IDENTIFIERS Prototypes; *Public Information Systems

ABSTRACT

A questionnaire was sent to officials in 17 federal departments and 57 agencies to collect data on their information needs and practices. The survey instrument was designed to provide: (1) information to the Joint Committee on Printing needs to carry out its oversight role in federal printing and publishing management; and (2) information to assist the Office of Technology Assessment in conducting a study on "Technology, Public Policy, and the Changing Nature of Federal Information Dissemination." The report presents a total of 173 responses to the questionnaire, 114 of which were received from the civilian cabinet level departments, 11 from the Department of Defense, and 48 from agencies. A compilation of these responses is organized into 13 appendixes which, together with an introductory letter, make up this report: Appendix I discusses the objectives, scope, and methodology of the survey; Appendixes II through XI summarize the responses from each of three groups on such topics as information types and formats, dissemination services, information technologies, assessments, policies and procedures, budgets/expenditures, and information products; Appendix XII provides a glossary of terms that was included in the questionnaire; and Appendix XIII lists departments and agencies represented by the survey respondents. The Honorable Frank Annunzio
Chairman, Joint Committee on Printing
Congress of the United States

Dear Mr. Chairman:

As requested by the former Committee Chairman and you as the then Vice Chairman, we have completed a survey of federal agency information needs and practices. We collected this information through a questionnaire sent to all federal departments and 57 agencies in June 1987. The questionnaire was designed to provide (1) information the Committee needs to carry out its oversight role in federal printing and publishing management and (2) information to assist the Office of Technology Assessment (OTA) in its study entitled "Technology, Public Policy, and the Changing Nature of Federal Information Dissemination."¹ The Committee requested the OTA study at the same time it requested assistance from us. The Committee's overall objective in requesting this work was to assess the implications of evolving public printing, publishing, and information dissemination technology on the future of the Government Printing Office and public information functions of the federal government.

We sent the questionnaire to the senior information resources management (IRM) officials of all 13 Cabinet-level departments and asked them to provide one response for each major subdivision of their departments. We asked the senior IRM officials of agencies, or the agency head or other appropriate official when the agency was not required to have a senior IRM official, to provide one response for each of their agencies. We received a total of 114 responses from the civilian Cabinet-level departments, 11 responses from the Department of Defense, and 48 responses from agencies. Our

¹OTA's resulting report, tentatively entitled Informing the Nation: Federal Information Dissemination in an Electronic Age, is scheduled to be issued about October 1, 1988.

objective, scope, and methodology are further discussed in appendix I.

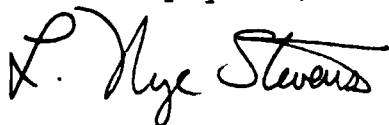

As agreed with the Committee, information in this fact sheet is limited to a compilation of department and agency questionnaire responses. We edited responses for completeness and internal consistency and contacted departments and agencies when necessary to clarify answers or obtain complete responses. However, we did not independently verify the accuracy of the responses.

Responses are summarized in appendixes II through XI by the three groups: Cabinet-level civilian department subdivisions, Department of Defense, and agencies. A glossary of terms that was included in the questionnaire is reproduced in appendix XII. Departments and agencies represented by the respondents are listed in appendix XIII. The appendixes do not include respondent-provided (1) narrative comments, (2) information on specific information products or services disseminated to the public in electronic format, and (3) copies of relevant statutes and policies and procedures. This information has been furnished separately to OTA.

- - - - -

As agreed with the Committee, we plan no further distribution of this fact sheet until 10 days after the date of issuance, unless you publicly announce its contents earlier. At that time, we will send copies to interested parties and make copies available to others upon request. If we can be of further assistance, please call Larry Herrmann on 275-4412 or me on 275-8676.

