ABSTRACT

This report presents revenue and expenditure data for U.S. higher education institutions in the 50 states and the District of Columbia for fiscal year 1996 (FY 1996). Higher education institutions are defined as postsecondary institutions, granting associate or higher degrees, eligible for Title IV federal financial aid programs. Data is based on the Integrated Postsecondary Education Data System Finance survey, with revenue data organized by source of revenue and expenditure data by purpose of expenditure. There are separate schedules for salary and scholarship/grant data. A summary of findings includes the following: (1) The largest source of public institution revenue in FY96 was state appropriations; (2) expenditures for public and private nonprofit institutions are related to the level of institution, with two-year institutions allocating a higher percentage of expenditures to instruction than their four-year counterparts; (3) salaries and wages comprised between 47 and 62 percent of expenditures, with two-year public institutions at the high end and four-year private for-profit institutions at the low end; and (5) with some exceptions, public four-year institutions with relatively high expenditures on scholarships and grants tended to be in states where public institutions received a high percentage of total revenue from tuition and fees. Following the data tables are a glossary and a description of the survey methodology. (CH)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

Introduction

Since 1987 the Integrated Postsecondary Education Data System (IPEDS) Finance survey has collected information on the current funds revenues and expenditures of higher education institutions. Revenue data are collected by source of revenue, such as tuition and fees and state appropriations, while expenditure data are collected by purpose of expenditure, including instruction, research and public service. Both revenues and expenditures are separable into two classes: education and general (E&G) and sales and services (i.e. auxiliary enterprises, hospitals, and independent operations). E&G revenues and expenditures are those that are intended for operating the educational, research and public service missions¹ of the institution while entities listed under sales and services are either ancillary to the mission of the institution or are essentially self-supporting operations such as bookstores, dormitories, and hospitals. That is, the revenues of these entities support their operating expenditures. As part of current funds expenditures, total expenditures for salaries are also collected in each expenditure category that has associated personnel. Additionally, expenditures on scholarships and grants are collected by source in a separate schedule of the IPEDS Finance survey.

This report presents revenue and expenditure data for the nation's higher education institutions for fiscal year 1996 (FY96). This report includes information only on higher education institutions in the 50 states and the District of Columbia. In fiscal year 1996 (FY96), higher education institutions were defined as postsecondary institutions that were eligible for Title IV² federal financial aid programs and that granted an associate's or higher degree. In fiscal year 1995 higher education institutions were defined as those that were accredited at the college level by an agency recognized by the Secretary, U.S. Department of Education. This change in definition came about because the U.S. Department of Education no longer distinguishes higher education institutions based on their accreditation status. The effects of this change in definition on financial statistics can be examined in tables 14-17. The effects of this change on the number of higher education institutions, particularly for-profit institutions, may be seen in table A3.

¹Education and general revenues include tuition and fees, federal, state and local appropriations, federal, state and local grants and contracts, private gifts, grants and contracts, endowment income, and sales and services of educational activities. Education and general expenditures include expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and mandatory transfers from current funds.

²For an institution to be eligible to participate in Title IV financial aid programs it must offer a program of at least 300 clock hours in length, have accreditation recognized by the U.S. Department of Education, have been in business for at least 2 years, and have signed a participation agreement with the Department.

As table 14 indicates, the change in total current fund revenues between FY95 and FY96 for all higher education institutions in the nation was 4.68 percent. Of this percentage change, 0.30 percent was due to the change in universe. That is, if the universe definition had remained constant between FY95 and FY96, the change in current fund revenues would have been 4.38 percent. For current fund expenditures, the total change was 4.10 percent of which 0.27 percent was due to the change in universe definition. While the change in universe definition was negligible at the national level, it had a fairly large effect for some states, and for some institutional sectors in some states. For example, almost half the change in current fund revenues for all institutions in Arizona was due to the change in universe definition. In South Dakota more than three-fourths of the change in current fund revenues was due to the change in universe definition. In Louisiana, all the observed increase in current fund revenues of all its institutions was due to the change in the universe (table 14).

The change in universe definition did not seem to affect changes in the revenues or expenditures of public 4-year institutions in any state except for the District of Columbia (table 15). However, it did have an effect on changes in the aggregate financial statistics of both public 2-year institutions (table 16) and private, non-profit 4-year institutions (table 17) particularly at the state level. Although nationally, the increases in current fund revenues and expenditures of over 5 percent observed in the public 2-year sector would have been about 4.5 percent had the universe not changed, the effect of the change was quite profound in several states such as Arkansas, Georgia, Louisiana, and South Dakota (table 16). The change in universe also had a significant effect on the aggregate financial statistics of private non-profit 4-year institutions in such states as Alaska, Colorado, Illinois, Mississippi, and Oregon as may be seen in table 17.

Summary Findings

Current Funds Revenues

Tables 1-8 show the distribution of revenues and expenditures in FY96 by institutional level and control. In FY96 the largest source of revenues of public institutions was state appropriations, accounting for about one-third of their total operating revenues (table 3). Tuition and fees, the second largest source of E & G revenues of public institutions, accounted for almost 19 percent of total current funds revenues (table 3). The relative shares of revenues accounted for by these two major sources of income tend to confirm public institutions' reliance on state funding. Additionally, as table 3 indicates, public 2-year institutions rely heavily on local funding as well as state funding, with local appropriations accounting for over 18 percent of their operating revenues.

