PUB DATE JUL 68

EDRS PRICE MF-\$0.25 HC-\$0.80 18P.

DESCRIPTORS- *VOCATIONAL EDUCATION, *OCCUPATIONAL CLUSTERS, *EMPLOYMENT OPPORTUNITIES, OCCUPATIONAL SURVEYS, AGRICULTURAL EDUCATION, HEALTH EDUCATION, DISTRIBUTIVE EDUCATION, TRADE AND INDUSTRIAL EDUCATION, OCCUPATIONAL HOME ECONOMICS, BUSINESS EDUCATION, *EMPLOYMENT PROJECTIONS, EMPLOYMENT STATISTICS, MODELS, EDUCATIONAL PLANNING, EMPLOYMENT TRENDS, LABOR MARKET, *EMPLOYMENT LEVEL, NEBRASKA,

THE NEED FOR OCCUPATIONAL EDUCATION PROGRAMS WAS ASCERTAINED BY DESIGNING A MODEL FOR STATEWIDE ASSESSMENT OF EMPLOYMENT OPPORTUNITIES. A LIST OF 63,125 NEBRASKA EMPLOYERS WAS DEVELOPED IN COOPERATION WITH THE STATE TAX COMMISSIONER, INTERNAL REVENUE SERVICE, AND THE STATE DEPARTMENT OF LABOR. QUESTIONNAIRES CONSISTING OF 174 JOB CLUSTERS WERE MAILED TO A 3 PERCENT RANDOM SAMPLE OF 1,894 FIRMS TO DETERMINE THE NUMBER OF PEOPLE PRESENTLY EMPLOYED BY OCCUPATIONAL GROUPING, THE NUMBER OF EMPLOYEES NEEDED IN EACH OCCUPATIONAL GROUP DURING THE NEXT YEAR, AND THE EMPLOYMENT NEEDS FOR EACH OCCUPATIONAL GROUPING IN THE NEXT 3 YEARS. THE QUESTIONNAIRE YIELDED A 40 PERCENT RESPONSE AND DATA FROM NON-RESPONDENTS WERE OBTAINED BY PERSONAL INTERVIEW. SELF-EMPLOYED PERSONS HIRING NO EMPLOYEES WERE NOT INCLUDED IN THE SAMPLE POPULATION. HOWEVER, THE FARMER AND RANCHER GROUP WAS ESTIMATED FROM NEBRASKA AGRICULTURAL STATISTICS. THE EMPLOYMENT DATA WERE PROJECTED BY COMPUTER TO REFLECT STATEWIDE EMPLOYMENT OPPORTUNITIES IN EACH OF THE 174 JOB GROUPS. CURRENT EMPLOYMENT IN NEBRASKA WAS ESTIMATED TO BE 653,990 AND PERCENTAGE DISTRIBUTIONS BY OCCUPATIONAL GROUPS WERE--(1) AGRICULTURAL, 20.4, (2) DISTRIBUTIVE, 22.5, (3) HEALTH, 3.9, (4) WAGE EARNING HOME ECONOMICS, .8, (5) BUSINESS, 16.3, (6) TRADE AND INDUSTRIAL, 29.6, AND (7) OTHER, 6.5. FINDINGS INDICATED 42.8 PERCENT OF ALL NEW EMPLOYEES IN THE NEXT 3 YEARS WILL BE NEEDED IN THE TRADE AND INDUSTRIAL OCCUPATIONS AREA. FURTHER STUDY WAS RECOMMENDED TO DETERMINE JOB DESCRIPTIONS, CURRICULUM NEEDS, NET EMPLOYMENT OPPORTUNITIES (CORRECTED FOR MIGRATION), AND STARTING WAGES.

STATE-WIDE COMPUTERIZED MODEL FOR DETERMINING
OCCUPATIONAL OPPORTUNITIES IN NEBRASKA

SUMMARY

Introduction:

One of the most pressing problems confronting vocational educators, legislators and other policy makers in Nebraska is that of ascertaining the need for occupational education programs. Data on the state labor force have been collected under varying conditions, times and geographical areas. They have not adequately depicted the numbers and kinds of jobs which exist or which will exist in the future. Since vocational education programs should be geared to the labor market, the need for a reliable indicator of employment opportunities is apparent. The Nebraska Research Coordinating Unit (RCU) designed a model to obtain, from employers themselves, current and projected data on employment opportunities.

