ABSTRACT

This report presents an analysis of public and leadership opinion survey data about engineering and technology over the past 10-15 years. It examines public attitudes toward technology and engineering, and provides implications about views concerning specific issues related to these general subjects. The volume is organized thematically, into sections, which include: (1) the public's perception of engineering; (2) the importance of technology in the United States; (3) the perceived quality of U.S. products versus foreign products; (4) technological development and protectionism; (5) technological investment and business; (6) technology and the federal government; (7) technology, the Strategic Defense Initiative, and space exploration; and (8) public views of technology. Within each section, detailed observations provide further analytic interpretation. Written analyses and interpretations are interspersed with tabular material that generally presents data in chronological order to support the conclusions. (TW)

EXECUTIVE SUMMARY

I. INTRODUCTION

This report by the Public Agenda Foundation for the National Academy of Engineering's Office of Public Awareness presents an analysis of public and leadership opinion survey data about engineering and technology over the past ten to fifteen years. It is the most comprehensive examination of public attitudes toward technology and engineering, and of the implications of views about specific issues related to those general subjects, that has yet been compiled.

The data in this report comes from three sources: the archives of the Roper Data Center at the University of Connecticut, The National Science Foundation's volumes of Social Indicators, and proprietary data provided to the Public Agenda, for the Academy's use, by AT&T.

The volume itself is organized thematically, into sections. Within each section, "Detailed Observations" provide further analytic interpretation. Written analysis and interpretations are interspersed with tabular material that generally presents data in chronological order to support those conclusions. Though less plentiful than public opinion data, leadership attitudes have been included whenever relevant data was available.

Finally, we should emphasize that while the analysis centers on engineering and technology, the reader should recognize that many questionnaire items ask about "science and technology." Whenever possible, we differentiate between those two concepts and limit our interpretations to those data that are of greatest importance to the Academy, its Office of Public Awareness, and its interest in exploring the possible development of a nonpartisan, public information and education campaign.

II. SUMMARY OF FINDINGS

This report presents thirty-five distinct findings, grouped by subjects, into eight broad thematic areas of interest to the Academy. The summary below merely highlights the key findings from those eight sections.

Section 1: The Public's Perception of Engineers

The engineering profession is well regarded by the American people. The public believes that professional standards are high and that engineers are generally competent and ethical. However, there is some evidence that public esteem for the profession, though still comparatively excellent, has slipped in the past two or three years.

Section 2: Technology and the United States: Its Importance and Where We Stand

The public believes that technology is vital both to the economic prosperity of the United States and in sustaining the influence of this country worldwide. At the same time, people do not spontaneously include technology when asked, for example, to list the most important factors that contribute to American prosperity. While the U.S. is viewed as a world leader in technology, large numbers of Americans feel that other countries are "catching up." Government leaders rank the development of new technology as the nation's most important economic goal, and leaders in the area of science and technology policy say that this country should seek to lead the world of basic research.

Section 3: Perceived Quality of U.S. vs. Foreign Products

The public expresses concern about the quality of American-made products. Many people say, for example, that foreign cars are of better quality than those built in the U.S; and foreign cars are increasingly felt to be better in specific ways: in the quality of workmanship and freedom from repairs and in providing better gas mileage. In fact, large numbers of Americans say they will buy an American-made car because it is built in this country, not because it is of higher quality or of better value. Importantly, however, the public does not believe that the comparatively poor quality of U.S. products is due to poor engineering or inadequate technology; rather the public cites other factors, including deficiencies in the management of American companies, labor costs, and the subsidies provided by foreign governments.

Section 4: Technological Development and Protectionism

Americans generally say that trade with Japan is "harmful" to the U.S. economy. Yet most people tend to reject protectionist measures as a remedy, favoring modernization and increased investment in technological research and engineering as solutions to America's difficulty in competing internationally.

Section 5: Technological Investment and Business

People favor business investment in technological research and development and say this is an appropriate use of business profits. Large numbers of Americans believe that businesses put too high a priority on executive bonuses and "perks," and, as a result, people feel that companies do not invest enough of their profits in essential research and development.

Section 6: Technology and the Federal Government

Americans favor government support for technological R&D and say that past government expenditures in this area have "paid off." In fact, a majority favors increased government support of research, particularly at the college and university level. Government leaders tend to reject any national policy to restrict high technology exports, but large numbers among them say that there should be some restrictions in this area.

Section 7: Technology, SDI, and Space Exploration

Americans generally support the development of the Strategic Defense Initiative (SDI or "Star Wars"), but support is thin, and may reflect confidence in the President and his judgment more than enthusiasm for the idea itself. If this interpretation is correct, public opinion is potentially volatile in this area.

The public's continuing support for the space program, however, is clear, in spite of the recent tragedy with the space shuttle. Most people say the accident was probably caused by an engineering or technological flaw, yet even this did not shake public confidence in science and technology.

Section 8: Public Views of Technology

Part 1: Technology's General Impact

Americans have great faith that technology can solve pressing national problems and they believe that technology has generally improved the quality of life. At the same time, people are aware of at least some

of the risks, and their positive view of technology is not based on what might be called "blind optimism."

Part 2: Technology's Impact on Jobs

In the workplace, people say technology has made many jobs safer and increased productivity; but Americans are uncertain whether technology creates more jobs than it takes away. In spite of their unease, however, people oppose laws that would limit the ability of business to make technological changes in the workplace.

Part 3: Social Control of Technology

About the desirability of controls over technology, public opinion is distinctly mixed. People oppose controls that would restrict the development of useful new technology, yet they are concerned about new threats to public safety.

Part 4: Public Awareness and Potential for Involvement

The public is moderately interested in scientific and technological matters, and feels that their basic understanding of these issues is "adequate." Further, people say that scientific and technological development is an area where they do not have enough information to make informed judgments or decisions.

These tentative conclusions or "findings" are built upon a wealth of detail which is summarized in the pages that follow and supported by data that is excerpted there.

SECTION 1: THE PUBLIC'S PERCEPTION OF ENGINEERS

The engineering profession is well regarded by the American people. The public believes that professional standards are high and that engineers are generally competent and ethical. However, there is some evidence suggesting that public esteem for the profession, though still excellent, has slipped in the past two or three years.

FINDING #1

A STRONG MAJORITY OF AMERICANS EXPRESS HIGH REGARD FOR ENGINEERS AND THE ENGINEERING PROFESSION. HOWEVER, EVIDENCE SUGGESTS PUBLIC REGARD FOR THE PROFESSION MAY HAVE SLIPPED IN RECENT YEARS.

Detailed Observation

Engineering is consistently ranked very high as a recommended career.

TABLE #1-1

Source: Roper Organization, March 1983, national, n = 2000.

Detailed Observation

While no differences were found among people of different age, sex, educational level, region or income, there is evidence that the profession's status may have dropped slightly in recent years.

Detailed Observation

As for honesty and ethical standards, most people consistently rank engineers as "high" or "average." One study found only clergymen and doctors to have higher ratings.

TABLE #1-6

Q: "How would you rate the honesty and ethical standards of people in these different fields--very high, high, average, low, or very low?"

"...Engineers"

Advertising practitioners	10	44	43	3
Car salesmen	8	40	48	4

Source: Gallup, Aug. 1977, national, n = 1500.

