ABSTRACT

The CMAS is a system of instructional materials analysis consisting of a detailed comprehensive taxonomy of questions on product characteristics, rationale and objectives, content, theory and strategies, antecedent conditions, evaluation, background of materials development, and on background of the analysis. Documents related to or offering an explanation of the analysis system are ED 039 159, ED 040 094, ED 041 794, and ED 049 134. A brief summary of the course which is analyzed, "New History of the United States: An Inquiry Approach," is described in ED 051 059. Subject areas of this course are history, political science, and economics. More than 500 analysis items are used for the eight major and numerous minor topics of evaluation. The substantive content is analyzed as moderately sound, and the physical and technical content as very good, although more visual materials could have been included in the text. The author's rationale is implicit and fairly clear to the analyst, while the objectives set forth are very clear. Primary goals of the materials, as seen by the analyst, are for students to become skilled in the scientific method, questioners of existing knowledge and values, and creative, divergent thinkers. Cognitive objectives are stated clearly with emphasis on analytical thinking, and affective objectives are also stated. Cognitive content of the materials is judged as unbiased, of good quality, and balanced in values, with much emphasis placed upon analytical questioning and inquiry.

3.0 Content

4.0 Theory and Strategies

5.0 Antecedent Conditions

6.0 Evaluation

7.0 Background of Materials Development

8.0 Background of the Analysis

1.0 Product Characteristics

The materials analyzed below are designed for eleventh grade students of United States history. They were developed by the Social Studies Curriculum Center of Carnegie-Mellon University under the general direction of Edwin Fenton.

The techniques and strategies employed in the materials are based on the inquiry method, as defined by Fenton to be a process whereby the student forms hypotheses and develops proofs.

The author feels that students should have the opportunity to examine materials which motivate them to develop hypotheses and substantiate them. He believes these experiences will help to create thinking, contributing, responsible members of society.

1.33-A4

The cost of the audio-visual component kits is \$100.00 for each of two or \$180.00 if purchased together.

Kit #1 includes: one 33 $\frac{1}{3}$ rpm record, 25 transparencies, 6 filmstrips, 2 sets of picture cards, and 25 class handouts to be used with chapters 1-15.

Kit #2 includes: one 33 $\frac{1}{3}$ rpm record, 28 transparencies, 8 filmstrips, and 15 class handouts to be used with chapters 16-30.

Each kit is packaged in a black vinyl carrying case measuring 13"x 13"x 2".

The transparencies, in most cases, offer statistical data in graphic form. They are important components to the understanding of the content material.

The class handouts are useful to the student for following the reading selections and songs which are on the records.

However, they could also have been printed in the student text. Very little of the material in the handouts need be presented in that form. (It seemed to be a gimmick.)

The filmstrips offer illustrations, photographs, cartoons, etc. which present information in a non-verbal manner.

This material could have been placed within the student textbook; it would have made the book less dull and drab.

1.34-A2

There are fifteen objective tests of twenty questions each for every two chapters.

Each question offers four answer choices.

Fifteen essay tests are included with each covering two chapters.

Each test consists of four questions. These essay questions are generally broad-based and many ask for specific evidence to support attack or defense of the generalization.

1.34-A3

The test booklet costs \$.80 per copy.

1.34-A5

Nothing is said about what is to be measured by the tests.

Therefore, it is difficult to judge validity.

1.35-A1

Each student should have a copy of the student textbook.

Each classroom teacher should have a copy of the Teacher's Guide and test booklet.

Each class should have the opportunity to utilize the Audio-Visual kits. (It is not necessary for each classroom to have the kits.)

Several classes can share the use of the kits.

1.35-A2

The use of the materials in the Audio-Visual kits would mandate the availability of the following equipment: a phonograph, an overhead projector, a filmstrip projector, and a spirit duplicating machine.

1.4-A

Both the expository and inquiry or discovery activities are utilized. There are many reading activities and the material is to be used in discussion and writing exercises.

The teacher can select a variety of techniques ranging from pure lecture to directed discussion to assistance in hypothesis testing.

The audio-visual materials all supplement these techniques.

* Criticism of CMAS form.

1.0 Product Characteristics

Information. This section gives a general overview of the curriculum materials, including a complete description of the physical characteristics and a brief description of selected substantive characteristics.

Instruction. After completing the entire analysis, write and insert here an overview of the entire analysis in not more than 100 words. The overview should be both selected, pointing to the most important characteristics of the materials as the analyst sees them, and succinct.

1.1 Subject Content

This topic is treated very briefly here. See Section 3.0, Content, for elaboration; see also Section 6.0, Evaluation.

1.1-Q1 Indicate the discipline or disciplines most prominent, mark them "1," "2," "3," in order of prominence; or, if they cannot be distinguished, mark them all "1." If more than three disciplines are prominent, mark either "interdisciplinary" or "multidisciplinary."

Anthropology	_____	Psychology	_____
Economics	<u>3</u>	Sociology	_____
Geography	_____	Social Psych.	_____
History	<u>1</u>	Interdisc.	_____
Political Sci.	<u>2</u>	Multidisc.	_____

1.2 Intended Uses

Much of the content of this section is elaborated in Section 5.0, Antecedent Conditions.

1.2-Q1 For what grade level or levels are these materials most appropriate, according to the author?

Grade level(s) 11 / / / / / # 4

SN NA UA C

1.2-Q2 Are there any particular kinds of students, teachers, schools, or communities for which these materials would be especially suitable or unsuitable--for example, students from particular ethnic groups, teachers without much background in social science, schools with or without flexible facilities, and communities that are or are not politically conservative. If "yes," elaborate.

/ / / / / / / 4 /
 Yes No SN NA UA C

1.2-Q3 What does the author consider the most appropriate length of time, in weeks or years, for the use of the whole set of materials? Circle "weeks" or "years" according to which unit is used.

32 weeks or years
 / / / 4 /
 SN NA UA C

1.21 Grade Level(s)

1.21-Q For what grade level or levels are these materials most appropriate, according to the author? For what other grade level or levels might they also be used with reasonable effectiveness? What are the analyst's views with respect to the most appropriate grade level or levels, and with respect to another grade level or levels for which the materials could be used? Check the appropriate boxes below.

Grade levels for which materials are most appropriate	Author's Intention													<input checked="" type="checkbox"/>				
	Analyst's Opinion	K	1	2	3	4	5	6	7	8	9	10	11	12	13	14		

/ / / 4 /

Other grade levels where materials could be used	Author's Intention																	
	Analyst's Opinion	K	1	2	3	4	5	6	7	8	9	10	11	12	13	14		

1.22 Student Characteristics

1.22-Q Are there any particular kinds of students for whom these materials would be especially suitable or unsuitable--slow or able learners; particular social, economic, or ethnic groups? If "yes," elaborate.

/ / / / / / 4 /
 Yes No SN NA UA C

1.23 Characteristics of Teacher, School, and Community

1.23-Q Are there any particular kinds of teachers, schools, or communities for which these materials would be especially suitable or unsuitable--for example, teachers with or without much background in social sciences, schools with or without flexible facilities, communities that are or are not politically conservative? If "yes," elaborate.

Yes No
 SN NA UA C

1.24 Required Time

1.24-Q What does the author consider the most appropriate length of time, in weeks or years, for the use of the whole set of materials? What is the range of times, from shortest to longest, that the author thinks the materials might be used effectively? What lengths of time does the analyst consider appropriate? Fill in appropriate numbers below and circle "weeks" or "years" according to which unit is used.

	According to author	According to analyst	
Most appropriate length of time	32	36	(indicate weeks or years)
Shortest appropriate length of time	30		
Longest appropriate length of time	36		

SN NA UA C

1.25 Sequence and Independence of Parts

1.25-Q1 To what extent can the teacher depart from the sequence of materials prescribed by the author without impairing the effectiveness of the materials?

0 1 2 3 4 5 6 SN NA UA C
 Very little Moderate departure Very much

1.25-Q2 To what extent can parts of the materials be taught separately, apart from the rest of the materials, without impairing the effectiveness of the parts so taught?

0 1 2 3 4 5 6 SN NA UA C
 Very little Moderate departure Very much

1.31 Printed Student Materials

1.31-Q1 There are a number of charts below which apply to the student text (if any) and to other student materials (if any). In the chart immediately below, the first line has the word "text" in the first column. The second column is for the complete title of the text. On the second line, the analyst should put in the first column a short identifying name for the second piece of student materials he is analyzing--e.g., "readings," "workbook"--and then the full title should be written in the second column. In subsequent charts these materials will be identified by the short identifying name. If there is a third item to be analyzed, it should be identified on the third line of the chart. If there are additional items, they should be described appropriately in the narrative.

 liable reliable reliable

1.35 Costs

1.35-Q1 The calculation of costs for classroom use of curriculum materials is difficult and complex. This question is to help the analyst summarize and analyze the total cost of adopting a particular curriculum materials package. Most or all of the costs summarized here have already been given in Sections 1.31-1.34 and these figures should be used in making computations for this section.

