ABSTRACT

During 1974 approximately 13 percent of the 2.8 million students enrolled in Texas schools represented a concentrated effort to serve educationally disadvantaged pupils with the greatest needs on campuses eligible for Elementary and Secondary Education Act (ESEA) Title I funds. Of these funds, 75 percent was expended for instructional activities with reading receiving the largest amount. Although Federal funds received by Texas were not fully adequate to meet all diagnosed needs of educationally disadvantaged students, programs funded under ESEA Title I continued to have an impact on the instruction and achievement of those students served. This impact was revealed by the achievement gains of participating students. In the larger districts (those with an average daily attendance (ADA) of 35,000 or more), 62 percent of the students in reading and 56 percent of those in mathematics programs showed gains equal to or greater than those expected of the general population. In the smaller districts (those with less than 35,000 ADA), 56 percent of the students in reading programs and 52 percent of those in mathematics programs showed gains equal to or greater than 1.0 month per month of instruction. This 1973-74 annual report provides tabular information on the participants, instructional activities, pupil services, effectiveness of the reading and mathematics programs, summer programs, and programs operated in nonpublic schools. COMPLIANCE WITH TITLE VI, CIVIL RIGHTS ACT OF 1964 AND THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

- (1) acceptance policies on student transfers from other school districts;
- (2) operation of school bus routes or runs on a non-segregated basis;
- (3) non-discrimination in extracurricular activities and the use of school facilities;
- (4) non-discriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning or dismissing of faculty and staff members who work with children;
- (5) enrollment and assignment of students without discrimination on the ground of race, color or national origin;
- (6) non-discriminatory practices relating to the use of a student's first language; and
- (7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, Department of Health, Education and Welfare.

If there be a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

FOREWORD

During FY 1974 approximately 13 percent (368,646) of the 2.8 million students in Texas schools, who were classified as educationally disadvantaged with the greatest needs on campuses eligible for ESEA, Title I funding, received concentrated special treatments through the expenditure of 63.5 million dollars of Title I funds. Of this total, 47.3 million dollars (75 percent) was expended for instructional activities with reading receiving the largest amount.

In the larger districts 62 percent of the students in reading and 56 percent of those in mathematics programs showed gains equal to or greater than those expected of the general population. In the smaller districts, districts with less than 35,000 average daily attendance, 56 percent of the students in reading programs and 52 percent of those in mathematics programs showed gains equal to or greater than 1.0 month per month of instruction.

Although Federal funds received by the State of Texas are not fully adequate to meet all diagnosed needs of educationally disadvantaged students, programs funded under ESEA, Title I continue to have an important impact upon the instruction and achievement of those educationally disadvantaged students who are served. This impact is revealed by the gains in achievement made by participating students.

INTRODUCTION

Regulations

The Regulations for Title I of the Elementary and Secondary Education Act* of 1965, PL 89-10, require the following as indicated in Section 116.22:

There must be at least an annual evaluation of the program, including appropriate objective measurements of educational achievement and the comparing, at least annually, of the educational achievement of participating children with some objective standard or norm. The type of measurement used by a local educational agency should give particular regard to the requirement that the State Educational Agency report to the U. S. Commissioner of Education on the effectiveness of the programs in that State in improving the educational achievement of participating children.

The unit within the Texas Education Agency responsible for the administration of the Title I program is the Division of Program Funds Management. The Division of Evaluation, Office of Planning, conducts the evaluation mandated by federal regulations. The local school districts within the State of Texas that operated programs funded through Title I submitted the required evaluation report to the Texas Education Agency. However, since there were more than 1,000 such districts, a stratified random sample was used for reporting statewide information to the U. S. Office of Education. (See Page 2)

Goal and Assumptions

The Texas Education Agency perceives the goal of the programs funded under Title I as the provision of instruction and services to those pupils with the greatest incidence of educational need in order that these pupils may be assured of progress in school. Two basic assumptions proceed from this goal. First, both pupil services and instruction will be provided to some number of pupils in some number of districts, and second, these services and instruction will ensure that these pupils make progress in school. The implication which can be made from these assumptions is that pupil progress will be of sufficient quantity that these children will remain in school until graduation.