Sincerely yours,

L. Nye Stevens
Associate Director

OBJECTIVE, SCOPE, AND METHODOLOGY

The former Chairman and Vice Chairman, Joint Committee on Printing (JCP), asked us to identify (1) the current and future information needs of the government and the public and (2) services that might be provided from the Government Printing Office (GPO).¹ We were asked to include traditional information technology but to emphasize state-of-the-art information technology, such as database management, information storage, retrieval, and dissemination systems. At the same time, JCP asked the Office of Technology Assessment (OTA) to identify, analyze, and develop the key issues relevant to the future of GPO and, more generally, to the future direction of the federal government's public information technology and policy.

On the basis of discussions with JCP, our objective was specified as support of the broad OTA study. We agreed to design a questionnaire and collect and provide information on federal agency information needs and practices that could be used to satisfy the needs of both JCP and OTA. We further agreed that we would provide the questionnaire results directly to OTA but would also prepare a fact sheet transmitting the questionnaire data to JCP. Finally, it was agreed that we would document the questionnaire results but not verify information provided by the departments and agencies.

Our questionnaire survey was designed principally to collect

- information on the agencies' present information dissemination practices and plans for use of various new information dissemination technologies,
- department and agency assessments of service provided by GPO and other federal information disseminators,
- department and agency positions on information policy issues and information on the extent of some electronic dissemination practices, and
- information on agency expenditures and information products.

We met with JCP and OTA representatives several times and jointly developed several drafts of the proposed questionnaire as JCP's interests evolved and OTA's study plan was refined. When we

¹Information on information needs of the public is being assessed through questionnaires sent to libraries and associations. The results will be reported separately.

reached substantial agreement on the questionnaire content it was reviewed by GPO, pre-tested with federal department officials, and revised.

In June 1987 we sent a letter and the questionnaire to executive branch senior IRM officials² recognized by OMB in all 13 Cabinet-level departments and in 50 judgmentally selected agencies. In addition, we sent a letter and the questionnaire to heads or other appropriate officials of seven legislative, judicial, and executive branch agencies that were not subject to the provisions of the Paperwork Reduction Act. Departments and agencies represented by questionnaire respondents are listed in app. XIII.

Because the questionnaire dealt with many department and agency functions and information issues, we stressed in the transmittal letter and on the questionnaire cover that we believed information from multiple sources was necessary to develop a single consolidated response. We cited department and agency printing officers, librarians, publishers, public information officers, and advanced technology application planning groups as those we believed the senior IRM official might find beneficial to consult. To help ensure that those in the departments and agencies in the best position to provide information were asked to do so, we provided copies to associations and other groups representing several of these specialties so that group members would be aware the questionnaire had been sent and could seek to contribute to the department or agency responses.

To obtain some detail on subdivisions of Cabinet-level departments, we asked that departments provide a single response for each of their major subdivisions, such as bureaus or administrations. Civilian departments provided a total of 114 responses. The Departments of the Army, the Navy, and the Air Force each provided a single response, and the Marine Corps and seven other Department of Defense components each provided a single response. For clarity, the responses summarized in this fact sheet are presented in three major groups:

-- civilian Cabinet-level department subdivisions (114 responses);

²The Paperwork Reduction Act requires that most executive branch departments and agencies designate a senior official in this capacity. The senior IRM official is to report directly to the agency head and carry out the responsibilities of the agency under the Paperwork Reduction Act. The Federal Election Commission is the one executive branch agency that we contacted that is not subject to the act.

- Department of Defense, including the three services (11 responses); and
- agencies (48 responses).

The following appendixes give the survey results by these major groups.

DEPARTMENT AND AGENCY
CURRENT INFORMATION TYPES AND FORMATS

We asked each department and agency to identify the various types of public information that it disseminates and the format(s) it currently uses for dissemination. They were instructed to check as many boxes in each row as applied. If they did not disseminate a given type of information, they were asked to check column (a). Results are expressed as the number of total responses for each type of public information. Separate results are provided for each of the three groups.

For the following types of public information that your agency may disseminate, which of the following formats does the agency currently use for dissemination? (CHECK AS MANY BOXES IN EACH ROW AS APPLY. IF YOUR AGENCY DOES NOT DISSEMINATE THE TYPE OF INFORMATION, CHECK COLUMN (a) FOR THAT ROW.)