Private institutions, in contrast, are not, for the most part, state supported, and have a strong reliance on revenues from students. This is evident from tables 5 and 7. Over 40 percent of the operating revenues of private non-profit institutions are from tuition and fees and, more than half their E & G revenues are from tuition and fees (derived from table 5). Among private non-profit 2-year institutions this reliance on tuition and fees is even greater, accounting for over 60% of

their operating revenues. It is greater still among private for-profit institutions, accounting for 84 percent of the operating revenues of all for-profit institutions and almost 90 percent of the operating revenues of 4-year for-profit institutions (table 7). While income from the federal government made up over 14 percent of private non-profit 4-year institutions' revenues, most of this (11.6 percent) was from restricted grants and contracts and from independent operations. Private gifts, grants and contracts were another significant source of income for private non-profit institutions comprising over 9 percent of their operating revenues. In private non-profit 2-year institutions this share rose to almost 12 percent and was in the form of unrestricted revenues. Surprisingly, revenues from state grants and contract accounted for about 4 percent of the operating revenues of private non-profit 2-year institutions and revenues from state and local governments comprised 7 percent of the revenues of private for-profit 2-year institutions. This might reflect state student financial aid, since these are the revenue categories in which that source of income would be reported.

Current Funds Expenditures

While sources of revenue seem to be related to the control of the institution, expenditures seem to be more related to the level of the institution at least among public and private non-profit institutions. For example, 2-year public and private non-profit institutions allocated a higher percentage of their total current funds expenditures to instruction in fiscal year 1996 than did their 4-year counterparts. Public 2-year institutions spent over 45 percent of their total current funds expenditures on instruction compared to the slightly under 30 percent spent by 4-year publics (table 4). Two-year private non-profit institutions spent almost one-third of their operating expenditures on instruction compared to the almost 27 percent spent by 4-year non-profit institutions (table 6). Similarly, public and private non-profit 2-year institutions allocated a significantly higher percentages of their operating expenditures to student services, institutional support, and operations and maintenance of plant than did 4-year public and private non-profit institutions. Two-year public and private non-profit institutions spent over 10 percent and 12 percent, respectively, of their total current funds expenditures on student services compared to expenditures of about 4 percent in public and 5 percent in private non-profit 4-year institutions; and, they spent about 15 percent and 18 percent on institutional support, compared to the 8 percent and 10 percent spent by their 4-year counterparts (tables 4 and 6). The one expenditure category in which control seemed to be a major factor was expenditures on scholarships and fellowships. Public institutions, regardless of level, spent only about 4 percent of their total current funds expenditures on scholarships and fellowships, while private non-profit institutions spent about 11 percent on activities in this category.

Private for-profit 2- and 4-year institutions spent about the same percentage of their total expenditures on instruction, 27 percent and 29 percent, respectively (table 8). However, private for-profit 2-year institutions spent a much higher percentage of their total expenditures on scholarships and grants than did private for-profit 4-year institutions, 12 percent and 7 percent, respectively.

Salary Expenditures

It is interesting to note that as different as the expenditure patterns are between 4- and 2-year institutions, the percentage of expenditures that go to salaries and wages are within a fairly narrow range for a given expenditure function (table 19). Overall, salaries and wages comprised between 47 percent and 62 percent of total current funds expenditures with 2-year publics at the high end and 4-year private for-profits at the low end. Of the major expenditure categories, salaries and wages comprised from 65 percent to 73 percent of instructional expenditures, from 49 percent to 63 percent of student services expenditures, and from 35 percent to 57 percent of expenditures on institutional support.

Revenues by State

Examining differences in the relative importance of sources of revenues and comparing the allocation of expenditures by state permit additional insights into the support for, and priorities of, higher education particularly in the public sector³. For example, there is substantial variation in the percentage of total revenues from tuition and fees in 4- and 2-year public institutions across states (tables 10 and 11). In 4-year public institutions in Vermont, for example, 42.9 percent of their total revenues came from tuition and fees (table 10). This percentage is higher than the average percentage of private non-profit 4-year institutions' revenues from tuition and fees (41.4 percent, table 12). On the other hand, in New Mexico, 4-year public institutions received less than 10 percent of their total revenues from tuition and fees and in California, 2-year institutions received less than 10 percent of the total revenues from tuition and fees. Additionally, the data in tables 10 and 11 seem to indicate that public institutions in states that have a relatively high level of state and local funding tended to have a lower percentage of revenues from tuition and fees, although there are some clear exceptions. Public 4-year institutions in Arizona, Maine, Massachusetts, New York, South Dakota and West Virginia had a higher than average share of revenues from both tuition and fees and from state and local sources. Public 4-year institutions in Alabama, California, Iowa, Minnesota, Nebraska, New Mexico, South Carolina, Utah, and Washington all had lower than average shares of revenues from tuition and fees and from state and local sources as well. Among public 2-year institutions, only Arizona had a higher than average share of revenues from tuition and fees and from state and local appropriations. Public 2-year institutions in Idaho, Illinois, Montana, Oklahoma, Oregon, and Texas had lower than average shares of revenues from tuition and fees and from state and local sources.

³ Interstate comparisons must be treated with caution, however. In some states, for example, certain costs of public institutions (e.g. faculty and retirement costs) are paid through state sources rather than through institutional expenditures, while revenues from tuition and fees may go into a general fund rather than to the institution.

While it seems reasonable that the distribution of revenues by source in public institutions would vary by state, less anticipated is that the distribution of revenues by source in private non-profit 4-year institutions would also vary by state. However, as table 12 indicates, this appears to be the case. The percentage of revenues from tuition and fees in private non-profit 4-year institutions varied from a low of about 21 percent in Utah to a high of over 78 percent in Arizona. In general, the percentage of revenues from state and local sources was low and there was little variability among private non-profit 4-year institutions, suggesting little state or local support for these institutions. In Florida, New Jersey, New York, and Texas private non-profit 4-year institutions received 5 percent or more of their total revenues from state and local sources compared to a national average of 2.6 percent.