Detailed Observation

On technical and scientific issues of great importance, the public ranks scientists and engineers specializing in the subject as the most qualified to decide the issue. Yet people do not place blind faith in experts, but rather express what might be seen as a healthy skepticism about what experts say.

TABLE #1-8

Q: "Let's suppose that an electric utility company wants to build a nuclear power plant in a particular town or country, but a group of local citizens who live there are afraid it might be dangerous and organize to stop its construction. In a case of conflict like this, which one of the groups listed on this card do you think would be best qualified to decide the issue?"

	<u>Oct. 1979</u>
	<u>Best Qualified*</u>
	%
A group of scientists and <u>engineers</u> who specialize in this area	67
The citizens of the community voting in a referendum	44
A Federal regulatory agency or commission	32
The utility company that will operate the plant	20
Local government officials	15
The governor and the state legislature	9
The courts	7
The President and Congress	5
Don't know	8

* Percentages do not add up to 100% because first and second choice percentages were combined.

SECTION 2: THE U.S. AND TECHNOLOGY: ITS IMPORTANCE AND WHERE WE STAND

The public believes that technology is vital both to the economic prosperity of the United States and in sustaining the influence of this country worldwide. At the same time, people do not spontaneously include technology when asked, for example, to list the most important factors that contribute to American prosperity. While the U.S. is viewed as a world leader in technology, large numbers of Americans feel that other countries are "catching up." Government leaders rank the development of new technology as the nation's most important economic goal, and leaders in the area of science and technology policy say that this country should seek to lead the world in basic research.

FINDING #2

MOST AMERICANS CONSIDER TECHNOLOGY TO BE VITAL TO OUR PROSPERITY AND INFLUENCE IN THE WORLD.

Detailed Observation

The public consistently ranks "scientific research" and "industrial know-how" as major factors that continue to make America great. Although "technological genius" ranks lower on the list, a solid majority says it is vital too.

TABLE #2-1

Q: Now I'm going to read you some things some people believe have made America great. Looking ahead to the next 25 years, for each item I read, tell me if you think it will be a major factor in continuing to make America great, a minor factor, or hardly a factor at all?*

	<u>1979</u>	<u>1977</u>	<u>1975</u>	<u>1973</u>
	%	%	%	%
Scientific research	89	91	NA	NA
Industrial know-how	80	80	86(1)	87(1)
Rich natural resources	79	77	79	65
Democracy as its political system	74	72	NA	NA
Skill at organizing production	74	71	NA	NA
Technological genius	73	78	NA	NA
Free, unlimited education for all qualified	67	75	75	78
Deep religious beliefs	57	61	NA	NA
People of different racial and religious backgrounds	NA	NA	58	57

* The wording in 1973 and 1975 was "Looking ahead to the next 10 years."

(1) The wording in 1973 and 1975 was "Industrial know-how and scientific progress."

Source: Harris, national, (1979: n = 1514); (1977: n = 1498); (1975: n = 1519); (1973: n = 1513).

Detailed Observation

Additionally, the public sees scientific research and technological development as necessary to maintain economic prosperity and increase U.S. productivity.

TABLE #2-2

Q: "Do you agree that scientific research and technological development (read list) or don't you agree?"

	Nov. 1977		
	<u>Agree</u>	<u>Don't</u> <u>Agree</u>	<u>Not</u> <u>Sure</u>
	%	%	%
"...Are necessary to keep the country prosperous."	92	4	4
"...Are the main factors in increasing productivity."	69	16	15

Source: Harris, Nov. 1977, national, n = 1520.

Detailed Observation

Finally, "technological know-how" ranks first in factors that contribute most to U.S. influence in the world.

TABLE #2-3

Q: "People give different reasons to explain the degree of influence the United States has in the world. Of the things listed on this card, which two do you think contribute the most to U.S. influence in the world?"

(Percentages of first and second responses are combined)

	<u>Oct. 1979</u>
	%
1. Our technological know-how	45
2. Our form of government	41
3. Our economic system	26
4. Our scientific creativity	22
5. Our natural resources	19
6. Our religious heritage	15
7. Our educational system	14
8. The racial and ethnic mixture of our population	10

Source: Institute for Survey Research, Temple University for the National Science Foundation, Oct. 1979, national, n = 1635.

Detailed Observation

A large majority says it is very important that America be a leader in "scientific growth and development". In part, this perception rests on the view that the world depends on U.S. industrial know-how, technology, and scientific research.

TABLE #2-4

Q: "How important do you think it is that the United States be a leader in scientific growth and development--very important, fairly important, not too important, or not at all important?"

	<u>May 1979</u>
	8
Very important	74
Fairly important	19
Not too important	4
Not at all important	1
Don't know	3

Source: Roper Organization, March 1979, national, n = 2004.

TABLE #2-5

Q: "Does the rest of the world depend on the United States a lot, a little, or not at all for..."

	<u>Nov./Dec. 1978</u>		
	<u>A Lot</u>	<u>A Little</u>	<u>Not At All</u>
	8	8	8
"...Developing industrial know-how."	74	19	2
"...Technology."	67	24	3
"...Scientific research."	65	27	3

Source: ABC News/Harris, Nov./Dec. 1978, national, n = 1195.

Detailed Observation

However, policy leaders in science and technology are more likely to say that America should lead the world in basic scientific research rather than applied science and technology.

TABLE #2-6

Q: "As a matter of national policy, do you think the United States should seek to be the leader in almost all areas of basic scientific research (applied science and technology), or should we focus our efforts on only selected areas of basic research (applied science and technology)?"

"The U.S. should be a leader in all areas of.."

	<u>Nov./Dec. 1981</u>
"...Basic Scientific Research."	8 50
"...Applied Science and Technology."	38

Source: Public Opinion Laboratory at Northern Illinois University, Nov./Dec., 1981. Nongovernmental policy leaders in science and technology (scientists, engineers, doctors, science journalists and other professional leaders in science related areas from universities, nonprofit institutions and industry), national, n = 287.

FINDING #3

AT THE SAME TIME, MOST AMERICANS DO NOT SPONTANEOUSLY THINK OF TECHNOLOGY OR TECHNOLOGICAL KNOW-HOW AS ESSENTIAL FOR ECONOMIC PROSPERITY AND GROWTH. RATHER, IT APPEARS THEY NEED TO BE REMINDED OF TECHNOLOGY'S RELATIONSHIP TO GROWTH.

Detailed Observation

When asked in an open-ended question (without being given a list of factors), Americans most often cited "political change/new leaders" and "the development of new industry" as the most important factors encouraging economic growth. "Modern technology" received only a middle ranking. Yet when given a list of possible factors, "the current state of American technology, know-how and innovation" was ranked first.

TABLE #3-1

Q: "What is encouraging the economy to grow?"
(People answered in their own words).

	<u>Sept./Oct. 1979*</u>
	%
Political change, new leaders	14
Development of new industry	10
President taking control/president has power to control inflation	7
Individual ambition to get ahead	7
Modern technology	3
High wages	3
Using alternative energy sources	3
People helping the economy grow - all other reasons mentioned	14
Government helping the economy grow - all other reasons mentioned	10
Business helping the economy grow - all other reasons mentioned	10
Don't know	62

*Note: This question was asked to only those respondents who stated that there are factors that encourage the economy to grow (29% of total sample, n = 580). Table percentages are for this subsample only.