DEPARTMENT AND AGENCY
PLANNED INFORMATION TYPES AND FORMATS

We asked departments and agencies to check those new formats they planned to use for public information dissemination in the next 3 years. They were instructed to check as many boxes in each row as applied. If they did not plan to disseminate this type of information, they were asked to check column (a). They were not to check formats already in use (see app. II). Results are expressed as the number of total responses for each type of public information. Separate results are provided for each of the three groups.

PUBLIC INFORMATION DISSEMINATION
SERVICES AND FORMATS

This appendix relates the public information dissemination services used by the departments and agencies and the formats currently used by those services. We asked the department or agency to indicate whether or not it uses a given dissemination service and, if so, the format(s) in which the information is disseminated. Results are expressed as the number of total responses for each dissemination service. Separate results are provided for each of the three groups.

For the following dissemination services that may be used by your agency to disseminate public information, which of the following formats does your agency currently use for dissemination? (CHECK AS MANY BOXES IN EACH ROW AS APPLY. IF YOUR AGENCY DOES NOT USE THIS DISSEMINATION SERVICE, CHECK COLUMN (a) FOR THAT ROW.)

USE, PROTOTYPING, OR PILOT
TESTING OF INFORMATION TECHNOLOGIES

We asked departments and agencies which of several information technologies (1) are currently in operational use and (2) are currently being prototyped or pilot-tested in their organization for a variety of information functions. The "currently prototyping or pilot testing" column was to be checked only for those technologies that are not currently in operational use.

With respect to the collection, filing, storage, printing, and dissemination of public information, which of the following information technologies is your agency (A) currently using, or (B) currently prototyping or pilot testing? (CHECK ONE BOX FOR EACH ROW UNDER COLUMN (A) "CURRENTLY IN OPERATIONAL USE." ALSO, CHECK ONE BOX FOR EACH ROW UNDER COLUMN (B) "CURRENTLY PROTOTYPING OR PILOT TESTING" FOR THOSE TECHNOLOGIES THAT ARE NOT CURRENTLY IN OPERATIONAL USE AT YOUR AGENCY.)

QUALITY, COST, AND TIMELINESS ASSESSMENTS

We asked departments and agencies to assess three aspects of producing information products--quality, cost, and timeliness--for formats available from their own agency, GPO, the National Technical Information Service of the Department of Commerce, the Consumer Information Center of the General Services Administration, depository libraries, and commercial vendors/contractors. They were asked to use a typical agency report as a base and assess each aspect on a 5-point scale. Quality was defined as "clarity, readability, and layout." Cost was as compared to the costs of similar dissemination services prevailing in the information industry.

The three groups' responses for quality are grouped together, followed by responses for cost and timeliness. Each summary shows the number in each group of respondents that use the service/format and the distribution of those users' responses on the 5-point scale.

For typical agency reports (i.e., 50-100 pages, typeset, some graphics, specified deadline), how high or low would you rate the quality (i.e., clarity, readability, end layout) of each of the dissemination services and formats listed below? (CHECK ONE BOX IN EACH ROW. IF YOU DO NOT USE A FORMAT FROM A SPECIFIC SERVICE, CHECK BOX 1.)

Civilian Cabinet-Level Department Subdivisions N=114 DISSEMINATION SERVICES/ FORMATS	QUALITY OF THE SERVICE AND FORMAT						NO RESPONSE

ASSESSMENT OF GPO-PROVIDED PRODUCTS OR SERVICES

We also asked departments and agencies to assess GPO-provided products or services on a 5-point scale ranging from "Very Satisfied" through "Very Dissatisfied."

The results for the three groups show the number of respondents in each group that use GPO for a given product or service and, of those, the number that reported they are Very Satisfied, Satisfied, Neither Satisfied Nor Dissatisfied, Dissatisfied, and Very Dissatisfied.

Narrative comments were solicited for the Very Satisfied and Very Dissatisfied responses. They have been furnished to OTA.

How satisfied or dissatisfied are you with GPO's provision of the following information products or services? (CHECK ONE BOX IN EACH ROW. IF YOU DO NOT USE THIS PRODUCT OR SERVICE, CHECK BOX 1.)

