The patient could benefit from assistance in improving college study, test-taking, and related "survival skills" in order to better meet the overall demands of formal academic coursework.

---

**SR16**

Functional interference from the patient's longstanding psychiatric disorder is likely to be more problematic than any primary cognitive deficits.

---

**SR17**

A slightly lower performance was observed in the area of \_\_\_\_ but would not be judged as a significant area of deficit. However, the patient may need support in the aspects of \_\_\_\_ educational/training program that may require \_\_\_\_ skills beyond current level of achievement.

---

**SR18**

Several issues appear likely to figure prominently in \_\_\_\_\_ attempt to enhance his/her vocational skills and employment status. As he/she must maintain him/herself financially while undergoing vocational skill training, and as he/she does not wish to leave his/her current daylight job due to comfort level and anxiety around any job change, skill training programs should be investigated with are part-time in nature, offered in the evenings, or are paid in nature.

---

**SR19**

\_\_\_\_\_ could benefit from ongoing professional rehabilitation assistance in exploring potential programs of study/training. Additionally, he/she lacks knowledge and experience in accessing even the standard types of student financial aid which are available to him/her.

---

**SR20**

\_\_\_\_\_ could benefit from ongoing vocational counseling and guidance in an atmosphere of support and encouragement of efforts to enhance vocational and employment situations.

---

**SR21**

Strong and highly distinct patterns of occupational interest and preference emerged across all measures utilized in this assessment.

---

**SR22**

Measured aptitudinal strengths correspond to the nature and aptitudinal demands of \_\_\_\_\_'s measured and expressed high-interest career goals.

---

**TECH.CIV**

**TECHNOLOGY, Civil-Construction** occupations involve activities concerned with the structural design for construction of buildings, highways and other transportation systems. Sample occupations include Structural Drafter, Mining Engineer and Safety Engineer.

---

**TECH.ELE**

**TECHNOLOGY, Electrical** occupations involve engineering and systems design in the fields of electricity and electronics. Sample occupations include Computer Engineer, Electrical Test Engineer, and Electronic Design Engineer.

---

**TECH.MEC**

**TECHNOLOGY, Mechanical** occupations involve activities concerned with engineering and structural design of aircraft, automotive, marine and other mechanical equipment and the development of new and improved mechanical and chemical manufacturing processes for converting raw materials into products. Sample occupations include Materials Engineer, Tool Designer, Petroleum Engineer and Metallurgist.

---

**TECHNOLO.PRO**

**Professional Technology** occupations involve responsibility for engineering and structural design in the manufacture, construction or transportation of products or utilities. Sample occupations include Aeronautical Engineer, Marine Architect and Chemical Engineer.

**TECHNOLO.SKL**

**Skilled Technology** occupations involve working with one's hands in a skilled trade concerned with construction, manufacture, installation or repair of products in related fields of construction, electronics, and mechanics. Sample occupations include Brick Layer, Mechanic, Truck Driver, and Video Control-Room Technician.

**TESTS**

<u>NAME OF TEST</u>	<u>MINUTES/TEST</u>
Wechsler Adult Intelligence Scale - Revised (WAIS-R)	90
Wide Range Achievement Test - Revised (WRAT-R)	30
Halstead-Reitan Neuropsychological Battery (HRNB)	240
California Verbal Learning Test (CVLT)	40
Nelson-Denny Reading Test	20

Stroop Color-Word Test	5
Rey-Osterrieth Complex Figure Drawing, Star Drawing Test, Hooper Visual Organization Test, Smith Symbol Digit Modalities Test	<u>10</u>
	535 = 8 hours, 55 min.

**TOWL-2.TAB**

The Test Of Written Language - 2 (TOWL-2) was used in order to measure written expressive language involving both writing per se and the expression of ideas as a form of communication. The ability to write meaningfully is based upon at least three basic cognitive skills: (1) the ability to write in compliance with accepted standards, especially those governing punctuation, capitalization, and spelling; (2) the ability to use acceptable syntactic, morphologic and semantic elements of a given language; and (3) the ability to express ideas, opinions, and thoughts in a creative and mature way. These three abilities comprise the conventional, linguistic, and conceptual components of writing. The TOWL-2 is a measure

which attempts to evaluate these three abilities. With \_\_\_\_\_, the spontaneous story subtest was utilized. Here one can get a measure of thematic maturity, contextual vocabulary, syntactic maturity, contextual spelling, and contextual style with results presented as percentile ranks and standard scores with a mean of 10. \_\_\_\_\_ scores on this subtest of the TOWL-2 follow:

	Percentile Rank	Standard Score
Thematic Maturity		
Contextual Vocabulary		
Syntactic Maturity		
Contextual Spelling		
Contextual Style		

### **TPT.TXT**

The Tactile Performance Test is a measure of complex psychomotor ability involving problem solving without the use of the visual or auditory senses and relying on tactile cues only. Input is delivered to the brain via the haptic senses from the preferred hand to the contralateral cerebral hemisphere, where the incoming information is registered. Because of intracerebral and intercerebral connections, the incoming information permeates the entire brain, which then becomes involved in solving the problem. After a trial with the dominant hand, the individual is given the task to perform with the nondominant hand, with the expectation that the time required to solve the task should be reduced by one-third because learning transfer has occurred.

### **WAIS-R.TAB**

Intellectual evaluation was conducted via the administration of the Wechsler Adult Intelligence Scale - Revised. This instrument provides a composite score (Full Scale IQ) which serves as an index of general intelligence as well as Verbal and Performance IQ scores. The results obtained were as follows:

Verbal IQ:  
 Performance IQ:  
 Full Scale IQ:

These scores are commensurate with functioning in the     range of intelligence.

Further analysis of WAIS-R performance is available via subtest analysis. The Verbal Subtests consist of tasks which tap verbal conceptual ability, practical judgment and reasoning, numerical reasoning, immediate auditory attention, acquired knowledge, and general verbal proficiency. The Performance Subtests involve more visuo-perceptual and visuomotor skills in task completion. Spatial and nonverbal reasoning skills are tapped in these tasks. In addition, demands are imposed for speed dependent performance on a number of these tests. Subtests are scored as Scaled Scores with a mean of 10 and a standard deviation of 3.

**WCST.EXP**

The Wisconsin Card Sorting Test is an instrument assessing cognitive flexibility by the examiner spontaneously changing "sets" and rules for card sorting without informing the subject. In this manner, one can observe how the subject responds to seemingly illogical change and what problem solving mechanisms come into play in the process of this trial and error procedure.

**WCST.WNL**

The patient's performances on this test were well above average and without any signs of preservation, the loss of the conceptual "set", or uninsighted random guessing that can occur when frontal systems have been compromised. This impression was further support by performances on the Porteus Maze Test, the Smith Symbol Digit Modalities Test, the Trailmaking Tests, and formal measures of controlled verbal fluency. Average or above average performances were elucidated on all of these measures which are viewed as representing functions mediated by frontal system structures.

**WIAT.TAB**

The Wechsler Individual Achievement Test was utilized to ascertain academic achievement levels in the areas of reading, mathematics, language, and writing. The Wechsler Individual Achievement Test (WIAT) is a comprehensive individually administered battery for assessing the achievement of children from ages 5 to 19. It consists of eight subtests whose individual items encompass a wide range of curriculum objectives. In the case of Mathematics Reasoning, for example, items assess areas related to measurement, geometry, number concepts and problem solving. Reading Comprehension items look at recognizing stated detail, recognizing stated cause and effect, sequencing, recognizing implied cause and effect, and making inferences. The Listening Comprehension and Oral Expression subtests provide information regarding the individual's receptive and expressive language skills. The Written Expression subtest assesses various writing skills including the development and organization of ideas, capitalization, and punctuation. Scores are presented as standard scores with a mean of 100 and a standard deviation of 15, with a range from 40 to 160. Grade equivalency data and percentile ranks are also available. The scores on the WIAT for \_\_\_\_\_ follow:

<u>Subtest</u>	<u>Standard Score</u>
Basic Reading	1630
Mathenatics Reasoning	
Spelling	
Reading Comprehension	
Numerical Operations	
Listening Comprehension	
Oral Comprehension	
Written Expression	

These individual subtest scores are then combined into composite scores. For \_\_\_\_\_ they are the following:

- Reading
- Mathematics
- Language
- Writing

---

**WISC-III.TAB**

Intellectual evaluation was conducted via the administration of the Wechsler Intelligence Scale For Children - III. This instrument provides a composite score (Full Scale IQ) which serves as an index of general intelligence as well as Verbal and Performance IQ scores. The results obtained were as follow:

- Verbal IQ:
- Performance IQ:
- Full Scale IQ:

These scores are commensurate with functioning in the \_\_\_\_\_ range of intelligence.

Further analysis of WISC-III performance is available via subtest analysis. The Verbal Subtests consist of tasks which tap verbal conceptual ability, practical judgment and reasoning, numerical reasoning, immediate auditory attention, acquired knowledge, and general verbal proficiency. The Performance Subtests involve more visuo-perceptual and visuomotor skills in task completion. Spatial and nonverbal reasoning skills are tapped in these tasks. In addition, demands are imposed for speed dependent performance on a number of these tests. Subtests are scored as Scaled Scores with a mean of 10 and a standard deviation of 3.

**WMS-R.TAB**

As a formal assessment of memory the Wechsler Memory Scale-Revised (WMS-R) was utilized. The WMS-R is an individually administered, clinical instrument for appraising major dimensions of memory functions in adolescents and adults. The scale is intended as a diagnostic and screening device for use as part of a general neuropsychological examination, or any other clinical examination requiring the assessment of memory functions. The functions assessed include memory for verbal and figural stimuli, meaningful and abstract material, and delayed as well as immediate recall. There are eight subtests which comprise the scale, four of which serve as delayed-recall trials. The eight tests of short-term memory contribute to two major composite scores, General Memory and Attention/Concentration. The General Memory group is further subdivided into measures of Verbal and Visual Memory. The scaling of the WMS-R was constructed with a mean of 100 and a Standard Deviation of 15. 's scores on this formal measure of memory are as follow:

Verbal Memory  
 Visual Memory  
 General Memory  
 Attention/Concentration  
 Delayed Recall

# Case Study

May 24, 1996

## CASE STUDY

### REFERRAL INFORMATION

*The patient, is a 27 year old single white female residing alone in an apartment in Pittsburgh, Pennsylvania. Patient is 5'7", about 125 lbs., with dark black (possibly dyed), straight shoulder length hair, and has severe acne on her face. Patient usually presents well-groomed and casually dressed in jeans and T-shirt or blouse. Patient has a long history of psychiatric problems and substance abuse dating to adolescence, and is currently being followed by the Center for Psychiatric and Chemical Dependency (CPCDS). She has the following diagnoses as of November, 1995: Axis I: Bipolar I Disorder, depressed, severe with mood congruent psychotic features, with rapid cycling and with catatonic features; Alcohol dependence in full remission; Cannabis dependence in full remission; Obsessive Compulsive disorder by history in adolescence; Anorexia Nervosa by report in adolescence. Axis II: Personality disorder, NOS; Rule out Schizotypal and Borderline Personality disorder. Axis III: Acne. IV: Moderate stressors. V: Past GAF=30, at discharge=80. Patient was referred to the Psychiatric Rehabilitation Assessment Services Clinic (PRAS) on December 18, 1995 by D.D., MSW of CPCDS of Western Psychiatric Institute and Clinic (WPIC) for vocational consultation due to dissatisfaction with her current work situation as a word processor and desires to explore alternative choices. Initial session with C.L., B.A., was January 24, 1996. Patient is currently being followed by L.K., M.Ed., under the supervision of M.G., M.Ed., CRC.*

### PSYCHIATRIC HISTORY

*Patient grew up in Wilkes-Barre, Pennsylvania. During her childhood, from ages ten to about fifteen, she reports obsessive thinking and compulsive rituals. These included seeing herself as bad, checking and counting, and feeling that she had to repeatedly rub germs off of her hands or bad things would happen to other people. From the ages of thirteen to seventeen, patient recalls her father calling her "fat" so she started starving herself and suffered from Anorexia Nervosa. She reports that at the age of thirteen, she was 5'4" and 130 lbs. but by the age of fourteen or fifteen, she was 5'7" and 105 lbs. Patient reports that she would lie in her bed and cry when she was a teen, thinking she might not be able to have children due to starving herself and possibly destroying her reproductive system. She still admits to some preoccupation with food and weight.*

*At seventeen she entered college and exchanged the anorectic behavior for alcohol abuse. Patient said that she feels alcohol saved her from getting thinner and eventually dying from Anorexia Nervosa. Patient stated she had two good friends in college and described herself as a "holy terror" and "got drunk as often as I could and I caroused in search of young men about as often as I got drunk." During her junior year of college, Patient reports that she fell in love with a man who liked to drink as much as she did, until his father got him involved in AA meetings. He in return introduced her to these meetings. In 1989, at the age of 20, patient was treated in the Dual Diagnosis Inpatient Unit at WPIC for three weeks, for severe major depression and alcoholism. After hospitalization, she participated in AA*

Meetings and outpatient care in CPCDS. During her stay in the hospital she was given Prozac for depression but this was discontinued after her release due to developing mania. Prior to being treated at Braddock Mental Health Center for Bipolar Affective Disorder in 1993, patient reported multiple cycles of depression, lasting about two months, alternating with periods of euthymia and mania which lasted about two weeks. Patient described euphoria, increased energy, decreased sleep, increased sense of self-confidence and socialization, sexual promiscuity and increased drug use during her manic phases. She reported having had some thirty such cycles before being treated with Lithium at Braddock MHC and has reported no manic episodes since then. Patient reports that she stopped treatment at Braddock MHC in 1993 and received Lithium from her family doctor for the next two years.

Patient describes an experience in March of 1995 while working as a data entry temp, in which she was having a daydream or fantasy of the 1800's, during which she experienced the sensation of dying and bleeding as a result of being robbed and stabbed. She started gasping and grabbing her chest and had to leave work. In the summer of 1995, patient reported a three month episode of Major Depression manifested by depressed mood, suicidal ideation, decreased energy and concentration, sleep and appetite disturbance, poor concentration, feelings of hopelessness, and feeling detached from her body. She presented to WPIC on September 11, 1995 and was treated on an outpatient basis at the Center for Psychiatric and Chemical Dependency by D.D., MSW and I.S., M.D. Patient's depressive symptoms began to increase, including suicidal ideation to the point of thinking about preparations such as a burial plot, who would get her possessions, and what she would wear. Patient reported not committing suicide because she is not sure that things would be better in the afterlife, that she could be a ghost and would still have the same problems or would interfere with people's lives. Patient was hospitalized November 6, 1995 to November 27, 1995 at WPIC on the Women In Transition Unit and is currently in outpatient treatment at CPCDS. As was reported by her primary therapist in an April 1, 1996 progress note, patient currently takes the following medications: Risperdal 1 mg q hs po, Zoloft 25 mg q am po, and Lithium Carbonate 300 mg, 2 pills BID po.

#### HISTORY OF DRUG AND ALCOHOL ABUSE

In 1986, patient started drinking alcohol while in college. She reports being intoxicated up to three to four times a week, consuming large amounts of alcohol, experiencing some blackouts, missing classes, and inappropriate sexual behavior. In 1990, she reported using marijuana everyday for six months. Patient attended AA and NA in 1989 and 1990 for eight months but felt "it was too much like a cult." Patient was hospitalized in the Dual Diagnosis Inpatient Unit at WPIC for three weeks in 1989 for Severe Major Depression and Alcoholism. She reported that she has rarely drunk alcohol since she started taking Lithium and has not drunk alcohol since October of 1995. Patient said she did see herself as an alcoholic in the past, but does not see herself as one now. Patient continues with individual outpatient treatment and attends groups at CPCDS.

#### PERSONAL DEVELOPMENTAL AND SOCIAL HISTORY

Patient grew up in Wilkes-Barre, Pennsylvania with one younger brother. Her mother,

52 years old, stayed at home until patient was 12 years old, at which time she went to work as a prison librarian. She describes her mother as "touchy-feely," very intelligent and self-educated. Her father, 65 years old, was a high school history teacher and athletic director. He has recovered from a heart attack he had years ago. She describes her father as a "Type A" personality, "mean-willed but generous," and she feels he ordered her mother around. Patient thinks that her parents are a "strange couple" but she feels fairly close to them. Patient stated that her parents were shocked and upset to learn about her psychiatric condition. Her brother, 22 years old, attends a Masters' program at the University of Alabama. She stated that she does not feel particularly close to him. Patient said that she learned to read and write by the age of three from her mother, and was sent to kindergarten at the age of four. She described her school years as being "head and shoulders" above other classmates academically, but had a long way to go as a social success. Patient said that she did not like the town she lived in or anybody in it, thus feeling that she did not belong. As a result, she created a very active fantasy life which included many imaginary friends between the ages of three and seven. She started talking to her dolls after her mother stated she was too old for imaginary friends, and at the age of nine, patient began writing screen plays as an expression of her fantasy life. Patient related that she felt she was smothered as a child and that her parents always wanted a child who was smart and would become successful as well as be obedient and not express independence or self-assurance. Patient states that she did not have friends until she started college and drinking alcohol. She reported that her first love occurred while in her junior year of college and that this young man saved her life by introducing her to the 12-step program at AA. They are no longer together and currently she is dating a married man. Patient reports that the following people in her family have had medical or psychiatric problems: Paternal uncle has a depressive illness; paternal cousin had alcoholism and compulsive gambling disorder; Maternal great-aunt had alcoholism; Paternal aunt had cancer and a cousin is being treated with Lithium for mania.

## MEDICAL HISTORY

Patient's most recent medical evaluation on November 6, 1995 at the University of Pittsburgh Medical Center reports a physically healthy adult female. She has a history of asthma with bronchitis and ovarian cysts. Patient reports an allergy to the antibiotic, Ilosone, to which as a child she reacted with anaphylaxis. Currently, she has acne which is being treated with a sulfa antibiotic medication. After patient's last hospitalization in 1995, she reported blurry vision as a result of medication (Risperdal).

## SOCIAL SUPPORTS

Patient reports that she is fairly close to her parents but does not feel close to her brother. She reports improved interpersonal relationships since high school and has several close friends. Although patient grew up Catholic, she is now very active in the First Unitarian Church and choir. Music and writing are a big part of her life although she has not pursued her music career because she states that things "feel different" and she has not had the motivation to compose as of late. She is also involved in an acting class that she says helps her to relax.

## CURRENT STRESSORS

*Patient expresses dissatisfaction with her job as a word processor. She feels she is underemployed since she has a B.A. in liberal arts.*

## EDUCATION AND EMPLOYMENT

*Patient was taught to read and write by her mother at the age of three and at four she began Kindergarten. In elementary school, she reports making good grades, being involved in a reading group, entering and winning awards in creative writing and learning to play the flute. In high school, she continued to get good grades and became a member of the National Honor society, the radio club, school newspaper, and many musical organizations. She received a scholarship from the teachers' association and attended college at I. University of Pennsylvania to study music education. In her final year of college she completed an internship at a public radio station in Pittsburgh, doing production work, basic audio engineering and all the technical work and editing on a weekly environmental affairs show. She graduated magna cum laude with a B.A. in liberal arts, music performance. After graduation she continued volunteering at the radio station and started working as a cashier at a supermarket. Two months later she started working as a data entry temp in Pittsburgh. During this time she was invited to play the flute in a new age music project and performed a few live shows at local pubs and bars. In 1993, she produced, engineered and performed her first recording, "Songs for Dysfunctional Girls." In 1995, she performed a few live shows and sold some tapes. After she quit her data entry temp job, around March 1995, she took six weeks off and then started her current job as a word processor with a law firm in Pittsburgh. She makes \$20,000 a year, but is dissatisfied and is interested in pursuing a different career. She states that she has lost her motivation to compose music. Currently she also volunteers at a music studio and continues to write short stories. Patient stated that she feels happiest when writing her stories.*

## VOCATION AND PSYCHOEDUCATIONAL ASSESSMENT

*Patient attended initial session at PRAS on January 24, 1996, with C.L., B.A., under the supervision of M.G., M.Ed., CRC. Reportedly, the patient was looking for a "new focus" to her career because she feels underemployed as a word processor when she has a BA. in liberal arts. Patient agreed to take the following vocational assessment measures: Career Ability Placement Survey (CAPS) administered on February 1, 1996; Career Occupational Preference System Interest Inventory, Professional level (COPS-P), Career Orientation Placement and Evaluation Survey (COPES), and Strong-Campbell Interest Inventory (SCII), administered on January 24, 1996, and the Multidimensional Self Esteem Inventory administered on May 20, 1996. Patient appeared heavily invested in vocational assessment and stated, "this makes me lean more towards going back to school because I love to keep learning." She also said she was disappointed because she expected to score better on the ability testing. To date, patient has attended fifteen sessions without missing any scheduled appointments at PRAS. Sessions have included: discussing results of vocational testing, exploration and weighing pros and cons of possible career interests, research and discussion about potential Master's degree programs, identifying goals and accomplishments and*

*identifying positive and negative working conditions. Currently patient has registered to take a biology class at the local community college for the summer of 1996 to explore her interest in medical-life science before committing to an educational program.*

### **SUMMARY AND RECOMMENDATIONS**

*Patient states that she is interested in exploring career opportunities because she feels underemployed working as a word processor. She has a B.A. in liberal arts with an emphasis in music performance but feels she has lost the inspiration and motivation to continue composing. Patient is very interested in challenging activities and to continue learning new things. She appears to be invested in attending therapy to learn about her symptoms and preventing relapse and attending sessions at PRAS to explore career interests. Patient seems willing to do what it takes to achieve her goals. Patient will continue to attend PRAS bimonthly for counseling and guidance toward achieving her long term goal of establishing and following through on a plan of action to aid in determining specified vocational and/or educational goals.*

*Recommendations include the following:*

- 1. Continued career guidance in an atmosphere of support and encouragement and further exploration of high interest careers.*
- 2. Continued exploration of employment options while pursuing additional training/education as needed.*
- 3. Further evaluation of pros and cons of working conditions and career direction.*
- 4. Continued outpatient treatment focusing toward improving self-confidence and monitoring of symptoms.*
- 5. Referral as needed.*

**TEST DATE(S):** 1-24-96, 2-1-96, 5-20-96, 6-3-96, 6-10-96

**TESTS ADMINISTERED:** Wechsler Adult Intelligence Scale - Revised (WAIS-R), Wechsler Memory Scale - Revised (WMS-R), Wide Range Achievement Test - Revised (WRAT-R), Nelson-Denny Reading Test (Form F), Career Ability Placement Survey (CAPS), Career Orientation Placement and Evaluation Survey (COPEs), Career Occupational Preference System Interest Inventory, Professional Level (COPS-P), Strong Campbell Interest Inventory, Minnesota Multiphasic Personality Inventory (MMPI), Multidimensional Self-Esteem Inventory (MSEI).

**BACKGROUND AND REFERRAL INFORMATION:**

the patient is a 27 year old single white female, referred to PRAS on 12-18-95 by \_\_\_\_\_ of CPCDS of WPIC for vocational consultation due to dissatisfaction with her current work situation as a word processor. the patient presented to WPIC on 9-11-95 for treatment on an outpatient basis for a mood disorder. Reportedly, she has a long history of psychiatric problems dating to adolescence. From the age of 10 to 15, the patient reported obsessive thinking and compulsive rituals, which included seeing herself as bad, checking and counting and feeling she had to repeatedly rub germs off of her hands or bad things would happen to other people. During the ages of 13 to 17, she reported starving herself and developed anorexia nervosa with a 25 lb. weight loss. the patient stated that her anorectic behavior ceased when she entered college and started abusing alcohol. In 1989, at the age of 20, the patient attended AA meetings with the help of her then, current boyfriend and in 1989, entered the Dual Diagnosis Inpatient Unit at WPIC for treatment of alcoholism and was also treated with Prozac for severe Major Depression. Prior to being treated at Braddock MHC for Manic Depressive Illness in 1993, the patient reported multiple cycles of depression, lasting about two weeks. During her manic phases, the patient described euphoria, increased

PAGE 2

energy, decreased sleep, increased alcohol and marijuana use. the patient stopped treatment with Braddock MHC in 1993 and received Lithium from her family doctor until 1995. As the patient became more depressed, suicidal, and experiencing periods of dissociation, she entered the Women in Transition Unit of WPIC from November 6, 1995 to November 27, 1995. Currently, the patient is followed by \_\_\_\_\_ of CPCDS at WPIC and takes Lithium Carbonate, 300 mg. and Zoloft 25 mg. daily.

Medically, the patient is a physically healthy adult female as reported by medical evaluation on 11-6-95. She has a history of asthma with bronchitis and ovarian cysts and currently is being treated with a sulfa antibiotic medication for acne. She wears contact lenses for corrective vision.

Educationally, the patient reported that her mother taught her to read and write by the age of 3 and she entered kindergarten at age four in Wilkes-Barre, PA. Through high school, the patient stated making A's and B's and being involved with music and creative writing groups. She received a scholarship from the teachers' association and majored in music education at Indiana University of PA. She graduated in 1990, magna cum laude with a B.A. in liberal arts, music performance. Currently, the patient has registered to take classes this summer to further explore her interest in Medial-Life Science.

the patient has been employed as a cashier at a supermarket, a data temp and currently works as a word processor with a lawyer's firm making \$20,000 per year. As an intern in college she worked at a local radio station doing production work, basic audio engineering and all the technical work and editing on a weekly environmental affairs show. In 1993, she played the flute in a new age music project and performed a few live shows at local pubs and bars, and produced, engineered and performed her first recording, "Songs for Dysfunctional Girls." In 1995 she performed a few live shows and sold some tapes. Currently, the patient states that she has lost her motivation to compose music but has started writing short stories in her spare time.

#### **OBSERVATIONS OF TEST BEHAVIOR:**

Formal vocational assessment was conducted on 1-24-96, 2-1-96, 5-20-96, 6-3-96, and 6-10-96. the patient expresses excitement and stated she likes challenges and taking tests, and appeared very invested in vocational and psychoeducational assessment. the patient appeared noticeably anxious and self-conscious during the beginning of the WMS-R and WAIS-R, thus possibly hindering her performance, which improved as she calmed down. During interpretation of results, the patient felt she should have scored higher on the CAPS but quickly stated she had more reason than ever to go back to school and "stimulate" her mind again. the patient always appeared attentive and was an eager participant when engaging in vocational sessions. Keeping in mind her test anxiety, results appear to be a valid representation of the patient's current abilities.

**TEST RESULTS AND DISCUSSION:**

Intellectual evaluation was conducted via the administration of the Wechsler Adult Intelligence Scale - Revised. This instrument provides a composite score (Full Scale IQ) which serves as an index of general intelligence as well as Verbal and Performance IQ scores. The results obtained were as follows:

Verbal IQ:	123
Performance IQ:	113
Full Scale IQ:	122

the patient's full scale score places her in the superior range of intelligence. While superior verbal skills are conveyed, performance placed in the high average range of abilities.

Further analysis of WAIS-R performance is available via subtest analysis. The Verbal Subtests consist of tasks which tap verbal conceptual ability, practical judgment and reasoning, numerical reasoning, immediate auditory attention, acquired knowledge, and general verbal proficiency. The Performance Subtests involve more visuoperceptual and visuomotor skills in task completion. Spatial and nonverbal reasoning skills are tapped in these tasks. In addition, demands are imposed for speed dependent performance on a number of these tests. Subtests are scored as Scaled Scores with a mean of 10 and a standard deviation of 3.

Verbal Subtests

Performance Subtests

	Scaled Scores		Scaled Scores
Information	14	Picture Completion	10
Digit Span	14	Picture Arrangement	13
Vocabulary	15	Block Design	12
Arithmetic	11	Object Assembly	10
Comprehension	16	Digit Symbol	14
Similarities	12		

Verbally, the patient has a very superior ability to utilize practical information and social judgment in everyday problem solving (Comprehension). The ability to demonstrate an adequate fund of general and factual knowledge, closely tied to academic success, is in the superior range (Vocabulary), as is attention, concentration and immediate auditory recall of number series (Digit Span). High average ability in logical abstract thinking and verbal concept formation was evident (Similarities). An average score was obtained on Arithmetic, which requires sustained attention to aural direction and the ability to mentally manipulate and solve arithmetic procedures.

Nonverbally, a superior score was recorded on Digit Symbol which measures visual-motor coordination and psychomotor speed in associating unfamiliar symbols with familiar numbers requiring speed, attention and concentration. High Average scores were obtained on Picture Arrangement, measuring the ability to use logical planning, anticipation and social insight to comprehend and interpret social situations, and Block Design, which requires attention, concentration, nonverbal reasoning and spatial-problem solving abilities. Average scores were recorded on Picture Completion, which requires visual alertness, perception and attention in discriminating between essential and unessential details, and Object Assembly, which requires the ability to visually identify and organize parts into meaningful wholes under speed requirements.

Bannatyne recategorization of WAIS-R scores looks at three cognitive factors which have been linked with and are utilized in the processing of information and learning and a fourth factor labeled, Acquired Knowledge. The three primary factors consist of spatial, conceptual, and sequential ability areas, each of which is summarized by way of a mean rating. The spatial category is based upon the Block Design, Object Assembly, and Picture Completion subtests; the Conceptual category is based upon the Vocabulary, Similarities, and Comprehension subtests; and the sequential category is comprised of the Digit Span, Digit Symbol, and Arithmetic subtests. The final category, Acquired Knowledge is based upon the Information, Arithmetic, and Vocabulary subtests and thus generally reflects the impact of formal academic experiences. the patient's Bannatyne recategorized scores result in the following profile:

Conceptual	>	Sequential	>	Spatial	Acquired Knowledge
M = 17.6		M = 13.0		M = 10.6	M = 13.3

the patient's results indicate very superior conceptual abilities, high average sequential abilities and average spatial abilities; resultant acquired knowledge score is in the high average range.

As a formal assessment of memory the Wechsler Memory Scale-Revised (WMS-R) was utilized. The WMS-R is an individually administered, clinical instrument for appraising major dimensions of memory functions in adolescents and adults. The scale is intended as a diagnostic and screening device for use as part of a general neuropsychological examination, or any other clinical examination requiring the assessment of memory functions. The functions assessed include memory for verbal and figural stimuli, meaningful and abstract material, and delayed as well as immediate recall. There are eight subtests which comprise the scale, four of which serve as delayed-recall trials. The eight tests of short-term memory contribute to two major composite scores, General Memory and Attention/Concentration. The General Memory group is further subdivided into measures of Verbal and Visual Memory.

The scaling of the WMS-R was constructed with a mean of 100 and a Standard Deviation of 15. the patient's scores on this formal measure of memory are as follow:

	Standard Score	Range
Verbal Memory	100	Average
Visual Memory	95	Average
General Memory	97	Average
Attention/Concentration	122	Superior
Delayed Recall	97	Average

the patient demonstrated superior abilities of attention and concentration, average memory for verbal and visual information and average delayed recall. Anxiety appeared to hinder her initial encoding of the verbally presented material (two short stories read aloud), thus lowering both her verbal and general memory scores. Additionally, she appears to experience memory problems due to depression.

A screening of academic skills was undertaken via administration of the Wide Range Achievement Test-Revised (WRAT-R). Found below are the Standard Scores and Percentiles that were derived from the WRAT-R.

	Standard Score	Percentile	Range
Reading Recognition	118	88	High Average
Spelling	124	95	Superior
Arithmetic	108	70	Average
Untimed Arithmetic	125	95	Superior

the patient performed extremely well on the spelling subtest, missing only two out of 46 items. Basic phonetic skills are within a high average range. Under time constraints, she demonstrated average ability in arithmetic, but given the opportunity to complete the remaining problems without constraints, she scored in the superior range, demonstrating her facility in basic Algebra. It is important to note that the patient has recently been reviewing arithmetic in preparation for an algebra class which she has registered to take in the fall semester.

**Nelson-Denny Reading Test (Form F)**

	Standard Score	Percentile Rank	Range
Reading Comprehension	112	79	High Average
Reading Rate	77	08	Borderline

the patient demonstrated high average ability in reading comprehension. It is felt that her score of borderline on reading rate is an underestimation given the fact that she completed the test before allotted time elapsed and that initial anxiety and awareness of being "tested" appeared to impair her initial performance.

On the CAPS, a measure of eight primary ability areas associated with the Occupational Clusters presented in the CCOPS vocational aptitude and interest battery, the following aptitude scores were derived:

<u>Primary Ability</u>	<u>Stanine Score</u>	<u>Percentile Score</u>	<u>Range</u>
MR Mechanical Reasoning	2	8	Deficient
SR Spatial Relations	6	68	Average
VR Verbal Reasoning	6	68	Average
NA Numerical Ability	4	32	Average
LU Language Usage	9	98	Very Superior
WK Word Knowledge	5	50	Average
PSA Perceptual Speed and Accuracy	5	50	Average
MSD Manual Speed and Dexterity	6	68	Average

the patient's score on language usage demonstrates very superior abilities in recognizing and using standard English grammar and punctuation. Average scores were obtained across all other CAPS subtests except for a score in the deficient range on understanding of mechanical facts and principles. An average score on the subtest measuring abstract verbal reasoning ability is inconsistent with superior verbal comprehension abilities demonstrated on the WAIS-R. The lower CAPS subtest score appears due to test anxiety and time constraints vs. true ability in this area.

Enclosed with this report is a print-out of scores including Percentile Scores and those Occupational Clusters within which scores are high enough to consider them as potential areas for career exploration, dependent of course on expressed vocational interests and work values.

The Career Orientation Placement and Evaluation Survey (COPES) was administered in order to assess those personal values which have been repeatedly demonstrated to reflect major dimensions of job satisfaction. In conjunction with interests, what one would "like" to do, those domains which one values or perceives as important and worthwhile play an important role in career choice and job satisfaction. Work values measured by the COPES are described below.

INVESTIGATIVE vs. ACCEPTING: Intellectual curiosity and the challenge of solving a complex task are major values of persons scoring high on this scale. The need for

PAGE 7

information is very important to such people. Low scorers value clear cut activities in which they see the concrete results of their work and do not need to solve many complex problems.

**PRACTICAL vs. CAREFREE:** Showing proper appreciation for one's personal belongings and appreciation of practical and efficient ways of doing things are major values of persons scoring high on this scale. Such persons value activities in which they take good care of their property and work with things to make them more practical and efficient. Low scorers value activities where others take care of equipment and keep things in good working order.

**INDEPENDENCE vs. CONFORMITY:** Independence from rules, regulations, and social conventions, and the freedom to work on their own are major values of persons scoring high on this scale. Such persons value activities in which they are relatively free of rules and regulations and are not restricted by social obligations. Low scorers value working under careful supervision where clear directions and regulations can be followed.

**LEADERSHIP vs. SUPPORTIVE:** Making decisions, directing others, and speaking for the group are major values of persons scoring high on this scale. Such persons have a need to be seen as important and usually take positions of leadership. Low scorers value activities in which they can be a good follower and do not need to direct others or tell others what to do.

**ORDERLINESS vs. NON-COMPULSIVE:** Orderliness and keeping things neat and in their proper place are major values of persons scoring high. Such persons value activities in which they keep things tidy and do what they are expected to do. Low scorers value activities in which they can take things as they come and do not need to keep things orderly.

**RECOGNITION vs. PRIVACY:** To become well known and famous and to know important people are major values of persons scoring high on this scale. Such persons seek the admiration of others, as well as the rewards of honorary degree. Low scorers value keeping their activities private and are not concerned with being considered a famous person.

**AESTHETIC vs. REALISTIC:** Artistic appreciation and the enjoyment of music and the arts are major values of persons scoring high on this scale. Such persons value activities in which they appreciate beauty, show artistic and emotional sensitivity, and appreciate music and the arts. Low scorers value activities in which they do not rely on their senses and in which they are not involved with appreciation of artistic qualities.

**SOCIAL vs. SELF-CONCERN:** Helping others and appreciating the work of charitable service groups are major values of persons scoring high on this scale. Working with people in a friendly situation is important to such persons. Low scorers value activities in which they spend time on their own projects and tend to their own affairs rather than helping others.

Work and/or activity which incorporates value preferences is seen to be intrinsically worthwhile and indicative of job satisfaction for the majority of individuals. The work related values which are most important to the patient are listed below; preference for the underlined work value is indicated by percentile rank.

<u>Work Value Scale</u>	<u>Percentile Rank</u>	<u>Range</u>
<u>Investigative</u> vs. Accepting	97	Very Strong
<u>Practical</u> vs. Carefree	10	Very Low
<u>Independence</u> vs. Conformity	99	Very Strong
<u>Leadership</u> vs. supportive	80	Strong
<u>Orderliness</u> vs. Non-Compulsive	05	Very Low
<u>Recognition</u> vs. Privacy	98	Very Strong
<u>Aesthetic</u> vs. Realistic	98	Very Strong
<u>Social</u> vs. Self-Concern	05	Very Low

the patient's profile indicates that she very strongly prefers work which is intellectually challenging and complex, allows for independence from rules and regulations, and the freedom to work on her own without social obligations. She would very much like to have her accomplishments be admired, honored and recognized by others. She strongly prefers work that is involved with appreciation of beauty, music and the arts. Also indicated is a dislike for work which involves being practical, efficient, orderly, and having to work closely with others as part of a team.

The COPS-P is a self-report measure which allows the individual to select and more carefully define the kind of work which he/she may be interested in doing. Choices are given regarding a variety of activities which are performed and/or are a part of many and diverse occupations. The individual is asked to make choices based on personal interests rather than on consideration of factors such as salary, social standing, or future advancement. These many activities are then categorized with respect to the sixteen professional-level occupational clusters detailed in the CCOPSystem and reported as percentile ranks. the patient's highest reported vocational interest areas fall under the career clusters of:

	<u>Percentile</u>
1. Written Communication	91
2. Performing Arts	86
3. Medical-life Science	83
4. Civil Technology	75
5. Agribusiness (Outdoor)	75

1647

**COMMUNICATION, Written** occupations involve activities concerned with skill in the use of written language especially in the creation or interpretation of literature and the written communication of knowledge and ideas. Sample occupations include Copy Writer, Editorial Assistant, Librarian, Technical Writer, Editor, and Reporter.

**ARTS, Performing** occupations involve activities concerned with the individualized expression of creative or musical talent. Sample occupations include Musician, Choreographer, Dancer, and Actress.

**SCIENCE, Medical- Life** occupations involve activities concerned with the conducting of research and the accumulation and application of systemized knowledge in medicine and the biological and life sciences. Sample occupations include Anesthesiologist, Pharmacologist, Physiatriist, Geneticist, and Biomedical Engineer.

**TECHNOLOGY, Civil-Construction** occupations involve activities concerned with the structural design for construction of buildings, highways and other transportation systems. Sample occupations include Structural Drafter, Mining Engineer and Safety Engineer.

**OUTDOOR, Agribusiness** occupations involve activities performed primarily out-of-doors which are concerned with the growing, tending and harvesting of plants and animals for human consumption. Sample occupations include Dairy Technologist, Farmer, Horticulturist, Soil Conservationist, and Range Manager.

the patient's profile clearly indicates Written Communication as a high interest and she has stated that she feels her best when writing short stories. Her interest in Performing Arts was manifested as a flute player in a new age program and her work and performance on a recording, "Songs for Dysfunctional Girls." the patient has started to pursue her interest in Medical-life Science through taking classes in Biology and Chemistry.

A second measure of occupational interest was utilized to further explore the patient's career interests. The Strong-Campbell Interest Inventory (SCII) yields systematic information about patterns in one's vocational interests and how these patterns compare with those of successful people in many occupations. Results are based on interests, not aptitudes or abilities. Indicated likes and dislikes are analyzed in three main ways: 1) "General Occupational Themes" for similarity to six important overall patterns; 2) "Basic Interest Scales", for similarity to 23 clusters of specific activities; and 3) "Occupational Scales", for similarity to the interests of men and woman successfully employed in 106 occupations.

Found below is the patient's profile on the General Occupational Themes of the SCII. The range of scores is roughly from 30 to 70, with the average person scoring 50.

<u>GENERAL OCCUPATIONAL THEME</u>	<u>SCORE</u>	<u>RANGE</u>
Realistic	39	Moderately Low
Investigative	43	Average
Artistic	60	Moderately High
Social	44	Average
Enterprising	41	Moderately Low
Conventional	35	Low

Of the 23 Basic Interest Scales of the SCII, the patient's interest reached average or higher on the following scales:

<u>BASIC INTEREST SCALE</u>	<u>SCORE</u>	<u>RANGE</u>
Medical Science	57	Moderately High

the patient's responses were very similar or similar to those of persons working in occupations corresponding to 9 of the 106 Occupational Scales of the SCII.

Broadcaster	Very Similar
Reporter	Moderately Similar
Florist	Moderately Similar
Interior Decorator	Moderately Similar
Librarian	Moderately Similar
Artist, fine or commercial	Similar
Photographer	Similar
Musician	Similar
Advertising Executive	Similar

There are two Special Scales on the SCII designed to yield additional insight into interests and expectations. The Academic Comfort Scale differentiates between people who enjoy being in an academic setting and those who do not. Persons with low scores (below 40) often are inclined to view education as a necessary hurdle for entry into a career, whereas persons with high scores (above 50) typically seek out academic courses. the patient's score of 48 on this scale indicated a moderate inclination toward formal academic coursework. The Introversion-Extroversion Scale is associated with a preference for working with things or ideas (scores above 55) or with people (scores below 45). the patient's score of 49 on this scale indicates a preference for working with things, ideas and people.

Enclosed with this report is the patient's comprehensive SCII Profile Report and further interpretive information.

Assessment of self-esteem and personality was conducted via use of the MSEI and the MMPI.

Results of the MSEI indicate moderate difficulties in feeling lovable and accepted as a person as well as confusion around her sense of identity and purpose in life. Such persons may have difficulty expressing or receiving feelings of love and experience much inner conflict among different aspects of self-concept. Also present is some confusion and guilt with regard to moral values and behavior. the patient attributed these feelings of guilt to growing up as a strict Catholic and currently attending a very liberal Unitarian Church. the patient's profile also indicated feelings of competence and capability in mastering new tasks and learning quickly, feeling talented and capable of doing well at most things.

the patient's MMPI profile was indicative of an individual currently experiencing a significant amount of emotional distress. Persons with similar profiles typically are obsessive, worrisome, oversensitive individuals who are apt to present with complaints of anxiety, nervousness, tension and depression. They are apt to show marked psychic distress and to complain of difficulty in thinking and concentration. They are apt to be indecisive and passive in their relationships with others and indulge in a rich fantasy life and daydreaming. These persons may suffer from depersonalization, delusions and hallucinations.

Additionally, persons with a similar profile tend to be isolated, aloof and although desire some contact with others, most often want to avoid contact that they cannot cope with comfortably and often experience social anxiety. They may have recurrent illusions, ideas of reference, and engage in magical thinking, which seem to be coping mechanisms to fill their inner void. They feel disembodied and often have dissociative experiences. Often they are detached, uninvolved observers of the world and others with behavior and appearance often considered odd or eccentric. When social demands and expectations press upon them, they feel an excess of environmental stimulation and often react by dissociating, or with paranoia and delusional thoughts.

#### **SUMMARY AND RECOMMENDATIONS:**

the patient underwent formal vocational and psychoeducational assessment on 1-24-96, 2-1-96, 5-20-96, 6-3-96, and 6-10-96. Assessment results indicate overall cognitive functioning in the Superior range of abilities. Verbal comprehension abilities are in the Superior range and perceptual organizational abilities are in the High Average range. Weaknesses in measured vocational aptitudes do not reflect abilities demonstrated in intellectual functioning, and appear to be due to test anxiety and time constraints. Attention and concentration abilities are in the superior range; verbal, general and delayed memory functions are in the average range and appear to be related to symptoms of depression. Basic academic skills are above average and are commensurate with measured verbal and overall cognitive functioning.

Vocational interests reflect the patient's history of musical performance and current interest in writing. Although she had not considered Medical-life science as a career, she is currently exploring this possibility with a class in biology and has registered for chemistry, biology II, and algebra for the fall at Community College of Allegheny County. the patient has decided to remain working at her \$20,000 a year job as a word processor while she explores vocational interests. While scores indicate that the patient has the intelligence and capabilities to succeed at the career of her choice, her MMPI profile reflects emotional distress that could interfere with this success.

Recommendations:

1. Continued outpatient therapy and treatment.
2. Continued career counseling and guidance on an as needed basis.

		1652			1653		

Field	Pros	Cons
1. Word-oriented jobs -- linguistics, translator, technical writer, communications	Talented with words Enjoy writing and language Will probably "fit in" as a person with others in this discipline	Difficulty finding work Ex.: What do you do with a linguistics degree?
2. Psychology	Interested in the mind and how it works Have had a strong aptitude for psychology in past course work	Don't really believe in most counseling Would be most interested in reasarch - need Ph.D. - not as many jobs
3. Physical Therapy	Enjoy active-type work Enjoy helping people/being a healer	Seeing handicapped patients every day may disturb me and/or make me sad Heavy science requirements in school
4. Chiropractor	Interested in healing Interested in the human body Interested in things that are "alternative" Run own business or practice with group	The public and other medical professionals often have poor opinion of profession Not sure if I believe in the ideology 100% Almost as much schooling required as to be a traditional physician Heavy science requirements
5. Traditional Physician	Interested in healing Interested in the human body Respected member of community Run own business or practice with group	Heavy science requirements Lots of schooling Near-spotless academic record Expensive, long-term commitment

Field	Pros	Cons
<p>6. Staying Where I Am (i.e., music with odd jobs or vice versa)</p>	<p>Jobs are easy for me and leave me with free time and a reliable paycheck            No school debt            My musical project has been the most meaningful and satisfying work I've ever done</p>	<p>Right now is not a particularly creative time in my life, due to various circumstances            Jobs are mind-numbing, dull, unchallenging            Struggle to find respect, always feel I have to explain myself/my lot in life            Put out much more than I've gained from musical project in the way of sacrifices</p>

General Concerns

1. How do I know this isn't just a "phase"? (wanting to go back to school, wanting to change careers, etc.) How badly do I want any of the above careers, and is it realistic to try to obtain them?
2. Can I do it? Will I actually, if given the chance, go back to school and apply myself in previously scoffed-at subjects?
3. Where is the money going to come from? Can I work full-time and still go to several classes a week? Or can I work part-time and live on that income?
4. Will what I do make that much difference in my happiness, or am I asking for trouble by asking for more job responsibility and giving up on the career I used to want more than anything?

# The Multidimensional Self-Esteem Inventory

Table 2  
Characteristics of High and Low Scorers

Scale	High Scores	Low Scores
	<b>A. Global Self-esteem (GSE)</b>	
	Pleased with self, feels significant as a person, self-confident, pleased with past, expects future successes.	Self-critical, dissatisfied with self, feels insignificant as a person, self-doubting, displeased with past, expects future failures unless major life changes are made.
	<b>B. Components of Self-esteem</b>	
1.	<b>Competence (CMP)</b> Competent, feels capable of mastering new tasks, learns quickly and does well at most things, feels talented, feels effective and capable.	Incompetent, feels unable to master new tasks, learns slowly and often fails in difficult endeavors, ineffective, feels lacking in skills or talents.
2.	<b>Lovability (LVE)</b> Worthy of love, feels cared for by loved ones, accepted as a person, can count on support from loved ones, able to express and receive feelings of love, involved in satisfying intimate relationship.	Unlovable, doubts that loved ones care, fears rejection because of certain aspects of personality, unsure whether loved ones can be counted on for support, has difficulty expressing or receiving feelings of love, doubts about finding or maintaining an intimate relationship.
3.	<b>Likability (LKE)</b> Likable, popular, accepted by peers and included in their plans, enjoyable companion, gets along well with others, popular in dating situations, expects to be liked, makes a good first impression.	Unlikable, unpopular, not accepted by peers and often excluded from peers' plans, has difficulty enjoying being with and getting along with others, unsuccessful in dating situations, fears rejection, and often makes a poor first impression.
4.	<b>Personal Power (PWR)</b> Powerful, successfully seeks positions of leadership, good at influencing others' opinions and behaviors, assertive, has a strong impact on others.	Powerless, poor leader and avoids leadership positions, a follower who is strongly influenced by others' opinions and behaviors, unassertive, rarely has a strong impact on others.
5.	<b>Self-control (SFC)</b> Self-disciplined, persevering, good at setting and achieving goals, not easily distracted, in control of emotions, exercises restraint in eating, drinking, and/or use of drugs.	Lacks self-discipline, often fails to complete tasks, difficulty with setting and achieving goals, easily distracted, not in control of emotions, lacks self-control in eating, drinking, or use of drugs.
6.	<b>Moral Self-approval (MOR)</b> Pleased with moral values and behavior, has clearly defined moral standards and acts in a way that is consistent with moral values, sets a positive moral example for others.	Guilty and displeased with moral values or behavior, unclear about moral beliefs and standards, often acts in an unethical or immoral manner, ashamed of setting a poor moral example for others.
7.	<b>Body Appearance (BAP)</b> Physically attractive, pleased with appearance, feels that others are attracted because of appearance, feels sexually attractive, takes care to enhance physical appearance.	Physically unattractive, displeased with appearance, feels that others are repelled by their looks, doubts sexual attractiveness, indifferent or unaware of ways to improve physical appearance.
8.	<b>Body Functioning (BFN)</b> Well-coordinated, agile, in good physical condition, comfortable with body, enjoys physical activities such as dancing or sports, feels healthy and feels a sense of vitality and vigor in body functioning.	Awkward, clumsy, uncoordinated, in poor physical condition, uncomfortable with body, dislikes engaging in physical activities, feels unhealthy and that body is dull, lifeless, and sluggish.
	<b>C. Identity Integration (IDN)</b>	
	Clear sense of identity, knows who he/she is, knows what he/she wants out of life, well defined long-term goals, inner sense of cohesion and integration of different aspects of self-concept.	Confused, lacking a sense of identity and purpose, unsure of what he/she wants out of life, no long-term goals, much inner conflict among different aspects of self-concept.
	<b>D. Defensive Self-enhancement (DEF)</b>	
	Defensive, overly inflated view of self-worth, claims to possess highly unlikely positive qualities, denies ubiquitous human weaknesses.	Open, nondefensive evaluation of self-worth, makes no claims of rare virtues, and acknowledges common human weaknesses.

70 + ↑ Significantly High  
60-69 Moderately High  
40-59 Average  
30-39 Moderately Low  
29 + ↓ Significantly Low

This computer generated report should be considered a professional-to-professional consultation. All statements should be considered tentative and subject to further interpretation by a qualified mental health professional.

#### PROFILE VALIDITY

On the MMPI the person's validity scale configuration indicates the profile is valid and that the person is currently experiencing a significant amount of emotional distress.

#### PROFILE INTERPRETATION

Persons of this profile type typically are obsessive, worrisome, oversensitive individuals who are apt to present with complaints of anxiety, nervousness, tension, and depression. They almost always show marked psychic distress on admission and are apt to complain of difficulty in thinking and concentration. Occasionally they are quite confused and in a state of panic. These persons are overideational in approach to solving problems and are generally worrisome, insecure and have chronic feelings of inadequacy and inferiority. They are apt to be indecisive and passive in their relationships with others, and typically have difficulty establishing close interpersonal ties with the opposite sex. A rich fantasy life, and much daydreaming are characteristic of patients of this profile type. Sexual conflict and poor sexual performance are quite likely. These persons are apt to be withdrawn, depressed, and suffer from somatic correlates of anxiety. They are usually conscientious, but somewhat stereotyped in their approach to solving problems. Occasionally these persons drink excessively in an attempt to relax. Delusions and hallucinations are sometimes present. These persons may

suffer from depersonalization. In state hospital settings, the majority of these persons are seen as psychotic and these are divided between major depressions and schizophrenia. In a recent study of private psychiatric patients, these persons were not seen as a homogenous group, and had a primary diagnosis of adjustment disorders; tied for second place, were three categories: Psychotic disorders not elsewhere classified (schizophreniform or schizoaffective disorders), affective disorders, and substance abuse. Though the latter was a small factor in primary classification, substance abuse was included as a primary, secondary or tertiary diagnosis in 64% of this sample. This is greater than normally has been reported in the general literature with the exception of work that has been done with female college students. The modal personality cluster for patients of this profile type was dramatic, emotional, erratic personality disorders; namely, borderline or histrionic. This differs from previous findings; however, here again this was not a homogenous sample and the differential would include schizoid, schizotypal, avoidant and passive-aggressive.

#### PERSONALITY (AXIS II)

The elevated score of the STY Personality Disorder Scale indicates a Schizotypal Personality Disorder. Individuals with Schizotypal Personality Disorders tend to be isolated and aloof. They do desire some contact with others but want to avoid contact that they cannot cope with comfortably and often experience social anxiety. They have recurrent illusions, engaging magical thinking, and ideas of reference which seem to be coping mechanisms to fill their inner void. Their affect is often constricted or incongruent with their circumstance.

They tend to experience life as flat and lifeless. They feel disembodied and often have dissociative experiences. They are detached, uninvolved observers of the world and others. Their behavior and appearance is often odd or eccentric. They are overwhelmed by the fear of disintegration and non-existence. As depersonalization becomes more severe, psychotic episodes are more likely, as are irrational outbursts.

When social demands and expectations press upon them, they feel an excess of environmental stimulation. They often react to this by dissociating, or in extreme cases by use of paranoia and aggressive outbursts. They may also react with delusional thoughts, hallucinations and bizarre behaviors.

When they are called upon to relate to others, they often do not logically orient their thoughts. They become lost, tangential, and digressive. This particular speech pattern only causes them more alienation from others. They are often never married and tend to drift from job to job.

Other personality patterns often associated with the Schizotypal personality are the schizoid and avoidant patterns.

Slight elevation of the BDL Personality Disorder Scale indicates a Borderline Personality Type. These individuals have been described as having intense affect and rapidly changing moods and actions. Their behavior is erratic and unpredictable.

