditionally male dominated fields. One hundred twenty-one full time equivalents were projected for the 189 college applicants. The attrition rate after the first year of college attendance was only 4%. The program was equally effective with all population subgroups. (Author)

Journal Announcement: RIESEP77

Alcoholic women living with their children are recognized as a treatment population needing special environmental support as part of their recovery. The Family Rehabilitation Coordinator Project is a pilot research and training effort to aid the recovery of alcoholic women and their children and families. Trainees work in the home of an alcoholic mother beginning her recovery through some recognized plan of treatment. Results presented focus on changes in relationships and roles within the family which may be related to the presence of the rehabilitation coordinator, particularly changes in the perceptions and behaviors of the recovering alcoholic mother. Document Type: BIBLIOGRAPHY (131)

Journal Announcement: RIEMAR77

This document is comprised of papers presented at a symposium on Adult Development in Women. A paper entitled "Women in the Middle Years" reviews the major findings on adult women, and describes what an adequate theory of women in the middle years should account for. Mental health, effects of marriage, children and work, and the interrelationships of these factors are discussed. In elucidating critical stages, the authors consider a developmental framework focusing on women's role patterns and life stages within the cultural context would be appropriate. The traditional consideration of chronological age, and stereotypes and myths about women, especially the mind-body relationship and the need for marriage and children have impeded model development. Power, and its relationship to a sense of personal control, are

central considerations. A paper, "Some Sociological Perspectives on Adult Women" discusses personal roles, multiple roles, and coping and support systems. The conclusion reached is that theories based primarily on data from men do not apply to issues confronting women, and that life tasks, including the "marker events" which trigger a person's concerns with each of these tasks, serve as a focus from which to study the middle years. Document Type: RESEARCH REPORT (143)

Journal Announcement: RIEFEB77

The evidence of numerous studies on women's roles and attitudes suggest that, at least historically, women have attitudinally agreed that women's place is in the home. However, more recent studies suggest a new trend in attitudes. Women have now assumed a pose of wanting to work, while at the same time they tend to cluster in traditionally female occupations and express uncertainty over the compatibility of the dual role. Baldwin-Wallace College, a liberal arts and pre-professional college of approximately 2,200 enrollment, has undertaken a program of career planning for adult women to assist them in understanding themselves, and their relationship to careers and occupations. Attitudinal and institutional changes cannot be accomplished by women alone. Since males play an influential role in the career development of women and are generally more credible to and have more impact upon established institutions, it is essential that men also become significantly involved in the facilitation of women's career development. The proposed presentation attempts to provide information about this on-going career program and the use of male and female counselors in the program by discussion and the experiential involvement of the audience. Document Type: RESEARCH REPORT (143)

Journal Announcement: RIEJAN77

The purpose of this study was to assess the effects of a 12-week intervention in 6 black and 9 white low income homes in order to modify maternal teaching behavior and influence child functioning. Home visitors worked with the mothers once a week mainly utilizing objects and events in the home for educational purposes. It was hypothesized that a home-visitor program directed toward the mother would improve her maternal teaching behavior and have effects on the cognitive functioning of her preschool-aged child. Measuring instruments used in a pre-test and post-test situation were the Stanford-Binet, Form L-M; the DARCEE Concept Test; and in a post-test only design, the Maternal Teaching Style Instrument (MTSI). Positive changes in maternal teaching style were achieved by experimental group mothers, especially in the area of cue labeling. Significant cognitive gains were achieved by the preschool target children on recognition skills on the DARCEE Concept Test while all other differences were in the predicted direction but statistically insignificant. The limited changes in the target children were attributed to the limited duration of the intervention. (MS/Author)