Among other important variables affecting cost calculations are these two: 1) What materials are essential and which are optional? and 2) Are costs to be calculated for the first year of use, or over a period of years of use? The following instructions take account of these two variables. The "Minimum" and "Maximum" columns refer to the costs if only the most essential materials are bought (minimum) and the costs if all materials are bought (maximum). The "First Year" columns refer to the costs if materials are bought and used for only one year. The "Subsequent Years" columns refer to the costs if the non-expendable materials are used for a period of four years.

	First Year		Subsequent Years	
	Minimum	Maximum	Minimum	Maximum
Cost per student				
Text	\$ 7.28	\$ 7.28	\$	\$
Tests				
Other printed student material				
Other media				
Total cost per student	\$ 7.28	\$ 7.28	\$ 0	\$ 0

	First Year		Subsequent Years	
	Minimum	Maximum	Minimum	Maximum
Cost per classroom				
Teacher's Guide	\$ 3.72	\$ 3.72	\$	\$
Other printed teacher's material TEST BOOKLET	.80	.80		
Other media	180.00	180.00		
Total cost per classroom	\$ 184.52	\$ 184.52	\$ 0	\$ 0

The analyst should comment freely in the narrative on the assumptions, uncertainties, and qualifications related to his total cost figures.

X / / / /
SN NA UA C

1.35-Q2 Are there costs other than those indicated above which a school or school district might incur if these materials are used? For example, might it be necessary to buy unusual equipment or supplies, to give special training to teachers, or to modify school facilities?

X / / / /
SN NA UA C

1.4 Dominant Instructional Characteristics

To the extent that materials can influence the course of learning activities, give your best judgments as to the probable effects of these materials in shaping the following dimensions of learning. The use of various teaching strategies is treated much more fully in Section 4.0, Learning Theory and Teaching Strategies.

1.4-Q Describe the dominant types of teaching and learning activities that are prescribed or suggested by these materials.

2.0 Rationale and Objectives

In this section the rationale and objectives of the material are described.

The author believes the student is interested in investigating and examining those things which go to make up man's history.

Further, it is his belief that society should foster the opportunities for each individual to develop into an independent thinker and responsible citizen. In this role the student can pursue the goals of society and contribute effectively to them.

2.1-A1

The nature of the individual is that he is capable of investigating and examining things which are part of man's history. By questioning these things the individual is in a position to understand man and his society.

2.1-A2

The author feels that one goal of education which society should foster is to produce independent thinkers and responsible citizens who can take active roles in the democratic system. They should have a rich cultural life and always be able to assimilate new information.

2.12-A

See narrative 2.1-A2

2.14-A

The goal of our society should be to give each individual the opportunity to develop to the limits of his ability.

2.15-A

The author feels that the citizen can influence society and must make choices to help pursue the goals of the society.

2.2-A1

The materials in this project illustrate that knowledge is a total of man's observations of his experience and the student can gain this knowledge by inquiry and the proof process.

2.2-A2

Society and the men who are part of it are the sources of values and man acquires values in a variety of ways. He may get his values from his family, friends, experiences, church, etc. As he learns more about society he also learns more about its values.

* 2.415-Q1

The word "...other" should be "... otherss"

* 2.416-Q2

"of external criteria" should be underlined

* 2.42-Q1

the scale is confusing.
specific ----- general
shouldn't these poles be reversed?

2.5-A3

The author indicates that "the curriculum does not attempt to instill a particular set of values in students" but by "discussing a value in class without trying to arrive at consensus... each student" is challenged "to think for himself and to reflect upon the validity of values which he has learned". He states that this "clarification gives each child an opportunity to develop his unique value system".

* 2.51

The entire concept of "Valuing" and a description of it was omitted from this section.

2.52-A1

The author accepts a basic ethic of the dignity and worth of the individual. The curriculum raises questions of values consistently. It continually examines different value systems to present students with an opportunity to "pick and choose" from among a wide range of values. It offers students an opportunity to "examine the role of values in an entire culture" thus enabling them to investigate the relationships of values to the societies from which they grew. It also gives students opportunities to reflect about whether particular values from the past are pertinent to their own lives.

* 2.53-Q1

the scale is confusing.
specific ----- general
shouldn't these be reversed?

* 2.54-Q2

should read "performance objectives" NOT "performances objectives".

* 2.6

The explanation and information about Psychomotor objectives should precede the question 2.6-Q.
It is difficult to answer the question if the explanation of the terminology follows the question.

2.61-A

The perception phase of psychomotor objectives is evident in the audio-visual activities utilized in the course. The transparency materials placed on a screen by means of an overhead projector are intended to give sensory stimulations which make the student respond. The recordings serve the same purpose. The information or clues thus conveyed to the student cause him to get involved with a particular task. All of these techniques are used to enable the student to utilize the inquiry approach to learning.

2.0 Rationale and Objectives

Information. A rationale is a philosophic position on education held by a curriculum developer. It consists of the assumptions and goals which the developer uses as guides and criteria for the selection and ordering of objectives, content, strategies, and evaluation processes in the curriculum. The assumptions include assumptions about the nature of the individual, of society, and of the relationship between the individual and society; also assumptions about the nature of knowledge and values. To the extent that a curriculum is embodied in materials, the rationale also supplies guides and criteria for the materials.

Objectives of curriculum materials are statements that indicate the ways in which students are expected to change their thinking, values, and actions as a result of using the materials. Objectives range from very general to very specific and include both substantive and methodological objectives. Specific objectives are sometimes stated in the form of "behavioral," or "performance," objectives.

Instructions. With respect to all parts of the CMAS, the evidence for answers to questions may be explicitly stated in the materials or other sources, or it may be implicit and necessitate the making of inferences by the analyst, or there may be no evidence at all on which to base an answer. Many of the questions on rationale may put a severe strain on the inferential powers of the analyst and some may have to go unanswered.

After completing Section 2.0, write and insert here an abstract of the section in not more than 100 words. The abstract may contain both descriptive and evaluative statements.

2.0-Q1 Can the author's rationale be found explicitly and clearly in the materials or in other sources available to the analyst? Can it be found implicitly? Does it seem that no rationale exists? Indicate your answer on the following scale.

/	/	/	/	/	X	/	/	/	/	/	/	/	/	/	/	/	/	/	/
0	1	2	3	4	5	6	SN	NA	UA	C	4

2.21 Nature of Knowledge

Information. Competing views about the nature of man and the universe have flourished in the Western world in the 19th and 20th centuries, some of them dating back to ancient Greece. Such philosophic positions typically deal with the nature of reality (metaphysics), of knowledge (epistemology), and of values (axiology); they have clear implications for education, which have been spelled out by educational theorists. The three philosophical views which are described briefly below were selected because they represent a wide range of views and imply especially clear and divergent courses of action in curriculum development.

Idealism: Knowledge and values exist independently of man and of human experience; they are absolute and changeless. Man's task is to learn about such knowledge and values and to use them as guides for his life.

Pragmatism: Knowledge and values are derived from human experience and their validity is judged by how well they seem to serve man's purposes; hence they are relative and changeable.

Existentialism: Knowledge and values are very personal matters for each individual. Personal awareness and choice-making are the focus of man's existence.

2.21-Q1 through 2.21-Q4

With respect to knowledge, to what extent can the author's position be identified with any or all of these philosophical positions?

2.21-Q1 Idealism:

0	1	2	3	4	5	6	SN	NA	UA	/ # 4 /		C							
Much critical and analytical thinking		Some of each			Much memory work														

2.41 Taxonomy of Cognitive Objectives

Information. In several parts of the CMAS, beginning with this section, use is made of the TAXONOMY OF EDUCATIONAL OBJECTIVES: HANDBOOK I: COGNITIVE DOMAIN, edited by Benjamin S. Bloom (New York: David McKay, 1956). The taxonomy is used as presented by Bloom, except that "memory" is substituted for "knowledge" to describe the first level of objectives. The analyst should acquire some familiarity with Bloom's book.

The categories of the Bloom taxonomy are cumulative, in that each objective depends for its accomplishment on all of the preceding objectives and each is more complex and difficult than the preceding objectives.