They have difficulty maintaining a sense of self and seem to lack a clear personal identity. They feel scattered, and therefore vacillate among their whims and fantasies. They are often attached to another person and become dependent upon them. They are vulnerable to loss and afraid of being alone. They are fearful of rejection and often misinterpret the actions of others as rejection. They may experience anger towards those they depend upon. The stronger their angry feelings become the more prevalent and serious their potential to harm themselves becomes.

Slight elevation of the PAG Personality Disorder Scale indicates a Passive-Aggressive Personality Type. A person with a passive-aggressive personality pattern tends to be negativistic. They sometimes appear sullen and easily offended by others. Their feelings are often unstable and they have a low tolerance for frustration. They are jealous, quarrelsome people who begrudge others their successes. They are unpredictable, and at times volatile.

They often complain about their subjective or somatic discomforts but usually do not want to explore to gain insight into their origin. These individuals are preoccupied with their sense of personal inadequacy, bodily ailments, feelings of guilt, social resentments, frustrations, and disillusionments. They feel victimized by fate and think that nothing ever works out for them.

They have difficulty working out their moods, desires and thoughts internally. As children they generally did not have consistent discipline. Because of this they do not have a sense of self discipline. These individuals generally employ two defense mechanisms, introjection and projection.

## SPECIAL SCALE INTERPRETATION

The person has a significant elevation on the Anxiety (A) supplemental scale. Such individuals are apt to be consciously anxious, especially in social situations. A lack of self assurance and trust in oneself is likely. The person is apt to be pessimistic about the future, but because of emotional discomfort is motivated for treatment.

The person has a significant elevation on the Subjective Depression (D1) Harris subscale. These individuals generally feel depressed or unhappy most of the time. They lack energy and drive and do not cope with everyday life very well. They feel nervous and tense most of the time and have difficulty concentrating. They lack self confidence, feel inferior to others, and are easily hurt by criticism. They avoid interaction with others and are often embarrassed in social situations. They will often manifest a multiplicity of depressed symptoms including: poor appetite, sleep disturbance, frequent crying, and depressed mood. They are often diagnosed as having a dysthymic disorder.

The person has a significant elevation on the Brooding (D5) Harris subscale. These individuals feel inferior, unhappy and useless. They are generally hurt by criticism and tend to brood and ruminate over past social encounters. They generally lack the energy to cope with problems and often feel like they are losing control of their minds.

The person has a significant low score on the Denial of Social Anxiety (Hy1) Harris subscale. These individuals are generally introverted and are influenced greatly by social standards and customs. They are somewhat shy in social situations and have a difficult time talking to others.

The person has a significant low score on the Need for Affection (Hy2) Harris subscale. These individuals generally see others as dishonest, selfish, and unreasonable. They are critical and suspicious of others, and generally perceive others as treating them badly.

The person has a significant elevation on the Lassitude-Malaise (Hy3) Harris subscale. Individuals with this profile type may not be in good health and generally feel weak, fatigued, or tired. They have difficulty concentrating and may manifest poor appetite and sleep disturbance. They are bored, uninterested in their environment and tend to be somewhat unhappy and depressed most of the time.

The person has a significant elevation on the Familial Discord (Pd1) Harris subscale. These individuals see their home situation as unpleasant and lacking in love, understanding and support. They describe their family as critical, quarrelsome, and overbearing. They often feel

like leaving their home situation.

The person has a significant elevation on the Social Alienation (Pd4A) Harris subscale. These individuals feel alienated and socially isolated. They feel lonely, unhappy and unloved. They in general feel that people do not understand them and feel like they have received a raw deal from life. They are self centered, insensitive in needs and feelings of others and are often inconsiderate. However, paradoxically they are concerned about what others think about them. They often express regret and remorse for their actions which is usually short lived.

The person has a significant elevation on the Self-Alienation (Pd4B) Harris subscale. These individuals seem to be uncomfortable and unhappy. Often times they have problems concentrating. They see their daily life as uninteresting and unrewarding. They verbalize regret, guilt and remorse over their past deeds and shortcomings. They generally do not talk about the specific misbehaviors that concern them. Many of these individuals use alcohol excessively.

The person has a significant elevation on the Poignancy (Pa2) Harris subscale. These individuals appear to be high strung and more sensitive than most individuals. They see themselves as intensive people who often feel lonely and generally misunderstood. Their high energy level and need for sensory stimulation often drive them toward risky and exciting activities. This results in tension discharge and temporary equilibrium.

The person has a significant elevation on the Social Alienation (Sc1A) Harris subscale. These individuals describe their family situation as lacking in love and support. They feel that their families treat them more like children than adults. They often report having feelings of hostility and hatred toward family members. They are extremely alienated and feel that others do not understand them. In some cases they actually feel that some people are trying to harm them or are out to get them. Because of their fear and social phobia they tend to avoid social situations and interpersonal relationships when at all possible. They consequently feel lonely and empty inside.

The person has a significant elevation on the Lack of Ego Mastery, Cognitive (Sc2A) Harris subscale. These individuals generally have difficulty concentrating and thinking. They also may have memory problems. They may report strange thought processes and have feelings of depersonalization and unreality. They often feel that they might be losing their minds.

The person has a significant elevation on the Lack of Ego Mastery, Conative (Sc2B) Harris subscale. These individuals are generally depressed and in a state of despair. When put

in stressful situations they often become anxious and agitated. They have difficulty coping with everyday problems and worry excessively. Their general defense against stress is to withdraw into fantasy and daydreaming. Many times they wish that they were dead, and they seem to have given up hope.

The person has a significant elevation on the Lack of Ego Mastery, Defective Inhibition (Sc2C) Harris subscale. These individuals report having dissociative episodes and memory blackouts. They appear to be restless and irritable and may have periods of laughing and crying which they can not control. They feel like they cannot control their emotions and impulses and are frightened by this loss of control.

The person has a significant low score on the Socially Retiring (Mf6) Serkownek subscale. These individuals are extroverted, exhibitionistic and like to be the center of attention. They are dogmatic and argumentative. They often seek sensory stimulation and are often involved in risky or dangerous activities.

The person has a significant low score on the Staid-Personal Rigidity (Si3) Serkownek subscale. The individuals enjoy social groups and clubs, seek out excitement, and are extremely competitive. At times they may become hyperactive, and at extremes, hypomanic. They often blame others for their misfortunes.

The person has a significant elevation on the Physical-Somatic Concerns (Si6) Serkownek subscale. These individuals commonly report somatic symptoms including changing in speech and hearing, hay fever and asthma. They tend to worry and are concerned about their physical appearance. They tend to be socially introverted and to avoid problematical social situations.

The person has a significant elevation on the Psychoticism (PSY) Wiggins' Content scale. These individuals may manifest a variety of psychotic symptoms including hallucinations, confused thinking, unusual thought content and mannerisms, paranoid ideation, and lack of control. Most feel misunderstood and persecuted by others and society. They often respond to what they perceive as a threat by withdrawing into fantasy and daydreaming. They are generally somewhat grandiose and are unrealistic concerning their own abilities and talents.

The person has a significant elevation on the Manifest Hostility (HOS) Wiggins' Content scale. These individuals are apt to be hostile and aggressive. They may also express these impulses in passive, indirect ways. They are often practical jokers, generally uncooperative, and very critical of others. They see other individuals as extremely demanding and resent the demands placed upon them. They feel like they are being taken advantage of and tend to

retaliate indiscriminantly against others they perceive as taking advantage of them. They exhibit an extreme amount of interpersonal sensitivity and are apt to be argumentative.

The person has a significant elevation on the Poor Health (HEA) Wiggins' Content scale. These individuals express concern over their physical health. They are often preoccupied with their physical condition and exhibit gastro-intestinal difficulties. They may complain of coughing, heart pain, hay fever, asthma, shortness of breath, sexual difficulty and fatigue.

The person has a significant elevation on the Depression (IV) TSC Cluster scale. These individuals are generally depressed and apathetic. They also feel anxious and fearful. They may exhibit depressive symptoms which include unhappiness, psychomotor retardation, feeling blue, lacking energy, fatigue, loss of interest, suicidal ideation or fear of losing control. They have extremely low self concepts and feel that the life situation has become so problematical and difficult that they no longer have the resources to cope. They see life as uninteresting and unrewarding. They often feel like complete failures and express fear and guilt.

The person has a significant elevation on the Autism (VI) TSC Cluster scale. These individuals may exhibit psychotic thought processes and symptoms. They often have strange, weird thoughts which they perceive as disturbing and frightening. They often have trouble concentrating, are indecisive and forgetful. They have feelings of unreality which may include dissociation and depersonalization. They also have daydreams which they may perceive as immoral or evil, and which they are reluctant to talk about. In times of stress they may manifest a psychotic disorder and thought disturbance.

The person has a significant elevation on the Tension (VII) TSC Cluster scale. These individuals are extremely anxious and nervous. They also manifest compulsive mechanisms and excessive worry. They are easily upset, often cry readily and manifest sleep disturbance and difficulty concentrating and may have specific fears such as claustrophobia and fear of natural disaster and disease.

PSYCHIATRIC EVALUATION FORM

NAME: [REDACTED] MEDICAL RECORD #: [REDACTED]  
EVALUATION SETTING: BAC DATE: 09/11/95

PATIENT IDENTIFICATION

Is this patient a twin?  NO  YES

The patient is a single, employed, 26-year-old, white woman.

REASON FOR REFERRAL

The patient is requesting help with a mood disorder. She has a long history of manic depressive illness and wants to be seen for ongoing therapy and medication management.

HISTORY OF PRESENT ILLNESS

The patient reports that during the summer, she experienced a three month episode of Major Depression. She reported depressed mood, suicidal ideation, decreased energy and concentration, sleep and appetite disturbance, poor concentration, and feelings of hopelessness. She reports that within the last two weeks or so, that she is coming out of this Major Depressive Episode, but feels like she needs continued treatment.

The patient currently denies any symptoms of mania or hypomania, obsessions and compulsions, anxiety, substance abuse, and other compulsive behaviors. She also denies current suicidal ideation or homicidal ideation or plans.

PAST PSYCHIATRIC HISTORY (IF ANY)

The patient reports that she has a history of being treated in a Dual Diagnosis Inpatient Unit for three weeks in 1989 for Severe Major Depression and Alcoholism. She reports after this treatment program, she followed up with outpatient care and participated in AA Meetings. The patient also reports that in 1993, she was treated at Braddock Mental Health Center and saw a therapist and psychiatrist several times for "mood swings." She reports her diagnosis was Manic Depressive Illness and that she was placed on lithium. The patient reports that since taking lithium back in 1993, her moods have been fairly stable with the exception of the recent episode this summer of Major Depression. She reports taking lithium as prescribed. The patient reports that she moved out of the catchment area for Braddock Mental Health Center and received her lithium from a family physician for the past two years.

The patient reports that during her childhood, from ages ten to thirteen and ages fifteen to about fifteen and one-half, she had fairly serious obsessive thinking and compulsive rituals. These involved seeing herself as bad and feeling that she had to repeatedly rub germs off of her hands or bad things would happen to other people. She reports these obsessions and compulsions left her at about age fifteen and one-half. The patient also reports that as a young teenager from ages 13 to 17, she suffered from Anorexia Nervosa. She reports starving herself, but denies any use of diuretics, laxatives, or excessive exercising. She reports that she stopped the anorectic behavior when she started abusing alcohol at approximately the age of 17.

**PAST TREATMENT:**

The patient reports that she had an eight month period of AA and NA involvement in 1989 and 1990. She was involved in the 12-Step Program and had a sponsor. She reports that "it was too much like a cult." She reports back in the 1989 and 1990 period when her drinking was excessive, she did see herself as an alcoholic, but she does not see herself as an alcoholic at the present time. She denies any episodes of excessive alcohol use in the past year and one-half.

**SUICIDAL IDEATION AND BEHAVIOR**

NO  YES (Explain below)

Past

The patient reports that she had thoughts of cutting herself this past summer, but did not follow through with anything.

Current

She denies any current suicidality.

**AGGRESSIVE IDEATION AND BEHAVIOR**

NO  YES (Explain below)

Past

The patient denies.

Current

The patient denies.

**HISTORY OF DRUG AND ALCOHOL ABUSE**

NO  YES (Explain below)

Past

She reports a period of alcohol abuse dating back from the late 1980s to about 1990. She reports frequent episodes of intoxication up to three to four times a week, consuming large amounts of alcohol, experiencing occasional black-outs, an increase in tolerance and psychosocial problems. She reports that as a result of her excessive drinking, she was more prone to physical problems such as missing class due to a variety of illnesses, feeling run-down, and that she has had interpersonal conflict as a result of her drinking. The patient also reports inappropriate sexual behavior, both when in a manic phase and during periods of excessive alcohol consumption. The patient also reports a six month history of almost daily use of marijuana back in 1990, but denies any use since that time. She denies any use of opiates, hallucinogens, cocaine or stimulants, sedatives, or inhalants.

Current

The patient reports that she drinks one to two beers a month and has not used in the past two weeks. She reports that she has not been drunk for the past year and one-half.

NAME: [REDACTED]

MR#: [REDACTED]  
DATE: 09/11/95

**FUNCTIONING LEVELS (AXIS V)**

Past GAF Score: 70

Current GAF Score: 60

Highest level of functioning in the past year for at least a few months

Level of functioning at time of assessment

**PERSONAL, DEVELOPMENTAL AND SOCIAL HISTORY**

The patient reports that she is the oldest of two children. Her parents are described in good health. Her father is 65 and has apparently recovered from a heart attack several years ago. Her mother is 52. Both live in Pennsylvania. The patient reports that she is fairly close to her parents and does not feel particularly close to her 22-year-old brother who is attending a Masters Program in Alabama. The patient reports that she was a high honor student in both college and high school. She reports main difficulty in high school revolving around difficulty keeping friends and feeling like an outcast. However, she reports improved interpersonal relationships while in college. She graduated in 1990 with a degree in music from Indiana University of Pennsylvania. Since that time, she has held two jobs in the computer field; one as a data entry clerk and more recently, word processing.

**SOCIAL STRESSORS (AXIS IV)**

Description of Recent Stressors

Recent stressor is change in job about four months ago.

Overall Stressor Severity

NONE = 1       MILD = 2       MODERATE = 3       SEVERE = 4  
 EXTREME = 5       CATASTROPHIC = 6       UNSPECIFIED = 7

**SOCIAL SUPPORTS**

The patient reports that she has several friends. She is heterosexual. She reports her main avocation hobby evolves around composing and performing music. She describes herself as a fairly prolific song writer and is trying to produce music and have it published. She reports that music takes up most of the time aside from working. She currently lives on her own. She supports herself with a \$20,000. She grew up a Catholic, but currently is active in the First Unitarian Church. She is active in the choir and reports that religion is very important to her.

**MEDICAL HISTORY AND PHYSICAL EXAMINATION**

Active Medical Problems

The patient denies.

Current Medications (Include over the counter medications).

1. Lithium 900 mg a day.
2. She is on sulfa, an antibiotic 1,000 mg daily. She has been on this for two months for a skin condition.

Past Medical History

None reported.

Current Health Provider

Dr. Offerman in Point Breeze.

**SIGNIFICANT FAMILY MEDICAL AND PSYCHIATRIC HISTORY**

The patient reports a paternal uncle had depressive illness, a paternal cousin had alcoholism and compulsive gambling disorder, a maternal great-aunt had alcoholism, and a paternal aunt had cancer.

**IMPACT OF PATIENT'S ILLNESS ON FAMILY AND OTHER SUPPORT SYSTEMS**

She reports minimal adverse impact on her family during the active phase of her illness, stating that because she lived away from them and had limited contact, they did not know the degree to which she suffered. She did say, however, that they were shocked and upset when they learned of her psychiatric condition. She does report, several years ago, during episodes of alcohol abuse, that interpersonal relationships became problematic.

**MENTAL STATUS EXAMINATION**

Appearance and General Behavior

The patient was dressed casually and was cooperative during the interview.

Mood and Affect

Mood and affect were within normal limits with no current evidence of depression, anxiety or hypomania.

Rate and Pattern of Speech and Thought

Within normal limits with no current evidence of loose associations.

NAME: [REDACTED]

MR#: [REDACTED]  
DATE: 09/11/95

Content of Speech and Thought

Within normal limits, and she was able to focus on questions in the interview. She denied obsessions, ideas of reference, or delusions.

Perception

The patient denied any kind of hallucinations.

Cognitive Functions

The patient was oriented times three with memory intact. She made one mistake in subtracting 7's from 100. Judgment fair. Ability to abstract is intact.

Insight

Fair to good. She knows that despite having come out of a recent episode of depression, that she needs to stay closely involved in treatment.

**PATIENT STRENGTHS**

1. She is full-time employed.
2. Articulate, willing to comply with medication management, and willing to attend psychotherapy sessions as needed.

**ASSESSMENT SUMMARY**

The patient is a 26-year-old, single, white, employed female, comes to us for ongoing help with a long-standing bipolar disorder. Although her mania has been under control for the past several years, she recently experienced a three month episode of Severe Major Depression, which just recently ended a little over two weeks ago. During that time, the patient reports that she was compliant with her lithium. Although the patient presents with a past history of alcohol dependence, she currently does not present any symptoms indicating that she meets criteria for Alcohol Abuse or Dependence at this time. She denies excessive use of alcohol in the past year and one-half and drinks occasionally; one to two beers a month.

UNIVERSITY OF PITTSBURGH MEDICAL CENTER  
WESTERN PSYCHIATRIC INSTITUTE AND CLINIC  
ADULT & GERIATRIC PSYCHIATRY DIVISIONS  
PSYCHOSOCIAL ASSESSMENT

NAME: [REDACTED]  
MEDICAL RECORD #: [REDACTED]  
DATE OF ADMISSION: 11/06/95  
ADDRESS: [REDACTED]  
TELEPHONE #: [REDACTED]  
COMMITMENT STATUS: 201 Voluntary Commitment  
BSU: Turtle Creek  
INPATIENT UNIT: 13th Floor  
INPATIENT SOCIAL WORKER: B. P., L.S.W.

SOURCE OF INFORMATION:

Information was gathered from the patient, the patient's mother, and WPIC records.

REASON FOR ADMISSION (including patient and/or family perceptions and expectations of treatment):

The patient reports she felt like her body was "full of lead." She reports having suicidal thoughts and had a fear that she would act on them.

SIGNIFICANT FAMILY MEMBERS & SIGNIFICANT OTHERS (name/relationship/age if known; other persons residing in the household):

[REDACTED] the patient's parents, [REDACTED]  
[REDACTED] the patient's brother, age 22.

RELEVANT CUSTODY/GUARDIANSHIP ISSUES:

There are no relevant custody or guardianship issues.

CURRENT PROVIDERS/INVOLVED AGENCIES (including date of involvement & telephone):

The patient has had approximately six sessions with Dennis Daley at CPCDS; 383-1261.

RELEVANT FAMILY INFORMATION (historical and current):

The patient reports she grew up in Wilkes-Barre, a small town in Pennsylvania. The patient reports she did not like it and did not like anybody in the town. The patient reports always feeling that she did not belong, which made it difficult for her to make friends. The patient has one younger brother, [REDACTED], age 22. The patient reports she had a very active fantasy life and had many imaginary friends between the ages of three and seven. She reports her mother said she was too old to have imaginary friends, so she began

NAME: [REDACTED]  
MR#: [REDACTED]  
ADMITTED: 11/06/95  
PAGE 2

talking her to her dolls rather than imaginary friends, which was more acceptable to her mother. In addition, the patient began writing out screen plays at age nine to channel her internal fantasy life. The patient sees her creativity as both a "gift and curse."

The patient reports her mother was at home when she was little. At 12, she reports her mother went to work as a prison librarian. The patient reports her father was a high school history teacher and athletic director. The patient reports around age 13, she became obsessed with food and dieting. During high school, she reports having only one or two friends at a time and denies that these relationships were very close. The patient remained obsessed with food through her high school years. The patient recalls her father calling her "fat." In college, the patient began drinking and feels she was a problem drinker during her college years. After college, the patient moved to Pittsburgh. The patient reports she has a few close friends but still feels as though she does not really belong.

The patient described her mother as "touchy-feely." She reports her mother was very intelligent and self-educated. The patient describes her father as mean-witted but generous." She reports he is "Type A" and feels he ordered her mother around. The patient feels that her parents are a "strange couple."

**CHILDREN OF PATIENT AT POTENTIAL RISK FOR THE DEVELOPMENT OF PSYCHIATRIC DISORDERS** (list name & age, note if previously identified and receiving treatment, or if high-risk screening may be indicated):

The patient has no children.

**PSYCHOSOCIAL ISSUES:**

**A. Living Situation/Housing**

The patient lives in her own apartment.

**B. Recent Lifestyle Events/Losses**

The patient does not identify any specific lifestyle changes or losses. The patient does report that she feels very unsatisfied and unhappy in her work.

**C. Coping Style & Problem-Solving Abilities**

The patient in the past has used alcohol and eating as a coping style. More recently, the patient attempts to talk with friends and has enlisted the help of a counselor. However, the patient has a difficult time expressing her thoughts and feelings.

**D. Financial**

The patient supports herself from her full-time job.

**E. Employment**

The patient works full-time as a word processor.

NAME: [REDACTED]  
MR#: [REDACTED]  
ADMITTED: 11/06/95  
PAGE 3

**F. Cultural/Religious Issues**

The patient denies any cultural/religious issues pertinent to treatment.

**G. Legal Involvement**

The patient denies any legal history.

**H. Disabilities**

The patient denies any disabilities.

**I. Social Support**

The patient has several close friends that she identifies as social support.

**J. Marital and Relationship Problems**

The patient is single.

**K. Child Care and Parenting**

The patient has no children.

**L. Other**

No other psychosocial issues were identified.

**PATIENT & FAMILY STRENGTHS:**

The patient is very intelligent. The patient is very creative in both writing and music. The patient is motivated for treatment. The patient's parents express concern for the patient and a willingness to learn more about her illness.

UNIVERSITY OF PITTSBURGH MEDICAL CENTER  
WESTERN PSYCHIATRIC INSTITUTE AND CLINIC  
DISCHARGE SUMMARY FORM

NAME: [REDACTED]

MEDICAL RECORD #: [REDACTED]

ADMISSION DATE: 11/06/95

PROGRAM: 13th Floor

DISCHARGE DATE: 11/27/95

PROGRAM: 13th Floor

PATIENT IDENTIFICATION

The patient is a 26-year-old, single, white female admitted on a 201 after being referred by therapist, D. [REDACTED] at CPCDS; patient experiencing worsening depressive symptoms and suicidal ideation. The patient was accompanied to the Diagnostic Evaluation Center by a friend.

REASON FOR REFERRAL

PSYCHIATRIC HISTORY

The patient is known to Western Psychiatric Institute and Clinic through outpatient treatment. She also has been hospitalized in the past. She also has received psychiatric treatment in the past through Braddock Medical Center. The patient reports an onset of periods of depression and mania since teenage years. Her first psychiatric hospitalization was in 1989 at the age of 20. The patient reports being depressed at this time and also having difficulty with using alcohol and cannabis. She reports being treated with Prozac at this time and initially experiencing relief from depression; however, she reports developing mania after discharge from the hospital and, subsequently, stopped taking the Prozac. The patient reports developing multiple cycles of depression lasting approximately two months, alternating with periods of euthymia then periods of mania which lasted approximately two weeks. The patient estimates having had at least 10 such cycles in the period from 1988 up until the time she started taking Lithium in 1993. The patient endorses euphoria, increased energy, decreased sleep, increased sense of self-confidence and socialization, sexual promiscuity and increased drug use during her manic periods; however, the patient states that since taking Lithium she has not experienced a manic episode. The patient, however, endorses possible episodes of mixed symptoms with racing thoughts, internal sense of agitation, mood lability. The patient reports no other treatment with antidepressants or other psychiatric medications in the past. The patient also reports onset in her teens of obsessive behaviors including hand washing, checking and counting. She also reports that she developed Anorexia Nervosa as a teenager. The patient currently denies restricting food intake but does admit to preoccupation with food and her weight. The patient did not endorse above symptoms, nor were they evidenced during this hospitalization.

NARRATIVE SUMMARY OF TREATMENT COURSE

The patient is a 26-year-old, single, white female with a history of Bipolar Disorder, admitted after worsening of depressive symptoms including suicidal ideation, also some bizarre thoughts regarding death and episodes of depersonalization and auditory hallucinations, initially presenting with catatonic features of poverty of speech and movement despite racing thoughts. This resolved with routine Ativan dose. This Ativan dose was slowly tapered down during admission as the patient improved and the patient will not be discharged with the Ativan as part of her medication regime. Also, Risperdal was added which the patient has tolerated her Lithium was increased and level of 1.2 obtained on 11/18/95. On 11/26/95 an additional Lithium level was obtained at 1.36 and Lithium was decreased at 600 mg b.i.d. The treatment team's recommendation is that an additional Lithium level be obtained on 11/30/95. During the initial week of hospitalization, the patient's symptoms persisted with extreme mood lability, preoccupation with death and morbid theme, suicidal ideation and an inability to guarantee her safety outside of the hospital. Internal sense of agitation, racing scattered thoughts and bizarre depersonalization experiences including the sense that she was outsider her body

DISCHARGE DATE: 11/27/95

at times. Her mood eventually stabilized and thought processes cleared to the point where the patient was more socially engaged, able to participate more fully in milieu treatment and felt in control of her thoughts. Her suicidal ideation and morbid preoccupation remitted. Her sleep, activity level and appetite improved. The patient was able to take a successful pass to home for the holiday; however, she has complained of some side effects, predominantly visual difficulty and some sedation; her Lithium and Risperdal doses were decreased and the treatment team's recommendation is that she be closely monitored for return of manic or mixed symptoms and also psychotic symptoms. The patient also had episodes of difficulty swallowing, likely due to glossal dystonia; the patient given p.r.n. Cogentin for this with good results.

#### MENTAL STATUS AT TIME OF DISCHARGE

##### Appearance and General Behavior

The patient presented as pleasant and cooperative.

##### Mood and Affect

Her affect was somewhat blunted but no lability noted. Her mood was "good" and "stable."

##### Rate and Pattern of Speech and Thought

Speech slow and halting but no blocking noted; no circumstantiality or tangentiality.

##### Content of Speech and Thought

Content focused on making preparations for discharge. Denies current psychotic symptoms. No evidence of paranoid or delusional ideation.

##### Perception

No evidence of perceptual anomalies and denies episodes of depersonalization or derealization at this time. Denies suicidal, self-harmful, aggressive or homicidal ideation.

##### Cognitive Functions

Oriented times three. Cognitive functions appear intact. Judgement improved, able to state safety plan for discharge.

##### Insight

Insight into need for continued treatment good.

*CASE STUDY*

*May 24, 1996*

## Background and Referral Information

The patient, \_\_\_\_\_, is a 45 year old, white, single male admitted to WPIC initially in 1980. The patient resides with his parents, \_\_\_\_\_ and \_\_\_\_\_, in the \_\_\_\_\_ section of Pittsburgh, Pennsylvania. Mr. \_\_\_\_\_ presents with a long history of depressive symptoms accompanied by debilitating, generalized, somatic complaints of weakness and pain. These symptoms include decreased sleep, decreased appetite with at least a 50 - pound weight loss in 1980, depressed mood, anhedonia, increased social insolation, anergia, hopelessness, decreased activities of daily living, increased somatic complaints, delusions, and suicidal ideation without a plan. The patient has been diagnosed as follows: Axis I: Major Depression with Psychotic Features, severe and recurrent, Axis II: Schizotypal Personality Disorder, Axis III: Status Post Electroconvulsive Therapy and Clubbed Feet, and the Axis V: is 60. Patient was referred to PRAS on 03\01\96 for vocational counseling, help with career selection and getting job ready by his therapist from CCP, Nina Bridenbaugh. Initial session with Rosyvee Guzmán under the supervision of Michelle Geckle, M.Ed., CRC was April 09, 1996. In this session patient expressed that he needs to "start something" in his life, because his experience is limited to working with his father in a dry cleaning business. Patient expressed a vocational interest in health care area, but he does not know what specific area he wants.

## Psychiatric History

In August, 1980, at the age 29, the patient began to experience depressive symptoms, including decreased sleep, appetite disturbance, increased agitation and a feeling of depression. Patient related that in September, 1980, he moved in with his parents because he had financial problems. In this month, his parents sent Mr. \_\_\_\_\_ to a private psychiatrist, who started the patient on Sinequan. Patient related that this medication did not improve the depression. Then the patient became further depressed and began complaining of hallucinations. He was hospitalized at Western Pennsylvania Hospital, but he left the hospital AMA after four days. Then, the patient was admitted to WPIC from in 10\09\80 - 12\18\80. He related that at this time, he felt very weak, and he did not have energy to do anything. He also started to experience other significant symptoms: anhedonia, lack of energy, hopelessness, very poor concentration, very impaired sleep, decreased appetite, increased social withdrawal and intermittent suicidal ideation without a specific plan and delusions. During hospitalization he was treated for depression at that time with ECT treatments. He did not comply with recommended out patient treatment and returned to his parents home. Reportedly, from 1981 until his second admission to WPIC on 11\01\93 at the age 42, \_\_\_\_\_ remained significantly depressed and quite dysfunctional. In 1993 \_\_\_\_\_'s father gave him an ultimatum to "get his act together" or he would have \_\_\_\_\_ committed to the hospital. He described \_\_\_\_\_ as a "human vegetable". As M \_\_\_\_\_ continued to do nothing but lie in bed all day, his father brought him to WPIC. He was hospitalized from 11\01\93 until 01\07\94. It was decided that since the patient had a severely retarded, withdrawn depression, and psychotic symptoms, specifically somatic delusions, ECT was begun. He had a course of 16 ECT treatments, during which he had significant confusion which did resolve

back to good cognitive functioning. He did have marked improvement in depressive symptoms. He was also treated with Zoloft 50 mg. He was discharged to CCP for individual therapy and medication maintenance, with which he has been compliant. He attended group therapy for approximately seven months as well. The patient received SSI in early 1995. At this moment, the patient denies having ideas of reference, auditory or visual hallucinations or feelings that his thoughts or actions are being controlled. Patient related that all he does during the day is listen to talk shows on the radio, eat, sleep and look at television.

### **Family History and Background Information**

The patient has two brothers and one sister, and he is the oldest. His mother, is age 65 and a housewife. The patient's mother has been diagnosed with Bipolar Disorder and she received ECT treatment as a result of post-partum depression following the birth of her last child. The patient also has a brother, who has schizophrenia and who lives in a group home in The patient's younger brother lives in California, and his sister lives in New Jersey. The patient's father is age 67, and is now retired. He owned a dry cleaning business which he sold in 1993. He has hypertension. The patient's paternal grandmother has a history of depression, and she died due to colon cancer. The patient's maternal grandmother had emphysema.

### **Social Supports**

The patient's main supports are his parents, particularly his father.

### **Developmental History**

The patient is the oldest of four children, having two younger brothers and one sister. The patient was born and raised in Pittsburgh. The patient's mother reportedly had a normal pregnancy and delivery without complications, but the patient had a congenital deformity, club feet. As a child, the patient had to wear shoes with a bar in between when he went to bed, causing difficulty in sleeping. At age 18 months, the patient received physical therapy in D.T. Watson Home for Crippled Children. During this time, the patient's mother was only allowed to visit on weekends. The patient's mother reported that when she would visit, was happy to see her, however, frequently cried. By age 3, had two operations for corrective surgery on his feet. At the age 5 1/2, started kindergarten without incident, and apparently he had a good adjustment to school. Patient reported that he completed the elementary school with A's- B's and C's. The patient's parents reported that had no behavioral problems, and they reported that 's major interest was reading. The patient reported that he rarely participated in any athletic events. The patient reported that he experienced considerable difficulty adjusting to Junior High School and High School, which were new settings for him. He graduated from High School in 1969, and attended the University of Pittsburgh. The patient received a college degree in 1973 in

*Political Science. Then he worked in father's dry cleaning business. The patient's parents reported that [redacted] did not show motivation or confidence to take on much responsibility in the business. Patient related that he felt bored and frustrated with his work at the family business but also lacked confidence in himself. He tried working in his father's home remodeling business in [redacted], Pennsylvania, but found this unsatisfying also and returned to the dry cleaning business after two months. He was able to work until his first depression in 1980 but has been unable to maintain any employment since that time. He did volunteer work at Shadyside Hospital in Physical Therapy Department during the summer of 1995, and liked this. However when the PT student interns returned in September 1995, there was no longer a role for him. He was offered another volunteer position in a clerical capacity which he declined. He has had no vocational activity since this time.*

### **Medical History/ Physical Health Problems**

*The patient has a congenital deformity, club feet and has had multiple surgeries for this condition. The patient is unable to be on his feet for long and now has traumatic arthritis. Patient reported that he has prescription glasses, but he said he does not like wearing them, except for driving. Patient appears over weight, which exacerbates the condition of his feet.*

### **Test Observations**

*Patient expressed genuine interest in engaging in vocational and educational assessment. The patient appeared mildly anxious throughout testing sessions, but maintained excellent effort. Patient was most cooperative during the testing sessions. The patient had some difficulty sustaining concentration over lengthy (several hours) testing sessions. Patient appeared to fatigue easily, hence testing was administrated over four different days. During different tests in the visual area, patient appeared to be squinting his eyes because he does not like using glasses. Throughout testing he was aware of personal weaknesses (visual spatial, constructional) and able to joke slightly about these, e.g. on Block Design. His approach to task was slow, cautious and deliberate.*

DISCHARGE SUMMARY FORM

Name: \_\_\_\_\_  
Admission Date: 11/01/93 Program: 10th Floor  
Discharge Date: 01/07/94 Program: 10th Floor

PATIENT IDENTIFICATION

The patient is a 42-year-old, single, white male who lives with his parents. His family history is significant for a mother with Bipolar Disorder and a brother with Schizophrenia. The patient has a previous episode of Major Depression treated with ECT.

REASON FOR REFERRAL

3 The patient was admitted voluntarily at the urging of his parents because of his severe dysfunction for about 12 years and increasing depressive symptoms. He has, lately, been having extreme weight loss, retardation of functioning, and suicidal ideation. In addition, his major complaints are diffuse body pain and diffuse sense of heaviness in his limbs which he attributes to delusional beliefs.

PSYCHIATRIC HISTORY

3 The patient was previously admitted to Western Psychiatric Institute and Clinic in 1980. The patient says that he feels very weak recently and cannot muster the energy to do anything. He has an accompanying feeling that his arms and legs are heavy and that his entire body feels like a lead weight. In addition, the patient states that he is depressed and endorses feelings of significant anhedonia, lack of energy, hopelessness, very poor concentration, very impaired sleep, decreased appetite, increased social withdrawal, and intermittent suicidal ideation without a specific plan. He occasionally does consider cutting his wrists. He said that he has an overall bodily pain and weakness which prevents him from doing any physical activity. The patient was unable to specify how long the symptoms have been occurring, but it seems that they have been worsening over approximately three to four months. He states that a turning point for him was in 1989 when he held his breath several times to "cut the air off" because he was hyperventilating. He states that this has caused damage to his body and that the incidence was a precipitant to his recent symptoms. The patient's parents note that he has been doing very little daily functioning for approximately 10 years and that his depressive symptoms have been present since then but worsening over the last four to five months. The patient said that he had just enough strength to come into the hospital the night before and said that he has tried to treat his pain with Tylenol which did not work.

The patient denies having ideas of reference, auditory or visual hallucinations, or feelings that his thoughts or actions are being controlled. He does endorse occasionally that he feels that his thoughts are racing. He says that all he does during the day is listen to talk radio and eat meals and that he gets by just "breathing in and out." The patient said that he has lost about 50 pounds in the

NAME: \_\_\_\_\_

WPIC # \_\_\_\_\_

last several months. He said that he has been extremely nervous and scared about his present condition and that he worries about his health but is not worried that he will die.

The patient was admitted previously at WPIC in 1980 for an apparent, similar depressive episode, treated with ECT with the possible complication of confusion versus hypomania. The patient's past history is also significant for clubbed feet. For details of social history, please see dictated Social History which is significant for previously good function through college as a political science major.

Antipsychotic therapy:

Suicidal or aggressive ideation and behavior during this treatment episode?  NO  YES (Explain below)

The patient had vague suicidal ideas but no suicidal behavior or aggressive behavior during hospitalization.

Did patient cooperate with overall treatment during this treatment episode?  NO  YES (Explain below)

The patient was cooperative during the hospitalization.

Rating of improvement in patient's condition during this treatment episode.

Marked Improvement  Moderate Improvement  Slight Improvement  No Change  Worsening  Unspecif

NARRATIVE SUMMARY OF TREATMENT COURSE

PROBLEM #1. Major Depression, Severe With Psychotic Symptoms, Recurrent.

It was decided that since the patient had a severely retarded, withdrawn depression, and psychotic symptoms, specifically somatic delusions, we would begin treatment with electroconvulsive therapy. The patient agreed to ECT as did the family, and he had a course of 16 ECT treatments, initially with six unilateral changing to 10 bilateral treatments. During the course of bilateral ECT, the patient did have significant confusion on each day of the ECT which did resolve significantly back to his baseline mental status of being well oriented and alert with good cognitive functioning.

The patient's workup including EEG, chest x-ray, spine films, and EKG were normal except for an incomplete bundle branch block on EKG. Overall, the patient tolerated ECT very well and did have marked improvement with the electroconvulsive

NAME: \_\_\_\_\_

WPIC # \_\_\_\_\_

therapy. There was a brief period after treatment 12 in which we held the ECT treatments to observe the patient's condition due to confusion, and he had an acute worsening of depressive symptoms, hopelessness and somatic delusions resulting in our decision to continue with 16 treatments. The last four treatments were spaced out over at least three to four days between each treatment to prevent significant confusion.

PROBLEM #2. Maintenance Antidepressant Therapy.

The patient was initially started on Zoloft 25 mg and increased to 50 mg. Significantly, the patient experienced some increased restlessness and jitteriness which seemed to resolve after five to six days. The patient did not have any hypomania after completing ECT, did not have any significant confusion. His function was markedly improved overall.

PROBLEM #3. Psychotic Symptoms.

Initially, we had started Haldol 2 mg after the ECT was completed by decided to discontinue it due to severe akathisia. After discontinuing Haldol and observing the patient, he did not have any residual psychotic symptoms, but we must consider adding antipsychotic medication if the patient has return or preoccupation or somatic delusions.

PROBLEM #4. History of Clubbed Feet.

This has been significant for the patient. It seems to add to some component of his symptoms of somatic delusions. In addition, the family, especially the mother is extremely concerned and occasionally preoccupied with the patient's orthopedic condition.

MENTAL STATUS AT TIME OF DISCHARGE

Appearance and General Behavior

The patient is alert, oriented, well organized, well groomed, considerably improved compared to his admission mental status exam.

Mood and Affect

Mood is "good." There is no suicidal ideation, no hopelessness. The patient did not have psychotic symptoms.

Rate and Pattern of Speech and Thought

Speech and thought are all normal and appropriate and goal oriented.

Content of Speech and Thought

Perception

UNIVERSITY OF PITTSBURGH  
 WESTERN PSYCHIATRIC INSTITUTE AND CLINIC  
 PSYCHIATRIC EVALUATION FORM

Date: 11/01/93 WPIC# \_\_\_\_\_  
 Name: \_\_\_\_\_  
 Evaluation Setting: DEC

PATIENT IDENTIFICATION

Is this patient a twin? X NO \_\_\_ YES

The patient is 42-year-old, white, single male, who presents to the DEC voluntarily, accompanied by his father.

REASON FOR REFERRAL

The father endorses that the patient has been in the house for the last 12 years, with little motivation and did describe him as a "vegetable."

HISTORY OF PRESENT ILLNESS

According to the family, the patient is known to WPIC by one previous admission in 1980. The patient could not give any history regarding that particular admission but the father endorsed that the patient was significantly depressed at that time, having difficulty functioning at work, was quite depressed, was not eating and was hospitalized here at WPIC. He reports that the patient was given ECT and some unknown medication. Upon discharge, the patient was referred back home and outpatient follow-up. Since that time, he has been at home in his room in bed. The father endorses that he has done absolutely nothing and things have gotten worse over the last several months to the point that the patient has not been eating, despite being encouraged, and has lost 50 pounds in the last several months. He has not been sleeping and he is becoming more and more withdrawn. The father made an ultimatum several months ago indicating to the patient that he would have him committed if he did not get his act together and start doing some things instead of laying in his bed all day. The patient begged his father for a 30-day reprieve and yesterday that 30 days was up. It appears that the patient was encouraged to come in today because the father feels as though he needs help and is significantly depressed. The patient does report increased depression for the last 10 years, endorses hyposomnia, poor appetite, increased isolative behavior, anergia, anhedonia, hopelessness and suicidal ideation, without a specific plan. The patient does not endorse any precipitants with the exception that he is feeling "sick." He describes his arms and legs are getting heavier, that he cannot move them, that he has pain in his extremities and in his body. He reports that this is secondary to having held his nose and breath about five or six months ago. The patient denies any auditory or visual hallucinations. The patient denies paranoia. The patient denies drug or alcohol use and father concurs.

PAST PSYCHIATRIC HISTORY (IF ANY)

Hospitalized in 1980 at WPIC.

### SIGNIFICANT FAMILY MEDICAL AND PSYCHIATRIC HISTORY

The patient has a brother with schizophrenia. His mother and paternal grandmother have a history of depression.

### IMPACT OF PATIENT'S ILLNESS ON FAMILY AND OTHER SUPPORT SYSTEMS

His father expresses concern about his isolative behavior and his increased depression.

### MENTAL STATUS EXAMINATION

#### Appearance and General Behavior

The patient was a casually dressed, slightly disheveled male, who appears his stated age. The patient was cooperative throughout the evaluation.

#### Mood and Affect

The patient's mood was depressed, and his affect was depressed.

#### Rate and Pattern of Speech and Thought

Speech was clear, slightly disorganized and unpressured. Thought rate and pattern was organized and coherent.

#### Content of Speech and Thought

The patient focused on the somatic complaints he has been experiencing.

#### Perception

The patient denies auditory and visual hallucinations.

#### Cognitive Functions

The patient is alert and oriented times three.

#### Insight

The patient has no insight into the nature of his illness.

### PATIENT STRENGTHS

1. Support of his family.
2. Articulate.
3. Physically healthy.

### ASSESSMENT SUMMARY

This is a 42-year-old, white, single male, who presents to the DEC voluntarily, accompanied by his father. Both endorse a history of the patient being in the house for approximately 12 years, with the patient laying in bed or just staying in the home. It appears that over the last several months, his functioning has diminished. The patient has had a decreased appetite despite their encouraging him to eat, with a 50-pound weight loss over the last several months. He has been more hyposomnic and more isolative, and his father expresses concern about his continued decline. The patient does endorse increased depressive symptoms with somatic complaints of pain in extremities and body, feeling that his limbs are getting heavy and that he cannot move. He does blame this all on the fact that he held his breath and nose about five or six months ago. The patient denies any psychotic symptoms. He does endorse significant depression.

### RECOMMENDATIONS FOR FURTHER EVALUATION

#### Additional History

Obtain through his father.

#### Diagnostic Assessments

As per treatment team.

### TREATMENT RECOMMENDATIONS

Inpatient admission to the 10th floor.

## SOCIAL STUDY

Name: \_\_\_\_\_ Hospital No.: # \_\_\_\_\_ Social Worker: Robert DiFranco, MSW

IDENTIFYING INFORMATION

The patient is a 29 year old, white, single, male who was admitted on a voluntary commitment for suicidal ideation and depression for the past four weeks. The patient is the oldest of four children who is currently living at home with his parents. Special consideration: the patient has a younger brother, \_\_\_\_\_, who was a patient in the Schizophrenic Module and is currently followed by the EPICS Program.

PRESENTING PROBLEM

In August, 1980, the patient began complaining of "feeling sick" to his parents. \_\_\_\_\_ made repeated trips to the family doctor who could not find any physical complications. This continued for approximately one month and the patient was experiencing decreased sleep, appetite disturbance, increased agitation and a feeling of depression. In September, 1980, the patient moved back home with his parents due to a compounding problem of rent increase and other financial problems.

In September, 1980, his parents sent him to a private psychiatrist who started the patient on Sinequan. This medication did not improve the depression, in fact, \_\_\_\_\_ became further depressed and began complaining of hallucinations. He was hospitalized at Western Pennsylvania Hospital but left AMA after four days and was then brought to WPIC by his parents.

FAMILY HISTORY & BACKGROUND INFORMATION

The patient is the oldest of four children having two younger brothers and younger sister. The youngest brother, \_\_\_\_\_, age 23 is currently living in Arizona and the youngest, \_\_\_\_\_, age 20 is a student at \_\_\_\_\_ College.

The patient's mother is age 50 and is self-employed owning a small business in \_\_\_\_\_'s brother \_\_\_\_\_ is also in the business. The patient's father is age 52 and is also self-employed as the owner of a dry cleaners and also a home remodeling business in \_\_\_\_\_, Pa. The patient has been employed by his father in the dry cleaning business throughout high school and college, this has been the patient's only job experience.

\_\_\_\_\_ was born and raised in \_\_\_\_\_ area of Pittsburgh. Mother relates that she had a normal pregnancy and delivery without complications. However, the patient had a congenital deformity which is club feet. As an infant, \_\_\_\_\_ was bottle fed and mother reports no difficulty with feedings.

Mother states developmental milestones in her estimation were reached early. Although \_\_\_\_\_ had club feet, he was without difficulty at nine months, using phrases at about 11 months, and toilet trained at about a year and a half. Regarding M \_\_\_\_\_'s club feet, mother states that as an infant,

1728

## Social Study

Page (2)

had to wear shoes with a bar in between when he went to bed. This was apparently very uncomfortable, thus had difficulty falling asleep as an infant.

At age 18 months, mother placed at D. T. Watson Home for Crippled Children where he remained for three months receiving physical therapy and having to wear casts. During this time, mother was only allowed to visit on weekends. She states that when she did visit was happy to see her, however, frequently cried. By age 3, had two operations for corrective surgery on his feet. At age 5½ started kindergarden without incidence and apparently a good adjustment to school. Throughout elementary school, he remained an A - B student and parents report no behavioral problems. 's major interest was reading, parents report he rarely participated in any athletic events. Mother characterizes as "pretty much a loner" that is, never initiating contact with peers but would interact when contact was initiated by others.

Problems began in the family after mother delivered her fourth child which was an unplanned and unwanted pregnancy. Mother experienced post-partum depression and received ECT treatment which she states had a positive effect.

experienced considerable difficulty adjusting to Junior High School which was a new setting for him. Mother states he began refusing to attend which lasted about 2-3 months, after this time, this behavior subsided. In high school, there were no particular behavior problems, as remained an A - B student and still a loner.

Throughout 's growing up years, he followed and looked up to his younger brother, , who was gregarious and athletic. He did not date in high school and had only a few friends. After high school, went straight into college at Pitt majoring in Political Science.

After graduation from college, he returned to the cleaning business with his father where he has remained working, very unhappy at times. However, states he cannot leave because he feels he is not qualified to do anything else. Father doesn't give much responsibility nor does push for much.

## Social Study

Page (3)

About two years ago, quit the cleaning business and went to work in his father's home remodeling business in , Pa. for only a month and then returned. Reason for leaving was boredom.

moved away from his family one year after college. He moved in with a roommate and stayed with him for 1½ years. Roommate moved out - went home - stayed home 1½ years and then got his own apartment. He'd been in this apartment about 2½ years when rent became too expensive and he moved back home. Before moving back home, mother states he had been complaining of feeling sick and went to different medical doctors. This was this past August. He then began to complain of being depressed.

did well academically in college, however, after graduating he returned to his father's business in which, admittedly by his parents, was responsible for only menial tasks. has remained in the cleaning business and parents report he shows no motivation or confidence to take on more responsibility. states himself, that he lacks confidence in himself and also that he is bored with his work at the family business. About two years ago, became extremely frustrated in which he states he had to quit. At this time, he began working in his father's home remodeling business but found this unsatisfying also and so returned to the dry cleaning business after two months.

One year after college, moved away from his family. He moved in with a roommate and maintained an apartment for 1½ years. After this, his roommate got married and returned home to his parents for another 1½ years. Again moved out but this time alone; he lived independently for 2½ years. One month prior to hospitalization, became depressed, gave up the apartment and returned home.

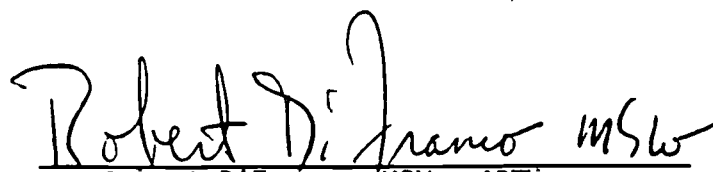

### ASSESSMENT & PLANS

During 's hospitalization, he was treated with antidepressant medication which he did not respond well to. Also, he was given a trial of neuroleptics to rule out the possibility of Schizophrenia since his brother has

Social Study

Page (4)

been diagnosed Schizophrenic and was delusional upon admission. The neuroleptics made very agitated and they were discontinued. was then recommended for ECT which he received; after his third treatment, he became very confused and disoriented for several days. The treatment was discontinued, however, had a positive effect. was discharged shortly afterwards, his follow-up outpatient therapy was to consist of Family Therapy and Individual Psychotherapy.

**TESTS ADMINISTERED:** Wechsler Adult Intelligence Scale - Revised (WAIS-R), Wechsler Memory Scale - Revised (WMS-R), Career Ability Placement Survey (CAPS), Career Orientation Placement and Evaluation Survey (COPEs), Career Occupational Preference System Interest Inventory (COPS), Strong Campbell Interest Inventory (SCII), Wide Range Achievement Test - Revised (WRAT-R), Nelson-Denny Reading Test (Form F), Test Of Written Language - 2 (TOWL-2), Halstead-Reitan Neuropsychological Battery (HRNB), California Verbal Learning Test (CVLT), Connor's Continuous Performance Test (CCPT), Hooper Visual Organization Test, Rey Complex Figure, Short Category Test, Beck Depression Inventory (BDI), Minnesota Multiphasic Personality Inventory (MMPI), Multidimensional Self-Esteem Inventory (MSEI), SCL-90-R.

**BACKGROUND AND REFERRAL INFORMATION:**

The client, a 45 year old, white, single male, was referred to Psychiatric Rehabilitation and Assessment Services (PRAS) on 3/1/96 for vocational assessment and counseling, help with career selection and/or getting ready for a job by his therapist from the Comprehensive Care Program (CCP) of Western Psychiatric Institute and Clinic (WPIC), Nina Bridenbaugh, LSW. The client presents with a long history of depressive symptoms accompanied by complaints of debilitating, generalized somatic weakness and pain.

In August, 1980, at age 29 the client began to experience depressive symptoms, including decreased sleep, appetite disturbance with 50 pound weight loss, depressed mood, anhedonia, anergia, increased social isolation, increased agitation, decreased activities of daily living, somatic complaints, delusions, and intermittent suicidal ideation

without a plan. In September, 1980, his parents sent him to a private psychiatrist, who started the client on Sinequan, but his depression worsened. The client was then hospitalized at Western Pennsylvania Hospital, but he left AMA after four days. The client was then admitted to WPIC from 10/9/80 - 12/18/80. During this time, he was treated for depression with ECT with marked improvement. The client did not comply with recommended outpatient treatment once returned to his parents home. Reportedly, from 1981 until his second admission to WPIC, at age 42 in 1993, the client had a severely retarded, withdrawn depression, and some psychotic symptoms, specifically, somatic delusions. He has been unable to work since 1980. His father brought him to the hospital in November 1993 and described him as a "human vegetable". During this second hospitalization, from 11/1/93 until 1/7/94, the client had a course of 16 ECT treatments, during which he experienced significant confusion which did resolve back to good cognitive functioning, again with marked improvement in depressive symptoms. Psychotic symptoms cleared with a brief trial of Haldol and did not return after Haldol was discontinued due to severe akathisia. The client was also treated with Zoloft 50 mg, which he continues to take. He was discharged to CCP for individual outpatient therapy and medication maintenance, with which he has been compliant. He attended group therapy for approximately seven months as well. The client received SSI in early 1995. The client has been diagnosed (12/28/94) as follows: Axis I: Major Depressive Disorder, Recurrent, Severe, With Psychotic Features (296.34), Axis II: Schizotypal Personality Disorder (301.22), Axis III: Status Post Electroconvulsive Therapy (V67.59) and Clubbed Feet (754.70), and Axis V: GAF of 60. However, at present the client presents with a GAF of 50.

Family history is positive for Bipolar Disorder in mother and younger sister and Schizophrenia in younger brother; Psychiatric symptomatology is denied in father and another younger brother.

The client has a congenital deformity, club feet, and has had multiple surgeries for this condition. He is unable to be on his feet for long and now has traumatic arthritis in his feet, as reported in his most recent physical exam (11/1/93). The client has a prescription for glasses, but he does not like wearing them, except for driving. At this time, the client appears overweight, which exacerbates the condition of his feet. The client walks with a noticeable limp.

Educationally, the client graduated from high school in 1969, attended the University of Pittsburgh, and received a Bachelor's degree in 1973 in Political Science. The client's work experience is limited to working with his father in a dry cleaning and home remodeling business. He did volunteer work at Shadyside Hospital in the Physical Therapy Department during the summer of 1995, and liked this. However, when the PT student interns returned in September 1995, there was no longer a role for him. He was offered another volunteer position in a clerical capacity which he declined. He has had no vocational activity since this time.

At this time, the client denies having ideas of reference, auditory or visual hallucinations, or feeling that his thoughts or actions are being controlled. The client reports that all he does during the day is listen to talk shows on the radio, eat, sleep and watch television. At this time, the client continues to take Zoloft 50 mg. The client expressed a vocational interest in the health care area, but he does not know what specific area he wants. The client's long term goal is to establish and follow through on a plan of action to aid in determining specified vocational goals.