When looking at private for-profit institutions by state, one of the most interesting aspects is the large variation in the size of this institutional sector. In many states there are very few private for-profit institutions and as a result their aggregated revenues and expenditures are very small (table 13). Among private for-profit institutions, the percentage of revenues from tuition and fees ranged from 71 percent in Louisiana to 100 percent in Maryland and North Dakota (table 13). On average, private for-profit institutions received about 5.1 percent of their total operating revenues from state and local sources, but in Connecticut, Minnesota, New Jersey, New York, and Pennsylvania they received about 10 percent or higher of their total revenues from state and local sources. In fact, private for-profit institutions in New York received over 20 percent of the total revenues from state and local sources.

Expenditures by State

The distribution of expenditures by purpose in public 4-year institutions does not appear to be a function of their state location. The percentage of total expenditures public 4-year institutions allocated to instruction ranged from a low of almost 20 percent in New Mexico to a high of 41 percent in Delaware (table 10). However, expenditures on instruction in public 4-year institutions were within plus or minus 5 percent of the national average of 29.5 percent in 41 states. Expenditures on scholarship and fellowships in public 4-year institutions accounted for between 0.9 and 8.9 percent of total expenditures. In 27 states, expenditures on scholarships and fellowships within plus or minus 1 percent of the national average of 4.4 percent but they were within 2 percent of the national average in 42 states. With some exceptions, public 4-year institutions with a relatively high share of expenditures on scholarships and grants tended to be in states in which public institutions received a high percentage of their total revenues from tuition and fees.

The percentage of total expenditures that public 2-year institutions allocated to instruction seems to be more variable among states than were the expenditures of public 4-year institutions for this purpose (table 11). This percentage ranged from a low of 24 percent in Vermont to a high of 61 percent in Wisconsin. Even in this sector, however, expenditures on instruction in public 2-year institutions were within 5 percent of the national average of 45.2 percent in 31 states. As with public 4-year institutions, the percentage of total expenditures for scholarships and grants of

public 2-year institutions did not exceed 8 percent except in the states of New York and Vermont⁴.

Although the range of expenditures on instruction among 4-year private non-profit institutions in the states ranged from a low of about 20 percent in Alaska to a high of 43 percent in Nebraska (table 12), private non-profit 4-year institutions allocated between 25 percent and 30 percent of their total expenditures to instruction in 25 states. The range of allocations to scholarships and fellowships for private non-profit 4-year institutions was fairly broad with a low of about 4 percent in Utah to a high of over 30 percent in North Dakota. Additionally, 4-year private non-profit institutions in 22 states allocated 15 percent or more of their total expenditures to scholarships and fellowships. This compares to a national average for private non-profit 4-year institutions of 11.5 percent.

Across the nation, private for-profit institutions allocated about 28 percent of their total expenditures to instruction and about 10 percent to scholarships and fellowships (table 13). In examining these expenditures from state to state, there is a wide range in the percentage of total current funds expenditures allocated to instruction. For example, private for-profit institutions in Wyoming allocate about 16 percent of their total current funds expenditures to instruction while those in Nebraska and Maryland allocate over 50 percent to instruction. Again, however, private for-profit institutions in 29 states allocated within 5 percent of the national average of 26.5 percent (between 22.6 percent and 32.6 percent) of their total expenditures to instruction. Significant variation in the percentage of total expenditures allocated to scholarships and fellowships in private for-profit institutions is fairly evident from table 13. In only 6 states did for-profit institutions allocate within 2 percent of the national average of 9.6 percent for scholarships and fellowships. As might be expected, expenditures on scholarships and fellowships seem to be related to the level of revenues from state and local sources with some exceptions such as in Georgia, Louisiana, South Dakota, and Tennessee.

⁴ Vermont has only one degree-granting public 2-year institution.

Acknowledgments

The authors appreciate the reviewers of this report: Vance Grant, National Library of Education; Carol Fuller, National Association of Independent Colleges and Universities; John Minter, John Minter Associates; Thomas Snyder, Frank Johnson, Michael Cohen, and Marilyn McMillen, National Center for Education Statistics. The authors also appreciate the technical assistance provided by Martha Hollins.

Creation of the final database used to generate the tables in this report was accomplished through an interagency agreement with the U.S. Department of Commerce, Bureau of the Census. Karen Peters of the Governments Division of the Census, along with other members of the Census staff, and a network of state coordinators shared responsibility for data collection and processing, nonresponse followup, and resolution of data inconsistencies. While their names are too numerous to mention here, their time, effort, and commitment toward making this an accurate database are gratefully acknowledged.

The authors of this report are indebted to all individuals who completed the survey forms and thus provided the information that made this report possible.

— Percent change within +/- 0.005 percent.

1/ The portion of the total percent change that can be attributed to the change from a higher education universe as defined by accreditation status to a higher education universe as defined by degree-granting status and Title IV eligibility.

NOTE: Pell Grants are excluded from revenues and expenditures.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), 1994-95 and 1995-96 "Finance" surveys.

Table 15.— Total current funds revenues and expenditures of accredited, public 4-year institutions for fiscal year 1995 and Title IV eligible, degree-granting, public 4-year institutions for fiscal year 1996 in current dollars, by state

State	Revenues in thousands				Expenditures in thousands

1/ The portion of the total percent change that can be attributed to the change from a higher education universe as defined by accreditation status to a higher education universe as defined by degree-granting status and Title IV eligibility.

2/ District of Columbia does not have any public 2-year institutions.

NOTE: Pell Grants are excluded from revenues and expenditures.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), 1994-95 and 1995-96 "Finance" surveys.

Table 17.— Total current funds revenues and expenditures of accredited, private non-profit 4-year institutions for fiscal year 1995 and Title IV eligible, degree-granting, private nonprofit 4-year institutions for fiscal year 1996 in current dollars, by state

Glossary⁵

Accredited institutions. An institution that is accredited at the college level by an agency recognized by the Secretary, U.S. Department of Education. This definition was used to identify higher education institutions prior to fiscal year 1995-96.