Specific issues in counseling are examined from the user's perspective. The book is a collection of issue papers written by students and recent graduates. Chapter 1 provides an overview of the counseling profession and discusses the controversy between educational and therapeutic counseling, the predominance of high school counselors, and the relative ineffectiveness of counselors. The second chapter considers the counseling process itself. Chapter 3 deals with regional and community-based counseling centers as an alternative to the traditional high school counseling system. Minority counseling programs and minority student needs are addressed in Chapter 4, and the fifth chapter describes the information and counseling needs of women. Three primary changes in the counseling system are identified: (1) the focus of counseling should be client-centered; (2) counselors need to be able to collect and manage the information that prospective students need; and (3) counseling should be moved out of the schools and into the community. Presented is the program evaluation report of the Cheshire (Connecticut) Preschool Program for early intervention with a total of 64 mildly and severely handicapped children between 3 and 6 years old. It is explained that the mother-child project has served children with such handicapping conditions as hearing impairment, vision impairment, cerebral palsy, cleft palate, autism, hyperactivity, language delay, mental retardation, and emotional disturbance. Listed are program objectives (such as giving mothers new insights) and evaluation techniques used. Detailed are characteristics of the children and the evaluation process and sequence. Presented in the major portion of the document are evaluation results which include significantly increased IQ scores, improved behavior ratings, and improved parent ratings. It is concluded that the program has had a dramatic positive impact on both children and mothers. Appended are items such as a classroom observation schedule, a child rating scale, the preschool parent questionnaire, and case histories. (DB)

Journal Announcement: RIEOCT76

This study was done to evaluate the effectiveness of a one and a half hour workshop on changing attitudes toward women. The subjects were 34 counselors who attended a workshop entitled "Intervention Strategies for Modifying Sex Stereotypes." The 27-item alternate forms were devised out of the full scale 55-item Attitudes Toward Women Scale and were called Form A and Form B. Eighteen counselors received Form A as a pretest and Form B as a posttest and 16 counselors received Form B as a pretest and Form A as a posttest. Twenty-one subjects returned the follow-up questionnaire (same as posttest) sent to them one month later. The results showed that counselors' attitudes became significantly more liberalized after the workshop and that these changes were retained at the time of follow-up, regardless of which form was administered. The finding is interpreted as bolstering the worthwhileness of offering a short-term workshop to modify sex-stereotypic attitudes. (Author)

Document Type: RESEARCH REPRT (143)

Journal Announcement: RIEAUG76

The study explored the impact of mid-career changes for women who were enrolled in or had recently completed a program in the Wisconsin Vocational, Technical, and Adult Education (VTAE) System for the purpose of changing careers from housewife and mother to that of labor force participant. Sixty-six women, aged 30-49, returned a survey questionnaire that sought information about socioeconomic, marital, and educational status; the effect of the change on interpersonal relationships and life styles; motivation for change; resulting benefits and liabilities; and self-image. An important objective was to develop implications and recommendations for VTAE system programing and to design a model of mid-career decision making for women. It was found that the primary motivation for a return to school was financial. The majority experienced a feeling of achievement and an increase in self-confidence, with new friends, interests, and experiences rated as important benefits. The greatest problems were adjusting to the student role and coping with the demands of home and school responsibilities. Suggestions were offered on ways to encourage women to enter to enter male-oriented occupations and on ways to improve preparation and counseling for re-entering school and the labor market. (NJ)

This program is a structured, 16-session consciousness-raising group for adult women which can be used in a university setting with women in continuing education or

in a community setting with noncollege women. The program is designed to help women identify the influence of sex-role stereotyping on their lives, learn ways for effective sex-role conflict resolution, and define interests and personal goals. It has been given as a one credit-course by the Counseling Service staff at Phoenix Community College in Arizona for groups of 12 to 15 women. Participants have become more self-achievement-oriented and inner-directed following the course and report an increased appreciation for other women. (Author)

This booklet, written in response to requests from throughout the nation about how a rape crisis center can be started, presents the history of the founding of the Washington, D.C. center. The booklet offers sections dealing with specific issues. A section discusses, for the rape victim, pros and cons of working with the police, together with the various legal implications. The medical and hospital information section describes hospital procedures and the problems of venereal disease and pregnancy. Additional sections discuss the emergency phone service of the crisis center, transportation and counseling, conducting rape conferences, and publicity. The final section, called "Putting it All Together", covers other important issues not mentioned in previous parts of the booklet. Appendices containing sample forms, bylaws of the rape crisis center, and a mock phone conversation are attached. (Author/BW)