#### TEST RESULTS AND DISCUSSION:

The client expressed genuine interest in engaging in vocational and educational assessment. The client appeared mildly anxious throughout testing sessions, but maintained excellent effort, and was most cooperative. The client had some difficulty sustaining concentration over lengthy (several hours) testing sessions and appeared to fatigue easily, hence testing was administered over several different days. During different tests in the visual area, the client appeared to be squinting his eyes, but declined to put on his glasses. Throughout testing he was aware of personal weaknesses (visual spatial, constructional) and able to joke slightly about these, e.g. on Block Design. His approach to task was slow, cautious and deliberate.

Intellectual evaluation was conducted via the administration of the Wechsler Adult Intelligence Scale - Revised. This instrument provides a composite score (Full Scale IQ) which serves as an index of general intelligence as well as Verbal and Performance IQ scores. The results obtained were as follows:

Verbal IQ:	116
Performance IQ:	85
Full Scale IQ:	100

These scores are commensurate with functioning in the Average range of intelligence, with Verbal IQ in the High Average range and Performance IQ in the Low Average range. The 31 point spread between the Verbal and Performance IQ scores is statistically significant and indicates much better developed verbal comprehension abilities than perceptual organization abilities.

Further analysis of WAIS-R performance is available via subtest analysis. The Verbal Subtests consist of tasks which tap verbal conceptual ability, practical judgment and reasoning, numerical reasoning, immediate auditory attention, acquired knowledge, and general verbal proficiency. The Performance Subtests involve more visuo-perceptual and visuomotor skills in task completion. Spatial and nonverbal reasoning skills are tapped in these tasks. In addition, demands are imposed for speed dependent

performance on a number of these tests. Subtests are scored as Scaled Scores with a mean of 10 and a standard deviation of 3.

Verbal Subtests

Performance Subtests

	Scaled Scores		Scaled Scores
Information	14	Picture Completion	6
Digit Span	13	Picture Arrangement	7
Vocabulary	14	Block Design	5
Arithmetic	14	Object Assembly	6
Comprehension	9	Digit Symbol	7
Similarities	9		

Verbally, relative strengths are indicated by superior scores in three areas: 1) Information, or fund of and memory for general, factual everyday knowledge, reflecting social and educational background; 2) Vocabulary, or knowledge of word meanings, language development, verbal comprehension and expressive abilities; and 3) Arithmetic, a measure of speed of purely verbally-based mental numerical manipulation and reasoning abilities requiring attention, focused concentration and mental alertness. Another relative strength (high average) is in immediate auditory recall, freedom from distractability, and attention and concentration (Digit Span). Average scores were obtained on measures of social judgement, common sense, and utilization of practical information in everyday problem-solving situations (Comprehension), and in higher level abstract logical thinking and verbal concept formation (Similarities).

Non-verbally, the client's scores on measures of perceptual organization abilities ranged from borderline to the lower end of the low average range. Relative strengths (low average) are in visual-motor speed and coordination, capacity for rote learning of new material, and aptitude for clerical-like tasks (Digit Symbol), and in the ability to interpret social situations, logical planning ability and foresight (Picture Arrangement). Significant deficits lie in spatial visualization and non-verbal reasoning (perception, analysis and synthesis), the ability to see relationships among non-verbal material and perceptual organization ability (Object Assembly), and finally, in non-verbal conceptual ability, or the ability to see a picture as a whole and to differentiate essential from unessential detail.

Bannatyne recategorization of WAIS-R scores looks at three cognitive factors which have been linked with and are utilized in the processing of information and learning and a fourth factor labeled, Acquired Knowledge. The three primary factors consist of spatial, conceptual, and sequential ability areas, each of which is summarized

by way of a mean rating. The spatial category is based upon the Block Design, Object Assembly, and Picture Completion subtests; the Conceptual category is based upon the Vocabulary, Similarities, and Comprehension subtests; and the sequential category is comprised of the Digit Span, Digit Symbol, and Arithmetic subtests. The final category, Acquired Knowledge is based upon the Information, Arithmetic, and Vocabulary subtests and thus generally reflects the impact of formal academic experiences. The client's Bannatyne recategorized scores result in the following profile:

Spatial	<	Conceptual	<	Sequential	<	Acquired Knowledge
M = 5.66		M = 10.66		M = 11.33		14

The above indicate borderline spatial abilities, average conceptual and sequential abilities, and superior knowledge acquired from formal educational experiences.

As a formal assessment of memory the Wechsler Memory Scale-Revised (WMS-R) was utilized. The WMS-R is an individually administered, clinical instrument for appraising major dimensions of memory functions in adolescents and adults. The scale is intended as a diagnostic and screening device for use as part of a general neuropsychological examination, or any other clinical examination requiring the assessment of memory functions. The functions assessed include memory for verbal and figural stimuli, meaningful and abstract material, and delayed as well as immediate recall. There are eight subtests which comprise the scale; four of which serve as delayed-recall trials. The eight tests of short-term memory contribute to two major composite scores, General Memory and Attention/Concentration. The General Memory group is further subdivided into measures of Verbal and Visual Memory. The scaling of the WMS-R was constructed with a mean of 100 and a Standard Deviation of 15. The client's scores on this formal measure of memory are as follow:

	<u>Standard Score</u>	<u>Range</u>
Verbal Memory	105	Average
Visual Memory	89	Low Average
General Memory	97	Average
Attention/Concentration	108	Average
Delayed Recall	93	Average

The above results indicate fully average memory functioning except for low average visual-spatial memory. This relative deficiency in spatial ability is consistent across all tests administered.

A screening of academic skills was undertaken via administration of the Wide

Range Achievement Test-Revised (WRAT-R). Found below are the Standard Scores and Percentiles that were derived from the WRAT-R.

	Standard Score	Range
Reading Recognition	124	Superior
Spelling	125	Superior
Arithmetic	113	High Average

The client demonstrated superior knowledge of phonetics and spelling. Arithmetic ability is in the high average range and includes competence in basic math, fractions, percents and elementary Algebra.

**Nelson-Denny Reading Test (Form F)**

	Standard Score	Percentile Rank	Stanine	Standard Score
Reading Comprehension	105	62	6	Average
Reading Rate	104	61	6	Average

These scores, while at the upper end of the average range of ability, are somewhat lower than would be expected given the client's educational background and documented level of intellectual functioning, and reflect some degree of functional inefficiency in performance of a complex task such as reading, comprehending, and recalling a multi-paragraph story.

The Test Of Written Language - 2 (TOWL-2) was used in order to measure written expressive language involving both writing per se and the expression of ideas as a form of communication. The ability to write meaningfully is based upon at least three basic cognitive skills: (1) the ability to write in compliance with accepted standards, especially those governing punctuation, capitalization, and spelling; (2) the ability to use acceptable syntactic, morphologic and semantic elements of a given language; and (3) the ability to express ideas, opinions, and thoughts in a creative and mature way. These three abilities comprise the conventional, linguistic, and conceptual components of writing. The TOWL-2 is a measure which attempts to evaluate these three abilities. With the client, the spontaneous story subtest was utilized. Here one can get a measure of thematic maturity, contextual vocabulary, syntactic maturity, contextual spelling, and contextual style with results presented as percentile ranks and standard scores with a mean of 10. The client's scores on this subtest of the TOWL-2 follow:

	Percentile Rank	Standard Score	Range
Thematic Maturity	37	9	Average
Contextual Vocabulary	9	6	Low Average
Syntactic Maturity	16	7	Low Average
Contextual Spelling	9	6	Low Average
Contextual Style	16	7	Low Average

Again, these scores are somewhat lower than the client's superior verbal comprehension abilities and indicate some functional inefficiency in the ability to perform a multi-step, overall task, in this case, writing a short story.

A comprehensive neuropsychological evaluation was then undertaken utilizing the Halstead Reitan Neuropsychological Battery and ancillary procedures. Test data were analyzed using norms developed by Heaton, Grant and Matthews (1991) and permit demographic-corrected score conversion. This allows the individual's test performances to be compared with an appropriate normative peer group which is matched for gender, age, and level of education.

Assessment of basic language skills yielded essentially normal performance on measures targeting basic receptive and expressive language and there were no aphasic features. The client had no difficulty on tests of primary auditory processing of acoustic-rhythmic or phonemic stimuli. Performance on the Conner's Continuous Performance Test did not indicate attentional problem. Assessment of sensorimotor functions revealed within normal limits performance on measures targeting visual and auditory perception, however, there were a significant number of tactile errors on the Finger Tip Writing Test, with some performance asymmetry as well (more errors on the dominant right hand). Both hand performances were in the impaired range (T=32). Misperceptions on this test is a common finding in individuals with learning disability. Tactile form recognition was impaired only for the right hand. Moderate lateralizing effects were seen with the left hand performance on measures of psychomotor speed including the Grooved Pegboard (T=19 vs. T=22), and the Finger Oscillation Test (T=29 vs. T=37), and both hand performances were in the impaired range. Psychomotor speed was also impaired on the Smith Symbol Digit Test where performance was 1.0 Standard Deviation below the mean. On the Hand Dynamometer Test the right handed grip strength (43.5 kg.) was significantly greater than the left handed grip (29.0 kg.). Moderate motor imperceptions were noted on the Star Drawing Test as well. Of note, the client reported that he broke his left arm at age 13 and cracked his left wrist at age 16, which likely lowered his performance on the left side on the above measures of sensorimotor and motor measures.

On the Hooper Visual Organization Test visual-spatial perception was in the moderately impaired range, and the client also had significant difficulty with visual-motor organization on the Rey Complex Figure Test. Delayed recall was especially impaired (only 25%). Given this client's easy fatigue, the length of this assessment, and his already demonstrated impairments in visual-spatial and perceptual organization abilities, the Tactile Performance Test of the Halsted battery

was not administered.

On the California Verbal Learning Test the client demonstrated average capacity for novel learning of discrete verbal material with repeated trials (Long-delay Free Recall = 81.2%). However, on the Category Test, a measure of abstraction, reasoning, and logical analysis--skills essential for organized planning and effective and efficient functioning in everyday life--the client's performance was in the mildly impaired range (T=34, 63 errors). This type of impairment is often misunderstood in persons with good educations, high IQs, and records of earlier achievements, but who are unable to successfully meet the requirements of everyday living.

Personality assessment was conducted via use of the Minnesota Multiphasic Personality Inventory, the SCL-90-R, the Multidimensional Self-Esteem Inventory (MSEI), and the Beck Depression Inventory (BDI).

The client's score on the BDI is in the normal range (not currently depressed). On the SCL-90-R, he had elevations on the Interpersonal Sensitivity Scale. The SCL-90-R is a 90-item self-report symptom inventory which yields a profile based upon nine primary symptom dimensions labeled Somatization, Obsessive-compulsive, Interpersonal sensitivity, Depression, Anxiety, Hostility, Phobic Anxiety, Paranoid Ideation, and Psychoticism. The client's profile indicates that he feels inadequate and inferior, has a poor self concept and lacks ego strength. People with this profile generally lack social skills and are extremely uneasy in dating situations.

On the MMPI, the client's profile is devoid of significant clinical scale elevations. Persons with this profile often present with adjustment disorders or psychiatric disorders, are usually defensive about psychological problems, and are apt to be naive, rigid and lacking insight. Approximately half of psychiatric inpatients with this "false normal" profile are psychotic and evidencing a Major Affective Disorder or Schizophrenia. Persons with similar profile types tend to make heavy use of the defense mechanisms of repression and denial, and are usually quite upset and distressed when they cannot present a facade of adequacy, formality, and moral virtue. The client also achieved a slight elevation (T=64) on the Schizoid Personality Disorder Scale of the MMPI. Individuals with this personality type tend to see themselves as bland and reflective. They are apt to be satisfied with their lives and content to remain aloof and socially detached. They are often difficult to energize, not emotionally conflicted, and untroubled by environmental circumstances. When they are pressed socially beyond their level of comfort they are likely to simply withdraw.

Results of the Multidimensional Self-Esteem Inventory indicate difficulties with global self-esteem, personal competency, expressing and receiving feelings of love, and maintaining an intimate relationship. Also, the client indicated difficulty in enjoying and getting along with others and that he appears to be lacking a sense of personal identity and purpose.

As an aid in vocational planning the California Career Occupational Preference System was utilized. The CCOPS is comprised of a vocational aptitude measure (CAPS), an interest inventory

(COPS), and a work values inventory (COPES). Specific vocational aptitudes are plotted against expressed interests and work-related values in the context of 14 major occupational cluster areas. These occupational cluster areas range from the Professional Science area to that of Service occupations and have been successfully correlated with the General Aptitude Test Battery and its resultant Occupational Aptitude Patterns. Scores are expressed as Stanines (1-9, with 9 being the highest score obtainable) and as Percentiles; those above the 75th Percentile and below the 25th Percentile are judged to be particularly relevant in the overall interpretation of test results.

On the CAPS, a measure of eight primary ability areas associated with the Occupational Clusters presented in the CCOPS vocational aptitude and interest battery, the following aptitude scores were derived:

	<u>Primary Ability</u>	<u>Stanine Score</u>	<u>Percentile Score</u>	<u>Range</u>
MR	Mechanical Reasoning	2	8	Borderline
SR	Spatial Relations	2	8	Borderline
VR	Verbal Reasoning	4	32	Average
NA	Numerical Ability	6	68	Average
LU	Language Usage	5	50	Average
WK	Word Knowledge	8	92	Superior
PSA	Perceptual Speed and Accuracy	6	68	Average
MSD	Manual Speed and Dexterity	4	32	Average

Enclosed with this report is a print-out of scores including Percentile Scores and those Occupational Clusters within which scores are high enough to consider them as potential areas for career exploration, dependent of course on expressed vocational interests and work values.

Also enclosed with the print-out are estimated scores on the General Aptitude Test Battery (GATB), as well as interpretive aids and statements useful in career counseling and exploration.

Scores on the CAPS help to evaluate relative strengths and weaknesses in terms of the eight abilities briefly described below.

MR Mechanical Reasoning measures understanding of basic mechanical facts and principles and the laws of physics. This ability is important in technical and mechanical fields, skilled trades and industrial arts, as well as many scientific and agricultural pursuits.

SR Spatial Relations measures the ability to visualize or think in three dimensions and mentally picture the position of objects in space from a two-dimensional diagram of picture. This ability is important in the arts, industrial arts, skilled trades, engineering and many

scientific occupations.

- VR Verbal Reasoning measures how well an individual can reason logically with words given facts and possible conclusions which may be drawn from those facts, and facility for understanding and using concepts expressed in words. The ability to reason accurately is important in general academic success, jobs requiring written or oral communication, science, service and business.
- NA Numerical Ability measures basic computational skills, mathematical reasoning, and the ability to use numbers and work with quantitative materials and ideas. This ability is important in many school courses and is required in varying degrees in almost all of the scientific, technical, business and clerical fields.
- LU Language Usage measures how well an individual can recognize and use standard English grammar, punctuation, and capitalization. This ability is important in jobs requiring written or oral communication, clerical jobs, professional level science occupations, and in all levels of business and service.
- WK Word Knowledge measures how well a person can understand the meaning and precise use of words. This is important in communications and all professional level occupations involving high levels of responsibility and decision making.
- PSA Perceptual Speed and Accuracy measures how well an individual can perceive small details rapidly and accurately with a mass of letters, numbers and symbols. This ability is important in office work and other jobs requiring fine visual discrimination.
- MSD Manual Speed and Dexterity measures the ability to make rapid and accurate movements with the hands. This ability is important in Arts-Skilled and Technology-Skilled occupations and other jobs requiring speed and dexterity in the use of the hands.

Results on the CAPS are consistent with results of intellectual, psychoeducational, and neuropsychological evaluations in that verbal abilities are a relative strength and spatial and mechanical reasoning abilities are significantly impaired.

The Career Orientation Placement and Evaluation Survey (COPES) was administered in order to assess those personal values which have been repeatedly demonstrated to reflect major dimensions of job satisfaction. In conjunction with interests, what one would "like" to do, those domains which one values or perceives as important and worthwhile play an important role in career choice and job satisfaction. The work related values which are most important to the client are listed below; preference for the underlined work value is indicated by percentile rank.

<u>Work Value Scale</u>	<u>Percentile Rank</u>	<u>Range</u>
<u>Investigative</u> vs. Accepting	45	Average
<u>Practical</u> vs. Carefree	7	Borderline
<u>Independence</u> vs. Conformity	65	Average
<u>Leadership</u> vs. supportive	80	High Average
<u>Orderliness</u> vs. Non-Compulsive	51	Average
<u>Recognition</u> vs. Privacy	1	Deficient
<u>Aesthetic</u> vs. Realistic	1	Deficient
<u>Social</u> vs. Self-Concern	8	Borderline

The client's profile indicates that he strongly values work in which he may keep his activities private, and spend time on his own projects and affairs rather than as part of a team or helping others. He prefers to work on his own, free from rules, regulations and social conventions, and does not wish to have to rely on his sense of aesthetic appreciation in his work. These preferences are consistent with schizoid personality traits. Somewhat inconsistent with this profile is an indicated preference for a leadership vs. a supportive role in work, and counseling around the meaning of this apparent discrepancy is recommended.

The COPS-P is a self-report measure which allows the individual to select and more carefully define the kind of work which he/she may be interested in doing. Choices are given regarding a variety of activities which are performed and/or are a part of many and diverse occupations. The individual is asked to make choices based on personal interests rather than on consideration of factors such as salary, social standing, or future advancement. These many activities are then categorized with respect to the sixteen professional-level occupational clusters detailed in the CCOPSystem and reported as percentile ranks. The client's highest reported vocational interest areas fall under the career clusters of:

	<u>Percentile</u>
1. Service Social	89
2. Communication Written	76
3. Science Medical-Life	75

**SERVICE, Social-Health** occupations involve activities concerned with interpersonal relations in caring for the personal needs and welfare of others in fields of social service and health. Sample occupations include Nurse, Counselor, Speech Pathologist, Probation Officer, and Recreational Therapist.

**COMMUNICATION, Written** occupations involve activities concerned with skill in the use of written language especially in the creation or interpretation of literature and the written communication of knowledge and ideas. Sample occupations include Copy Writer, Editorial Assistant, Librarian, Technical Writer, Editor, and Reporter.

**SCIENCE, Medical- Life occupations** involve activities concerned with the conducting of research and the accumulation and application of systemized knowledge in medicine and the biological and life sciences. Sample occupations include Anesthesiologist, Pharmacologist, Physiatrist, Geneticist, and Biomedical Engineer.

Globally, the client's measured interest in social and health service occupations would appear to conflict with results of his personality assessment and measured work role and condition preferences. His measured interest in higher-level medical and life science careers may be contraindicated by his deficits in visual-spatial and perceptual organization abilities, skills essential to excel in the mathematics and science curriculum prerequisite to these careers.

A second measure of occupational interest was utilized to further explore the client's career interests. The Strong-Campbell Interest Inventory (SCII) yields systematic information about patterns in one's vocational interests and how these patterns compare with those of successful people in many occupations. Results are based on interests, not aptitudes or abilities. Indicated likes and dislikes are analyzed in three main ways: 1) "General Occupational Themes" for similarity to six important overall patterns; 2) "Basic Interest Scales", for similarity to 23 clusters of specific activities; and 3) "Occupational Scales", for similarity to the interests of men and woman successfully employed in 106 occupations.

Found below is the client's profile on the Six General Occupational Themes of the SCII. The range of scores is roughly from 30 to 70, with the average person scoring 50.

<u>GENERAL OCCUPATIONAL THEME</u>	<u>SCORE</u>	<u>RANGE</u>
Realistic	31	very low
Investigative	43	moderate low
Artistic	33	low
Social	50	average
Enterprising	43	moderate low
Conventional	35	very low

Of the 23 Basic Interest Scales of the SCII, the client's interest reached average or higher on the following scales:

<u>BASIC INTEREST SCALE</u>	<u>SCORE</u>	<u>RANGE</u>
adventure	49	average
science	49	average
medical science	52	average
teaching	49	average

social service	58	moderate high
medical	55	moderately high
domestic arts	46	average
law/ politics	54	average
merchandising	44	average
business management	46	average

The client's responses were at least moderately similar to those of persons working in occupations corresponding to the following 5 specific occupational scales of the SCII:

Bus Driver  
Social Science Teacher  
Speech Pathologist  
Nurse, LPN  
Funeral Director

There are two Special Scales on the SCII designed to yield additional insight into interests and expectations. The Academic Comfort Scale differentiates between people who enjoy being in an academic setting and those who do not. Persons with low scores (below 40) often are inclined to view education as a necessary hurdle for entry into a career, whereas persons with high scores (above 50) typically seek out academic courses. The client's score of 30 on this scale indicates a disinclination toward formal academic coursework. The Introversion-Extroversion Scale is associated with a preference for working with things or ideas (scores above 55) or with people (scores below 45). The client's score of 61 on this scale indicates a strong preference for working with things or ideas.

Enclosed with this report is the client's comprehensive SCII Profile Report and further interpretive information.

#### SUMMARY AND RECOMMENDATIONS:

In summary, current overall intellectual functioning is within an Average, verbal comprehension abilities are within the High Average range, and perceptual organization abilities are in the Low Average range. Significant inefficiencies lie in visual-spatial perception and visual-motor organization. Mild impairment is noted in higher-level abstraction, reasoning, and logical analysis, skills essential for organized planning and effective and efficient functioning in everyday life. Personality assessment indicates schizoid tendencies and traits, interpersonal sensitivity, feelings of inadequacy and insecurity, and difficulty with social and intimate relationships, including "reading" the nonverbal behavior of others and social cues. Additionally, while the client appears to

be somewhat socially inept, uncomfortable, and isolated with restricted affect, he does not appear to evidence the cognitive or perceptual distortions and eccentricities of behavior characteristic of persons with Schizotypal Personality Disorder. The above pattern of cognitive strengths and weaknesses, in conjunction with the client's characterological and behavioral manifestations, appear to warrant consideration of the diagnosis of a neurodevelopmental "nonverbal" learning disability.

Academic skills range from Superior phonetic and spelling skills, to High Average arithmetic skills, to Average reading rate and reading comprehension abilities, to Low Average writing skills. Memory functions, including attention and concentration, are within an Average range, except for Low Average memory for visual material. At present the client evidences considerable discrepancy among his expressed and inventoried career interests, his aptitudes, his work role and working condition preferences, and his measured cognitive and neuropsychological strengths and weaknesses.

Physically, the client evidences left-sided motor weakness and slowing, and mobility and related functional impairments secondary to clubbed feet and traumatic arthritis in his feet.

Psychosocially, the client has been unable to work since 1980 and has been supported by SSI since 1995. He resides in his elderly parents' home, and appears to have little social contact outside his family, except for mental health care services. Global Assessment of Functioning is currently estimated at no more than 50.

Recommendations include the following:

1. Orthopedic and psychiatric evaluations to yield an assessment of the client's functional abilities and tolerances.
2. Continued career counseling and developmental learning experiences to further career development and involvement.
3. Continued monitoring of depressive and psychotic symptoms.
4. Continued individual psychotherapy.
5. Group experiences, of both a psychotherapeutic and social-relational nature.

DSM-IV Diagnoses :

AXIS I : 296.33 Major Depressive Disorder, Recurrent, Severe, Without Psychotic Features.

AXIS II : Schizoid Personality Traits.  
315.9 Learning Disorder Not Otherwise Specified, Nonverbal type.

AXIS III : V 67.59 Status Post Electroconvulsive Therapy.  
754.70 Clubbed Feet.

## OVERALL SUMMARY BASED ON COMPARISON TO GENERAL POPULATION DATA

MEASURE	VALUE	T-SCORE	PERCENTILE	GUIDELINE
# Hits	317 ( 97.8%)	*	93.59	MARKEDLY ATYPICAL
# Omissions	7 ( 2.2%)	*	93.59	MARKEDLY ATYPICAL
# Commissions	7 ( 19.4%)	41.57	22.91	within average range
Hit RT	418.58	44.98	34.39	within average range
Hit RT Std Error	6.81	58.24	79.47	within average range
Variability of SEs	11.14	60.06	84.26	MILDLY ATYPICAL
Attentiveness (d')	2.93	53.66	67.93	within average range
Risk Taking (B)	0.18	86.54	99.00	MARKEDLY ATYPICAL
Hit RT Block Change	-0.02	38.78	15.36	within average range
Hit SE Block Change	0.03	53.59	67.69	within average range
Hit RT ISI Change	-0.08	18.95	1.00	within average range
Hit SE ISI Change	-0.18	34.04	5.53	within average range

\* For hits and omissions, nature of data dictates use of percentiles only.

Conversions were made for HITS, HIT RT, and d' so that high T-scores (i.e.,  $\geq 60$ ) provide evidence of a problem for ALL measures listed in the table. For example, without a conversion, a HITS T-score of 33 would indicate a lot of errors and a potential attention problem. This score of 33 is 17 BELOW the normative average of 50. To make high scores consistently indicative of a problem, this score is converted to 17 points ABOVE 50 which is 67.

Note that percentile values higher than 90 or 95 correspond to atypical responses. Percentile values must be much higher than T-scores before being considered atypical.

For B, both high AND low scores are noteworthy. Low scores indicate too frequent responding usually related to impulsivity. High T-scores for B indicate atypically low number of responses usually related to inattention.

The more measures showing up as atypical, the more likely that a problem exists. The presence of only one atypical measure does not usually indicate a problem.

INTERPRETIVE GUIDE

The Conners' CPT provides a rich source of information. The meaning of each individual component is presented first, then the information is synthesized into overall comments.

COMMENTS REGARDING THE TEST COMPONENTS:

Even in individuals with severe attention deficits, it is rare that all component measures will indicate attention problems. If 0 or only 1 component is atypical, this rarely is an indication of an attention problem. If 2 or more components are atypical, then the possibility of an attention problem should be considered more seriously. The more measures that are atypical, the more evidence there is for an attention problem.

Overall Processing Speed (Overall Hit Reaction Time)

-----

This represents the average speed of correct responses for the entire test.

's response speed falls in the average range of the general population.

Overall Attentional Variability (Overall Standard Error)

-----

High levels of variability indicate inconsistency in speed of responding - a sign of fluctuating attention from trial to trial.

's responses were about as consistent as other typical individuals from the population.

Speed Decrement Over Time (Pattern of Hit Reaction Time)

-----

Some individuals tend to lack the ability to maintain their speed over time, indicating a loss of effort or energy in their responses.

's responses did NOT, however, slow down to any great degree over the course of the test.

Variability Over Time (Pattern of Standard Error)

-----

If an individual becomes more variable over time in their speed of response, then this may indicate a gradual loss of sustained attention.

's responses show no unusual loss of consistency over time.

#### Omissions

-----

Inattentiveness may be caused by temporary blocks in responding, or actual looking away from the test when signals are presented. A high level of omissions indicates such a loss of attentiveness.

made an unusually high number of omission errors indicating inattentiveness.

#### Commissions

-----

Commission errors may represent an inability to withhold motor responses as a result of an impulsive response tendency.

, however, did not make an unusually high number of commission errors.

#### Perceptual Sensitivity ( $d'$ )

-----

Errors in responding may represent difficulties in discriminating the perceptual features of signals (all letters except X) and non-signals (Xs).

The value of  $d'$  for indicates about average perceptual sensitivity.

#### Response Bias (B)

-----

Beta (B) represents an individual's response tendency: Some individuals are cautious and choose not to respond very often. These individuals will obtain high Beta T scores. Others are more risk-taking or impulsive and respond more frequently than they should. These individuals will obtain low Beta T scores.

's value of B indicates a response style which emphasizes the minimization of commission errors more than omission errors relative to the General Population.

#### Activation/Arousal (Inter-Stimulus Statistics)

-----

People tend to adjust their speed of reactions according to how fast the stimuli occur. When the stimuli are presented quickly, brain activation/arousal is high and responses tend to be fast. When the stimuli are presented slowly, brain activation/arousal is low and responses tend to be slower and less consistent.

did not show any atypical change in response pattern when the letters were presented slowly.

#### OVERALL COMMENTS REGARDING

#### 'S TEST

For most measures, 's performance on the Conners' CPT did not indicate attention problems. However, ...

...made a large number of omission errors indicating poor attention to the task.

...was highly inconsistent in responding indicating inattentiveness as measured by variability of SEs.

Overall INDEX = 4.44

Given that this particular combination of measures is not strongly associated with attention problems, and most measures were in the typical range, overall the Conners' CPT does NOT provide strong evidence of an attention problem.

#### Important Additional Notations

-----

The comments in this report are based on general patterns apparent in the responses of . Always examine the graphs and information provided carefully to refine (and add to) the interpretations given. For instance, you will want to consider the statistics that are not explicitly discussed in this printed report. Please consult the Conners' CPT manual, or use the help keys while examining "on screen" reports for information about the measures.

This computer generated report should be considered a professional-to-professional consultation. All statements should be considered tentative and subject to further interpretation by a qualified mental health professional.

#### PROFILE VALIDITY

On the MMPI the person's validity scale configuration indicates that the profile is valid and depicts an individual who was open and honest in approaching the instrument.

#### PROFILE INTERPRETATION

The person's profile is devoid of significant clinical scale elevations. In outpatient settings, about half the time, such a performance is indicative of individuals who are presenting with either an adjustment disorder and/or marital problems, and who are quite often devoid of a personality disorder.

In psychiatric inpatients, the other extreme of the diagnostic spectrum is apt to be present in that approximately half of the persons producing this 'false normal' profile are psychotic and evidencing, most probably, a Major Affective Disorder (Major Depression or Bipolar Disorder) or to a lesser extent, Schizophrenia.

The remainder of individuals who produce this 'false normal' profile, in both inpatient and outpatient settings, tend to be in what pre-DSM-III terminology would be classified as chronic mixed neurotics. Such individuals are apt to present with somatoform disorders and psychological factors affecting physical conditions, as well as anxiety disorders or dysthymic disorders. The underlying personality of these

persons are apt to be in a category of anxious and fearful personality disorder, namely, Avoidant, Dependent, Compulsive, Passive-Aggressive, though a small minority are seen as evidencing histrionic personalities.

Persons of this profile type are usually defensive about psychological problems and are apt to be naive, rigid, and lacking in insight. Such individuals tend to make heavy use of the defense mechanisms of repression and denial and are unduly conventional and insecure. Such individuals are quite apt to be resistant to psychotherapeutic intervention because of a fear of revealing themselves. They are usually quite upset and distressed when they cannot present a facade of adequacy, formality and moral virtue.

#### PERSONALITY (AXIS II)

Slight elevation of the SZD Personality Disorder Scale indicates a Schizoid Personality Type. These individuals see themselves as bland and reflective. They are satisfied with their lives and are content to remain aloof and socially detached. They are untroubled by intense emotions. They are difficult to energize and do not seem to be bothered by environmental circumstances.

They have little drive and generally are not emotionally conflicted. When they are pressed socially beyond their level of comfort they simply withdraw.

### SPECIAL SCALE INTERPRETATION

The person has a significant low score on the Self-Alienation (Pd4B) Harris subscale. These individuals find daily life stimulating and rewarding. They are in general comfortable and happy. They do not express regret, remorse or guilt.

**MSEI**  
Table 2  
Characteristics of High and Low Scorers

Scale	High Scores	Low Scores
	<b>A. Global Self-esteem (GSE)</b>	
	Pleased with self, feels significant as a person, self-confident, pleased with past, expects future successes.	Self-critical, dissatisfied with self, feels insignificant as a person, self-doubting, displeased with past, expects future failures unless major life changes are made.
	<b>B. Components of Self-esteem</b>	
1.	<b>Competence (CMP)</b> Competent, feels capable of mastering new tasks, learns quickly and does well at most things, feels talented, feels effective and capable.	Incompetent, feels unable to master new tasks, learns slowly and often fails in difficult endeavors, ineffective, feels lacking in skills or talents
2.	<b>Lovability (LVE)</b> Worthy of love, feels cared for by loved ones, accepted as a person, can count on support from loved ones, able to express and receive feelings of love, involved in satisfying intimate relationship.	Unlovable, doubts that loved ones care, fears rejection because of certain aspects of personality, unsure whether loved ones can be counted on for support, has difficulty expressing or receiving feelings of love, doubts about finding or maintaining an intimate relationship.
3.	<b>Likability (LKE)</b> Likable, popular, accepted by peers and included in their plans, enjoyable companion, gets along well with others, popular in dating situations, expects to be liked, makes a good first impression.	Unlikable, unpopular, not accepted by peers and often excluded from peers' plans, has difficulty enjoying being with and getting along with others, unsuccessful in dating situations, fears rejection, and often makes a poor first impression.
4.	<b>Personal Power (PWR)</b> Powerful, successfully seeks positions of leadership, good at influencing others' opinions and behaviors, assertive, has a strong impact on others.	Powerless, poor leader and avoids leadership positions, a follower who is strongly influenced by others' opinions and behaviors, unassertive, rarely has a strong impact on others.
5.	<b>Self-control (SFC)</b> Self-disciplined, persevering, good at setting and achieving goals, not easily distracted, in control of emotions, exercises restraint in eating, drinking, and/or use of drugs.	Lacks self-discipline, often fails to complete tasks, difficulty with setting and achieving goals, easily distracted, not in control of emotions, lacks self-control in eating, drinking, or use of drugs.
6.	<b>Moral Self-approval (MOR)</b> Pleased with moral values and behavior, has clearly defined moral standards and acts in a way that is consistent with moral values, sets a positive moral example for others.	Guilty and displeased with moral values or behavior, unclear about moral beliefs and standards, often acts in an unethical or immoral manner, ashamed of setting a poor moral example for others.
7.	<b>Body Appearance (BAP)</b> Physically attractive, pleased with appearance, feels that others are attracted because of appearance, feels sexually attractive, takes care to enhance physical appearance.	Physically unattractive, displeased with appearance, feels that others are repelled by their looks, doubts sexual attractiveness, indifferent or unaware of ways to improve physical appearance.
8.	<b>Body Functioning (BFN)</b> Well-coordinated, agile, in good physical condition, comfortable with body, enjoys physical activities such as dancing or sports, feels healthy and feels a sense of vitality and vigor in body functioning.	Awkward, clumsy, uncoordinated, in poor physical condition, uncomfortable with body, dislikes engaging in physical activities, feels unhealthy and that body is dull, lifeless, and sluggish.
	<b>C. Identity Integration (IDN)</b>	
	Clear sense of identity, knows who he/she is, knows what he/she wants out of life, well defined long-term goals, inner sense of cohesion and integration of different aspects of self-concept.	Confused, lacking a sense of identity and purpose, unsure of what he/she wants out of life, no long-term goals, much inner conflict among different aspects of self-concept.
	<b>D. Defensive Self-enhancement (DEF)</b>	
	Defensive, overly inflated view of self-worth, claims to possess highly unlikely positive qualities, denies ubiquitous human weaknesses.	Open, nondefensive evaluation of self-worth, makes no claims of rare virtues, and acknowledges common human weaknesses.

70 + Significant High  
60-69 Moderately High  
40-59 Average  
30-39 Moderately Low

# The Choose-Get-Keep Model

## *Serving Severely Psychiatrically Disabled People*

Karen S. Danley, Ph.D.  
William A. Anthony, Ph.D.

*Supported employment has emerged recently as a new service option in the field of developmental disability. Currently, a number of supported employment programs are being developed for people with long-term mental illness. Supported employment represents an expanded vision of what vocational services are possible for people with psychiatric disabilities. However, the "place-train" model of supported employment, which has become popular in developmental disability, must be replaced by a "choose-get-keep" model of supported employment for people with psychiatric disabilities. The critical concepts and programmatic implications of the choose-get-keep supported employment model are presented.*

Supported employment, which, both as a concept and as a program, had its origins and growth in the field of developmental disability, is receiving increasing programmatic, legislative and fiscal support. At the same time, employment for people with psychiatric disabilities is receiving a lot of attention (Will, 1987). In March 1987, the Office of Special Education and Rehabilitative Services conducted a *State-of-the-Art Conference on Supported Employment for Individuals with Chronic Mental Illness* (Nolan, 1987). An entire issue of the *Psychosocial Rehabilitation Journal* has been devoted to the subject (Mellen & Danley, 1987), and data based articles are beginning to appear in the literature (Trotter, Minkoff, Harrison, & Hoops, 1988).

Anthony and Blanch (1987) overviewed the conceptual and legislative development of supported employment for people with psychiatric disabilities. They noted that in contrast to people

with mental retardation, there was never an issue of "transition" from a comprehensive, mandated program (such as special education) into adult life. Rather, the major problem for people with psychiatric disabilities was an almost complete lack of any kind of vocational services.

Despite these historical differences, the concept of supported employment as emanating from the field of developmental disability is most applicable to people with psychiatric disability. Directly relevant is the notion of a goal of paid employment for all disabled people; integrated work settings; and ongoing support, including supervision, training or transportation (National Council on the Handicapped, 1986). Anthony and Blanch (1987) concluded that the basic assumptions and philosophy of supported employment cut across disability groups. The differences between supported employment for people with psychiatric disabilities and supported

employment for people with developmental disabilities is at the operational level rather than the philosophical level. It is supported employment intervention itself and the principles underlying the intervention that are different.

### **Supported Employment Intervention Model**

The supported employment model of intervention has been characterized as a *place-train* model rather than the more traditional *train-place* model of vocational rehabilitation (Twelfth Institute of Rehabilitation Issues, 1985). In the traditional, *train-place* model, a person was trained to "get ready" for competitive employment in such settings as day activity centers, day treatment centers and sheltered workshops, with the assumption that clients would move from such environments to competitive employment. However, it appears that people who have learned work relevant skills in these pre-competitive work environments can not easily transfer them to the competitive employment setting (Bellamy, Rhodes, & Albin, 1986).

The *place-train* model does not make this assumption about skill generalization. Rather, the client is placed in the competitive employment setting and the necessary skills are taught in that setting. The training occurs within a work environment that provides the intensity and length of support that each person needs to succeed. The *place-train* model

of supported employment differs from the *train-place* model in a variety of ways, including underlying assumptions, philosophy, intervention strategies, level and length of support, opportunities for integration, and wages (Twelfth Institute on Rehabilitation Issues, 1985).

### The Choose-Get-Keep Model of Supported Employment

In contrast to the *place-train* model of supported employment interventions for people who are developmentally disabled, people who are psychiatrically disabled need to be provided with a *choose-get-keep* model for supported employment interventions. The *choose-get-keep* model of psychiatric vocational services has been described by Anthony, Howell and Danley (1984). This service delivery model is particularly relevant to supported employment interventions. In essence, the *choose-get-keep* model of employment services, in its most basic form, helps people with psychiatric disabilities in their attempts at choosing, getting and keeping a job.

The *choose-get-keep* model posits that there are essentially three types or categories of competencies critical to a person's vocational success. A person can perform these competencies in the workplace and, depending upon a person's needs, with or without instruction and/or support. Examples of competencies related to each *choose-get-keep* category are listed in the accompanying table. The *choosing* phase culminates in the client's decision about the job in which he/she desires to work, and involves the client in evaluating the potential occupation and places of employment compatible with his/her personal needs and qualifications. The *getting* phase results in the client obtaining employment in a particular occupation at a particular place. In this phase, specific employers are located, contacted and interviewed. The *keeping* phase continues with the client maintaining his/her

job for as long as he/she wishes. It involves the client applying the technical skills and work adjustment skills at the level needed to do the job. The supported employment intervention is an excellent example of this *choose-get-keep* model in operation.

Prior to the supported employment initiative, the psychiatric vocational rehabilitation approach, similar to the traditional approach used with people who are developmentally disabled, attempted to train people in job-keeping skills in nonpermanent and, at times, artificial employment settings, (e.g., sheltered workshops, partial care centers, clubhouses, transitional employment placements). Essentially, people

## Integral to the *choose-get-keep* model of supported employment is the concept of client choice.

were trained in work adjustment skills before they obtained a permanent placement, similar to the traditional *train-place* model. In contrast, the supported employment model of *choose-get-keep* trains people in these skills after the person gets a permanent placement (more similar to the *place-train* approach of supported employment used for people with developmental disability). In this sense, the supported employment model of *place-train* is consistent with the *choose-get (place)-keep (train)* model of supported employment for people who are psychiatrically disabled.

However, there are a number of differences in conceptual and programmatic emphasis between the *choose-get-keep* model for people with psychiatric disabilities and the *place-train* model for people with psychiatric disabilities. *This is not meant to imply that the place-train model of supported employment might not also consider these concepts and programmatic issues to be critical.*

However, as the supported employment approach becomes embedded into the psychiatric rehabilitation field, the conceptual and programmatic ingredients critical to its success need to be explicated.

### Critical Conceptual Emphases

*Choosing.* Integral to the *choose-get-keep* model of supported employment is the concept of client choice. People who are psychiatrically disabled must have the opportunity to actively choose a job that is most compatible with their known interests, abilities, credentials, and background experience. Matching the person to the job is not done to him/her but *with* his/her participation.

The choosing process is not a simple process of "obtaining information about a worker's skills and performance in order to make appropriate training decisions" (Bellamy, Horner, & Inman, 1979, p.89). A potential worker's likes, dislikes and career aspirations must also be identified and used as ingredients in a systematic decision-making process.

Unfortunately, most types of vocational programs for people with psychiatric disabilities have not allowed much choice. The field of mental health has emphasized neither client choice nor risk-taking in hospital and community settings. Furthermore, a history of failure has steered many people away from choosing and committing themselves to a particular course of action. Psychiatrically disabled people are often considered to be passive recipients of treatment programs, such as aftercare and day treatment, even though studies do show the usefulness of post-hospital treatment when it is willingly attended

(Anthony, *et al.*, 1978). Compounding the clients' problems with vocational choice are mental health and rehabilitation practitioners who sometimes limit themselves to standardized interest, aptitude or needs assessment tools or who recommend vocational options to clients based mainly on computerized profiles. This inattentiveness to the client's involvement in client decision making is

taining the skills over time. Also, the focus of the instruction content of new skills is likely to be related to interpersonal and intrapersonal demands of the environment rather than demands associated with specific job tasks.

*Understanding the model.* The *choose-get-keep* model of supported employment describes a process that clients and family members can unders-

Blanch (1987) have cautioned, there are times when placement in a supported employment slot may be premature, particularly when the potential worker's occupational goals seem unclear or inappropriate:

"Career counseling and/or job placements designed to further the vocational exploration process might be necessary, not for the purpose of delaying the supported employment process, but for the purpose of starting anew the vocational development process. For persons with a psychiatric disability the vocational area is problematic not just because of the client's symptomatology, but also because the psychiatric disability and its treatment have impeded the client's personal and vocational development. Severely psychiatrically disabled clients are 'vocationally immature' because they lack many normal life experiences and life roles that are the foundation of one's vocational identity. As a result, their knowledge of themselves, including their own skill, interests and values in relation to the world of work is minimal; their ability to test the reality of self-knowledge against the demands of the working world is often deficient, and their general knowledge of the world of work is sparse" (Anthony and Blanch, 1987, p.7).

## Unfortunately, most types of vocational programs for people with psychiatric disabilities have not allowed much choice.

not due to the client's disability, but rather to the failures of the mental health and rehabilitation system to actively involve the client in the process of choosing (Anthony, Howell, & Danley, 1984).

*Getting.* In the getting phase of supported employment, people with psychiatric disabilities may wish to learn job seeking skills. Skills such as resume writing, filling out applications and interviewing for a job are skills which many people with psychiatric disabilities can master. Once again, learning and using these skills allows people with psychiatric disabilities to become more involved in *getting*, rather than being *placed* in, their supported employment position and to feel more prepared for future job changes and advancement possibilities.

*Keeping.* In the keeping phase of supported employment, emphasis must be placed on instructional interventions which focus on the *application* of appropriate job behaviors rather than the *acquisition* of these behaviors. Whereas persons with developmental disabilities might need more attention paid to acquiring new skills, many persons with psychiatric disabilities learn skills quickly or have existing skills which are difficult to apply in work settings. Problems arise in putting the skills into practice and sus-

tand, and which can easily be explained to mental health professionals. While at first glance the traditional vocational rehabilitation process seems straightforward, there are now so many vocational assessment methods, intervention strategies and alternative vocational environments that clients, families and practitioners can become easily confused as to how each particular vocational service ingredient fits into the overall vocational picture (Danley and Rogers (1987). The *choose-get-keep* model enables everyone to know, at any given point in time, what is happening and why.

*Other vocational experiences.* An understanding of the vocational

## The *choose-get-keep* model enables everyone to know, at any given point in time, what is happening and why.

rehabilitation process is important because supported employment for people with psychiatric disabilities is but one of many vocational options for people who are psychiatrically disabled. Supported employment, even the *choose-get-keep* model, tends to emphasize the *get* and *keep* phases of the process. However, as Anthony and

The assumption of psychiatric vocational rehabilitation is that with increasing time and different vocational experiences, the clients' interests and values often change. Unfortunately, clients' occupational choices following the onset of the disability are oftentimes

## Choose-Get-Keep Model

### Examples of Work Related Competencies Categorized by the Three Supported Employee Phases

Choosing a Job	Getting a Job	Keeping a Job
Identifying own interests	Identifying job-related assets	Dressing appropriately for work
Identifying personal work capabilities	Identifying employment sources	Using public transportation
Matching personal traits to job requirements	Using sources of employment information	Reporting to work on time
Evaluating employment alternatives based on personal values	Writing a resume	Reporting to work regularly
Listing more than one employment alternative	Completing job applications	Interacting positively with supervisor
	Explaining work history gaps	Responding constructively to criticism
	Presenting self positively	Giving direction to others
	Demonstrating understanding of questions and statements	Sustaining work effort
	Dressing appropriately for interview	Evaluating own work performance
	Asking interview questions	Performing required job tasks. (cooking, typing, programming)
	Explaining career goals to an interviewer	
	Clarifying interviewer comments	

based on former values and skills rather than on a comprehensive picture of their current values and skills. It may in fact be desirable to create new occupational experiences, short of a supported vocational placement, to clarify interests and values. A common fallacy is that clients cannot develop new interests and values. The truth is that they *can* when they are stimulated by new knowledge gained first hand from relevant vocational experiences.

### Programmatic Implications

The conceptual underpinnings of the *choose-get-keep* model of supported employment lead to certain programmatic emphases which may be more pronounced than in the *place-train* model of supported employment. The implications which follow are derived from the involvement of Boston University's Research and Training Center in

the development and implementation of two supported employment projects based on the *choose-get-keep* model. One project has been operational for several years and data relevant to its operation has been reported in the literature (Trotter *et al.*, 1987); the other project is just beginning (Danley, 1987). The supported work project described by Trotter, *et al.* (1987) is called Access, and is operated by Transition<sup>21</sup> Employment Enterprises, Inc. (TEE), a private nonprofit agency. The other project (Danley, 1987) has been designed to use one site, a large urban university, as the location for a number of individual supported work placements.

Programmatically, to ensure that clients are given the opportunity to choose the job they wish to try, *the pre-employment phase of supported employment is typically longer than in the place-train supported employment model.* The TEE Access program has two pre-employment phases prior to the supported employment placement. The first phase has classes 3 hours a day, 5 days a week for 7 weeks. During this phase, the trainee identifies personal and work related values, interests and skills.

Entry into the second phase of pre-employment occurs when the trainee has identified occupational objective(s) compatible with their values, interest and skills. Programmatically, in addition to a lengthier pre-employment phase, *this also means that the jobs are developed by the job developer with some knowledge of the types of jobs in which the trainees might be interested.* Job development does not occur without an understanding of the uniqueness of each client's occupational choice.

The supported employment program must also have a programmatic response to those clients who wish to be involved in the placement process themselves. *Persons with psychiatric disabilities can be helped to be active participants in getting the job they want rather than feeling they have just been placed (dumped?) into a job the agency wants for them.* At TEE, the second phase of pre-employment, which may last from 1 week to several months, consists of 3 days of classes. During this period, TEE trainees are interviewing for jobs which the TEE job developer has found, or which they themselves have found using their own skills. The classes further refine the job seeking skills taught during the first pre-employment phase and provide peer support for the job getting effort.

The keeping phase of a supported employment program may be somewhat different than the training phase of the *place-train* supported employment model. Because clients learn skills quickly but may have difficulty using them, *job coaches need to spend time strategizing with the trainee about how to overcome the personal and environmental impediments to using what they already know more effectively and/or more often.* Rather than routinely providing onsite, intensive job skills training, the job coach would be more apt to act as a role model and provider of feedback to the trainee, as well as a liaison between the company supervisors and the trainee. Very importantly, the job coach is available to the trainee and the company by telephone on an as needed, continuous basis.

The simplicity and common sense nature of the *choose-get-keep* model of supported employment helps clients, families and practitioners understand the need for programmatic responses to all parts of the process. If the client can not choose the types of occupation in which he or she wants in a supported employment placement, then the supported employment program may try, in the pre-employment phase of supported employment, to provide the program components necessary to help trainees who cannot choose. These components might include values clarification procedures and instruction on decision making skills. Or the clients may be provided with more intensive career development experiences through some other program (*e.g.*, Kohn, Hutchinson & Unger, 1988). If trainees are still trying to choose whether they will work or not, independent of what occupation they want, then a clubhouse experience, transitional employment placement or volunteer position might be more appropriate at this time than a supported employment placement.

Vocational intervention models, other than supported employment, have been helpful to people with psychiatric disabilities. *A choose-get-keep model of supported employment recognizes within the model the potential contributions of other vocational interventions.* The *choose-get-keep* model of supported employment is an inclusive rather than exclusive model of services. Supported employment includes *choose-get-keep* program components but, when the supported employment program components are not sufficient for the client, it may be that other vocational interventions are more appropriate for a part of the *choose-get-keep* process. Program administrators of supported employment need to be aware of and conversant with the contributions to the client of other programs, such as transitional employment and clubhouse programs (Beard *et al.*, 1982), supported learning programs (Unger, 1988), intensive career development programs (Kohn, Hutchin-

son & Unger, 1988), and complementary mental health programs such as case management (Waysienki *et al.*, 1985).

### Summary

Supported employment, both as a concept and a program, is only as good as its outcome, *i.e.*, how well it increases the opportunities for people with psychiatric disabilities to be more successful and satisfied in their vocational area of functioning. It is not the answer, but it is an answer to an historical conceptual oversight and a programmatic void. The idea of a more immediate vocational placement with support for as long as the person needs has not been emphasized to the extent possible. As a result, programs based on these concepts have not been forthcoming. The *choose-keep* model of supported employment is consistent with the critical concepts of supported employment and can guide the supported employment programmatic responses which emerge.

34. In what quarter of your class did you rank (1 is top quarter, 4 is lowest):

High school \_\_\_\_\_ Trade or other vocational school \_\_\_\_\_ College or university \_\_\_\_\_

35. Test scores.

a. Did you take the PSAT (Preliminary Scholastic Aptitude Test)?

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, when did you take it \_\_\_\_\_

Scores: Verbal \_\_\_\_\_ Mathematical \_\_\_\_\_

b. Did you take the SAT (Scholastic Aptitude Test)?

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, when did you take it? \_\_\_\_\_

Scores: Verbal \_\_\_\_\_ Mathematical \_\_\_\_\_

c. Did you take the ACT (American College Test)

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, when did you take it? \_\_\_\_\_

Score: \_\_\_\_\_

d. Did you take any other college aptitude test? Name \_\_\_\_\_

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, when did you take it? \_\_\_\_\_

Score: \_\_\_\_\_

e. Did you take any College Achievement Tests?

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, what and scores.

When \_\_\_\_\_ Subject \_\_\_\_\_ Score \_\_\_\_\_

f. Did you take the Graduate Record Examination?

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, score: \_\_\_\_\_

g. Did you take the Miller Analogies Test?

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, score: \_\_\_\_\_

36. Study habits. Where do you usually study? \_\_\_\_\_

Approximately how long each weekday? \_\_\_\_\_

What time do you start? \_\_\_\_\_ What time do you finish? \_\_\_\_\_

Describe the surroundings and circle all that apply.

- |            |                        |                       |       |                 |                   |
|------------|------------------------|-----------------------|-------|-----------------|-------------------|
| 1          | 2                      | 3                     | 4     | 5               | 6                 |
| Good space | Interrupted frequently | Quiet                 | Noisy | Study by myself | Study with others |
| 7          | 8                      | 9                     |       |                 |                   |
| My bedroom | Library                | Other School Building |       |                 |                   |

Comments: \_\_\_\_\_ **1803** \_\_\_\_\_

37. Extracurricular activities. What groups, clubs, teams, offices, or other activities were you involved with while in high school or college? List both those associated with your school and community.

High school years (school related) \_\_\_\_\_  
\_\_\_\_\_

High school years (community related) \_\_\_\_\_  
\_\_\_\_\_

College or other school years (school related) \_\_\_\_\_  
\_\_\_\_\_

College or other school years (community related) \_\_\_\_\_  
\_\_\_\_\_

38. Special training. Since leaving school, have you participated in any special educational programs (workshops, job training courses, correspondence study, or other programs)?

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, what and where \_\_\_\_\_  
\_\_\_\_\_

39. Summarize your educational background (include your strong and weak points, your areas of major study, etc.)

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

### EDUCATIONAL PLANS

40. Do you plan to continue your education?

\_\_\_\_\_ No

\_\_\_\_\_ Yes. If yes, what level of education and what type of program? \_\_\_\_\_  
\_\_\_\_\_

41. If you are interested in attending a college or university, what institution would you like to attend (if you could be accepted)?

1. \_\_\_\_\_ 4. \_\_\_\_\_

2. \_\_\_\_\_ 5. \_\_\_\_\_

3. \_\_\_\_\_ 6. \_\_\_\_\_

What characteristic of these schools interests you the most? \_\_\_\_\_  
\_\_\_\_\_

42. If you are interested in attending a trade or vocational school, what institutions (or type of programs) interest you the most?