Academic support expenditures. Expenditures for the support services that are an integral part of the institution's primary mission of instruction, research, or public service. Includes expenditures for libraries, museums, galleries, audiovisual services, academic computing support, ancillary support, academic administration, personnel development, and course and curriculum development. Also includes expenditures for veterinary and dental clinics if their primary purpose is to support the institutional program. [Note: This definition is an operational definition used in all editions of State Higher Education Profiles (SHEP) and may not be consistent with the terms used in the 1987 IPEDS glossary.]

Auxiliary enterprise expenditures. Costs incurred for goods and services used to operate those essentially self-supporting operations of the institution that exist to furnish a service to students, faculty or staff and that charge a fee that is related to the cost of the service, although not necessarily equal to the cost of the service.

Auxiliary enterprise revenues. Revenues generated by or collected from the auxiliary enterprise operations of the institution that exist to furnish a service to students, faculty or staff and that charge a fee that is related to the cost of the service, although not necessarily equal to the cost of the service.

Control of institution. Includes public, private non-profit, and private for-profit institutions.

Current funds expenditures. The costs incurred for goods and services used in the conduct of the institution's operations. They include the acquisition cost of capital assets, such as equipment and library books, to the extent current funds are budgeted for and used by operating departments for such purposes.

Current funds revenues. Includes all unrestricted revenues earned during the reporting period as well as restricted revenues to the extent that such funds were expended for current operating purposes. They do not include restricted current funds received but not expended because these revenues have not been earned.

⁵SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System Glossary 1987.

Degree-granting institution. An institution that offers an associate's, bachelor's, master's, doctor's, or first-professional degree.

Educational and general (E&G) expenditures. Educational and general expenditures include current fund expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and educational and general mandatory transfers. Educational and general expenditures exclude expenditures for auxiliary enterprises, hospitals, and independent operations. Pell Grants are excluded.

Educational and general (E&G) revenues. Consists of current fund revenues from federal, state, and local appropriations; tuition income; government grants and contracts; private gifts, grants, and endowment income; sales and services of educational activities; and other revenues. Excluded from E&G revenues are income from sales and services of auxiliary enterprises, sales and services of hospitals, independent operations, and revenues for capital purposes. E&G funds include only those funds intended for operating purposes. Pell Grants are excluded.

Endowment income (revenues). Includes the unrestricted income of endowment and similar funds; restricted income of endowment and similar funds to the extent expended for current operating purposes; and income from funds held in trust by others under irrevocable trusts. Does not include capital gains or losses. Such gains when spent for current operations are treated as transfers, not revenues.

Federal appropriations (revenues). Includes dollars appropriated or made available by the federal government to public or private degree-granting institutions for current operating expenses and not for specific projects or programs. An example is federal land-grant appropriations. Federal appropriations received through state channels are included in the total for federal appropriations. Federal grants and contracts are excluded.

Federal grants and contracts (revenues). Includes revenues from federal agencies that are for specific research projects or other types of programs such as administrative allowances for student aid. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered. Pell Grants awarded to students are excluded, although the administration allowance for Pell Grants is included.

Four-year-and-above institution. Any institution whose highest degree awarded in the fiscal year for which data are being reported was a baccalaureate degree or higher.

Institutional support (expenditures). Expenditures for the day-to-day operational support of the institution. Includes expenditures for general administrative services, executive direction and planning, legal and fiscal operations, and public relations/development. Excludes expenditures for physical plant operations.

Instruction (expenditures). Expenditures of the colleges, schools, departments, and other instructional divisions of the institution and expenditures for departmental research and public service that are not separately budgeted. Includes expenditures for credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (e.g., academic deans). This category also includes general academic instruction, occupational and vocational instruction, special session instruction, community education, preparatory and adult basic education, and remedial and tutorial instruction conducted by the teaching faculty for the institution's students.

Level of institution. A classification of an institution based on the highest degree certificate or diploma awarded during the fiscal year for which data are being reported.

Libraries (expenditures). Expenditures for all print material, microfilm, microfiche, audiovisual materials such as records and films, and computer software. Excludes expenditures for hardware of any kind (e.g., computer terminals, microfiche readers, record players, and projectors).

Operation and maintenance of plant (expenditures). Expenditures for operations established to provide service and maintenance related to campus grounds and facilities used for educational and general purposes.

Other sources (revenues). Includes sales and services of educational activities and revenues derived from the sales of goods or services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products. Also includes all items or revenues not covered elsewhere. Examples are interest income and gains (net of losses) from investments of unrestricted current funds. Includes revenues resulting from the sales and services of internal service departments to persons or agencies external to the institution (e.g., the sale of computer time).

Pell Grant expenditures. Expenditures for scholarships and fellowships funded by Pell Grants. Pell Grants are a type of federal student financial aid that provides eligible undergraduate students with need-based grants to help them defray the cost of postsecondary education. (Public Law 92-318, as amended, Public Law 94-482, Education Amendments of 1972, Title IV; 20 USC 107a-1976.)

Private gifts, grants, and contracts (revenues). Revenues from private donors for which no legal consideration is involved and from private contracts for specific goods and services provided to the funder as stipulation for receipt of the funds. Includes only those gifts, grants, and contracts that are directly related to instruction, research, public service, or other institutional purposes. Includes monies received as a result of gifts, grants, or contracts from a foreign government. Also includes the estimated dollar amount of contributed services.

Private for-profit institution. A postsecondary educational institution that is under private control and whose profits derived from revenues, are subject to taxation.

Private non-profit institution. A postsecondary educational institution that is controlled by an independent governing board and incorporated under Section 501(c)(3) of the Internal Revenue Code.

Private institution. Includes both private for-profit and private non-profit institutions, unless otherwise noted.