*Within the context of this report, Title I of the Elementary and Secondary Education Act is referred to as Title I.

Purposes

As stated earlier, an annual statewide evaluation of Title I must be conducted by the State and the results reported to the U. S. Commissioner of Education. Among the other purposes of the evaluation process are the following:

- To provide the local school districts with some indicators of program quality which the districts might use for decision making while, at the same time, meeting the need for State information.
- To provide personnel in the Division of Program Funds Management of the Texas Education Agency with information to assist in program planning and approval for the succeeding year.
- To provide a discussion of attempts to eliminate the barriers to normal academic progress so that children are able to remain with their peer groups as they progress toward graduation or the completion of an educational program which will provide them an adequate background to meet the challenges of the competitive world.
- To provide information about how resources have been utilized for the benefit of disadvantaged children in Texas schools during the 1973-74 school year.

Program Description

The ninth year of programs for educationally disadvantaged children funded under Title I has seen a decrease in the number of children served by these programs. Since the inception of the legislation providing this funding, an attempt has been made to focus programs on those pupils with the greatest educational disadvantage. The identification of program objectives was deemed necessary to ensure that program efforts were directed toward the highest priority needs of the students.

Information reported on the following pages for the programs operated during the regular school term was obtained from the completed Annual Information Report of Programs Funded Through ESEA, Title I Regular in Public Schools, Regular Term, 1973-74.

Sample Selected

All information received from the eight districts in Texas having an ADA of 35,000 and over was used in compiling the statewide report. A stratified random sample was used by the Texas Education Agency for

purposes of reporting information on Title I funded programs in districts of less than 35,000 ADA. The sample was selected by district size according to the following criteria:

- (1) 50 percent of the 41 districts having an ADA of 9,000 to 34,999
- (2) 25 percent of the 85 districts having an ADA of 3,000 to 8,999
- (3) 10 percent of the 566 districts having an ADA of 300 to 2,999
- (4) 10 percent of the 297 districts having an ADA of less than 300

The data received from districts of less than 35,000 ADA were weighted to represent all districts of these size groupings. Weighting factors were derived on the basis of pupils who participated in programs and dollars expended in providing these programs. Table 1 presents the data utilized in arriving at the weighting factors which were applied to data elements received from the sample districts. Also shown in this table are number of participants and expenditures from districts of 35,000 ADA and over. All information received from the sample districts was carefully examined for accuracy and validity.

Data are presented in most instances for districts 35,000 ADA and over (Strata I districts) and districts less than 35,000 ADA (Strata II districts), as well as for the State. The data shown for Strata II districts are those derived from the weighting process. Examination of data received in past years has shown that there are differences between programs provided to pupils in the eight largest school districts in the State (districts having an ADA of 35,000 and over and predominantly urban, inner city districts) and to those pupils in other districts.

Information shown in this report from summer programs and programs operated in nonpublic schools was collected and tallied from all districts operating such programs.

Table 2 provides a historical overview of the number of districts providing programs through the use of Title I funds and the number of pupils who participated in these programs from 1965 to the present. The number of pupils who were served by these programs decreased by approximately 11 percent from FY 1966 to FY 1974.