Document Type: PROJECT DESCRIPTION (141)

Journal Announcement: RIENDV75

Women, with too few exceptions, are hired less often and for less money, get fewer and smaller raises, are promoted on the job less, and are fired more readily than males of comparable ability and experience. In addition, women in the professions (education included) report discriminatory practices in graduate training and while on the job. Counselors, educators, and other helping professions seem to have done little thus far to alleviate this situation. The author discusses intervention strategies for sex stereotyping which are being conducted in the United States. She points to the need for more research in the field and, in particular, to testing out of intervention strategies with greater variety of populations, over longer periods of time, and with stricter and more elaborate controls. Journal Announcement: RIEAUG75

A total of 1,341 male and female students enrolled at a private women's college, a two-year comprehensive college of moderate size, an agricultural-technical college, and a small two-year comprehensive college were surveyed in Spring 1974 to determine demographic and descriptive data, career choices, plans for labor force participation, and perceptions of counseling services. Almost twice as many women as men were sampled. Career-innovators were defined as women who had selected careers in which zero to 40 percent women are presently employed. Non-innovators were defined as women who planned to enter careers in which 70 to 100 percent of those employed are women. Approximately 20 percent of the women

sampled were career-innovative. Compared to non-innovators, role innovative women had significantly higher college grades, had made their career choices more recently, aspired to higher educational degrees, were less apt to plan to marry before completing their education, planned to have fewer children, planned a wider range of careers, were less likely to cite closeness to home as a reason for choosing their college, and reported more problems with their colleges. Innovators and non-innovators reported similar appraisals of counseling services. Implications for counseling are noted, pertinent literature is reviewed, and tabulated data is presented. Journal Announcement: RIEJUL75

A total of 1,341 male and female students enrolled at a private women's college, a moderately-sized comprehensive college, an agricultural-technical college, and a small comprehensive college were surveyed to determine demographic and descriptive data, career choices, plans for labor force participation, and perceptions of counseling services. Twice as many women as men were sampled. Analysis of the data revealed that these women were more like four-year college women than "new students" at two-year colleges. The majority of women studied were 18 or 19 years old, single, and white. Nearly half of both their mothers and fathers had completed some college. While attending college the women depended on their parents for financial support and did not work. Their most common majors were liberal arts, health sciences, or secretarial science. Unlike four-year college women, however, their occupational choices resembled those of their fathers more than their mothers and they anticipated continuous commitment to work. They selected their careers for special interest, opportunity to work with people, and ability to be creative. True role innovativeness was expressed by only one-fifth of the women sampled. Pertinent literature is reviewed, data is presented, and recommendations for improved counseling services are made. The questionnaire and the interview format are appended. (Author/DC)

Language: ENGLISH

Document Type: BOOK (010)

Journal Announcement: RIEJUN75

There has been rapid growth in the number of mature female students entering institutions of higher education. Increases in employment opportunities, decline in birth rate, and the impact of social reform and the feminist ideology all indicate a trend toward greater opportunities for women with increased female participation in higher education. As a student development specialist, the counselor must recognize the particular psychosocial needs of women and develop strategies to facilitate the personal growth and development of the female student. A broad base of research and discussions on the psychology and psychosocial needs of women has rapidly developed. Drawing on the research in this field, the counseling service at Virginia Western Community College has planned a course designed to define specific sources of psychological, sociological, and situational factors which may impede the growth and development of the mature female student. Student objectives, proposed teaching methods, and a sequence of topics for the course are detailed. Desirable group dynamics and the means for course evaluation are also described. A bibliography focusing on college women is included. (Author/AH)

Language: ENGLISH

Document Type: RESEARCH REPORT (143)