Source: Roger Seasonwein Associates for Union Carbide, Sept./Oct. 1979, national, n = 2000.

TABLE #3-2

Q: "I am going to read down a list of items. As I do, I want you to tell me whether each one is helping the nation's economy grow, or holding back the nation's economic growth, or is having very little effect on the nation's economic growth. Is it your feeling that these items are helping this nation's economy grow or holding growth back, or not having much of an effect on the growth of the nation's economy?"

	Sept./Oct. 1979	
	<u>Helps economic growth</u>	<u>Holds down growth</u>
	%	%
The current state of American technology, know-how and innovation	63	13
Major corporations	43	33
The current level of productivity	34	37
Labor unions	28	49
The amount of taxes the average business pays	27	41
Environmental protection laws and regulations	25	41
The amount of taxes the average person pays	24	51
Government spending	20	62
Materials and products imported from foreign nations	18	63
Governmental regulation (other than environmental laws)	14	51
The size of the federal government	12	54
The energy situation	8	81
Inflation	5	86

Source: Roger Seasonwein Associates for Union Carbide, Sept./Oct., 1979, national, n = 2000.

FINDING #4

THE PUBLIC FEELS THAT THE U.S. HAS THE LEAD ON OTHER COUNTRIES IN BASIC SCIENTIFIC RESEARCH AND APPLIED SCIENCE AND TECHNOLOGY. BUT MANY PEOPLE CONTINUE TO FEEL THAT OTHER COUNTRIES ARE "CATCHING UP."

Detailed Observation

People increasingly say that America is ahead of other countries in the development of high technology, a trend suggesting that many may feel overall U.S. competitiveness has rebounded and American companies are now better positioned to compete effectively in international markets. However, other data suggest that large numbers of Americans continue to feel that other countries are "catching up" to the U.S. in the development of high technology.

TABLE #4-1

Q: "Do you think that America is ahead of other countries in developing high technology, computers and information systems?"

FINDING #5

GOVERNMENT OFFICIALS NOW RANK THE DEVELOPMENT OF NEW TECHNOLOGY AS OUR MOST IMPORTANT ECONOMIC GOAL.

Detailed Observation

Government officials now feel that the development of new technology is the most important economic goal for the nation.

TABLE #5-1

Q: "Here is a list of some economic goals for the nation. Please tell me which you feel are the most important for us to pursue as the current time."

	<u>Government Officials</u>		
	<u>1985</u> (Rank)	<u>1984</u> (Rank)	<u>1983</u> (Rank)
Developing new technology	1	4	6
Keeping down interest rates	2	1	2
Increasing international competitiveness	3	5	7
Creating new jobs	4	2	3
Increasing productivity	5	3	4

Source: Corporate Priorities Environmental Scan, Yankelovich, Skelly & White, Inc. for AT&T, 1985. Government officials: national, n = 118.

FINDING #6

FOUR IN TEN SAY THE QUALITY OF U.S. EDUCATION CONTINUES TO HARM EFFORTS TO BE A WORLD TECHNOLOGICAL LEADER. ADDITIONALLY, LARGE NUMBERS CITE INSUFFICIENT INVESTMENT IN RESEARCH AND DEVELOPMENT AS A REASON FOR LOW PRODUCTIVITY. ASKED WHAT AFFECTS (OR AFFECTED) AMERICA'S TECHNOLOGICAL CAPABILITY, A MAJORITY NAMED A NUMBER OF EVENTS, INCLUDING PROBLEMS IN THE AUTO INDUSTRY, BUT NOT INCLUDING THE TRAINING OF U.S. ENGINEERS.

Detailed Observation

Many Americans feel that the current quality of American education continues to harm U.S. efforts to be a world technological leader. And, as recently as 1983, a majority also said that insufficient funding for research and development of new products and technology was partly responsible for America's low productivity.

TABLE #6-1

Q: "Is the current quality of American education helping or harming the efforts of the United States to maintain itself as a world technological leader?"

	<u>Jan./Feb. 1985</u>
Helping	38
(Both)	12
Harming	40
(Don't know)	10

Source: Cambridge Reports, Inc., Jan./Feb. 1985, national, n = 1430.

TABLE #6-2

Q: "It has been said that the U.S. lags behind some other countries such as West Germany and Japan on productivity--that is, the number of units of products that are produced per employee. Here's a list of reasons that have been given for lower productivity by American industry. (Card shown.) Would you read down that list and for each, tell me whether you think it is a major reason, a minor reason or a not a reason for lower productivity in the U.S.?..."

"...Not enough money is spent on scientific research and development of new products and technology."

	April 1983		April/May 1981		April/May 1980

Don't know	7		13		16	

Source: Roper Organization, national, (April 1983: n = 2000;) (April/May 1981: n = 1999); (April/May 1980: n = 2009).

Detailed Observation

In terms of what affected America's technological capability, a majority named a number of events as causing our reputation to decline. The drop in American productivity, the problems of the auto industry in competing with Japan, and the defeat in Vietnam lead the list. However, Japan was not felt to be doing a better job at training engineers and scientists.

TABLE #6-3

Q: "In recent years, a number of things have happened to the U.S. which have raised some doubts about our know-how and technological superiority. For each one of these things I'm going to read you, would you tell me whether you think it was a major setback for our reputation for technological capability, a minor setback, or hardly a setback?"

Source: Harris for Asaiti Shimbun, March 1982, national, n = 1599.

SECTION 3: PERCEIVED QUALITY OF U.S. VS. FOREIGN PRODUCTS

The public express concern about the quality of American-made products. Many people say, for example, that foreign cars are of better quality than those built in the U.S; and foreign cars are increasingly felt to be better in specific ways: in the quality of workmanship and freedom from repairs and in providing better gas mileage. In fact, large numbers of Americans say they will buy an American-made car because it is built in this country, not because it is of higher quality or of better value. Importantly, however, the public does not believe that the comparatively poor quality of U.S. products is due to poor engineering or inadequate technology; rather the public cites other factors, including deficiencies in the management of American companies, labor costs, and subsidies of foreign governments.

FINDING #7

THE PUBLIC IS DIVIDED ABOUT WHETHER AMERICAN-MADE PRODUCTS (ESPECIALLY AUTOMOBILES), ARE OF BETTER QUALITY THAN THOSE MADE OVERSEAS.

Detailed Observation

Only one in four strongly believes that American-made products are of generally higher quality than those manufactured elsewhere. People are divided about the quality of American and foreign cars, especially those made in Japan and Germany. Among the young and those in higher income brackets, majorities say the quality of foreign cars is superior.

TABLE #7-1

Source: Gallup for Newsweek, May 1983, national, n = 915.

FINDING #9

IN ASSESSING THE QUALITY OF VARIOUS PRODUCTS, FACTORS OTHER THAN TECHNOLOGICAL SUPERIORITY SEEM TO ACCOUNT FOR AMERICAN'S VIEWS. IN FACT, MOST PEOPLE DO NOT FEEL THAT IMPORTED BRANDS ARE BETTER DESIGNED OR ENGINEERED. RATHER, THE QUALITY OF JAPANESE AND OTHER FOREIGN-MADE PRODUCTS IS SEEN TO BE THE RESULT OF MANAGEMENT PRACTICES, LOWER LABOR COSTS, PRICE, AND GOVERNMENT SUBSIDIES.