TABLE 3
PARTICIPANTS IN ESEA, TITLE I FUNDED PROGRAMS
BY GRADE LEVEL

PERCENT OF TOTAL PARTICIPANTS

PARTICIPATION

Table 3 represents the number of pupils by grade level who were served by the use of Title I funds for all districts in the State. In districts 35,000 ADA and over, 88.6 percent of all participants were in grades prekindergarten through six. In the smaller districts, 73 percent of the participants were in grades prekindergarten through six. An additional 14 percent of the pupils served in the Strata II districts were in grades seven and eight. One of the stated objectives of the Title I program, as administered in Texas, was to serve a greater percent of elementary level pupils than secondary level pupils in the hope that early treatment of educational problems would result in a reduction of need as the pupil proceeded through an educational program. From FY 1973 to FY 1974, there was a six percent decrease (overall) in the number of children served. In larger districts (Strata I) the decrease was 10.8 percent; in smaller districts (Strata II) the decrease was 4.5 percent.

Table 4 presents data on participation of pupils in programs by the ethnicity of the pupils. The ethnicity of the pupils served in each of Strata I and II is a population characteristic of the areas in which the districts are located and was not an attempt to include or exclude any particular ethnic group in these programs. However, it has always been a fact that more minority group children are served by Title I funded programs than majority group children. The passage of the Elementary and Secondary Education Act in 1965 was based on the principle that the educational problems of all disadvantaged children should be eliminated. The ethnic distribution of students served remains essentially the same as in FY 1973.

** Strata II Districts - Districts having an ADA of less than 35,000

INSTRUCTIONAL ACTIVITIES

Title I funds are categorical aid. They are to be spent to provide instruction and service over and above that already provided by the local district. Title I provides special services to educationally, economically, and culturally deprived and handicapped children showing specific need who attend eligible Title I schools. The alleviation of educational problems is the objective toward which Title I funds are to be concentrated. Use of funds to accomplish other objectives is incidental to the purpose of increasing educational gains. Therefore all pupils identified as educationally disadvantaged and eligible to receive the benefits of Title I funds should be served in an instructional program. However, the data collected indicate that 13 percent of all those pupils identified as Title I participants in Strata II districts received no instruction which was funded through Title I. In Strata I districts, two percent of the identified participants were not in Title I funded instructional activities.

Figure A shows the percent of districts, by strata, providing instruction to Title I pupils in certain instructional areas.

Table 5 provides information on those pupils participating in instructional activities as well as the percent of total participants receiving treatment in each area. Instructional treatment provided through Title I is supplemental in nature and designed to give a pupil additional help in areas in which he or she exhibit weaknesses. All pupils identified as needing this supplemental instruction should also be involved in the regular school program and receiving the same benefits as non-Title I pupils. Information collected from school districts, however, does not provide an indication of the extent to which the disadvantaged pupil is served by the regular school program.

Figure B presents the percent of total Title I instructional dollars expended for each instructional activity. In Strata I districts, 66 percent of all instructional dollars were expended in the areas of reading, mathematics, and English language arts compared to 84 percent expended in these areas in Strata II districts. The percent of the expenditures of the Strata II districts for these three instructional areas was virtually unchanged from last year (83 percent to 84 percent). However, the percent for the Strata I districts decreased by five percent (from 71 percent to 66 percent). Compared to the smaller districts, the Strata I districts expended a relatively large percent of their Title I instructional dollars in the area of preschool education. However, 73 percent of the preschool age children identified as eligible for Title I programs were involved in instructional activities in the Strata I districts, compared to 60 percent in Strata II districts. Therefore it must be noted that approximately 40 percent of the preschool age children in the smaller districts received no educational benefits from Title I other than those which were accrued through the provision of pupil services.

Districts with less than 35,000 ADA

**TOTAL INSTRUCTIONAL
COST \$35,763,355**

GRAND TOTAL OF INSTRUCTIONAL EXPENDITURES - \$47,343,846

"Other" instructional activities include Oral Language/Language Development, Natural Sciences, Social Sciences, Enrichment Experiences, Physical & Health Education, Special Education, Bilingual Education.

