

# Introduction to Networking Protocols and Architecture

Raj Jain  
Professor of CIS

**Raj Jain is now at  
Washington University in Saint Louis  
Jain@cse.wustl.edu  
<http://www.cse.wustl.edu/~jain/>**

- ❑ Data Comm vs Networking vs Distributed Systems
- ❑ Types of Networks
- ❑ Protocol Layers: OSI and TCP/IP Models
- ❑ Connection-oriented vs connectionless
- ❑ Layered packet format

# Data Communication vs Networking

- Communication: Two Nodes. Mostly EE issues.

- Networking: Two or more nodes. More issues, e.g., routing

# Distributed Systems vs Networks

- ❑ Distributed Systems:
  - ❑ Users are unaware of underlying structure.  
E.g., trn instead of \n\bone\0\trn
  - ❑ Mostly operating systems issues.
  - ❑ Nodes are generally under one organization's control.
- ❑ Networks: Users specify the location of resources.

<http://www.cis.ohio-state.edu/~jain/>

- ❑ Nodes are autonomous.

The Ohio State University

Raj Jain

# Types of Networks

- Point to point vs Broadcast

- Circuit switched vs packet switched

- Local Area Networks (LAN) 0-2 km,  
Metropolitan Area Networks (MAN) 2-50 km,  
Wide Area Networks (WAN) 50+ km

# Protocol Layers

- Problem: Philosophers in different countries speak different languages. The Telex system works only with English.

I believe there is a God!

Philosopher

Translator

Secretary

# Design Issues for Layers

- Duplexity:

- Simplex: Transmit or receive

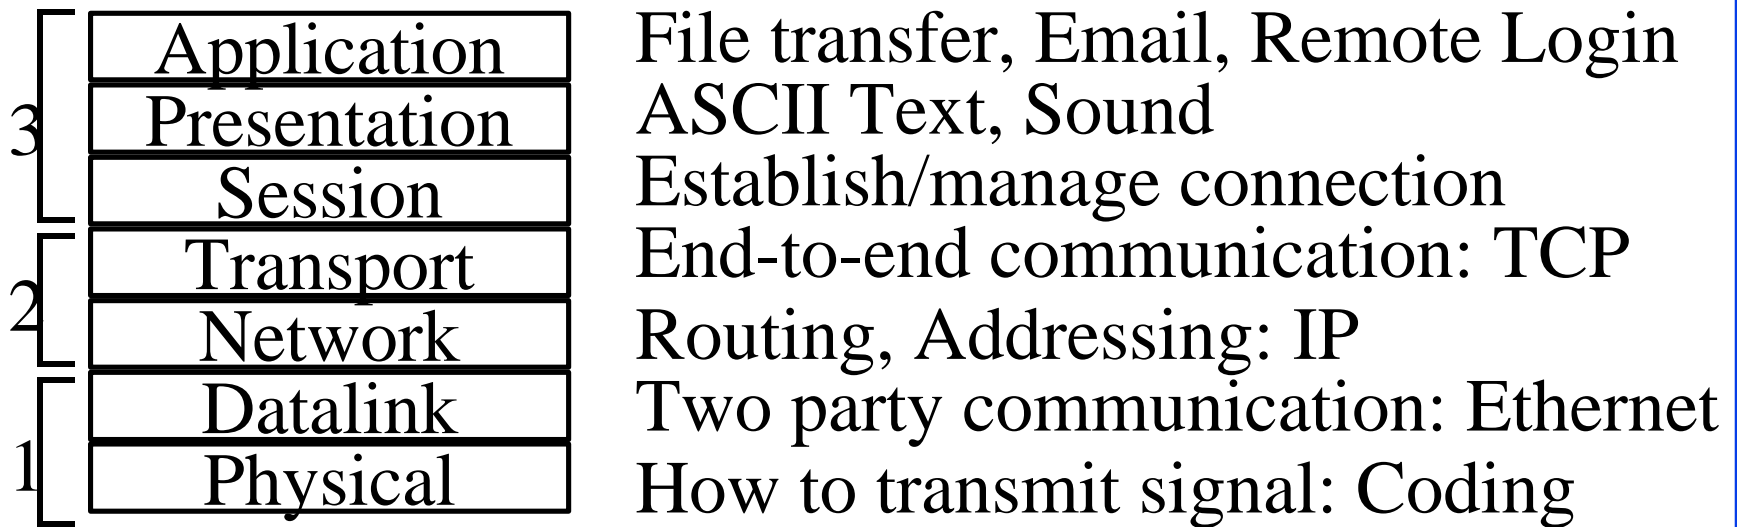

- Full Duplex: Transmit and receive simultaneously

- Half-Duplex: Transmit and receive alternately

- Error Control: Error detection and recovery

- Flow Control: Fast sender

# ISO/OSI Reference Model

# Layering

FTP	Telnet	Web	Email
Trans Control Prot		User Datagram Prot	
Internet Protocol		Novell Netware (IPX)	
Ethernet		Token Ring	
Copper		Fiber	