Public institution. Includes all postsecondary educational institutions under the control of—or affiliated with—federal, state, local, or state-related agencies.

Public service (expenditures). Funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services beneficial to groups external to the institution. Examples are seminars and projects provided to particular sectors of the community, and expenditures for community services and cooperative extension services.

Research (expenditures). Funds expended for activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution.

Restricted educational and general (E&G) revenues. Those funds available for financing operations but which are limited by donors and other external agencies to specific purposes, programs, departments, or schools. Externally imposed restrictions are to be contrasted with internal designations imposed by the governing board on unrestricted funds.

Scholarships and fellowships (expenditures). Expenditures given in the form of outright grants and trainee stipends to individuals enrolled in formal course work, either for credit or not. Excludes Pell Grants. Includes aid to students in the form of tuition or fee remissions. Excludes those remissions that are granted because of faculty or staff status. Also excludes College work-study program expenses.

Institutional. Expenditures for scholarships and fellowships from revenues generated by the institution such as tuition and fees revenues, endowment income, sales and services of educational activities, and other sources.

Other federal. Expenditures for scholarships and fellowships, excluding Pell Grants, received from federal government agencies.

Private. Expenditures for scholarships and fellowships received from private sources such as businesses, foundations, individuals, and foreign governments.

BEST COPY AVAILABLE

State and local. Expenditures for scholarships and fellowships provided by state and local governments.

State and local appropriations (revenues). Dollars appropriated or made available by state and local governments to public or private postsecondary institutions for current operating expenses and not for specific projects or programs. Grants and contracts are excluded. Charges for room, board, and other services rendered by auxiliary enterprises are not included here.

State and local grants and contracts (revenues). Includes revenues from state and local government agencies, which are for specific research projects or other types of programs such as student aid. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered.

Student services (expenditures). Funds expended for admissions, registrar activities, and activities whose primary purpose is to contribute to students' emotional and physical well-being and to their intellectual, cultural, and social development outside the context of the formal instructional program. Examples are career guidance, counseling, financial aid administration, and student health services (except when operated as a self-supporting auxiliary enterprise).

Tuition and fees (revenues). Charges assessed against students for educational purposes. Includes tuition and fee remissions or exemptions even though there is no intention of collecting from the student. Includes tuition and fees that are remitted to the state as an offset to the state appropriation. Excludes charges for room, board, and other services rendered by auxiliary enterprises.

Two-year institution. Any institution whose highest degree awarded during the fiscal year for which data are being reported was an associate's degree, or a certificate, or diploma in a program of at least 2 but less than 4 years in length.

Survey Methodology

Introduction

The Finance survey is conducted annually as part of the National Center for Education Statistics' (NCES) Integrated Postsecondary Education Data System (IPEDS). IPEDS collects finance data in order to help fulfill the NCES mandate to report on the financial condition of postsecondary education in the nation. Finance data are also important to monitor changes in postsecondary education finance and to promote research involving institutional financial resources and expenditures.

Financial data collected in this survey include current funds revenues by source, current funds expenditures by function, utilities expenditures, scholarship and fellowship expenditures by source of funds, library acquisition expenditures, indebtedness on physical plant, details of endowment assets, selected fund balances, hospital revenues, and physical plant assets. These data are used for peer and aggregate analysis.

Finance data are also needed for reporting and projecting the revenues and expenditures of a national activity representing a significant component of the GNP.

Overview

The fiscal year 1996 data on financial characteristics of postsecondary institutions are from the Finance and Consolidated surveys that are conducted annually by NCES. These surveys are part of (IPEDS). The financial data in this file represent 6,960 postsecondary institutions and system offices, of which, 6,615 are eligible to participate in Title IV federal financial aid programs in the United States, and the outlying areas. There were 345 institutions that had self-reported eligibility and were found to be ineligible based on the Postsecondary Education Participation System (PEPS) file of March 1997.

Universe of Institutions, Mailout and Followup Procedures, and Response Rates

A major subset of all postsecondary institutions are those institutions that are eligible to participate in Title IV aid. It is this group of institutions that annually receive the finance survey. In past IPEDS surveys, eligible institutions were self-identified and included those institutions accredited at the college level by an agency or association recognized by the Secretary, U.S. Department of Education. [Any other postsecondary institution that has at least one program of 300 or more clock hours (or 8 credits) and was established for at least two years was also included in the subset of eligible institutions. The latter group was based on self-reported responses to items on the Institutional Characteristics survey].

Beginning in 1996, the subset of eligible institutions was validated by matching the IPEDS universe with the PEPS file, which contains the “true” eligibility status of postsecondary institutions. This file is maintained by the Office of Postsecondary Education (OPE). OPE grants eligibility to institutions to participate in Title IV federal financial programs. Using the PEPS file as the source for determining eligibility, 7,120 institutions and system offices were mailed Finance or Consolidated survey forms.

The Finance (F) survey was mailed to 3,908 eligible postsecondary institutions that were either accredited at the collegiate level in the previous academic year or are 4-year eligible institutions that offer a bachelor's, master's, doctor's or first-professional degree. Most 4-year, for-profit institutions were sent a complete (F) survey. All 96 system offices were also mailed the (F) survey regardless of accreditation status or type of degree offered. The Consolidated (CN) survey, that collects a limited amount of financial data, was mailed to the remaining 3,116 institutions, primarily for-profit 2-year institutions, that were Title IV eligible at the time the forms were mailed.