Brief descriptions of the six major categories of the Bloom taxonomy are given below, to serve as a basis for analytical questions in this and subsequent sections.

Memory ("knowledge" in the Bloom taxonomy): The recall or remembering of facts, dates, rules, principles, patterns, methods, generalizations, theories, etc.

Comprehension: Understanding or apprehending what is being communicated, including the ability to translate and interpret the communications but not necessarily to understand all their implications or to relate them to other things.

Application: Using facts, rules, methods, theories, etc. in new concrete situations.

Analysis: Breaking something down into its constituent parts, so that the parts can be identified and the interrelationships of the parts understood.

Synthesis: Putting things together to form a new entity, such as a new idea, plan, hypothesis, or set of relationships.

Evaluation: Making quantitative and qualitative judgments about the extent to which observed phenomena meet stated standards or criteria

Whereas it is usually easy to distinguish memory-level objectives from the "higher"-level objectives of the Bloom taxonomy, it is often difficult to distinguish among the higher-level objectives, comprehension through evaluation. Norris M. Sanders suggests (page 6 in Classroom Questions: What Kinds?) that the term "critical thinking," which has had much currency in education, can be closely identified with all of the five cognitive levels above memory. This terminology is used in parts of the CMAS as a simplifying or alternative supplement to the six-level Bloom taxonomy. Note that Bloom also uses a term-- "intellectual abilities and skills"--to designate the upper five levels of the taxonomy as a group, thus emphasizing the distinction between the first level and all the other levels.

In general, to what extent do the materials specifically point toward achievement of each of the following cognitive levels?

2.51 Taxonomy of Affective Objectives

Information. In several parts of the CMAS, beginning with this section, use is made of the TAXONOMY OF EDUCATIONAL OBJECTIVES: HANDBOOK II: AFFECTIVE DOMAIN, by David R. Krathwohl, Benjamin S. Bloom, and Bertram B. Masia (New York: David McKay, 1964). The analyst should acquire some familiarity with this book. The brief descriptions of the five major categories of the Krathwohl taxonomy are given below, to serve as a basis for analytical questions in this and subsequent sections. The categories of the taxonomy are cumulative, in that each objective depends for its accomplishment on all of the preceding objectives and each represents a higher level of engagement or involvement.

Receiving: Being aware of, or paying attention to, the intended subject matter.

Responding: Interacting with the subject matter in a minimal or moderate way.

Organization: Putting individual values into a system that establishes their relationships to each other.

Characterization: Completing the process of adopting and internalizing a set of values so that they become an integral part of a person's character.

It is possible that authors' affective objectives are more difficult to ascertain than their cognitive objectives. Nevertheless, the analyst should indicate

to the best of his ability the extent to which the materials specifically point toward achievement of each of the following affective levels.

	Little or none		To a moderate extent				To a great extent

2.52 Value Postures

Information. Some authors claim that they are not, or should not, be concerned with values; they may claim that their materials are "value-free." Even when such a position is taken, it is likely that the materials will contain implicit positions on values.

The following four positions on values can be identified. (They overlap the Krathwohl taxonomy somewhat, but only partially.)

Indoctrination: Conveying attitudes, beliefs, and values without examining the reasons for them or alternatives to them.

Clarification: Making values and value systems of individuals clear, without attempting to change them.

Analysis: Examining values in order to learn what has caused them to be formed, how they are related to each other, and what their implications are.

Commitment: Encouraging individuals to take clear stands on value issues and to defend and act on those values.

2.52-Q1 Does the author intend that his materials be "value-free" or does he clearly intend to deal with values?

$\frac{1}{0} \quad \frac{1}{1} \quad \frac{1}{2} \quad \frac{1}{3} \quad \frac{X}{4} \quad \frac{1}{5} \quad \frac{1}{6} \quad \frac{1}{SN} \quad \frac{1}{NA} \quad \frac{1}{UA} \quad \frac{1}{C}$

2.61 Details of Psychomotor Objectives

Information. While psychomotor objectives may not play a prominent role in social science education, they are included here for the sake of completeness. These objectives may be of importance for some social studies activities in the elementary grades. Also, at any grade level, social studies may be combined with subjects in which psychomotor objectives are important, such as art and physical education.

Following the work of Elizabeth Simpson, the following major categories of psychomotor objectives can be identified. As with the cognitive and affective taxonomies, these objectives are cumulative.

Perception: Receiving sensory stimulation, selecting cues that are relevant to the task at hand, and using the cues as aids to perform the task.

Set: A preparatory adjustment or readiness for action, including mental, physical, and emotional sets.

Guided response: First steps in performing a psychomotor objective; done consciously, mostly through imitation and trial and error.

Habitual response: Habitual and semi-automotive performance; done with confidence; possibly combining several responses.

Complex overt response: Easy, efficient performance, combining (if appropriate) a number of responses into a complex set.

2.61-Q Give a general description of the psychomotor objectives in the materials, including, if appropriate, references to the elements of the psychomotor taxonomy.

$\frac{18}{SN}$ $\frac{1 \quad 1 \quad 1}{NA \quad UA}$ $\frac{1\#2}{C}$

3.0 Content

In this section the content of the materials is examined. It is found that the author believes the social sciences should be taught early in a student's career. Since he believes that analytical questioning and inquiry are the heart of history, much emphasis has been placed on this in the materials.

In cognitive content the author places little emphasis on generalizations because students must be able to build new generalizations and not live in the future with only previous generalizations and knowledge.

As far as affective content the material consistently raises questions of values and affords students the opportunity to reflect upon them.

* 3.1-Q1

No definition of theory here. It is, however, found later in 3.114.

3.11-A1

The social sciences, according to the author, should be taught early in the school sequence. They offer many useful analytical questions for historical investigation. These questions can be drawn from the work of other social scientists.

3.11-A2

The author views history as something R.G. Collingwood has defined with these four points:

- (1) History is a kind of research or inquiry
- (2) The object of history as a discipline is to find out about the actions of people who have lived in the past
- (3) The historian proceeds by interpreting evidence
- (4) Studying history is useful because it can encourage reflective thinking leading to human self-knowledge.

The author feels that analytical questioning and inquiry are the heart of history.

3.111-A1

The author defines a fact as a statement about a person, event, etc. which meets the tests for historical credibility.

3.111-A2

The author sees facts used to help the student solve new problems or cope with new experiences.

3.112-A1

The author views a concept as a category which is useful as a basis for a classification system.

3.112-A2

He hopes to teach students the meaning of key procedural concepts and introduce them to their use in investigations in the social studies.

3.112-A3

There are many major concepts which are important among them are: leadership, decision-making, ideology, citizenship, scarcity, distribution, role, status, culture change, values, historical topics, historical definition.

3.113-A1

A generalization is, according to the author, a statement about past or present society which explains two or more facts and meets the tests imposed by a method of inquiry.

3.113-A2

Generalizations are one legitimate way to think about structure because they do define the investigated subject matter and they do control its inquiries but, the author states, they don't do either task well.

3.113-A3

The author feels that lists of generalizations are inert. They become ends in themselves. It is extremely difficult to remember the many generalizations identified by Hanna and others. These generalizations don't help the students learn the process by which social scientists develop a generalization. Therefore, it is the process that is important. Students must be able to help build new generalizations and not live in the future with only previous generalizations and knowledge.

3.114-A1

Theory as viewed by the author is a generalization which is so well documented and accepted that a piece of evidence which seems to contradict it is assumed wrong until another more encompassing theory can be developed to explain both the old and the new evidence.

3.115-A

See narrative 3.11-A2.

* 3.12-Q2

A definition of "constructs" should appear sometime before this.

3.12-A5

The major processes emphasized are student use of inquiry skills, based on the author's six step "mode of inquiry".

3.122-A4

See narrative 3.112-A3.

3.123-A4

See narrative 3.113-A3.

3.126-A1

See narrative 3.11-A2.

3.2-A1

The curriculum accepts as a basic ethic the dignity and worth of the individual. But it does not attempt to instill a particular set of values in students.

However the curriculum consistently raises questions of values. The course examines value systems of men throughout history in order to introduce students to a wide range of values from which they may pick and choose. It examines relationships of values to the societies from which these values grew teaching students to examine the role of values in an entire culture. It gives students opportunities to reflect about whether particular values from past societies are pertinent to their own lives.

3.21-A1

By raising questions of values the content continually affords the student the opportunity to reflect upon substantive values.

3.21-A2

In all areas of conflict, problems, and dilemmas, particularly of a comparative nature, students are confronted with value questions.

