REPORT RESUMES

    INFORMATION SYSTEMS CAN OFFER A DELIBERATE MECHANISM FOR
THE DIFFUSION OF EDUCATIONAL IDEAS. TO ACCOMPLISH THIS, THE
FOLLOWING FACTORS MUST RECEIVE ADEQUATE ATTENTION--(1) THE
ORGANIZATION OF KNOWLEDGE SO THAT ALTERNATIVE CONCEPTS CAN BE
LOCATED, (2) THE IDENTIFICATION OF USER GROUPS AND THEIR
INFORMATION NEEDS, (3) THE EXTENSIVENESS OF DIFFUSION OF
INFORMATION AND THE DEGREE OF PENETRATION THROUGH VARIOUS
DISSEMINATION TECHNIQUES WITHIN USER GROUPS, AND (4) FEEDBACK
TECHNIQUES ON THE EFFECTIVENESS OF THE CONCEPTS DISSEMINATED.
IT IS THE GOAL OF THE EDUCATIONAL RESOURCES INFORMATION
CENTER TO BECOME A VIABLE AND EFFECTIVE INFORMATION SYSTEM
FOR THE PROFESSIONAL FIELD OF EDUCATION. THE CLEARINGHOUSE ON
VOCATIONAL AND TECHNICAL EDUCATION IS NOW COLLECTING,
ABSTRACTING, INDEXING, AND DISSEMINATING THE RECORDED BODY OF
KNOWLEDGE GENERATED BY THE VOCATIONAL PROFESSION AND ITS
RELATED AREAS THROUGH TWO QUARTERLY PUBLICATIONS, ABSTRACTS
OF INSTRUCTIONAL MATERIALS IN VOCATIONAL AND TECHNICAL
EDUCATION (AIM) AND ABSTRACTS OF RESEARCH AND RELATED
MATERIALS IN VOCATIONAL AND TECHNICAL EDUCATION (ARM), AND
THROUGH RESEARCH IN EDUCATION (RIE) WHICH ALSO IDENTIFIES
MATERIALS IN OTHER DISCIPLINES. THE RESEARCH COORDINATING
UNITS (RCU) ARE THE LOGICAL DISSEMINATION NETWORK AGENTS
WITHIN THE STATES. THE CLEARINGHOUSE ON VOCATIONAL AND
TECHNICAL EDUCATION AND A GROUP OF RCU DIRECTORS ARE TO DRAFT
GUIDELINES FOR STATE INFORMATION SERVICES AS A PRELIMINARY TO
MEETING WITH ALL RCU DIRECTORS TO WORK OUT OPERATIONAL
PROBLEMS OF THE INFORMATION SYSTEM. THE PROPOSED GUIDELINES
SHOULD BE FLEXIBLE AND OPEN-ENDED SO THAT EACH STATE CAN
DECIDE WHICH ASPECTS ARE DESIRABLE AND WORKABLE FOR THAT
STATE. AVAILABILITY INFORMATION FOR AIM AND ARM MICROFICHE
SETS IS INCLUDED. THIS SPEECH WAS DELIVERED AT THE NATIONAL
CONFERENCE ON THE DIFFUSION OF EDUCATIONAL IDEAS (MICHIGAN
STATE UNIVERSITY, MARCH 26-28, 1968). (MM)

Information Systems;
A Vehicle for Diffusion of Educational Ideas.

Information Systems;

A Vehicle for Diffusion of Educational Ideas

In order to comment on information systems as a vehicle for diffusion of educational ideas, perhaps it would be appropriate to review the important elements of diffusion.

1. First, there is an idea or concept.

2. The idea is communicated from one individual to anothe .

3. This activity occurs in a social system.

4. It occurs over time.

5. The concept is adopted, adapted, or rejected.

The theoretical or conceptual framework of diffusion is viable and provides guidance but there must be a deliberate mechanism to implement this framework. In short, an effective and pervasive information system is required. However, to date there has been very little success in building effective information systems. What are some of the reasons for this state of affairs? I believe that there are factors which have significant bearing upon the diffusion of ideas which have not received adequate attention. These are factors which involve:

1. The organization of knowledge so that alternative concepts can be located.

2. The identification of user groups of information and their information needs.

3. The extensiveness of diffusion of information within these user groups and the degree of penetration through various dissemination techniques. These may be recorded and/or verbal techniques, e.g. Specialized packages of information for pre-identified needs

of a specific user group could be produced which would have significant impact upon this group.