Table 6 reflects the per pupil cost of instructional activities from Title I funds and the per pupil cost of the activities when funds from all other sources were utilized in conjunction with Title I funds. In all instances, in the Strata II districts other funds were used in conjunction with Title I funds in providing supplementary instruction to educationally disadvantaged pupils. The same is true for the Strata I districts with the exception of mathematics, English language arts, and natural sciences/social sciences. These other funds included other Federal funds as well as State and local funds, increasing the per pupil expenditures substantially for several of the instructional activities.

The per pupil costs from Title I funds ranged from \$19 for physical education, health, safety, recreation to \$191 for preschool with the average per pupil expenditure for all instructional activities being \$82. The per pupil costs from Title I funds in the Strata II districts was higher in seven of the ten instructional activities than it was in the Strata I districts. The exceptions were English language arts, natural sciences/social sciences and preschool.

PUPIL SERVICES

Pupil services are made available to educationally disadvantaged pupils for the purpose of reducing problems which might possibly hinder the academic success of a pupil. Title I funds are available for this purpose as well as funds from a multitude of other sources both within the school districts financial structure and other agencies administering service programs. Table 7 reflects the number and percent of all identified Title I participants who received pupil services, regardless of the source of the funds which provided these services. In Strata I districts, 89 percent of all identified Title I pupils received at least one pupil service through the school district and in Strata II districts, 79 percent of these pupils received at least one service. The Strata I districts furnished transportation, fees and breakfast to a much larger percent of their participating students than did the Strata II districts.

As noted from Table 7, the total cost of providing these services from Title I was relatively small, only 12 percent of all Title I funds expended during the regular school term. It would appear that the pupils' basic needs are being met in such a manner that the schools are able to direct their resources into instructional programs rather than pupil services, or that because instructional services are required before pupil services can be provided, very few dollars are left. The extent to which these needs are being met by agencies other than the school district is reflected somewhat in the last columns of Table 7. However, district personnel completing the Annual Information Report have indicated that these data regarding aid provided to pupils outside the school are difficult to collect.

Food Service receives by far the greatest amount of funding from sources other than Title I. However, if food service is excluded, the amount of Title I funds spent for services was three times as great as funds from other sources.

The total Title I funds utilized for services shown in Table 7 differs from the overview in Table 23 because one of the school districts did not indicate the services for which \$47,278 (as reported in the overview of the Annual Information Report) was expended.

TABLE 7

PUPIL SERVICES

TYPE OF SERVICE	PARTICIPANTS IN TITLE I FUNDED PROGRAMS RECEIVING SERVICES		COST OF PROVIDING SERVICES TO PARTICIPANTS IN TITLE I FUNDED PROGRAMS		
	Number	Percent	Title I Funds	Funds From Other Sources

PERSONNEL SERVING IN PROGRAMS FUNDED THROUGH TITLE I

Information reported by school districts on personnel was to include all persons who were actively involved in providing instruction and services to pupils in programs which were funded in whole or in part by Title I. Salaries for these personnel do not necessarily come from Title I.

According to the information received, 47 percent of the cost of providing staff development activities to personnel shown in Table 8 was funded by Title I. The cost per person from all sources of funds for staff development ranged from \$19 for nurses aides (60 percent participated) to \$110 for elementary guidance counselors (90 percent participated). Staff development costs for teachers was approximately \$76 for an elementary teacher and \$59 for a secondary teacher, excluding salaries which were normally paid to these personnel.

A marked increase over 1972-73 in the percent of personnel who received special preparation for working with disadvantaged children was observed for all types of personnel.