- 1. \_\_\_\_\_ 4. \_\_\_\_\_
- 2. \_\_\_\_\_ 5. \_\_\_\_\_
- 3. \_\_\_\_\_ 6. \_\_\_\_\_

Comments: \_\_\_\_\_  
\_\_\_\_\_

43. What are your educational preferences?

- a. In what state or region would you like to attend school? \_\_\_\_\_
- b. Do you prefer coed or single-sex institution? \_\_\_\_\_
- c. Are you interested in a large, medium or small institution? \_\_\_\_\_
- d. What major and minor subjects are you considering, if any? \_\_\_\_\_  
\_\_\_\_\_
- e. Are you interested in graduate school? \_\_\_\_\_

44. Financial aid. How do you plan to finance advanced/additional education? Circle all that apply.

- |                       |                             |                       |                |

## COUNSELING OBJECTIVES

78. Indicate the kind of help you are seeking by checking the appropriate items below:

- Help with study concerns
- Help with social concerns
- Help with personal concerns
- Help with life planning concerns
- Help with time and stress management
- Scholarships, fellowships, and loan information
- Choosing a career
- Need career information
- Determining type of employment in relation to training and work experience
- Determining type of employment in relation to interests, values, skills and personality
- Help in getting a part-time job
- Help in getting a summer job
- Getting a job overseas
- Learning about my skills
- Job marketplace analysis
- Changing career or job
- Long-range occupational planning
- Decision-making counseling
- Resume counseling
- Application counseling
- Placement counseling
- Interview counseling
- Avocational counseling
- Small business counseling
- other: specify

1814

## GOALS: SETTING AND ACHIEVING THEM

The following thoughts on goals deal with the importance of having them and offer suggestions on how to go about designing and achieving them. Experience has shown convincingly that those who have specific, written goals are far more likely to enjoy the success they envision than those who do not go beyond the wishing stage. As you go through these pages, please take sufficient time to pause, reflect, and undertake the exercises that are suggested, in sequence. Rushing through the steps or skipping about will diminish their value to you.

### **\*\* WHAT WOULD YOU DO IF YOU KNEW YOU COULD NOT FAIL TO ACHIEVE IT?**

At first, this may seem like a ridiculous question. However, when we realize that many of the limitations that seem to hold us back in life are self-imposed, the question becomes a challenge to us, asking us to overcome the tendency to stay in our comfort zones. In some ways, we are like thermostats; if we raise the set-point (our expectations for ourselves), we can raise our performance levels. We should not be willing to settle for the minimum that we are capable of doing.

### **\*\* REVISIT YOUR SUCCESSES**

A major responsibility we have, as adults, is to discover those areas where we have talents that we enjoy putting to good use and to channel our energies in those directions. As an indicator of your "areas of excellence", look back over your life up to this point and ask yourself which experiences gave you the greatest sense of satisfaction and self-worth? Please turn to Activity Page 1 and take time to answer the questions on that sheet. In these past "wins" are some of the seeds of your future satisfaction!

## REVISIT YOUR SUCCESSES

As you think of past experiences and roles wherein you felt successful, try to extract the elements and factors that contributed to these feelings. These can be one-time or long-running episodes in your life. Use the back of the page if necessary.

### EXPERIENCE

### FACTOR

1.

2.

3.

4.

**COMMON THREADS** linking these successful experiences (list on reverse):

**GOALS: ACTIVITY PAGE 1**

1817

## **\*\* INVENTORY YOUR DREAMS**

Now, please turn to Activity Page 2 and, in a free-form sort of way, continue by making a list of: things you would like to do or create in the future; people you would like to meet; places you would like to go; achievements you would like to accomplish; and "how you would like to be remembered when you're gone." This last question may seem odd, but by going through the exercise of writing your own memorial service "remembrance," you can continue the process of crystallizing your plans for your life, increasing the probability that your life will reflect the values that matter most to you.

INVENTORY YOUR DREAMS

THINGS YOU WOULD LIKE TO DO/CREATE:

PEOPLE YOU WOULD LIKE TO MEET:

PLACES YOU WOULD LIKE TO GO:

POSITIONS / ACHIEVEMENTS / HONORS YOU WOULD LIKE TO OBTAIN:

GOALS: ACTIVITY PAGE 2a.

INVENTORY YOUR DREAMS, continued

**HOW WOULD YOU LIKE TO BE REMEMBERED?**

Here is the setting: years from now, family and friends are gathered to pay tribute to you at your memorial service. Before dying, you asked two people to speak on this occasion; one is your "Significant Other" in your personal life and the second is a friend and associate who worked with you for a number of years. You have the opportunity to "draft" their remarks - what would you like each one to say about you? (P.S. If either of them is long-winded, use the back of this page!).

**SIGNIFICANT OTHER:**

**FRIEND FROM WORK:**

**GOALS: ACTIVITY PAGE 2b**

**\*\* PICTURE THIS!!**

You may have heard of the terms, "left-brained" and "right-brained." The two hemispheres of our brain, taken together, provide us with both our logical, rational outlooks and our feeling, creative talents. In addition to writing down our thoughts on our goals, it is beneficial to "visualize" our future success. On Activity Page 3, create a pictorial representation of whatever represents your goals - realized in the future.

1821

**PICTURE THIS!**

On the reverse of this sheet, describe the elements in your picture and their significance.

**GOALS: ACTIVITY PAGE 3**

## **\*\* GUIDELINES FOR FORMULATING WRITTEN GOALS**

Before you continue in the process of setting your goals down in writing, consider these elements that influence the usefulness of this whole process to you:

### **1. Suggested formula for a written goal:**

- a. State them in the positive. For example, I might say "I will weigh 175 pounds," as opposed to saying "I will lose 15 pounds."
- b. Be specific and mention the evidence you will experience when you attain the goal; example: "My B.A. degree from Pitt will hang proudly on my wall."
- c. Pursue goals that are attainable (within your control) and, where appropriate, maintainable over time.
- d. Go after goals that will have desirable consequences for both you and others.

### **2. Target when you expect to achieve these outcomes.**

- a. Some of your goals will be near-term, some intermediate in their time-frame, and some will be long-range. If too many of your goals are bunched up in one of these "windows," you will need to consider spreading them out appropriately.

3. List the resources you can call upon.

a. Potential resources include, but are not limited to:

- \* Your faith
- \* Your personal style and values
- \* Friends, peers, role models
- \* Education, formal and informal
- \* Work experience
- \* Money
- \* Time

As you will see on a subsequent form, you will be able to list potential resources for each of your goals.

4. Use models to help you.

a. Think of and research people who have achieved success similar to that which you envision for yourself. Here are some activities you can consider:

- \* Write down why you think they're successful
- \* Write a "piece of advice" you think they would give you
- \* Read a biography of them, if one exists
- \* Even better, write and/or call them directly; ask to meet with them; if I were planning to become a surgeon, I would read The Puzzle People, then I would contact Dr. Starzl and ask if I could buy him a sandwich someday or tag along. Many successful people take a genuine interest in passing along their experience and offering encouragement.

5. Discipline: Are you willing to pay the price?

- a. This aspect is left out of many discussions on goals. Expect a certain amount of "pain" from discipline, but realize that it is preferable to the ultimate pain of regret over lost opportunity! As Dennis Waitley says, you don't want to live on "Someday Isle," as in "Someday, I'll get around to it." The Nike catchphrase "JUST DO IT!" applies not only to our fitness plans, but to our entire range of goals!

6. Action is the critical ingredient.

- a. Not sure how or where to start? Sometimes a goal seems too imposing. Try this approach: Work backwards from your goal; that is, find a small chunk of activity that you can do today to advance you toward the goal's attainment. Also, don't think that all the important resources you need to make progress are "far away." The speaker Earl Nightingale tells a story called "Acres of Diamonds," about an African farmer who sought far and wide for riches, only to discover years later that the ground upon which his house stood was literally full of diamonds! Remember too, diamonds don't look like diamonds when they are in their rough form; they must be cut, shaped, polished, and placed in a beautiful setting, just like the opportunities that are right under our feet!

## 7. Failure - it's OK!

a. Failure is a prerequisite of success. Successful people have all overcome adversity. Literature is full of fascinating, true stories of "greats" who have risen above their failures. Abraham Lincoln, regarded as one of our finest Presidents, ran for political office nine times in his life and lost seven of those contests. Thomas Edison documented 10,000 failed efforts in his quest to invent the lightbulb.

b. Expect adversity. The more you try to accomplish in your life, the more you open yourself up to adversity. Don't expect smooth sailing. Hear what Dave Scott, a six-time winner of the Ironman Triathlon, has to say: "It's not the distance that overwhelms people who race Hawaii's Ironman Triathlon. It's the relentless wind that blows across the lava fields. You're on one of the highest ridges, you see miles of repetitive road to Hawi (sic), and you realize it's extremely hot and you're going straight into a 30-mile-an-hour crosswind. I've found that those who dwell on these conditions tend to fold. I always train for adversity. I consider adversity an asset, something to turn around to my advantage. One of life's most important lessons is learning to put your losses in perspective and to savor your triumphs by riding on euphoria's wave. Have high goals and expectations; regard defeats as stages on the road to success by remembering the little victories that have gotten you where you are."

from The Meaning of Life

## 8. Seek balance in your goals .

a. A blend of personal and professional goals will help you achieve both types of goals and increase your chances of satisfaction and fulfillment.

## PERSONAL MISSION STATEMENT

If you have Covey's book, his section on developing your own personal mission statement is very helpful. In brief, this is the step of writing, succinctly, your statement of what you want your life to represent, what values drive and motivate you, where you draw your strength from, and the accomplishments you plan to achieve, in broad terms. Think of this as a telegram to yourself; words are precious and costly, yet you don't want to leave out any essentials. In a paragraph or two, summarize these elements. Refer back to the picture you drew previously. Make a draft, come back to it and make revisions until you are comfortable. Even then, remember that this can be changed and up-dated by you at any time in the future. Life demands flexibility; your mission statement and goals don't have to be set in stone. The person who takes these steps is able to modify them to reflect reality and factors that change.

Proceed to Activity Page 4 and work on your Mission Statement.

**MY PERSONAL MISSION STATEMENT**

**GOALS: ACTIVITY PAGE 4**

1828

## "MY GOALS"

You are now ready to list specific goals in various areas of your life. On Activity Page 5, a number of suggested areas have been provided: Career, Family, Finances, etc. You may use these or you can modify this list to suit your needs; do not feel constrained by what you see on this page.

Here are some clarifying thought on some of the categories listed:

\* Education refers both to formal programs ( like an MBA) and to informal objectives (such as learning Sign Language or learning to play the piano). Each of us has an increasing responsibility for our own lifelong learning curve.

\* Finances refers not only to income projections, but also to the ways you will manage and use your monetary assets. Preparing for your "retirement" years is a valid part of this area.

\* Health should include both mental (example: "read a minimum of one book each month") and physical aspects (example: do three aerobic workout each week"). Keeping up with some form of regular exercise is critical in both spheres. This is also the category in which dietary goals can logically be placed.

\* Activities is the place to list those one-time experiences that you would like to have. This is the "FUN" category, where you can list such things as: "Ski in Colorado; take a rafting trip through the Grand Canyon; ride in a hot air balloon; take a Bed-and-Breakfast tour of England, etc. By all means, don't stop at 15; Lou Holtz, the Notre Dame football coach at one time created a list of more than 100 such goals, and proceeded to accomplish every one, including having dinner at the White House. He probably has a new list he's working on!

## THE ACTION PLAN

All that has happened to this point would be an empty exercise if we fail to apply specific plans to allow us to implement the goals we have established. The action plan on Activity Page 6 is designed to allow you to do just that. The intent is that, on an annual basis at least, you will review your "My Goals" list, assess your current status with respect to each, and devise a specific plan for the coming year to address those goals that you feel are sufficient priorities to act upon in the year ahead. Remember that some goals will be deferred until later.

\* You will want to make a number of copies of this form before proceeding.

\* Follow the numbering system from the "My Goals" pages. If goal #F1 is "To do three aerobic workouts weekly," devote one "Action Plan" page to that specific goal and fill out the boxes accordingly.

\* Under "Action Steps/Desired Results," state the desired outcomes in specific, positive terms. List the steps in sequence, either first-step-to-last or in reverse order, if that helps you think it through.

\* "Resources Needed" can include money, materials, people's help, or anything else beyond your own time.

\* "Responsibility" lists those people - yourself and/or others - upon whom the completion of that step depends.

\* "Timetable" should include both a target starting date and a target completion date.

\* "Success Rating": Goals should be measurable. Here, you can apply your own evaluation system; I would suggest that "0" represents "not done at all" and "5" stands for "completed as planned." Fill in this column at the end of the year.

**GOALS: ACTION PLAN FOR THE YEAR:**

I. PHEAA Update:

A. Application Flow

1. Student completes FAFSA and mails to Data Entry Vendor.
2. Data Entry Vendor will forward data to Central Processor.
3. Central Processor will print and mail a SAR acknowledgement to the student who files electronically. Students filing a paper FAFSA will still receive a paper SAR.
4. PHEAA will receive application data from the Central Processor.
5. PHEAA will transmit the data to schools using PHEAA as their EDE Destination Point.

B. State Grant

1. Maximum award increased to \$2,632/year for full-time students and increased to \$1,316/year for part-time students.
2. PHEAA adjusted maximum income cutoff has been increased to \$60,000 for BOTH full-time and part-time students.
3. Need covered by grant increased to 40%.
4. Parents contribution reduced approximately 4%.
5. Percentage of reduction based on income: The income level at which such reduction occurs has been increased by \$5,000.

C. Federal Family Education Loan Program Update:

1. Interest Rates - July 1, 1995 to June 30, 1996
  - a. Stafford Loans - 8.25%
  - b. PLUS Loans - 8.98%
2. Guaranty Fee - PLUS Loans
  - a. Capped at the lesser of 1% of the loan disbursement or \$50
3. PHEAA Keystone Stafford Loan Program - low cost Stafford Loans
  - a. Eligibility requirements: (Must meet all.)
    - eligible PA State Grant applicant
    - family income less than \$21,000
    - enrolled in program of study at school eligible for the State Grant Program
    - meet PA residency requirements for the grant program
  - b. Same as regular Stafford Loan except:
    - fees reduced from 4% to 2%
    - interest rate reduced by 1% after making 36 on-time monthly payments
  - c. PHEAA will offer a Keystone Stafford Loan to those applicants who file the regular Stafford application or who requests an application via the FAFSA.

D. Paul Douglas Scholarships

1. No awards for 1995-96
2. Applies to new awards as well as renewals.

1843

II. Free Application For Federal Student Aid (FAFSA) Updates:

NOTES:

III. PHEAA Basics (State Grant)

1-800-692-7435

1. Application Process:

File "Free Application for Federal Student Aid".

2. Deadlines:

File after January 1.

5/1 - All renewal applications; and all non-renewal applications who plan to enroll in baccalaureate degree programs and college transfer programs.

8/1 - Non-renewal applications who plan to enroll in business, trade, or technical schools, hospital schools of nursing, or two year terminal programs at four year colleges, two year public or junior colleges.

**Note:** A renewal student is one who was the recipient of a PHEAA State Grant in the prior academic year.

Late applications are processed on a funds available basis. All students should be encouraged to apply, even though the deadline may have passed.

**STATE GRANTS  
APPLICATION FILING DATES:**

**AFTER JANUARY 1  
BY MAY 1**

- ▶ 4-Year Programs, College Transferable Programs and ALL RENEWALS

**BY AUGUST 1**

### FULL TIME STATE GRANT AWARD AMOUNTS

\$2632 Maximum — Pennsylvania schools only

#### NON-VETERANS — OUT OF STATE

- \$585 Maximum — AK, CT, DE, MA, ME, OH, RI, VT, DC, WV
- \$390 Maximum — Non-portable states
- \$0 — MD, NJ, NY

#### VETERANS — OUT OF STATE

- \$780 maximum for all states except MD, NJ, NY

PENNSYLVANIA HIGHER EDUCATION ASSISTANCE AGENCY

### STATE GRANT PART-TIME AWARD AMOUNTS

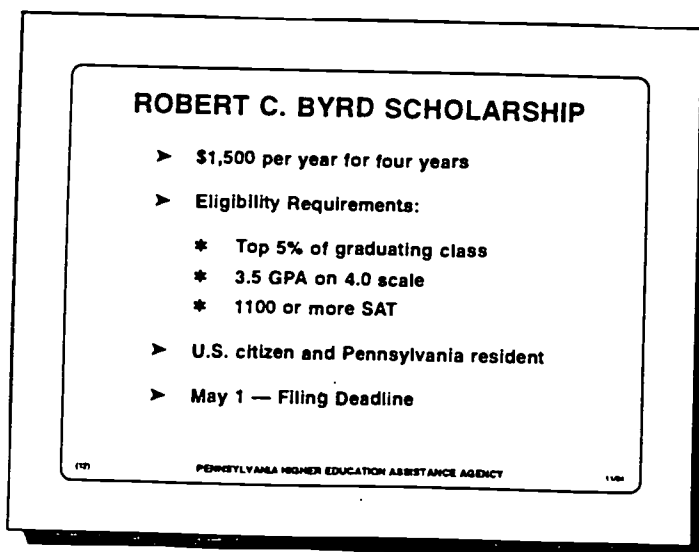

- For Both In-State and Out-of-State Students  
— One Half Their Full-Time Award
- Minimum Award is \$100

PENNSYLVANIA HIGHER EDUCATION ASSISTANCE AGENCY

### III. Review of PHEAA State Grant (continued)

IV. 1996-97 Robert C. Byrd Scholarship

1. Annual award of \$1,500; federally funded. Four years of eligibility.
2. Minimum criteria required for consideration:
  - a. PA residency
  - b. Meet federal government citizenship requirements
  - c. Must meet "all" three educational standards:
    - \* In top 5% of high school class
    - \* Have a 3.5 grad point average on a 4.0 scale
    - \* SAT scores of 1100 or more; ACT composite score of 27 or more; or GED score of 289 or above
3. Meeting the criteria does not guarantee selection: at least two recipients will be chosen in each county by lottery.
4. Deadline date for applications is May 1.
5. Recipients' checks are mailed directly to the students. Students must take check to school.

## V. 1996-97 Agricultural Education Loan Forgiveness Program (AELF)

### General:

The Agriculture Education Loan Forgiveness Program was created by the Pennsylvania General Assembly and signed into law by Governor Casey in 1992. It is intended to:

1. Assist student loan borrowers who receive degrees in fields related to the production of agricultural products so they can return to work on family farms or family farm corporations.
2. Assist students who receive degrees in veterinary medicine and who subsequently practice veterinary medicine a portion of which must include farm animals.

### Requirements:

1. All such borrowers must have graduated from a Pennsylvania institution of higher education and be in their first year of full-time employment on a family farm, or a "family farm corporation" as defined in the law, or in the practices of veterinary medicine including farm animals on or after July 1, 1991.
2. In addition, veterinarians must be accredited by the U.S.D.A. to perform accredited tasks in Pennsylvania including the signing of animal health certificates required for interstate commerce in animals and animal products and be able to certify regulatory testing of agricultural animals such as testing for bovine tuberculosis or brucellosis.

### Eligible Loans:

Loans made or guaranteed by PHEAA, the Pennsylvania Higher Education Assistance Agency. Other loans whether private or personal are not eligible.

### Amounts:

The program may repay as much as \$2,000 per year for eligible applicants and up to \$10,000 for any one applicant, in effect a "lifetime maximum". Actual payments will be limited by the number of eligible applicants and the amount appropriated by the General Assembly.

### Applications:

Applications may be obtained from PHEAA, the Pennsylvania Higher Education Assistance Agency. Write to: PHEAA Agriculture Education Loan Forgiveness Program, P.O. Box 8114, Harrisburg, Pennsylvania, 17105-8114. Or call: (717) 257-5220.

VI. 1996-97 Work-Study Programs (717) 720-2550

1. Off-Campus Work-Study Programs

- \* Cooperative effort of PHEAA, participating post-secondary schools and non-profit employers
- \* Student must be eligible Pennsylvania resident and be eligible for the Federal College Work-Study Program
- \* Applications and information available in the Financial Aid Office
- \* Rate of pay determined by Financial Aid Office

2. State Work-Study Programs

- \* Cooperative effort of PHEAA, participating post-secondary schools and employers
- \* Employer is not required to be "non-profit"
- \* Jobs are available in high tech and community service
- \* Information and applications available from PHEAA or the Financial Aid Office

### PHEAA WORK PROGRAMS

➤ Off Campus  
Work Study  
(FWS/OFF)

➤ State  
Work Study  
Program  
(SWSP)

(13)PENNSYLVANIA HIGHER EDUCATION ASSISTANCE AGENCY1996

### WORK STUDY PROGRAMS

- Studies show that students who work while in school:
  - \* Achieve better grades
  - \* Improve time management
  - \* Are more motivated
  - \* Develop healthier self-esteem
  - \* Are more likely to complete their education
- Career related work experience can be included on resume
- Gain an edge when job hunting because they offer potential employers a degree plus experience
- Reduce need for borrowing since student earns wages

• Independent student (or dependent student if parents denied a PLUS Loan).

(18)

PENNSYLVANIA HIGHER EDUCATION ASSISTANCE AGENCY

2. Variable interest rate for new borrowers - maximum 8.25%

Following is a summary for each Stafford Loan type (subsidized and unsubsidized) of how the student's grade level and prior loan borrowings for the same academic year are to be taken into account when determining the actual loan amount that applies to the student whose loan application is being certified:

a. A subsidized Stafford Loan amount for a dependent student is determined as the lesser of:

- (1) Cost minus aid minus, EFC; or
- (2) Appropriate academic grade level limit, minus any Stafford Loan amounts (subsidized or unsubsidized) received by the student in the same academic year.

b. An unsubsidized Stafford Loan amount for a dependent student is determined as the lesser of:

- (1) Cost minus aid minus subsidized Stafford Loan amount determined in "a"; or
- (2) Appropriate academic grade level limit, minus any Stafford Loan amount (subsidized or unsubsidized) received by the student in the same academic year, including the subsidized stafford loan determined in "a".

Note: Student must file a need analysis (FAFSA) application in addition to the actual Stafford Loan Application.

3. Applications can be requested through the PHEAA State Grant Application, or from lenders participating in the program.

VIII. 1996-97 Federal Parent Loans for Undergraduate Students (PLUS)

1-800-692-7392

1. The PLUS Program currently has no annual or aggregate limits. Loans can be guaranteed up to the difference between educational costs minus other financial aid.

\* Parent(s) for dependent student

2. Variable interest rate; changes each July 1st; maximum rate is 9%.

3. Analysis required:

$$\begin{aligned} & \text{Cost of Education} \\ & - \text{Other Financial Aid} \\ & = \text{Need for PLUS Loan} \end{aligned}$$

Note: Expected Family Contribution is not a factor in this program.

4. Financial Charges

\* 3% Origination Fee

\* 1% Guaranty Fee

5. Applications can be obtained from lender.

**FEDERAL PARENT LOAN FOR  
UNDERGRADUATE STUDENTS (PLUS)**

Cost of Education — Other Aid = Amount Parents can borrow

- > (Variable Interest Rate - Max %)
- > Origination Fee = 3%
- > Guaranty Fee = 1%
- > Repayment Terms = 10 Years

PA 1988 PENNSYLVANIA HIGHER EDUCATION ASSISTANCE AGENCY 1988

IX. Other PHEAA Educational Loan Programs

A. Health Education Assistance Loans (HEAL) 1-800-421-4817

1. For graduate health education students
2. Maximum eligibility
  - \* \$12,500 per year;  
\$50,000 aggregate  
Public Health  
Pharmacy  
Chiropractic  
Graduate Health Administration  
Clinical Psychology
  - \* \$20,000 per year;  
\$80,000 aggregate  
Medicine  
Osteopathy  
Dentistry  
Veterinary Medicine  
Podiatry
3. Variable interest rate; changes every three months.
4. Student must demonstrate financial need as determined by the school.
5. Applications and information are available in the school Financial Aid Office which serves the graduate health education students.

Other PHEAA Educational Loan Programs, (continued)

B. Law Access Loan

1-800-282-1550

1. Applications for the following types:
  - a. Federal Stafford and Unsubsidized Stafford Loan
    - \* Reduced unsubsidized interest rate while in-school and in grace
  - b. Private Law Access Loan (LAL)
    - \* Annual borrowing limit is up to the costs of attendance
    - \* Aggregate Maximum is \$120,000.00
    - \* Variable interest rate charges quarterly - capitalized once at repayment
    - \* Reduced interest rate while in-school and in grace period
  - c. Bar Examination Loan (BEL)
    - \* Up to \$5,000.00 - disbursed one time in graduating year
2. Applications available in the Financial Aid Office at eligible participating ABA law schools or by calling the program administrator, The Access Group.

C. Business Access Loan

1-800-282-1550

1. Applications for the following loan types:
  - a. Federal Stafford and Unsubsidized Stafford Loans
    - \* Reduced unsubsidized interest rate while in-school and in grace
  - b. Private Business Access Loan (BAL)
    - \* If attending at least half-time, can borrow up to the cost of attendance
    - \* If less than half-time can borrow up to the combined cost of tuition, fees, and a maximum of \$500.00 for books and supplies
    - \* Variable interest rate changes quarterly - capitalized once at repayment
    - \* Reduced interest rate prior to the commencement of repayment
2. Applications available through the Financial Aid Office at eligible participating AACSB business schools, or by calling the program administrator, The Access Group.

Other PHEAA Educational Loan Programs, (continued)

D. Dental Access Loan

1-800-282-1550

1. Applications for the following loan types:
  - a. Federal Stafford and Unsubsidized Stafford Loans
    - \* Reduced unsubsidized interest rate while in-school and in grace
  - b. Private Dental Access Loan (DAL)
    - \* If attending at least half-time, can borrow up to the cost of attendance
    - \* If less than half-time, can borrow up to the combined cost of tuition, fees, and a maximum of \$500.00 for books and supplies
    - \* Variable interest rate changes quarterly - capitalized once at repayment
    - \* Reduced interest rate prior to the commencement of repayment
2. Applications available through the Financial Aid Office at eligible participating dental schools, or by calling the program administrator, The Access Group.

E. Medical Access Loan

1-800-282-1550

1. Applications for the following loan types:
  - a. Federal Stafford and Unsubsidized Stafford Loans
    - \* Reduced unsubsidized interest rate while in-school and in grace
  - b. Private Medical Access Loan (MAL)
    - \* If attending at least half-time, can borrow up to the cost of attendance
    - \* If less than half-time, can borrow up to the combined cost of tuition, fees, and a maximum of \$500.00 for books and supplies
    - \* Variable interest rate changes quarterly - capitalized once at repayment
    - \* Reduced interest rate prior to the commencement of repayment
  - c. Residency Loan
    - \* Loan to be used for interview and relocation expenses
    - \* Maximum of \$8,000
    - \* Repayment begins 9 months after status drops to less than half-time or after the completion of a required residency medical program (not to exceed 48 months)
2. Applications available through the Financial Aid Office at eligible participating medical schools, or by calling the program administrator, The Access Group.

Other PHEAA Educational Loan Programs, (continued)

F. Graduate Access Loan

1-800-282-1550

1. Applications for the following loan types:
  - a. Federal Staff and Unsubsidized Stafford Loans
    - \* Reduced unsubsidized interest rate while in-school and in grace
  - b. Private Graduate Access Loan (GAL)
    - \* If attending at least half-time, can borrow up to the costs of attendance
    - \* If less than half-time, can borrow up to the combined cost of tuition, fees, and a maximum of \$500.00 for books and supplies
    - \* Variable interest rate changes quarterly - capitalized once at repayment
    - \* Reduced interest rate prior to the commence of repayment
2. Applications available through the Financial Aid Office at eligible participating graduate schools, or by calling the program administrator, The Access Group.

X. School Services (717) 257-5220

1. PHEAA's Career Guidance Network, (PCGN)

Combined Package Includes:

a. Keys to Educational Opportunities

- \* Software which provides information about postsecondary institutions, including admissions, financial aid, degrees, and general demographic information.

b. PAIS - PHEAA Aid Information System

- \* Software which permits a student to enter income and asset information, and receive an estimate of State Grant, Pell Grant, and subsidized Stafford Loan eligibility.

2. RESUME1

- \* Resume development, cover, and thank you letters

3. Discover (an ACT Program)

- \* Three versions: Junior High, High School, and College/Adult
- \* Computerized career/school guidance programs targeted to each of these groups.

XI. Other Programs

A. Urban and Rural Teacher Loan Forgiveness Program (717) 257-5220

1. PHEAA will pay up to \$2,500 per year; maximum of \$10,000 on PHEAA administered Stafford and SLS Loans.
2. For persons with a four year degree in their first full year teaching at time of application.
3. Must be employed on a full-time permanent basis teaching the major portion of the school day.
4. Must be certified to teach in Pennsylvania by Pennsylvania Department of Education.
5. Must be teaching in a Commonwealth designed urban or rural public school district or at a non-profit non-public school in a district where students may fulfill compulsory attendance requirements.
6. Applications are available in the principal's or superintendent's office, or by contacting PHEAA.

Other Programs, (continued)

B. Early Childhood Education Professional Loan Forgiveness - Provides student loan forgiveness up to \$2,500 a year to a maximum of \$10,000. (717) 257-5220

1. Qualifications:

- a. Must have a Bachelor's Degree and PA Early Childhood Education Certification, or an Associate's Degree in Early Childhood Education Development.
- b. Must have borrowed student loans guaranteed by PHEAA.
- c. Should not be in default on student loans or delinquent on any payment due any Pennsylvania Agency.
- d. Should be a resident of Pennsylvania.
- e. Must receive a salary less than \$18,500 a year as a full-time professional in a PA DPW approved child day care center or group day care home.

2. Applications are available at early child care centers or by contacting PHEAA.

Other Programs, continued

C. PHEAA Network Consolidation

1-800-338-5000

1. Borrower with Title IV (no minimum) indebtedness can combine the following loans at weighted average rate (no caps):
  - \* Stafford (subsidized and a non-subsidized)
  - \* Supplemental Loans to Students (SLS)
  - \* Health Professional Student Loans (HPSL)
  - \* Perkins Loans (formerly National Direct/Defense Student Loans)
  - \* Parent Loans for Undergraduate Students (PLUS)

Note: A borrower with high indebtedness to one of these loan programs can take advantage of the Network Consolidation Program.

2. Payment arrangements for terms up to 30 years may be possible, based on the borrower's total indebtedness.
3. Borrower calls PHEAA Network Consolidation Loan staff at the toll-free number. Staff will counsel borrower, and send application and other information about the program.
4. This program should be used by borrowers after the completion of the educational program to manage high levels of indebtedness.

Program Highlights

It is important to remember when counseling students as to their choice of professions and schools, that a debt management tool, the NETWORK CONSOLIDATION PROGRAM, is offered to student loan borrowers upon completion of their postsecondary education. A NETWORK LOAN allows a student a smaller monthly payment HOWEVER a longer repayment term is incurred.

UNITED STATES DEPARTMENT OF EDUCATION

WASHINGTON, D.C. 20202-\_\_\_\_\_

Dear *FAFSA Express* User:

Thank you for ordering the U.S. Department of Education's *1995-96 FAFSA Express* software. *FAFSA Express* allows students to complete and transmit the Free Application for Federal Student Aid using a PC and modem. We are very excited about the software's ability to enhance the Federal student aid application process.

*FAFSA Express* will significantly shorten the application process. After the student enters the application, the information is edited by the software for logic and consistency. *FAFSA Express* highlights responses that are inconsistent or incomplete and prompts the student to change them. *FAFSA Express* then transmits the student's record to the Department of Education. If a printer is available, *FAFSA Express* prints a copy of the student's application data and a signature page. After the student (and parent, if necessary) signs and mails the signature page to the Department, the signature is appended to the student's electronic record, completing the application. Within two weeks the student will receive a Student Aid Report (SAR) in the mail with processing results.

If a printer is not available, *FAFSA Express* notes this on the student's record and transmits the application. The student will receive a SAR which he or she must sign and return to the Department to complete the application. The student will then receive a SAR with processing results.

Included in this packet are the *FAFSA Express* software (on 3-1/2" diskette) and User Guide, and envelopes necessary to send printed signature pages to the Department. Also included is a stand-up card designed to be placed on or near the PC where *FAFSA Express* resides. The stand-up card provides information the student needs before using *FAFSA Express*.

This version of *FAFSA Express* uses the Department's current General Electronic Support (GES) network, and can be used through December 31, 1995 for the 1995-96 cycle. In late November there will be a version available using the Department's new Title IV WAN network. You will need to call and order this new version, and at the same time you can request the 1996-97 version which will be sent to you in January of 1996.

*FAFSA Express* is provided free-of-charge. The software is not copyrighted and may be installed on any number of PCs. *FAFSA Express* may also be copied and distributed to students who have PCs in their homes. Transmission of records is done at no cost to the sender. The *FAFSA Express* User Guide contains complete instructions on installing the software. You can also call the *FAFSA Express* Customer Service number, 1-800-801-0576, if you need assistance with hardware, software, or installation.

Sincerely,

Jeanne B. Saunders

Director, Application and  
Pell Processing Systems Division

# Free Application for Federal Student Aid

## 1996-97 School Year

WARNING: If you purposely give false or misleading information on this form, you may be fined \$10,000, sent to prison, or both.

**"You" and "your" on this form always mean the student who wants aid.**

Form Approved  
OMB No. 1840-0110  
App. Exp. 6/30/97

U.S. Department of Education  
Student Financial  
Assistance Programs

Print in capital letters  
with a dark ink.

BER 2 4

Fill in ovals  
completely.

Right

Wrong

### Section A: You (the student)

1-3. Your name

1. Last name

2. First name

3. M.I.

Your title (optional)

Mr.

Miss, Mrs., or Ms.

4-7. Your permanent mailing address  
(All mail will be sent to this address. See Instructions, page 2 for state/country abbreviations.)

4. Number and street (Include apt. no.)

5. City

6. State

7. ZIP code

8. Your social security number (SSN) (Don't leave blank. See Instructions, page 2.)

Month Day Year

15-16. Are you a U.S. citizen?  
(See Instructions, pages 2-3.)

Yes, I am a U.S. citizen.

No, but I am an eligible noncitizen.

A

No, neither of the above.

9. Your date of birth

10. Your permanent home telephone number

Area code

State

11. Your state of legal residence

12. Date you became a legal resident of the state in question 11  
(See Instructions, page 2.)

Month Day Year

13-14. Your driver's license number (Include the state abbreviation. If you don't have a license, write in "None.")

State

License number

17. As of today, are you married? (Fill in only one oval.)

I am not married. (I am single, widowed, or divorced.)

I am married.

I am separated from my spouse.

18. Date you were married, separated, divorced, or widowed. If divorced, use date of divorce or separation, whichever is earlier.  
(If never married, leave blank.)

Month Year

19. Will you have your first bachelor's degree before July 1, 1996?

Yes

No

### Section B: Education Background

20-21. Date that you (the student) received, or will receive, your high school diploma, either—

• by graduating from high school

Month Year

OR

• by earning a GED

Month Year

(Enter one date. Leave blank if the question does not apply to you.)

22-23. Highest educational level or grade level your father and your mother completed. (Fill in one oval for each parent. See Instructions, page 3.)

22. Father

23. Mother

elementary school (K-8)

high school (9-12)

college or beyond

unknown

If you (and your family) have unusual circumstances, complete this form and then check with your financial aid administrator. Examples:

- tuition expenses at an elementary or secondary school,
- unusual medical or dental expenses not covered by insurance,

- a family member who recently became unemployed, or
- other unusual circumstances such as changes in income or assets that might affect your eligibility for student financial aid.

Section C: Your Plans Answer these questions about your college plans.

- 24-28. Your expected enrollment status for the 1996-97 school year (See Instructions, page 3.) Full time, 3/4 time, 1/2 time, Less than 1/2 time, Not enrolled. 24. Summer term '96, 25. Fall semester/qtr. '96, 26. Winter quarter '96-97, 27. Spring semester/qtr. '97, 28. Summer term '97.

- 33-35. In addition to grants, what other types of financial aid are you (and your parents) interested in? (See Instructions, page 3.) 33. Student employment, 34. Student loans, 35. Parent loans for students.

29. Your course of study (See Instructions for code, page 3.)

Code [ ]

30-31. College degree/certificate you expect to receive and the date you expect to receive it (See Instructions for code, page 3.)

30. Degree/certificate

Month Day Year [ ]

31. Date

36. If you are (or were) in college, do you plan to attend that same college in 1996-97? (If this doesn't apply to you, leave blank.) Yes [ ] No [ ]

37. For how many dependents will you pay child care or elder care expenses in 1996-97? [ ]

32. Your grade level during the 1996-97 school year (Fill in only one.)

- 1st yr./never attended college, 1st yr./attended college before, 2nd year/sophomore, 3rd year/junior, 4th year/senior, 5th year/other undergraduate, 1st year graduate/professional, 2nd year graduate/professional, 3rd year graduate/professional, Beyond 3rd year graduate/professional.

38-39. Veterans education benefits you expect to receive from July 1, 1996 through June 30, 1997

38. Amount per month [ ]

39. Number of months [ ]

Section D: Student Status

Yes to any of these denotes dependency

- 40. Were you born before January 1, 1973? Yes [ ] No [ ]
41. Are you a veteran of the U.S. Armed Forces? Yes [ ] No [ ]
42. Will you be enrolled in a graduate or professional program (beyond a bachelor's degree) in 1996-97? Yes [ ] No [ ]
43. Are you married? Yes [ ] No [ ]
44. Are you an orphan or a ward of the court, or were you a ward of the court until age 18? Yes [ ] No [ ]
45. Do you have legal dependents (other than a spouse) that fit the definition in Instructions, page 4? Yes [ ] No [ ]

If you answered "Yes" to any question in Section D, go to Section E and fill out the GRAY and the WHITE areas on the rest of this form.

If you answered "No" to every question in Section D, go to Section E and fill out the RED and the WHITE areas on the rest of this form.

Section E: Household Information

If you are filling out the GRAY and WHITE areas, answer questions 46 and 47 and go to Section F.

If you are filling out the RED and WHITE areas, skip questions 46 and 47. Answer questions 48 through 52 about your parents, and then go on to Section F.

STUDENT (& SPOUSE)

- 46. Number in your household in 1996-97 Include yourself and your spouse. Do not include your children and other people unless they meet the definition in Instructions, page 4. [ ]
47. Number of college students in household in 1996-97 Of the number in 46, how many will be in college at least half-time in at least one term in an eligible program? Include yourself. [ ]

PARENT(S)

- 48. Your parents' current marital status: single [ ], married [ ], separated [ ], divorced [ ], widowed [ ]
49. Your parent(s)' state of legal residence [ ] State
50. Date your parent(s) became legal resident(s) of the state in question 49 (See Instructions, page 5.) Month Day Year [ ]
51. Number in your parents' household in 1996-97 Include yourself and your parents. Do not include your parents' other children and other people unless they meet the definition in Instructions, page 5. [ ]
52. Number of college students in household in 1996-97 Of the number in 51, how many will be in college at least half-time in at least one term in an eligible program? Include yourself. (See Instructions, page 5.) [ ]

Section F: 1995 Income, Earnings, and Benefits Everyone must fill out the Student (& Spouse) column. Page 3

You must see Instructions, pages 5 and 6, for information about tax forms and tax filing status, especially if you are estimating taxes or filing electronically or by telephone. These instructions will tell you what income and benefits should be reported in this section.

STUDENT (& SPOUSE)

PARENT(S)

The following 1995 U.S. income tax figures are from:

53. (Fill in only one.)

65. (Fill in only one.)

- A—a completed 1995 IRS Form 1040A, 1040EZ, or 1040TEL
B—a completed 1995 IRS Form 1040
C—an estimated 1995 IRS Form 1040A, 1040EZ, or 1040TEL
D—an estimated 1995 IRS Form 1040
E—will not file a 1995 U.S. income tax return

- A
B
C

91. \$ .00

Section H: Releases and Signatures

92-103. What college(s) do you plan to attend in 1996-97? (Note: The colleges you list below will have access to your application information. See Instructions, page 8.)

Housing codes 1-on-campus 2-off-campus 3-with parent(s) 4-with relative(s) other than parent(s)

Table with columns: Title IV Code, College Name, College Street Address and City, State, Housing Code. Row XX shows Example University, 14930 North Somewhere Boulevard, Anywhere City, State ST, Housing Code 2.

104. The U.S. Department of Education will send information from this form to your state financial aid agency and the state agencies of the colleges listed above so they can consider you for state aid. Answer "No" if you don't want information released to the state. (See "Deadlines for State Student Aid" in Instructions, page 10.) 104. No [ ]
105. Males not yet registered for Selective Service: Do you want us to register you? (See Instructions, page 9.) 105. Yes [ ]

106-107. Read, Sign, and Date

All of the information provided by me or any other person on this form is true and complete to the best of my knowledge. I understand that this application is being filed jointly by all signatories. If asked by an authorized official, I agree to give proof of the information that I have given on this form. I realize that this proof may include a copy of my U.S. or state income tax return. I also realize that if I do not give proof when asked, the student may be denied aid.

Certification Statement on Overpayments and Defaults. I understand that I may not receive any Federal Title IV, HEA funds if I owe an overpayment on any Title IV educational grant or am in default on a Title IV educational loan unless I have made satisfactory arrangements to repay or otherwise resolve the overpayment or default. I also understand that I must notify my school if I do owe an overpayment or am in default.
Statement of Educational Purpose. I certify that I will use any Federal Title IV, HEA funds I receive during the award year covered by this application solely for expenses related to my attendance at the institution of higher education that determined or certified my eligibility for those funds.

Everyone whose information is given on this form should sign below. The student (and at least one parent, if parental information is given), must sign below or this form will be returned unprocessed.

106. Signatures

Signatures section with boxes for Student, Student's Spouse, Father/Stepfather, Mother/Stepmother.

107. Date completed

Date completed section with boxes for Month, Day, Year (1996, 1997).

School Use Only section with Title IV Code, FAA Signature, MDE Use Only, Spec. handle No. copies, and D/O checkbox.

Section I: Preparer's Use Only

For preparers other than student, spouse, and parent(s). Student, spouse, and parent(s), sign above.

Preparer's information section with boxes for Preparer's name (last, first, MI), Firm name, Firm or preparer's address (street, city, state, ZIP).

108. Employer identification number (EIN) [ ]

OR

109. Preparer's social security number [ ]

Certification: All of the information on this form is true and complete to the best of my knowledge.

110. Preparer's signature [ ] Date [ ]

MAKE SURE THAT YOU HAVE COMPLETED, DATED, AND SIGNED THIS APPLICATION. Mail the application to: Federal Student Aid Programs, P.O. Box —, XXXXXXX

# Free Application for Federal Student Aid

## 1996-97 School Year

Form Approved  
OMB No. 1840-0110  
App. Exp. 6/30/97

U.S. Department of Education  
Student Financial Assistance Programs

If you were in college last year and meet certain conditions, you will receive a renewal application in the mail or from your school early in 1996. You must use either the **Renewal FAFSA** or this **Free Application for Federal Student Aid (FAFSA)** to apply for aid from Federal student financial aid programs.

You can also use the Renewal FAFSA or this FAFSA to apply for most state and some private aid, although certain state and private aid programs may require an additional form. To find out more about which forms to use, contact your high school counselor, college financial aid office, or state scholarship/grant agency.

Be sure to read **INFORMATION ON THE PRIVACY ACT AND USE OF YOUR SOCIAL SECURITY NUMBER** on page 12.

**WARNING:** You must fill out this form accurately. The information that you supply can be verified by your college, your state, or by the U.S. Department of Education.

You may be asked to provide U.S. income tax returns, the worksheets in this booklet, and other information. If you can't or don't provide these records to your college, you may not get Federal student aid. If you get Federal student aid based on incorrect information, you will have to pay it back; you may also have to pay fines and fees. If you purposely give false or misleading information on your application, you may be fined \$10,000, sent to prison, or both.

### WHAT IS THIS APPLICATION FOR?

#### Federal Student Financial Aid

"Federal student financial aid" means Federal grant, loan and work-study money for your education.

The Federal student assistance programs can help you pay for most kinds of education after high school. The aid is available if you are attending a college, a professional school, or a vocational or technical school. This application is for Federal student financial aid for the 1996-97 school year (July 1, 1996–June 30, 1997).

### STATE AND COLLEGE STUDENT FINANCIAL AID

Some state and college aid programs may require additional information. Contact your state scholarship/grant agency or college financial aid administrator to find out whether you need to complete any form(s) in addition to the FAFSA, and what types of aid you might be eligible for. Be sure to see the deadline dates under "Deadlines for State Student Aid" on page 10. Some colleges also have their own deadlines, which may be earlier than the Federal deadline.

### This application is used for these Federal Student Financial Aid Programs

Federal Pell Grants  
Federal Supplemental Educational Opportunity Grants (FSEOG)  
Federal Subsidized and Unsubsidized Stafford Loans  
Stafford/Ford Federal Direct Subsidized and Unsubsidized Loans  
Federal Perkins Loans  
Federal Work-Study (FWS)  
Title VII and Public Health Act Programs

#### To be eligible, you must . . .

- be a U.S. citizen or eligible noncitizen,
- be registered with Selective Service (if required),
- attend a participating college,
- be working toward a degree or certificate,
- be making satisfactory academic progress,
- not owe a refund on a Federal grant or be in default on a Federal educational loan, and
- have financial need (except for Unsubsidized Stafford Loans).

#### In addition:

- Federal student loans must be repaid.
- Less-than-half-time students may be eligible for Federal Pell Grants and some other Federal student aid programs.
- Students who have received a bachelor's degree are not eligible for Federal Pell Grants or FSEOG, but may be eligible for other Federal student aid programs.
- Students attending two schools in the same enrollment period must inform both FAAs. Students can not receive Pell Grants at both schools.
- Conviction of drug distribution or possession may make a student ineligible.

### DEADLINES

**FEDERAL STUDENT AID—JANUARY 1, 1996 TO JUNE 30, 1997**  
You should apply as early as possible but not before January 1, 1996. Mailing in your form is only the first step in applying for student aid. We must receive your form no later than June 30, 1997.

**FOR STATE STUDENT AID—SEE PAGE 10**  
State deadlines may be earlier than the Federal deadline. Your state may also require an additional form. Check the requirements and deadlines.

**FOR COLLEGE AID—CHECK WITH YOUR FINANCIAL AID OFFICE.** Colleges may have their own deadlines and applications for awarding student aid.

If you (and your family) have unusual circumstances, such as tuition expenses at an elementary or secondary school, unusual medical or dental expenses not covered by insurance, a family member who recently became unemployed, or changes in income or assets that affect your eligibility for financial aid, complete this form and then check with your college financial aid office.

For more information on applying for student aid, see **WHAT ARE THE NEXT STEPS?** on page 10.

**FOR RED  
SHADED  
AREAS**

**FOR GRAY  
SHADED  
AREAS**

Before you begin to fill out this form, **TEAR IT OUT** and lay it alongside the instruction book so that you can check for additional instructions as you go along.

The **RED** and **GRAY** areas indicate which instructions are for which questions. **Read the instructions as you fill out this form.** Mistakes will delay the processing of your application.

Some questions on the form are self-explanatory, and no additional instructions are provided. These are questions 9, 10, and 17.

Although other people (besides the student who is applying for aid) may help fill out this form, it is about the student. On this form, the words "you" and "your" always mean the student. The word "college" means a college, university, graduate or professional school, community college, vocational or technical school, or any other school beyond high school.

If you need more help, ask your high school guidance counselor or your college financial aid administrator to explain the instructions to you.

**Records You Will Need**

**Keep these records! You may need them again.**

- Student's driver's license and social security card
- W-2 Forms and other records of money earned in 1995
- 1995 U.S. income tax return (IRS Form 1040, 1040A, or 1040EZ)  
If you haven't completed your tax return, see page 5.
- Records of untaxed income, such as welfare, social security, AFDC or ADC, or veterans benefits
- Current bank statements
- Current mortgage information
- Business and farm records
- Records of stocks, bonds, and other investments

**Special Instructions.** If you (your spouse or parents) file a Puerto Rico or foreign tax return, see page 9. If you are a Native American or a citizen of the Federated States of Micronesia, the Marshall Islands, or Palau, see the special instructions on page 9.

**When You Fill Out This Form**

- You must use a pen with black or dark ink, or a #2 pencil.
- Print carefully, do not write "N/A" or margin notes on the form!
- Fill in ovals completely, like this:
- For errors, use white-out or erase completely.
- Round off all figures to the nearest dollar. For 50 cents or more, round up; for 49 cents or less, round down.
- For dates, write in numbers that correspond to the month, day, and year. For example, for November 7, 1974, write in 11-07-74.
- Questions about your plans and references to the "school year" mean the school year from July 1, 1996 through June 30, 1997.
- If you are applying to more than one college, answer the questions about enrollment according to your plans for first-choice college.

1-3. Use your proper name, not a nickname. Your social security number (SSN) and your name should match the number and name on your social security card. If there are differences, you should update your information with the Social Security Administration.

4-7. Write in your permanent mailing address. All mail will be sent to this address. Don't use the address of the financial aid office or any other office. Use the state/country abbreviations list below.

**State/Country Abbreviations**

AL Alabama	IA Iowa	NC North Carolina	WI Wisconsin
AK Alaska	KS Kansas	ND North Dakota	WY Wyoming
AS American Samoa	KY Kentucky	OH Ohio	Military:
AZ Arizona	LA Louisiana	OK Oklahoma	AA
AR Arkansas	ME Maine	OR Oregon	AE
CA California	MD Maryland	PA Pennsylvania	AP
CO Colorado	MA Massachusetts	PR Puerto Rico	CN Canada
CT Connecticut	MI Michigan	RI Rhode Island	FM Federated States of
DE Delaware	MN Minnesota	SC South Carolina	Micronesia
DC District of Columbia	MS Mississippi	SD South Dakota	MH Marshall Islands
FL Florida	MO Missouri	TN Tennessee	MP Northern Mariana Islands
GA Georgia	MT Montana	TX Texas	PW Palau
GU Guam	NE Nebraska	UT Utah	
HI Hawaii	NV Nevada	VT Vermont	
ID Idaho	NH New Hampshire	VI Virgin Islands	
IL Illinois	NJ New Jersey	VA Virginia	
IN Indiana	NM New Mexico	WA Washington	
	NY New York	WV West Virginia	

If your place of residence is not on the list above, leave the state abbreviation blank and write the name of your city and territory or country in the space for city.

8. You must write in your social security number (SSN) to be considered for Federal student aid. If you don't write your SSN, this form will be returned unprocessed. The Privacy Act statement on page 12 gives information about your protections and how your social security number can be used.

11. Write in the two-letter abbreviation for your current state/country of legal residence. Use the state/country abbreviations list above. Residency (domicile) is your true, fixed, and permanent home. If you moved into a state for the sole purpose of attending a college, don't count that state as your legal residence.

12. Write in the date you became a legal resident of the state you listed in question 11. If you've always lived in the state, you may use your date of birth as the date of legal residence. If you don't know the exact day that you became a legal resident, provide the month and year.

13-14. Write in your driver's license number, starting with the abbreviation of the state in which the license was issued (use the state/country abbreviation list above). If you have a driver's license, you must provide the license number if you previously received, or plan to apply for, a Federal student loan. If you don't have a driver's license, write "None" in the space for license number.

15-16. If you are a U.S. citizen (or U.S. national), fill in the first oval and go on to question 17. Fill in the second oval and write in your eight- or nine-digit Alien Registration Number if you are one of the following:

## DRAFT

- U.S. permanent resident, and you have an Alien Registration Receipt Card (I-151 or I-551).
- Other eligible noncitizen with an Arrival-Departure Record (I-94) from the U.S. Immigration and Naturalization Service showing any one of the following designations: (a) "Refugee," (b) "Asylum Granted," (c) "Indefinite Parole" and/or "Humanitarian Parole," (d) "Cuban-Haitian Entrant."
- Other eligible noncitizen with a Temporary Resident Card (I-688).

If you cannot fill in the first or second oval, you must fill in the third oval. If you are in the U.S. on only an F1 or F2 student visa, only a J1 or J2 exchange visitor visa, or only a G series visa (pertaining to international organizations), you must fill in the third oval. You may be eligible for some state or college aid.

18. If you, the student, are currently married, separated, or widowed, write in the date you married, became separated, or were widowed. If you were never married, leave this question blank.

If your current marital status is "divorced," write in the date you separated or were divorced, whichever was earlier.

19. Answer "No" if you do not have a bachelor's degree from a college and you will not have one by July 1, 1996. Answer "Yes" if you already have a bachelor's degree or will have one by July 1, 1996. Also answer "Yes" if you have or will have a degree from a college in another country that is equal to a bachelor's degree.

## Section B: Education Background

20–21. Write in one date: either the date that you graduated or expect to graduate from high school, or the date that you earned or expect to earn a certificate or diploma through the General Education Development (GED) program.

Leave both dates blank if you will not graduate from high school and will not receive a GED certificate.

**Pennsylvania residents only.** Leave both dates blank if you received a military GED, a foreign high school diploma, a home study diploma, or a correspondence school diploma.

22–23. These questions are for state scholarship purposes only and do not affect your eligibility for Federal student aid. For these questions only, "father" and "mother" mean your birth parents, or your adoptive parents, or legal guardian—not your foster parents or stepparents. Fill in one oval for your father's highest educational level or grade level completed, and one oval for your mother's highest educational level or grade level completed.

## Section C: Your Plans

24–28. Fill in your expected enrollment status for the 1996-97 school year. If you are applying to more than one college, fill in the enrollment status and school terms that apply to the college you are most likely to attend. (See question 92.)

If you will be attending a nonterm or clock-hour institution, fill in your enrollment status and the term or terms that most closely match the time you will be enrolled.

## SAMPLE

29. Write in the two-digit number for your expected course of study, using the "Course of Study Code List" on this page. For example, if your course of study is bookkeeping, write in "04" for business management and administrative services. If your course of study is vocational/technical, such as mechanical or electrical repair, write in "25." If your course of study is not listed or you are undecided, write in "27."