3.22-A2

See narrative 3.21-A2.

3.0 Content

Information. In this section the concern is with what content-related changes are intended in the knowledge, attitudes, and behavior of the student through the use of the materials being analyzed. As a result, this section is broken down into cognitive content and affective content. Cognitive content is concerned with examining the facts, concepts, generalizations, structure(s), and theory(ies) presented in the materials. Affective content is concerned with examining the presence of values and attitudes in the materials, and the affective levels of commitment to which the materials aspire.

Instruction. After completing Section 3.0, write and insert here an abstract of the section in not more than 100 words.

3.1 Cognitive Content

3.1-Q1 How useful does the author view each of the following to be in explaining his discipline?

For analytical purposes, the analyst can refer to the following definitions:

A fact is a unique thing or event that exists in the real world.

A concept is an idea generalized from particular facts. The essence of a concept is its unity, its oneness. A useful concept should identify a cluster of properties that usually go together and that have a meaningful relationship to each other. The usefulness of a concept depends partly on its general acceptance, partly on its communicability--but most importantly on its relationship to a larger body of knowledge.

A generalization is a statement of a relationship between two or more concepts. Most useful generalizations are universally applicable and can be used for prediction purposes. Useful generalizations are desirable knowledge.

A structure is the arrangement and interrelationship of concepts within a whole. The concepts of a structure define the investigated subject matter of a discipline and function as a guide to inquiry.

Yes No SN NA UA C

3.114 Theory

For analytical purposes, the analyst can refer to the following definition: A theory is a general statement about relationships among facts. The facts that are a part of a theoretical statement are not isolated facts, but facts classified or generalized into concepts. A theory is a structure of concepts. It states a relationship--often a causal relationship--among the concepts. A theory is something more than a structure; it is an explanation of how a structure works. Theory guides and is related to the whole body of scientific inquiry. Concepts are the building blocks of theory and a theory can be no better than the concepts with which it is constructed. Conversely, concepts

are no better than the theories to which they lead. A structure of knowledge, which relates concepts to each other, can only be justified by its role in facilitating sound theories. By specifying what concepts are related and how they are related, one is better able to make predictions about real world phenomena. Theories come at several levels of generality. Generalizations, much used in curriculum work, are theories of limited scope--small theories, pieces of theory. Some theories about limited parts of reality, which become very firmly established, are called laws. A theory can be an overarching structure of an entire discipline.

3.114-Q1 How does the author define theory?

3.2 Affective Content

3.2-Q1 What is the author's view of the affective content of the discipline(s)?

X / / / / 3 /
SN NA UA C

3.2-Q2 How are values and attitudes presented in the materials?

A value is assessed worth toward a thing, event, behavior, or phenomenon. To value something means it has met certain criteria you have posed.

An attitude is a simple generalized relationship of a person to a class of things or situations. A value is often considered to be more positive, more structured, and more likely to lead to action than attitudes. An attitude is indicated by statements such as "I feel that..." "I think that..." and "The way I see it is...." To value involves choosing, prizing, and acting upon something.

3.21 Author's View of Affective Content

In this section, the analyst is concerned with the author's view of the affective content of his discipline and other related disciplines separate and apart from the curriculum materials. Information for this section will be found in journal articles, position papers, books, and other similar sources. This information is not obtained from an examination of the curriculum package of materials.

3.21-Q1 How important is the affective content of his discipline to the author?

4.0 Theory and Strategies

Theories and strategies are covered in this section. It is the opinion of the author that students can become useful, active societal members as a result of exposure to his curriculum. As he states, the student will be equipped to permit him "to live a fruitful life in an affluent democratic society."

It is the author's intention to challenge the student to discover logical conclusions from explicit data, create hypotheses from given information, and substantiate these hypotheses.

By using directed discussion and discovery techniques the author attempts to engage the student in developing a sophisticated thought process to enable him to contribute to society.

4.1-A1

"Thought develops as a child's conceptual structures become reorganized. He fits new information into the conceptual scheme he has been developing throughout his life. If new data fit the scheme he carries in his head, no problem exists. But if new data do not fit his scheme, he must change or extend it in order to make sense of the new information. The source of many individual differences among children may lie in the amount of concrete thinking each requires before formal thought can proceed independently."

4.13-A

The curriculum attempts to help each student develop to the limit of his ability into an independent thinker and a responsible citizen of a democratic society. The author is concerned most with the social personality and his relations with the society. A good citizen who can think independently and be a responsible contributor to the society is the goal of the author.

4.132-A

The author believes some students (those interested in college) are motivated by the need to pass college board examinations to get into college. Therefore, the curriculum stresses the skills and attitudes required to accomplish this. Other students are motivated to just be able to deal with the many political, social, and economic problems which will confront them as responsible citizens in a democratic society.

The analyst feels that students should be motivated to learn in order to be able to function as thinking individuals in a highly complex society. The curriculum should equip them to deal with the problems which they will face in the future.

4.133-A

The author believes that the student can, after experiencing the curriculum, become a useful, active, contributing member of the society. He will be equipped to permit him "to live a fruitful life in an affluent democratic society".

The analyst feels that students should be able to experience all things about life. They should have the opportunity to be exposed to knowledge, civilization, and culture in the curriculum. They should be able to experience the aesthetic as well as the practical aspects of life. They should be able to gain an appreciation of all that life has to offer so they may live a complete and fruitful life.

4.2-A1

See narrative 4.1

4.2-A4

The analyst agrees with the basic theoretical position of the author because children seem to create new schema as they are confronted with new information which does not fit into the already established schema. The student will adapt to this new information (particularly, challenging information) and accommodate to it.

4.21-A1

The author feels that questions asked by the teacher in directed discussion will challenge the "students to engage their mental faculties in class discussion and to develop sophisticated thought processes". The whole idea of inquiry into challenging areas seems to create a willingness to learn.

4.21-A3

To most students this challenge will be accepted much of the time. However, there are some students who will not be challenged to inquire or discover for themselves. They must be fed much of the information.

See narrative 4.1 with particular attention to the last paragraph.

4.212-A1

Interest and curiosity are aroused in the student by challenging him to discover some logical development or conclusions from explicit data; create hypotheses from given information and substantiation of these hypotheses; media materials which generate some excitement and further inquiry into the topic, etc.

4.212-A2

The challenge, to the student, through questioning, inquiry, exciting media, and repetition of the methodology will, in my opinion, probably not be maintained or sustained completely throughout the use of the materials. This will be especially true of those students mentioned in narrative 4.21-A3.

4.214-A1

Basically the students are to be grouped in a large class situation with the teacher directing the discussion. This may take several forms such as asking questions to make certain students know evidence from readings to lead students through data toward generalizations, to probe students' recall of information or technique and use in further investigation. Occasionally the students are divided into small groups. This gives the students an opportunity to contribute to discussions simultaneously and helps students learn how to interact without the supervision of the teacher.

There appears to be more reliance on the large group situation than on the small group interaction.

4.214-A2

See narrative 4.214-A1

4.215-A1

The author feels that directed discussion contributes substantially toward instilling certain attitudes in students. "Calling on students whether or not they have raised their hands implies that no one gets a free ride." All students are expected to participate and contribute to the activities of the classroom. The teacher can help to develop the shy student or child with a poor self-image into a willing participant by asking gradually more difficult questions. "The effect of work like this on the self-images of children", states the author, "should be a vital part of social studies instruction".

4.22-A1

Most of the information presented to the student is in the form of extracted readings from primary and secondary source materials. Introductory comments, expository essays, and several key questions accompany the readings.

4.221-A1

The student is usually asked to work with concrete information (in readings and essays) which help him to master a body of knowledge.

4.222-A1

Most of the knowledge to be learned is presented in the readings and essays. The introductions and study questions guide the student to pertinent data within the material. The student is asked to go beyond memorization to look for implications and for connections between one reading and the others.

When they can make a point better than the written word, audio-visual materials are utilized. Class handouts are also used to emphasize a particular point or give some direction to a discussion.

4.223-A1

By answering the study questions with the readings the student is able to connect separate ideas, find implications, and form generalizations.

4.23-A1

The student is constantly forced to use analytical concepts to help guide his search for further data. He also must interpret data in creating hypotheses, modifying hypotheses, and stating generalizations. By following the established mode of inquiry the student should reach the learning goals.

4.24-A1

The author has chosen content to (1) help students learn essential concepts for the mode of inquiry (2) fit interests and needs of adolescents (3) accumulate knowledge about economic, social, and political problems and (4) help students become "excellent citizens in a democracy".