TABLE 8

PERSONNEL (REGARDLESS OF FUNDING SOURCE OF SALARY) SERVING IN PROGRAMS FUNDED THROUGH TITLE I

PERSONNEL POSITION	NUMBER OF PERSONNEL SERVING IN PROGRAMS	PERCENT OF TOTAL PERSONNEL WHO PARTICIPATED IN STAFF DEVELOPMENT ACTIVITIES	PERCENT OF TOTAL PERSONNEL WHO RECEIVED SPECIAL PREPARATION FOR WORKING WITH DISADVANTAGED CHILDREN	COST OF STAFF DEVELOPMENT ACTIVITIES	
				Title I	Other
Teachers - Elementary	6,617	91%	68%	\$268,903	\$236,057

EFFECTIVENESS OF READING AND MATHEMATICS PROGRAMS

The testing of students participating in programs emphasizing the cognitive skill areas was dependent upon the evaluation design for each individual program operated by a district. However, for the 1973-74 school year, districts were directed to test all students in reading and mathematics programs which were funded through Title I and report the results of those tests to the Texas Education Agency.

Districts indicated, as a part of their evaluation plan in the Consolidated Application for State and Federal Assistance, the expected level of attainment for pupils in each of their programs, and the instruments which would be used to measure whether that attainment level was achieved. Therefore many different instruments, including standardized achievement tests, diagnostic instruments and criterion-referenced tests were used to measure pupil achievement in reading and mathematics.

Test data are presented in Tables 9 and 16 for Strata I and Tables 10-15 and 17-22 for Strata II. The data shown in the tables are unweighted. They include only that information received from the districts included in the sample. However the representativeness of these data for all pupils in the State should be fairly accurate because of the manner in which the districts were selected for inclusion in the sample.

The data considered to be relatively valid indicators of the success of programs and useful for aggregating were those received from districts administering a standardized achievement test to pupils and reporting to the Texas Education Agency composite reading scores and composite mathematics scores (all subtest scores combined as a measure of each of the subject areas). From Strata II, districts of less than 35,000 ADA, only data from the seven major standardized achievement tests most often used in Texas were compiled for reporting in Tables 10-15 and 12-22.

The percent of pupils from Strata II in reading and mathematics programs from whom comparable test scores were received are as follows:

	<u>Reading</u>	<u>Mathematics</u>
Districts of 9,000 - 34,999 ADA	37.2%	22.5%
Districts of 3,000 - 8,999 ADA	63.3%	34.5%
Districts of 300 - 2,999 ADA	61.9%	53.8%
Districts with less than 300 ADA	59.9%	38.5%

These percentages are substantially higher than in previous years when, for example in 1972-73, approximately eight percent of the pupils who were in reading and mathematics programs in Strata II districts were tested and had test data submitted to the Texas Education Agency on their level of achievement.

All test data which were received from districts of 35,000 ADA and over, Strata I, for pupils who were in reading and mathematics programs are

reported in Tables 9 and 16. In combining information for presentation in these tables, all available test data from both achievement and diagnostic instruments, as well as data reported from separate subtests (i.e., reading comprehension, vocabulary, paragraph meaning), were used. An audit of records from one of these districts revealed that test data submitted had included scores from non-Title I students. Since each district was not audited, it has not been determined if this was the case with any other district.

Utilizing all of the information received from the districts of 35,000 ADA and over, the achievement of 44.6 percent of the pupils in reading activities and 38.5 percent of the pupils in mathematics activities are presented. From the 1972-73 programs in the large districts, only 37 percent of the pupils were represented in the achievement data.

The data submitted by districts in the Annual Information Report reflect numbers of pupils by average gain per month of instruction. For presentation in this report, a computation was made of the percent of pupils tested who showed gains of 1.0 month and greater per month of instruction, as well as the average gain per month of instruction for each grade level. This information, along with the number of pupils in the instructional program and the number of pupils tested, is shown in Tables 9, 10, and 12-15 for reading and Tables 16, 17, and 19-22 for mathematics.

Tables 11 and 18 provide summarized information for each of the substrata within Strata II. An average gain for all grade levels was computed for each of these substrata, as well as the percent of all pupils showing gains of 1.0 month per month of instruction and greater. These statistics for each of the substrata may be compared to the same statistics for all of Strata II found in Tables 10 and 17.