4. Fee⁷ ack techniques on the effectiveness of the concepts disseminated.

I submit that a dynamic and responsive information system should be able to deal effectively with these factors and thereby become an effective vehicle for the diffusion of educational ideas. Such a system must first gather together a body of knowledge which can be used to locate a number of ideas; thereby providing a choice of concepts. There must be easy access to this knowledge without a lot of roadblocks. Within the body of knowledge there must be access to specific ideas. With the proliferation of ideas, evaluation and synthesis of these concepts by recognized authorities must be provided.

An effective information system must be concerned with methods of dissemination of this body of knowledge to different user groups. More efforts must be expended in identification of user groups and their information needs. The logical next step is to determine whether information that has been generated and collected meets these needs. Does the information need to be re-organized, or possibly re-stated to meet the needs of the user? Perhaps the information needed by a user group has never been generated and efforts should be directed towards stimulating qualified persons to generate such information.

Within user groups, there must be concern for the extensiveness and depth of penetration of dissemination of information from individual to individual. This requires the use of formal and informal methods of

dissemination which directly relate to the diffusion and adoption process. It requires organization of compatible information networks at local, state, national and international levels with switching devices <u>between</u> these levels and <u>within</u> these levels. These networks must have built-in allowances for flexibility. This must relate to:

1. language corpatibility and search strategies

2. hardware compatibility

3. delineation of services and the division of labor

Next, a dynamic information system must evolve feedback techniques on the effectiveness and usefulness of the information and ideas in attaining the desired objectives of a user group and the individuals within those groups.

It is the goal of ERIC to become this kind of viable and effective information system for the professional field of education - first as a national system and then as part of an international network. Plans are being laid now for activities in the international arena.

How does a segment of the field of education such as vocational and technical education fit into this picture? The Clearinghouse on Vocational and Technical Education has initiated the basic steps of collecting the recorded body of knowledge generated by the vocational profession and its related areas. This knowledge is being abstracted, indexed and disseminated through two quarterly publications, <u>Abstracts of Instructional Materials in Vocational and Technical Education</u> (AIM) and <u>Abstracts of Research and Related Materials in Vocational and Technical Education</u> (ARM). With the assistance of advisory committees these publications have been

specifically designed as the basic information tools for the vocational profession. In addition there are other important publications such as Research in Education which identify significant materials in other disciplines. The time of many groups and many persons will be saved by having access to this information.

The Vocational Clearinghouse staff is working hard on the one thousand and one details that are involved in the complex problems inherent in gathering recorded knowledge, organizing it and making it available. For example, a number of suggestions were received requesting a back-up of microfiche for AIM and ARM. A back-up system has been negotiated through Central ERIC with the ERIC Document Reproduction Service (EDRS) and microfiche sets for AIM and ARM will be available by an ED number. A letter explaining this is being mailed to you and the state directors this week. A copy of this letter is attached as Appendix I of this report for information purposes. If you have questions after reading this information, I shall be glad to answer them. We know it would save time and money if a subscription system could be established for these microfiche packages. We anticipate that a price reduction might be negotiated if we could guarantee EDRS a basic number of subscriptions. Hence we are asking for an indication of interest from you in this regard. This example shows how quickly one can get involved in the multitudinous details of an information system.

To get back to the big picture, we know it is equally important to work on dissemination activities and feedback techniques. It is self evident that an information system that has the potential of serving thousands of professional vocational educators as well as many other

interested groups requires a viable dissemination network. The Research
Coordinating Units are the logical agents within the states who can become
one of the most important links of the entire system. Already the Clear-
inghouse on Vocational and Technical Education is beginning to refer users
to the Research Coordinating Units. However, we know that considerable
effort must be expended to effect a compatible but flexible information
system. In order to do this, the Clearinghouse on Vocational and Technical
Education has invited an Ad Hoc group of RCU directors to meet in Columbus
at least twice later in the spring to draft some guidelines for state
information services. The states involved are

1. California

2. Kansas

3. New Jersey

4. Oregon

5. North Carolina

6. Wisconsin

The type of activities to be covered by the Committee are

1. Identification of user groups and services to them

2. Synthesis and information analysis activities

3. Indexing

4. Search techniques

5. Feedback techniques

6. Consumer education

This is being done looking towards meeting with RCU directors for the
purpose of working out operational problems of the information system.
We know there are other states who are actively working on procedures
and we solicit their assistance by contacting Dr. Robert Taylor, Dir-
ector of the Center for Vocational and Technical Education, or myself

in respect to using their materials. The resulting guides evolved by the Ad Hoc Committee should be flexible and open-ended with the recognition that each state will have to decide which aspects are desirable and workable for that state.