Survey forms were mailed in July 1996. The survey results were collected from November 1996 through June 1997. Followup for survey nonresponse began in December 1996 by telephone and letter. Nonrespondents to the mail survey were asked to provide total current funds revenues and expenditures and revenues and expenditures by major category (e.g., tuition and fees, instruction, scholarships and fellowships). During this time period institutions determined to be out-of-scope were deleted from the universe. These deletions resulted from formal notification by IPEDS state coordinators, the Department of Education eligibility notices, and from followup telephone calls. Included in the deletions were: (1) duplicates of other institutions on the file; (2) institutions that closed or had merged with another institution, and thus were no longer a legitimate institution or branch; (3) institutions that no longer offered postsecondary programs; or (4) schools that did not conform to the IPEDS definition of a postsecondary institution or branch. At the conclusion of this process 6,960 institutions and system offices remained as the 1996 finance universe. The finance universe is also adjusted to reflect institutions that changed from one sector to another subsequent to survey mailout.

Table A1 shows the number of postsecondary institutions in the 50 states, the District of Columbia, and the outlying areas that were mailed a finance survey (or the consolidated form); the final in-scope universe receiving either survey form; the number of in-scope institutions that responded and response rates. The unit response rates were calculated as the ratio of the number of institutions responding to the survey divided by the number of in-scope institutions in the final universe. The overall response rate for the 6,960 institutions in the 1996 postsecondary finance universe was 90.5 percent.

Included in the calculation of the 90.5 percent response rate are 30 private non-profit institutions and one for-profit institution that represent a special circumstance. These institutions are among roughly 500 institutions which participated in a pilot study of a new private, non-profit form that was designed to collect financial information which is consistent with changes in accounting and financial reporting standards issued by the Financial Accounting Standards Board

(FASB). Institutions were asked to fill out both the new pilot test form and the finance (F1) form. However, 31 of these 500 institutions were only able to fill out the new pilot test form (having changed their accounting system to accommodate the new accounting model). Since they filled out the new form, they are counted as respondents. However, since they were unable to fill out the old (F1) form, their finance data based on the F1 form were imputed.

Table A1.—Number of postsecondary institutions in the 1996 Finance survey and survey response rates, by survey form and sector of institution: 50 states, District of Columbia and the outlying areas

Survey form and Sector of institution	Mailed	Final universe	Number responded	Response rate
All postsecondary	7,120	6,960	6,300	90.5
Finance form	4,004	3,944	3,554	90.1
Consolidated form	3,116	3,016	2,746	91.0
Central office	96	70	69	98.6
4-year	2,427	2,436	2,199	90.3
Public	630	632	617	97.6
Non-profit	1,656	1,654	1,449	87.6
For-profit	141	150	133	88.7
2-year	2,248	2,498	2,277	91.2
Public	1,242	1,244	1,169	94.0
Non-profit	425	412	360	87.4
For-profit	581	842	748	88.8
Less-than-2-year	2,349	1,956	1,755	89.7
Public	225	202	197	97.5
Non-profit	99	90	86	95.6
For-profit	2,025	1,664	1,472	88.5

NOTE: Survey forms were mailed to all 96 central offices. Of the 96 central offices, 69 returned survey forms. Of the remaining 27 central offices that did not return survey forms, 26 were omitted from the file. It was assumed that they either had no finance data to report, or their finance data had been included with their associated campuses. Ventura County Community College System office was imputed, because they and their associated campuses did not respond to the survey and in the previous year the system office reported data for their campuses. The sector of an institution at the time of mailout may differ from its sector in the final universe because an institution's sector may change due either to a shift in the highest level of offering, or to improper classification by sector in the prior year.

Change in Universe Definition

In 1996, the Education Department discontinued its tradition of distinguishing between institutions that are accredited at the college level from other Title IV eligible postsecondary institutions. Therefore, it is not possible for NCES to maintain an updated subset of institutions accredited at the college level, NCES' traditional definition of higher education institutions.

Therefore, in the 1996 and subsequent IPEDS files, institutions are identified as Title IV eligible and either (1) degree-granting – those that offer either an associate's, bachelor's, master's doctor's or first-professional degree; or (2) non-degree-granting (certificate only) – those institutions that offer only certificates at any level. Institutions offering only post-baccalaureate, post-master's, or first-professional certificates and institutions offering certificates of less-than-4-years are included in this group.

Table A2 provides the number of institutions and survey response rates by eligibility status and degree-granting status by sector of institution. The eligibility status of an institution was updated in March of 1997 and 345 institutions that were sent a finance or consolidated survey had lost eligibility status. On the final file, there are 6,615 eligible institutions or system offices. Of these 4,100 are degree-granting. It is this group of institutions that IPEDS will consider as higher education institutions in subsequent data collection and reporting activities. The number of institutions, and total fiscal year 1996 current funds revenues and expenditures by eligibility and degree-granting status, and by their 1995 accreditation status are provided in table A3.

Table A2. —Number and survey response rates of postsecondary institutions, by Title IV eligibility, and by degree-granting status and sector of institution: 50 states, District of Columbia and the outlying areas, Fiscal year 1996

— Less than 0.05 percent.

NOTE: The percent difference between accredited institutions and degree-granting institutions column (9) was calculated by subtracting column (7) institutions that were accredited in FY 1995 and are not eligible degree-granting in FY 1996 from column (5) institutions that were not accredited in FY 1995, but are eligible degree-granting in FY 1996 and then dividing by column (3) and multiplying by 100.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), 1995-96 "Finance" survey.

The higher education universe as defined by Title IV eligibility and degree-granting status is very similar to the higher education universe defined by accreditation status. Of the 4,100 eligible degree-granting institutions, 3,667 or 89.4 percent were accredited in fiscal year 1995. There are 433 eligible degree-granting institutions that were not accredited in fiscal year 1995. The majority of these new higher education institutions are private for-profit institutions, which include 18 four-year and 265 two-year for-profit institutions. There are 126 accredited institutions that will be excluded from the higher education universe because they either are not eligible for Title IV funding or do not grant degrees. Most of these are 4-year and 2-year non-profit institutions. Also, 11 less-than-2-year accredited institutions are excluded from the new higher education universe.