4.241-A

By utilizing the accumulated knowledge in inquiry the student is continually reviewing both the information (knowledge) and the method (technique).

4.25-A1

The student must at least be able to inquire independently of the questions which the teacher uses to cue him. "A student who has not mastered inquiry skills", the author states, "may well find himself on the human scrap heap ten years after he leaves school".

4.252-A

The materials were designed for students who would be able to operate on Piaget's "Phase of Formal Operations". This is where the student "acquires the capacity to think and to reason beyond his own realistic world and his own beliefs. Cognitive random behavior is replaced by a systematic approach to problems". The student is now concerned with establishing hypotheses. He searches for hypotheses which can account for the observed and possible events which have occurred to him. He attempts to prove empirically which possibilities could materialize. Deduction by hypothesis and judgment by implication furnish the student with the chance to reason beyond mere cause and effect.

The constant utilization of Fenton's "Mode of Inquiry for the Social Studies" demands that the student move in Piaget's "Phase of Formal Operations". For only then will the student be equipped to work with the mode of inquiry in a successful manner.

4.3-A1

The principal teaching modes employed in this curriculum are two types of directed discussion (teaching concepts, proof process, hypothesis formation, and value dilemma presentation) and discovery exercises.

4.3-A2

The author describes the modes by using terms "directed discussion" and "discovery".

4.4-A1

The predominant pattern of strategy is to have the students read a selection from the textbook, discuss it in class with the teacher and other students, and, then, perhaps write an essay or some paragraphs on a hypothesis they developed from the material. The teacher would continually question the class and direct the discussion.

4.41-A

The author believes that directed discussion is "perhaps the most useful way to help students learn proof process". The teacher can consistently encourage students to examine the logic of their thinking by the sorts of questions he asks. Discussion also can often result in the acquisition of facts and generalizations. Directed discussion also contributes toward attempts to instill certain attitudes in students.

4.5-A2

The use of the materials would have to be varied more than they are. The pattern can tend to become almost repetitious and could be boring.

4.0 Theory and Strategies

There is no comprehensive theory which covers all aspects of learning. Nor is there a comprehensive theory which covers all aspects of instruction or educational methodology. When examining curriculum materials, we must do careful analysis and make sound judgments about theory and its application to the curriculum materials. In this section the concern is the adequacy with which components of theory can be described and explained, rather than the rightness or wrongness of a particular theoretical position.

Learning theorists are concerned about the emotional, intellectual, and behavioral development of the child: his personality, motivations, and the social conditions of learning. More specifically, they are also concerned about reinforcement, transfer of learning, and retention. Instructional theory is closely tied to learning theory. It is both prescriptive and normative. It prescribes rules which convey the most effective way of achieving curricular objectives. For example, if a concept in mathematics is presented to a student in small steps combined with immediate feedback, it is likely he will better retain the concept. Instructional theory is normative in that criteria are established (on some basis) and conditions are stated for meeting the criteria. In short, a theory of instruction is concerned with the improvement of, rather than a description of, learning.

A teaching strategy is a chosen pattern of action(s) aimed at reaching some goal. It includes the conceptualization of the desired interaction and outcome; the selection of teacher role; the selection of materials and media; the selection of the pattern of communication; and the selection of the physical arrangements.

Instructions. After completing Section 4.0, write and insert here an abstract of the section in not more than 100 words.

4.1 Learning Theory

4.1-Q1 What explicit statements does the author make in the materials or elsewhere which reflect his position toward a particular theory of learning?

4.1-Q3 What is the author's view, as evidenced explicitly or implicitly in these materials, and what is the analyst's view, of the importance of each of the following categories of learning theory?

The following brief descriptions of learning theories may be useful in answering this question:

Specificist theory is concerned with the analysis of specific stimuli and specific human behaviors. A general assumption of this theoretical position is that complex behavior is a summation of specific behaviors. Other terms used for this theoretical position are respondent theory or stimulus-response theory. Major writers in the field are Edward L. Thorndike, Ivan Pavlov, John B. Watson, Edwin R. Guthrie, Clark Hull, and B. F. Skinner.

Field theory is concerned with analysis of mediating processes which occur in the organism between stimuli presentation and responses. Mediation in field theory is thought to take the form of internal organization patterns within the individual. These patterns govern the reception of stimuli, their translation into behavior, and resulting action. Another term sometimes used is Gestalt psychology. Major writers in the field are Wolfgang Köhler, Kurt Lewin, Edward C. Tolman, and Max Wertheimer.

Personality theory is concerned with the analysis of the individual's unique characteristics and unique behavior patterns. Personality theorists study both mental and physical properties of the individual and their interrelationships as well as individual thought and behavior patterns. Major writers in the field are Sigmund Freud, Henry A. Murray, Abraham Maslow, and Gordon Allport.

The above listed needs come from the writings of Abraham Maslow. They are hierarchical, beginning with physiological needs and moving toward self-actualization needs. Below is a brief description of each of the needs listed.

Self-actualization--The individual has a need to be himself and to act in a manner consistent with who he is.

Esteem--The need to gain respect of others and to build self-respect.

Love and belonging--The need that a person has to feel assurance that he is loved; that he is a worthy person; that he is acceptable because he is accepted.

Safety--The feeling of security from harm, danger, or threat of destruction.

Physiological--The need to maintain the physical organism.

4.212 Interest

4.212-Q1 How are interest and curiosity aroused in the student?

/X/	/	/	/	/	#3/
SN	NA	UA		C	

4.212-Q2 From my analysis of the materials it appears that student interest will:

/	/	/	X/	/	/	/	/	/	/	/X/	/	/	/	/	#3/
0	1	2	3	4	5	6				SN	NA	UA		C	
Drop off frequently through-out use of the materials		Be some-what main-tained through-out use of the materials			Be highly maintained through-out use of the materials										

4.213 Goals

4.213-Q1 Learning goals are established by:

The student							
The teacher						X	
Students and teachers cooperatively							
Other (specify)							
	0	1	2	3	4	5	6
	Never		Sometimes			Always	

/	/	/	/	/	#3/
SN	NA	UA		C	

4.213-Q2 To what extent do students proceed at their own individual pace toward the established goals?

/	/	/	/	X/	/	/	/	/	/	#3/
0	1	2	3	4	5	6	SN	NA	UA	C
Not at all		Sometimes		Always						

4.214 Grouping

4.214-Q1 How are students to be deployed (grouped) in the learning situation?

/X/	/	/	/	#4/
SN	NA	UA		C

4.214-Q2 In using these materials in the classroom, it appears that:

/	/	/	/	/ X /	/	/	/	/	/ X /	/	/	/	/ #4 /
0	1	2	3	4	5	6	SN	NA	UA	C			
No variety of group- ing is possible			Some var- iety of grouping is possible			A wide variety of ways students can be grouped							

4.215 Attitudes

4.215-Q1 How does the author attempt to develop in the student a particular attitude toward learning?

/ X /	/	/	/	/ #4 /
SN	NA	UA	C	

4.215-Q2 How much emphasis does the author put on developing in students a positive attitude toward learning? (For a definition of attitude, refer to Section 3.0, Content.)

/	/	/	/	/	/ X /	/	/	/	/	/	/ #4 /	
0	1	2	3	4	5	6	SN	NA	UA	C		
No empha- sis			Moderate emphasis			Great emphasis						

4.22 Structure and Form of Knowledge

4.22-Q1 What is the predominant organizational pattern of the information presented to the student?

/ X /	/	/	/	/ #4 /
SN	NA	UA	C	

4.22-Q2 Information is presented to the student in a:

/	/	/	/	/ X /	/	/	/	/	/	/	/ #4 /	
0	1	2	3	4	5	6	SN	NA	UA	C		
Highly complex form-- not likely to be understood			Somewhat complex form-- difficult to under- stand			Simple form-- easy to under- stand						

4.221 Mode of Representation

4.221-Q1 Is the student asked to work with the body of knowledge to be learned in concrete form (enactive representation)? In abstractions, symbols, or words

4.232 Active Participation and Novelty

4.232-Q1 How often are students able to actively participate in the learning process?

4.232-Q2 How frequently do students encounter new and novel situations when using the materials?

4.233 Punishment

4.233-Q Are the materials designed to be used in such a way that the student is allowed to make mistakes without threat of failure?

4.234 Student Feedback

4.234-Q How frequently is the student able to give feedback to either the teacher or the author on the use of the materials? (Describe.)

4.24 Retention and Transfer

4.24-Q1 How clear is the author in describing the means whereby students are to retain necessary information during use of the curriculum materials? (Describe.)