Detailed Observation

While most people say new technologies improve the quality of consumer products, they do not think better design or engineering is the main reason for the high quality and overall success of imported brands in U.S. markets.

TABLE #9-1

Q: "Some people say the introduction of new technologies makes consumer products better. Other people say the introduction of new technologies usually causes the sacrifice of some product quality. Which of these views is closer to your own?"

SECTION 4: TECHNOLOGICAL DEVELOPMENT AND PROTECTIONISM

Americans generally say that trade with Japan is "harmful" to the U.S. economy. Yet most people tend to reject protectionist measures as a remedy, favoring modernization and increased investment in technological research and engineering as solutions to America's difficulty in competing internationally.

FINDING #11

THERE IS A GENERAL FEELING AMONG AMERICANS THAT TRADE WITH JAPAN DOES MORE HARM THAN GOOD TO THE U.S. ECONOMY. HOWEVER, IN SPITE OF THIS FEELING, AMERICANS GENERALLY FEEL THAT THE WAY TO INCREASE PROSPERITY AND REGAIN OUR COMPETITIVE POSITION IS NOT THROUGH PROTECTIONISM BUT BY INCREASING PRODUCTIVITY THROUGH MODERNIZATION, INCREASING OUR RELIANCE ON HIGH TECHNOLOGY, AND, IMPORTANTLY, THROUGH BETTER ENGINEERING.

Detailed Observation

A solid majority of the public believes that competition from Japanese imports does more harm to this country than good.

TABLE #11-1

Q: "There has been a lot of talk lately about competition from Japanese-made products and the amount of Japanese-made products being sold in the United States, such as automobiles, steel, cameras, and high technology. Do you think import competition from Japan does more harm than good to this country, more good than harm, or doesn't it matter one way or the other?"

	<u>Sept. 1985</u>	<u>July 1985</u>
More harm than good	56	60
More good than harm	23	20
Doesn't matter	19	17
It depends (vol.)	1	1
Not sure	1	2

Source: Harris, Sept. 1985, national, n = 1225, July 1985, national, n = 1252.

Detailed Observation

A majority of the public rejects imposing protectionist measures in order to increase prosperity or regain a competitive trading position. Rather, people want American industry to modernize and compete.

TABLE #11-2

Q: "Which of the following two statements more closely reflects your views?"

	<u>May 1985</u>
"U.S. automakers could develop better engineered and better priced cars and don't need import restrictions."	8 59
<u>OR</u>	
"Import restrictions on Japanese cars are necessary to protect the U.S. auto industry and its workers."	31
Don't know/No answer	10

Source: Associated Press/Media General, May 1985, national, n = 1402.

TABLE #11-3

Q: "For these statements, please tell me whether you strongly agree, mostly agree, mostly disagree, or strongly disagree."

	<u>1985</u>
	<u>Strongly Agree</u>
"...We should continue to manufacture a wide variety of products in the U.S. to avoid becoming dependent on foreign companies."	62
"...We should stop imports of foreign products when they cause Americans to lose their jobs."	47
"...Our government should support American companies that compete with foreign countries."	39

Source: Corporate Priorities Environmental Scan, Yankelovich, Skelly & White, Inc. for AT&T 1985, national, n = 2424 (16 years or older, including 99 college students living on campus).

TABLE #11-4

Q: "Here are three suggestions. Which one do you think the U.S. should do to correct this situation?"* (That U.S. products can not compete in world markets.)

	<u>March 1983</u>
"...Modernize uncompetitive industries, hold down wages, try to compete."	52
<u>OR</u>	
"...Increase trade barriers to keep foreign products out, even though other countries may respond by keeping our products out of their markets."	22
<u>OR</u>	
"...Get out of these industries and emphasize high technology industries instead."	17
None (vol)	3
Not sure (vol)	6

*NOTE: Asked of registered voters who feel U.S. products cannot compete in world markets any more (36% of total sample, n = 363).

Source: Yankelovich, Skelly & White/Time Magazine, March 1983, national registered voters, n = 1008.

Detailed Observation

Both younger and older people say that future economic growth will depend more on the development of high technology than on import restrictions or the revitalization of old industries.

TABLE #11-5

Q: "If you had to choose one, do you feel that future economic growth will come more from computers and high technology, revitalization of old industries or restrictions on imports from abroad?"

SECTION 5: TECHNOLOGICAL INVESTMENT AND BUSINESS

People favor business investment in technological research and development and say this is an appropriate use of business profits. Large numbers of Americans believe that businesses put too high a priority on executive bonuses and "perks," and, as a result, people feel that companies do not invest enough of their profits in essential research and development.

FINDING #12

THE PUBLIC BELIEVES THAT RESEARCH AND DEVELOPMENT SHOULD BE HIGH ON THE LIST OF COMPANY USES OF PROFITS. YET PEOPLE BELIEVE THAT EXECUTIVE BONUSES AND DIVIDENDS HAVE A MUCH HIGHER ACTUAL PRIORITY.

Detailed Observation

More than nine out of ten say research and development is a justified use of business profits. In fact, the public ranks only worker salary and benefit increases as higher in importance, and a large majority feels that business should significantly increase its contribution to colleges and universities for basic scientific and technological research.

TABLE #12-1

Q: "Now let me read you a number of things companies do with their profits. For each tell me if you feel that it is a justified use for the profits that companies make or not..."

"...Expand research and development to turn out new and better quality products."

Source: Harris for Business Week, Feb. 1984, national, n = 1251.

TABLE #12-2

Q: "Which 2 or 3 of these things do you think should big corporations do most with their profit money?"

	<u>June 1983</u>
Increase salaries/benefits for their workers	8 64
Do research and development of new products and production methods	53
Contribute to charities/foundations	48
Pay dividends to stockholders	29
Expand their existing operations	24
Cover everyday operating costs of the company	21
Buy stock in other companies	4
Give bonuses to top executives	3

NOTE: Adds to more than 100% due to multiple responses.

Source: Roper Organization, June 1983, national, n = 2000.

TABLE #12-3

Q: "I would like to read you a number of statements about the whole question of scientific and technological research. For each, tell me if you agree or disagree. Major U.S. corporations should increase by a sizable amount the money they give to colleges and universities for basic scientific and technological research."

	<u>Sept. 1983</u>
Agree	8 82
Disagree	15
Not sure	3

Source: Harris for Southern New England Telephone, Sept. 1983, national, n = 1256.

Detailed Observation

However, most people think that, in fact, business expenditures for research and development are a much lower priority than they should be. Majorities say business is more likely to use profits for executive bonuses or to pay dividends to stockholders than to invest in research and development.

TABLE #12-4

Q: "There is a lot of talk in the news about profits made by big corporations -- how they should be greater or smaller, how they should be used one way or another, etc. Here is a list of things big corporations might do with the profits they make. (Card shown respondent.) Keeping in mind that it might vary somewhat from company to company, could you choose the 2 or 3 things you feel big corporations do most with their profit money?