Results reported on reading achievement indicate that approximately 62 percent of all pupils tested in Strata I districts achieved one month per month of instruction and greater, or that the rate of achievement for this group of pupils was at or above a normal rate of learning. As was mentioned earlier in this report, an audit of one district in Strata I revealed contamination of test data. The effect of this and other artifacts of reporting modes has not been assessed.

Data reported from the Strata II districts reveal that approximately 44 percent of the pupils were achieving at a normal growth rate. The average gain in reading for all grade levels was .83. Within the substrata, pupils from districts of 9,000 to 34,999 ADA showed an average gain of .90.

Reported achievement data from pupils in mathematics programs were generally higher than results from reading programs in Strata II districts. The overall gain per month of instruction from pupils in Strata II was .90 with pupils in districts of 3,000 to 8,999 ADA showing gains of .98. In Strata I districts, the average gain per month of instruction was .94.

NONPUBLIC SCHOOL PROGRAMS FUNDED THROUGH TITLE I

During the 1973-74 school year, Title I programs were provided to educationally disadvantaged students in 112 nonpublic (private) schools. There were 56 local education agencies or public school districts which served as fiscal agents for the nonpublic schools. The programs in these schools served 6,950 children of which 81 percent were in grades prekindergarten through six. The ethnic representation of children in these programs showed a slightly higher percentage of Spanish-surnamed children than in public school programs and a lower percentage of Negro children (in nonpublic schools 55 percent Spanish-surnamed; 22 percent Negro; 23 percent Other).

Ninety percent of all the participants were involved in instructional activities funded through Title I and 53 percent of these children received at least one pupil service which was provided by Title I funds. Delivering these instructional and pupil services were 246 persons who were salaried either in whole or in part through Title I. Of these, 49 percent were teachers and 25 percent teacher aides. The extent to which other personnel were involved in these programs is not known. The total cost of providing programs to pupils in nonpublic schools through Title I was \$1,052,619. Of this amount, 91 percent was expended for instructional programs and six percent for pupil services.

The concentration of the instructional programs appeared to be in the area of reading with 85 percent of the children receiving this type of instruction; 16 percent were in mathematics programs, 14 percent in English language arts, and 12 percent in oral language/language development programs.

Table 23 indicates how Title I funds were utilized in nonpublic schools. Table 24 shows the areas of instruction and the services received by pupils in the nonpublic schools.

SUMMER PROGRAMS FUNDED THROUGH TITLE I

Title I funded programs were operated in 133 school districts in the summer of 1974. A total of 44,588 pupils, or 12 percent of the number which were involved during the regular term, participated in these summer activities which provided a wide range of experiences. Four percent of all Title I funds expended for FY 1973 were for these summer programs.

Summer programs have without exception been designed for elementary level pupils. Approximately 84 percent of all the participants were in grades prekindergarten through six. Participation by ethnicity was as follows: Spanish-surnamed, 56 percent; Negro, 29 percent; and Others, 15 percent.

The number and percent of total summer participants are shown in Table 25 according to the various activities and services in which these pupils were involved.

The number of personnel providing the services and activities shown in Table 25 are as follows:

Elementary Teachers	2,157
Secondary teachers	205
Elementary and secondary teachers	158
Teacher aides	1,890
Guidance counselors	21
Nurses	79
Social services personnel	49
Other professional personnel	322
Other nonprofessional personnel	590

The expenditures for summer programs are shown in Table 26. The manner in which funds were expended for these summer programs is approximately the same as those expended during the regular term programs.

SUMMARY OF EXPENDITURE OF TITLE I FUNDS FOR
SCHOOL YEAR 1973-74 AND SUMMER SCHOOL 1974

Table 27 provides an overview of the areas in which Title I funds were expended during the 1973-74 school year, including the 1974 summer programs. The funds reported in this table include 1973-74 funds, 1972-73 impounded funds which were carried over to 1973-74, and Part C funds.