4.24-Q2 To what degree are learned knowledge and skills used in similar and new situations?

0 1 2 3 4 5 6 SN NA UA C

Not used Sometimes used Very frequently used

4.24-Q3 Do you think the means provided for retention and transfer are adequate?

0 1 2 3 4 5 6 SN NA UA C

Totally inadequate Somewhat adequate Very adequate

4.241 Practice, Drill, Review

4.241-Q How frequently are students given an opportunity to practice, drill, or review the material to be learned? (Describe.)

Practice:

0 1 2 3 4 5 6 SN NA UA C

Drill:

0 1 2 3 4 5 6 SN NA UA C

Review:

0 1 2 3 4 5 6 SN NA UA C

Never Occasionally Very often

4.242 Setting

4.242-Q In what kind of group setting do practice, drill, and/or review take place? Check the appropriate box below.

	Practice	Drill	Review
Individualized			<input checked="" type="checkbox"/>
Small groups			
Large groups	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
Other (specify)

 tant important important

$\frac{1}{SN} \frac{1}{NA} \frac{1}{UA} \frac{3}{C}$

4.251 Assimilation and Accommodation

4.251-Q To what extent has the author taken into account development of the cognitive processes of assimilation and accommodation in the child?

Assimilation					X		
Accommodation						X	

0 1 2 3 4 5 6
 Not con- Somewhat Always
 sidered considered considered

The following definitions will be useful in answering the above question:

Assimilation--The individual's process of incorporating or taking in external reality.

Accommodation--The adjustment (imposed by a characteristic in the external environment) required of the individual.

4.252 Phases of Cognitive Development

4.252-Q Below, check those phases of cognitive development (categorized according to Jean Piaget) of the students for which the materials were designed. Describe briefly how you arrived at your decision and give an example. (Refer to Section 5.121-Q2.)

Preconceptual (2 to 4 years)	_____	Concrete operations (7 to 11 years)	_____
Intuitive thought (4 to 7 years)	_____	Formal operations (11 to 15 years)	X
		X	3
		SN	NA UA C

4.3 Teaching Modes

4.3-Q1 What are the principal teaching modes, as identified by the author, that are to be employed in teaching the materials?

X			4
SN	NA	UA	C

4.3-Q2 What terms describing the modes are used by the author, e.g., inquiry, discovery, directed discussion?

X			4
SN	NA	UA	C

4.3-Q3 How carefully are the author's terms describing teaching modes defined?

/	/	/	/	/	X	/	/	/	/	/	4
0	1	2	3	4	5	6	SN	NA	UA	C	
Not defined		Some definition			Very carefully defined						

4.31-Q through 4.36-Q

Fill in the chart below for subsections 4.31 through 4.36. When doing the analysis in this section, keep in mind the following question: "When is the teacher or the particular resource essential in the learning situation?" Unless the author makes (or you can make) a strong case for three-way interaction (Teacher-Student-Resource), that row should not be checked.

According to the author, what is the intended proportion of use of:

		0-20%	21-40%	41-60%	61-80%	81-100%
4.31-Q	Teacher-to-Student action	X				
4.32-Q	Resource-to-Student action			X

4.4 Strategy Pattern

4.4-Q1 What is the predominant pattern of strategy use?

X			# 4
SN	NA	UA	C

4.4-Q2 How clear is the author about the pattern?

					X				# 4	
0	1	2	3	4	5	6	SN	NA	UA	C
Very unclear		Moderately clear			Very clear					

4.4-Q3 How consistent do you judge this strategy pattern to be with the objectives, content, and theory?

Objectives:

				X					# 3	
0	1	2	3	4	5	6	SN	NA	UA	C

Content:

				X					# 3	
0	1	2	3	4	5	6	SN	NA	UA	C

Theory:

					X				# 3	
0	1	2	3	4	5	6	SN	NA	UA	C
Very inconsistent		Somewhat consistent			Very consistent					

4.41 Selection

4.41-Q What reasons does the author give for selection of the strategies to be employed?

X			# 4
SN	NA	UA	C

4.42 Sequence

4.42-Q How well does the author describe the sequence in which the strategies are to be employed?

					X				# 3	
0	1	2	3	4	5	6	SN	NA	UA	C
Very poorly		Fair			Very well					

4.43 Variety and Flexibility

4.43-Q What is the degree of variety and flexibility in using the strategies?

4.5 Effectiveness

4.5-Q1 In general, how effective do you think these strategies will be in teaching the materials?

4.5-Q2 Could you teach these materials? (Describe briefly.)

4.51 through 4.54 Use of Student's Time, Student Outcomes, Teacher's Time, Cost and Use of Resources

Fill in the table below.

How effective do you think the materials will be in terms of:

4.51-Q	Use of student's time					X		
4.52-Q	Student outcomes					X		
4.53-Q	Use of teacher's time						X	
4.54-Q	Cost and use of resources					X		

0 1 2 3 4 5 6
 Very ineffective Somewhat effective Very effective

5.0 Antecedent Conditions

The antecedent conditions described in this section are, for the most part, not extremely important for the successful use of the materials.

Students in most schools with a variety of socio-economic and educational backgrounds should have some success with the materials.

The teacher and school setting will play an important role but the materials can be used in almost any school setting.

5.1-A3

The materials are directed towards what the author calls the "typical" student. However, the above average student should have better success with the materials than the below average student who will have some difficulty.

5.1-A4

Any student, regardless of ethnic background, should have varying degrees of success with the materials depending upon his individual academic ability.

5.12-A

See narrative 4.252-A

5.122-A2

Students should be able to recognize some key concepts such as leadership, citizenship, production, ideology, resources, etc.

5.122-A3

The student if he has experienced the sequence of the Holt Social Studies Curriculum, should have the ability to develop hypotheses. He also should be able to work within the mode of inquiry which the author suggests. The student should be able to understand certain concepts which have been stressed in earlier courses in the Fenton curriculum.

5.122-A4

The students should be able to use the tools of research to find answers to questions.

5.123-A1

Although the student is usually asked to work with concrete information he also deals with some iconic and symbolic representation.

5.123-A2

There seems to be little need for role playing and gaming skills in this course.

5.123-A3

Some knowledge graphic materials would be helpful to the student.

5.13-A1

Only a good attitude toward learning could contribute to the success of the student in studying the materials.

5.14-A

The student should be able to work well with others in small groups.

5.15-A1

The student should exhibit good learning behavior (particularly a willingness to read, inquire, and work with others).

5.15-A2

Other students should exhibit the same behavior as that in narrative 5.15-A1.

5.15-A3

See narratives 5.15-A1 and 5.15-A2.

5.2-A1

A teacher with a good background in history, knowledge of inquiry techniques, and a willingness to motivate students will probably have success in teaching these materials.

- 5.2-A3
No particular cultural or socio-economic characteristics are necessary.
- 5.2-A4
The teacher should have average or above average intelligence.
- 5.212-A2
The teacher should have knowledge and experience in directed discussion, questioning, and inquiry strategies.
- 5.22-A2
The number of years of teaching experience will only be helpful if it includes the types of strategies included in narrative 5.212-A2.
- 5.22-A3
See narrative 5.22-A2.
- 5.25-A2
The teacher should be able to lead the class in discussion and gain the respect of the class.
- 5.251-A1
The teacher should have a positive attitude toward success in teaching.
- 5.251-A2
He should feel that they can succeed in the work of the course.
- 5.251-A3
See narratives 5.251-A1 and 5.251-A2.
- 5.251-A4
The teacher should have a willingness to be open to change.
- 5.3-A
No unusual classroom conditions are necessary for success with these materials.
- 5.32-A
See narrative 5.3-A.
- 5.322-A1
The only classroom equipment necessary is easily movable student desks and chairs.
- 5.322-A2
The audio-visual equipment needed includes overhead projector, filmstrip projector, screen, phonograph, and spirit duplicating machine.
- 5.33-A3
A resource center containing the books and materials in the suggested reading lists would be helpful.
- 5.4-A1
The characteristics of the community will not play a significant role in the successful teaching of these materials.
- 5.4-A2
See narrative 5.4-A1.
- 5.4-A3
See narrative 5.4-A1.
- 5.42-A1
See narrative 5.4-A1.
- 5.42-A3
See narrative 5.4-A1.
- 5.421-A
See narrative 5.4-A1.

5.422-A1

See narrative 5.4-A1.

5.45-A

See narrative 5.4-A1.

5.46-A1

The community must give sufficient financial support to the program to permit success.

5.46-A2

See narrative 5.46-A1.