While the difference between the number of Title IV eligible degree-granting institutions and accredited institutions is small, the differences in the revenues and expenditures is even smaller. The overall net change of 7.5 percent in the number of institutions accounts for only a 0.3 percent change in revenues and expenditures. The largest net changes in revenues and expenditures of about 40 percent occurred in 2-year for-profit institutions. Because the revenues and expenditures in 2-year for-profit institutions are small compared to all other institutions the increase due to these additional institutions has very little effect on the total revenues and expenditures of all institutions. For example, the revenues of eligible degree-granting 2-year for-profit institutions (\$1.5 billion) accounts for 0.75 percent of the total revenues of all eligible degree-granting institutions.

Editing Procedures

For schools reporting detail in current funds revenues (part A) and expenditures data (part B), and expenditures on scholarships and fellowships (part E), the following editing procedures were used:

- (1) The unrestricted and restricted columns of current funds revenues and expenditures were totaled for each line. The generated totals of each line were compared to reported totals. Revenues by source and expenditures by function were totaled for each column and generated totals of each column were compared to reported totals. Generated totals replaced reported totals if differences were within ranges set in the error resolution guidelines. If differences between generated and reported totals were outside these ranges, the line or column was flagged as an error.
- (2) Current year finance data was checked for consistency with prior year data. If current data increased or decreased outside ranges set in the error resolution guidelines the data item was flagged as an error.
- (3) Several consistency checks between various parts of the form were also performed. For example, Pell Grant expenditures reported in Part E could not exceed restricted federal grant revenues reported in part A and scholarship and fellowship

expenditures reported in part B. Restricted state and local grants and scholarships reported in part E could not exceed revenues from restricted state and local grants and contracts reported in part A.

- (4) Telephone calls were made to check data inconsistencies if these fell outside of the error resolution guidelines. For example, if the difference between reported totals and generated totals exceeded ranges set by the guidelines, the institutions were called; if not, generated totals replaced reported totals.
- (5) Private institutions reporting federal appropriations were also flagged as an error. After calling a sample of these institutions, it was determined this revenue was from a federal work/study program and the revenue was moved to federal grants and contracts.

Imputation Procedures

- (1) Imputations for nonrespondents to the fiscal year 1996 Finance survey, who had responded to any of the five preceding Finance surveys (fiscal years 1991 through 1995), were based on the most recent data reported by these institutions in those years. Institutions were stratified into 11 imputation groups by highest degree granted (Doctoral with medical degrees granted, Doctoral without medical degrees granted, master's, bachelor's and associates) for public and private institutions. Private for-profit 2-year and less-than-2-year schools were combined to form the 11th group. Private for-profit 4-year institutions were combined with private non-profit institutions.

Revenues which are affected by enrollment (tuition and fees, government appropriations, grants and contracts, and auxiliary enterprises) were summed and then divided by full-time-equivalent enrollment (FTE) to yield a revenue per FTE for fiscal year 1996 and for the previous years for each group. A rate of change from previous year to current year was calculated for revenues per FTE student for each group. An institutional inflation factor was calculated by multiplying the group rate of change of revenues per FTE by the ratio of current year FTE (fiscal year 1996) and prior year's FTE (fiscal year 1995) of nonresponding institutions. This inflation factor was then applied to previously reported or previously imputed part A data for the selected revenue items that are affected by enrollment. For all other revenue items not directly related to enrollment the previous year's data was adjusted by an inflation factor based on the change in gross revenues in the current year and gross revenues in the prior year without any FTE adjustment.

For parts B and E, for responding institutions selected expenditure functions related to enrollment which included instruction, student services, scholarship and fellowship expenditures and auxiliary expenditures were summed and then divided by FTE to yield an expenditure per FTE student for fiscal year 1996 and for the previous years for each group. A rate of change from previous year to current year was calculated for expenditures per FTE for each group. An institutional inflation factor was calculated by

multiplying the group rate of change of expenditures per FTE by the ratio of current year FTE (fiscal year 1996) to prior year's FTE (fiscal year 1995) of nonresponding institutions. This inflation factor was then applied to previously reported or previously imputed part B data for the selected expenditure items that are affected by enrollment and all part E items. For all other expenditure items not directly related to enrollment the previous year's data was adjusted by an inflation factor based on the change in gross expenditures in the current year and gross expenditures in the prior year without any FTE adjustment.

Full-time equivalent enrollment (FTE) was computed from fall enrollment data of the corresponding fiscal year (i.e. fall 1995 enrollment for fiscal year 1995-96).

- (2) For institutions that did not respond to any of the preceding five survey years (fiscal years 1991 through 1995), a hot deck strategy was used: Institutions completing the "F" form were sorted into hot deck groups formed as a combination of control, religious affiliation, highest degree granted, geographic region, state (if public), and presence of a medical (M.D., D.D.S., D.V.M., O.D. degree) or medical-related (chiropractic, optometric, or podiatric) school. A donor school was selected from the same hot deck group as the nonresponding institution. Fall enrollment data from 1995 were used to compute FTE enrollment for both the nonresponding institution and its matched institution. The ratio of the FTE of the recipient institution to the FTE of the donor institution was computed. The resulting factor was multiplied by the donor institution's actual value for those items which enrollment directly affects: tuition and fees, government appropriations, grants and contracts, revenues from auxiliary enterprises, instruction, student services, scholarship and fellowship, and auxiliary enterprise expenditures. All other items for the recipient's record were taken without adjustment from the donor record. This process was repeated for every data item in parts A, B and E.
- (3) Institutions that returned finance data on the CN form or were followed-up via PETS (Postsecondary Education Telephone System) supplied data in the fields used below:

Variable name *Description*

Revenues

A013	Tuition and fees
A063	Federal government grants and contracts
CN3	State and local government grants and contracts
A113	Sales and services of educational activities
CN5	Other sources of revenues
A163	Total current funds revenues