SECTION 6: TECHNOLOGY AND THE FEDERAL GOVERNMENT

Americans favor government support for technological R&D and say that past government expenditures in this area have "paid off." In fact, a majority favors increased government support of research, particularly at the college and university level. Government leaders tend to reject a any national policy that would restrict high technology exports, but large numbers among them say that there should be some restrictions in this area.

FINDING #13

THE PUBLIC SAYS THE FEDERAL GOVERNMENT SHOULD ACTIVELY SUPPORT RESEARCH AND DEVELOPMENT IN HIGH TECHNOLOGY, SUPPORTING COOPERATIVE BUSINESS EFFORTS AND PROVIDING MORE FUNDING FOR ACADEMIC RESEARCH. IN LARGE PART, THESE SENTIMENTS ARE FUELED BY A BELIEF THAT FEDERAL SUPPORT IN THIS AREA HAS BEEN MONEY WELL SPENT.

Detailed Observation

More than four citizens out of five say the federal government should play actively support high technology research and development. Two out of three say the government should encourage companies to work together on high technology development.

TABLE #13-1

Q: "Some people believe there are areas where the government just shouldn't be involved and other areas where the government ought to play an important role. For each of the following, tell me whether you think the government's role ought to be very active, not active, or not at all active."

"...in supporting research and development in high technology."

FINDING #14

IN THE 1970S, HEALTH CARE, EDUCATION, AND ENERGY-RELATED RESEARCH WERE THE PUBLIC'S PRIORITIES FOR FEDERALLY FUNDED SCIENTIFIC AND TECHNOLOGICAL RESEARCH.

Detailed Observation

In the 1970s, most people said improving health care was the top priority for government funded science and technology research. Developing and conserving energy, improving education and reducing crime also ranked as high priorities.

TABLE #14-1

Q: "I would like to talk with you about some of the things tax monies are used for. Science and technology can be directed toward solving problems in many different areas. Which areas on this list would you most like to receive science and technology funding from your tax money?"¹

FINDING #15

WHILE MOST LEADERS BELIEVE THERE SHOULD BE FEDERAL RESTRICTIONS ON HIGH TECHNOLOGY EXPORTS, THEY PREFER A CASE BY CASE APPROACH RATHER THAN A NATIONAL POLICY. THE PUBLIC GENERALLY IS UNDECIDED ABOUT THIS ISSUE.

Detailed Observation

Nearly three out of four government officials, public interest activists and corporate executives say there should be export restrictions on specific technologies. But majorities among all leadership groups support a case-by-case approach rather than a comprehensive national policy in this area.

TABLE #15-1

Q: "In your opinion are there any specific technologies, industries or companies that should be restricted with respect to exports?"

	<u>May 1985</u>			
	<u>Government Officials</u>	<u>Media</u>	<u>Public Interest Activists</u>	<u>Corporate Executives</u>
	<u>%</u>	<u>%</u>	<u>%</u>	<u>%</u>

Oppose	21
Don't know	46

Source: Cambridge Reports, Inc., April/May 1985, national, n = 1417.

SECTION 7: TECHNOLOGY, SDI, AND SPACE EXPLORATION

Americans generally support the development of the Strategic Defense Initiative (SDI or "Star Wars"), but support is thin and may reflect confidence in the President and his judgment more than enthusiasm for the idea itself. If this interpretation is correct, public opinion is potentially volatile in this area.

The public's continuing support for the space program, however, is clear, in spite of the recent tragedy with the space shuttle. Most people say the accident was probably caused by an engineering or technological flaw, yet even this did not shake public confidence in science and technology.

FINDING #16

THE PUBLIC GENERALLY SUPPORTS DEVELOPMENT OF THE STRATEGIC DEFENSE INITIATIVE.
EVIDENCE ALSO SUGGESTS THE PUBLIC THINKS THE SYSTEM WILL WORK.

Detailed Observation

A majority of Americans favors developing SDI.

TABLE #16-1

Q: "Taking all things into consideration, do you think the United States should develop a strategic defense initiative -- Star Wars -- or not?"

	<u>Nov. 1985</u>
	%
Develop	58

TABLE #16-3

Q: "President Reagan has proposed developing a defensive system that would destroy incoming Russian missiles before they reach the United States. Some people say it might be difficult technologically, but we should try to develop it. Other people say it would be impractical, expensive and sounds like science fiction. Do you think we should try to develop the system, or not?"

	<u>April 1983</u>
	%
Should	67
Should not	25
No opinion	8

Source: CBS News/New York Times, April 1983, national, n = 1489.

Detailed Observation

Most Americans also believe that SDI could work, but that majority appears to be diminishing.

TABLE #16-4

Q: "Ronald Reagan has proposed developing a defensive nuclear system in space that would destroy incoming missiles before they reach the United States, a system some people call 'Star Wars.' Do you think such a system could work?"

	<u>Nov. 1985</u>	<u>Jan. 1985</u>
	%	%
Yes	58	62
No	27	23
Don't know/No answer	15	15

Source: CBS News/New York Times, Nov. 1985, national, n = 1659; New York Times/CBS News Foreign Policy Survey, Jan. 1985, national, n = 1525.

FINDING #17

HOWEVER, CONCERNS ABOUT BOTH THE DEFICIT AND MILITARY COST-OVERRUNS LEAD MANY TO QUESTION THE WISDOM OF SPENDING SO MUCH ON SDI AT THE PRESENT TIME. WHILE THE EVIDENCE IS NOT CONCLUSIVE, AT LEAST SOME OF THE PUBLIC'S SUPPORT FOR SDI SEEMS TO REFLECT CONFIDENCE IN THE PRESIDENT AND HIS JUDGMENT, RATHER THAN ENDORSEMENT OF SDI AS A CONCEPT, AND THEREFORE SUPPORT FOR SDI MAY BE SUBJECT TO CHANGE.

Detailed Observation

Nearly two out of three view the \$26 billion earmarked for the development of SDI as too much to spend, and the public is split on whether SDI is worth the money it will cost to develop.

TABLE #17-1

Q: "Although no one has yet estimated how much it will cost to develop Star Wars, President Reagan has asked for a total of 26 billion dollars over the next five years for 'research' on the strategic defense initiative, considering the current budget situation, would you say that's too much to spend on research, or is it about the right amount, or would you say it isn't enough?"

	<u>Nov. 1985</u>
	%
Too Much	59
About the Right Amount	27
Not Enough	7
Not Sure	7

Source: Los Angeles Times, Nov. 1985, national, n = 2041.

TABLE #17-2

Q: "Do you think this system ("Star Wars" defense or defensive nuclear system in space that would destroy incoming missiles before they reached the United States) would be worth the amount of money it would cost?"

	<u>Jan. 1985</u>
	%
Yes	40
No	46
Don't know/No Answer	14

Source: CBS News/New York Times, Jan. 1985, national, n = 1525.

Detailed Observation

Finally, while the evidence is not conclusive, key differences in question wording suggest that at least some (and perhaps much) of the public's support for the system reflects public confidence in the President and his judgment, rather than a ringing endorsement of SDI as a concept. For example, when the public is asked about "laser-beam weapons in outerspace" with no mention of either the President or SDI, their level of support is much lower. (Compare the table below to Table #16-3.)

TABLE #17-3

Q: "All in all, do you favor or oppose spending billions of dollars for the U.S. to develop a laser-beam and particle-beam anti-nuclear missile defense system in outer space and on the ground?"