Journal Announcement: RIEJAN75

In keeping with the trend toward greater parent participation in the education of their children, a preschool intervention program designed to improve the educability of children who would enter kindergarten at the start of a fall term was conducted in one elementary school. The major purpose of the project was to determine if mothers would accept the role of home teachers for their prekindergarten children on a regular basis, using school-prescribed tasks. A sample of 12 mothers and their children was studied. Mother-instruction was measured by a checklist that obtained information about the extent to which mothers engaged in teaching the prescribed activities at home. A teacher observation survey recorded ability of the child to perform supervised skill activities. It was found that mothers in the program did show an active interest in school-home relationships, as evidenced by the regularity with which they accepted the role of home teacher. The pupils in the project, after entering kindergarten, were better adjusted socially and performed better in verbal expression than classmates who had not participated in the project. Based on findings in this program, it is recommended that the parent's involvement as home teachers be extended throughout the school career of their children. (Author)

Journal Announcement: RIEDEC73

The New Orleans model for parent-infant education involves the use of non-professional workers, trained by professional staff, who teach general concepts of child development and child management to groups of disadvantaged mothers. Two themes are stressed: the parent is now and will be the child's

most important teacher, and all the baby's time is learning time. In the long range view, research at the Parent Child Center is designed to investigate whether or not educational intervention needs to be implemented from the first year of life for optimal success and also to evaluate two systems of delivering services (in a center versus home visits). Results are as yet inconclusive. (DP)

Language: ENGLISH

Journal Announcement: RIEDCT73

The paper examines that phenomenon of widowhood, which has become a natural attribute of a woman's old age because of her greater life expectancy when compared with her husband. Researchers have discovered that, although problems of widowhood have attracted little serious inquiry, one of every five women who face conjugal bereavement need outside help to return to a state of physical and mental well-being. New patterns of health care for this ever-increasing number of women include "widow-to-widow programs" wherein trained widow aides give direct help to the recently bereaved, voluntary organizations sponsored by religious orders, and widow consultation services provided by private and government agencies. The author feels that further scientific inquiry is needed to identify those variables associated with high morale and those which correlate with low life satisfaction following bereavement. References are included. (Author/SES)

Journal Announcement: RIEMAY73

The present study is a preliminary effort to delineate areas in which male and female clients in a university counseling center are viewed and/or treated differently. Ratings of 565 female and 645 male clients at the University of Maryland Counseling Center were made by 13 Ph.D. level counselors (9 male and 4 female) on 16 evaluation questions. Five of the 16 items showed significant differences between ratings of male and female clients. The main difference seemed to be that females were more often judged to have social-emotional problems and males were more often seen as having vocational-educational problems. No large differences were apparent between male and female counselors in their client ratings, but clients of both sexes seemed more likely not to show up for their first interview with a female counselor than for the first interview with a male counselor. The opposite tended to be true, however, of client no-show behavior for other than the first interview. The results of this study are discussed in terms of sexual stereotypes and future directions for research. (Author/HS)

Language: ENGLISH

Journal Announcement: RIEDEC72

This transcript is the result of panel presentation given on the implications of liberalized abortion laws for counselors. A new law which went into effect in July, 1970, in New York State presented women with the option of obtaining a legal abortion up to the 24th week of pregnancy. Counselors in New York State were, therefore, presented with new alternatives in dealing with women with unwanted pregnancies. The panel included a gynecologist discussing the impact of the law on the state and a college community; a Newman chaplain reflecting on alternatives to abortion; two counseling psychologists discussing personal reactions to the abortion issue and its impact on a college population; and a black counselor comparing the reaction of whites and nonwhites to unwanted pregnancies. The problem of unwanted pregnancy presents serious dilemmas to counselors. This panel

presentation was an attempt to incorporate a wide range of viewpoints on this issue. (Author/WS)

Journal Announcement: RIESEP72

An intervention study with mothers and infants is discussed. The project staff consisted of two home visitors, a materials specialist, an infant examiner, and a project coordinator. This study assessed the effectiveness of the program for mothers and infants. Infant abilities and psychological development were tested and homes were rated. One home visitor worked directly in each home for a maximum of 24 home visits. Throughout the project, the home visitor demonstrated and reinforced behavior of the adult caretaker that provides for the physical, emotional, social, and intellectual development of infants. Data analysis indicated that a successful intervention program can be designed to affect favorably a wide range of functional areas in the behavioral development of infants. (Author/CK)

