DESCRIPTORS College Credits; *College Majors; *Educational Objectives; *Junior Colleges; Junior College Students; Part Time Students; *Student Characteristics; Tuition Grants; *Veterans; Veterans Education

IDENTIFIERS *Hawaii

ABSTRACT

Recipients of veteran benefits at community colleges in Hawaii comprised 24 percent of the spring 1975 enrollees. The proportion varied by campus from 15 percent at Kapiolani to 31 percent at Leeward and Kauai. Veterans differ from the student body as a whole in terms of credit load carried and educational objectives; this may be a result of the conditions upon which veteran benefits are granted: veterans must have definite educational goals and receive stipends depending upon the credit loads carried. Sixty-seven percent of the veterans, compared to 56 percent of all students, were full-time. While veteran part-time students carried heavier credit loads (7.3 compared to 6.3), full-time veteran students carried slightly lighter credit loads (13.5 compared to 14.1). The 45,826 Student Contact Hours generated by the veterans comprised 26 percent of the total SCH recorded for the spring semester. Ninety-five percent sought associate degrees, one percent sought certificates, and only four percent were unclassified (compared to 11 percent unclassified for the student body). Fifty-two percent of the veterans were liberal arts majors and 44 percent were vocational majors. Veterans were predominantly male, married, older, and residents of the area near the college they attended. A table of data is appended. (Author/DC)

STUDENTS RECEIVING VETERAN BENEFITS
COMMUNITY COLLEGES
SPRING 1975

Various student groups have been identified for more detailed analysis in the past. This is a "first-time" study of those who receive financial recognition as veterans or dependents of veterans. It is not possible at this time to separate the two groups.

That this group is an important one is an understanding which emerges when the data are presented and analyzed. Its size encourages further study and attention.

Students included in this report are largely veterans of the Korean War and Vietnam War eras, with a few retirees from the armed forces as well as dependents of certain veterans.

Highlights

1. Recipients of veteran benefits comprised 24 percent of the spring enrollees. The proportions varied by campus, however, from 15 percent at Kapiolani to 31 percent at Leeward and Kauai Community Colleges.
2. Partly reflecting the conditions upon which veteran benefits are granted,* the veterans as a group differ from the student body as a whole in terms of credit load carried and educational objectives.
 - a. A larger proportion, 67 percent, were full-time students (compared to 56 percent for the student body).
 - b. While part-time students who were veterans carried heavier credit loads (7.3 compared to 6.3), full-time veteran students carried slightly lighter credit loads (13.5 compared to 14.1).
 - c. The 45,826 SCH generated by the veterans comprised 26 percent of the total SCH recorded for the spring semester.
 - d. A larger percentage had definite educational goals: 95 percent sought associate degrees; 1 percent, certificates; 4 percent were unclassified (compared to 11 percent unclassified for the student body).

*Veterans are required to have educational goals. Further, the stipends veterans receive are dependent upon: full-time, three-fourth time, half-time status, and number of dependents.

- e. Fifty-two percent of the veterans were liberal arts majors, 44 percent, vocational majors. (Majors in the business program were the most numerous among the vocational students.)
3. In terms of student status:
 - a. Sixty-eight percent were "continuing" (on campus last fall).
 - b. Nineteen percent, 755, were "new".
 - c. Of the new students, the majority were Hawaii high school graduates and over 80 percent were pre-1970 graduates of high schools.
 - d. A greater proportion of the veterans who were "new" students:
 - (1) had GEDs (17 percent compared to 8 percent)
 - (2) were mainland high school graduates (22 percent compared to 20 percent)
 4. In terms of personal characteristics, the data substantiated what was generally surmised. Veterans were predominantly: male (92 percent); U.S. citizens (99 percent); Hawaii residents (97 percent); married (62 percent); older (mean age 31.3 years, compared to 25.3 for the student body); and residents of the area near the college they attended.

Summary

Recipients of veteran benefits comprised a substantial group at the community colleges this spring. What impact did the veterans make on the campus? What are the implications for student services? instructional methods? What further information is needed to develop programs in various areas which would be most fruitful for the veterans and for the institutions? What are the campuses doing about evaluating the veterans' previous experience and training?