From information presented in this table, it appears that, as in the past, small districts (Strata II districts) expend a greater percentage of their Title I funds for direct instructional activities and large districts expend a greater percentage in providing pupil services.

TABLE 27

SUMMARY OF TITLE I FUNDS
EXPENDED IN 1973-74 PROGRAMS

AREA OF EXPENDITURE	ALL DISTRICTS	PERCENT OF TOTAL	STRATA I DISTRICTS	PERCENT OF TOTAL STRATA I	STRATA II DISTRICTS	PERCENT OF TOTAL STRATA II

RECOMMENDATIONS

The statistics and information presented on the previous pages of this report provide an overview of the nature and extent of the use of Title I funds for educationally disadvantaged children. However, questions may be raised by this information which at this time can be answered in only a cursory manner. These questions point to the need for an improved system for examining the results of these programs in relation to the resources, including money, personnel, time, and efforts, which impact upon students. The following recommendations address needs at the local, state, and federal decision-making levels.

Local

- Evaluation should be an integral part of program planning.

From examination of new program applications and discussions with those planning and operating current year programs, it appears that there is a need for greater emphasis to be placed on the use of evaluative data in changing and improving existing programs for disadvantaged children. In the past, programs have been continued without thoroughly examining the results.

- Involvement of counselors, teachers, students, and parents in actual program planning, as well as program implementation, should be increased.

Personnel working in Title I funded programs should be involved in planning these programs.

State

- A decision for the future direction of compensatory education programs on a statewide level is needed.

In the past, local districts have been autonomous in charting the direction of the Title I programs in their districts. The establishment of local objectives has precluded a statewide evaluation system because of the lack of comparability between districts. If a need continues for statewide evaluation results, then statewide objectives for the Title I program must be established. The lack of comparable measures of achievement, or test results, will continue until specific direction on a statewide basis is provided to those districts which operate programs.

If statewide objectives for the Title I program are not desired or not obtainable, then perhaps a core of common objectives or a set of basic objectives could be utilized with each district required to use comparable measures of achievement.

- The use of evaluative information in reviewing applications for Title I funded programs should be an important part of the approval process.

Changes are continually underway to improve the type and quality of information reported to the Texas Education Agency about previous years programs. This information must be utilized in examining new program applications and in providing technical assistance to local districts in improving programs.

Ninety-eight percent of all the districts operating programs during the 1973-74 school year provided information to the Texas Education Agency at the end of their programs and of those submitting a report, approximately 99 percent reported measures of achievement. These statistics alone are positive indicators that districts are attempting to provide the information requested by the Texas Education Agency. The State agency must use evaluative data received from the districts in reviewing applications and in providing assistance to schools.

- Accurate school leaver data must be collected statewide.

One of the most obvious evidences of the success of Title I programs should be a reduction in the number of pupils who leave school before completing an adequate course of study. Accurate information about school leavers is not available. Efforts should be directed to improving the follow-up system for school leavers.

- Evaluation data is needed on pupils below grade two.

As the state of the art advances, direction should be provided to local districts for the evaluation of programs involving very young children.

- All efforts directed toward the solution of an identified problem should be coordinated.

Since student growth results from a variety of factors, evaluation studies are needed which take into consideration all measureable relevant in-school and out-of-school variables.

Federal

- Provisions for longitudinal evaluations should be considered.

The impact of compensatory programs is rarely evidenced within the span of one year. The educational needs of these children

are usually of such scope that only a concentrated effort over an extended period of time can adequately benefit these children. Therefore, determining whether the needs of these children have been met should be examined over a longer time duration.

- Funding formulas should place emphasis upon those pupils with the greatest educational needs, rather than socio-economic factors.

Federal allocation of dollars provide the greatest amount of funds for states with high numbers of children eligible for Aid for Dependent Children (AFDC). This discriminates against a large number of educationally disadvantaged students who have both parents and are in need of supplementary educational treatment.