### Course of Study Code List

01 Agriculture	17 Mathematics (includes statistics)
02 Architecture	18 Nursing
03 Biological sciences (biology, zoology, etc.)	19 Personal and miscellaneous services (cosmetology, culinary arts, massage, etc.)
04 Business management and administrative services (mktg., mgmt., bkcp., acct., etc.)	20 Philosophy
05 Communications (journalism, advertising, etc.)	21 Physical sciences (chemistry, physics, geology, etc.)
06 Computer sciences	22 Social sciences and history (includes economics, geography, political science)
07 Education	23 Psychology
08 Engineering	24 Theological studies and religious vocations
09 English language/literature	25 Vocational/technical (construction, mechanical, transportation, etc.)
10 Fine and performing arts	26 Wildlife, forestry, or marine sciences
11 Foreign languages/literatures	27 Other/undecided
12 Health profession (except nursing)	
13 Home economics	
14 Law	
15 Liberal arts	
16 Library sciences	

30–31. Write in the one-digit code for your expected degree or certificate, using the "Degree/Certificate Code List" below. If your degree or certificate does not fit any of these categories, or if you are undecided, enter "8." Then write the date that you expect to receive your degree or certificate. If your expected completion date will be the year 2000 or later, write the last two digits only, for example, write "00" for 2000, or "04" for 2004.

### Degree/Certificate Code List

- 1 Certificate or diploma for completing an occupational, technical, or educational program (less than two-year program)
- 2 Certificate or diploma for completing an occupational, technical, or educational program (at least two-year program)
- 3 Associate degree (at least two-year degree)
- 4 1st bachelor's degree
- 5 2nd bachelor's degree
- 6 Teaching credential program (non-degree program)
- 7 Graduate or professional degree
- 8 Other/undecided

32. Fill in your grade level in college from July 1, 1996 through June 30, 1997. If you are currently a senior in high school or will be a first-time entering freshman, fill in "1st year/never attended college." "Grade level" does not mean the number of years you have attended college, but your grade level in regard to completing your degree/certificate. A student who is not enrolled full-time will require more years to reach the same grade level as a full-time student.

33–35. Answer "Yes" or "No" to indicate whether you are interested in student employment (for example, work-study programs) or a student loan. Your parents, not you, the student, would apply for the PLUS loan if they are interested in applying for a parent loan. Answering "Yes" does not obligate you or your parents to accept a loan or other student aid, nor does it guarantee that you will receive aid.

## DRAFT

36. Answer "Yes" if you are (or were) in college and you plan to attend that same college in 1996-97. By "that same college" we mean the college you are attending now or the most recent college you have attended. If you are still in high school and are (or were) enrolled in college, leave this question blank. Also, leave this question blank if you have never previously attended college.

37. Report the number of people in your household for whom you, the student, will pay dependent care expenses while you are in college, for example, day-care or baby-sitting expenses.

38. Write in the amount of veterans education benefits you, the student, expect to receive per month from July 1, 1996 through June 30, 1997. The benefits you should write in include, but are not limited to, these programs: Selective Reserve Pay (Montgomery GI Bill-Chapter 106), New GI Bill (Montgomery GI Bill-Chapter 30), Post-Vietnam Veterans Educational Assistance Program [VEAP] (Chapter 32), Vocational Rehabilitation (Chapter 31), REPS (Restored Entitlement Benefits for Survivors-Section 156), Educational Assistance Program (Chapter 107), and Dependents Educational Assistance Program (Chapter 35).

Don't include Death Pension or Dependency & Indemnity Compensation (DIC).

39. Write in the number of months from July 1, 1996 through June 30, 1997 that you expect to receive veterans education benefits.

Section D: Student Status

Answer each of the questions numbered 40 through 45 with either "Yes" or "No." A blank counts as "No."

40. Fill in the correct oval. (See your answer to question 9.)

- 41. Answer "Yes" if you:
• have engaged in active service in the U.S. Army, Navy, Air Force, Marines, or Coast Guard; or were a cadet or midshipman at one of the service academies; and were released under a condition other than dishonorable; or
• are not a veteran now but will be one by June 30, 1997.

- Answer "No" if you:
• never served in the U.S. Armed Forces,
• are only an ROTC student,
• are currently a cadet or midshipman at a service academy,
• are only a National Guard or Reserves enlistee and were not activated for duty, or
• are currently serving in the U.S. Armed Forces and will continue to serve through June 30, 1997.

42. Answer "Yes" if you will be enrolled in a graduate or professional program (a course of study beyond a bachelor's degree) in the first term of 1996-97. If your graduate status will change during the school year, see your financial aid administrator.

43. Answer "Yes" if you are legally married as of today. Also, answer "Yes" if you are separated. "Married" does not mean living together unless your state recognizes your relationship as a common law marriage.

44. Answer "Yes" if (1) you are currently a ward of the court or a ward of the court until age 18, or (2) both your parents are dead and you don't have an adoptive parent or legal guardian. For a definition of "legal guardian," see page 9.

45. Answer "Yes" if you have any children who get more than half of their support from you. Also answer "Yes" if other people (not your spouse) live with you and get more than half of their support from you and will continue to get that support during the 1996-97 school year.

Important Instructions for Sections E, F, and H

The question numbers on this form correspond with the information that will be printed on your Student Aid Report (SAR).

If you answered "Yes" to any of the questions in Section D, you (and your spouse if you are married) must fill out both the WHITE areas and the GRAY areas. Questions that you, the student (and your spouse), must complete are numbered 1-47, 53-64, and 92-110; in some cases, you must also complete questions 77-83 about your (and your spouse's) assets.

If you answered "No" to every one of the questions in Section D, then you must fill out the WHITE areas (about yourself) and the RED areas about your parents. Questions that you and your parents must complete are numbered 1-45, 48-76, and 92-110; in some cases you must also complete questions 77-91 about your and your parents' assets.

ATTENTION: GRADUATE HEALTH PROFESSION STUDENTS
If you are applying for Federal student aid from graduate programs authorized under Title VII of the Public Health Service Act, you must give information about your parents, even if you answered "Yes" to one of the questions in Section D. If you are unsure about the requirements, check with the financial aid administrator at the college you plan to attend. If your college requires parental information, complete the RED, GRAY, and WHITE areas and make sure that at least one parent signs this form.

Section E: Household Information

Student (& Spouse) Household Information - GRAY Area

Fill out this section with information about yourself (and your spouse). If you are divorced, separated, or widowed, don't include information about your spouse.

46. Write in the number of people in your household that you will support between July 1, 1996 and June 30, 1997. Include yourself and your spouse. Include your children if they get more than half their support from you. Include other people only if they meet the following criteria: 1) they now live with you, and 2) they now get more than half their support from you and they will continue to get this support between July 1, 1996 and June 30, 1997. (Support includes money, gifts, loans, housing, food, clothes, car, medical and dental care, payment of college costs, etc.)

47. Write in the number of people from question 46, including yourself, who will be college students between July 1, 1996 and June 30, 1997. Always include yourself, even if you will be enrolled for less than half-time. Your spouse and other family members may be counted as college students only if they are enrolling (or are accepted for enrollment) for at least 6 credit hours in at least one term, or at least 12 clock hours per week. To be counted here, a college student must be working towards a degree or certificate leading to a recognized education credential at a college that is eligible to participate in any of the Federal student aid programs.

**Parent(s) Household Information - RED Areas**

Read the descriptions that follow. Fill in all the ovals that apply to you and follow the instructions.

**Your parents are both living and married to each other.** Answer the questions on the rest of this form about them.

**You have a legal guardian.** Answer the questions on the rest of this form about your legal guardian. For a definition of "legal guardian" see page 9.

**Your parents have divorced or separated.** Answer the questions on the rest of the form about the parent you lived with most in the last 12 months. If you did not live with one parent more than with the other, answer in terms of the parent who provided the most *financial* support during the last 12 months, or during the most recent calendar year that you actually were supported by a parent. *(Support includes money, gifts, loans, housing, food, clothes, car, medical and dental care, payment of college costs, etc.)*

**Your parent is widowed or single.** Answer the questions on the rest of this form about that parent.

**You have a stepparent.** If the parent that you counted above is married or remarried as of today, you must include information about your stepparent (even if they were not married in 1995).

If you are giving information about your stepparent, note that whenever we say "parents" on the rest of this form, we also mean your stepparent.

48. Show the current marital status of the people that you give information about on this form. For example, if you give information about your mother and stepfather, fill in the oval that says "married," because your mother and stepfather are married.

49. Write in the two-letter abbreviation for your parent(s)' current state/country of legal residence. See the list of abbreviations on page 2. Residency (domicile) is your parents' true, fixed, and permanent home. If your parents are residing in a state for the sole purpose of attending a college, don't count that state as their legal residence. If your parents are separated or divorced, use the state/country of legal residence for the parent whose information is reported on this form.

50. Write in the date your parent(s) became a legal resident(s) of the state you listed in question 49. If your parents became legal residents of the state at different times, use the date for the parent who has been a resident the longest. If your parents are divorced or separated, use the date for the parent whose information is reported on this form.

51. Write in the number of people in your household that your parents will support between July 1, 1996 and June 30, 1997. Include your parents and yourself. Include your parents' other children if they get more than half their support from your parents, or if they would be required to provide parental information when applying for Title IV Federal student aid in 1996-97. Include other people only if they now live with and get more than half their support from your parents and will continue to do so between July 1, 1996 and June 30, 1997.

*(Support includes money, gifts, loans, housing, food, clothes, car, medical and dental care, payment of college costs, etc.)*

52. Write in the number of people from question 51 who will be college students between July 1, 1996 and June 30, 1997. Always count yourself, even if you will be enrolled for less than half-time. Your parents and other family members may be counted as college students only if they are enrolling (or are accepted for enrollment) for at least 6 credit hours in at least one term, or at least 12 clock hours per week. To be counted here, a college student must be working towards a degree or certificate leading to a recognized education credential at a college that is eligible to participate in any of the Federal student aid programs.

**Section F: 1995 Income, Earnings, and Benefits**

**Tax filing information for Section F**

**Won't file a tax return.** Even if you, your spouse, and/or your parents don't file an income tax return for 1995, you will need to know earnings for the year. Use your W-2 Forms and other records to answer the questions here.

**Tax return not completed - how estimated taxes are handled.** We recommend that you complete your income tax return before filling out this application. However, it may be necessary to estimate tax information to meet state and college deadlines. When your application is compared with the official 1995 IRS Form 1040, 1040A, or 1040EZ that you and your family file, the financial information must agree. If there are differences, you will need to correct the information and send it back to the U.S. Department of Education. This could mean a delay in getting your student financial aid.

**IRS Form 1040 filers.** In certain instances, you, your spouse, or your parents may have filed a 1995 IRS Form 1040, even though you were not required to file a Form 1040. Tax preparers often file a Form 1040 or an electronic 1040 on behalf of the tax filer, even though that person's income and tax filing circumstances would allow him or her to file a 1040A or 1040EZ. If you are sure that you, your spouse, or your parents are not required to file a Form 1040, then fill in either oval "A" or oval "C" in question 53 and/or question 65 to indicate eligibility to file a 1040A or 1040EZ.

**IRS 1040TEL filers.** If you filed or will file a 1040TEL (tax filing by telephone, available in some states), fill in the oval for either the completed or estimated 1995 IRS Form 1040EZ in questions 53 and/or 65.

**Puerto Rico Tax Filers, Foreign Tax Return Filers, and Native Americans, see page 9.**

In Section F, if the instructions tell you to skip a question, leave it blank. If your answer to a question is "none" or "zero," put a zero in the answer space. Don't leave it blank or use dashes. For example:

\$  .00

**53. 1995 U.S. income tax form.** Fill in only one oval to indicate which IRS form was filed or will be filed for 1995.

If you are currently divorced, separated, or widowed, but you filed (or will file) a joint tax return for 1995, give only your portion of the exemptions, income, and taxes paid asked for in questions 54 through 64.

If you are married and you and your spouse filed (or will file) separate tax returns for 1995, be sure to include both your and your spouse's exemptions and income in questions 54 through 64, even if you were not married in 1995.

Use the tax return to fill out questions 54 through 63.

**54. Total number of exemptions for 1995.** Write in the number from Form 1040-line 6e or 1040A-line 6e. If you (and your spouse) used the 1040EZ and answered "Yes" on Form 1040EZ-line 5, use the 1040EZ worksheet (line F) to determine the number of exemptions (\$2500 equals 1 exemption). If you answered "No," enter "01" if you are single or "02" if you are married.

**55. Adjusted Gross Income (AGI) for 1995.** Write in the amount from IRS Form 1040-line 31, Form 1040A-line 16, or Form 1040EZ-line 4.

Use Worksheet #1 on page 11 to answer question 55 if you don't have a 1995 tax form but will be filing one.

**56. U.S. Income tax paid for 1995.** Write in the amount from IRS Form 1040-line 46, Form 1040A-line 25, or Form 1040EZ-line 10. Make sure this amount doesn't include any FICA, self-employment, or Other Taxes from Form 1040. Don't copy the amount of "Federal income tax withheld" from a W-2 Form.

**57-58. Income earned from work in 1995.**

If you filed or will file a tax return, include the "wages, salaries, tips, etc." from your (and your spouse's) Form 1040-line 7, 1040A-line 7, or 1040EZ-line 1. If you (and your spouse) filed a joint return, report your and your spouse's earnings separately. If you (and your spouse) own a business or farm, also add in the numbers from Form 1040-lines 12 and 18.

If you are not a tax filer, include your (and your spouse's) earnings from work in 1995. Add up the earnings from your (and your spouse's) W-2 Forms and any other earnings from work that are not included on the W-2 Forms.

**59-63. Untaxed income and benefits for 1995.** Don't include benefits reported in questions 71 through 75 of the Parent(s) column.

**59. Earned Income Credit.** Report the total amount of your (and your spouse's) Earned Income Credit from Form 1040-line 57, Form 1040A-line 29c, or Form 1040EZ-line 8.

**60. Social security benefits for 1995.** Write in the amount of untaxed social security benefits (including Supplemental Security Income) that you (and your spouse) got in 1995. Don't include any benefits reported in question 55. Don't report monthly amounts; write in the total for 1995. Be sure to include amounts that you got for your children. Don't include amounts your parents received for you, which should be reported in questions 72 through 75.

**61. Aid to Families with Dependent Children (AFDC or ADC) for 1995.** Don't report monthly amounts; write in the total for 1995. Don't report social security benefits here.

**62. Child support received for all children.** Don't report monthly amounts; write in the total received for 1995.

**63. Other untaxed income and benefits for 1995.** Use Worksheet #2 on page 11. Add up your (and your spouse's) other untaxed income and benefits for 1995. Be sure to include your (and your spouse's) deductible IRA/Keogh payments, if any.

**64. 1995 Total from Worksheet #3.** Enter the total amount from Worksheet #3 on page 12. Write in "0" if the worksheet items don't apply to you (and your spouse).

### Parent(s) 1995 Income, Earnings, and Benefits

**65. 1995 U.S. income tax form.** Fill in only one oval to indicate which IRS form was filed or will be filed for 1995.

If you are giving information for only one parent and that parent filed (or will file) a joint tax return for 1995, give only that parent's portion of the exemptions, income, and taxes paid asked for in questions 66 through 75.

If your parents are married and they filed (or will file) separate tax returns for 1995, be sure to include both parents' exemptions and income in questions 66 through 75.

Use the tax return to fill out questions 66 through 75.

**66. Total number of exemptions for 1995.** Write in the number from Form 1040-line 6e or 1040A-line 6e. If your parent(s) used the 1040EZ and answered "Yes" on Form 1040EZ-line 5, use the 1040EZ worksheet (line F) to determine the number of exemptions (\$2500 equals 1 exemption). If your parent(s) answered "No," enter "01" if your parent is single or "02" if your parents are married.

**67. Adjusted Gross Income (AGI) for 1995.** Write in the amount from IRS Form 1040-line 31, Form 1040A-line 16, or Form 1040EZ-line 4.

Use Worksheet #1 on page 11 to answer question 66 if your parents don't have a 1995 tax form but will be filing one.

**68. U.S. income tax paid for 1995.** Write in the amount from IRS Form 1040-line 46, Form 1040A-line 25, or Form 1040EZ-line 10. Make sure this amount doesn't include any FICA, self-employment, or Other Taxes from Form 1040. Don't copy the amount of "Federal income tax withheld" from a W-2 Form.

**69-70. Income earned from work in 1995.**

If your parent(s) filed or will file a tax return, include the "wages, salaries, tips, etc." from your parents' Form 1040-line 7, 1040A-line 7, or 1040EZ-line 1. If your parents filed a joint return, report your father's and mother's earnings separately. If your parents own a business or farm, also add in the numbers from Form 1040-lines 12 and 18.

If your parent(s) are not tax filers, write in your parents' earnings from work in 1995. Add up the earnings from your parents' W-2 Forms and any other earnings from work that are not included on the W-2 Forms.

WORKSHEET B—SIMPLIFIED NEEDS TEST

- 1. Did or will you and/or your parent(s) (both parents, if they are married) file a 1995 IRS Form 1040, and you and/or your parent(s) were not and are not eligible to file a 1995 1040A or 1040EZ?

If "Yes"—fill out Section G, both WHITE and RED areas, and the rest of this form.

If "No"—fill out the rest of this Worksheet.

Income from the PARENT(S) column only:

- 2. Question 67 \$ \_\_\_\_\_ .00 OR
3. Question 69 and 70 \$ \_\_\_\_\_ .00 (only if you left question 67 blank)

If the answer from either question 2 or 3 is less than \$50,000, you do not have to fill out Section G. Go on to Section H.

If the answer from either question 2 or 3 is \$50,000 or more, complete Section G and the rest of this form.

Section G: Asset Information

Student (& Spouse) Asset Information

You must give information about your (and your spouse's) assets in Section G. If you are divorced or separated and you and your spouse have jointly owned assets, give only your portion of the assets and debts. Be sure to give information about assets held in trust for you (and your spouse).

If you (and your spouse) have assets owned jointly with someone else—such as a business or farm—give only your (and your spouse's) portion of the assets and debts.

In Section G, don't include:

- a home, if it is the principal place of residence,
• a family farm, as defined in question 82,
• personal or consumer loans, or any debts that are not related to the assets listed,
• the value of life insurance policies and retirement plans (pension funds, annuities, IRAs, Keogh Plans, etc.), or
• student financial aid.

77. Cash, savings, and checking accounts. Include the current balance of checking or savings accounts unless you (and your spouse) do not have access to the money because the state declared a bank emergency due to the insolvency of a private deposit insurance fund.

78. Other real estate and investments value. If you (and/or your spouse) own other real estate or have investments, write in how much they are worth today. Other real estate includes rental property, land, and second or summer homes. Include the value of portions of multifamily dwellings that are not the family's principal residence. Investments include trust funds, money market funds, mutual funds, certificates of deposit, stocks, bonds, other securities, installment and land sale contracts (including mortgages held), commodities, precious and strategic metals, etc. Don't include your home.

79. Other real estate and investments debt. Write in how much you (and/or your spouse) owe on other real estate and investments.

75. Untaxed income and benefits for 1995.

71. Earned Income Credit. Report the total amount of your parents' Earned Income Credit from Form 1040—line 57, Form 1040A—line 29c, or Form 1040EZ—line 8.

72. Social security benefits for 1995. Write in the amount of untaxed social security benefits (including Supplemental Security Income) that your parents got in 1995. Don't include any benefits reported in question 67. Don't report monthly amounts; write in the total for 1995. Be sure to include the amounts that your parents got for you and their other children.

73. Aid to Families with Dependent Children (AFDC or ADC) for 1995. Don't report monthly amounts; write in the total for 1995. Don't report social security benefits here.

74. Child support received for all children. Include the student. Don't report monthly amounts; write in the total received for 1995.

75. Other untaxed income and benefits for 1995. Use Worksheet #2 on page 11. Add up your parents' other untaxed income and benefits for 1995. Be sure to include your parents' deductible IRA/Keogh payments, if any.

76. 1995 Total from Worksheet #3. Enter the total amount from Worksheet #3 on page 12. Write in "0" if the worksheet doesn't apply to your parents.

ATTENTION: COMPLETE WORKSHEET A IF YOU ARE FILLING OUT THE GRAY AND WHITE AREAS OR WORKSHEET B IF YOU ARE FILLING OUT THE RED AND WHITE AREAS TO SEE IF YOU NEED TO FILL OUT SECTION G.

WORKSHEET A—SIMPLIFIED NEEDS TEST

- 1. Did or will you (and your spouse) file a 1995 IRS Form 1040, and you (and/or your spouse) were not and are not eligible to file a 1995 1040A or 1040EZ?

If "Yes"—fill out Section G, WHITE area, and the rest of this form.

If "No"—fill out the rest of this Worksheet.

Income from the STUDENT (& SPOUSE) column:

- 2. Question 55 \$ \_\_\_\_\_ .00 OR
3. Questions 57 and 58 \$ \_\_\_\_\_ .00 (only if you left question 55 blank)

If the answer from either question 2 or 3 is less than \$50,000, you do not have to fill out Section G. Go on to Section H.

If the answer from either question 2 or 3 is \$50,000 or more, complete Section G and the rest of this form.

**80. Business value.** If you (and/or your spouse) own a business, write in how much the business is worth today. Include the market value of land, buildings, machinery, equipment, inventories, etc.

**81. Business debt.** Write in what you (and/or your spouse) owe on the business. Include only the present mortgage and related debts for which the business was used as collateral.

**82. Investment farm value.** If you (and/or your spouse) own an investment farm, write in the value today. Include the market value of land, buildings, machinery, equipment, livestock, inventories, etc. Don't include a family farm if it is your principal place of residence and you claimed on Schedule F of the tax return that you "materially participated in the farm's operation."

**83. Investment farm debt.** Write in what you (and/or your spouse) owe on the investment farm. Include only the present mortgage and related debts for which the farm was used as collateral.

#### Parent(s) Asset Information

You must give information about your parents' assets in Section G. If you are giving information for only one parent and that parent has jointly owned assets, give only that parent's portion of the assets and debts.

If your parents have assets owned jointly with someone else—such as a business or farm—give only your parents' portion of the assets and debts.

In Section G, don't include:

- a home, if it is the principal place of residence,
- a family farm, as defined in question 90,
- personal or consumer loans, or any debts that are not related to the assets listed,
- the value of life insurance policies and retirement plans (pension funds, annuities, IRAs, Keogh Plans, etc.), or
- student financial aid.

**84.** Write in the age of the older parent for whom you are giving information on this form. Refer to page 5 to see whose information you should be reporting on this form.

**85. Cash, savings, and checking accounts.** Include the current balance of checking or savings accounts unless your parents do not have access to the money because the state declared a bank emergency due to the insolvency of a private deposit insurance fund.

**86. Other real estate and investments value.** If your parents own other real estate or have investments, write in how much they are worth today. Other real estate includes rental property, land, and second or summer homes. Include the value of portions of multifamily dwellings that are not the family's principal residence. Investments include trust funds, money market funds, mutual funds, certificates of deposit, stocks, bonds, other securities, installment and land sale contracts (including mortgages held), commodities, precious and strategic metals, etc. Don't include your parents' home.

**Other real estate and investments debt.** Write in how much your parents owe on other real estate and investments.

**88. Business value.** If your parents own a business, write in how much the business is worth today. Include the market value of land, buildings, machinery, equipment, inventories, etc.

**89. Business debt.** Write in what your parents owe on the business. Include only the present mortgage and related debts for which the business was used as collateral.

**90. Investment farm value.** If your parents own an investment farm, write in the value of the farm today. Include the market value of land, buildings, machinery, equipment, livestock, inventories, etc. Don't include a family farm if it is the principal place of residence and your parents claimed on Schedule F of the tax return that they "materially participated in the farm's operation."

**91. Investment farm debt.** Write in what your parents owe on the investment farm. Include only the present mortgage and related debts for which the farm was used as collateral.

#### Section H: Releases and Signatures

**92–103.** By answering questions 92 through 103, and signing this form, you give permission to the U.S. Department of Education to provide information from your application to the college(s) that you list in Section H. You also agree that such information is deemed to incorporate by reference the Statement of Educational Purpose on page 4 of the application. Colleges that receive information electronically or on tape or cartridge will get your application information automatically. Colleges use this information to help estimate the amount of your financial aid package. Don't write in the name of a college if you don't want it to receive your application information. You may leave questions 92-103 blank if you don't know which colleges you are interested in, but if you do, we will not send your application information to any colleges.

Your application may be processed faster if you write in the Title IV Code and the name of the college only. Check with your financial aid office, your high school counselor, or your public library for the Title IV Code list provided by the U.S. Department of Education. The Title IV Code is always a ten-character code that begins with "0" (zero), "G," "B," or "E."

If you can't get the Title IV Code, write in the complete name, address, city, and state of the college(s) that you are interested in attending. Write clearly. It is very important to write the correct city and state or Title IV Code so that your college can be identified. If a college is a branch campus, include the complete name of the branch. Also, indicate if it is a specific part of a university, such as the law school.

For each college, select the housing code number that best describes the type of housing you expect to live in if you attend that particular college. Write the housing code number on the line for that college. In question 92, write in the name and address of the college that you are most likely to attend. (Note: States often consider the college you write on the first line in determining their awards for state aid.) In question 93, write in your expected housing code for that college. Continue in the same way for question 94 if you are applying to more than one college. Don't write more than one college and housing code on each line.

**DRAFT**

**SAMPLE**

**DRAFT**

To have information sent to more than six colleges. About four weeks after mailing your application, you will receive a Student Aid Report (SAR). You can take or send a copy of your SAR to a new college. You can also write a letter to a FAFSA processor requesting that information be sent to new colleges. Or, after you receive your SAR, you can write in new college names/addresses or Title IV codes on the SAR, and return it to the address printed on the SAR.

**104.** Answer "No" only if you do not give permission to send information from this form to the financial aid agencies in your state and to the state agencies of any college(s) you listed in Section H. Some state agencies use this information to help decide whether you will get a state award and to check if you reported correct information on your state student aid application. Also, they may use it to help in the processing of your application for a Federal student loan, if you are eligible. If you answer "No," any state aid you might be eligible for may be denied or delayed, but it will have no effect on your Federal student aid.

By allowing us to send information to your state financial aid agency, you are giving permission to the verification of any statement made on this form. Also, you are giving permission to the state financial aid agency to which information is being sent to obtain income tax information for all persons required to report income and for all periods reported on this form.

**Maryland residents only.** You are giving permission to have your information sent to your state senator and delegates so that you may be considered for scholarships under their programs, unless you answer "No."

**Be sure to read INFORMATION ON THE PRIVACY ACT AND USE OF YOUR SOCIAL SECURITY NUMBER on page 12.**

**105. Selective Service Registration.** In order to receive Federal student aid, you must be registered with Selective Service if you are a male who is at least 18 years old and born after December 31, 1959. Answer "Yes" only if you are a male and are 18 through 25 years of age, have not yet registered with Selective Service, and give Selective Service permission to register you. If you believe that you are not required to be registered, call the Selective Service office at 1-847-688-6888 for information regarding exemptions.

**106-107. Read and sign.** You must sign and date this form. If you don't, it will be returned unprocessed. If you are married, your spouse should also sign this form. If you filled out the RED and the WHITE areas, at least one of your parents must sign this form. Everyone signing this form is certifying that all information on the form is correct and that everyone is willing to provide documents to prove that the information is correct. Such documents may include U.S. or state tax returns and the worksheets in this instruction book. Don't sign, date, or mail your FAFSA before January 1, 1996. If you do, the form will be returned unprocessed.

**Section I: Preparer's Use Only**

**108-110. Preparers.** If someone other than you, your spouse, or your parents completed this form on your behalf, especially if the person charged a fee for assisting you, the law requires the preparer to fill in Section I. A "preparer" is anyone who wrote the answers or told you what to write. The preparer must write their name and the company name and address (or home

address, if self-employed). Either the preparer's social security number, or the company's Employer Identification Number (EIN) as assigned by the Internal Revenue Service (IRS), is also required. The preparer must sign and date the form, certifying that the information is correct and complete. An original signature is required, although the preparer may use a pre-printed address label or a rubber stamp to fill in address information.

**SENDING IN YOUR FORM**

Double-check your form to make sure it is complete and accurate. Be sure it has the necessary signatures. Put the form in the envelope provided. Don't send money; this is a free application. Don't put letters, tax forms, worksheets, or any extra materials in the envelope. They will be destroyed.

**SPECIAL INSTRUCTIONS/DEFINITIONS**

**Puerto Rico Tax Return.** If you, your spouse, and/or your parents filed (or will file) a 1995 Puerto Rico tax return, or were not required to file a Puerto Rico tax return according to the tax code of Puerto Rico, follow the instructions below:

- In question 53 and/or question 65, fill in oval "A" if a Puerto Rico tax return has been filed; oval "C" if a Puerto Rico tax return will be filed; or oval "E" if you, your spouse, and/or your parents were not required to file a Puerto Rico tax return according to the tax code of Puerto Rico.
- Use the information from that tax return to fill out this form.

**Foreign Tax Return.** If you and your spouse, or your parents, won't be filing a U.S. income tax return in 1995, follow the instructions below:

- In question 53 and/or question 65, fill in oval "B" if a foreign tax return has been filed, or oval "D" if a foreign tax return will be filed.
- Use the information from that tax return to fill out this form.
- Convert all figures to U.S. dollars, using the exchange rate that is in effect today, and
- Fill out Section G, Asset Information.

**Legal Guardian.** A legal guardian is a person who is appointed by a court to be your legal guardian in a legal relationship that will continue after June 30, 1997, and who is directed by a court to support you with his or her own financial resources.

**Native American.** If you are a Native American, report the amount of income and assets over \$2,000 per individual payment that you (and your spouse) or your parents received in 1995 from the Per Capita Act or the Distribution of Judgment Funds Act. If \$2,000 or less per individual payment was received from either of these Acts, don't report it. Don't report funds received as an award under the Alaska Native Claims Settlement Act or the Maine Indian Claims Settlement Act. Also, don't report any assets received from the Alaska Native Claims Settlement Act.

**Citizens of the Marshall Islands, Federated States of Micronesia, and Palau.** If you do not have a social security number (SSN), contact your financial aid administrator before you mail in this form. Also ask your financial aid administrator how to answer question 15 about your citizenship status.

**BEST COPY AVAILABLE**

**WHAT HAPPENS NEXT?**

Need more information on Federal student aid? You can get more information from *The Student Guide: Financial Aid from the U.S. Department of Education*. To get a free copy, write to:  
 Federal Student Aid Information Center  
 P.O. Box 84  
 Washington, DC 20044

The U.S. Department of Education also has a toll-free number to answer questions about Federal student aid programs. This number is 1-800-4-FED AID (1-800-433-3243).

If you are hearing-impaired and have a TDD machine, you may call toll-free TDD 1-800-730-8913.

What happens after I mail in my form? Within four weeks, the U.S. Department of Education will send you a Student Aid Report (SAR). On the SAR will be either a request for further information or a number called an Expected Family Contribution (EFC). We use a formula established by law to figure the EFC from the information you give us. Your college uses the EFC to determine the amount of your Federal grant, loan, or work-study award, if you are eligible.

Your college or the U.S. Department of Education may ask you to prove that the information you gave on your application is true. Be sure to make a copy of your application form before mailing it.

What if I don't get a SAR or I need another copy of my SAR? If you don't get a SAR within four weeks, call this Federal student aid information number, 1-319-337-5665. You can find out if your application has been processed, or you may request duplicate copies of your SAR.

What if my situation changes? Some questions ask you to make projections, for example, about your family status for the coming year. If your answers to these questions change, wait until you receive your SAR, then check with your financial aid administrator. The income and expense information reported on this form must be accurate for the past year (1995), not for the coming year. If your financial situation changes, check with your financial aid administrator.

How long does it take to complete this application? The time required to complete this information collection is estimated to vary from one hour to one hour and thirty minutes, including the time to review instructions, search existing data resources, gather and maintain the data needed, and complete and review the information collection. If you have any comments concerning the accuracy of the time estimate(s) or suggestions for improving this form, please write to: U.S. Department of Education, Washington, DC 20202-4651. If you have any comments or concerns regarding the status of your individual submission of this form, write directly to: Application and Pell Processing Systems Division, U.S. Department of Education, 600 Independence Avenue, S.W., Washington, DC 20202.

**INFORMATION ON THE PRIVACY ACT AND USE OF YOUR SOCIAL SECURITY NUMBER**

The Privacy Act of 1974 requires that each Federal agency that asks for your social security number or other information must tell you the following:

1. Its legal right to ask for the information and whether the law says you must give it.
2. What purpose the agency has in asking for it and how it will be used.
3. What could happen if you do not give it.

You must give your social security number (SSN) to apply for Federal student financial aid. The U.S. Department of Education's legal right under the Title IV programs to require that you provide us with your SSN is based on Section 484(a)(4)(B) of the Higher Education Act of 1965, as amended. The SSN is used under the Federal Pell Grant, Federal Supplemental Educational Opportunity Grant, and Federal Work-Study programs in recording information about your college attendance and progress, and in making sure that you have received your money. The SSN is also used under the Federal Family Education Loan, Federal Direct Student Loan, and Federal Perkins Loan programs to identify the applicant, to determine program eligibility and benefits, and to permit servicing and collecting of the loans.

If you are applying for Federal student aid only, you must fill out everything except questions 12, 18, 20-21, 22-23, 24-28, 29, 30, 31, 32, 50, 92-103, 104, and 105. If you wish to be considered for state student aid, you must fill out all of the questions, and do not answer "No" to question 104. The authority to request all other information (except the SSN) is based on sections 474, 475, 476, 477, 479, 480, and 483 of the Higher Education Act of 1965, as amended. This information is used to determine the amount of Federal student aid for which you may be qualified.

The information which you supplied may be disclosed to third parties that the Department has authorized to assist in administering Federal student aid programs. This disclosure may include private firms that the Department contracts with for the purpose of collating, analyzing, totalling or refining records in the system and who are required to maintain safeguards under the Privacy Act. This may also be accomplished through computer matching programs with other Federal agencies for verification of information as to eligibility for benefit programs, debt collection and the prevention of fraud, waste, and abuse. For example, such computer matching programs include the ones operated with the Selective Service System, the Social Security

Administration, and the Immigration and Naturalization Service, and in cooperation with the Department of Justice to enforce Section 5301 of the Anti-Drug Abuse Act.

We will provide your name, address, social security number, date of birth, expected family contribution number, student status, and state of legal residence to the financial aid agency(ies) in your state of legal residence, even if you answer "No" in question 104. This information will go to the state agencies in your state of legal residence to help coordinate state financial aid programs with Federal student aid programs. We will also provide your application information to the college(s) you listed in Section H, or its representative. We will also send your information to the financial aid agency(ies) in the state(s) in which the college(s) is located, but only if you do not answer "No" in question 104. We will provide calculations and determination of eligibility to the agency with which you filed a student aid application, or another similar agency, if you request us to do so. That agency may also release information received from the Department to colleges, state scholarship agencies, and loan guaranty agencies that you have designated to receive information. Also, we may send information to members of Congress if you ask them to help you with Federal student aid questions. If your parents or your spouse provided information on the form, they may also request to see all the information on the application (as covered by their certification).

If the Federal government, the Department, or an employee of the Department is involved in litigation, we may send information to the Department of Justice, or a court or adjudicative body, if the disclosure is related to financial aid and certain other conditions are met. The information may also be made available to Federal agencies which have the authority to subpoena other Federal agencies' records. In addition, we may send your information to a foreign, Federal, state, or local enforcement agency if the information that you submitted indicates a violation or potential violation of law, for which that agency has jurisdiction for investigation or prosecution. Finally, we may send information regarding a claim which is determined to be valid and overdue to a consumer reporting agency. This information includes identifiers from the record, the amount, status and history of the claim and the program under which the claim arose.

**REMEMBER, WE MUST RECEIVE  
YOUR APPLICATION BY  
JUNE 30, 1997.**

1878

How to Apply	Eligibility Requirements	Range of Awards
Free Application for Federal Student Aid (FAFSA) Application. CCAC Financial Aid Application.	1. Demonstrated financial need. 2. Enrolled in degree or certificate program. 3. U.S. citizen or eligible noncitizen. 4. Undergraduate. 5. Maintain satisfactory academic progress.	Varies depending upon enrollment status and family contribution. Range \$400 - \$2300
Free Application for Federal Student Aid (FAFSA) Application. CCAC Financial Aid Application.	1. PA resident. 2. Enrolled 6 credits or more. 3. Enrolled in 2-year degree program. 4. Demonstrated financial need. 5. Maintain satisfactory academic progress.	Varies depending upon need Range: 200-80% of tuition and fees.

Lenders extend the benefits of an Unsubsidized Federal Stafford Loan to eligible Federal Stafford Loan applicants who do not meet the federal financial need analysis standards for the subsidized Federal Stafford Loan. The student must pay interest during the period he/she is in school for the Unsubsidized Stafford Loan.	Range: Up to \$2,825 for Grade Level 1st, \$3,500 for Grade Level 2+. Repayment begins six months after termination of studies. Interest rate varies depending on borrower's status. * Unsubsidized Stafford Loan amounts may vary.
	1. Loan Application (available from local banks, savings and loan associations and credit unions). 2. CCAC Financial Aid Application. 3. Free Application for Federal Student Aid.	1. Parent of dependent student. 2. Student must be U.S. citizen or eligible noncitizen. 3. Student must enroll for 6 or more credits in degree or certificate program. 4. Student must have high school diploma. 5. Student must maintain satisfactory academic progress.	Range: Cost less other aid. Repayment begins 60 days after loan is disbursed. Subject to credit check by lender.
	1. Free Application for Federal Student Aid (FAFSA) Application. 2. CCAC Financial Aid Application.	1. Demonstrated financial need. 2. U.S. citizen or eligible noncitizen. 3. Maintain satisfactory academic progress. 4. Must have completed Financial Aid file by May 1st. (Refer to "How to Apply").	Varies depending upon need and availability of funding. Range: \$200 - \$1800 Repayment at 5% interest nine months after termination of studies.
	1. Free Application for Federal Student Aid (FAFSA) Application.	1. Demonstrated financial need. 2. U.S. citizen or eligible noncitizen. 3. Maintain satisfactory academic progress. 4. Must have completed Financial Aid file by May 1st. (Refer to "How to Apply").	Varies depending upon need and availability of funding. Repayment at 5% interest nine months after termination of studies.

**MEMORANDUM**

**TO:** PRAS staff  
**FROM:** Michelle Geckle, M.Ed., CRC *MG*  
**DATE:** October 7, 1994  
**RE:** Student loan deferments

As you may be aware, PRAS clinicians are able to sign rehabilitation deferments for our clients with previous student loans (#8 on the attached list). It is important to analyze on a case-by-case basis if the deferment is in a client's best interest. On some loans, the interest continues to accrue during the deferment period. Clients can call the Student Loan Servicing Center (S.L.S.C.) at 1-800-233-0557 to determine the type of loan they possess and to request deferment forms. Clients can also complete the attached form to request a rehabilitation deferment.

## DEFERMENT INFORMATION

When your grace period expires and your repayment period begins you are entitled to have monthly installment payments of principal deferred during authorized periods. Federal regulations require you to provide all documentation needed to establish eligibility for a specific deferment. **REMEMBER:** Deferments are **NOT** automatic, and eligibility is based on the loan program through which you obtained your loan and/or the disbursement date of your loan. Additional information may be needed to grant your request. We will send you the appropriate forms which you must complete and return. You will be notified of approval or denial as soon as possible. Please **READ THE ENTIRE FORM CAREFULLY TO ENSURE ELIGIBILITY.** A deferment is granted for periods during which you are engaged in one of the following activities:

(Please Check One)

- 1. Return to full-time study at an eligible educational institution.
- 2. Study at an eligible, Federally-run institution of higher education or vocational school.
- 3. Study under an eligible Graduate Fellowship Program.
- 4. Active duty in U.S. Armed Forces or as an officer in Public Health Service.
- 5. Volunteer service under the Peace Corps Act.
- 6. Volunteer service under Title I (ACTION Program).
- 7. Volunteer service for a Tax Exempt Organization.
- 8. Enrollment in a Rehabilitation Training Program.
- 9. Service in an eligible Internship or Residency Program.
- 10. If you or your spouse is Temporarily/Totally Disabled.
- 11. If you are a "Single Parent" and must provide continuous care for a disabled dependent. Disability must last for at least three months.
- 12. Pregnant or caring for your newborn or newly adopted child. You must have been enrolled at least half-time in the last six months prior to receiving the deferment. You may not work or go to school while on deferment.
- 13. Unemployed and seeking full-time employment. To qualify for this deferment Federal regulations require that you:
  - a) Are unemployed or working less than 30 hours per week.
  - b) Be registered with an employment agency (public or private) that helps you obtain employment in any field.

Are able to list three attempts to secure employment in the past three months including the name and address or the firm, person contacted, and the date.

THE FOLLOWING DEFERMENTS ARE AVAILABLE ONLY TO NEW STUDENT BORROWERS WHO OBTAINED THEIR FIRST LOAN TO ATTEND SCHOOL FOR AN ENROLLMENT PERIOD BEGINNING ON OR AFTER JULY 1, 1987:

- \_\_\_\_\_ 1. Return to half-time study at an eligible educational institution and has borrowed a Guaranteed Student Loan for the loan period covered by the deferment.
- \_\_\_\_\_ 2. Service in the National Oceanic and Atmospheric Administration Corp.
- \_\_\_\_\_ 3. Teaching in "Shortage Areas". You may teach in an elementary or secondary school in a "Shortage Area" as defined by the Secretary of Education. Shortage refers to both geographic and subject area.
- \_\_\_\_\_ 4. Mother of a pre-school aged child. Must be entering or reentering the work force and be paid at a rate not more than \$1 above the Federal Minimum Wage.

AVAILABLE TO ALL BORROWERS

If you do not qualify for any of the above statutory deferments, and yet your current financial situation makes it difficult to meet your student loan obligation, you may be eligible for a Forbearance. During Forbearance, you are required to pay only the interest that accrued on your account. Any unpaid interest may (at your lender's discretion) be added to and become part of the principal of the loan at the end of the Forbearance period. This is called Capitalization. If you feel you qualify for Forbearance, please complete the following:

- 1. You are currently employed full-time? \_\_\_\_\_  
or less than 30 hours per week? \_\_\_\_\_
- 2. Place of employment: \_\_\_\_\_
- 3. What is your net income per month? \_\_\_\_\_
- 4. List all monthly expenditures (i.e., Rent, Mortgage, Utilities, etc.)  
\_\_\_\_\_  
\_\_\_\_\_
- 5. Length of time for which you wish to be granted Forbearance:  
Maximum of 24 months granted in 6 month intervals. \_\_\_\_\_ (6 months)

Please sign and return this request form in the space provided below and return it to the Student Loan Servicing Center at the above address within 30 days.

# Working While Disabled— A Guide to Plans for Achieving Self-Support While Receiving Supplemental Security Income

U.S. Department of  
Health and Human Services  
Social Security Administration  
SSA Publication No. 05-11017  
August 1991  
ICN 480302

## What is a plan for achieving self-support?

---

Basically, a plan for achieving self-support, or PASS for short, is a plan for your future. Many people with disabilities want to work, and you're probably one of them. But maybe you need to go back to school before you can get a job. Or maybe you'd like to start your own business, but you just don't have the money. Whatever your work goal may be, a PASS can help you reach it.

A PASS lets you set aside money and/or other things you own to help you reach your goal. For example, you could set aside money to start a business or to go to school or to get training for a job.

If you're already getting Supplemental Security Income (SSI), having a PASS means you'll be able to keep more of your SSI payment each month. If you don't get SSI because your income or resources are too high, setting up a PASS may help you qualify. And that can be very important because people who get SSI usually get Medicaid, too.

## How will a plan affect my SSI checks?

---

Under regular SSI rules, your SSI check is reduced by the other income you have. But the income you set aside for a PASS **doesn't** reduce your SSI check. This means you can get a higher SSI benefit when you have a PASS. But you can't get more than the maximum SSI benefit for the State where you live.

Money you save or things you own such as property or equipment that you set aside for a PASS won't count against the resource limit of \$2,000 (or \$3,000 for a couple). Under regular SSI rules, you wouldn't be eligible for

SSI if your resources are above \$2,000. But with a plan, you may set aside some resources so you would be eligible for SSI.

## Who can have a plan?

---

**You can**, if you:

- Get SSI (or can qualify for SSI) because of blindness or a disability;

**AND**

- Have or expect to receive income (other than SSI) and/or resources to set aside toward a work goal.

**And remember:** If you don't get SSI now, having a PASS may help you qualify.

## What kinds of expenses can a plan help pay for?

---

A plan may be used to pay for just about any expenses that will help you reach your work goal. For example, your plan may help you save for:

- Supplies to start a business;
- Tuition, fees, books, and supplies needed for school or training;
- Supported-employment services, including payments for a job coach;
- Attendant care or child care expenses;
- Equipment and tools to do the job;
- Transportation to and from work; and
- Uniforms, special clothing, and safety equipment.

These are only examples. Not all of these will apply to every plan. You might have other expenses depending on your goal.

**BEST COPY AVAILABLE**

## How do I set up a plan?

Your plan must be in writing and approved by Social Security. This chart shows the steps you should follow to set up your plan.

1 Choose a work goal. The goal **must be** a job. It should be a job you're interested in doing and that you think **you'll be able to do** at the end of your plan.

2 Find out how long it will take to reach your goal.

**Note:** A plan should not last longer than 3 years. But if your plan involves school or training, it may last up to 4 years.

3 Decide what things (such as training or tools) you will need to reach the goal.

**Note:** Each person will need different things to reach the goal. For example, if you want to work in a restaurant, you may need training to learn how to cook. If you want to become a computer programmer, you may need a college degree and a computer in order to reach your goal. If you want to start a business, you may need to rent a store or office and buy equipment and supplies.

4 Find out the cost of the things you need to reach your goal.

5 Find out how much money you'll need to set aside each month to pay for them. Plan a way to keep receipts for the things you need.

**Note:** If you're setting aside income, your SSI benefit will usually increase to help pay your living expenses. The people at Social Security can estimate what your new SSI amount will be if you set up your plan.

6 Make plans to keep any money you save for the goal **separate** from any other money you have. The easiest way to do this is to open a separate bank account for the money you save under your plan. But you don't have to open a separate account. Just be sure you can tell us how you're keeping it separate.

7 Write the plan, sign, and date it.

8 Bring or mail the plan to your local Social Security office.

## Who may help me set up a plan?

Anybody can help. You may set up a plan yourself or get help from:

- a vocational rehabilitation counselor;
- an organization that helps people with disabilities;
- an employer;
- a friend or relative; or
- the people at your Social Security office.

1886

## **How do I write a plan?**

---

There is no required form for a plan. You may simply write a letter that gives all the information about your plan. Or, to make sure your plan is complete, you may use the sample outline on the last page of this pamphlet. Pages 7 and 9 show examples of completed plans using the sample outline. Page 11 explains how to complete the sample outline.

## **What does Social Security do after I submit my plan?**

---

After you submit your plan, Social Security will:

- review the plan to make sure it is complete;
- decide if there is a good chance that you can reach your goal;
- decide if any changes are needed and discuss those changes with you; and
- send you a letter to tell you if the plan is approved or denied.

If your plan is approved, Social Security will contact you from time to time to make sure that you are doing what your plan says you will do to reach your goal.

## **What happens if my plan is not approved?**

---

If your plan is not approved, you have a right to appeal the decision. The letter you'll get will explain your appeal rights and tell you what you need to do to appeal. You may also submit a new plan to Social Security.

## **Can I change my plan after it is approved?**

---

Yes. You must tell the Social Security office **in writing** what changes you want to make, such as a change in how much money you set aside each month or additional expenses you will have. The Social Security office will tell you whether the changes are approved. The changes must be approved in advance. It is very important that you tell Social Security as soon as possible about any changes that might affect your plan.

## **What happens if I cannot complete my plan?**

---

If you cannot complete your plan, you may set up a new plan with a new work goal. If you don't set up a new plan, any money or other things set aside under the original plan **may** begin to count toward the \$2,000 resource limit. If they put you over the limit, you may become ineligible for SSI.

Also, Social Security will begin to count the income you were setting aside under the plan. However, as long as you tell Social Security as soon as possible that you cannot complete your plan, you won't have to pay back any extra SSI you got while you were following your plan.

BEST COPY AVAILABLE

## **How will a plan affect other benefits I get?**

---

You should check with the agency that is responsible for your other benefits to find out if the plan (and the extra SSI) might affect those benefits.

## **Are there any other rules that may help?**

---

Yes. Other SSI rules may help you while you work. They can help you keep more of your SSI check, and they can help you keep your Medicaid. There are also some special rules for students. For more information, ask Social Security for the booklet, *Working While Disabled—How Social Security Can Help*.

## **For more information**

---

If you want more information or if you want to make an appointment with a Social Security representative, just give us a call. Our telephone number is listed in your telephone book under "Social Security Administration" or "U.S. Government."

## **Examples of plans**

---

Every plan is different. The following two pages show examples of plans.

**Example 1** is a plan for Thomas Kelly. Mr. Kelly gets a \$227 SSI check and a \$200 Social Security disability check each month. He wants to become a cook. He discusses his goal with his counselor, who tells him that he will need 6 months of training which will cost \$600. He decides that he wants to use \$100 of his Social Security disability check each month to pay for the training. His plan is on the next page.

Once Mr. Kelly's plan is approved, the \$100 he sets aside each month to pay for his tuition won't count against his SSI. Therefore, his SSI will go up by \$100. This will help him pay his other living expenses.

**Example 2** is a plan for Mary Arnold. Mrs. Arnold gets a monthly Social Security disability check of \$500. Her income is too high for her to get SSI. She has a chance to go to work for a pottery shop, but she cannot afford to pay for the training and tools she will need and still pay for her living expenses. She discusses the idea with an organization that helps people with disabilities. The people in the organization tell Mary that she may be able to set up a plan to use part of her Social Security disability check to pay for a pottery instructor and pottery tools.

If Mrs. Arnold's plan is approved, the \$200 per month she is using toward her work goal won't count when Social Security figures if she can get SSI. Therefore, she'll be eligible for an SSI payment while she's working toward her goal.

# Plan for Achieving Self-Support

Name Thomas Kelly SSN 999-99-9999

1. My work goal is: Cook

2. I want my plan to begin in: October 1990 (month and year)

I expect to reach my goal in: March 1991 (month and year)

3. I will have the following expenses in order to reach my goal:

<u>Item</u>	<u>Connection to Goal</u>	<u>Month(s) Paid</u>	<u>Cost</u>	<u>Total</u>
Tuition-- Culinary Academy	Training needed to learn job	10/90 - 3/91	\$100 per month	\$600

4. I already have the following money or property that I will use to reach the goal:

NONE

5. I expect to receive the following income that I will use to reach the goal:

\$100 per month from my Social Security disability check

6. I will keep the money I set aside under my plan in the following bank account:

None -- I will pay the money toward my tuition each month.

7. I ~~am~~/am not already working or saving toward the goal.

## How to complete the PASS outline

---

If you decide to use the sample outline, fill in your name and your Social Security number in the spaces at the top of the outline. Complete the rest of the outline as follows:

- Line 1: Write your work goal. Be as specific as possible.
- Line 2: Show the month and year when you want your plan to begin. This should be the month when you'll start setting money aside to reach your goal. Next, show the month and year you expect to reach your work goal.
- Line 3: List each of the items you'll need to pay for in order to reach your goal. Show how each item will help you reach your goal and show the months in which you'll set aside the money to pay for them. Also, show how much each item costs. Some items, such as training, may have an hourly, weekly, or monthly cost. If so, show this and the total cost.
- Line 4: Show any resources you own **now** (for example, money in a bank account) that you'll use to pay for the items listed in line 3. If you don't have any resources or don't plan to use them for this purpose, show "None."
- Line 5: Show any income you expect to get in the future **other than your SSI** that you'll use to pay for the items listed in line 3. If you won't use future income, show "None."  
**Note:** You must have some form of income or resources to use to pay for the items in line 3. If you don't, a PASS won't help you.
- Line 6: If you intend to save money to pay for the items in line 3, you must keep the money you save separate from any other money you have. If you open a bank account to do this, show the name of the bank and the account number. If you don't intend to open a bank account, show how you will keep the money saved under the plan separate from your other money.
- Line 7: Indicate whether or not you are already working toward the goal or saving money toward the goal. If so, show the month you started.
- Line 8: Sign your name and write the date you signed the plan.
- Line 9: Show the name and address of any person or organization who helped you develop your plan.

# PLAN FOR ACHIEVING SELF SUPPORT

## Step-by-Step Guide

---

### *A LITTLE BACKGROUND.....*

Work incentives were initially introduced in 1972 with the Amendments to the Social Security Act. Several work incentives have been added since, each time as a result of Congressional concern over the low numbers of people with disabilities who were returning to the work force. The Plan for Achieving Self-Support provision is part of the original supplemental security income statute. When this program was initially developed, Congress expressed a "...desire to provide every opportunity and encouragement to the blind and disabled to return to gainful employment" (FR, 8/87).

This Guidebook was developed with the hope of assisting and encouraging SSI and SSDI beneficiaries to access Social Security Work Incentives and to realize the advantages of working while still being able to collect their benefits. While the situation is improving, the PASS program remains highly underutilized. It is our hope that this Guidebook will be helpful in introducing the Social Security Work Incentive Programs to individuals with disabilities as well as their supporters.

---

### *FIRST, A FEW DEFINITIONS.....*

#### Social Security Disability Insurance (SSDI) -

Social security benefits for people who have a medical disability and have worked and contributed to social security taxes (F.I.C.A.) for enough terms to be covered under social security disability provisions.

#### Supplemental Security Income (SSI) -

Social security benefits for people who have a medical disability and little or no income or resources. Maximum SSI income is called the Federal Benefit Rate.

---

Trial Work Period -

A 9-month period (not necessarily consecutive) during which a disabled or blind Social Security beneficiary's earnings will not affect his or her benefit. (The 9 months of work must occur within a 60-month period.)

