ABSTRACT

This document presents equipment needs for an adequate (as opposed to minimum) level of physical education programming at primary, middle, and secondary school levels. The "adequate" level is presented since minimal requirements are often considered by educators as being "adequate," and they accept the minimum as being a mean if only the minimum is presented. General goals of physical education are discussed, and expected student outcomes at each of the three levels are listed. Equipment envisioned for the elementary school program is for a population of 600 students and approximately 24 teachers. The assumption underlying the plan is that there will be four sections per grade level and that only two of the four sections will be using the equipment at any one given period. Middle and secondary school levels are based on a population of 900 for the middle school and 1,500 for the secondary school, with all students in the middle school enrolled in the program. Not all students in the secondary school are expected to take part in the program. Careful scheduling and innovativeness on the part of instructors can reduce the expenditure necessary for equipment purchase. An equipment inventory check list is appended. (MJB)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

#### PHYSICAL EDUCATION EQUIPMENT GUIDELINES

#### INTRODUCTION

The recommendations for physical education equipment included in this guide represent an adequate level of equipment. The equipment recommended is not for a minimum program and the user should keep this in mind. The rationale for presenting the adequate level rather than the minimal level can be summed up by the fact that too many educators consider minimum requirements as an adequate program and that many educators accept the minimum as being a mean if only a minimum is presented.

The recommendations are based on the premise that all students should be directly involved in activity at all times. Too frequently a few physically gifted students are involved in an activity while the majority are sitting, holding and observing. The task of learning to run while bouncing a ball can hardly be accomplished by watching, observing and listening. The student must run while bouncing the ball. Proper management and an adequate number of balls must be provided if all students are to learn.

Most items included in the equipment list have ratios based on the equipment needs for the number of students. This has certain limitations. Class scheduling and equipment use planning will simplify the task of providing equipment.

The equipment recommendations included in this guide are based on an instructional program which is designed to meet the following goals.

GOALS OF PHYSICAL EDUCATION

To assist the learner in efficient and skillful movement which allows a person to pursue an active life style.

To develop an understanding of voluntary movement and ways in which the learner may organize his or her movements to accomplish significant purposes

in life.

To develop an understanding of space, time, mass-energy relationships, and related concepts.

To condition the heart, lungs, muscles and other organic systems to respond to increased demands by imposing progressively greater demands upon them.

To promote understanding of the social aspects of physical involvement and to enhance positive behavior patterns through interaction during activities.

#### Implementation of Goals

In order for these goals to become a reality, one must consider that all physical education instructional planning should include consideration of the physiological development, abilities, interests and needs of the learner.

A daily planned physical education instructional program should be provided for all students K-12.

Class enrollment should not exceed 40 students.

Safety of students should be a paramount factor in decision making concerning student activity, reaching stations, equipment and the facilities to be used.

#### EXPECTED STUDENT OUTCOMES

#### Primary

- (1) Students should be able to successfully walk, skip, jump, hop, run, leap, turn, throw, catch, strike, extend, flex, climb, twist, curl, push, kick, tat, tug, bend, stretch, fall, lift, pull, bounce, gallop, slide or glide and distinguish between even and uneven rhythm and balance.
- (2) Students will have explored movement in a minimally structured setting, then progressed through semi-directed to directed specific learning. This

would include comprehension of terms such as: high-low, fast-slow, hard-soft, flow-broken and direction.

- (3) Students will have explored creativity in movement and participated in activities expressing feelings and values through movement. Feelings such as sadness-happiness, alertness-inattention, good self image-poor self image, s-rongness-weakness, and openness are examples of concepts that can be expressed through creative movement.
- (4) Students will have learned simple games that utilize the fundamental skills of movement. These activities initially should not include those with stringent rules and guidelines, boundary restrictions or complicated inappropriate movement.
- (5) Students should have an understanding of the role of physical education and its relationship to an individual's agility, cardio-respiratory fitness, flexibility, endurance, speed, power, muscular strength, coordination, balance and good posture.

#### Middle

- (1) Students will have learned to be good group participants through team involvement in soccer, softball, flag football, basketball, volleyball, angleball, newcomb, boundball and field hockey.
- (2) Students will have a more accurate and positive self image as a result of self-and peer evaluation, student planning of prescriptive activities and the accompanying dialogue and interraction of decision making.
- (3) Students will have learned all the basic skills and components for involvement in many activities including basic movement, creative movement, rhythm and dance, relays, games and sports, stunts, tumbling, apparatus,

aquatics (when possible), outdoor activities, introduction to individual and dual sports, team games, special conditioning and personal fitness programs.

(4) Students will have become more competent in decision making and self direction by exploring activities in many basic courses and by having opportunities to select alternative courses.

#### Secondary

- (1) Students will have acquired many values through independent study.

  These values may include those of self direction, self-motivation, research, self evaluation, self acceptance of responsibility for own learning and the learning of processes which make post school motor involvement an important part of the student's life style.
- (2) Students will have developed skills, knowledge and understanding of wise use of the out-of-doors through involvement in outdoor education.
- (3) Students will have furthered group social skills through participation in intramurals, extramurals or interscholastic programs.
- (4) Students will have acquired desirable health education attitudes and practices such as the importance of emotional health and a positive self image; appreciation and respect for the human body and its vital organs; personal fitness and effects of exercise on body systems nutrition and weight control; and the effects of drugs on the human body.
- (5) Students will have learned skills of planning, instructional programming and evaluation by active, total participation in curriculum development and anonymous evaluation of the instructor.
- (6) Students wf11 have broadened their creative skills through programs

that give special attention to expressive, creative and aesthetic movement.

These skills can be expressed from the viewpoint of both the observer and participants.

- (7). Students will be capable of planning and implementing personal programs of wise use of leisure time.
- (8) Students will have had opportunities to develop skills in wise selection of activities through alternative course selection.
- (9) Students will have adequate skills and knowledge to positively pursue at least one life-time sport. Examples are archery, tennis, golf, badminton, bowling, angling and casting, shooter sports, hiking and canoeing.

#### PHYSICAL EDUCATION EQUIPMENT RECOMMENDATIONS

The selection of equipment for the physical education instructional program must be based on decisions made after considering many important questions.

Some of these questions are

- . What facilities are available for the instructional program?
- . Is storage space available?
- . What are the assessed heeds and interests of students and the community?
- . What is the skill level of the students who will use the equipment?
- : What is the largest class size?..
- . What is the age of the students?
- . Can instructors make efficient use of the equipment?
- What are the administrative restrictions and attitudes toward the program and specific activities?
- Will all students on a specific grade or age level participate in physical education simultaneously?
- Will those scheduling classes allot equipment efficiently?

Will, the local course syllabus be utilized?

Instructors who have creative talent and innovativeness can save much expense for equipment by improvision.

### Elementary School Equipment Needs .

The following equipment listing is for an elementary school of 600 students, and approximately 24 teachers with 25 students per section. The assumption underlying the plan is that there will be four sections per grade level and that only two of these four sections will be using the equipment at any one given period. This will take very careful planning. Equipment will be needed for approximately 50 students per grade level. A large centrally located equipment room, with a coordinator to supervise, would be a logical answer to equipment dispensation.

# Middle and Secondary School Equipment Needs

Equipment purchase for the middle and secondary school should be based on assessed needs for a comprehensive instructional program. The equipment recommendations are based on a student population of 900 for the middle school and 1,500 students for the secondary school.

All students in the middle school will be enrolled in physical education whereas, not all students in the secondary program will be enrolled in physical education.