Objective:

The objective of the research was to design a model for state-wide assessment of employment opportunities.

Procedure:

The first step was to identify a complete list of firms within the state that employed people.

The population of Nebraska employers was developed in cooperation with the State Tax Commissioner, the Internal Revenue Service (IRS) and the State Department of Labor. The population included all businesses required to file Federal Income Tax Reports in the following tax classes: (1) firms employing one or more persons on which Social Security was paid and income tax withheld, (2) domestic help and (3) farms and ranches employing farm labor. In addition (4) all Federal offices in Nebraska and (5) out-of-state Nebraska employers were included.

The population of firms was 63,125. Names of all firms were transferred to magnetic tape and assigned consecutive numbers. A three per cent sample, 1894 firms, was randomly selected by computer from this population. Names and addresses of the firms were obtained from the computer printout. A questionnaire mailed to the 1894 firms yielded a 40 per cent response. Data from the remaining firms were obtained by personal interview.

It would be obviously impractical to enumerate employment opportunities for every job title. The Standard Terminology For Instruction in Local and State School Systems was used to identify job clusters or groupings of job titles according to similar educational preparation.¹ The two-page questionnaire consisted of 174 job clusters in seven occupational areas, (i.e. Agriculture, Distribution, Health, Wage Earning Home Economics, Business, and Trade and Industrial Occupations, and other).

Data requested from all firms were: (1) the number of people presently employed by occupational grouping; (2) the employer's estimate of the number of employees needed in each occupational group during the next year due to turnover, promotion, expansion and retirement; and (3) the employer's estimate of employment needs for each occupational grouping in the next three years.

Delimitations:

The population did not include self-employed persons who hired no employees and withheld no labor income tax or social security. No accurate source of this information is available except the farmer and rancher group, which could be estimated from the Nebraska Agricultural Statistics.²

Findings:

The employment data collected were projected by computer to reflect state-wide employment opportunities estimates for each of the 174 job groups. Current employment in Nebraska was estimated to be 653,990. This total includes an estimated 61,852 self-employed farmers and ranchers who did not appear on the IRS File because they did not employ hired labor. The 61,852 figure was obtained by subtracting the number of projected farmers and ranchers reporting in the study (18,148) from the projected number of Nebraska farms and ranches reported in the Nebraska Agricultural Statistics.²

¹Putnam, John F. and Chismore, Dale W. Standard Terminology for Instruction in Local and State School Systems. State Education Records and Reports Series: Handbook VI, Chapter 5, U. S. Department of Health, Education, and Welfare, Office of Education, May 1967.

²Nebraska Department of Agriculture. Nebraska Agricultural Statistics. Annual Report, 1965, Preliminary 1966, State-Federal Division of Agricultural Statistics, Lincoln, Nebraska, May 1967, p. 109.

List 1 shows the occupational mix of present Nebraska employment based on the educational classifications in the Standard Terminology for Instruction in Local and State School Systems.³ These educational job clusters are grouped according to occupations which require similar background and preparation.

Nebraska State Department of Labor "Labor Force Summary"⁴ (List 2) for the same time period classifies Nebraska jobs by Industrial Classification based upon product produced and general service performed. Since the basis for categorization is different, the data in most cases are not comparable.

List 1		List 2	
<u>Standard Terminology for Instruction in Local and State School Systems³</u>		<u>Labor Force Summary of Nebraska's Employment⁴</u>	
Agricultural	133,452*	Agricultural	94,000*

⁴Nebraska Department of Labor, Division of Employment. "Nebraska Labor Force Summary," Nebraska Labor Force Trends, December, 1967, Lincoln, Nebraska

TABLE I		
NUMBERS AND PERCENTAGES OF PERSONS PRESENTLY EMPLOYED IN NEBRASKA BY OCCUPATIONAL AREA ⁵		
	Present Employment	
	Number	Percent of Total
Agricultural Occupations	133,452	20.4
Distributive Occupations	147,066	22.5
Health Occupations	25,435	3.9
Wage Earning Home Economics Occupations	5,501	.8
Business Occupations	106,367	16.3
Trade and Industrial Occupations	193,403	29.6
Other Occupations	42,766	6.5
TOTAL	653,990	100.0

⁵Putnam and Chismore loc. cit.