← Same Interfaces

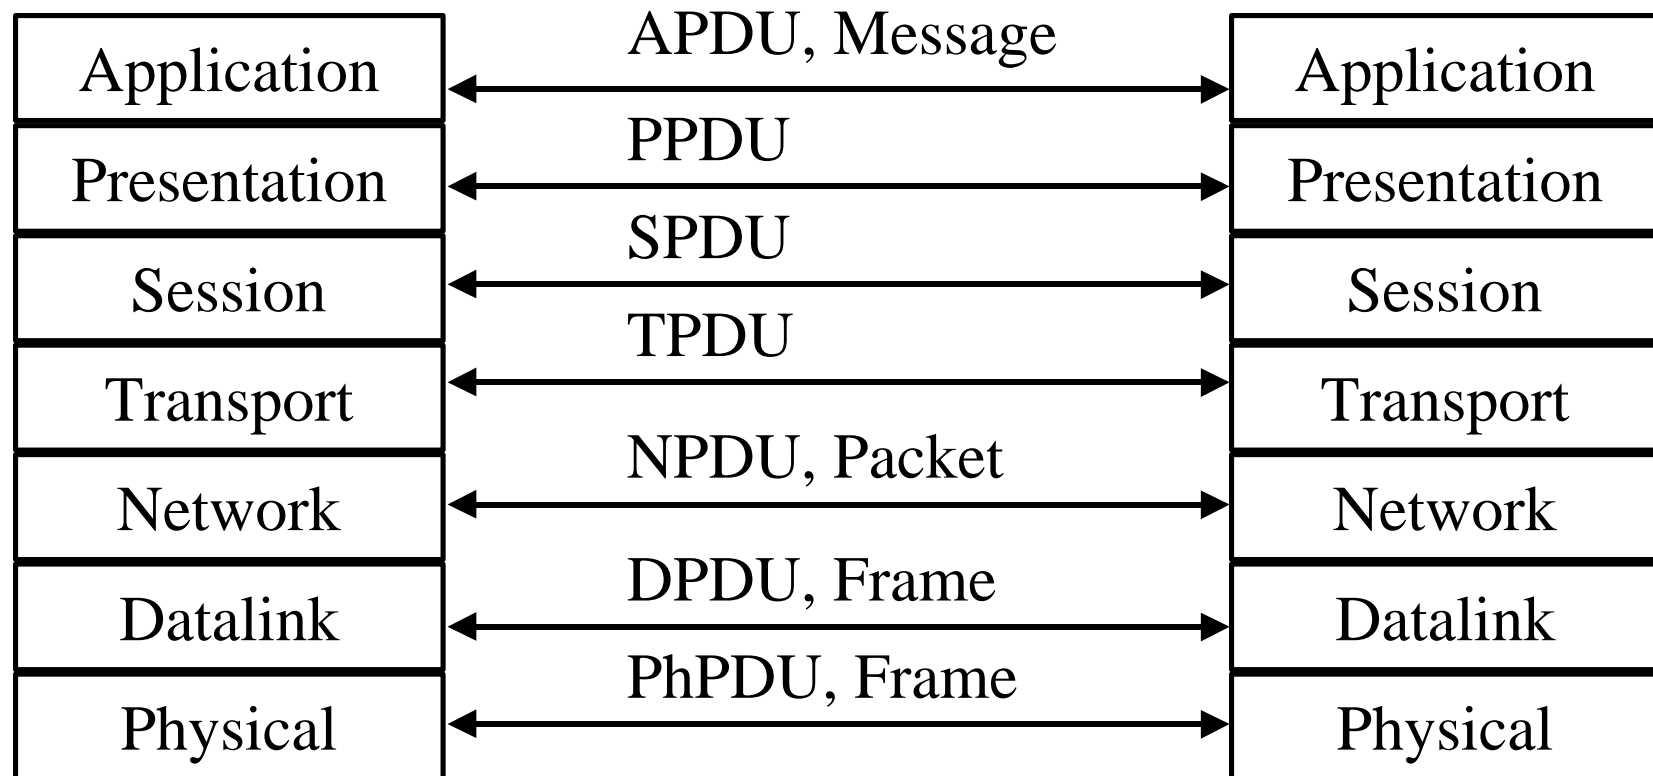

- ❑ Protocols of a layer perform a similar set of functions
- ❑ All alternatives for a row have the same interfaces
- ❑ Choice of protocols at a layer is independent of those of at other layers. E.g., IP over Ethernet or token ring
- ❑ Need one component of each layer  $\Rightarrow$  Null components

# Interfaces and Services

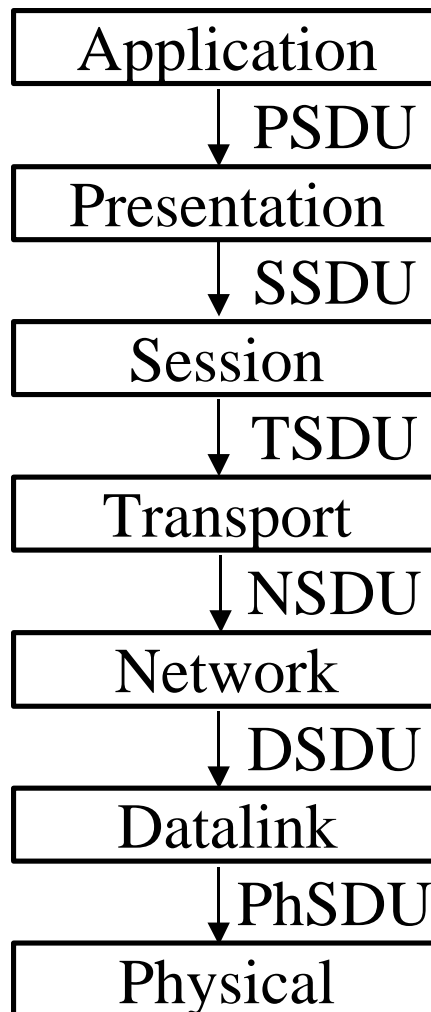

- ❑ IDU = Interface Data Unit = ICI + SDU
- ❑ ICI = Interface Control Information
- ❑ SDU = Service Data Unit
- ❑ PDU = Protocol Data Unit = Fragments of SDU + Header or Several SDUs + Header (blocking)
- ❑ SAP = Service Access Point