Extended Period of Eligibility -

For at least 3 years after a successful trial work period, a disabled or blind Social Security beneficiary may receive a disability check for any month that his or her earnings are below the substantial gainful activity level (in 1993, \$500 for disabled, \$880 for blind).

Continuation of Medicare -

If Social Security disability payments stop because a person has earnings at or above the substantial gainful activity level, but the person is still disabled, Medicare can continue for at least 39 months after the trial work period. After that, the person can buy Medicare coverage by paying a monthly premium.

Impairment-Related Work Expense -

Certain expenses for things a disabled person needs because of his/her impairment in order to work may be deducted when counting earnings to determine if the person is performing substantial gainful activity.

Continuation of Medicaid Eligibility -

Medicaid may continue for disabled or blind SSI recipients who earn over the SSI limits if the person cannot afford similar medical care and depends on Medicaid in order to work.

Plan for Achieving Self-Support -

A disabled or blind SSI recipient may set aside income and resources for up to 48 months toward an approved Plan for Achieving Self-Support (PASS).

---

Federal Benefit Rate -

Minimum monthly income level, as determined by each state. As of January 1, 1994, the Federal Benefit Rate is \$446.00 per month for Arizona residents. Some states supplement the Federal Benefit Rate.

Substantial Gainful Activity (SGA) -

The performance of significant physical and/or mental activities in work for pay or profit. Applies to SSDI in determining initial and continuing entitlement (<\$200 per month for 9 months of trial work period; <\$500 per month after trial work period). Applies to SSI only in determining initial eligibility for SSI disability payments (<\$200 per month).

Earned Income Exclusion for SSI Recipients -

Allows much of a person's earned income to be excluded when figuring the SSI payment amount while a person is working.

General Income Exclusion = \$20

Earned Income Exclusion = \$65 and 50% of remaining  
income per month

Resources for SSI Recipients -

Resources can be anything a person owns, such as a bank account, stocks, real property, personal property. SSI recipients cannot have <\$2,000 in savings and remain eligible for cash benefits.

1896

---

## PASS Introduction

### WHAT IT DOES:

A Plan for Achieving Self-Support (a PASS) allows a person with a disability to set aside income and/or resources for a specified period of time for a work goal.

### WHO CAN HAVE A PLAN:

Any person who experiences a disability and who either receives or is eligible to receive SSI and has another source of income (i.e. earned income, SSDI, lottery winnings, etc.)

### PLAN

#### REQUIREMENTS:

The Plan must:

- be designed especially for the individual
- be in writing
- have a specific and achievable work goal
- have a specific time frame for reaching goal
- show what money and/or resources will be used to reach goal
- show how the PASS money will be kept identifiable from other funds
- be reviewed periodically by SSA to assure progress towards goal

### PASS PLANNING STEPS:

1. Verify eligibility for SSI if individual is not currently receiving SSI benefits.
2. Identify and assess an achievable work goal.
3. Research all expenses necessary to reach goal.
4. Calculate feasible monthly PASS savings amount.
5. Define time frame needed to accomplish goal.
6. Put plan in writing using the list of requirements (see page 2)
7. Contact SSA to meet with either individuals representative or the Work Incentive Specialist on staff.

1897

---

## REQUIRED PASS

### ELEMENTS:

1. Claimants' name
2. Claimants' Social Security Number
3. Occupational objective
4. Month and year of PASS completion
5. List of planned expenditure(s)
6. Resources currently owned (if any)
7. Resources to allocate towards occupational goal
8. Current savings towards goal (if any)
9. Individual's/agencies assisting claimant
10. Signature of claimant
11. Date

### THE OCCUPATIONAL OBJECTIVE:

This must:

- Be designed especially for the individual
- Identify the individual's proposed occupation (i.e. restaurant owner, bee keeper, file clerk, etc.)
- Be achievable and realistic given the individual's abilities
- Provide an opportunity for the individual to produce additional income leading to financial sufficiency, in part or in whole.

### LIKELY PASS

### CANDIDATES:

- A person with a disability who is interested in employment.
- A person with a disability who is earning above Substantial Gainful Activity and/or who will see a reduction in SSI benefits due to earned income.
- A person who would otherwise lose their eligibility for benefits or have benefits reduced, suspended, or terminated due to excess income or resources.
- A person with a disability who is already receiving training or vocational rehabilitation services or is in school.
- A person with a disability who is currently looking for employment or who is interested in becoming self-supporting.

1898

---

**UNLIKELY PASS**

- CANDIDATES:**
- A person who is ineligible for SSI for any reason other than excess resources or income.
  - A person who is under age 15.
  - A person who is terminally ill.
- 

## PUTTING A PASS TOGETHER

### *Step 1.....The Preliminaries!!*

Writing a PASS involves closely examining the financial circumstances of the individual receiving benefits, the claimant. By doing this early in the process, both you and the claimant will have a better idea of what he/she can afford and how a PASS will impact his/her Social Security checks and/or work income.

**The following table may be used to detail the claimant's personal financial picture:**

Monthly Income:

Source:	Amount:
SSI Check	
SSDI Check	
Gross* Work Income *before taxes and deductions	
Personal Assets (Example: savings accounts, Investments, Trust Funds, etc.)	
Other:	

Obtaining information on the monthly expenses that the claimant incurs will assist you in ensuring that the individual has enough funds to cover his/her budgetary needs. This information is important in determining whether the claimant will be able to meet his/her financial obligations while working towards an occupational goal.

**The following table can be used to list the claimant's monthly expenses and/or bills. If something is not listed or is paid other than monthly, use blank lines at bottom.**

Monthly Expenses:

Expense:	Amount:	Due Date:
Rent/Mortgage*		
Utilities:		
electricity		
gas		
phone		
water		
Food at Home*		
Food out		
Laundry		
Bus Fare/Pass		
Gas (car)		
Medical Expenses (Doctor visits and medications, etc.)		
Personal Items		
Barber/beauty shop		
Cigarettes		
Entertainment		
Hobbies		

\*If no rent or food expenses are incurred due to supported living arrangements, be sure to consider this as in-kind support for SSI calculations

*Step 2.....The Occupational Objective*

The Social Security Red Book on Work Incentives describes the **Plan for Achieving Self-Support or PASS** as "an opportunity for people to set aside income and/or resources for a specified period for a work goal" (p 45). This work goal should be decided upon before moving on any further. The occupational objective must be designed especially for the individual and must be realistic and achievable based on the individual's abilities. This is a critical step in PASS-development as all further steps build upon this objective.

Please define the work goal of the claimant and how a PASS will help him/her to achieve this goal:

The Occupational Objective is to:

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_ 1900 \_\_\_\_\_

\_\_\_\_\_

---

**THE EQUATION:** Total PASS expenses ÷ Monthly sheltered amount =  
Number of months required to reach goal and complete  
PASS

$$\begin{array}{r}
 \$ \underline{\hspace{2cm}} \\
 \text{Total PASS expenses from Table} \\
 \text{in Step 2}
 \end{array}
 \div
 \begin{array}{r}
 \$ \underline{\hspace{2cm}} \\
 \text{Amount of work income or} \\
 \text{unearned income claimant is able} \\
 \text{to shelter each month for PASS}
 \end{array}
 =
 \begin{array}{r}
 \underline{\hspace{2cm}} \\
 \text{Number of months} \\
 \text{required to reach} \\
 \text{occupational goal.}
 \end{array}$$

At this point, it may become necessary to adjust the amount the claimant is sheltering each month if it effects his/her eligibility for SSI. This equation may be manipulated to calculate the optimal monthly PASS deposit in order to possibly increase the SSI check.

### *Step 5 - Putting it on paper....*

All of the previous researching and planning now must be put into written form. It is critical that all of the listed elements are part of the PASS, but there is no required format.

Although not described earlier and not a required section, including a brief narrative section is sometimes helpful in explaining the claimant's occupational objective and means of achieving his/her goals. This provides the format to provide more details regarding the goal and the individual's unique needs and how the listed expenditures will help the individuals reach the work goal.

### *Step 6 - The Meeting....*

The final step to getting a PASS initiated is submitting the written document to the Social Security Administration. This can be done by contacting the local office to inquire as to who reviews and approves Plans for Achieving Self-Support. This is generally the Claims Representatives themselves, however, some offices have a designated Work Incentive Specialist who reviews all submitted Plans. PASSes may also be mailed to the SSA, but it is beneficial to meet with the SSA Representative in person in case any additional information is needed.

### *Step 7 - Getting Started....*

After reviewing a PASS, the SSA will send a letter indicating their decision to both the claimant and, generally, to the individual/agency assisting in the development if this was indicated. In the case of an approved plan, the letter will indicate what expenses were approved, the initiation date, the amount to be sheltered each month, the claimant's responsibilities, and the Compliance Review date, as well as the customary Appeal information.

1902

The Social Security Administration is required to periodically review all PASS Plans. This is usually done every 6 to 8 months and is done to insure that the claimant is progressing towards the stated occupational goal. It is very important that accurate records and receipts are kept for expenditures made with PASS funds as well as bank statements for the account being used for PASS funds.

**PASS EXAMPLE:**

Jeff receives SSI benefits and has just recently been hired as a part-time Basketball Referee at a local gymnasium. In order to accept this position, Jeff will need to purchase 3 Officials' Uniforms, Black Court Shoes, and will need to enroll in 4 Training and Certification Classes with the City Recreation Department. Jeff has heard about the Plan for Achieving Self Support and would like to incorporate the above expenses into a PASS plan. Jeff's PASS could be written as follows:

Occupational Objective: To gain part-time employment as a Basketball Official.

Planned Expenditures:

Item:	Month of Purchase:	Estimated Cost:	Subtotal
3 Officials' Uniforms	Months 1 - 3	\$165.00 (\$55.00/uniform)	\$165.00
Black Court Shoes	Month 1	\$85.00	\$250.00
4 Certification Courses	Months 2 - 6	\$300.00 (\$75.00 per course)	\$550.00
Total of All Expenditures:			\$550.00

Jeff currently has no resources to contribute to his PASS expenses. However, he will be earning \$4.50/hour within his new position. Jeff would like to shelter \$100.00/month of his earned income into his PASS account in order to reach his identified occupational objective. He plans to open a separate savings account at his financial institution in which he will deposit his PASS funds.

Length of Jeff's PASS:

\$550.00	÷	\$100.00	=	5.5 Months
Total PASS expenses		Amount of work income or unearned income claimant is able to shelter each month for PASS		Number of months required to reach occupational goal.

From this equation, Jeff would have 5 1/2 months to shelter \$100.00/month. This would allow him to not only purchase the items that he needs for his employment, but would also have the impact of enabling him to collect a higher SSI check than he otherwise would be able to without a PASS plan. The following table illustrates the effect of working on Jeff's SSI check with and without the PASS plan:

**SSI CHECK AMOUNT WITH AND WITHOUT PASS:**

	<b>Without PASS</b>	<b>With PASS</b>
Gross Earned Income:	\$405.00	\$405.00
General Exclusion:	- \$20.00	- \$20.00
Earned Income Exclusion:	- \$65.00	- 65.00
=	\$320.00	\$320.00
	÷ 2	÷ 2
Countable Earned Income:	\$160.00	\$160.00
Less PASS Amount:	- \$0.00	- \$100.00
Total Countable Income:	\$160.00	\$60.00
1994 FBR:	\$446.00	\$446.00
Less Total Countable Income:	- \$160.00	- \$60.00
<b>New SSI Amount:</b>	<b>\$286.00</b>	<b>\$386.00</b>
<b>Monthly Dispensable Income</b>		
SSI Check	\$286.00	\$386.00
Earned Income:	\$405.00	\$405.00
Total:	\$691.00	\$791.00
- PASS Amount	-0-	- \$100.00
<b>Usable Income:</b>	<b>\$691.00</b>	<b>\$691.00</b>

Thus, while Jeff has a PASS to cover for the expenses he will incur in realizing his occupational goal, he will be able to collect a higher SSI check. Because he must allocate \$100.00 of his earned income towards the approved PASS expenses, Jeff's disposable income remains the same, even though he is receiving wages.

1904

---

## OTHER IMPORTANT PASS POINTS:

- The Social Security Administration reviews claimants' progress on their Plans generally every 6-9 months. For some individuals, it may be beneficial to request more frequent progress reviews.
- It is important to maintain communication with SSA in the event of any changes in the claimants' status (i.e. employment change or loss, increase in wages, etc.) so that overpayment can be avoided.
- It is critical for the claimant to maintain accurate records of their PASS funds. This includes receipts for items purchases, bank statements, mileage, etc.
- When it comes to developing PASS plans, be creative, and consider all of the claimant's needs, now and in the future.
- Large and long-term occupational goals can be broken down into one or two PASS plans to avoid committing the claimant to a lengthy PASS. For example, instead of writing one PASS for transportation and school expenses, prioritize the needs and goals, and complete one PASS successfully before embarking on the next need/goal.
- Maintain records of all communication with the SSA. Also, stay abreast of claimants' work and benefit status (i.e. tracking Trial Work Periods for people collecting SSDI, etc.)
- While one of the requirements for a PASS is eligibility for SSI, an individual who only collects SSDI *becomes* eligible for SSI when he or she shelters all or part of their SSDI with a PASS.
- A claimant can have multiple PASSes but can only have one at any given time. If the claimant is working, he/she can have a PASS and claim for Impairment Related Work Expenses (IRWEs).
- Some **possible** PASS expenses: tuition, books, supplies, and all other fees/costs associated with an educational or occupational training program, attendant care, child care, equipment or tools, dues and publications for academic or professional purposes, uniforms or specialized clothing, safety equipment, operational or access modifications to buildings or vehicles, medical and social services, maintenance costs and/or interest fees for any of the above items. This is not intended to be all-inclusive.

EMPLOYMENT OPTION

1906

JOB CLUB MANUAL

1907

( see Videotape )

2 min., 50 sec.

### INTRODUCTION

The job club model was originally described by Nathan Azrin in the late 1970's. Working with persons with disabilities, Dr. Azrin investigated the utility and efficacy of a structured group approach in enabling them to successfully secure positions of employment. The model has been used over the years with various consumer groups. Our interest is in its usefulness for persons with major psychiatric disabilities and for whom job acquisition and retention have been long standing and difficult to solve problems.

The small group experience can provide specific benefits to the potential job-seeker. Through the group process, consumers

- (1) can develop self-reliance and experience positive feedback on their self-initiated initial and continuing efforts to find a job.
- (2) The members of the group can acquire specific job readiness skills.
- (3) The group provides an environment in which its members can share with their peers and benefit directly from the mutual sharing and learning that occurs.
- (4) Finally, the group provides learning activities that an individual alone could not be a part of such as role playing, modeling, and group discussion.

1908

## FOSTERING SELF RELIANCE

Looking for work can be one of the most stressful activities in the life of most persons. It can be a long term endeavor with many negative experiences and few rewards and can make the most steadfast of persons feel discouraged and despair and wonder if it's at all worth the effort.

Group support can help to combat the discouragement, frustration and lowered self-esteem that many of our clients, who have a mental disorder, suffer. Participation in the Job Club enables and empowers the members to deal with the task of job seeking not as a punishing and incidental activity but as an ongoing and manageable one with specific tasks and strategies that can be defined, tried out, evaluated and revised.

- . How do I cold call an employer?
- . What is the best way to present myself in writing?
- . What personal resources do I have?
- . How do I get a job interview?

Now, let's look in on a Job Club in process. First, we'll experience how members are oriented to the group, what expectations are to be met by the members, and what can be expected from the group leader - active efforts to foster self-reliance and initiative from the outset.

## ACQUIRING SPECIFIC JOB READINESS SKILLS

The most effective style within the job club setting is one of continuous encouragement and praise while maintaining structure and a task orientation. Didactic instruction is combined with individual assistance and guidance to the group members as needed. The group leader also promotes mutual assistance among the members.

The single, overriding objective of the group is to help each job seeker to obtain employment. The group's focus is on instructing and encouraging the members in the specific activities that will help them to obtain this objective. It has been well documented that a positive correlation exists between attendance at a Job Club and securing employment.

## THE USE OF EMPLOYERS

The participation of actual employers from the local community is an invaluable resource for the group's members. The benefits for members are several.

- the opportunity to ask "real-life" questions of a "real-life" person
- the employer has built-in credibility
- talking with employers provides a "dry run" for the members and can decrease the anxiety of talking with an employer without the risks associated with the real life job interview
- Consumers can ask questions that would generally never dare to ask in an actual interview.

Inclusion of employers also provides an excellent means for introducing potential employers to possible employees. The stigma which colors the employment prospects of persons who have a psychiatric disability is great. And, this initial encounter wherein the employer is the established expert can help to lessen his or her built in preconceived notions or preexisting fears about hiring persons who have a mental illness into the workforce.

## JOB CLUB ACTIVITIES

In the process of acquiring specific job readiness skills often times the group members are able to verbalize concerns that otherwise might go unsaid, causing a great deal of stress and worry later on. The preparation of resumes, cover letters, and job application forms facilitates the acquisition of specific strategies and approaches that the consumer can learn, become comfortable with, and adapt in light of his or her own needs and values.

## SHARING AND MUTUAL LEARNING WITH ONE'S PEERS

Generally, individuals are open to feedback and suggestions from those persons in situations similar to their own. The practical and emotional support of the group's members for each other also benefits the group's leader. Each member shares in the responsibility and burden of finding jobs for each of the members. Because of this mutual learning and sharing, leader "burnout" is prevented and the reluctance and pessimism that many professional often feel with the same task--finding jobs--and with only on ally, the individual client or consumer, can be appreciably diminished.

## GROUP LEARNING ACTIVITIES

The experience of participating in "mock" or simulated job interviews, which are simultaneously video-taped, is an enormously effective means to reinforce the didactic learning process and to enable the group members to become even more "active" learners.

While didactic presentations are always accompanied by group discussion, the opportunity to simulate a real-life situation and then to see oneself as an observer might see one is invaluable.

The playback may be either immediate or delayed and it is very useful to stop the tape or repeat various segments to emphasis a point or focus on an issue. This technique is particularly useful for consumers who may not be aware of their verbal or nonverbal presentation in an interview situation.

For the purpose of demonstration, you will now see an example of a "bad" interview which is designed to illustrate typical problems and ineffective response patterns which a consumer might experience or engage in. Next, a "good" interview" is demonstrated. Here the intent is to model how an individual might deal with issues such as gaps in the employment history, reasons for leaving previous jobs, and how to present oneself in the best light possible during the job interview.

## CONCLUSION

Well, you've just seen a Job Club in process. It's an exciting and worthwhile undertaking for any of you who are in the business of job development and placement. It is a unique approach in that the responsibility for securing jobs is a collaborative effort between the group leader and the group's members.

Also, one of the basic premises of the Job Club approach is that small groups and the group process itself can be therapeutic instruments in and of themselves.

The group provides acceptance and support for its members as new feelings of independence and responsibility emerge.

Old values and behaviors are reexamined, reevaluated, and changes if and when the individual member so desires.

Biased and unrealistic perceptions are subjected to reality testing through the group's interactions.

Feelings of self-confidence and self-worth are enhanced by the group's acceptance of each other.

These group process effects, combined with the didactic and technical expertise of the group leader, result in a highly effective and efficient means of tackling one of the most stressful and difficult tasks facing the individual disabled by virtue of a mental illness -- securing a job.

## ADDENDA I

- I. You have just finished viewing Part I of "Implementing the Job Club Model with Persons who have a Psychiatric Disability". Part II of this tape contains simulated job interviews which are meant to illustrate both ineffective and effective job interviewing.
  
- II. After watching the following job interview, tell us what you think went wrong?
  
- III. After watching this second job interview, tell us what interviewing skills the interviewee has put into practice?

## JOB CLUB AGENDA

- Week 1      Orientation
- Week 2      Resumes and Cover Letters
- Week 3      Applications
- Week 4      Interview Questions
- Week 5      Continue Interview Questions; Introduce Sources for Generating Job Leads
- Week 6      How to Make Effective Telephone Contacts
- Week 7      Financial Incentives to Work
- Week 8      Social Service (Rehabilitation) Agencies that Provide Placement Assistance
- Week 9      Wrap up Evaluation

## CONFIRMED EMPLOYER PRESENTATIONS

- 2/19/92      Richard Jozwiak - University of Pittsburgh
- 3/4/92      Steve Young - VA Hospital, Oakland
- 3/11/92      Denise Hartz - Integra Corporation
- 3/18/92      Jane Moyer - Xerox Corporation
- 4/1/92      Glenn Gorse - Internal Revenue Service

You will be given handouts that pertain to these and other topics for future use. Additionally, you will be provided with instruction and assistance in the use of the word processing program, Word Perfect 5.1, and computer time to individualize resumes and cover letters if you wish to do so. Job leads will be available after every session.

APPENDIX C: Behavioral Contract

JOB SEEKING SKILLS  
LETTER OF AGREEMENT

As Group Leader, I agree to:

1. Provide instruction, lead discussion, and guide group members in the hands-on development of job seeking skills. These include:
  - a. Finding and making the most of job leads.
  - b. Completing employment applications.
  - c. Writing a resume.
  - d. Development of self-presentation skills.
2. Assist individual members during scheduled group sessions, as appropriate.

\_\_\_\_\_  
Group Leader signature

As Group Member, I agree to:

1. Attend the group as scheduled and on time. I will phone ahead (phone number) if I have to miss a meeting.
2. Actively participate in the group.
3. Do homework assignments.

2~  
3~

Dear 4~:

Neuropsychological Assessment and Rehabilitation Services is instituting a Job Seeking Skills Group in which you may be interested.

Your N.A.R.S. clinician has suggested that I contact you to offer the opportunity to join this group. The members, like yourself, have identified their occupational objectives, but may feel the need to further develop specific job seeking skills. Such skills include resume writing, completion of employment applications, locating and utilizing job leads, and the development of self-presentation skills. The first meeting will take place on Wednesday, February 12, 1992. It will be held in Suite 606, from 1:00 p.m. to 2:30 p.m. We will meet at this time every week through April 15, 1992.

You will also have the opportunity to meet with individuals from personnel departments of local companies. Representatives from the University of Pittsburgh, Xerox Corporation, Veterans Administration Hospital, Integra Corporation and the Internal Revenue Service have already confirmed attendance and there will be other employers included.

If you are interested in participating in this group or want to find out more about it, please call 624-2842. I look forward to hearing from you.

Sincerely,

Sharon Heinlein, M.Ed., CRC  
Specialty Counselor II  
Neuropsychological Assessment  
and Rehabilitation Services

/jd

February 24, 1992

Ms. Amy Miller  
Employment Recruiter  
Western Psychiatric Institute and Clinic  
3811 O'Hara Street  
Pittsburgh, PA 15213

Dear Ms. Miller,

As per our conversation, I will be conducting a Job Seeking Skills Group for adults on Wednesdays from 1:00 - 2:30 p.m. and I am looking forward to your presentation for our group on Thursday, March 12, 1992. If possible, please touch upon the following topics during your discussion, as these issues seem to be of particular concern to group members.

- 1) Which types of positions are available with your company? Which must you recruit heavily and/or most frequently?
- 2) What are the minimum educational and/or experiential requirements for entry level, unskilled, semi-skilled, and skilled positions?
- 3) Are there any means of obtaining information regarding current open positions in addition to that available in the job posting?
- 4) Do you verify employment and personal references and at what point? Describe the range of responses you receive as a result of your inquiries.
- 5) Please explain the various job categories, such as temporary and casual, and the average length of time an individual remains in a part time position before it becomes full time.
- 6) If an applicant applies for a position in housekeeping, for example, and an escort position becomes available for which he/she feels qualified, is it necessary to re-apply in person or can a telephone call be made to personnel? Does another job application need to be completed?
- 7) When a person applies for several jobs such as housekeeper, escort or general clerical on a single application, how are these applications filed in personnel and would such a candidate actually be considered for all three of these diverse positions?
- 8) What makes an applicant stand out during the application and interview processes?

- 9) Will there be any personnel policy changes due to the passage of the Americans with Disabilities Act (ADA)?
- 10) What affirmative action efforts are currently in place at Western Psychiatric Institute & Clinic and will due you expect any changes with the passage of the ADA?

Any information about applying and interviewing for positions within your company which you may contribute to our group will be greatly appreciated. Please do not hesitate to contact me at 624-2842 if I may be of any assistance to you in any way.

Sincerely,

Sharon Heinlein, M.Ed., CRC

# The Basics

**T**here is a formula that can be followed for cover letters. I stress *can* because the most important advice I can give you about this formula and the many sample cover letters at the back of this book is: Don't be afraid to deviate from the formula. Steal phrases, words, and basic structures to your heart's content, but adapt each cover letter to the specific situation. Be a professional and write your own letters.

It's critical that your letter is unique and specific to you—not one that any applicant could have written. Employers can smell a formula a mile away, yet most job-hunters insist on writing letters that sound the same as every other cover letter. As a result, most letters are insufferably dull. You'll make the employer's day if you write an interesting letter. I've had employers call me just to compliment me on my cover letters even when, for one reason or another, they weren't able to hire me.

If you're having trouble getting started, see the worksheets on pages 15 and 17.

## The Cover Letter Formula

**First paragraph:** Tell why you're writing, in such a way as to arouse the employer's interest. Use this paragraph to display your specific knowledge about the company you're writing to.

**Second paragraph:** Briefly describe your professional and/or academic qualifications. Identify the job title or general area you're interested in. The reader shouldn't have to guess what kind of job you're looking for.

**Third paragraph:** Relate yourself to the company. Give details as to why you should be considered. Cite examples of your qualifications for the position sought. Draw on the power of your resume and refer to it—but better yet—expand on it. Avoid trite, overused phrases, such as “as you will note in my enclosed resume” or “I have

taken the liberty of enclosing my resume.” If you are short on job experience, mention extracurricular activities, especially examples of leadership, special projects you worked on, or the fact that you worked your way through school. If you're a homemaker returning to the workforce, don't forget to include volunteer work and family-management skills.

**Fourth paragraph:** Request action. Ask for an interview appointment. Suggest a time. Tell the employer that you will call to make an appointment. [**Be sure to follow up!**] It's a lot harder for the employer to ignore a request for action than a wishy-washy “call me if you're interested” approach.

**Before closing:** Thank the prospective employer for his or her time and consideration.

## Dear So and So:

### To Whom Should You Send Your Letter?

The best way to find out who should receive your letter is to call the company and ask the receptionist. For example, “Could you tell me who does the hiring for financial analyst positions?” If the receptionist refers you to the personnel department, ask also for the name of the company president. If you must choose between sending your letter to a personnel director and the company president, send it to the president (unless it's a very large company, in which case you should ask for the head of the department in which you're interested in working).

Yes, it's true the president may never see that mail. A secretary or other lower-echelon staffer will probably open and screen the president's mail, but whoever handles it is responsible for responding to the president's mail and making certain the president's image isn't damaged by failing to respond to a correspondent. The underling has to report back to the president on

what action was taken; thus a chain of communication is initiated centering around your letter.

Chances are your letter will end up back in the personnel office anyway, but if you send it to the president you will increase the chances of someone with real hiring power seeing it along the way.

### **Attention-Grabbing Beginnings: The 20-Second Test**

The biggest trick to composing a dynamic cover letter is to begin it in a way that will draw the reader in and make him want to read more—and ultimately read your resume and invite you for an interview.

Let's look at it this way: About 500 pieces of paper a week cross the desk of the average busy executive. If he or she spends 25 percent of the work day reading correspondence—and that's a very generous estimate—that means devoting one minute to each piece of paper. But many of those papers represent situations far more urgent to the executive than your cover letter, especially if it's an unsolicited one. You may have as few as 20 seconds to grab his attention.

Some ways to do that include beginning with a quote (see sample page 57), starting with a clever angle (samples, pages 58, 59, and 60), and praising the company you're writing to (sample, page 78).

### **Quotes**

Using a meaningful quote from someone in your field can be an attention-getting way to start your letter. You should be sure that the quote is truly meaningful to the job you're seeking, and was spoken by someone your reader is likely to respect. Also, make sure your quote isn't too long. No matter how good it is, if it's too long your reader is bound to wonder when you're

going to get to the point, and maybe put it down halfway through.

### **Praising the Employer**

What employer wouldn't warm up to an applicant who talks about how much he admires the company he's applying to and how much he'd like to work there—and why? Praise for the employer is often a good approach, but you can make it infinitely more credible by supporting your praise with facts that show how much you know about the firm.

### **The Clever Angle**

Once in awhile, you may be able to come up with an approach that is out of the ordinary and shows your creativity (see samples). If you're applying for a job in a creative field, such as journalism, advertising, art, or even sales, you can take more risks than if you're applying as an engineer, for instance. Again, be sure that what you're saying applies to the situation and isn't too long.

### **Pasting a Copy of the Ad to Your Letter**

When responding to a want ad, you can direct your reader's attention to your reason for writing by pasting a copy of the want ad right on the letter. This is particularly effective when writing to a large company that regularly advertises openings, as the recipient can tell immediately which ad you're responding to. Seeing the ad will also refresh his or her memory about what the ad is asking for, and if you've tailored your letter well to the requirements of the ad, your reader just may end up with the impression that you're the perfect person for the job. Obviously, this is not a good approach if your qualifications don't quite match the requirements of the ad.

# Cover Letters

## Guidelines for Cover Letters:

1. ADDRESS SOMEONE IN AUTHORITY  
(who has the authority to hire you)
2. SHOW THAT YOU'VE DONE YOUR "HOMEWORK"  
(and you know about THEIR priorities and concerns).
3. CONVEY YOUR ENTHUSIASM AND COMMITMENT
4. BALANCE WARMTH AND PROFESSIONALISM
5. PRESENT SOMETHING UNIQUE ABOUT YOU
6. BE APPROPRIATE, YET STAND OUT
7. BE SPECIFIC ABOUT WHY YOU'RE WRITING
8. TAKE THE INITIATIVE ON THE NEXT STEP
9. REMAIN BRIEF AND FOCUSED

DATE

Dear Prospective Employer:

Please accept this letter and resume as my expressed interest in joining your organization in a capacity which will most effectively utilize my experience, skills, and potential.

I possess excellent communication skills which enable me to interface well with all levels of the general public, co-workers, and management. My background is highly diversified and I am capable and comfortable in adapting to many different situations and demands. I wish to continue learning and I would welcome opportunities to train in new areas. I work well under pressure, with or without supervision, to produce profitable results. Please note that I have a perfect attendance record in my 8 years of service at Sears, as it is my firm conviction that dedication and commitment are essential in performing one's work.

I believe I could make a valuable contribution in your behalf and would greatly appreciate the opportunity to further discuss my qualifications and your needs in greater depth.

If you wish to arrange an interview, or if you have need for any additional information, please contact me at your earliest convenience.

Thank you very much for your time and courtesy in reviewing this material and for your forthcoming response.

Sincerely,

Mr. \_\_\_\_\_, Director of Personnel Services

Dear Mr. \_\_\_\_\_:

I am seeking a position with your agency within the areas of housekeeping and maintenance, or as a janitor/custodian. As you can see from my resume, which is attached, I have completed a formal training program in janitorial work and have had two summers of work experience as a janitor's aide. I would appreciate very much the opportunity to prove to you that I am a hard working and dependable employee.

I could be available for an interview at your convenience and will be looking forward to hearing from you soon.

Thank you very much for your consideration.

Sincerely,

Attachment

January 29, 1990

Womens Center & Shelter  
P.O. Box 9024  
Pittsburgh, Pa. 15224

Dear Personnel Director:

Enclosed please find my resume for your review. I would like to be considered for the position of Community Education Specialist.

As a candidate for the job, I offer you a B.A. in Education and recent certification as a Mental Health/Mental Retardation Specialist. I have experience as a Teacher and extensive volunteer work for the Crisis Center North. I also coordinate volunteers for Circle C Group Homes for troubled youth.

I am presently unemployed as my previous job was grant funded and the funding expired. I welcome the opportunity to assist women in crisis and would like to speak with you concerning my qualifications for the job. Thank you for your consideration of my resume.

Sincerely,

1937

James Kelley  
226 Stark Avenue  
Pittsburgh, PA 15206

Dear Decision Maker:

Please allow me to introduce myself. My name is James Allen Broad, and as made clear in my resume, I have a diverse background in sales, advertising, and marketing. Accordingly, I will bring with me various skills, talents, and experience to the position you presently have available.

In my present position as National Marketing Director, and over 10 years as a Regional Sales Manager, I have dealt with and mastered myriad sales situations. Coupled with my background in Counselor Education, my expertise in effectively dealing with people has been greatly enhanced.

I am confident of my ability to perform successfully in this position, and I know that granting me an interview will prove to be mutually beneficial. I will contact you within one week, to arrange an appointment. Thank you so much for your time and consideration. I look forward to our working together.

Sincerely yours,

James Kelley

Mr. Donald C. Marin  
DCM Advertising and Sales Literature  
119 Federal Street, 214 Martin Building  
Pittsburgh, PA 15212

Dear Mr. Marin:

Enclosed, please find my resume for your review. I would like to be considered for a volunteer position with your company. If volunteer work is not feasible, I would like to have the opportunity to freelance at a minimal charge.

As you can see, I have a B.F.A. from Carnegie Mellon University and several years experience. I did not continue in this field as the freelance work was not stable employment and I needed to secure some job-related benefits; therefore I began working for the Commonwealth of Pennsylvania as a liquor store clerk.

My intentions are to eventually return to work full time in the graphic art industry. Because your agency provides design and illustration services, I would find working for you a valuable experience. Of course, I want to be an asset to your company also, as I endeavor to keep my artistic skills at a high level.

I am presently working for the University of Pittsburgh, but am not utilizing my graphic arts experience as much as I would like. My schedule allows me to be available to work in your office Fridays.

I would appreciate speaking with you, and reviewing my portfolio and qualifications. Thank you for your consideration.

Sincerely,

John T. Nagy

P.O. 22361  
Pittsburgh, PA 15222

Dear Manager:

Enclosed please find my resume for your review. I would like to be considered for a position as a VAX/VMS SAS Programmer.

As a candidate for the job, I offer you a B.S. in Information Science from the University of Pittsburgh. I have four years research experience working at Western Psychiatric Institute & Clinic (WPIC). While working at WPIC I developed particular expertise using FOCUS and Informix. I programmed and maintained the databases and produced reports as needed. Also, I gained valuable experience with statistical packages such as SAS. I am also familiar with Lotus 1-2-3, SPSS, BMDP and FORTRAN programming. My most recent position at WPIC was grant funded and the grant was not renewed. Therefore, I am presently unemployed and feel that I could be a valuable asset to your program.

I would like to speak with you concerning my qualifications. Thank you for your consideration.

Sincerely,

Mark Dewaine

- Good use of Unique Selling Proposition
- Good use of broadcasting accomplishments
- Could have a more attention-grabbing beginning
- Grade: A-

101 Little Patuxent  
Pkwy., #278  
Columbia, MD 21044  
301-555-5278

Dear Sir or Madam,

This letter is in response to your ad in The Sunday New York Times.

In my present position with Mason-Dixon Accounting, Inc., I further developed my management skills as well as a strong knowledge of financial accounting. Through the use of this knowledge and experience, I was able to greatly improve the manner in which financial accounting was conducted.

By devising and applying new systems, which utilized personnel and equipment more efficiently, I significantly reduced operating costs and time spent recording routine financial transactions. The end result was a more efficient organization offering higher quality financial accounting services.

I strongly feel that my experience and enthusiasm for doing quality financial accounting would be a good addition to your organization. I look forward to your response and the opportunity to further discuss the possibility of working for your company.

Sincerely,

Patty DeRoy

## *Blind Box Ad Response Letter*

- Applicant uses "contribution" to tell what she can do for employer
- The "30-gallon trash can" phrase was popular with employers
- Grade: A

29 Ocean Blvd.  
Toms River, NJ 08753  
609-555-9696

Dear Boxholder,

My strong writing background and keen interest in economic development would enable me to make a significant contribution to the public relations position you are currently advertising.

In my most recent editing positions, a 30-gallon trash can was the destination of 90 percent of the press releases I received. Based on seeing so many poorly written and mistargeted releases, I feel I could write a book or teach a course on how not to write a press release or run a publicity campaign.

I know what editors are looking for.

I know because I was most recently editor of 10 weekly papers in Ocean County. Before that, I was city editor at the newspaper in New Jersey's third-largest city. It's because of my inside knowledge of what drives editors crazy about public relations that I feel my experience is transferable to this slight shift in careers.

I'm a competent, award-winning writer and editor. One of the pieces I've won awards for is a weekly column that has dealt exclusively with social and family issues. I'm available immediately to help meet your writing and placement needs.

I can make myself available for an interview at your convenience and may be reached during business hours at 201-555-9528.

Thanking you most kindly for your consideration, I look forward to meeting with you soon.

Cordially,

Deirdre Cosgrove

- Provides enticement for employer to call by offering to show clips, but still leaves ball in employer's court
- Grade: A-

1090 Peachtree Lane, #23  
Atlanta, GA 30303  
404-555-4040

Ms. Judy Sumner  
The Atlanta Constitution  
Constitution Court  
Atlanta, GA 30303

Dear Ms. Sumner,

I have the skills and potential to fill the editorial position you advertised for in the August 10, 1989 newspaper.

Until I moved, I was a reporter for the Chattanooga News-Free Press (circulation 100,000). Working general assignments on the city side, I covered stories on all available beats; politics, city and county courts, education, police and fire, business and religion. I also wrote weekly Sunday features and occasional sports stories and restaurant reviews.

Under a veteran city editor who believes in exposing his staff to varied experiences, I had an opportunity to do layout, write headlines and edit copy.

While at the University of Tennessee at Chattanooga, I worked for four years on the university newspaper and was assistant editor of the campus literary magazine. An English major, I graduated magna cum laude.

My enclosed resume contains information on my previous work experience and successful academic career. I have also enclosed recommendations from several editors on our staff.

I would like to show you my strong collection of clips and can be contacted for an interview at 404-555-4040. I will look forward to hearing from you.

Sincerely,

Wesley D. Captain

## *Classified Ad Response Letter*

- Speaks well to requirements expressed in ad
- Resulted in an interview
- Information about why she left her last job could have been left out
- Leaves ball in employer's court
- Grade: A-

9020 Walker Driver  
Chapel Hill, NC 27514  
919-555-1515

Dear Mr. Squirrel,

My experience as a creative assignment editor and my supervisory background would enable me to make a significant contribution to the assistant metro editor position you are currently advertising.

Most recently, I was executive editor of a group of 10 weekly newspapers in Austin County. I left there to help my husband launch a new business, but now that he's on the verge of landing his first major account, I'm eager to get back into newspapers. Before my last job, I was city editor at the daily in Texas' third-largest city.

A real strength of mine is story ideas. I'm able to ensure my reporters never miss what they should be covering, but I can often suggest an unusual approach that puts the story into perspective for readers.

And once the copy is in, I get great satisfaction from working with the reporter to mold it into the clear, crisp, concise piece of prose it should be.

One of my proudest editing achievements along these lines was at a daily in Florida, where a story I conceived, assigned and edited went on to win the national Rolling Stone entertainment writing award for 1984.

At The Austin News-Beacon, I consistently showed superior news judgment in pitching stories on the daily news budget and in the news meeting. That's why I was promoted from assistant city editor to city editor after only three months.

I can make myself available for an interview at your convenience and can be reached during business hours at 919-555-9876.

Thanking you most kindly for your consideration of me, I look forward to meeting with you soon.

Sincerely,

Theresa Simmons

## *Classified Ad Response Letter*

- Good letter; a little long
- Should take proactive stance with interview request
- Grade: A-

110 Ocean Blvd.  
Los Angeles, CA 90005  
213-555-5678

Dear Dr. Davis,

The most important criteria in a professor are professional experience, teaching ability, and research potential. With my marketing and management experience as well as my college teaching experience, I would like to be considered for a position as one of your entry-level assistant professors. I feel confident that I am strongly qualified—and I would love to teach any and all of the courses you mentioned in your ad in the Marketing News.

I would bring the strength of several years in the marketing field, a BS in marketing from Syracuse University and an MBA with a concentration in marketing from New York University, as well as the years of experience teaching both large and small classes.

I am especially strong in marketing research—both qualitative and quantitative, and am well versed in all aspects of promotion, advertising, consumer behavior, and marketing and business management.

My teaching skills are excellent. I am always evaluated highly by my students and department heads. I enjoy the interaction with students and am comfortable with both large lecture classes as well as smaller groups.

Please look over the enclosed resume and list of courses I have taught, and I believe you will find a strong candidate for the position.

I look forward to hearing from you in the near future. Please call me if there is anything else you might need, or if you have any questions. Enclosed, as the ad requested, you will find my vita, listing of courses taught, and the names of three references.

Thank you for your valuable time and consideration.

Sincerely,

Peter Kiser

## *Classified Ad Response Letter*

916-555-1010

Mr. Jeff Green  
The Health Center  
45 Medical Court  
Sacramento, CA 95841

Dear Jeff Green,

My strong writing background and intense interest in health care would enable me to make a significant contribution to the media information director position you are currently advertising.

I'm a competent, award-winning writer and editor. One of the pieces I've won awards for is a weekly column that has dealt exclusively with social, family and health issues. I have enclosed writing samples that show my commitment to health care issues.

I'm available immediately to help meet your writing and placement needs. I have good contacts in the media.

My respect and admiration for The Health Center goes a back a long way. I came to you for my health-care needs as a teenager, and I have relied on you for care and information ever since. I am truly committed to your mission.

I can make myself available for an interview at your convenience. Thanking you most kindly for your consideration, I look forward to meeting with you soon.

Cordially,

Debbie Bayne

## *Cold Contact Letter*

- Does a good job of telling what the applicant can do for the company
- Good highlighting
- Drops the ball by not taking proactive approach to interview
- Grade: A-

85 W. 78th Street  
New York, NY 10023  
212-555-1010

Ms. Vanessa Graham  
City Medical Supplies  
23 Houston Street  
New York, NY 10005

Dear Ms. Graham,

In my four years as sales manager of a leading medical supplies distributor in Westchester County, I directed the sales and marketing policies of the company's line of medical supplies and accessories.

During that time:

- Annual billings more than tripled from \$3.25 million to \$10.75 million.
- Profits rose five-fold, from \$150,000 in 1984 to \$785,000 for the fiscal year ending September, 1988.
- Number of accounts within same geographical territory increased by more than 250%.

The success I've had here and elsewhere in 12 years of selling is not a coincidence, or attributable to luck or magic. My sales success is due in part to my education in Business Administration (Harvard, 1976) and a natural ability to analyze a marketing/selling situation and come up with an innovative program that leaves the competition way behind.

What I have done for my previous employers, I am confident I can do for you.

I would be glad to make myself available for a personal interview where we can discuss how I can serve your company in increasing sales and market share.

Sincerely yours,

Thomas Mahoney

## *Cold Contact Letter*

- Good use of "what I can do for the company"
- The only things that could make this letter better are a little pizzazz and more specific reference to the company
- Grade: A

209F N.W. 111th Street  
Gainesville, FL 32609  
904-555-5665

Mr. David Heller  
N.J. Research, Inc.  
34 Consultants Court  
Princeton, NJ 08540

Dear Mr. Heller,

As marketing research companies are increasingly called upon to supply information on magazine readership to publishers, there is a growing need for trained and experienced professionals in the field.

Through my marketing/research experience and my master's thesis, which have particularly dealt with improving marketing readership studies so they can better define magazine audiences to potential advertisers, I am certain I could give you valuable assistance in satisfying research demands and improving the marketing tools you currently use.

I will be completing my master's degree in December and would be interested in making a contribution to N.J. Research's profitability in a marketing/research capacity.

I believe my services would be useful to you, and I will call you in late September to discuss an interview. Thank you for your time and consideration.

Sincerely,

Scott Morris

## *Cold Contact Letter*

- Good trumpeting of accomplishments
- Good, proactive approach to interview
- A little long
- Grade: A-

19 Berkley Street  
Maplewood, NJ 07040  
201-555-1212

Dr. Julius Kane  
Syracuse Law Partners  
50 Comstock Blvd.  
Syracuse, NY 13215

Dear Dr. Kane,

My recent experience as director of public information at an All National Law Clinic and my commitment to legal issues would enable me to make a significant contribution in a public relations/public affairs/community relations capacity. I will be relocating to Syracuse within a year because my husband has just accepted an offer to teach at Syracuse University.

Among the highlights of my tenure at All Nation has been the launch of a new clinic site. I developed a very successful marketing plan within tight budget restrictions, and as a result, the new clinic is not only building its caseload with each passing week, but we have also generated excellent awareness and enthusiasm for our services.

When I leave All Nation next year, I will have three newsletters and two annual reports under my belt. The publications I've produced thus far have been extremely well received.

I've also developed an aggressive program of regular press releases, having learned a great deal about how to get releases into print from my years as an editor. I have an excellent record of getting releases placed in local publications.

I will relocate to Syracuse no later than August, 1990, but I could relocate sooner should you have an appropriate opening. I would be willing to fly up for an interview at virtually any time, and it is likely I will be in Upstate New York around Christmastime. I will call you then to see if we can set up an exploratory interview even if you have no openings.

Should you wish to reach me to set up an interview, you may leave a message at 201-555-1212, or call that number after business hours or call me at All Nation at 201-555-9999. I'm sure my executive director would give me a fine recommendation, however, he doesn't know I'm leaving yet, so I would appreciate your discretion.

Cordially,

Joan E. Dreskin

RR Box 12  
Waverly, VT 05492  
802-555-5555

Dear Mr. Black,

More than three years ago, I left the Philadelphia area to receive a working education in media and media sales. My resume indicates that I have not only learned my business from a variety of angles, but also quickly progressed to a position of responsibility in every company.

Each promotion was based on my aggressiveness and a well-proven ability to make money. I can now do the same for your company.

In my most recent position, I took a department that was already 6% behind established goals. Within a six month period, I had completely reversed that figure—plus.

The enclosed resume only partially reveals my qualities as an advertising executive and idea man. I am experienced in many facets of marketing, budget and profit planning. I have much experience in general management planning and have proven quite capable of turning a disorganized and unprofitable crew into a well-run and money-making machine.

I am currently planning to return to the Philadelphia area to put my experience to work. After two harsh Vermont winters, I am ready to return to my old stomping grounds as soon as possible.

I hope to hear from you shortly and would be happy to travel to your area anytime for an interview. Thank you for your consideration of me.

Sincerely,

John Smith

Mr. Archie Weatherby  
California Investments Unlimited, Inc.  
25 Sacramento Street  
San Francisco, CA 94102

Dear Mr. Weatherby,

Please consider this letter as an initial application for a position as an insurance broker for California Investments Unlimited, Inc.

I recently graduated from the University of Oregon with a degree in business, where I was president of the Future Business Leaders of America.

Although a recent graduate, I am not a typical new graduate. I attended school in Michigan, Arizona and Oregon. And I've put myself through these schools by working at such jobs as, radio advertising sales and bartending, both of which enhanced my formal education. I have the maturity and ability to embark on a career in insurance brokering, and I'd like to do this in California, the state I grew up in.

I will be in California at the end of this month and I'd like very much to talk with you. I will follow up this letter with a phone call to see if I can arrange a time to meet with you.

Thank you for your consideration.

Sincerely,

John Oakley

## *Recent Grad Letter*

- Should have found out editor's name
- Request for interview is not proactive, although it is a good idea to ask for interview despite lack of openings
- Negative information unnecessary
- Resulted in an interview and job offer
- Grade: B+

4115 H Street, #20  
Davis, CA 95616  
818-555-4115

Dear Editor,

I am a graduating senior seeking a career in journalism. As managing editor of my award-winning daily collegiate paper, *The California Surfer*, of the University of California, Pikes Point, I was responsible for overseeing daily operations of the newsroom, including seven desk editors and one night editor. My duties included deciding placement of all stories in the paper, doing daily editing, serving on the editorial board, mitigating personnel problems and serving as liaison with the production and business departments. I also managed our United Press and UC Capitol Bureau wire services.

In addition to my management duties, I wrote approximately four to nine news stories per week, covering a variety of topics including local and student governments. I have also covered state politics and have much experience covering local government at the city and county level. I have also gained great insight into politics at the county level through my current internship with the Orange County Supervisors Office.

*The California Surfer*, despite being a student newspaper, has the largest daily circulation in Orange County and serves also as a community newspaper, focusing as much attention on local politics as what happens on campus. They also have a full-time reporter covering the events at the state capitol. Thus, I feel that while I have no immediate full-time experience with a professional newspaper, that my excellent, conscientious and thorough writing and reporting skills more than qualify me for a position on your newspaper.

I will be graduating in June and would appreciate being kept in mind if you have any job openings. In addition, I will be in New Jersey on March 27 and 28 and would appreciate being able to stop by and talk with you even if you have no immediate openings. Thank you for your full consideration.

Sincerely,

Allison Cassidy

Richard's draft letter to send to various

Office Manager  
Law Firm

Dear Manager,

After talking with a friend who is a lawyer, I was encouraged to seek work as a legal assistant, a position that has interested me for some time. My purpose in writing is to determine whether a legal assistant position is available or may become available with your firm soon.

As my resume illustrates, I have extensive experience and skills that are relevant to this position. I would very much appreciate the chance to come in and talk with you further about your personnel needs either now or in the near future.

As a professional creative writer, I'm interested in finding a job that calls for the writing and editing skills I've developed. I look forward to hearing from you soon.

Sincerely,

Richard Griffon

James Lawler  
Director of Operations, Alameda County  
Bay Medical Services  
780 San Joaquin Street  
Oakland CA 94604

Dear Mr. Lawler,

I was very pleased to learn of the opening for the Alameda County Field Supervisor-Operations position.

In my 18 months as a paramedic with Bay Medical Services I believe I have demonstrated independence and initiative in developing plans to resolve problems I encountered on the job.

I enjoy participating in the operational functions of BMS as a Crew Chief and Relief Field Supervisor.

I look forward to an opportunity to take on more responsibility in this organization and I see the position as a chance to further contribute to the development of paramedicine and to Bay Medical Services as an organization.

I have enclosed a copy of my resume and would like an opportunity to interview for this position.

Sincerely,

Richard Jennings

# *Resumes*

1955

## BASIC RESUME

- Well-suited to unskilled or semi-skilled workers, blue collar workers, skilled manual craftsman. Those who enjoy physical exertion, like to follow instructions, enjoy the outdoors, possess manual and finger dexterity, mechanically inclined.

- Simple type, elementary in its presentation.

- Helpful to those who don't think they need a resume.

- Record of past work experience including part-time or summer work, work as a trainee, under an on-the-job training program.

- Includes details of education with dates.

- Notes skills developed in volunteer work, in leisure time activities or hobbies.

- Is a curriculum vitae, a way to present information about the applicant in a graphic, well-organized manner.

Inventory - to do in preparation for writing basic resume

1. Name and Address

2. Work Record

List your former positions and give as much information as possible about each one and length of experience. Put all information in writing; later you can extract pertinent sections.

3. Employment You Are Trying to Secure

List the kind of work you are willing to accept and for which you consider yourself better qualified.

4. Willing to Relocate

You should mention whether or not you are willing to relocate.

5. Service

If you have any military background and if there is any match between that work and the job you are seeking, mention it.

You could divide your information under the following headings:

(1) Name and address.

(2) Kind of position wanted.

(3) Personal data: date of birth, condition of health, height, weight, marital status, number of children if any, willingness to relocate, etc.

(4) Work experience: what kind of work you have done up to the present, and what relation it has to the job you want.

(5) Training: what kind of schooling you have had. Did you learn your trade by means of an on-the-job program, or did you learn it through serving an apprenticeship?

(6) Of what organizations, societies or unions are you a member?

(7) State if your salary is open to negotiation or, if you are a union man or woman, whether it is in accord with union requirements. Also, if you are willing to relocate, you might bring up the

## CHRONOLOGICAL RESUME

- Presents information in somewhat more detailed form than the basic resume.
- Favored by office workers, white collar assistants, sales personnel and service employees.
- May also be used by skilled craftsmen and semi-skilled blue collar workers.
- Records information in chronological order. Offers best opportunity to present details of experience exactly as they occurred without explanations.
- Arranged in reverse chronological order.
- Easy to prepare.
- Good for continuous work record showing growth and development.
- Most familiar to employers.

Inventory - to do in preparation for writing resume.

1. Name and Address
2. Work Record

List your former positions and give as much information as possible and length of experience. You can extract pertinent material later. Do not fool yourself. Don't mention work because it sounds interesting; unless it is an activity you want to explore and for which you have the proper educational background and aptitude.

3. Educational Background

List training, institutions where you have studied and dates.

4. Service

If you have served in the armed forces, mention it.

You could arrange your resume in this manner:

(1) Name and address.

(2) Work record: Start each entry with the number of years you were on the job, the title of the position, if any, and the names and addresses of the companies. If you have any particular accomplishments that relate to the jobs held, then describe them as best you can to supplement the entry.

(3) Give the kind of training and experience you acquired, and above all try to emphasize the type of work you prefer.

(4) Refer to your memberships in the community and in the trade, and to whether you are a union man.

(5) References available on request.

1957

## FUNCTIONAL RESUME

A functional resume is organized according to the functions of a job. It is a good advertisement for yourself and an acceptable and ethical document to promote employment in a line of work which will bring you self-fulfillment. Not writing a functional resume is conning yourself into believing you are not as important as the employer.

A first-rate functional resume, a product of three weeks' work and four drafts disciplines people to focus on answers to three questions everyone needs to know: (1) Who am I? (2) What do I do well? (3) What do I want? Developing a functional resume helps you answer these questions.

Employers can be turned off so you do take a risk. Chronological resumes leave neutral feelings and do not turn people on or off.

It is especially suited to those who can express themselves effectively, who are interested in ideas and who are inclined to creative or artistic activity. It shows to better advantage the person who has gaps in work history or is changing careers or has never worked.