NOTE: Persons enrolled in vocational education programs to prepare for jobs may receive instruction in two or more subject areas, depending on the specific functions of their job. For example, persons reported in "Home Furnishings, Apparel and Accessories" under Distributive Occupations, and "Hospital Food Services, Hospital Food Assemblers" under Health Occupations would need instruction and technical knowledge in Home Economics.

As shown in Table II the estimated Nebraska man power need for one and three years indicates the highest need for trained workers will be in the Trades and Industrial Occupations area, where 29.6 per cent of the present labor force is employed. The need for new workers for the next 12 months (also shown in Table II) indicates that 42.3 percent of the new workers needed will be in the Trades and Industrial Occupations area. The study revealed that employers estimate there will be 142,899 job opportunities in Nebraska in the next year, and that there will be a total of 294,768 job opportunities in Nebraska in the next three years.

TABLE II				
NUMBERS AND PERCENTAGES OF OCCUPATIONAL OPPORTUNITIES IN NEBRASKA IN THE NEXT ONE AND THREE YEARS BY OCCUPATIONAL AREA ⁶				
	New Employees Needed in 12 Months		New Employees Needed in 3 Years	
	Number	Percent of Total	Number	Percent of Total
Agricultural Occupations**	17,433	12.2	27,001	9.1

Health Occupations	7,997	5.6	11,266	3.8
Wage Earning Home Economics Occupations	1,066	.7	1,567	.5
Business Occupations	17,402	12.2	39,032	13.2
Trade and Industrial Occupations	60,469	42.3	125,435	42.8
Other Occupations	6,566	4.6	14,400	4.8
TOTAL	142,899	100.0	294,768	100.0

⁶Putnam and Chismore loc. cit.

**There is no projection for these cells from the 61,852 self-employed farmers and ranchers hiring no employees.

NOTE: Persons enrolled in vocational education programs to prepare for jobs may receive instruction in two or more subject areas, depending on the specific functions of their job. For example, persons reported in "Home Furnishings, Apparel and Accessories" under Distributive Occupations, and "Hospital Food Services, Hospital Food Assemblers" under Health Occupations would need instruction and technical knowledge in Home Economics.

AGRICULTURAL OCCUPATIONS:

Much has been written about the shift of employment in Agriculture. People in off-farm agricultural occupations (agricultural mechanics, horticulture and agricultural supply and services) have expressed need for trained workers, but the number of persons needed and the numbers currently employed have not been previously established. The one and three year projections in this study provide reasonable estimates. The opportunities depicted in production and off-farm agricultural jobs warrant expansion of agricultural education programs in Nebraska.

Table III shows 133,452 currently employed in agricultural occupations, with 17,433 job opportunities in the next year and 27,001 opportunities in the next three years. The opportunities in the next one year constitute 12.2 per cent of the state's employment opportunities by occupational area.

TABLE III

TOTAL		836 133452**	245	17433	270	27001

*Number of employers reporting employees in this category.

**From 1966 Agricultural Statistics, 61,852 farmers not in sample because they do not hire help.

The numbers employed under Farming and Ranching in Table III included hired labor and replacement farmers while the project in the same table for "Laborers" includes the group of untrained people in the off-farm agricultural businesses.

All part-time workers were converted to full-time equivalents. Seasonal fluctuation, common in agriculture, was not considered.

The majority of the workers in agricultural occupations are at less than the professional level, requiring varying levels of education. About 11 per cent of those now employed and about four per cent of the next year's need (733) were classified in the professional category.

A study of Genereux⁷ showed the annual need for replacement farmers in Nebraska to be 951 annually. Genereux's study made allowances for farm consolidation, turnover, age of operator and population trends.