# Protocol Data Unit (PDU)

# Service Data Unit (SDU)

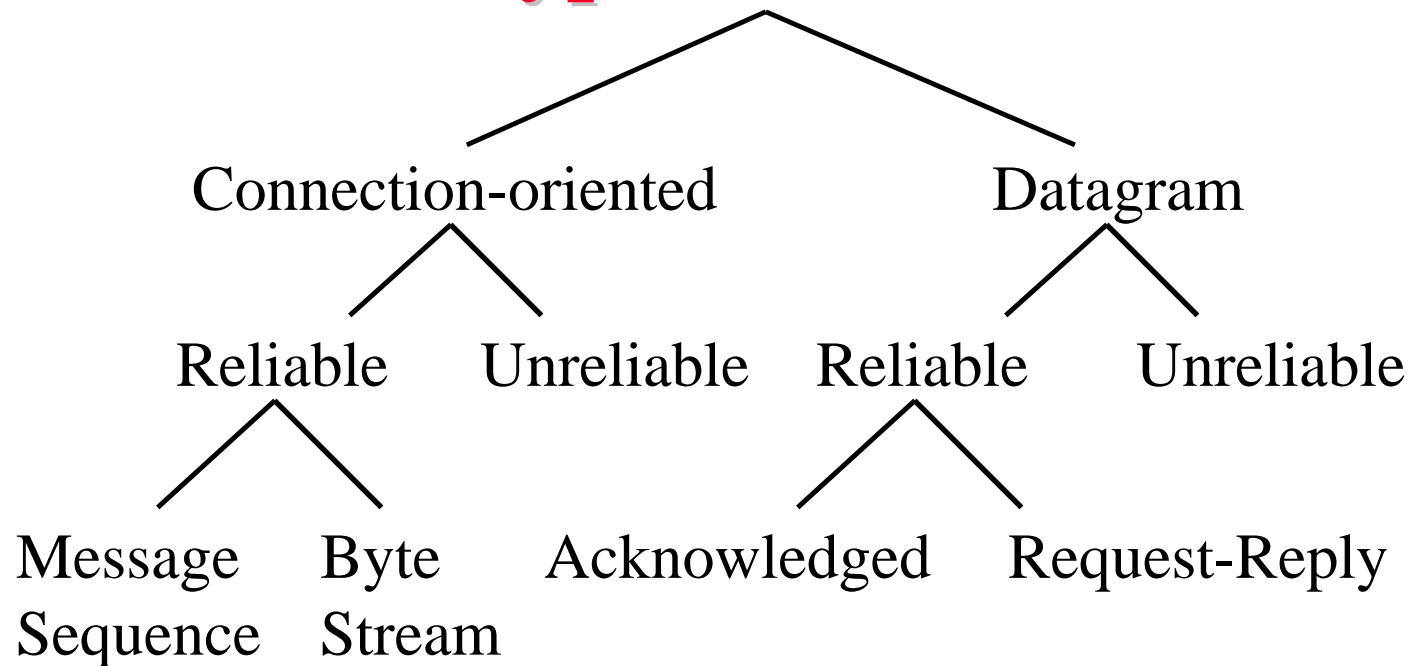

# Connection-Oriented vs Connectionless

- ❑ Connection-Oriented: Telephone System
  - ❑ Path setup before data is sent
  - ❑ Data need not have address. Circuit number is used.
  - ❑ Virtual circuits: Multiple circuits on one wire.
- ❑ Connectionless: Postal System. Also known as datagram.
  - ❑ Complete address on each packet
  - ❑ The address decides the next hop at each routing point

# Types of Services

- ❑ Byte streams: user message boundaries are not preserved
- ❑ Request-reply: The reply serves as an acknowledgement also
- ❑ Message oriented or byte oriented approach can be used for unreliable connection-oriented communication

# Service Primitives

- Indication = Interrupt

1. Request

2. Indication

3. Response

4. Confirm

Unconfirmed service: No confirmation or response

# TCP/IP Reference Model

- ❑ TCP = Transport Control Protocol
- ❑ IP = Internet Protocol (Routing)

TCP/IP Ref Model

TCP/IP Protocols

OSI Ref Model

Application	FTP	Telnet	HTTP	Application
Transport	TCP		UDP	Presentation
Internetwork	IP			Session
Host to Network	Ethernet	Packet Radio	Point-to-Point	Transport
				Network
				Datalink
				Physical