Journal Announcement: RIEAUG72

A study of the advantages and disadvantages of various types of infant care provided by someone other than the mother is presented. Problems listed as occurring in intervention programs include: maternal-child attachment, individual differences among infants, planning problems, and emotional-social development. Types of intervention studied are: the center model (outside-the-home center), the tutorial model (within a home setting), the home-visit model, and the parent-group model (teaching of parents). Role of the caregiver is conceptualized as follows: (1) home visitor - a guest having a position of low power in the home, and (2) teacher - one who aids the child in achieving a sense of competence. The point is made that evaluation of caregiving programs for low-income children is difficult and often confounded by complex motivational factors, such as a mother's attitudes toward intervention. The importance of dissemination of infant programs is stressed. (CK)

Journal Announcement: RIEJUN72

The Mother-Child Home Program was planned as a home-based, two-year cognitive intervention method. Women with varied incomes and education, both volunteer and paid, made 30-minute home visits twice weekly to help mothers become cognitive trainers of their own toddlers (starting at age two). Mother-child verbal interaction was stimulated with gifts of

attractive, self-motivating materials, chosen because of their suitability to the child's developmental level, and their potential for verbal interaction when used in play between mother and child. Interveners, called Toy Demonstrators, guided mothers to use the Verbal Interaction Stimulus Materials (VISM) in an atmosphere that was spontaneous, relaxed, and most importantly, nondidactic. Most low income mothers seemed to welcome any kind of cognitive intervention designed to help their children do well in school. Other mothers were resistant, yet appeared cooperative because it was difficult for them to make verbal refusals. A brief appendix highlights several Toy Demonstrators' descriptions of successful mother-involvement techniques. (DB)

Journal Announcement: RIEAPR72

This document reports on a series of business-industry-union consultations initiated and coordinated by the Women's Bureau of the U.S. Department of Labor. Meetings were scheduled in five selected cities. These forums were structured around three main features: (1) a keynote slide-talk, which allowed for speed and effective presentation of a maximum amount of background information concerning women's employment, (2) a panel of government representatives, who described Federal, State, and local (if any) laws and programs prohibiting sex discrimination in employment and wage payments, and (3) a panel of employers and union representatives, who discussed affirmative action plans and programs for improving women's job status. Approximately 770 participants were at the five conferences: 200 each in Boston and Kansas City, 150 in Detroit, 140 in Atlanta, and 80 in Boise. Industry representation ranged from two-fifths to four-fifths of the conferees in all the cities except Detroit, where it constituted about one-third of the group. Men constituted the majority of participants in three cities. These conferences were set up as demonstration projects. (CK)

Journal Announcement: RIEFEB69

The New York State Guidance Center for Women is sponsored by Rockland Community College under contract with the State University of New York, and located just east of Suffern, New York. During its first year, the Center counseled 483 women and an additional 800 were served through its information services--library, career interest meetings, radio career information series (13 30-minute broadcasts), and a Careers for Women Workshop series. About 80 percent of the Center's clients come from Rockland County. The professional staff includes a director, associate director, librarian, and six part-time counselors. The Center's counseling records indicate that while women considering employment or further education

need guidance and information and are willing to seek it, husband's attitudes, inflexible work and school schedules, and fears of impersonal work situations and inability to compete with younger students deter them from returning to work or school. (Document includes seven tables, lists of Advisory Committee members, tests available at the Center, and supplementary reports of counseling and testing services, information and special services, costs and staffing, and community, state, national, and international relationships.) (aj)

Journal Announcement: RIEFEB69

The New York State Guidance Center for Women in Suffern, New York provides individual counseling and vocational and educational information. During the months covered by this report, the Center cosponsored a conference on continuing education for women in the two-year colleges of the State University, began a second series of career information radio programs, and planned a seven-session Career Opportunities Workshop. Twenty-eight percent of the clients receiving counseling and testing during this period were from disadvantaged groups, compared with five percent previously. A pilot evaluation of the individual counseling done at the Center was undertaken to help the staff prepare for larger scale evaluation to be carried on in July 1968. Projected research includes comparisons of the usefulness of the Strong Vocational Interest Blanks for women and men, and studies of personal and demographic characteristics which may distinguish clients who use counseling and testing effectively from those who do not, and of selected psychological and social processes related to the difficulties women experience in enlarging their activities beyond the home. The Center has applied to the American Board of Counseling Services for accreditation.