DISTRIBUTIVE OCCUPATIONS:

Distributive Occupations include people in business, advertising, sales, merchandising, and distribution. As shown in Table IV the total figure of 147,066 persons now employed constitutes about 22.5 per cent of the work force in Nebraska. The 31,966 opportunities identified for next year account for about 22.4 per cent of the total anticipated need. In three years the 76,067 anticipated opportunities will be 25.8 per cent of employment needs. About 10 per cent of those currently employed in this group are listed as professional and managerial while only 5.3 per cent of those needed next year are in this category. This is probably because the turnover at the professional and managerial level is not as rapid as in other positions.

Positions in sales account for the highest number of occupational opportunities in this employment area. The retail opportunities alone account for about 18,400 or 57 per cent of all opportunities. The figure obtained for "Transportation" includes all truck drivers.

⁷Genereux, Douglas. Annual Estimated Replacement Farmer Opportunities in Nebraska, Departmental Report No. 3, Dept. of Ag. Education, Univ. of Nebr., Lincoln, Nebr., March 1967.

HEALTH OCCUPATIONS:

Health Occupations include persons who utilize skills, abilities and understandings deemed necessary to render supportive services to the health professions. The latter are concerned with providing diagnostic, therapeutic, preventive, restorative and rehabilitative health care services.

Table V indicates that 25,435 persons are presently engaged in health occupations, with 7,997 occupational opportunities in the next 12 months and 11,266 opportunities in three years.

TABLE V

TOTAL~	135	25,435	40	7,997	54	11,266

*Number of employers reporting employees in this category.

The per cent breakdown of those employed in each job group was Professional and Administrative categories, 39.0 per cent, Nurses Aides 33 per cent, Licensed Practical Nurse 7 per cent, Hospital Food Assemblers 5.6 per cent, Associate Degree Nurse 3.5 per cent, Clinical Laboratory Assistants 2.4 per cent, Certified Dental Assistants 2.2 per cent and Medical Assistants 1.5 per cent. Other occupations having 1 per cent or less representation are: Associate Degree Hygienist, Dental Laboratory Technician, Cytology Technician, Histology Technician, Hospital Food Services Supervisor, Inhalation Therapy Technician, Optician, Surgical Technician, Occupational Therapy Assistant, Physical Therapy Assistant, "General Medical Technology". and EGK Technician.

It is estimated that the projections for the section are probably conservative because Health Occupations was new with the Vocational Act of 1963 and The Standard Terminology for Instruction in Local and State School Systems provided a limited list of occupations.

HOME ECONOMICS OCCUPATIONS:

Wage earning home economics occupations include those occupational opportunities related to: care and guidance of children; clothing management, production, and services; food management, production, and services; home furnishings, equipment, and services; institutional and home management and supporting services. As shown in Table VI, the total number of persons employed in home economics related occupations in Nebraska is an estimated 5,501 with 1,066 employment opportunities expected in the next year and 1,567 in the next three years.

Prior to the passage of the Vocational Education Act of 1963 many of the food services and production, clothing services and production, and some retail jobs were and still are included in the areas of Trades and Industry and Distribution.

TOTAL***	101	5,501	22	1,066	26	1,567

*Number of employers reporting employees in this category

**It should be noted that it was difficult to record the total number of hours of employment for each domestic, as a domestic employee may work only one day (or part of one day) per week for an employer.

***The major food preparation and serving areas involving Wage Earning Home Economics knowledges and skills are shown in Table VIII Trade & Industrial lines 45-47 according to the Standard Terminology for Instruction in Local and State School Systems and should be given consideration in this area.

Seventeen per cent of the home economics employment is in the area of tailoring and sewing machine operation with almost fifty per cent more needed in that area in the next three years.

The data show that child care occupations included 200 employees or 3.6 per cent of home economics employment. This seems low when it is considered that according to the 1960 census Nebraska had 22,268 working mothers with children under six years of age. The census data included all persons 14 years of age or older, and it is probable that many persons who were employed as part time baby sitters and as domestic help (where no social security or income tax was withheld) were not included in the population from which this sample was taken. Only six people with the primary function of child care were included in the sample.