	<u>March 1985</u>	<u>April 1983</u>
	%	%
Favor	39	36
Oppose	56	58
Not Sure	5	5

Source: Harris, March 1985, national, n = 1256, April 1983, national, n = 1250.

FINDING #18

THE PUBLIC GENERALLY SUPPORTS CONTINUED SPACE EXPLORATION. HOWEVER, EVEN IMMEDIATELY AFTER THE MOON LANDING, MOST QUESTIONED THE AMOUNT OF MONEY BEING SPENT ON THE SPACE PROGRAM AND SAID THIS WAS A PLACE TO CUT THE BUDGET.

Detailed Observation

A majority of the public favors continuing the exploration of outer space.

TABLE #18-1

Q: "There are a number of things that have changed rather drastically over the past 20 years. Here is a list of some of them. Would you read down that list and for each one tell me whether you'd like to see continued advances and developments on it in the future, or whether you think we've gone as far as we should on it now, or whether we've already gone too far on it now..."

"...exploration of space."

	<u>Aug. 1981</u>
Would like continued advances	57
Gone as far as should	26
Gone too far now	12
Don't know	5

Source: Roper Organization, Aug. 1981, national, n = 2000. (Subpopulation: 'Y' half of sample, n = 1,000.)

Detailed Observation

However, even immediately after the first moon landing in July 1968, only a minority wanted to increase spending in this area, and a majority said it was their first choice for federal budget cuts, ahead of welfare benefits, aid to cities, military defense and subsidies to farmers.

TABLE #18-2

Q: "The United States is now spending many billions of dollars on space research. Do you think we should increase these funds, keep them the same, or reduce these funds?"

FINDING #22

WHILE MOST PEOPLE THINK A TECHNOLOGICAL OR ENGINEERING FLAW CAUSED THE SHUTTLE ACCIDENT, CONFIDENCE IN SCIENCE AND TECHNOLOGY WAS NOT SHAKEN BY THE ACCIDENT. PEOPLE SAY THAT THE SHUTTLE ACCIDENT IS PART OF THE PRICE WE MUST PAY TO EXPLORE OUTER SPACE.

Detailed Observation

Almost half of the public thinks the cause of the space shuttle accident was related to technology or engineering -- construction/maintenance or computer failure.

TABLE #22-1

Q: "What is your best guess about what caused (the space shuttle) explosion? Was it poor decisions by NASA leaders, or a mistake in construction and maintenance, or sabotage, or computer failure or was it something else?"

	<u>Jan. 1986</u>
Construction and maintenance	38
Computer failure	10
Sabotage	6
Poor decision by NASA leaders	3
Something else	28
No opinion/Don't know	17

Source: New York Times/CBS News, Jan. 30-31, 1986, national, n = 1120.

Detailed Observation

More than half the public say their confidence in science and technology was high before the accident, and only about six percent said it was "low." Eight in ten say their faith in science and technology is the same as it was before the tragedy, and only a small minority say their faith has been "shaken."

TABLE #22-2

Q: "Before the accident, was your confidence in science and technological ability quite high, or rather low, or somewhere in between?"

	<u>Jan. 1986</u>
	8
Confidence was high	54
Confidence was somewhere in between	40
Rather low/don't know	6

Source: Roper Organization for U.S. News & World Report, Jan. 29-30, 1986, national, n = 1003.

TABLE #22-3

Q: "Does this week's space shuttle accident shake your faith in science and technology or is your degree of confidence in science and technology the same now as it was before the accident?"

	<u>Jan. 1986</u>
	8
"My faith in science and technology is the same as it was before"	80
"My faith in science and technology has been shaken"	16
Don't know	4

Source: Roper Organization for U.S. News & World Report, Jan. 29-30, 1986, national, n = 1003.

Detailed Observation

While most people say an accident like the shuttle explosion was eventually 'bound to happen,' a solid majority feels that these deaths are part of "the price we must pay for the exploration and mastery of space."

TABLE #22-4

(Exact question wording not available)

A price we must pay	8 73
An unacceptable price	22
Don't know	5

Source: Roper Organization for U.S. News & World Report, Jan. 29-30, 1986, national, n = 1003.

FINDING #23

THE PUBLIC'S CURRENT VIEWS ABOUT THE SPACE PROGRAM MAY BE DEEPLY COLORED BY INTENSE PATRIOTIC AND EMOTIONAL REACTIONS.

Detailed Observation

Almost a third of the public said the space shuttle crash upset them more than two other recent tragedies -- the December military crash in Newfoundland and the 1983 terrorist bombing of the Marine barracks in Lebanon.

TABLE #23-1

Q: "Which of these three recent events upset you the most:

1. The October 1983 terrorist bombing of the Marine barracks in Lebanon.

Or

2. The January 1986 space shuttle crash killing all aboard.

Or

3. The December 1985 plane crash killing 248 military personnel in Newfoundland."

SECTION 8: VIEWS OF TECHNOLOGY

Part 1: Technology's General Impact

Americans have great faith that technology can solve pressing national problems and they believe that technology has generally improved the quality of life. At the same time, people are aware of at least some of the risks of technology, and their positive view of technology is not based on what might be called "blind optimism."

Part 2: Technology's Impact on Jobs

In the workplace, people say technology has made many jobs safer and increased productivity; but Americans are uncertain whether technology creates more jobs than it takes away. In spite of their unease, however, people oppose laws that would limit the ability of business to make technological changes in the workplace.

Part 3: Social Control of Technology

About the desirability of controls over technology, public opinion is distinctly mixed. People oppose controls that would restrict the development of useful new technology, yet they are concerned about new threats to public safety.

Part 4: Public Awareness and Potential for Involvement

The public is moderately interested in scientific and technological matters, and feels that their basic understanding of these issues is "adequate." Further, people say that scientific and technological development is an area where they do not have enough information to make informed judgments or decisions.

Part 1: Technology's General Impact

FINDING #24

THE PUBLIC GENERALLY BELIEVES THAT SCIENCE AND TECHNOLOGY DO MORE GOOD THAN HARM AND HAVE CHANGED LIFE FOR THE BETTER. HOWEVER, THERE IS EVIDENCE SUGGESTING THAT SLIGHTLY SMALLER NUMBERS OF AMERICANS HOLD THIS VIEW TODAY THAN A FEW YEARS AGO.

Detailed Observation

A large majority consistently says science and technology do more good than harm; however, public sentiment, which had been increasing from 1972 to 1983, has declined rather sharply in the past two years. Since the public is most aware of technological advances in the field of medicine, one explanation for this fluctuation is that the first successful artificial heart transplant occurred in December 1982. While the public's initial reaction was enthusiastic, more recent concerns about cost and effectiveness may have affected their view.

TABLE #24-1

Q: "Overall, would you say that science and technology do more good than harm, more harm than good, or about the same amount of each?"

	Jan/ Feb ¹ 1985	Jan/ Feb ¹ 1984	Jan/ Feb ¹ 1983	Jan/ Feb ¹ 1982	Sept ² 1976	July ² 1974	May ² 1972

TABLE #24-2

Q: "All in all, if you had to say, in the past, do you think science and technology did more good than harm for the human race, or more harm than good?"