Our goal is to provide an information system that will be _effective_ and we invite your suggestions and assistance. We are confident that through the cooperative relationship which is being established with the Research Coordinating Units we have the beginnings of a viable system which will contribute to and extend the diffusion and dissemination process.

For RESEARCH AND LEADERSHIP DEVELOPMENT IN

Vocational and Technical Education

THE OHIO STATE UNIVERSITY
980 KINNEAR ROAD
COLUMBUS, OHIO   43212
March 26, 1968

To: State Directors of Vocational and Technical Education
      RCU Directors

Dear Colleague:

Efforts are being made by Central ERIC (USOE) to resolve the delays in issuing Research in Education and the microfiche which back up this publication.

The microfiche sets of titles for the fall issue of Abstracts of Instructional Materials in Vocational and Technical Educ.tion (AIM) and fall issue of Abstracts of Research and Related Materials in Vocational and Technical Education (ARM) have been completed and are now available from the ERIC Document Reproduction Service (EDRS). (As soon as the microfiche for Winter AIM and ARM are available, the ED numbers will be sent to you.) The ED numbers and price for ordering are:

ED Number	Price	Number of Individual Documents Filmed	Title
ED 013 339	$19.50	74	Microfiche Collection of Documents Reported in Abstracts of Instructional Materials in Vocational and Technical Education, Fall 1967.
ED 013 338	$22.75	99	Microfiche Collection of Documents Reported in Abstracts of Research and Related Materials in Vocational and Technical Education, Fall 1967.

There may be a discrepancy between the prices shown in the February issue of Research in Education for these collections and the price listed in this letter. It is our understanding that the price we are sending you is the correct amount.

Additional ordering information is:
        EDRS
        The National Cash Register Company
        4936 Fairmont Avenue
        Bethesda, Maryland 20014
Please add applicable state sales taxes or submit tax exemption certificate.

IN COOPERATION WITH THE DIVISION OF ADULT AND VOCATIONAL RESEARCH, UNITED STATES OFFICE OF EDUCATION
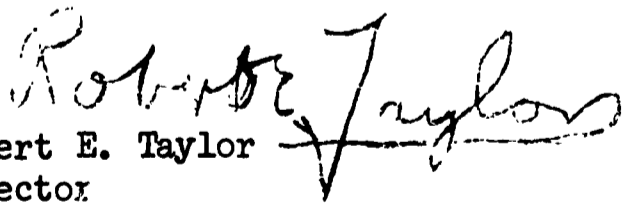

Enclosed is a list of the VT numbers in each publication which are included in these sets. The specific titles can be checked in the Document Number Index of AIM and ARM.

The documents have been filmed in sequential order by VT number. Each new title starts in the next frame following the last filmed page of a previous title. An illustration is enclosed showing how this is effected.

Our Clearinghouse is working with Central ERIC and EDRS on the possibility of establishing subscriptions to the microfiche sets for AIM and/or ARM so that these sets can be automatically mailed to the subscribing agency. It is believed that if there are a sufficient number of subscriptions, a reduction in price could be effected. We realize that a few groups will want to subscribe to all fiche from all clearinghouses. If this is done, the sets for AIM and ARM will automatically be included. However, it is anticipated that many vocational agencies will want only the sets for AIM and ARM which include some titles not announced in RIE from the Vocational and Technical Education Clearinghouse. Titles abstracted by other clearinghouses could be ordered separately as they are identified in Research in Education.

It would be helpful if you would indicate your interest in subscribing to AIM and ARM sets of microfiche on the enclosed form so we may have some data to use in discussing a subscription program with Central ERIC and EDRS.

Sincerely,

Robert E. Taylor
Director