5.5-A

"Although each course is self-contained and can be used independently of the others, the curriculum has been planned so that what students learn in one course is expanded, reinforced, and utilized in succeeding courses. The result is materials for an integrated curriculum."

5.51-A1

See narrative 5.5-A.

5.52-A1

These materials relate well to other courses being taught at the same grade level.

5.0 Antecedent Conditions

Information. Antecedent conditions are the conditions which must exist, with respect to pupil, teacher, school, and community in order for the curriculum materials to be successfully implemented.

In this section, the analyst is trying to determine what prior skills and knowledge both the learner and the teacher must possess in order to succeed in achieving the objectives which are intended by use of the curriculum materials. The analyst should also indicate if any unique characteristics and conditions should exist within a school before the materials may be used. In instances where unusual conditions should exist in a community in order for materials to be used with success, these conditions should also be discussed.

Instruction. After completing the rest of Section 5.0, write and insert here an abstract of the section in not more than 100 words.

5.1 Physical Characteristics

5.1-Q1 At what grade level(s) should students be in order to have the most success with these materials?

Grade level(s) 11 & 12 / / / / # 4 /

6.0 Evaluation

Little evaluative data is available outside of the information supplied by the project report.

Exposure to the materials had no appreciable loss on the mastery of content as measured by standardized tests, nor did it have any great effect in helping students develop generalized skills.

According to the available data, the materials did no better nor worse than regular curricular materials. However, the techniques and materials excited interest on the part of the students.

6.1-A The only primary source of evaluative data available is the Final Report of the Project.

6.13-A

Social Studies STEP Test (Cooperative Test Division of Educational Testing Service, 1957)

Peltier-Durost Civics and Citizenship Test (Harcourt, Brace, and World, 1958)

Watson Glazer Critical Thinking Appraisal (Harcourt, Brace, and World, 1952)

Test of Economic Understanding (Science Research Associates, 1963)

Iowa Test of Educational Development, Test 5: Ability to Interpret Reading Materials in the Social Sciences (Science Research Associates, 1952)

World History Test (Cooperative Test Division of Educational Testing Service)

6.14-A2 The Carnegie Test of Social Studies Inquiry Skills (devised by the project staff) is an objective test, containing fifty items. Ten of the items require students to match terms with their definitions. The remainder are multiple-choice items.

6.2-A1 The materials predictably should have an increased effect on the students with regard to their ability to use the process of inquiry. However, there should be no great difference with traditional courses in the area of knowledge content acquired.

6.2-A2 "The evaluation of the effects of the curriculum indicated that students who were in the experimental classes suffered no great loss in the mastery of content as measured by standardized tests. The curriculum did not have a significantly greater effect than the regular curriculum in helping students develop the generalized skills measured by standardized tests." However, in its area of major emphasis, the curriculum proved to be significantly better than the regular curriculum.

The student questionnaire results showed that students felt that the emphasis on inquiry was the curriculum's major strength. Many students also felt the new curriculum did not give them enough "facts."

6.21-A2 See narrative 6.2-A2 especially the second paragraph.

6.212-A1 This information is extremely difficult to measure effectively.

6.212-A2 The developers had great difficulty to develop means of assessing the impact of the curriculum on the attitudes and values of the students.

6.23-A The results of this project have enabled the sponsoring institution to continue developing materials in the new social studies.

6.3-A2 The materials compare favorably with most existing conventional American history textbooks.

6.3-A3 See narrative 6.2-A2.

6.312-A3 See narrative 5.1-A3.

6.32 Most conventional United States history textbooks such as: Bragdon & McCutcheon, HISTORY OF A FREE PEOPLE (Macmillan Company, 1969) and Wade, Wilder, Wade, A HISTORY OF THE UNITED STATES (Houghton Mifflin Company, 1970).

6.32-A4 The student questionnaire results show that "about fifteen per cent of the students ... responded that the ... courses had helped formulate their plans for college, all of these stating that they intended either to take more history and social science courses and most of these (indicated) that they intended to major in one of the social sciences. About thirty per cent of the students indicated that social studies had been their favorite course in high school."

6.33 The analyst's standards regarding the teachability and learnability of the materials are that they be relatively easy to understand and read, they be varied and interesting, and they motivate the student to further desire to learn.

6.42-A1 I would recommend the materials be used where they can be supplemented by the audio-visual materials and where the teacher has the opportunity to develop the inquiry process so that it will have a chance for success.

6.0 Evaluation

Information. In this section the purpose is to use the work of the analyst, along with data from other sources, to arrive at an overall evaluation about the curriculum materials. Some evaluative questions have been asked in other sections. These, combined with other sources of information, will enable the analyst to arrive at the evaluation of the materials. This section is organized so that the analyst will be able to compare his predictions with reported information prior to making internal and external comparisons and recommending uses of the materials.

Instruction. After completing the rest of Section 6.0, write and insert here an abstract of the section in not more than 100 words.

6.1 Sources of Evaluative Data

7.1 - A1

The institution responsible for the development of the materials is the Social Studies Curriculum Center at Carnegie-Mellon University in Pittsburgh, Pennsylvania.

7.1 - A3

Dr. Edwin Fenton

7.12 - A

The others responsible for these materials are Irving Bartlett (Carnegie-Mellon University), David Fowler (Carnegie-Mellon University), and Seymour Mandelbaum (University of Pennsylvania). Barbara Judd (Research Associate, Social Studies Curriculum Development Center, Carnegie-Mellon University) is responsible for the Teacher's Guide.

7.13 - A

The Holt Social Studies Curriculum grew out of five years of research and experimentation at the Social Studies Curriculum Center at Carnegie-Mellon University in Pittsburgh, Pennsylvania. Supported by a grant from the Cooperative Research Branch of the US Office of Education, the staff of the Center developed and tested a four-year social studies curriculum for able students. After the Center released the materials developed by this project into the public domain, the staff contracted with Holt, Rinehart and Winston to write a new version of their material for typical students.

7.14 - A

Additional information can be obtained by writing:

Marketing Manager, Social Studies
Holt, Rinehart and Winston, Inc.
383 Madison Ave.
New York, New York 10017

7.2 - A1

The major source of funding was the Bureau of Research, United States Office of Education, Department of Health, Education and Welfare.

7.23 - A

The original grant for the entire project was \$200,000, or \$62,500 per year. At the end of the first year, they received a supplementary grant of \$22,500 to help develop materials. In September of 1965, they received a second supplementary grant of \$92,000 to produce a complete audio-visual component for the project. The funding totalled \$364,000 or an annual sum

of \$91,125.

7.3 - A

The author is seen teaching some of the Holt Social Studies Curriculum materials in a series of films. These films demonstrate inquiry teaching techniques and the use of audio-visual materials for inquiry teaching. Although the films are not specifically for the United States history course, they do play a vital role in disseminating ideas common to a number of curriculum projects and contribute to teacher understanding of the new social studies. Several NDEA institutes, Experienced Teacher Fellowship programs, the methods book, THE NEW SOCIAL STUDIES, the classroom films, many speaking engagements, and articles written for professional journals all contributed to the wide dissemination of the project materials.

7.32 - A2

8.41 - A1

Fenton, Edwin, THE NEW SOCIAL STUDIES, New York: Holt, Rinehart and Winston, 1967.

This short expository account of the contemporary curriculum-reform movement in the social studies capsulizes the subject for the reader.

_____, TEACHING THE NEW SOCIAL STUDIES
IN SECONDARY SCHOOLS: AN INDUCTIVE APPROACH,
New York: Holt, Rinehart and Winston, 1966.

This is a college methods book which illustrates the inductive approach to teaching the new social studies. It has many examples from the Holt Social Studies Curriculum.

8.41 - A3

Kratwohl, David S., et. al., TAXONOMY OF EDUCATIONAL OBJECTIVES: AFFECTIVE DOMAIN, New York: David McKay Co., 1956.

Explains theory of affective domain taxonomy and gives clues as to how to find affective objectives in materials.

Oliver, Donald W., and James P. Shaver, TEACHING PUBLIC ISSUES IN THE HIGH SCHOOL, Boston: Houghton Mifflin, 1966.

Illustrates the meaning of rationale and what is meant by teaching about value clarification.

Maier, Henry W., THREE THEORIES OF CHILD DEVELOPMENT, New York: Harper and Row, 1969.

Included in this book is an excellent example of the learning theories of Jean Piaget.

8.51 - A2

Previously mentioned -- see earlier narratives.