Occupational Inventory- to do in preparation for writing functional resume

1. Name and Address
2. Occupational Objectives

This should be a clearly worded statement of the field in which you want to work. It is most important that you express yourself exactly here; you might find yourself in a position which, although it fits your qualifications, does not satisfy your ability completely or points you in the wrong direction. This statement should also tell the reader that you are not looking for just anything that might come along, so as to prevent your being offered just anything. Your overall objective may be stated generally, but the specific points in which you are interested must be stated precisely.

3. Summary of Functions- Could call it "Related Skills".

Take a sheet of paper and make a list of accomplishments - positive activities that gave you a sense of fulfillment. Go back as far as memory allows and list every accomplishment, achievement, contribution which made you feel proud deep down in your tummy - no matter how modest. Write down every job you held unless you hated it, all projects you enjoyed, all roles you've played - sister, Brownie leader, club treasurer.

Study each one and give it a name - management, mediation, planning. This will clarify your skill areas. This usually takes about 3 days!

Establish two five skill areas. Discard those accomplishments under each skill area which do not support what you want to do.

Now you have the guts of a functional resume.

You will begin to discover that many functions of your future job were performed in various forms throughout your working experience. For example, you may have kept records on one job, or checked general entries on another, or worked as an assistant in the accounting department on a third. Experience in record-keeping can be very useful in accounting. In a functional resume, this "hidden" accounting experience comes to light, and shows up more clearly than it would in a different form of resume.

On the other hand, you may be just out of school, with your experience limited to part-time or summer work. A functional resume may make you, a young trainee seeking a beginning job, appear as if you regard yourself a \$25,000-a-year executive.

The volunteer work you did and what you learned in other areas of living rate equal billing with paid employment. Thus, your stint as regional convention manager for a national organization would not, in the functional resume, be buried under some routine heading such as "community activities." You can review and relate what you actually did in your volunteer role, from site surveys to bargaining, to staffing, to housing, to publicizing - right down to your final report. Depending on the job you are aiming at, you can play up the most relevant functions. For a department store, where women take charge of the fashion shows, you would emphasize your success in bringing disparate and sometimes temperamental groups together on schedule. Or if you proposed and undertook several seminars for a university, you would want to point up the financial success of what you did.

If you are writing a resume for an advertising manager, for example, you can divide your experience as follows: (a) in copy writing, describe the kinds of copy you wrote and the particular products or media for which you wrote; (b) in administration, describe its scope, and whether your experience as administrator was gained in the advertising department of some company or for some advertising agency; (c) in art, indicate the type of art work you have done, and whether you worked under supervision or independently; (d) in sales promotion, specify who employed you in that capacity.

Employment History - Could call it Work Record, Experience Record, or Employers

For each job - part-time, volunteer, vocational and full-time - write brief descriptions illustrating effectiveness for the job you want, what you've done.

Education

Detailed information about your education is useful and important. Begin with your most advanced degree. If you have a master's, name the type of degree, school, its address, the year, your major subject and any pertinent facts connected with your attaining the degree, especially the titles and publication dates of your theses or dissertations, if any. Include special training courses, special conferences if they support the job you want.

### Professional Affiliations

Information about memberships in professional societies, including college fraternities, should be presented here. State any special function, duty, title, or administrative post you may hold (or have held), and whether you are an active, honorary, professional or nonprofessional member.

### Outside Activities

This should include the names of all political, social, church, civic and community organizations in which you have participated actively. This information also tells the employment or personnel manager something about you in addition to your work history.

### Military/Volunteer Service

Convert the terminology into understandable non-jargon that laymen can read. Keep the facts believable. If you taught English as a second language, say something about techniques used, how many taught, and skills necessary to do the job.

### Willing to Relocate

## MODERN ANALYTICAL RESUME

The modern analytical resume is somewhat more complex than the functional resume because it presents the necessary information in greater detail. It can be said that the modern analytical resume offers the prospective employer or the interviewer a broader base from which to judge the qualifications of the applicant. It is favored by professionals, executives or highly specialized workers. For those who possess leadership qualities and can supervise others, who enjoy thinking about and solving problems, who like educational work and who are adept at figures, the modern analytical resume should be their choice.

In preparing the final draft of your resume, it is n't necessary to use every item that follows. You can select those which apply to you particularly. For example, you may know a foreign language - a valuable asset in your field of endeavor. Or, conversely, you might not want to say anything about your clerical ability, thinking that there is no need for it in your field. The instructions given here are intended to provide all possible entries for your personal resume.

The modern analytical resume is a combination of the better or more outstanding qualities of the three preceding types of resumes. It includes all the advantages of what used to be known as the Harvard Resume; that is, it analyzes, step by step, the more essential aspects of your business profile.

The modern analytical resume permits you to stress the major areas of skill that are pertinent aspects of your work, as these relate to the position you are seeking. It supplies the employer with a great many details that would not be necessary to point out in jobs that can be covered in a basic, chronological or functional resume. Also, it presents the material in more logical sequence than in the functional resume and highlights the importance of each job held in each company.

In the modern analytical resume you are given the opportunity to emphasize the qualifications for the job you are aiming at, as well as to highlight your particular skills and abilities. In addition, the modern analytical resume allows you to concentrate on the kinds of work you did and the jobs you held in the past.

For example, an engineer can arrange his modern analytical resume according to jobs worked on, presenting each as a project in problem-and-solution form. This type of resume also permits the applicant to indicate and comment on the growth achieved with each job experience. It presents ascending steps and the progress made, as reflected in the different jobs held or duties performed. Because the modern analytical resume is so very comprehensive, it offers the applicant an opportunity to submit supplemental information in a letter accompanying the resume. Needless to say, personality, character and potential ability are revealed in these, and very often they play a major role in the best outcome for the applicant.

Apart from the advantages indicated above, the modern analytical resume is particularly suited for a college graduate who has become a corporate lawyer, president of a company, marketing executive or any other post that can be classified as in the top management level.

So comprehensive is the modern analytical resume in the opportunity it offers for occupational and self-revelation, that it also provides scope for answering questions that the interviewer may ask.

In preparing your modern analytical resume, try to be as complete as possible in the information you present. It will serve you best if you do this.

### Inventory

#### 1. Name and Address

Place your name and address on one side and your telephone number on the other.

#### 2. Summary of Experience

In 50 to 100 words summarize all the experience you have gained in the different positions you have held up to the present. This summary will provide the reader with an almost immediate idea as to whether you are the person to fill the job.

#### 3. Occupational Objective

In a sentence or two, name your field of specialization, or fields related to it, and the position you prefer. For example, an occupational objective might be "to be associated with a growing, internationally oriented firm in the field of marketing or investment."

#### 4. Experience Highlights

Your previous experience may be the determining factor as to whether or not you are hired.

Give the name and location of the company (or companies) you were with, the title of your position there, the length of employment. Describe your duties, pointing out those aspects of the work that might fit in with the job you now seek. If you are looking for a job in public relations or personnel, for example, you might explain your former jobs. If you are applying for a position as export manager, explain your sales experience and how it has helped you in the ability to deal with customers, to talk on the telephone, to write letters and to use the general principles of sales psychology.

#### 5. Education

Give the details of your education and training, from high school on - the name and location of each school, the dates of your attendance and the dates of your graduation. Include the name of your curriculum or program, and the titles of any courses that had special relevance to the work you now seek.

#### 6. Early Background

Employers generally want this information because it rounds out the picture of the whole person. Here you can tell something of your history as a child: the environmental and educational factors, including after-school activities or occupations that helped to form the adult you now are.

#### 7. Professional Affiliations and Licenses You Hold

Information about memberships in professional societies should be presented here. State any special functions, duties, titles or administrative posts you have held or hold, and whether you are an active, honorary, professional or nonprofessional member.

If you work in a field that requires licensing from local, state or federal authorities, state those you have.

#### 8. Personal Recognition

State the titles, publishers and dates of printing of all articles, papers, theses or books you have written. Employers like to have what is called "literary visibility" about their employees. Provide similar information in the scientific, technical or political fields.

#### 9. Clubs and Fraternities

This should include the names of all political, social, church, civic and community organizations in which you participate actively. This information also tells the employer or personnel recruiter something about you apart from your work history.

#### 10. Knowledge of Foreign Languages

Many companies, with their interests abroad through exports, foreign investments and overseas branches, have an increasing demand for employees who speak another language fluently. List the language (s) you can speak fluently, but do not assume that any high school or college courses in a language can be regarded as giving you fluency. You either know a language fluently or you do not. Personnel people will almost certainly have you take a test in the foreign language. Failure in this test can be held against you.

#### 11. Outside Activities

One young lady, interviewed for a secretarial position, was puzzled when asked if she collected coins or stamps. What could the question possibly have to do with her skills and competence as a secretary? Actually, it might reveal more about her interests and background than a series of more routine questions. An interest in stamps shows that a person enjoys handling small details. An active pursuit of such a hobby can sharpen a person's sensitivity to fine distinctions and subtleties of arrangement.

Obviously we don't all want to be philatelists or numismatists. But it's important not to overlook the value of hobbies and extracurricular activities in selling yourself to a potential employer. The books and magazines you read, the games you enjoy and the things you collect can all be positive comments on your character and personality. An employer who knows that you participate in extracurricular activities, welfare-organization work or community projects knows that you are willing to work to accomplish things even when it is not required of you or when there is no financial reward. If you have been chairman of a committee, president of your class or captain of an athletic team, you have had practice in leadership that will make you a better candidate for an executive position. If you were advertising manager of your school paper or yearbook, the experience may prove valuable when you look for a job in public relations.

#### 12. Willingness or not to relocate.

# What is a Damn Good Resume?

A DAMN GOOD RESUME is a functional resume with a chronological job history. It starts with a clearly stated Job Objective, and then presents an assessment of your skills and experience in terms of that current objective. It is brief, focused, and effective.

In contrast, the old style "standard resume" listed, in chronological order, your job experiences, and the basic duties you performed under each job title. It usually omitted mention of your objective (incredible!). And worst of all, it was left to the potential employer to figure out what all that MEANT to her, what you wanted, how well suited you were for the position available.

A DAMN GOOD RESUME is designed to give you full credit for what you've learned and accomplished, regardless of where or when, regardless of job titles or pay.

And it's a refreshing RELIEF to the employer; she looks it over and sighs, "WOW, finally somebody who knows just what she wants, knows what she has to offer, and even seems to know what WE need too!"

# A Damn Good Resume Has Four Basic Parts

- \* A clearly stated JOB OBJECTIVE
- \* A SKILL ASSESSMENT related directly to the Job Objective
- \* A listing of your WORK HISTORY
- \* A listing of your EDUCATION & TRAINING

## A DAMN GOOD RESUME DOES NOT HAVE:

- Personal information that's irrelevant to the job — age, marital status, height and weight, hobbies.
- Vague references to a job objective — like "I want to work with people."
- Jargon — like "interface."
- A clutter of too-precise dates — we simply say "1971-1975."

## HERE'S WHAT A DAMN GOOD RESUME CAN DO:

- Focus attention on your strong points.
- Minimize the impact of times when you were unemployed.
- Demonstrate that you're a "pro" even if you've never been paid for what you do.
- Show how you're well qualified for work in a different field from your present one.

# Ten Tough Questions

## About Resumes

1. "How do I account for that year when I wasn't employed?"
2. "What if I was 'just a housewife' for 20 years?"
3. "What do I do about dates on my job history . . . when I had two or three little jobs with a month or so in between?"
4. "What if I was called a 'secretary' and never got the pay or job title for all the things I really did?"
5. "Can't I skip the Job Objective? I don't want to limit myself."
6. "What if I don't have any work experience in the exact job that I want now?"
7. "How long should a resume be? One page?"
8. "What if my experience was from a long time ago?"
9. "What if they insist on a chronological resume and a lot of dates?"  
and finally . . .
10. "How should I use my resume?"

---

### 1. "HOW DO I ACCOUNT FOR THAT YEAR WHEN I WASN'T EMPLOYED?"

---

Tell the truth, creatively.

BE POSITIVE; refer to what you WERE doing rather than to what you WEREN'T doing. Don't say "unemployed" because it MIGHT convey an UN-truth about you, that you aren't interested in working, when in fact we both know you WANT to work. Instead, look at what you WERE doing, allow yourself a reasonable degree of "being human," and emphasize the positive aspects of what you did that year.

EXAMPLE: Candidly from my own experience . . . in 1974 I was traveling across the country "trying to figure out what to do with the rest of my life," coping with an unexpected traumatic illness, making some embarrassing and painful and wonderful experiments in group-living, and looking — sometimes desperately — for work that I could feel good about. I got by on unemployment for awhile, Medi-Cal for the illness, off-and-on Kelly Girl work, and loans from Mom. It was a very tough year.

What does it say on my resume?

"1974 - Travel and independent study"

And that's true! I've just expressed it with more dignity than I was feeling at the time. I don't need to tell anybody, on my resume, what a bummer that year was. And believe me, I learned enough to justify calling it "independent study"!

---

## 2. "WHAT IF I WAS 'JUST A HOUSEWIFE' FOR 20 YEARS?"

---

Change your attitude, for starters (more below);  
Give yourself credit for all you've accomplished and learned;  
Then, get help expressing it all creatively.

Every woman I've worked with, who started with "just a housewife" self-image, ended up with greatly improved self-esteem after doing a DAMN GOOD RESUME. When you discard the myth that only PAID work is valuable, and start listing everything you ever did (home management activities, volunteer work, hobby and craft work, personal growth projects, reading of all kinds), an impressive body of skills, knowledges and experience emerges.

The task then is simply to identify what skills are demonstrated in all that, and learning to express them in world-of-work terms. Get help and support from places like "Displaced Homemaker" centers and community Women's Centers for the needed attitude change, and help in analyzing and writing about your skills. (Refer also to Deana's resume in Appendix A.)

---

## 3. "WHAT DO I DO ABOUT DATES ON MY JOB HISTORY? . . . WHEN I HAD TWO OR THREE LITTLE JOBS, WITH A MONTH OR SO IN BETWEEN?"

---

Delete very short-term jobs. OR  
Combine several short jobs in one description. (See Deana's resume.)  
Stick to YEARS rather than precise dates by-the-month. Rounding off to years is a good general practice anyway:

- it looks better
- it keeps the reader from doing a lot of detailed arithmetic with your work record when you want them to focus on your SKILLS. Read the Employer Feedback section; employers have different opinions on this.

---

4. "WHAT IF I WAS CALLED A 'SECRETARY'  
AND NEVER GOT THE PAY OR THE JOB TITLE  
FOR ALL THE THINGS I REALLY DID?"

---

You don't have to use THEIR job title! So MUCH fine and important work is done every day in millions of offices by intelligent women who aren't being adequately paid or recognized for the high levels of their skills and responsibilities.

"COME THE REVOLUTION . . ." Meanwhile, feel free to create a fairer job title that reflects the highest level of skills you used as a so-called "secretary."

EXAMPLE: One client's old resume listed "secretary" positions five times. Her NEW DAMN GOOD RESUME refers to those same jobs with the following reasonable, fair job titles:

- office supervisor
- director's assistant
- technical writer
- executive secretary
- administrative assistant

---

5. "CAN'T I JUST SKIP THE JOB OBJECTIVE?  
I DON'T WANT TO LIMIT MYSELF."

---

NO!

Clearly stating your Objective serves to FOCUS you, not to box you in. It's critically important to KNOW WHAT YOUR OBJECTIVE IS, as explicitly as possible, and to state it, and then to have everything else on your resume directly relate to it. THAT'S what makes it a DAMN GOOD RESUME.

And remember, you could have TWO or more resumes, each with different objectives. Look at George's two resumes in the Sample Resume section for examples.

---

6. "WHAT IF I DON'T HAVE ANY WORK EXPERIENCE  
IN THE EXACT JOB THAT I WANT TO DO NOW?"

---

A DAMN GOOD RESUME is the perfect format for you. If you really want a particular kind of job and are confident that you'd do well at it if only you got the chance, it's just about certain that you have enough transferable skills to show that you're a good candidate for the job.

Here's what your resume needs to show:

Transferable skills from paid or unpaid experience.

A credible progression from where you've been to where you want to go now. (If there's a leap the size of the Grand Canyon from where you are to the position you want, then be willing to state a current objective that bridges the gap.)

Evidence of motivation & potential—experience that used the same kind of personality traits and strengths that your Ideal Job calls for. (See Shari's resume on page 27.)

---

7. "HOW LONG SHOULD A RESUME BE?"

---

One page is best, occasionally two. And it WILL all fit—even if you have 25 years of fantastic experience. A good resume is like a handful of Aces . . . you DON'T deal out the whole deck! Prospective employers don't WANT your whole life history; they only need to see the essential points that make you qualified, plus the unique experience and attitudes that make you SPECIAL. Say the minimum, powerfully.

---

8. "WHAT IF MY EXPERIENCE WAS  
FROM A LONG TIME AGO?"

---

The employer's attention is turned to your SKILLS, which appear first, rather than WHEN you acquired them, with THE DAMN GOOD RESUME format. Also, you can include your more recent activities of all kinds and show how the skills you acquired are transferable to the job you now seek.

---

9. "WHAT IF THEY INSIST ON A CHRONOLOGICAL RESUME, WITH ALL THOSE DATES IN ORDER?"

---

You could point out that your resume DOES include a list of your jobs and the years you did them; it's at the end, and it's condensed. OR, you may decide to go for the chronological resume instead of the D.G.R. format. Some knowledgeable folks insist that a chronological resume is sometimes better — like when you're staying in the same field and trying to move up the career ladder.

This question usually comes up in connection with a Job Application . . . which you are going to AVOID filling out until after you've had a personal interview with the Hiring Person. THEN attach your resume instead of filling out the "Job History" section, which is invariably designed to your disadvantage. You DO NOT have to give all that information before being interviewed.

EXCEPTION: for civil service jobs, we're advised, your application won't get processed unless you fill it out fully. In that case, don't fight it . . . do it THEIR way!

---

10. "HOW SHOULD I USE MY RESUME?"

---

- a) AS A "FIRST DRAFT" MODEL FOR A TAILORED RESUME. Always, when you apply for a specific advertised job opening, rewrite your resume using:
- THEIR job title as your Job Objective (word for word)
  - THEIR stated skill requirements as your Skill Areas
- b) AS A LAST RESORT FIRST CONTACT. When there's no way around it and you simply can't make the initial contact any other way. (But be creative . . . there usually is another way to reach the Hiring Person.) Send an excellent cover letter along with your resume.
- c) BEFORE YOUR JOB INTERVIEW. To get you focused and clear. Tuck the resume in your pocket to look at just before you enter the new workplace; it will remind you of your objective and of your skills. in case you tend to space out about them.
- d) AFTER YOUR JOB INTERVIEW. You can leave it with the employer as a concrete reminder and documentation of the information you provided during the interview. DO NOT hand it to the employer at the beginning of your meeting; she'll be looking at it instead of at you!
- e) WHEN YOU MAKE PHONE CALLS TO STRANGERS for job information research. When lining up informational interviews, and such — especially if your morale is flagging — keep your DAMN GOOD RESUME in front of you as you work, to remind you of your skills and accomplishments, and to keep your mind from going blank about your objective.

# Criteria for effective resumes as perceived by personnel directors

## Conclusions

1. Weighted averages used to measure the perceptions of personnel directors regarding the importance of various components in resume content revealed the following:

- It is important to very important to state a career objective on a resume.
- It is important to mandatory to state type of degree, major and area of specialization on a resume.
- It is very important to mandatory to state various areas of related work experience on a resume, whereas it is only important to very important to list various factors on nonrelated work experience on a resume.
- It is mandatory to state address and telephone number on a resume; however, age and applicant's picture are unimportant.
- Technical elements including neat appearance, proper data arrangement, good organization, typing and spelling were all rated as very important.
- Military experience and community involvement were important on a resume, whereas high school record and hobbies are of lesser importance. Draft status was rated unimportant.

2. Eighty-eight percent of the personnel directors spent three minutes or less reading a resume.

3. The average length of resume received was two pages long; however, generally, personnel directors prefer resumes one page long.

4. The identification section should be placed on the resume

first followed by the job objective, education, experience and related activities sections.

5. Application letters which accompany the resume should identify the position sought; should relate job goals, education and experience to position desired; should demonstrate good written communication skills and technical elements; and should indicate availability for an interview and location where applicant can be contacted. □

*Suggested content for application letters.* In an open-ended question regarding an application letter which usually accompanies a resume, personnel directors primarily suggested inclusion of the following types of content:

1. Indicate how applicant could benefit the organization.
2. Identify the position being sought.
3. Relate more detail regarding applicant's career goals.
4. Explain how applicant's background relates to the job being sought.
5. Research and reveal knowledge about the company where applicant is seeking employment.
6. Indicate a willingness to travel and relocate.
7. Demonstrate good written communication skills such as proper organization, positive overall tone and conciseness.
8. Demonstrate excellent technical elements such as neat appearance, correct spelling and accurate typing.
9. Indicate availability for an interview and where applicant can be reached.

applications

1986

## ANATOMY OF AN APPLICATION FORM

Although there are many different kinds of application forms, the rules for filling them out are usually pretty much the same. The following informational categories are typical of what you will find when you start applying for jobs.

### General Information

The employer is trying to get the necessary facts about you.

### Personal Information

Is generally considered to be unfair to ask until you are hired or unless it is necessary to the job. You can choose to answer or leave this blank if you are not comfortable providing this type of information. You can also state "WILL PROVIDE WHEN HIRED."

### Physical Condition Questions

Answer in brief nonmedical terms followed by a positive statement about your capabilities. This information is fair to ask **IF IT WOULD AFFECT THE WAY YOU CAN DO THE JOB.** Remember, be sure to tell what you can do as well as what you cannot do.

### Position Applied For

Be sure to list one or two job titles in which you are interested. Never state "anything."

### Salary Question

Never fill in a dollar amount. Instead state "Open" or Negotiable."

### Work History

This is a very important part of the application. Answer these questions truthfully and completely. Bring the information with you on a "Help Sheet" so you are prepared. Be sure to list the skills and **JOB DUTIES** you performed in your job. Don't take shortcuts on your answers--this section is very important in selling you to the employer. Also, never say "See Resume"--take the time to fill in the form even if you simply restate what your resume already says. Don't make the employer work to learn about you--it may irritate them.

If you don't have any or many paid work experiences, include volunteer work under this section.

Reason for Leaving - If your reason for leaving a job was not positive, be careful how you say it. NEVER put down anything which might concern the employer before you get a chance to interview. Instead, put down "Will explain in interview" or leave it blank.

Employment Dates - The employer will be watching for gaps in your work history--these will have to be explained in the interview. Be Honest - The employer will probably check up on this section.

References - Be prepared to list three people who know you and would say positive things about your work, skills and personality. Be sure to get permission from the reference people you list so they are not confused, surprised, or unhappy about getting a reference call from an employer.

Organizations - Do not list church or political groups just in case the employer doesn't agree with your religious or political beliefs. You may be discriminated against if the employer doesn't share your views.

### Training

The employer is trying to determine if you have the proper training and/or education for the job. You may have too much or too little. The employer may send for school records--or ask you to--in order to verify the information you provide, so be certain the information you give is correct. If you have your General Equivalency Diploma (GED) be sure to so indicate. Most employers believe the GED is as good as a high school diploma, but they will probably ask you why you quit high school during the interview.

If you plan to continue schooling while working, be sure to stress that you would do this only around your work schedule.

Hobbies and Interests - List 4 or 5 interests that you have.

Military Service - If you were in the military, indicate the training you received and the work you did.

Physical Capabilities - Questions about what you can do physically are fair if they will not be used to disqualify someone from a job they could do.

Convictions - If you were convicted of a crime as an adult, say "Will explain in interview." Arrests with no conviction or juvenile offenses do not need to be reported.

Statement of Truth and Signature - Be sure to sign the application before turning it in to the employer. This is your statement that all the answers you provided are correct. You may also be giving permission to the employer to check references.

Remember, providing false answers on an application form gives the employer the right to fire you later. Take your time and do a good job as this is a very important part of getting a job. Again, be honest!

EMPLOYMENT APPLICATION

WESTERN PSYCHIATRIC INSTITUTE AND CLINIC  
a division of the  
UNIVERSITY OF PITTSBURGH

*AN EQUAL OPPORTUNITY/AFFIRMATIVE ACTION EMPLOYER*

Western Psychiatric Institute and Clinic, as an educational and mental health care institution and as an employer, does not discriminate on the basis of race, color, religion, ethnicity, national origin, age, sex, marital, or handicapped status. This commitment is made by the Institute and required by Federal, State, and local laws and regulations, including Title IX, 86.9.

THIS IS TO CERTIFY THAT THE INFORMATION CONTAINED HEREIN IS ACCURATE AND TRUTHFUL TO THE BEST OF MY KNOWLEDGE AND BELIEF. I HEREBY AUTHORIZE WESTERN PSYCHIATRIC INSTITUTE AND CLINIC TO INVESTIGATE ANY OR ALL STATEMENTS I HAVE MADE WITH THE UNDERSTANDING THAT ANY MISREPRESENTATION MAY BE CAUSE FOR DISMISSAL OR REFUSAL TO EMPLOY. I AGREE TO MEDICAL EXAMINATION(S) AND/OR ANY OTHER PRE OR POST-EMPLOYMENT QUALIFYING EXAMINATIONS THAT MAY BE REQUIRED AS A CONDITION OF INITIAL OR CONTINUED EMPLOYMENT. IF EMPLOYED, I UNDERSTAND THAT HOURS OF WORK AND OTHER WORKING CONDITIONS ARE SUBJECT TO CHANGE AT THE INSTITUTE'S DISCRETION.

DATE \_\_\_\_\_ SIGNED \_\_\_\_\_

WESTERN PSYCHIATRIC INSTITUTE AND CLINIC is in no way obligated by the filing of this application, and acceptance thereof does not indicate that there are positions open. Separate application must be made to the University of Pittsburgh Personnel Division, Cathedral of Learning for all university positions other than positions at WPIC. The information contained herein will be held confidential and is, together with all attached papers, photographs, etc., the property of the INSTITUTE. This application will remain active for one year.

## REASONS FOR LEAVING JOBS

Employers will take special note of your cited reasons for leaving past jobs. They will be watching for indications that you may have had difficulty getting along with other persons, for health problems and for other signs of "trouble." Take care when you indicate these reasons on an application form as well as while answering questions during an interview.

NEVER USE	USE INSTEAD
<p><b>Fired</b> <b>Injury</b> <b>Health Problems</b> <b>Personal Problems</b></p> <p>(May alarm employer that you have a pattern of poor health or recurring injuries.)</p>	<p>Will Explain in Interview</p>
<p><b>Laid Off</b></p> <p>(May appear that you alone were fired or asked to leave job.)</p>	<p><b>Not Enough Work</b> <b>Large Company Lay Off</b> <b>Job Phased Out</b></p>
<p><b>Not Enough Money or Benefits</b> <b>Didn't Like Job</b> <b>Didn't Like Company</b> <b>Didn't Like Boss</b> <b>Quit</b></p> <p>(May appear that you have a bad attitude or don't get along with others.)</p>	<p>Will Explain in Interview or <b>Job Advancement</b> if you went to a job offering more money, better position, more benefits, better company, opportunity for job advancement.</p>
	<p><b>Other good reasons for leaving jobs:</b></p> <p><b>Moved or Relocated</b> <b>Care for my Family</b> <b>School or Training</b> <b>Seasonal or Temporary Employment</b></p>

Many people dislike the "paperwork" involved in a job search. However, it is not too difficult if you follow some basic guidelines. Let's look at the paperwork typically required during an employment search.

## FILLING OUT JOB APPLICATION FORMS

THE COMPLETED JOB APPLICATION FORM IS PROBABLY THE FIRST IMPRESSION AN EMPLOYER WILL HAVE OF YOU--SO MAKE IT A GOOD ONE! IT IS IMPORTANT TO ANSWER ALL OF THE QUESTIONS CAREFULLY AND POSITIVELY.

The way you fill out your application may tell the employer:

- how neat you are
- how well you read, write and spell
- how careful you are
- how prepared and organized you are
- how well you follow directions

Be sure to TAKE YOUR TIME AND DO A GOOD JOB FILLING OUT THE APPLICATION form or you may never get a chance to interview. Even one error on the application form can cause an employer not to select you for the interview.

Although there are thousands of different types of application forms, most of them are somewhat similar. Let's take a look at a typical one. Ask your instructor to show you more samples of the ones from your own community.

## TIPS ON FILLING OUT APPLICATION FORMS

### DO

Do take a "Help Sheet," your resume, and an erasable pen with you.

---

Do read the entire form carefully before you start filling it out.

---

Do use your best printing and be neat.

---

Do follow all directions carefully.

---

Do tell the truth and be positive about yourself.

---

If you cannot answer a question positively, you may choose to leave a blank space. Do be prepared to answer and discuss these questions in an interview though.

---

Do re-read the application form before you turn it in to make sure it presents you in a positive way.

---

### DON'T

Don't be caught unprepared without a pen and the correct information.

---

Don't hurry through the form and make mistakes which show you don't follow directions well.

---

Don't scratch out or write over mistakes--use an erasable pen. Don't fold, tear or smudge the application form.

---

Don't be afraid to ask questions if you don't understand.

---

Don't confess everything on your application. If your written answer won't explain things positively, write "Will Explain in Interview" on your application form.

---

Don't expect employers to forget about blank spaces on your application form or about times in your work history when you have not worked.

---

Don't turn in an application with spelling errors, cross-outs or negative sounding information.

---

## APPLICATION CHECKLIST

Always check the following items before you turn in your application form:

### IS MY APPLICATION FORM:

- filled out completely
- clean and neat with no cross-outs or smudges
- easily readable
- filled out correctly--no spelling errors
- truthful - yet does not list health or personal problems
- positive and adequate in answers; states "open" as desired salary
- signed by me

## REFERENCE CHECKS

Have you ever wondered what may be asked about you when an employer "checks" your references? The following are some typical questions that may be asked of a former employer.

1. How do you know him/her?
2. How long have you known him/her?
3. What kind of worker/person was he/she?  
 Dependable  
 Reliable  
 Accurate  
 Quality  
 Speed of Work/Quantity
4. How did he/she work without supervision?
5. How did he/she get along with others?  
 Co-workers  
 Supervisors
6. General impressions? Any problems? Any concerns?
7. How often was he/she late for work?
8. How often did he/she miss work in the past year?
9. Would you rehire him/her?

## MORE ABOUT CHOOSING REFERENCES

A reference is a person who knows you and can say things about your qualifications based on his/her experience working with you or simply knowing you. A good reference has credibility and will say positive things about your abilities and personality characteristics.

There are three types of references you can use:

1. **Employer** - These are people you have either worked for or with. List ones who have good things to say about your honesty, dependability and skills. If you are not sure what a former employer might say, ask them before you use their name. This type of reference is usually the most reliable reference available.
2. **Training** - These are people who have known you during your schooling such as teachers, administrators, or guidance counselors. Use this type of reference only if you've been in school within the past two years.
3. **Character** - These are people who have known you a long time and can talk about your honesty, work efforts, and dependability. Be sure to use their business titles to add credibility to this type of reference.

Do not list relatives, spouses, or significant others as references. These people will be expected to say good things about you and they lack credibility because of your relationship with them. Also, avoid using names of clergy or persons with strong political affiliations as the employer could possibly discriminate if he/she holds different beliefs.

appendix 40

# WRITTEN REQUEST FOR A LETTER OF RECOMMENDATION

---

Company's Name  
Company's Address

---

---

---

Dear Mr. Forsyth:

I'm writing this note as I told you I would on the phone. Thanks for agreeing to give me a letter of recommendation. Since I'll be giving the letter to different companies, could you address it "To Whom it May Concern"?

To refresh your memory about some details, you first met me in the American Legion in 1968, about 9 years ago, when I joined while you were President. We worked together on several committees, especially the Social Committee, when we planned outings. You have met my wife, Doris, and my three children at our picnics and at parties, and you know my department foreman, Ralph Henshaw, very well.

In the letter you might want to comment on whether I am trustworthy and conscientious, and on how I get along with people, since this information is very important to job interviewers. Also, if you could write your letter on your company stationery that would have your telephone number, title, and address on it so the interviewer could contact you if he needs to.

I really appreciate your writing this letter. It will mean a lot to me. As you can see, I'm trying very hard to get a job, so if you hear of anything, I'd like to know about it, either where you work or other places. Since you don't know all of the things I've done in jobs before we met, I'm sending a couple of job résumés I've made up. They will tell you a little bit more about me, and you can give them to anyone you hear about that might have the kind of job I can fill.

I'm including a stamped and self-addressed envelope so you can return your open letter to me easily as soon as you get it typed up. Thanks again and give my best to Joan and the kids. See you at the bank.

Regards,

**AFFIDAVIT**

1. The statements I made in this application are true and complete. I understand that if, in the judgment of the company, I have made any false statement, omission, or concealment or I have failed to answer any question fully and accurately, it will be grounds for terminating my employment if I am hired.
2. I authorize investigation of all statements and matters contained in this application, which Phar-Mor may deem relevant to employment. Phar-Mor will keep all such information confidential, except when such information is required to be released by law, order of a court, or other authority.
3. I agree to submit to a physical examination if requested by Phar-Mor. Phar-Mor shall designate the physician and shall also pay the examination expense. A physical examination may be requested prior to acceptance of employment or at any subsequent intervals after employment is granted. The purpose of such an examination (or examination) will be to determine my physical fitness to begin or continue employment with Phar-Mor.

2008

**Applied Information  
Technologies**

## **Common Job-Hunting Liabilities and How to Handle Them**

When it comes to job hunting, few people realize the importance of dealing with their liabilities. Sometimes these problems are viewed as relatively unimportant and are overlooked. On other occasions a person's liabilities are mistakenly thought to be so very serious, that a job hunter concludes that no corrective action can be taken.

To be most successful, you should develop a strategy for handling any potential liability you may have before you ever attempt to write your resume . . . take an interview . . . or in any way conduct your job campaign.

In the pages that follow, you will find overall solutions to common liabilities. Important observations are made, specific recommendations are offered, and in some cases, alternative courses of action are considered. If there appears to be overlap, it is best to review all of the information that may relate to your situation.

To get started, we suggest you review each liability listed. If it applies to you, place a check mark along side the appropriate number. In the majority of instances, you will have more than one item of concern that you should review. If you are not sure that it relates to your situation, read over the information presented and utilize only that which is pertinent.

When you surface ideas that you believe will help you, either underline the points or make notes on a separate piece of paper. Once you have covered all necessary material, you should be in a better position to formulate a strategy for offsetting your own job hunting liabilities.

Keep in mind that there is virtually no career problem that has not already been successfully resolved by someone else. As you review the strategies, you will soon realize that every liability can be overcome if you will commit to taking action that will resolve them. That commitment, combined with a firm belief in yourself and your future, will be a powerful force in helping you prevail over any difficulties and become successful in the job market.

## 1 You Are Attempting to Return to a Previous Occupation

Not many people have the courage to switch occupations, but among those who do, some find that they really don't like the new job as much as their previous one. When that is the case, it's best to admit the mistake and return to the previous occupation. The problem, of course, is that your most recent experience no longer relates to your goal.

One of the more common situations is the former "producer" who finds that "management" is not so satisfying and rewarding as expected. Many times, your own employer is unwilling to return you to your old job. That means the only way to reach your goal is through a well-executed job change. (Educators sometimes reach the same conclusion and find that they want to return to teaching.)

The important thing, in any case, is to remember that your recent experience should not detract from what you achieved previously. In fact, you normally will have developed a broader perspective, which will make you potentially more attractive as an employee in your past occupation.

There are a number of steps you can take to handle this situation. In the resume, you can use a format which presents goal-related achievements first.

Use the heading "Pertinent Accomplishments" or "Relevant Achievements" as a device to help justify the lack of emphasis on your most recent position. When communicating your recent experience, demonstrate that it complements your capabilities to excel in your previous occupational area. More often than not, you will have gained additional insights that would not be possessed by someone who never left the field.

Portray yourself as whatever you once were, plus more. Sell the fact that you will be an extra value, highly productive and multifaceted employee. Show when possible that you are able to deliver more benefits per dollar of compensation.

During the interview, you may be able to turn this to an additional advantage by characterizing the recent experience as "getting it out of your system." You can focus 100%, without looking over your shoulder, wondering whether you might have been happier doing something else.

You may also find it helpful to review the COMPASS database for your occupation, making careful note of the major requirements for the position you seek. Be certain that your qualifications for each requirement are evident on the resume and in your interviews.

## 2 Your Career May Have Peaked

This is an increasingly common situation today. You probably realize that developments in technology have been reducing the role of many middle managers in the traditional heavy industries. Also, financial pressures have been reducing the number of supervisory levels in many organizations.

If you encounter such a situation, it is likely that you will have to change industries. Another option would be to seek a broader role in a smaller company in your field. Because of the many changes in our economy, employers are adopting more progressive attitudes toward those whose careers appear to have peaked. People realize that it can happen to anyone.

Your resume should emphasize achievements over a broader period of time, rather than focusing on the last two or three years. A positive mental attitude is particularly important in this situation. A defeatist view can establish itself if you are not careful. Once that happens, your troubles can only become greater.

Realize that careers peak for a variety of reasons. If you are a high-level corporate officer, it just may be that you will never go any higher, nor do you wish to do so. Here, boredom may be the problem and a lateral move to a new environment could be all that you are after. The challenge of a new company, new associates and different problems could meet your expectations fully.

When industries and companies experience declining revenues, a majority of the employees will face a disappointing future. The longer you accept this stagnation, the more likely it is that others will view you as "peaked." The best solution is to recognize your plight early and decide to do something about it.

During the interview you should seek every advantage possible. Don't hesitate to point out that achievements are more difficult to come by in stable or declining fields. That would suggest the impact of your presence would have much greater intensity in a growing organization. Don't be reluctant to communicate your strengths and be certain to work toward maintaining a positive belief in yourself.

For most people, careers are a series of steps and plateaus. If you are stuck on a plateau, summarize all of your past accomplishments that were most significant to you and your employers. Describe the things you did to earn raises and promotions. Analyze requirements for the position you want, then surface every scrap of information on education, exposure or direct experience that might justify your candidacy.

### **3 Your Achievements may be Difficult to Quantify**

You are far more likely to impress potential employers if you can show measurable results which were achieved as a result of your actions. However, for some, it is difficult to attach a specific dollar, percentage, or numerical figure to their actions. If it is early in your career, you will want to emphasize attitudes, interests and aspirations. Work ethic is always a factor that you can communicate.

Even if you've worked for some years and lack quantifiable achievements, you can still make it easy for employers to understand your potential. On the resume, you can make a comparison between conditions existing before you started and those which existed afterwards. Any measure of visible change can reflect favorably on your candidacy.

You can examine all aspects of your job and concentrate on those that were personally most satisfying. Or, you can reflect on those actions that seemed to please your superior the most. These avenues of thought can usually lead you to claim some benefit that your employer received as a result of your work.

No matter what your field, there are some criteria by which your superiors judge whether your performance was good, bad or indifferent. Define those criteria and use them to prove that your performance was superior.

It is also possible to think in terms of how you helped others around you. You may explain such duties and responsibilities in your resume, which will help the reader understand why this was important and worthwhile work for your employer.

Outside interests and personal aptitudes may play a more important role in your strategy under these circumstances. Another way to counter this liability is to write about a variety of skills that you have acquired. Here, you could consider demonstrated aptitudes in: problem solving, analysis, persuasion, communication, etc.

Your interview strategy should be planned in advance. In addition to having a written presentation that will help you tell about yourself in a comfortable manner, you should rehearse the questions you will ask the employer. Refining your interviewing skills is particularly important when your achievements are difficult to quantify.

Think about answers to questions such as, "Why should anyone want to hire you?" "What can you offer that others can't?" Give reasons why you should be the employer's first choice.

### **4 You Have Relatively Few Personal Contacts**

Each year thousands of people make job changes without relying on personal contacts. However, anyone can benefit from new personal contacts as a supplement to their job campaign efforts. You can do this by contacting appropriate "influential" people for just that purpose. This could include letters to prominent executives, authors of articles and books, government officials, bankers, lawyers, accountants, industrial development representatives, board members, prominent alumni and others.

Sometimes, lower level employees in companies of interest can be influential in helping you to get important introductions, or they may provide helpful information and insights.

You can broaden your circle of acquaintances by joining and becoming active in civic, social, industry, trade or professional associations. Under certain circumstances, you can maintain communication with other job seekers who are dealing with similar problems. You can help each other make appropriate new contacts.

Though the old boys' networks and the women's networks are playing a lesser role these days, they too can still be helpful. There are some that exist primarily to provide job changing assistance, such as "The 40 Plus Club" and many local women's groups do the same thing.

The quickest way to get to know "new" people is through confident and well-planned use of the phone. If personal contacts are really important to your job campaign, lay out a plan and start dialing. Ask for introductions to new people who may be willing to help you. This is a common technique in smaller occupational areas, such as advertising, journalism, public relations, accounting, law and specialized consulting. It can be applied in any field.

One of the most valuable talents you can acquire in building a successful career is the ability to build a base of influential contacts. The more successful you become at this, the higher you will be able to rise.

If it is timely, use a goal setting technique to expand your circle of personal contacts. For each new introduction you get, set two additional referrals as your objective. This will rapidly build your sphere of influentials and help your job campaign efforts.

You will find that if you are able to give people specific insights into the type of companies you are targeting, they are likely to be more helpful. Be sure to refer to your POISE database which will stimulate your thinking in that regard.

## 5 Your Earnings are Relatively Low

Many employers are quite happy to interview someone whose past earnings were low because they feel they can purchase that person's talents at bargain rates. From a practical point of view, however, low earnings will sometimes indicate to employers that the individual has low self-esteem or didn't achieve very much.

Whatever the truth in your situation, you will certainly gain nothing by bringing attention to your low pay. If it is brought up during discussions, be prepared to give examples of how you achieved, performed and contributed at a level well above average, or at least at a level equal to those who are more highly paid.

Sometimes you can turn this to your advantage by pointing out that you worked for the satisfaction of contributing, and were never inclined to boast or ask for a raise. As a result, you now prefer a work environment where you will be recognized for the value you produce.

More importantly, you will always have to be on the alert for employers who are out to get a bargain, when or if they learn that your earnings have been relatively low. If that happens, indicate that it has reached the point where you are confident that you can go out into the marketplace and sell your talents for considerably more than what you are being paid.

A common method to gain extra leverage is to time your change to coincide with a recent raise. This somewhat higher platform will add to your negotiating base, especially if you say that you expect your next increase to be even more significant. You will want to use that highest dollar amount as a basis for negotiating your next level of income.

When negotiating, be certain to probe to learn the compensation range. Many times, the top figure will be 1.5 times the base or more. Know what the upside potential could be. In early discussions about money, confirm that the hiring authority intends to match the compensation to the contribution. Virtually every employer will agree to that principle.

As you interview, note all of the employer needs, requirements, problems, opportunities, challenges or potentials. Relate your request for pay to the contributions you will be making in these areas. What you made before should have no bearing on what you can make in the future.

What you get should be your fair share of the benefits you produce for the employer. Based upon what you say about the things you have done, an employer places a bet on you that your future performance will be equally superior. Articulating your pertinent past accomplishments will help you maximize compensation.

## 6 You Haven't Been Frequently Promoted

It is quite possible for people to turn in years of satisfactory performance without receiving a promotion. Some companies are structured in a manner that does not allow for frequent promotions, and even above average performance is expected as a normal contribution. Sometimes, contributions are recognized with extra financial rewards; sometimes they are not.

If you are someone who has achieved substantial results without being rewarded by frequent promotions, then you may face some objections from potential employers who consider lack of promotions as an indication of few achievements or an inability to get along with others.

There are a number of things you can do to offset this. On your resume you should consider use of an achievement format. Here, you can get to the substance of what matters to the employer . . . your ability to produce results. The use of headlines in your resume can also be used to break your experience into segments which identify challenges where you acted successfully to reach an objective.

Some examples of such headlines would be: Successfully Introducing a New Product . . . Recruiting the Right Person For Each Job . . . Turning Around Unfavorable Public Opinion . . . etc.

There is another significant thing to keep in mind. Many very successful people use job changing as an opportunity to secure a promotion. They position themselves as being ready for the next step, but are unable to secure advancement with their current employer for no fault of their own. Naturally, you must justify your claim to readiness. However, more often than not, if you believe you are ready, others will agree.

If your infrequent promotions are brought up in the interview, you can point out that you focused on doing the job, and paid little attention to office politics. Where appropriate, show that your earnings increased steadily or that your job expanded significantly. This is often viewed as having more significance than titles, particularly if you are in a producer function.

In the future, you would be wise to work harder to communicate your contributions to your superiors. It is not always the best man or woman who wins the promotion. Often enough, the person who is politically sensitive gets the nod to move ahead.

Set goals. Lay out plans to achieve those goals. Utilize a system of realistic feedback from your boss and others to see how you are doing. The more you are respected and understood, the faster you will be promoted. Good communications with your peers and superiors is also essential.

## 7 You May Have Poor References

Many employers still do not check references, but you should certainly not risk losing an opportunity by making that assumption. When references are checked, people often lose opportunities because their references didn't convey a strong endorsement. To protect yourself, speak to each person who will serve as your reference, including your boss and his superior, if you have already left the company. Go over your resume and reinforce the positive aspects of your performance. Get them to agree, if possible.

The higher the position you are seeking, the more likely it is that references will be checked. (Also, the more likely it is that you've ruffled some feathers along the way.) Regardless of your level, if you have poor references, this can present a significant obstacle.

There are a number of steps that can be taken. Before you start interviewing, develop as many positive "new" references as possible. These could be past suppliers, customers, people who worked with you, or any influential person in past employer organizations who knew that you performed well. Purely social acquaintances are generally a last resort, unless you're relatively inexperienced.

Check questionable references to find out what is being said. Prepare other references to support your position and stress your positive assets.

Do not volunteer a questionable reference. You should only volunteer "positive" ones. If it is necessary to offset bad references, try to develop "status" references. These are prominent people in your field or company, or those in public life: presidents, vice presidents, directors, board members, authors, senators, congressmen, mayors, etc.

If the bad reference is a past boss, try to defuse the negative by explaining that differences of opinion existed. Keep your explanation objective and unemotional. Do not imply any negatives.

If necessary, you may have to confront the negative references and advise them that their input is keeping you from winning a new position . . . making it impossible to support yourself. If this does not result in at least a neutral statement, then you may have to imply you will have to seek a legal remedy. In that case, you may consult a lawyer for advice on what actions can be taken, or confer with the company's personnel officer, who may intercede.

Most employers today are aware of the legal consequences of providing a bad reference, and they will tend to cooperate with you. Also, the passing of time can tend to mellow harsh feelings.

## 8 You Were Terminated From a Previous Position or Positions

Some people seem to feel that if they have ever been terminated, they must communicate this on their resume in order to be fair. Worse yet, they believe it is a stigma on their career that must be carried forever. This is simply not true.

Naturally, anyone reading a resume that indicated a person was fired would want to know why. They may very well assume the worst and decide not to call, even though the problem may have been due to a decline in the company's business. In such a case, the potential employee is actually misleading the potential employer by giving only half the story . . . the negative part. Better to leave it off entirely, saving any necessary detail for the interview, where it can be carefully explained.

Also, if appropriate, you can indicate that frequent job changing is common in the industry in which you have been employed. Explain that you were recruited from one position to the next by people who were aware of your superior performance in each prior job.

During the interview itself, the same principles would apply as for the unemployed person. If it is brought up as a concern, a truthful statement that the termination was due to factors beyond your control and not related to performance, would surely suffice. You want to have examples ready which demonstrate that you are a contributor and an achiever. When possible, you should also make clear that you left each employer on good terms.

When explaining a termination, it is your responsibility to sell your credentials in the most positive manner, up to your maximum potential. It is the "buyer's" responsibility to determine if there is a better candidate. References usually will not hinder your efforts to win new employment.

Negative information about your termination usually will become known only if you reveal it. Never provide any information that might harm your cause. Whatever deficiencies your former employer perceived, there have to be positive contributions you made to offset those negatives. Focus solely on the positives.

Margin for error grows smaller each time you are terminated. If you have been fired more than twice in recent years, it's time to take stock of yourself and probably seek out some entirely new directions. In the event you think you need special professional help, do not hesitate to seek it. The flip side of the coin is generally reassuring. Most terminations are not traceable to bad work habits or lack of employee contribution. Employers are generally aware of this.

## 9 You Have No Experience in Large Corporations

Many people build excellent careers in small and medium-sized companies without ever working for a large corporation. Often they are more versatile and have had the chance to take on more responsibility than would ever have been possible for them in a large corporation. Nevertheless, when such people apply for positions in large companies, they will sometimes encounter resistance because they lack blue-chip or major company experience.

Fortunately, common sense is on the side of the job seeker. It's easy to realize that the only logical objections a potential employer might have are: (1) you would not function well in a complex environment; (2) you don't know how to get cooperation from people at a variety of levels; (3) you are simply not used to dealing with large numbers of people.

The fact is, the typical immediate work unit in a large corporation is the same size as one in a smaller company. Not only that, the person in the smaller company might have achieved a higher level of responsibility with broader experience than his counterparts in a large company. They may, therefore, be even better qualified to function in a sophisticated environment and to get cooperation at various levels.

Sell your ability to contribute an entrepreneurial flair, your multifaceted experience and your capacity to extract more from available resources. Promote yourself as someone who will produce results.

Before joining a larger company, you should realize that the long standing value of being associated with a Fortune 1000 or "Blue Chip" company is being questioned more and more. The consensus now is that you should profile your own personality against that of any potential employer before deciding what's right for you and your career.

Some large companies are fast-moving and some small companies are slow-moving. There is no pat answer to the large vs. small company question. Don't be quick to pick your next employer based on size alone. Nevertheless, when you lack large company experience, but wish to explore opportunities in one, be sure you interview the company while allowing them to interview you.

Look for employers where there is experience-building action taking place. Favor situations where there is growth, new technology, new products or services, or even a turnaround effort. Avoid stagnant or declining situations. Place yourself where you are gaining "hands on" experience solving tomorrow's problems today. The COMPASS and POISE databases will prove helpful in that regard, because they are both indicators of those types of activities.

## 10 You Need to Maintain Confidentiality

Many people overestimate the need for confidentiality, but ultimately, this decision should only be made by the job seeker. The problem with maintaining absolute confidentiality is that it tends to make your job search efforts less productive.

It is important to keep in mind that, no matter how many steps you may take to keep your activities confidential, there is always the chance that they may be communicated to your employer. Nevertheless, it is possible to run an active job search and still minimize the possibility in a number of ways.

One traditional method is to use the third-party approach in contacting potential employers. This simply means that a friend or associate writes a letter to potential employers for you without mentioning your name and without giving facts that would identify who you are. In some cases, for a highly visible executive, this could mean slightly modifying the facts to keep your identity anonymous.

A second approach is to state in letters and on your resume that your communication and activity is strictly confidential. Sometimes people have simply stamped their resume "Confidential." This covers most situations. A stronger notice would be: "Effective care to protect the confidentiality of this communication is essential. Thank you."

In general, you would either avoid blind ads or use a third-party approach when responding to them. During the interview, reinforce the fact that your meeting must remain in strict confidence, because you would either be embarrassed or lose your present job, if your activity were known.

You should also be prepared in the unlikely event that your employer finds out about your efforts. Your response when confronted might be: "I test the market every three or four years. So far I've never found anything better than what I have." "Don't you think that's a sensible way to run a career?"

Many employers will not expect such a reply and be taken off guard. They may well agree that it is indeed a sensible thing to do and forget the matter. For employers who take a more aggressive view, you may want to remind them of your legal rights. Today, managers are usually cautious about how they handle termination. If things get testy, seek out your company personnel officer, who will usually try to calm down the situation.

If exploring new situations places you under severe risk of termination . . . one approach is to get a large amount of communication ready and put it out to the market at one time. Then, arrange interviews so they occur in a short period of time.

## **11 You are Attempting to Switch from a Military to a Civilian Career**

Each year thousands of highly capable individuals leave the military. Often they have held responsibility for complex operations involving many people and substantial resources. They have had to meet objectives, on time and within budget. In many cases, they have developed superior management skills and built a record of achievement.

Nevertheless, when people leaving the military attempt to market their talents in the private sector, some potential employers will be skeptical. The reason most often given by employers is that military personnel have difficulty performing in an environment where a profit is expected. Employers may feel you are not accustomed to the pressures.

Overcome this by giving examples of cost reduction, productivity improvements and efficiency gains you achieved. Show how you extracted a maximum return from each available dollar, man-hour or investment in equipment and facilities.

The truth is, many officers have performed under conditions more demanding than those in private-sector companies. That doesn't change the realities of perception. It seems that many hiring officials simply have difficulty picturing a military officer working effectively in a private company.

If you are attempting to find a position in the private sector, you will need to take the initiative in order to change negative perceptions. The first step for you is to get rid of your own bias. Private sector employers are a lot more like your military employer than you realize. They want to get things done on time, correctly, and consistently "meet the objective." Sound familiar? Well, if it does -- and it better -- keep looking for more things in common as you learn about the world of private enterprise.

On your resume, you should use a format which places your achievements and experience under clearly defined functions which relate as much as possible to those required in the private sector. You can even go so far as to indicate that your experience was equivalent to that of a person who holds a particular title in the private sector, such as Distribution Manager, Chief Operating Officer, Director of Telecommunications, Personnel Officer, etc.

Junior officers should maintain a degree of flexibility. Many doors will open with relatively little effort. Field grade personnel are the equivalent of industry's middle managers. More thinking and effort is called for when you have achieved these ranks. Those of you who have been fortunate enough to achieve General Officer status will find you are received with great respect.

Regardless of this good news, you are going to have to select career and industry direction in advance. Few employers will accept the responsibility of doing that for you. They simply will not take the time to figure out who you are and where you fit. You must provide a clear statement of what you want to be, and it must equate to common private sector positions. Study the COMPASS database carefully to make sure you fit into a commonly recognized job category.