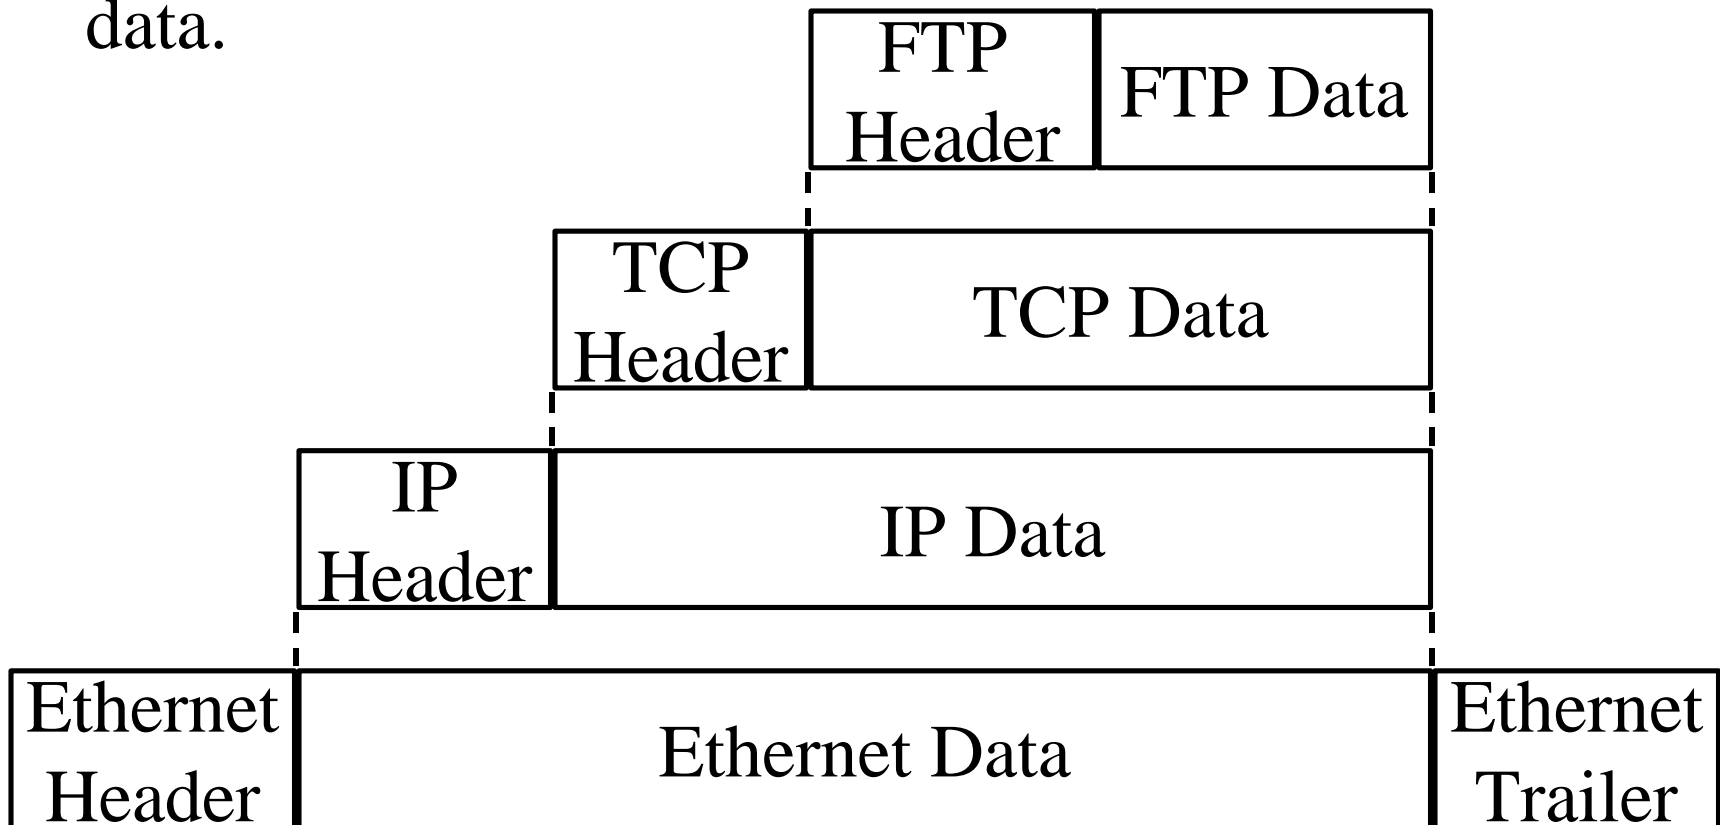

# OSI vs TCP Reference Models

- ❑ OSI introduced concept of services, interface, protocols. These were force-fitted to TCP later  
⇒ It is not easy to replace protocols in TCP.
- ❑ In OSI, reference model was done before protocols. In TCP, protocols were done before the model
- ❑ OSI: Standardize first, build later  
TCP: Build first, standardize later
- ❑ OSI took too long to standardize. TCP/IP was already in wide use by the time.
- ❑ OSI become too complex.
- ❑ TCP/IP is not general. Ad hoc.

# Layered Packet Format

- Nth layer control info is passed as N-1th layer data.

# Summary

- ❑ Communication, Networks, and Distributed systems
- ❑ ISO/OSI's 7-layer reference model
- ❑ TCP/IP has a 4-layer model
- ❑ PDU, SAP, Request, Indication

# Reading Assignment

- ❑ Read Sections 1.4, 1.5, Appendix 1A, 1B, Sections 2.2, and 2.3 of Stallings 6th Edition
  - ❑ 1.4 Protocols and Protocol Architecture
  - ❑ 1.5 Standards
  - ❑ Appendix 1A: Standards organizations
  - ❑ Appendix 1B: Internet Resources
  - ❑ 2.2 OSI
  - ❑ 2.3 TCP/IP

# Homework

- ❑ Visit [www.ietf.org](http://www.ietf.org) and find the titles of RFC1 and RFC137
- ❑ Check newsgroup [comp.protocols.tcp-ip](http://comp.protocols.tcp-ip) and list any one of the current issues being discussed there
- ❑ Submit answers to Problems 2.4 and 2.7 of Stallings 6th Edition
  - ❑ Problem 2.4: Communications between France and China
  - ❑ Problem 2.7: Segmentation and Blocking