RESPONSIBILITIES, POLICIES AND
PROCEDURES, AND TECHNOLOGIES

We asked departments and agencies several questions about their statutory responsibilities, their information-related policies and procedures, and their electronic databases and bulletin boards. Here responses for all three groups are displayed on the same page. For this appendix we display, below each entry, the number of those responding that reported values greater than zero.

We also asked departments and agencies to provide copies of the relevant statutes and policies and procedures. These were furnished to OTA.

3. Commercial vendors	2 N=1		

BUDGETS/EXPENDITURES AND INFORMATION PRODUCTS

We asked departments and agencies to provide their total budgets and their expenditure levels for certain activities for fiscal years 1983 through 1986 and estimates for 1987 and 1988. They were also asked to provide information on the quantities of a variety of information products for fiscal years 1983 through 1987. For this appendix we display, below each entry, the number of those responding who reported amounts greater than zero. Information provided in this appendix should be used very cautiously since the totals may significantly understate, and could overstate, department and agency budgets, expenditures, and quantities of information products.

Our cover letter to senior IRM officials stressed that best estimates were adequate for the purposes of this survey. Nevertheless, in many cases no estimates were provided initially and in some cases none could be obtained through follow-up attempts. During our follow-up attempts, some department and agency contacts said that (1) their budgeting and accounting systems could not provide the data aggregated as we asked for it; (2) they believed some definitions were not specific enough to ensure that their response was what we were seeking; and (3) information was not available, particularly for the earlier years.

BUDGETS/EXPENDITURES FOR FISCAL YEARS 1983 THROUGH 1988

Please provide your agency's total budget. Then provide expenditure levels (i.e., total aggregated costs including personnel costs, administration costs, materials costs, etc.) for the following activities for fiscal years 1983 through 1986 and provide estimates for fiscal years 1987 and 1988. (ENTER AMOUNTS IN THOUSANDS OF DOLLARS. IF NONE, ENTER ZERO "0".)

GLOSSARY

- Access to Information - The process by which users obtain public information; accessibility implies that the information is identified and made known to the public, and that the information can be obtained in a convenient format, in understandable language, and in a time frame whereby the information is current and has utility.
- Artificial Intelligence - See Expert Systems
- Compact Optical Disk - A digital optical disk, encoded, sized, and mastered according to standards in use for consumer digital audio systems. There are two basic types of compact disks:
 (1) CD-ROM - Read-only-memory
 (2) CD-I - Interactive
- Composition - The arrangement of type for printing; or the production of type or typographic characters arranged for printing.
- Computer-Aided Page Makeup - The use of computers to automate the formation of text and graphics into discrete pages.
- Computer Graphics - The use of computers to generate, manipulate, and display pictorial images.
- Computerized Telephone Calls - Telephones using an automatic calling unit (auto dialer) which permits automatic dialing of calls via the telephone network.
- Desktop Publishing - Basic composition of camera-ready copy by end users rather than professional photocompositors.
- Dissemination - See Information Dissemination
- Electronic Bulletin Board - A computerized message system that generally can be used to post messages or read those left by others. Computer users gain access by means of a modem and common telephone communication lines.
- Electronic Collection or Dissemination of Information - Information collected from or disseminated to the public through electronic media (e.g., magnetic tape, floppy disk, CD-ROM, on-line computer based systems, telecommunications, etc.).
- Electronic Data Base - A store of data on continuously updated files which can be made accessible to a computer.
- Electronic Data Transfer - The transfer of data signals between interconnected computers or terminal devices.
- Electronic Mail - A computerized message system that can be used to send and receive messages in electronic form via remote computer terminals.