8.0 Background of the Analysis

The purpose of this section is to give information about the background of the analyst(s), the circumstances under which the analysis was done, the reasons for analyzing these particular materials, and the references used by the analyst(s) in performing the analysis.

8.1 Characteristics of the Analyst(s)

In this section, references will be made to the analyst, in the singular. However, if there are two or more analysts, information in Section 8.1 should be given for each of them individually. Throughout the rest of the analysis, if there are two or more analysts working together, it is assumed that they give a single answer to each question, representing a consensus.

8.1-Q1 What is the analyst's educational affiliation?

Elementary	<input type="checkbox"/>	Senior high	<input checked="" type="checkbox"/>	College/university	<input type="checkbox"/>
Junior high	<input type="checkbox"/>	School district	<input type="checkbox"/>	State department	<input type="checkbox"/>
Other (specify)	_____				/ / SN

8.1-Q2 What is the analyst's professional affiliation?

Education	<input checked="" type="checkbox"/>	Other academic discipline (specify)	_____	
Social Science	<input type="checkbox"/>	Other (specify)	_____	
				/ / SN

8.1-Q3 What is the analyst's highest academic degree?

BA or BS	<input type="checkbox"/>	MA or MS	<input checked="" type="checkbox"/>	PhD or EdD	<input type="checkbox"/>
Other (specify)	_____				/ / SN

8.1-Q4 How many curriculum materials analyses has the analyst done prior to this one, using this system or a similar system?

None	<input checked="" type="checkbox"/>	Two	<input type="checkbox"/>	Four	<input type="checkbox"/>	
One	<input type="checkbox"/>	Three	<input type="checkbox"/>	Five or more	<input type="checkbox"/>	
						/ / SN

8.11 Identification

8.11-Q1 What is the analyst's name? STANLEY KLEIMAN

8.11-Q2 Age? 32

8.11-Q3 Position? (Teacher, consultant, etc.) TEACHER

8.11-Q4 Employer? (Name of school, school district, university, etc., including address) LIVINGSTON HIGH SCHOOL
LIVINGSTON, NEW JERSEY

8.12 Formal Education

8.12-Q1 What degrees does the analyst hold?

Institution	Degree(s)	Date
CITY COLL. N.Y.	B.A.	1961
PATERSON ST. COLL. (N.J.)	M.A.	1968

 / /
SN

8.12-Q2 Give the approximate number of semester hours or quarter hours the analyst has taken in his undergraduate and graduate work in the following subject areas:

Education	<u>36</u>	Pol. Science	<u>12</u>	Are these	
Anthropology	<u>6</u>	Psychology	<u>15</u>	Semester hours?	<u>X</u>
Economics	<u>12</u>	Social Psych.	<u>3</u>	Quarter hours?	<u> </u>
Geography	<u>12</u>	Sociology	<u>9</u>	Other? (specify)	<u> </u>
History	<u>60</u>	Other social science	<u> </u>		

 / /
SN

8.12-Q3 How many years has it been since the analyst has been a full time student enrolled in school?

11 years / /
SN

8.13 Professional Experience

8.13-Q1 Indicate the number of years the analyst has taught, served as administrator, or served in another capacity at the following levels:

	Teacher	Adminis- trator	Other (specify)
Elementary			
Junior high	<u>1 1/2</u>		
Senior high	<u>4</u>		
Junior college			
4-year college			

 / / / /
SN NA UA C
129

8.13-Q2 What are the principal subject areas the analyst has taught during the last five years?

SN NA UA C

8.13-Q3 What other subject areas has the analyst taught during the last five years?

SN NA UA C

8.13-Q4 If the analyst is affiliated with a particular school, indicate the type of school as follows:

Inner city	<input type="checkbox"/>	Suburban	<input checked="" type="checkbox"/>	<input type="checkbox"/> SN	<input type="checkbox"/> NA	<input type="checkbox"/> UA	<input checked="" type="checkbox"/> C
Urban	<input type="checkbox"/>	Rural	<input type="checkbox"/>				
Other (specify)	_____						

8.13-Q5 If the analyst is an elementary or secondary teacher, describe briefly the nature of his students in terms of learning ability, social and economic characteristics, and ethnic background.

SN NA UA C

8.13-Q6 If the analyst is affiliated with a school district--as teacher, administrator, or otherwise--indicate:

School population of the district	<u>8,000+</u>	<input type="checkbox"/> SN	<input type="checkbox"/> NA	<input type="checkbox"/> UA	<input checked="" type="checkbox"/> C
Population of the community (which may be larger than the district)	<u>30,000+</u>				

8.13-Q7 Describe briefly the subject matter, length, analyst's role, and other characteristics of any workshops, training sessions, and similar activities in which the analyst has been involved in the past three years.

SN NA UA C

8.13-Q8 Describe briefly any new curriculum materials the analyst has helped develop and/or test in the last three years.

SN NA UA # C

8.14 Editing

8.14-Q1 Was the analysis edited by someone other than the analyst? If so, name the editor or editors and describe briefly their positions and organizational affiliations.

Yes No SN NA UA # C

8.14-Q2 How intensive was the editing?

0 1 2 3 4 5 6 SN NA UA # C
Very light Moderate Very intensive

8.2 Circumstances of this Analysis

8.2-Q1 Approximately how many man-hours were spent doing this analysis?

125 hours SN NA UA # C

8.2-Q2 Describe the circumstances under which this analysis was undertaken:

In a workshop <input type="checkbox"/>	In a class <input type="checkbox"/>
In another type of inservice program <input type="checkbox"/>	As part of the duties of an employee <input checked="" type="checkbox"/>
Other (specify) _____	<input type="checkbox"/> SN <input type="checkbox"/> NA <input type="checkbox"/> UA <input type="checkbox"/> # <input checked="" type="checkbox"/> C

8.21 Location

8.21-Q1 Describe the location and the circumstances under which the analyst did the analysis.

SN NA UA # C

8.21-Q2 How favorable or unfavorable were the circumstances under which the analyst did the analysis, from the standpoint of producing a good analysis?

0 1 2 3 4 5 6 SN NA UA #4
 Very unfavorable Somewhat favorable Very favorable C

8.22 Time

8.22-Q1 Estimate the number of man-hours devoted to each of the following phases of the analysis:

Becoming familiar with the CMAS	Becoming familiar with the materials	Doing each of the sections								Total man-hours
		1.0	2.0	3.0	4.0	5.0	6.0	7.0	8.0	
40	10	8	10	12	20	10	10	3	2	125

SN NA UA #4
 C

8.22-Q2 What was the total elapsed calendar time from the time the analyst started the analysis until he finished it?

2 days or months SN NA UA #4
 C

8.22-Q3 Was the time spent on the analysis sufficient to produce a good analysis with which the analyst feels reasonably satisfied?

0 1 2 3 4 5 6 SN NA UA #4
 Much too short Fairly adequate Very adequate C

8.23 Instruction

8.23-Q1 Was the analyst working under the guidance or supervision of another person or persons? If so, identify the person(s) and his position.

Yes No SN NA UA #4
 C

8.23-Q2 If the answer to 8.23-Q1 is "yes," indicate how adequate the guidance or supervision was.

0 1 2 3 4 5 6 SN NA UA #4
 Very inadequate Average Very adequate C

8.3 Selection of Materials

8.3-Q Was there any reason why the analyst chose these particular materials to analyze, such as previous familiarity with them or plans to teach them in the future? If so, describe the reason briefly.

 / X / /
Yes No

 / / / / # 4 /
SN NA UA C

8.4 References

In Section 1.6, references are given which should help the reader of the analysis learn more about the materials. In Section 7.32, references are given which contain additional information about the project which produced the materials. In this section, the analyst should note references that he found particularly helpful in understanding and applying the analysis system.

8.4-Q If the analyst used any references which helped him understand and apply the analysis system to these materials, indicate those--two or three at the most--which were most helpful.

X / / / / # 4 /
SN NA UA C

8.41 Detailed References

8.41-Q1 Did the analyst refer to any additional writings by the author, beyond the materials package? If so, cite the reference or references and say briefly whether and why each of them was useful.

X / / /
Yes No

 / / / / # 4 /
SN NA UA C

8.41-Q2 Did the analyst refer to any additional writings about the materials, other than writings by the author? If so, cite the reference or references and say briefly whether and why each of them was useful.

X / / /
Yes No

X / / / / # 4 /
SN NA UA C

8.41-Q3 Did the analyst consult any references about particular aspects of the analysis system, such as references on values, educational objectives, or curriculum theory? If so, cite the references and say briefly whether and why each of them was useful.

X / / /
Yes No

X / / / / # 4 /
