PRIVATE COMMERCIAL AND BUSINESS SCHOOLS, 1928-29

There is a noticeably-constant fluctuation in the list of private commercial and business schools. Out of a list of approximately 1,850 private commercial schools of which the Office of Education had record during the period from June, 1925, to June, 1929, reports were received from 743. Of these 743 schools 171, or 23 per cent, were organized and 197, or 26.5 per cent, were discontinued during that period. The size of the city in which a school is located seems, in general, to be related in some way to the probable permanency of the school. Of the three groups of cities classified in this report according to size, Group III, cities having a population of fewer than 30,000, had the largest per cent of schools discontinued since that date. This size group of cities includes 51 per cent of the total number of schools organized and 47 per cent of the total number discontinued during the period studied.

For the same period Group I—that is, cities having a population of 100,000 or more—had 32 per cent of the schools organized and 34 per cent of those discontinued; Group II, cities having a population of 30,000 to 100,000, had 17 per cent of those organized and 19 per cent of those discontinued. The greatest stability in the number of private commercial schools, according to these data, is in cities having a population of 30,000 to 100,000, while the greatest instability is in cities having a population of fewer than 30,000.

Of the 743 schools referred to, 375, or 50.5 per cent, were organized previous to June, 1925, and were still in existence in June, 1929. Of these 375 schools, 196, or 52 per cent, showed increased enrollments since June, 1925, and 179, or 48 per cent, showed decreased enrollments. The greatest number of schools in any group showing increase in enrollments and the greatest number showing decrease in enrollments are both in Group III. In this group of cities 39 per cent showed increase in enrollments while 43 per cent showed decrease in enrollments. The greatest stability in enrollment as measured by these items is again in schools located in cities having a population of 30,000 to 100,000, and the greatest instability again in schools located in cities having a population of fewer than 30,000.

Six hundred and fifty-one private commercial and business schools reporting to the Office of Education in June, 1929, had a total enrollment of 179,756 students, of whom 121,215 were women and 58,541 were men. These 651 schools employed 4,074 instructors, of whom 2,211 were women and 1,863 were men. For the schools reporting, the three States having the largest total enrollment are New York with 25,069, Pennsylvania with 16,970, and Illinois with 16,790. The three States having the largest number of schools are New York with 71, Pennsylvania with 54, and Ohio with 45.

The total enrollment in day classes for the 629 schools reporting on this item was 120,505, of whom 85,577, or 71 per cent, were women. The total enrollment in evening classes for the 487 schools reporting was 59,251, of whom 35,638, or 60 per cent, were women. The total enrollment for both day and evening classes for these schools was 179,756, of whom 121,215, or 67.4 per cent, were women. The day-school enrollment was 67 per cent of the total day and evening school enrollment. The evening-school enrollment was only 49 per cent of the day-school enrollment.

In no instance does the enrollment by subjects in the evening school equal the day-school enrollment in the same subject. The nearest approach to equality is in the case of men enrolled in accountancy, in which subject the evening-school enrollment for men is almost 90 per cent of the day enrollment of men in this subject.

However, for women enrolled in accountancy the evening-school enrollment is only 60.6 per cent of the day-school enrollment. The greatest difference between day and evening school enrollments by subjects is found in the salesmanship course. For this course only 8 per cent as many women were enrolled in the evening classes as were enrolled in the day classes. For this course there were 14 per cent as many men enrolled in the evening classes as were enrolled in the day classes. For secretarial work only 14 per cent as many women are enrolled in the evening classes as are enrolled in day classes.

For every subject but one there is a greater difference between the day-school and evening-school enrollments for women than there is for men, the difference being in favor of the day-school enrollment. The one exception to this sex difference is in the case of machine operating, and here the difference is so slight as to be almost negligible. The sex difference between day and evening school enrollments in the private business schools may be partly accounted for by the assumption that relatively more men than women enroll in evening school for additional training for promotional purposes.

For the schools reporting, the total day-school and evening-school enrollments were compiled by States. In only the following States did the total evening-school enrollment exceed the total day-school enrollment: Connecticut, District of Columbia, Maryland, New Jersey, and Rhode Island.

A study of enrollments by school subjects, relative to the amount of education completed, shows that approximately five times as many students have completed high school as have had some college work; the same ratio exists between the number of high-school graduates and the number who had completed eight grades or less. The difference is again in favor of the high-school graduates.

The number who have had only some high-school work is slightly less than half the number who have graduated from high school. For

students enrolled in secretarial courses 55 schools reported 969 as having only an eighth-grade education or less. One hundred and fifteen schools reported 2,748 who had some high-school work; 191 schools reported 10,567 who had graduated from high school. One hundred and thirty-seven schools reported 2,186 who had had some college training. It is interesting to note that for every five students enrolled in the secretarial courses who had had some high-school work but were not high-school graduates, four were enrolled who had had some college training.

Of the 305 schools offering day courses in bookkeeping, 225, or 74 per cent, have courses varying from 6 to 10 months in length. For stenography 170, or 78 per cent, of the 217 schools reporting on this item have the same range for the length of the course. For the combined course 30 per cent require a 12-month course. The length of evening courses in the different subjects varies greatly, but in general is from one and one-half to two times that of the day courses.

Of the 651 private business schools included in this study, 63 reported that they offered commercial teacher-training curricula from which 452 students were graduated in 1928-29 and received licenses to teach commercial subjects. The minimum entrance requirements for these curricula included graduation from high school. The length of the curriculum varied from one to four years.

Out of the 651 schools reporting, 60 offered courses by correspondence.

TABLE 1.—Summary of statistics of all private commercial and business schools reporting, 1900 to 1929