(continued)

- Electronic Photocomposition - The preparation of copy for printing by using a computer to generate digitized characters which are photographically recorded on light sensitive paper or film.
- Electronic Publishing - Electronic storage, retrieval, and transmission of digitized text and graphics which allows (1) on-demand printing of publications or portions of publications, and (2) printing at remote, decentralized locations.
- Expert Systems - A particular development of artificial intelligence. It combines the computer's ability to store specialized knowledge with its ability to mimic the reasoning process of a human expert (e.g., in interrogating patients for medical diagnosis).
- Government Publication - A publication, document, form, microform or other similar matter which is reproduced by printing or other means for a government agency and for the official use of a government entity.
- Information - The content or symbolic substance of a communication, i.e., knowledge or intelligence, such as facts, data, or opinions, including numerical, graphic or narrative forms, regardless of mode or medium by which it is maintained or communicated.
- Information Dissemination - Distributing information to the public in whatever medium or format it may be available, without the necessity for the users to seek access for each such distribution.
- Information Product - A discrete package of information, developed prior to specific needs for it (except, perhaps the first need), usually with expectation of providing it to a number of users without modification.
- Information Resources - Both the information itself, and the related resources and facilities (e.g., personnel, equipment, funds, and technology) for accessing and processing the information.
- Information Service - Means for storing, accessing, processing, or delivering information to meet the needs of specific users when they request it.
- Interactive Cable TV - A system in which television signals are generally carried one-way directly from the distributing office to the subscriber's receiving set via coaxial cable. Interactive cable is a two way link allowing the subscriber to respond to signals along the cable. These signals can be fed into a computer, providing a wide range of new information services.
- Laser Printing - A form of electrographic printing whereby digital information is fed to a laser which creates a dot-matrix image, either directly on photo-sensitive paper, or indirectly on a photo-receptor device which transfers the image onto paper.
- Microform Printing - More appropriately referred to as computer output microform (COM). Instead of producing paper output, COM systems reduce the same information to microform or microfilm.
- Micrographics - The technique of photographically reducing document pages to microform (microfilm or microfiche).

(continued)

- Non-impact Printing - Includes laser, ink-jet, and deposition printing.
(See also Laser Printing)
- Off-line Electronic Media - Storage media not under control of a computer's central processor, (e.g., magnetic tape, floppy disk, cassette, videodisk, optical disk, etc.).
- On-line Electronic Media - Storage media under continual control of a computer; or connected to a computer by a communications link and accessible via a terminal.
- Optical Disk - A non-contact, random access plastic disk tracked by optical laser beams, used for mass storage and retrieval of digitized text and graphics. Two heavily used types are:
(1) WORM - Write-once, read-many
(2) ERASABLE

(See also Compact Optical Disk)
- Printing-On-Demand Systems - See Electronic Publishing
- Private Sector - Includes private enterprise, for profit, and non-profit, as well as professional and trade associations, joint government/private enterprises, and privately supported organizations such as libraries and universities.
- Public Information - That portion of government information that is not personal, proprietary, classified, or otherwise subject to Freedom of Information Act exemptions.
- Publication - See Government Publication
- Publications Layout - The plan, design, or arrangement of matter to be reproduced by various printing or reproduction methods.
- Telecommunications - The preparation, transmission, communication or related processing of information by electrical, electromagnetic, electromechanical, or electro-optical means.
- Teleconferencing - Generally any conferencing system employing telecommunications links.
- Selective Dissemination of Information (SDI) - A general term for providing a current awareness service based on a bibliographic database. The subscriber's subject interest "profile" is periodically matched against the updated database. Records matching the subscribers' interests are printed and sent to them.
- Videoconferencing - A form of teleconferencing where participants see as well as hear other participants at remote locations
- Videodisk - A transparent or reflective disk developed to record or playback television signals, but having the capacity to store and randomly access enormous amounts of digital data. There are two types: (1) capacitance electronic disks in which a stylus rides on the disk, and (2) optical encoded disks which use a laser beam to detect coded signals.

Requests for copies of GAO publications should be sent to:

U.S. General Accounting Office
Post Office Box 6015
Gaithersburg, Maryland 20877

Telephone 202-275-6241

The first five copies of each publication are free. Additional copies are \$2.00 each.

There is a 25% discount on orders for 100 or more copies mailed to a single address.

Orders must be prepaid by cash or by check or money order made out to the Superintendent of Documents.