	<u>Sept. 1983</u>
	%
More good than harm	83
More harm than good	14
Neither (vol)	1
Not sure	2

Source: Harris for Southern New England Telephone, Sept. 1983, national, n = 1256.

Detailed Observation

In general, a large majority of Americans believes that science and technology have changed life for the better. However, there is some evidence suggesting a decline in the number of people holding this view (from about 70 percent in the 1970s to about 55 percent in the mid-1980s). It is unclear whether this trend indicates a real shift in public opinion or if it is merely the result of different question wording.

TABLE #24-3

Q: "Advancing technology has resulted in a number of changes in our way of life--some good, some not so good. On the one hand we have such things as color television, pocket calculators, micro-wave ovens and whole new industries. On the other hand we have such things as people thrown out of work as machines take over their jobs, electronic eavesdropping devices, atomic bombs, and more pollution in the air. All things considered, do you think life is better today than 50 years ago because of advanced technology, or worse today, or just different -- no better or no worse?"

	<u>Dec. 1983</u>	<u>Dec. 1978</u>
	%	%
Life is better today	55	59
Life is worse today	15	19
Just different--no better, no worse	27	22

Source: Roper, national, (Dec. 1983: n = 2000); (Dec. 1978: n = 1997).

TABLE #24-4

Q: "Have science and technology changed life for the better or for the worse?"

	<u>Sept.</u> <u>1976</u>	<u>July</u> <u>1974</u>	<u>May</u> <u>1972</u>
Better	8	8	8
Worse	71	75	70
Both	7	5	8

	10	9	11

Source: Opinion Research Corporation for the National Science Foundation, national, (Sept. 1976: n = 2108); (July 1974: n = 2074); (May 1972: n = 2209).

Detailed Observation

Whatever the trend, however, the public's "faith" in technology is considerable. As recently as 1982, about three Americans in four said that technological "breakthroughs" will solve many (or all) of the country's problems.

TABLE #24-5

Q: "Most problems can be solved by applying more and better technology."

	<u>1982</u>
Agree	8 77

Don't know	2

Source: Research and Forecasts, Inc. for the Continental Group, 1982, national, n = 1310. (Published in Science Indicators 1982, The National Science Board, Washington, DC).

FINDING #25

BOTH LEADERS AND THE PUBLIC HAVE LONG FELT THAT TECHNOLOGICAL DEVELOPMENT INVOLVES RISKS, BUT THEY HAVE DIFFERENT VIEWS ABOUT THEIR NATURE AND EXTENT -- WITH THE PUBLIC SAYING TECHNOLOGY'S RISKS ARE GREATER, AND BUSINESS LEADERS IN PARTICULAR SAYING THAT RISKS HAVE BEEN EXAGGERATED BY EVENTS.

Detailed Observation

Even in the 1970s, when their feelings about technology may have been more positive than they are today, most Americans said that science and technology caused a substantial amount (but not most) of our problems. In fact, most people felt that "we've only seen the tip of the iceberg with regard to the risks associated with modern technology," but leaders tended to disagree with this view. Many more business leaders than the public felt events such as the Three Mile Island and Love Canal episodes cause technological risk to be exaggerated.

TABLE #25-1

Q: "Do you feel that science and technology have caused most of our problems, some of our problems, few of our problems, or none of our problems?"

	<u>Sept. 1976</u>	<u>July/Aug. 1974</u>	<u>May 1972</u>

Source: Harris for March and McLennon, Dec. 1979/March 1980, national. (See the number in parentheses for the sample size of each group.)

FINDING #26

THE PUBLIC'S SUPPORT FOR DEVELOPING NEW TECHNOLOGY RESTS, IN LARGE PART, ON THE PERCEPTION THAT SCIENCE AND TECHNOLOGY, AND TECHNOLOGICAL KNOW-HOW ARE LARGELY RESPONSIBLE FOR THE HIGH STANDARD OF LIVING IN THE U.S.

Detailed Observation

Solid majorities agree that science and technology are responsible for both our high standard of living and the key to raising it still further.

TABLE #26-1

Q: "Technological know-how is largely responsible for our standard of living in the United States."

Oct. 1979

FINDING #27

BUT PARALLELING THEIR FEELING THAT TECHNOLOGY IS NOT RISK-FREE IS THE PUBLIC'S SENSE THAT THE DEVELOPMENT OF NEW TECHNOLOGY HAS BOTH POSITIVE AND NEGATIVE EFFECTS ON THEIR LIVES.

Detailed Observation

A clear majority of the public perceives scientific and technological developments as having both positive and negative impacts. Science and technology have, in people's view, helped make the U.S. prosperous, productive and militarily strong, and also had a positive effect on efficiency, leisure time and personal growth. On the other hand, a majority feels they have contributed to materialism, waste and an impersonal society.

TABLE #27-1

Q: "Now I'd like you to think back over the changes from scientific and technological developments we've just been talking about. In general, as far as you personally are concerned, do you think these changes will have a positive effect, a negative effect, or not much effect either way on..."

"...Tend to overproduce products, and this is wasteful."	52	36	12

Source: Harris, Nov. 1977, national, n = 1520.

Part 2: Technology's Impact on the Workplace

FINDING #28

IN GENERAL, PEOPLE FEEL THAT NEW TECHNOLOGY IN THE WORKPLACE HAS IMPROVED JOB SAFETY, INCREASED PRODUCTIVITY, AND CREATED MORE JOB OPPORTUNITIES.

Detailed Observation

Majorities feel that new technology has reduced health hazards on the job and increased both productivity and job opportunities.

TABLE #28-1

Q: "Now, here are some changes that are taking place or are likely to take place in plants and manufacturing. For each, tell me if you think that it will make things a lot better, somewhat better, somewhat worse, or a lot worse..."

"...Installation of high technology will enable workers to increase their productivity."

FINDING #29

HOWEVER, THE PUBLIC IS OF TWO MINDS ABOUT WHETHER THE NET EFFECT OF TECHNOLOGY WILL INCREASE OR DECREASE THE NUMBER OF JOBS. AMONG UNION LEADERS, A MAJORITY BELIEVES TECHNOLOGY CREATES MORE JOBS THAN IT TAKES AWAY.

Detailed Observation

While the public is uncertain about the impact of technology on the number of jobs in the economy, evidence suggests that union leaders see technology's net impact as positive.

TABLE #29-1

Q: "Some people say that scientific and technological changes cause unemployment because people's jobs are replaced by machines. Others argue that while some jobs may be lost in specific areas, scientific and technological changes increase the total number of jobs over the long run. Which view is closer to the truth?"

FINDING #30

HOWEVER, IN SPITE OF THEIR FEELING THAT TECHNOLOGY MAY DECREASE THE NUMBER OF JOBS, THE PUBLIC OPPOSES LAWS TO LIMIT TECHNOLOGICAL CHANGE IN THE WORKPLACE.

Detailed Observation

Almost two out of three oppose laws that would limit the ability of business and industry to make technological changes in the workplace.

TABLE #30-1

Q: "Do you favor or oppose laws that would limit the ability of business and industry to make technological changes in the workplace?"