Expenditures

B013	Instruction
B093	Scholarships and fellowships
E013	Pell Grant
E023	Other federal
CN8c	State and local
CN8d	other scholarships and fellowships
CN9	Other educational and general expenditures
B123	Total educational and general expenditures
CN11	Other current funds expenditures (non E&G)
B223	Total current funds expenditures

For eligible degree-granting institutions that returned the CN form, data were distributed to be consistent with all other eligible degree-granting institutions returning the "F" form. Data in tuition and fees (A013), federal grants and contracts (A063), sales and services of educational activities (A113) total current funds revenues (A163), instruction (B013), scholarships and fellowships (B093), Pell grants (E013), other federal scholarships (E023), total E&G expenditures (B123) and total current funds expenditures (B223) were used as reported. Revenues reported in State and local government grants and contracts (CN3) were distributed among state grants and contracts and local grants and contracts. Data reported in "other sources of revenues (CN5)" were distributed to all other revenue sources in part A. Scholarships from state and local sources (CN8c) were distributed separately into state sources and local sources. Scholarships from other sources (CN8d) were distributed between institutional and private sources. Other E&G expenditures (CN9) were distributed to all other E&G functions excluding instruction and scholarships and fellowships. All other non-E&G expenditures were distributed to non-E&G expenditure functions, such as auxiliary enterprises. Distributions were based on the average percentage distribution for institutions in the same group (described in 2). For example, 2-year public institutions were distributed according to the average percentage distribution of all public 2-year institutions. After the distribution process, the variables CN3, CN5, CN8C, CN8D, CN9 and CN11 were eliminated from the file. In 1996, this process was applied to 330 institutions. There were also 31 eligible-degree-granting institutions that did not respond to the CN form but were imputed using steps 1 or 2 above. Non-degree-granting institutions that reported on the CN form were not distributed and those that did not respond were not imputed.

- (4) If an institution reported only totals in column three for revenues and for expenditures, imputations for restricted and unrestricted revenues and expenditures were performed by distributing total columns to restricted and unrestricted based on the average distribution of schools in the non-respondent's imputation group.

- (5) If an institution reported academic support but did not report library expenditures, expenditure data from the 1996 IPEDS Academic Library survey were used to determine library expenditures in fiscal year 1996.
- (6) For institutions that did not report salary and wage expenditures (part B column 4, lines 1 through 8 and line 23) group ratios of salary expenditures to total expenditures (column 3, lines 1 through 8), for each expenditure category and imputation group were calculated. These ratios were then multiplied by the total reported expenditure of the institution to yield a salary expenditure for each line or category. The imputed salary expenditures were then summed to produce a total salary and wage expenditure (column 4, line 23). Fringe benefits (column 4, lines 24 through lines 26) were then calculated by multiplying the group ratios of fringe benefits per total salary and wages by the imputed total salary and wages. The total employee compensation was then calculated by summing lines 23 through 26. For institutions that did not report salary expenditures by function (column 4, lines 1 through 8), but were able to report total salary expenditures (column 4, line 23), salary expenditures by function were initially imputed as above. The imputed salary and wage expenditures by function were then summed and subtracted from the reported total salary and wages (column 4, line 23) and a balance was calculated. This balance was then distributed across all salary categories in the same proportion as total reported expenditures in column 3. In 1996, there were 22 institutions that did not report salary and wage expenditures for lines 1 through 8. Salary and wage expenditures were not imputed for auxiliary expenditures, hospitals, and independent operations. These items were added to the finance survey in fiscal year 1995.
- (7) Eighty-four public institutions included money from the Federal Direct Student Loan (FDSL) program when reporting other restricted federal grant expenditures (part E, line 2, column 2) and revenues from restricted federal grants and contracts (part A, line 6, column 2). These items were imputed for the 84 institutions because loan money is not collected on the finance survey, and the money from these loans is generally reported in tuition and fee revenues. A four-year average percent change (1992 to 1995) of other restricted federal grants was calculated for each institution. This average percent change was then multiplied by the other restricted federal grant expenditure reported by the institutions in fiscal year 1995 to yield an imputed other restricted federal grant expenditure for fiscal year 1996. The difference between the original reported restricted grant expenditure and the imputed restricted grant expenditure was assumed to be the money associated with the FDSL program. This difference was then subtracted from the reported restricted federal grant revenues.

In the 1996 finance file 343 institutions were imputed based on previously reported finance data (method 1). One hundred-six institutions were imputed using method (2) above. Three institutions were not imputed. These institutions never reported to the finance survey so using the prior year method was not possible and the institutions are unique institutions, so that

finding donor institutions were not possible. Only parts A, B, and E of the finance survey form were imputed for nonresponding institutions. Institutions that were entirely imputed may be identified on the file by their response status (RSTATUS) and imputation type (IMPTYPE) codes. For responding institutions that were edited or partially imputed, imputed or edited items may be identified by the associated item imputation flags.

This report's focus is on 4,018 eligible degree-granting institutions in the 50 states and the District of Columbia and excludes institutions in the outlying areas. Table A4 shows the number of eligible degree-granting institutions that returned a survey form in the 50 states and the District of Columbia by level and control of institution. Table A5 shows the survey response rates by state.

Table A4.— Fiscal year 1996 survey response rates for Title IV eligible, degree-granting institutions, by sector of institution: 50 states and the District of Columbia

Sector of institution	Final universe	Number responded	Response rate
Total	4,018	3,712	92.4
Central office	62	61	98.4
4-year, public	613	600	97.9
4-year, nonprofit	1,498	1,353	90.3
4-year, for-profit	138	126	91.3
2-year, public	1,080	1,016	94.1
2-year, nonprofit	181	166	91.7
2-year, for-profit	446	390	87.4