# GENERAL INFORMATION

## 1. PRICE LIST

The prices set forth herein may be changed without notice, however, any price change will be subject to the approval of the National Institute of Education Contracting Officer

## 2. PAYMENT

The prices set forth herein do not include any sales, use, excise, or similar taxes which may apply to the sale of microfiche or hard copy to the Customer. The cost of such taxes, if any, shall be borne by the Customer

Payment shall be made net thirty (30) days from date of invoice. Payment shall be without expense to CMIC.

## 3. REPRODUCTION

Express permission to reproduce a copyrighted document provided hereunder must be obtained in writing from the copyright holder noted on the title page of such copyrighted document.

## 4. CONTINGENCIES

CMIC shall not be liable to Customer or any other person for any failure or delay in the performance of any obligation if such failure or delay (a) is due to events beyond the control of CMIC including, but not limited to, fire, storm, flood, earthquake, explosion, accident, acts of the public enemy, strikes, lockouts, labor disputes, labor shortage, work stoppages, transportation embargoes or delays, failure or shortage of materials, supplies or machinery, acts of God, or acts or regulations or priorities of the federal, state, or local governments; (b) is due to failures of performance of subcontractors beyond CMIC's control and without negligence on the part of CMIC; or (c) is due to erroneous or incomplete information furnished by Customer

## 5. LIABILITY

CMIC's liability, if any, arising hereunder shall not exceed restitution of charges.

In no event shall CMIC be liable for special, consequential, or liquidated damages arising from the provision of services hereunder.

## 6. WARRANTY

CMIC MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO ANY MATTER WHATSOEVER, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

## 7. QUALITY

CMIC will replace products returned because of reproduction defects or incompleteness. The quality of the input document is not the responsibility of CMIC. Best available copy will be supplied.

## 8. CHANGES

No waiver, alteration, or modification of any of the provisions hereof shall be binding unless in writing and signed by an officer of CMIC.

## 9. DEFAULT AND WAIVER

a. If Customer fails with respect to this or any other agreement with CMIC to pay any invoice when due or to accept any shipment as ordered, CMIC may without prejudice to other remedies defer any further shipments until the default is corrected, or cancel this Purchase Order.

b. No course of conduct nor any delay of CMIC in exercising any right hereunder shall waive any rights of CMIC or modify this Agreement.

## 10. GOVERNING LAW

This Agreement shall be construed to be between merchants. Any question concerning its validity, construction, or performance shall be governed by the laws of the State of New York.

## 11. DEPOSIT ACCOUNTS

Customers who have a continuing need for ERIC documents may open a Deposit account by depositing a minimum of \$200.00. Once a deposit account is opened, ERIC documents will be sent upon request, and the account charged for the actual cost and postage. A monthly statement of the account will be furnished.

## 12. STANDING ORDER ACCOUNTS

Customers who desire to receive microfiche copies of all ERIC reports announced in each issue of Resources in Education may do so by depositing \$2000.00 or submitting an executed purchase order. The cost of each issue and postage will be charged against the account. A monthly statement of the account will be furnished.

## 13. PAPER COPY (PC)

A paper copy (PC) is xerographic reproduction, on paper, of the original document. Each paper copy has a Vellum Bristol cover to identify and protect the document.

## 14. FOREIGN POSTAGE

Postage for all countries other than the United States is based on the international Postal Rates in effect at the time the order is shipped. To determine postage allow 75 microfiche or 75 (PC) pages per pound. Customers must specify the exact classification of mail desired, and include the postage for that classification with their order. Payment must be in United States funds.

## OTHER ERIC COLLECTIONS AVAILABLE FROM EDRS

### STANDING ORDERS

Subscription orders of microfiche copies of all ERIC reports announced in each issue of Resources in Education average \$160.00 per month.