	<u>Jan./Feb.</u> <u>1985</u>	<u>Jan./Feb.</u> <u>1983</u>
	%	%

3: Social Control of Technology

FINDING #31

SINCE THE PUBLIC HAS NEVER SEEN "TOO MUCH TECHNOLOGY" AS A MAJOR CAUSE OF TODAY'S PROBLEMS, PEOPLE WELCOME GREATER EMPHASIS ON TECHNOLOGICAL DEVELOPMENT.

Detailed Observation

In a ten year span, "too much technology" consistently was rated low on the list of major causes of current problems.

TABLE #31-1

Q: "Now here is a list of possible causes of some of our problems in this country. (Card shown respondent) Would you call off the ones you think are the major causes of our problems today?"

	<u>Oct.</u> <u>1983</u> rank	<u>Feb.</u> <u>1979</u> rank	<u>Feb.</u> <u>1977</u> rank	<u>Oct.</u> <u>1975</u> rank	<u>Oct.</u> <u>1974</u> rank	<u>Oct.</u> <u>1973</u> rank

Source: Gallup, April 1977, national, n = 1523.

FINDING #32

LEADERS OPPOSE SOCIETAL CONTROL OF TECHNOLOGICAL DEVELOPMENT, BUT THE PUBLIC HAS MIXED FEELINGS. WHILE SAYING THE DEVELOPMENT OF NEW TECHNOLOGY SHOULD BE UNREGULATED WHENEVER POSSIBLE, MAJORITIES ALSO SAY THAT UNLESS DEVELOPMENT IS RESTRAINED, PUBLIC SAFETY WILL BE JEOPARDIZED. THE PUBLIC'S AMBIVALENCE ABOUT THIS ISSUE INDICATES THAT PUBLIC OPINION IS NOT "WORKED THROUGH."

Detailed Observation

A majority of the public simultaneously says that whenever possible, the development of advanced technology should be as unregulated and that unless technological development is restrained, the future safety of our society will be jeopardized. Among leaders, large majorities of corporate executives, investors/lenders and government officials say that technological development should be uninhibited in all respects.

TABLE #32-1

Q: "As a general indication of your views on risk, technology, and the future, please tell me whether you agree or disagree with the following statements?"

"...Development of advanced technology should continue in as uninhibited a regulatory environment as reasonably possible."

Source: Harris for March and McLennon, Dec. 1979/March 1980, national. See number in parentheses for the sample size for each sub-group.

Part 4: Public Awareness and Potential for Involvement

FINDING #33

THE PUBLIC IS MODERATELY INTERESTED IN NEW DEVELOPMENTS IN SCIENCE AND TECHNOLOGY; THOSE WHO ARE BEST EDUCATED EXPRESS THE GREATEST INTEREST.

Detailed Observation

A majority of the public is interested in scientific and technological matters, and those with more education are even more interested.

TABLE #33-1

Q: "How much interest do you actually have in scientific and technological matters -- are you very interested, somewhat interested, rather uninterested, or not interested at all?"

	<u>Sept. 1983</u>
Very interested	30
Somewhat interested	57
Rather uninterested	7
Not interested at all	5

Source: Harris for Southern New England Telephone, Sept. 1983, national, n - 1256.

TABLE #33-2

Q: "Are you very interested, moderately interested, or not at all interested in:

	Oct. 1979		
	<u>Very</u>	<u>Moderately</u>	<u>Not At All</u>

Source: Institute for Survey Research Temple University for the National Science Foundation, Oct. 1979, national, n = 1635.

FINDING #34

MOST AMERICANS FEEL THAT THEIR BASIC UNDERSTANDING OF SCIENCE AND TECHNOLOGY IS AT LEAST "ADEQUATE." HOWEVER, THE PUBLIC DOES NOT FEEL WELL INFORMED ABOUT SCIENTIFIC AND TECHNOLOGICAL ISSUES, AND FOUR OF FIVE SAY CITIZENS IN GENERAL ARE TOO POORLY INFORMED TO HELP SET GOALS FOR SCIENTIFIC RESEARCH.

Detailed Observation

Most people believe that their basic understanding of science and technology is "adequate;" only one in four says he has a "very good" understanding of these areas.

TABLE #34-1

Q: "If you had to rate your own basic understanding of science and technology, would you say it is very good, adequate, or poor?"

	<u>Sept. 1983</u>
Very good	8 24
Adequate	59
Poor	16
Not sure	1

Source: Harris for Southern New England Telephone, Sept. 1983, national, n = 1256.

Detailed Observation

While about half the public believe they are "moderately" informed about issues involving new technology and innovation, four in ten say they are "poorly" informed. Even among people with at least some college education, only 15 percent say they are "very" informed. In addition, more than four in five feel that most citizens are not well enough informed to help set goals for scientific research or to decide which new technologies should be developed.

TABLE #34-2

Q: "Would you consider yourself very well informed, moderately informed, or poorly informed about this area?"

"...Issues about the use of new inventions and technologies."

"...To decide which new technologies should be developed."	12	85	4

Source: Institute for Survey Research, Temple University for the National Science Foundation, Oct. 1979, national, n = 1635.

FINDING #35

THOSE WHO ARE MORE INTERESTED IN AND KNOWLEDGEABLE ABOUT SCIENCE AND TECHNOLOGY ARE MORE LIKELY TO BECOME INVOLVED IN SCIENTIFIC OR TECHNOLOGICAL CONTROVERSIES. MOST PEOPLE'S RELUCTANCE TO GET INVOLVED DOES NOT STEM FROM FEELINGS OF POWERLESSNESS; RATHER, MOST SAY THEY WOULD NOT GET INVOLVED BECAUSE THEY DO NOT KNOW ENOUGH ABOUT THE ISSUE.

Detailed Observation

Compared to the public as a whole, almost twice as many among those with greater interest in and knowledge of science and technology would become involved in a controversy about nuclear power plants and space exploration. However, both groups would be more likely to become involved in a nuclear power plant controversy (that is, a controversy that was more familiar).

TABLE #35-1

Q: "I would definitely taken an active part in controversies about..."

	Oct. 1979		Total %
	Attentives* %	Non-Attentives* %	
"...Nuclear power plants."	39	21	24
"...Space exploration."	12	6	7

* Note: Individuals were classified as attentive to science and technology if they scored high on measures of interest in science and knowledge and awareness of technology.

Source: National Opinion Research Center/Institute for Survey Research, Temple University for the National Science Foundation, Oct. 1979, national, (Attentives: n = 301); (Non-Attentives: n = 1334); (Total: n = 1635).

Detailed Observation

In controversies surrounding space exploration and nuclear power plants, majorities say their main reason for not getting involved is the feeling that they do not know enough about the issue. Feelings of powerless -- which often keep people from becoming involved in other issues -- are not the primary reason for their reluctance to get involved in controversies about science and technology.

TABLE #35-2

Reasons for not Wanting to Take an Active Part in Specific Issue Controversies.

(Exact question wording is not available.)

	(n = 1068) Space Exploration Controversy %	(n = 627) Nuclear Plant Controversy %
I don't know enough about the issue	69	59
It wouldn't do any good	30	32
I wouldn't know who to contact	22	15
I have too many other things to do	19	19
Someone else would probably express my views	15	19
It would not affect me personally	14	10

* Percents are based on those who said they would not participate, not on the entire sample (See parentheses for sample sizes of each controversy.) Multiple responses were accepted so that the percentages add to more than 100.