Since wage earning home economics occupations is a new category, perhaps some difficulty was experienced by employers in grouping such employees into occupational clusters. Conventionally they expect occupations in this area to be listed under other categories. The 933 bakers, 11,933 cooks and chefs, and the 15,300 waiters and waitresses employed in Nebraska according to Table VIII, comprise a large segment of occupations that require home economics skills yet have skills related to the Trades and Industrial area. The projections for clothing related occupations are conservative for the state-wide totals due to a limited listing of this occupational classification on the data gathering instrument.

BUSINESS OCCUPATIONS:

Business and related occupations include those which utilize skills pertaining to business and office functions, and represent one of the high opportunity areas. A characteristic of this group, as reflected in this study, is the high rate of turnover.

The total number of people employed in an office or related occupation is estimated at 106,367 with 17,402 employment opportunities expected next year and 39,032 within the next three years. The 106,367 existing positions account for 16.3 per cent of the employment in the state.

About 21.2 per cent of those employed in this group are listed as professional and managerial people. Stenographic, secretarial, and related occupations make up the next largest percentage in the office and related occupations category comprising 19.9 per cent of the total number. The area of filing, office machines, and general office clerical follows closely with employees in this group comprising 18.5 per cent of the total number. In addition, 13.3 per cent of the total number are listed in the accounting and computing areas.

The greatest need in the next year is expected in stenographic, secretarial, and related with a 22.2 per cent expected increase in opportunities. Filing, office machines and general office and clerical will constitute an 18.2 per cent increase while the professional and managerial category will account for 15.9 per cent of the future employment opportunities.

TOTAL	725	106,367	220	17,402	323	39,032

*Number of employers reporting employees in this category.

TRADES AND INDUSTRIAL OCCUPATIONS:

As shown in Table VIII 193,403 persons are currently employed in Trades and Industrial Occupations. This is 29.6 per cent of the total projected Nebraska current employment. Professional and managerial occupations account for 6 per cent of the "Trades and Industrial" group, while "unskilled" jobs account for about 11 per cent of the Trades and Industrial total.

The data indicate there will be 60,469 employment opportunities in the next year and 125,435 within the next three years. These opportunities represent 42.3 and 42.8 per cent respectively of the total employment opportunities in Nebraska during the three year period.

Many of the occupations in the Trades and Industrial occupational area are highly specialized, and therefore, difficult to group successfully. Table VIII depicts the job groups on which data were obtained. It should be noted that the data were obtained at a peak employment in the construction season.

*Number of employers reporting employees in this category.

OTHER OCCUPATIONS:

This occupational category was included to enable employers to report employees that did not logically fit into one of the previous six groups. The majority of the persons reported in the professional and managerial group were teachers, ministers, lawyers and other professionals not logically fitting in the professional category of other occupational groups. It is an important segment.

The 34,600 persons in the professional and managerial group reported in Table IX, when combined with those in the professional and managerial from the other six groups, totaled about 18 per cent of the Nebraska Labor Force.

The total representing the unskilled labor force was estimated at about 4 per cent in Nebraska.

Need for Further Study:

The objective of this study was to assess current employment and categorize employment opportunities in Nebraska for the next year and three years. The specific jobs and technical functions of each job must be determined through further in-depth studies within the occupational areas where employment opportunities exist.

It is probable that educational programs preparing persons for many of the opportunity areas will cut across two or more subject areas, based on the function of the specific job. It is possible that persons in several job titles may be enrolled in certain common courses as well as specific courses related to each job title. Only more detailed studies will uncover exact curriculum needs.

Additional research is also needed in order to determine the "net" employment opportunities. The study included an assessment of employment opportunities created by expansion, turnover, promotion, and retirement. More detailed study is needed in occupational areas where there is high employment opportunity to determine the inter- and intra-firm migration. Such a study should also provide clues to the need for "upgrading education" by workers who are migrating.

Further study is also needed to ascertain approximate starting wages for jobs where employment opportunities exist.