Generally, you should follow the principle of selling your skills as a pragmatic leader -- who gets results under demanding conditions. Essentially, avoid defining your talents too narrowly when attempting to appeal to business employers.

## **12 You Worked For a Company Which Performed Poorly**

Just as it is possible to enjoy some of the positive rub off which comes from being part of a highly respected company, it is also possible to suffer from the negative image of a company which failed or has a poor reputation. The important thing for you to remember here is that you developed skills and made contributions which indicate an ability to contribute to a potential employer.

On the resume, therefore, you should be sure to separate your achievements from the overall results of the company. There is no need to write about negatives which have nothing to do with your ability to contribute. Know when to "stop telling the story." Talk only about results in those areas over which you had control.

If the subject is brought up in the interview, you might explain that the overall results were due to forces far beyond your control. You can go further, though, and turn this potential liability into an asset by adding that it was an interesting learning experience, and that you are a better manager as a result of being "successful in a failing environment."

Develop achievement examples which demonstrate how you prevented the employer's situation from becoming worse. Your work may have enabled the organization to survive for a far longer period. Successes in your area of responsibility which offset damage occurring elsewhere in the organization can be important. Sell yourself as a person who was part of the solution rather than part of the problem.

The strategy will work best when you are coming from a declining or low-profit industry. The important thing to remember is, when you are leaving a company with a poor track record, be sure you don't take the blame for its failures.

## 13 You May be too Old

It's always quite interesting to listen to the opinions which people express on age barriers and job hunting. In job seeking, older age can certainly prove to be a negative. However, it is quite unfortunate that so many unhappily employed people believe they are too old to change jobs.

Even though they may not consciously realize it, the truth is that many use age as a convenient excuse. Most of the time they either lack the confidence to try, don't know how to go about it, or are not willing to go through the work.

At a senior age, winning a new job is never a simple task. However, despite difficulties in adjustment, a good job change can bring you a totally new feeling about life. The excitement of new work, a new location, and new associates may provide you with a mental stimulation that helps you look and feel ten years younger.

In the 1970's, the job market seemed to be placing an ever-increasing emphasis on youth. However, in recent years there has been a definite shift toward the favoring of experience over youth. If you happen to be one of the people who thinks he is too senior in age, you might reflect on this briefly.

At the same time, appreciate that you have accumulated experience which could be of value to literally thousands of firms. Your major concern should not involve whether or not to seek a job. The key question is simply how and what to communicate to the right people in the right companies.

What does being too old really mean? In the United States half the population is over 31. To some people, being too old is surpassing this number. Being over 40, or 50, or even over 60 is far from being an insurmountable negative. To be sure, as you get older, job hunting will become more difficult, and particularly so in certain fields and industries.

However, age problems in job hunting are relative. Being too young could mean that you're 45 and shooting for a top spot in an industry where 90% of the top executives are 10 years your senior. On the other hand, being 32 could be too old in the advertising field if you're not yet a Vice President.

Age really becomes a barrier at that point when you mentally accept it as an obstacle. To be effective, your focus should not be on chronological history, but on the problems you have faced and solutions which came about through your efforts. You should have very little difficulty finding a way to persuasively state some accomplishments which imply . . . "I can do the same thing or more for you."

In most cases you will have to rely more on letters than resumes, since letters can be more easily slanted to cover your age, length of experience and dates. You will find it useful to make a point of stressing your sound business judgment, your ability to work in any type of environment (with all levels of management), and your drive (which is, of course, what many believe senior people do not possess).

Sell your maturity and depth of experience. It may be appropriate to enroll in a college course to show that you perceive yourself as continuing to advance in your career. Select a subject which will seem timely, whether it reflects a business or personal interest.

As far as your resume is concerned, you may wish to avoid mentioning your age. As a general rule, emphasize only recent work experience (the last 10 years). You can, if appropriate, disclose your age during the interview.

As you become older, your need to make a good first impression will become even more vital. If you're out of shape and run-down, start exercising under a doctor's direction. Make sure your appearance and dress are at their best. Avoid dated clothing styles. Invest in higher quality and better tailored garments which are appropriate for the level of income you are seeking. It is important to project self-confidence and a positive attitude.

## 14 You Haven't Shown Much Leadership

People with leadership capabilities usually don't get the opportunity to exercise them early in their career. Also, many think of leadership as the dramatic, visible force that they have seen depicted in movies. The truth is, leadership is exercised in many ways, and most of us have exhibited leadership qualities more often than we realize.

If you have consistently met personal goals, have built loyalty in those who work for or with you, or have helped others in a meaningful way, then you have probably demonstrated some leadership qualities. If you consider yourself a leader, then claim leadership abilities as one of your strengths. You can indicate that you lead by example, and that you are a motivator. Of course, maintain the appropriate degree of humility if you are just starting out. Good leaders try not to brag.

When questioned about your views regarding leadership, explain that it takes many forms. Then break the key leadership qualities into component parts which relate directly to strengths that you possess, such as . . . someone who reaches goals, an individual who makes people feel good about themselves, a person who finds solutions to tough problems, one who exceeds existing standards, etc.

## 19 Your Experience is Limited to One Company

The problems of staying too long in one job are similar to staying too long in one company, and so are the solutions. The concern on the part of a potential employer would be that perhaps you have lost your ability to adapt to different environments and would therefore be less effective.

The answer is for you to show your adaptability by playing up your ability to manage and deal with change. Have you changed departments? Were you transferred on occasion? Did you serve in different divisions? Have you had a number of bosses? Do you know more than one product line? All of this information can be important in positioning yourself in a more positive fashion.

You can take the initiative by pointing out that, at various times, your responsibilities actually fit quite distinct job titles. The COMPASS database will prove helpful here. It is an accurate reflection not only of the specific jobs available today, but also of the requirements for them.

Sometimes the very nature of the company's growth, expansion and diversification can help you project an image as a versatile performer.

Communicate how you have helped your employer increase revenues, profits, assets, market share, etc. Take partial credit for the winning moves of the team you were on. Few things are accomplished by one individual. Teamwork is what produces results. If you were there, you earned the right to claim participation in delivering beneficial results.

When a company has undergone significant changes during your time there, this should be emphasized in your oral and written communications. You can then think in terms of, "We achieved this goal, acquired that company, started this business, etc." even if you were not personally responsible for those actions.

Also, remember that there are lots of positives to working for one company for a long time; not the least of which is that you are loyal, stable, and will not skip from company to company.

A long tenure with one employer constitutes strong evidence that you have been both effective and compatible. You can share your pride in your staying power and a long record of contributions. As always, a positive mental attitude will play an important role in dealing with this liability successfully.

## 20 You Have Made Lateral Job Shifts

Most careers are not planned. In fact, for many people, their careers "just happen to them." Sometimes this means they move from job to job, either in the same company or with different employers, without gaining any appreciable increase in authority or responsibility.

If that has happened to you, and you are now determined to make a major step forward, you should understand that some potential employers may view your lateral job shifts as indicating a lack of either ambition or talent. Fortunately, there are a number of steps you can take to deal with the problem.

You can start on the resume, by putting more emphasis on what you were able to contribute overall, and making the progression of job responsibilities secondary. You should also consider placing more emphasis on your most recent job. This is consistent with most employers' desire to know "what you've done lately." By summarizing the earlier jobs briefly, your most recent position will (graphically) take on more significance. Attempt to portray the jobs as a planned progression.

Before you begin interviewing, you should examine why you have made lateral job shifts rather than progressing up the ladder. You will probably find that you were not in the habit of setting (proper) goals and objectives for yourself. Furthermore, there is some likelihood that you did not think seriously about your career and job hunting plans until now. Remember that it is never too late to start moving upward.

In the interview itself, point out that it is important for you to find a company that wants superior performance and is willing to promote accordingly. You may have to admit, at some point, that you have worked more for the satisfaction of working rather than the challenge of career advancement. But now you are determined to make new contributions on a higher level. This should be in an environment where the opportunities are well matched to your ability to deliver results.

Be careful however! Aggressive interviewers may show a tendency to take advantage of you by offering less money or holding back title. Don't be talked out of your determination to get ahead because you are over-anxious to begin with your next opportunity. You may have to work a bit harder on your negotiating skills, but it will be worth it!

## **21** Your Actions Have Not Realized Positive Results

Occasionally, people have performed well, but the results of their actions will not be realized until some future time. Here they can find themselves in the awkward position of having nothing to claim in terms of concrete results from their efforts.

If you find yourself in that situation, you should use anticipated results based on plans, forecasts or expectations. For example, you can make the statement that sales and earnings are "projected" at record levels, or that XYZ Company "expects" its new product to gain a 20% market share.

In other words, you can point to future earnings and market positions as a result of your actions. The fact that you are leaving the position somewhat ahead of the end results, should not take away from the recognition that your actions have been vital to that future accomplishment.

To reinforce your claim, examine your earlier contributions. Look for as many specific result indications as possible. This will reassure the prospective employer of your ability to deliver. Employers want to be convinced, and you should be prepared to give as much evidence as needed. From an employer's point of view, the important thing is whether you can take actions that get results. Results statements, properly supported, can sell you into your next position.

## **22** You Have Responsibility in an Area Where a Direct Competitor is more Successful

Sometimes it is possible to do a good job, achieve more than is expected, and still come out second best against a well-managed, aggressive competitor. If this has happened to you, follow the principle of communicating your achievements without regard to what competitors achieved. On the resume do not offer information that would indicate the competitor was more successful.

As part of your discussion about a successful competitor, you should acknowledge that they were indeed successful, but you should then point out the following . . . (1) you learned a lot from the encounter . . . (2) the competitor did some very smart things, which you would do for your next employer . . . (3) you now bring exceptional value to your next employer, because you are a more "seasoned" competitor.

This is not a serious liability unless adverse publicity has surrounded the situation. If that is the case, it is more likely you will have to change industries. That could become an advantage if the competition in your new field is not quite so sharp.

## **23** You Need More Writing Experience

There are relatively few positions where writing will be an important criterion. Where it is, however, lack of writing experience or failure to have been published can be a significant liability. One of the ways to overcome this is to use a narrative style in your resume, and make sure your resume is an example of superior writing.

In addition, you can write speculative material of the type that would be required for the desired position. For example, you might decide to create speculative ads for an advertising agency, speeches for a public relations position, technical material for a technical writer's spot, etc. You can write a paper that could become an article in a trade magazine, or promotional material which a potential employer might consider helpful.

In some cases, people have even written small brochures on a specific subject and had it typeset and printed. They give the brochure a title and list themselves as author, including a summary of their credentials and a photograph. Presenting your material in this format helps to lend authority to your story and enhances your image.

You can also consider meeting with editors and publishers to discuss articles that you could write for them. Some may express interest in having you do this. If that is the case, do not hesitate to mention in interviews that you have recently spoken to editors and publishers about writing specific articles for their publications.

## **24** You Didn't Hold Many Jobs In College

Some employers look for evidence of extensive part-time and summer work on the part of candidates who have recently graduated from college. If you didn't hold many jobs while in college, there may be numerous good reasons you can cite: a heavy course load, superior grades, sports participation or even above average social activities.

You can also stress travel or special projects in which you were involved, as well as personal characteristics which might be important on the job.

In fact, you may not have distinguished yourself in any particular way during your college years. In that event, good planning and interview rehearsal will be important for you. Be sure to decide upon career and industry options ahead of time. With your plan completed, learn as much as you can about new areas of interest to set yourself apart from others in a similar situation.

## 25 Your Experience is in an Industry Different from those you are Targeting

With the decline of many smokestack industries and the loss of middle management jobs in many others, lots of hard-working, well-qualified people find themselves forced to look for employment in industries where they have absolutely no experience.

The obvious concern of an employer is that your lack of knowledge will keep you from performing as well as someone who "knows the industry." Frankly, this is a more serious problem than most job hunters realize. In other words, you have a "credibility gap," and it is up to you to close it. Fortunately, there are a number of ways this can be done.

You can begin with your resume. Structure it so that the employer can see parallels between the functions they need and the functions in which you have experience. Point out that you learn quickly. Show achievements in as many product lines and markets as possible. Give evidence that you can come into a new situation and learn quickly enough to contribute in short order. Use examples of how you frequently succeeded in new areas.

One of the best ways to deal with this liability is to decide on the industries that interest you the most . . . and learn as much as you can about specifics in that field. The most common method is reading trade publications. Annual reports, along with 10-K reports which companies furnish to the Securities and Exchange Commission, can also be very informative.

If you are seeking higher income or want to maximize your credibility, you should consider going further. An excellent approach in this situation is to use the phone to set up field interviews with persons already in the industry of interest.

You will find people surprisingly receptive if you tell them what you are doing and why. It is amazing how much you can learn in a week.

You can also prepare a research paper on issues and trends affecting the industry of interest. This shows you had the determination to get that knowledge on your own initiative. The very act of conducting this research will set you apart from other candidates who do not have any industry knowledge.

Of course, it will help if you can target on industries that have some characteristics similar to those in which you have experience. Point out any similarities in terms of markets, distribution processes, products, manufacturing equipment and processes, raw materials, or any other factors.

No matter what approach you decide upon, put at the top of your agenda the objective of learning as much as possible about new areas of interest. You will quickly gain a significant competitive advantage!

## 26 You are an Entrepreneur Seeking a Corporate Position

When you consider the thousands of mergers and acquisitions that have occurred in the past 20 years, you realize that a large number of successful managers were once entrepreneurs.

Nevertheless, many employers will be hesitant to hire someone who has been running his own business. The concern is that the entrepreneur, accustomed to having things his own way, may not be a good team player and will not accept the limitations of corporate structure.

There is also a "Catch-22" here that you must be aware of. Companies often put out the word that they are committed to an entrepreneurial style of management. However, when they come face-to-face with a real entrepreneur, they will back down. Understanding this will help you to overcome the traditional resistance you may meet in the marketplace.

The best thing for you to do first is to practice some humility. Remember, job hunting puts you in the role of the seller, and you are used to giving orders and having them followed.

Secondly, the buyer (your next employer) has to become convinced that you are going to help him "get results," "succeed" and "look good." He doesn't want somebody who will try to outdo or outsmart him.

There are a number of ways for you to deal with your situation. On the resume, it might help to emphasize examples of teamwork and functional strengths. This makes it easier for potential employers to think of you in terms of how you can help, rather than in terms of why you won't fit in.

The entrepreneur, so widely heralded as a role model in business, is also one of the most misunderstood. Many employers subconsciously resent the "free spirit" image of the independent businessman.

One good way to counter this perception is to communicate your belief in professional management practices and human values, to balance the tough guy "results" orientation you are expected to possess.

Market your ability to innovate and extract maximum value from every available dollar, manhour or investment. Explain how you have learned to make and keep dollars, and how you expect to do the same for your next employer.

If you are being considered for a position listed in COMPASS, be sure to show point-for-point that you meet all the criteria, including those which relate to motivation, teamwork, leadership and other personal relations factors.

## 27 Your Previous Earnings Were Too High

On the surface, this may not appear to be a difficult problem. However, if you have personally maintained very high earnings, it can be difficult to uncover comparable opportunities. There are many reasons why this kind of situation can occur. When considering corrective action, each situation should be viewed individually.

For those who were fortunate to achieve high earnings in the producer role, such as stockbroker, sales executive, lawyer, public accountant, etc., the firm or product line you affiliate with will have a lot to do with your ability to duplicate your prior record.

One way to protect yourself against disappointment is to ask to meet with other members of the organization who are filling similar roles. Often they will be candid about the advantages and disadvantages you'll face in that company.

Those who have had their own business and seek to join a company as an employee will find it difficult, if not impossible, to immediately equal their prior income. The best strategy in these situations is to play down your earlier title and independence, while emphasizing your ability as a team player. Naturally, your capacity to build revenue, enhance profits, or solve problems will be very important.

For those very successful people who are less concerned with money, but who want a second career, a different approach will be called for. For example, a company president who seeks nonprofit work for personal reasons will want to emphasize such things as the need to devote full-time energy to a new and worthwhile cause (an ability to raise money, a long-standing interest in the activity, etc.).

Of course, there are those who have experienced higher earnings as a result of extremely hard work, who no longer wish to put forth that intense effort. To overcome this, you will want to communicate understandable reasons for your decision.

This could include a need for more time with your family, a long-planned opportunity to pursue certain outside interests, or the need for a new, more balanced life-style. Employers are always skeptical of anyone who is prepared to take a financial step down.

The vision of future benefits to the employer will determine the potential compensation. What you say about your past accomplishments will be the indicator of your potential to deliver results. Another way to maximize income is to suggest an incentive or bonus compensation package. Base your negotiations on your ability to produce results.

## 28 You Have Poor Titles Which Don't Reflect Your Responsibilities

This is not a serious liability because it is easy enough for most people to distinguish between the "substance" and the "form." Therefore, the basic strategy you want to follow is to de-emphasize the titles, and stress the substance of your achievements.

Let's look at some specific problems. If you had no official title, but functioned as manager, it is appropriate to claim this as fact. Some large corporations intentionally de-emphasize the importance of titles.

You may be called "Project Administrator." This implies a narrow scope of responsibilities to some employers. In this situation, your actual job could be the equivalent of a Division General Manager with multimillion-dollar profit responsibility. Be sure to communicate that in understandable terms.

The message is, don't sell yourself short. Don't use titles on a resume unless they help to promote you. If your title doesn't help to communicate your role in a positive way, use a headline or even a sentence to relate the breadth, depth and scope of your responsibility.

Be sure to communicate who you really are, regardless of title. The significance of a title may not be well understood from one organization to another. It is even more confusing when you are going from government or education into business.

One very convincing way to demonstrate the true level of your job is to show a number of examples where your responsibilities are described under advertised openings which carry a more senior title. COMPASS would no doubt contain many examples you could use.

Of course, you should be honest in what you communicate, but it is acceptable practice today to restate an official title into general, more understandable terms.

An "Assistant Controller" can refer to himself as a "Financial Manager," if that is common terminology for the same work in a new industry. A salesman who has done extensive recruiting and training of other salesmen can legitimately claim that he has functioned in a sales management capacity.

The problem becomes more difficult when you are changing careers. However, the same principles apply. The School Superintendent has broad managerial responsibilities for personnel, facilities and budgets. Government employees must translate their story into completely different terminology.

In these situations, be sure to emphasize functions, and perhaps do not use formal titles at all. If you want to make the transition, you will have to adopt a new vocabulary and maybe even some new ways.

## **29** You are an Educator Attempting to Switch to the Corporate Sector

Thousands of educators have either been forced out or have chosen to leave their field and find new positions in the private sector. Once they begin their search, they can expect to encounter some resistance from employers who assume they have little or no knowledge of their industry and few skills that could be applied in their company.

The truth is that many educators are superb administrators and proven managers. Some are excellent trainers or public speakers. Many of them are creative, strong leaders, or have successful experience in community affairs. There are also those who have specialized skills in science, mathematics, visual arts, or even the trades.

Most educators are excellent communicators, trainers and motivators. They have high intelligence and understand how to learn. They have strengths in community and public relations, interpersonal relations, administration, regulatory compliance and other areas pertinent to new career fields.

If you are an educator attempting to switch to the private sector, you should show achievements in a variety of functional and skill areas. Check COMPASS to learn the skills commonly required for the type of position you seek.

Also, since you know that lack of industry knowledge will be a concern, take the initiative to learn something about an industry you are pursuing. Learn about its opportunities, problems, issues and trends. Review POISE for growth companies in the industry in your area.

If you are pursuing a particular function, such as sales distribution, manufacturing or purchasing, you should learn as much as possible about it through reading, seminars if time permits, and discussions with people in that occupation.

Target your job search to fast growth and emerging industries. There aren't enough people available from their industries to meet the needs of these growing organizations. They have to grow their own staffs. What better raw material than former teachers?

Though you should not underestimate the challenge you face in transferring your skills, more and more employers have developed favorable attitudes toward educators. Those before you have done a good job of selling the positive characteristics associated with this occupation.

Please note! In spite of this advantage, you will have specific responsibilities if you are to capitalize on these favorable perceptions. You must have your objectives defined before you begin your campaign. No employer wants to do this for you.

Teachers should cite their ability to generate tangible results. Show successes through increased test scores, favorable college admissions rates, waiting lists for classes, or increased budgets because the community wants more of what they can do.

Perhaps more than any other group, teachers and educators have succeeded in adapting to new work environments. There appear to be a number of reasons for this.

Most important may be their understanding of money economics. The dollar restrictions in the educational environment are clearly set. In industry, it is possible to get ahead financially at a much greater rate through hard work and discipline.

## **30** You Were Terminated by the Person Who Got the Promotion You Wanted

Most corporations have a pyramid structure in which the achievers keep getting promoted to higher positions. But, at each succeeding higher position there are far fewer opportunities.

This means that, at various levels, two well qualified people will be vying for the same job. When one wins, the other is usually best advised to seek advancement in another part of the company, or to search for a new position.

Often, the person who received the promotion is anxious to have the "competitor" leave. They may even take some satisfaction in terminating that person.

If that has happened to you, it could be a serious liability. Outsiders may feel that your termination indicates a lack of achievement, is a permanent setback, or signals an inability to get along well with people.

In offsetting this liability, you should not make it obvious that you were terminated. You will have to concentrate on all the positives that led to your being a serious contender for the promotion in the first place.

More importantly, don't imply any bitterness about what happened when the subject comes up. Discuss the situation in a totally objective, nonemotional way and move the conversation along to the next topic.

Point out that what happened to you could happen to any other top performer. Remind the employer, when there are two good people available, only one can be selected.

When the winner's first action is to fire the person who was a candidate for advancement, he probably thought that person was also too capable or posed a threat of some sort. It shows that the rival still fears comparison of his results to yours.

### **31** You Have a Short Work History With Relatively Few Achievements

This situation is often faced by young people who have not had the opportunity to achieve very much. The problem is that you may be in competition with others who have achieved more. It's easy to get concerned in such a situation, but it's possible to overcome this problem with a few imaginative steps.

You can start on the resume by showing a range of activities which convey that you have worthwhile experience, knowledge or potential. Also, you can relate drive, enthusiasm, attitude and cultural interests. These can enhance your overall impression.

In addition to experience, knowledge and accomplishments, companies hire the person. It is widely known that some employers base hiring decisions on appearance, self-confidence, writing skills, your ability to articulate a problem or solution, etc. In fact, good personal chemistry still accounts for a major portion of all hiring decisions.

Many young people with a short work history can write a brief paper on a field in which they have an interest. They are quite capable of doing the required research. By sending that paper, along with a cover letter, you can divert the employer's attention from examining your past. This leaves you free to focus on the company's future.

You might be able to cite term papers or reports you produced at college to demonstrate your wide range of interests. You could highlight your ability to conduct research, to rapidly absorb new knowledge, to analyze information, etc. A trip to Europe may have given you valuable exposure, fresh insights, and appreciation for the different means by which others accomplish results.

When you are short on apparent achievements, you can also look to focus on attitudes and values that are important to employers: "My attitude toward hard work is influenced by family tradition: part-time job during 3 high school years, paid 50% of my college expense through outside employment, studied and attended class 12 hours per day, etc." These examples suggest that you have the ingredients of becoming a high achiever early in your career.

### **32** You Don't Have Enough Line Experience

Most management positions require a background in which a person has worked his way up the "line," learning to handle responsibility for people, departments, functions or operations within the business. Sometimes, however, even the most capable people are asked to fill "staff" positions, where their talents are often leveraged over an entire organization. When this happens, these individuals build a record of achievement without acquiring "line" experience required for many attractive positions.

If you have the "staff" label, you may find that employers will have reservations about your ability to lead and manage. There are a number of steps you can take to minimize this potential negative.

On the resume, don't make this problem obvious by emphasizing titles. You will probably want to use a situational, functional or achievement format. When it comes to communicating, you will want to write and speak about tangible impact areas regarding revenue, profits, growth, etc., and indicate the scope of your efforts.

For example: specify the number of people who were impacted by your work. Recognize that your staff work had a major influence on the bottom line, and the total organization. You can also convey strong leadership qualities and characteristics associated with "line" managers.

### **33** Your Education is Unrelated to Your Goals or is Insufficient

If you've been working any significant length of time, you already know that your formal education has less and less to do with your marketability as time goes by. Yet a quick scan of COMPASS will reveal that many corporations, especially the larger ones, have set up rigid criteria for minimum education requirements for each job.

One thing is certain. It is foolish to lie about your education. On the other hand, there is no need to make it obvious that you have an education which is unrelated or insufficient for your goals. If you have achieved results (outperforming others with more extensive education), then you should focus heavily on communicating past achievements which suggest future benefits, rather than educational history.

Unfortunately, a lack of required education can be a liability that will not be overcome through use of words and positive attitudes. If you anticipate a permanent obstacle that will stand between you and your goals, you may have only one solution. You may need a new degree, or specific courses to deal with the problem.

If that's the case, map out your plan and follow through with it on a step-by-step basis. Get enrolled immediately to give potential employers a strong signal that you will soon possess the credentials they want. Take courses that complement your on-the-job experience, and which qualify you for higher responsibility in the future.

Of course, if your initial contact with an employer is through a letter that focuses on specific areas of potential contribution, then education may never become a question. Also, you can state your intention to acquire additional education required by the job in question. Further intentions have been the basis for many successful employee relationships.

## 34 You Need to Change Careers

Many individuals who are concerned about changing employers will also be facing the special job hunting problems associated with career change.

Because their interests and life-styles have shifted, more talented people than ever are successfully changing careers. Many ambitious individuals have found themselves in overcrowded specialty areas with diminishing opportunities. For example, successful moves out of education, government and heavy industry have become increasingly common.

Those who need to change careers will find it helpful to identify functional capabilities, along with skills, knowledge and traits which should be emphasized.

The major obstacle they will encounter however, is a lack of specific industry experience. There are a number of simple steps that can be taken to offset this problem.

Younger job hunters can state their strong interest in an industry to compensate for a lack of experience. Those making a more significant change face a greater challenge. They may want to learn about a new field by reading trade publications and other pertinent published information.

Trade magazine articles contain news items which give you clues about problems and opportunities facing a particular firm or industry. This information enables you to demonstrate knowledge which can help you make a good impression. Reading the basic text for a college course or even a college outline review manual can help you to quickly master the common terminology of a new field.

Of course, one of the fastest ways to learn about specific companies that are growing rapidly and are most likely faced with having to recruit outside their own industry is to study POISE for your geographic area.

It is surprising how quickly you can acquire knowledge of industries, people, products, markets and companies through reading. The more conversant you can be with an employer's problems and opportunities, the more they will be interested in you.

Obviously, when you are seeking work in an entirely new field, the job changing process is considerably more difficult. Your creative material must highlight those skills and facets of your experience which would be valuable in the new field.

In your written communications, break down your experience into functions and skills common to those in the fields you wish to investigate. The key is to do this while not over-identifying with your present career field.

During interviews, your focus should be on showing the employer how transferable your skills are to his operations. As always, enthusiasm for the new career field is vital. Present examples of how you have faced change before, learned rapidly and produced superior results.

When you are attempting a career change, letters will often prove far more productive than resumes. You should also be open-minded about smaller growth companies. Demand for talent often exceeds the supply in these situations.

Franchise and business opportunities can also prove attractive for career changers who have the capital to invest. Today, there are many men and women who found their way to greater prosperity and independence by making such an investment.

## 35 Your Academic Record Was Mediocre

As you build experience and a record of achievements, your academic record becomes less important. For many young people who have only recently graduated from college, however, it remains one important indicator of their potential. If your academic record was mediocre, therefore, you may face resistance from some employers.

It is well to remember that there are two basic reasons for a mediocre academic career. One is that the course material was extremely difficult. A demanding curriculum in a school with high standards can result in an intelligent, hard-working student achieving a C average. From one perspective, this may appear to be a liability. Actually, just completing a difficult curriculum is a fine accomplishment.

The second major reason is that the student did not apply himself fully to the academic program. Psychological and emotional factors change, however, so that someone can become well motivated a short time later or in a new work environment.

If your grades were below average, do not mention this on your resume. Emphasize any work experience and coursework that relates to the position you are seeking, along with extracurricular activities. Make a careful assessment of your best qualities and selling points. This is not a time to underrate yourself.

Remember, employers don't hire grades, they hire people. Many successful leaders didn't hit their stride until after graduation. When you have little that is positive to say about your college academic experiences, steer your written and oral communications to other subjects, including future events and aspirations.

## 36 You Are Unemployed

This is perhaps the most feared of all liabilities, but this certainly need not be the case. If you've just been fired or otherwise de hired, the first thing to remember is not to panic. If you do, you are going to lose confidence and your ability to think clearly. Being unemployed today is not an uncommon condition. More than one in four Americans will successfully overcome the problem of unemployment during their lifetimes.

People may not admit it, but it is likely that many executives who interview you will have been unemployed themselves. It is a rare individual who can succeed in moving ahead without quitting or being fired, (or at least encounter the threat), during his career.

Quitting or being fired doesn't imply failure in the eyes of everyone else, even though you may feel depressed. Don't let it give you a guilt complex, and even more important, don't feel sorry for yourself. Most of the time people quit or get fired because of a personality conflict, or because someone higher up demands a change due to pressures at that level. Other common reasons for terminations include cost reductions and acquisitions.

The first reason we mentioned is the most significant. This concerns those situations where people could not get along with their boss, or at least not the way the boss wanted! There is a lot of truth in the saying . . . "choosing the right job is largely a matter of choosing the right boss."

Being unemployed does mean that you'll often be carrying a handicap. Regardless of the circumstances, the great majority of firms prefer candidates who are presently employed. Nevertheless, every day people turn bad situations into greater successes. Your ability to bounce back after a bad experience will be a true test of your basic strength and determination.

Register for unemployment. Don't let your pride stand in the way of accepting a weekly unemployment check. Almost everyone who loses a job ends up being unemployed for much longer than they expected. Another important step is to get a resume prepared immediately. The resume should look as though you prepared it before your termination and should not reveal that your employment has ended.

You will also have to be ready for some disappointment. Being an unemployed person means you will encounter false leads, generate unwarranted optimism and experience more disappointment than usual. You will also be under emotional strain, and may encounter family problems. However, don't vacation and don't hide. Start on your campaign immediately!

Your great advantage will be your ability to devote your entire effort to job hunting. Invest eight or more hours each day in your job search. Strive to physically place yourself in environments populated by people who could hire you or give you referrals to others who might hire you.

If possible, get access to an office phone. It helps to have a base of operations at an office. You might be able to use the number of a friend who can have a secretary take messages for you. Even though you may be limited financially, the investment you make in your job campaign will pay you back many times over.

## 37 You are Attempting to Relocate

For the job seeker who is attempting to relocate, there are two major problems. One is that employers will question whether the person is serious about relocating. The other is that employers who are interested know that they will have to go to considerable extra expense for relocation costs that they would not incur if they hired someone locally.

Also, in some cases, employers may doubt the sincerity of your interest in their needs versus your personal priorities.

If you are attempting to relocate, you want to eliminate these obstacles. Start with your resume. As a first step, establish a local address and phone number through family or friends. As an alternative, you can indicate that you "will relocate at your own expense" on your resume or letter.

Remember, simply making that statement doesn't mean that you will have to do it. If you have a strong background, they may offer to cover the relocation expenses anyway, at the time you receive an offer.

It will also be helpful if you can mention in letters and conversations that you are committed to relocating and you will be there to interview during a specific time period. This eliminates the question of how serious you are and it also lets the employer know he would not have to pay for your trip just to interview you.

The most effective way to pursue relocation -- and overcome the liability of being based far away -- is to spend time in the desired area. This may be less convenient than sending resumes and letters, but it is more effective for all but a few of the most marketable persons.

Of course, POISE and COMPASS will be especially valuable for you because they make it easy to learn about growth companies and advertised openings in virtually any area of the country. Also, FIT can supply the names of leading employers in many metropolitan areas.

## 38 You are Attempting to Reenter the Job Market after Raising a Family

Many women with an excellent education and a variety of skills that might be put to good use find themselves in a difficult position when they attempt to reenter the job market. For many of them, there is a kind of "culture shock," because they are facing a drastic change in their daily experience.

Looked at from another perspective, though, women who have raised a family have functioned as organizers, administrators, planners, and coordinators. They have done their share of mediation, as well. Many are excellent communicators with a high energy level and a good deal of enthusiasm. They can manage diverse projects efficiently.

If you are attempting to reenter the job market, you are probably best advised to use the functional format for your resume and include experience in volunteer and social activities when possible. Show by example that you have desirable personal traits such as initiative, resourcefulness, strong drive, integrity, etc.

Take the initiative to find out more about a particular industry or occupation in which you are interested. This will help ease the "credibility gap" you would likely face regarding your lack of specific work experience.

Before you begin to interview, speak with people in your community who have had business or other work experience. You may know some socially and others through your volunteer activities. They may offer varied assistance, serving as advisors, helpers or mentors.

One reassuring note is that hundreds of thousands of women have preceded you in this job-hunting process. They make up a major portion of the work force today, and they will be understanding with regard to your situation. Nevertheless, you must realize that it is up to you to do a good job of selling your talents. Focus on what you have to offer, what you can bring to the situation and what you will give.

Remember that no one is interested in giving you anything. They only want to hear about what they can expect from you. Present yourself as a contributor. Sell yourself as a person who has demonstrated commitment, devotion, and tolerance. Also, you can communicate an ability to be persistent, tireless, organized and adaptable.

During the interview, try to focus the conversation on those areas where the company needs help. Be prepared with SODAR stories that show you used job-related skills to achieve results in managing a family and in many other activities. Above all, be yourself and do not try to pretend you are someone that you are not.

## 39 You are Attempting to Switch from the Nonprofit to Private-sector

Very few people in the private sector understand the structure of government and nonprofit organizations. They don't have the least idea how someone in those organizations could function effectively in a for-profit company.

If you are coming out of government or nonprofit, you will need to take the initiative in helping private-sector employers understand how your experience and skills could be put to good use in their company.

It will be a good idea for you to check the COMPASS database for the job category you are seeking. You will quickly become familiar with the way private sector employers describe the skills they need.

On your resume, you should categorize your achievements and experience according to functions which are common to the private sector. Wherever possible, draw parallels between corporate and nonprofit or government organizations. For example, fundraising is the equivalent of sales, budget constraints are the equivalent of cost control, surplus is profit, etc.

Sometimes it's possible to show that you achieved a high level of authority and responsibility which may not have been attained by someone of the same age and experience in the corporate environment.

Frequently, government operations are so large that the number of employees and dollar values are impressive. If, on top of that, you can show that you performed to demanding standards, you may be able to relieve the concerns a private-sector employer might have.

Another suggestion is to give some careful thought beforehand to your best selling points and use SODAR stories that show you have used your skills effectively in your previous employment.

Though you will encounter a different world of work in the private sector, there is much more in common with your past than you might realize.

What's in common? Well first, money is important. You still need revenue, credit lines, budgets, accounting, controls and checkpoints. Organizational manuals, policy and procedures exist in both. Team play and communications can count for a lot in any environment.

The more you recognize and point out the similarities, the more successful you will be. Also, demonstrating a consistent pattern of superior performance which is likely to continue in the future will help.

## **40** You Are too Young and Inexperienced

Those who consider their youth as a liability think that others may view their lack of experience as a negative, relative to their salary and position objectives. The good news is that "Youth" is the easiest of liabilities to turn into an asset.

You will do best if you find some way to demonstrate things like interest in an industry, aggressiveness, drive, enthusiasm for a field, ability to learn quickly, and natural problem-solving talents. If you are short on work history, you will probably find a functional resume most effective. By highlighting a number of functions plus skill and knowledge areas, you will focus the reader's attention away from your age and limited years of experience.

Draw upon part-time experience or extracurricular accomplishments to show your abilities. Comments on sports, volunteer work or hobbies can also be used to project a desirable personality and background. This is true whether the activities might be car racing, sky diving, coaching little league, skiing, or playing bridge.

Project yourself as mature, one who can make sound judgments in a variety of situations. With rare exception, this is not a situation where you should present yourself as an individualist who "does his own thing." Avoid extremes, emphasize career growth potential over immediate salary, and be specific in your preference for a type of job.

For graduating college students interested in opportunities within small businesses, a full-scale campaign should be prepared about two months before graduation. This time schedule may seem very close. However, small businesses normally do not have training programs or other entry-level jobs which would be open for any length of time.

## **41** You Have Gaps in Your Work History

You are not alone if you have gaps in your work history. This has become common as our economy goes through major restructuring. People lose jobs for a variety of reasons and it is widely known that it's not so simple to surface an equally suitable opportunity. Still, the potential employer who finds a gap in your work history will very likely question you about it. It is wise to be prepared.

On the resume, there is no need to draw attention to gaps before you've had the opportunity to present yourself in person. One way to avoid this is to use a functional or achievement format, placing your chronology on the back page.

Another approach is to cite chronology only in years. Describing one term of employment from 1979 to 1982, and the next from 1983 to 1985, can obscure a gap extending from 1982 into 1983.

If the subject comes up in the interview, you will have an opportunity to turn it to your advantage. You can explain that you put the time to good use by mounting a well-thought out job campaign that is surfacing excellent new opportunities. You might also generate some positive empathy by describing the difficulties you faced in avoiding the temptation to take an offer that wasn't right.

You can go further and stress that it is very important to find the right job this time, so that you never have another gap. As a final note, you can point out that the experience has made you more appreciative of a good job, and that you will offer a greater degree of dedication and loyalty than the average person.

## **42** You Have Stayed too Long in One Job

The majority of employees today run the risk of staying too long in one job as the result of inertia. Very often, talented professionals will take the easy path by staying put. Years pass, and they suddenly realize that it is time to break the pattern. Probably the most difficult aspect of dealing with this liability is simply to make the decision to move on. Once that is done, you then have to devote the time, energy and resources to surfacing your "best" opportunity.

You may ask, "How long is too long to stay in one job?" There's no pat answer to that. Twenty years with a single employer and no particular recognition is obviously serious, but for some, three years without a promotion is too long.

If you feel uncertain about moving on, take a careful inventory of what you have to offer. Are you well rewarded, fully challenged and appropriately recognized? If not, it may be time for you to get going.

When you do, you may find that some employers view your staying in one job so long as an indication of inflexibility or lack of ambition. To counter that, there are a number of points that you can make on your resume or in interviews.

Whenever you have long tenure with one employer, it serves as testimony that you have been effective for that employer. They kept you on because you delivered needed results. Sell those results.

Long tenure also helps certify that you are a compatible individual who gets along with superiors, peers, subordinates, suppliers, customers, and others. Final hiring decisions are usually based upon compatibility. In other words, being with one employer for a long time can be viewed as strong testimony to both your overall effectiveness and your compatibility.

## **43** You Have no Experience in Small Companies

If you gained your experience in large corporations and find yourself interviewing with employers who are primarily smaller companies, you may well encounter some resistance from those who suspect that you may not be as adaptable as they would prefer. They might further presume that you would not be able to function well without the kind of staff support that is often found in large corporations.

The fact is, you probably are performance-oriented and enjoy a fast pace. (If not, you would not be seeking to make the change to a small company.) Be sure to point that out. In addition, you could even add that, as the company enters its next stage of growth, it will be facing many problems with which you are already familiar. Sell your ability to transfer successful techniques and methods of the large company to benefit a new, smaller employer.

Your goals play an important role here also. Therefore, you should reassure the potential employer that your desire for a small-company environment is one of your primary motivations for making a move. To help your case, find out as many good things as possible about the company. Few things will impress a smaller employer more than your having personal knowledge about the history and achievements of the company.

The big danger for the large company man in these situations relates to reaction time. Smaller organizations run lean. They must reach decisions quickly and work with minimal resources. Top management frequently finds it necessary to take a short-term point of view in order to capitalize on an opportunity or even to survive. Small companies are not for the faint of heart, but they offer challenge and excitement not available in the giant corporations.

Your big advantage is that there is still a tendency for smaller, unknown employers to favor individuals with experience in the better-known firms. They respect the past accomplishments of these firms and recognize that there will be no unexpected requirements for your further training and development.

## **44** Your Present Employer has a Reputation for not Demanding Much of People

Justifiably or not, some corporations develop a reputation as slow paced, perhaps paying people more than they are really worth. Usually it is a large corporation, where there are some people who give 100% and others who just seem to drift along. If your employer has this problem, you may encounter resistance from those who feel that no truly ambitious person would work for such a company.

In that situation, it is important to deal head on with the negative perceptions. On the resume, you can include a statement of personal philosophy that indi-

cates you are seeking a position in a company which demands the most of their people, provides a fast-paced environment, and gives above average rewards to above average contributors.

During the interview, discuss the issue candidly and explain what motivates you to make a change. You might indicate that you have outperformed many of your co-workers, and you now need to find an organization that will present sufficient challenge. Indicate that you are ready to make new contributions on a higher level . . . in an environment where the problems and opportunities are well matched to your ability to deliver results.

## **45** You Have a Record of too Many Job Changes

"Job hoppers" are people who have not shown much progression within companies and who usually experience many lateral job changes. Any employer will be wary of this kind of record.

However, there is a big difference between job hoppers and those who have achieved great progress through changing jobs. There is certainly little stigma attached to the latter. Your job changing will not be a liability if you can point to significant salary and responsibility progression. In fact, there is no better evidence of employer satisfaction than a record of salary growth and advancement.

If you're afraid of being cited for too many job changes, a functional or achievement resume will allow you to downplay the number of companies you've worked for.

Your success in dealing with your record of job change will depend primarily on your reasons for leaving various situations. Acceptable reasons include mergers or acquisitions; departure of talented superiors; a need for more challenge; changes in corporate policies; a desire to relocate; financial offers which were too good to turn down.

At interviews you could explain how you gained increased responsibility for people, dollars and capital invested in equipment and facilities. Point out how you were recruited from one position to the next by people who were aware of your superior performance in the prior role. Show how you were deliberately accumulating experiences which would best qualify you for the job you are now seeking.

If you have a more serious problem in this area, it may be time to take a hard look at what is causing your need for frequent change. Chances are, you must be cautious in selecting your next job. Try to be sure that your next opportunity is with the right people, in the right industry and that their overall outlook for the future is favorable.

## **46** You Had Few Activities in College

If you are a recent graduate and had few extracurricular activities, some employers may view this as a negative. On the other hand, there are many excellent reasons for restricting such activities.

On your resume, you should not make a separate section for extracurricular activities. Instead, you can combine it with other information, such as sports, travel, honors, awards, leisure pursuits, or other subjects. Where appropriate, you can emphasize the variety of courses you took and your grade point average.

If you had a heavy workload, you should mention that fact, along with information about jobs during the school year and in summer. In today's busy world, many students just don't have the time and interest to devote to extracurriculars. When that is the case, it is better to avoid companies and occupations where this is important.

During the interview, be prepared to speak about those activities in which you did engage. Explain, if appropriate, that you deliberately restricted your activities to give each one sufficient time and get something meaningful out of them. You should always also emphasize positive attitudes and characteristics which may appeal to potential employers. Use them as positives in place of activities.

Also, you can choose to mention that your first priority was to attain good grades and that your second priority was to earn money to offset educational expenses. This would leave little time for extracurricular activities.

## **47** You Have Experience Which is Narrow

If you have single industry or single company experience, you should consider using two resumes. One would be directed at the industry in which you have experience, while the other should be a functional resume which does not emphasize the firm(s) or industry where you have spent your working life.

Stress accomplishments by area of work. For example, a brief review of the COMPASS database would show that skills in recruiting, budgeting, planning and scheduling are needed in many businesses.

Make clear the kinds of benefits you could deliver to a prospective employer. Concentrate on major contributions which have universal appeal. These include increasing revenues, cutting costs, improving growth and enhancing productivity.

Though this liability is a lot less serious than most people realize, it should be carefully considered. As a starting point, there may be a roster of company or organization alumni who can be easily traced and followed into new opportunity areas.

If you have allowed yourself to become particularly isolated, it may be worthwhile to get in touch with former college acquaintances and past social and professional contacts in order to broaden your perspective about what is happening in the world around you. Reading a selection of trade magazines can help.

Regardless of your situation, the best way to break away from being viewed as too narrow is to define your own background and interests in the broadest possible fashion. Don't look for the easy way out, but develop a solid new direction for your career. Take the time to become better informed than your competitors about new products, trends and markets. You'll be surprised at how quickly your views can change.

## **48** You Were Terminated from Your Most Recent Position

If you were terminated from your most recent position, then you are unemployed, so the recommendations made for unemployment would generally apply. For most people, termination today is not due to performance, but to general factors within a company or industry. If you were involved in a personal conflict, avoid discussing the details. Do not bring up any subject which will allow a hiring authority to conclude that you lacked compatibility.

Generally accepted reasons for termination include declining industry, foreign competition, negative economic trends, management reorganization, temporary layoff, staff reduction based upon seniority, etc.

Be particularly wary of new opportunities where risk of termination is high. Avoid companies with wide swings in the business cycle or volatile sales patterns. Realize that it is just as important to keep away from risky environments in the future as it is to know how to manage this increasingly feared problem.

One way to protect yourself from another termination is to talk to employees already in the company about work conditions, management philosophy and the like. They will usually surface any dangers you would want to know about.

Needless to say, there are a few other things you should keep in mind once you accept your next position: work hard, build strong relationships and produce superior results. This will help insure against a reoccurrence of the problem in the future.

## 49 You Made Obvious Mistakes or Were Directly Responsible for Failure

All people make mistakes! While a random survey of 100 resumes might give just the opposite impression, any seasoned employer knows people will make mistakes during their careers. Sometimes, in the case of more senior managers, the resulting failures are significant.

If you have made a significant mistake or were directly responsible for a failure, it is important for you to remember that you made more good decisions than bad ones. Chances are you were also responsible for a number of significant successes. While you should never lie about your experience, neither is it required that you emphasize your mistakes. It is your responsibility to "sell" yourself in the most positive way possible and up to your maximum potential. It is the "buyer's" responsibility to determine if there is a better candidate available elsewhere.

Your resume should focus heavily on the positives, being careful to place any negatives in the best possible light. (If profits were down, note that there was a severe recession.) Also, do not be defensive if negatives come up during interviews. Accept responsibility for your actions and redirect the conversation to your assets and potential. Be attentive to building personal rapport and relieving any tension that might be caused by discussion of the subject.

You can also share certain beneficial input with a potential employer: (1) you learn from your mistakes . . . they don't happen twice . . . (2) you have learned a little humility which will stand you well in the future . . . (3) the strength of your character has been reinforced.

Remember, some of our strongest leaders are those who made big mistakes. The important thing is, they didn't let that stop them, and went on to continued success and achievement.

## 50 You Switched to Your Present Position a Short Time Ago

Probably one of the most distressing experiences for someone interested in building a career is to accept a new job and then quickly find out that it just isn't right. Sometimes, it's a matter of internal politics or conflicting personalities. Or, perhaps it can be an honest misunderstanding of what the job itself would entail.

Regardless, when it happens, it is best to face up to the situation and take corrective action as quickly as possible to find a new position. You can expect that the short time in your present job will be a concern to many potential employers.

Try to demonstrate, despite the short tenure, that you made contributions of lasting value. One way to defuse objections is to leave the present position off your resume, discussing the matter as you choose in a cover letter. During interviews, be careful not to sound defensive. Simply explain that, for a valid reason, you are seeking to cut the situation short.

The reason could be that you performed well, but could not meet your expectations, or that once in the job, you realized it was not what you had been told. The explanation should show that you deal with problems, even your own, in a forthright manner.

A word of caution! You should realize that the interviewer is going to be skeptical. Plan for this and be ready to put your best foot forward. It will help if you say that it was in your employer's best interests that you make a move quickly. You can turn this potential liability into an asset by stating that the experience has given you a determination to find a company where you can contribute over a long term.

## 51 You May be Considered too Much of a Generalist

Few of us start out in life with the idea that, "I will become a generalist," or "I will become a specialist." Nevertheless, people move from job to job without ever building specialist skills. When that happens, you become a generalist in the eyes of many.

The major problem the so-called generalist faces is that he will be viewed in such a broad fashion that he will have no "practical" value to his next employer.

To deal with this problem, you will want to devote extra care in developing career and industry directions that you are comfortable with. Once this is accomplished, you should hone in on specific qualifications that will enhance your credibility as it relates to your goals.

Break your experience down into functional components. Develop examples of successes you have had in several diverse functions matched to the key needs and requirements of the position you seek.

Young people should be particularly cautious about being labeled a generalist too early in their careers. Adjust your presentation during each interview so that extra attention is paid to the interviewer's needs. Steer him away from looking at you as a generalist by talking primarily about the company's problems.

Wearing the mantle of "generalist" will usually not be an asset until you have moved up in responsibility and reached the executive ranks. The general management function, by definition, calls for a generalist.

**The Job Search**  
Initial Interviews

**STAGES AND TOPICS COVERED DURING THE INITIAL INTERVIEW**

The screened area highlights the most important parts of the interview.

STAGES	INTERVIEWER TOPICS	INTERVIEWER LOOKS FOR
1. FIRST IMPRESSIONS	Introduction and greeting Small talk about traffic conditions, the weather, the record of the basketball team	Firm handshake, eye contact Appearance and dress appropriate to the business, not campus, setting Ease in social situations, good manners, poise
2. YOUR RECORD	<b>EDUCATION</b> Reasons for choice of school and major Grades; effort required for them Special areas of interest Courses enjoyed most and least; reasons Special achievements, toughest problems Value of education as career preparation Reaction to teachers High school record, SAT scores <b>WORK EXPERIENCE</b> Nature of jobs held Why undertaken Level of responsibility reached Duties liked most and least Supervisory experience Relations with others <b>ACTIVITIES AND INTERESTS</b> Role in extracurricular, athletic, community, and social service activities Personal interests—hobbies, cultural interests, sports	Intellectual abilities Breadth and depth of knowledge Relevance of course work to career interests Special or general interest Value placed on achievement Willingness to work hard Relation between ability and achievement Reaction to authority Ability to cope with problems Sensible use of resources (time, energy, money) High energy level, vitality, enthusiasm Leadership ability; interest in responsibility Willingness to follow directions Ability to get along with others Seriousness of purpose Ability to motivate oneself, to make things happen Positive "can do" attitude Diversity of interests Awareness of world outside the lab Social conscience; good citizenship
3. YOUR CAREER GOALS	Type of work desired Immediate objectives Long-term objectives Interest in this company Other companies being considered Desire for further education, training Geographical preferences and limitations Attitude toward relocation Health factors that might affect job performance	Realistic knowledge of strengths and weaknesses Preparation for employment Knowledge of opportunities Seriousness of purpose; career-oriented rather than job-oriented Knowledge of the company Real interest in the company Work interests in line with talents Company's chance to get and keep you
4. THE COMPANY	Company opportunities Where you might fit Current and future projects Major divisions and departments Training programs, educational and other benefits	Informed and relevant questions Indications of interest in answers Appropriate but not undue interest in salary or benefits
5. CONCLUSION	Further steps you should take (application form, transcript, references) Further steps company will take, outline how application handled, to which departments it will be sent, time of notification of decision Cordial farewell	Candidate's attention to information as a sign of continued interest

WHAT DOES THE EMPLOYER LOOK FOR IN HIS EMPLOYEES?

WHAT DOES HE LOOK FOR?

HOW DO YOU LET HIM KNOW YOU HAVE IT?

1. Self confidence in ability to do the job.

A. Describe your work experience related to the job.

B. Describe training or education which prepares you for the job.

2. An ability to get along with your employees.

A. Be friendly, but not overbearing in the interview.

B. Tell the employer before he asks that one thing you have learned from working is how to get along with people.

3. Knowledge of the job, or the company.

A. In the beginning of the interview briefly describe the job such as "I would like to apply for the shipping clerk position. I have held similar jobs in the past and I am interested in working here."

B. Questions, if good, can indicate your enthusiasm for working with the firm. Such as "How many people would I be working with in the bookkeeping department?"

"I've used your tire pump for a long time. Do you make any other pumps?"

"I know many airlines offer pass privileges as a fringe benefit. What is this company's policy?"

"In my last job I used a Burroughs bookkeeping machine. What brand do you use here?"

4. Dependability

A. Be on time for the interview!

B. Follow through on the "call back" closing.

**"IF YOU HAVE NOTHING TO LOSE IF SUCCESSFUL...AND EVERYTHING TO GAIN BY TRYING WHY NOT TRY AND KEEP ON TRYING?"**

5. Ability to fit company image on and off the job.

A. Dress appropriately for the job.

B. Don't degrade the company's products or comment on their polluting type properties, or what you consider "ba uses". The company probably doesn't want its employees picketing them for a cleaner environment.

---

6. As few as possible personal or environmental problems.

A. Don't describe problems you have which would not affect your job performance.

B. Describe how you compensate for any problems you have which will affect your job performance.

---

**"THOSE WHO GET HIRED ARE NOT NECESSARILY THE ONES WHO CAN DO THE JOB BEST BUT THE ONES WHO KNOW THE MOST ABOUT HOW TO GET HIRED!!!!"**

## appendix 42

# APPROPRIATE RESPONSES TO TYPICAL INTERVIEW QUESTIONS

---

An interviewer has the task of discovering what kind of person and worker you are in the short time period of about an hour or even less. Therefore, the questions asked by interviewers are fairly standard from one interview to another since all interviewers are trying to obtain the same type of information. On the following pages, these typical questions will be listed with a description of how you should answer each one.

### 1. TELL ME ABOUT YOURSELF

When an interviewer says, "Tell me about yourself," he is asking you to tell him about yourself as a person, not merely about your job skills. The type of answer you should give follows the same guidelines as you followed in providing personal information in your résumé, and you can refer back to this to remind yourself about what you should include. Try especially to provide information that may indicate something you have in common with the interviewer, so that you are no longer a stranger to him. Perhaps his children attend the same school as yours do, or you follow the same sports, or have lived in the same city, or his parents had a background similar to yours, or you have the same hobby. These are the specific items you should mention:

1. *Previously Met* If you have met or seen the interviewer before or heard any favorable comments about him, tell him so.
2. *Common Friend* If you know someone who works in the company or who knows the interviewer, mention him since this establishes a common acquaintance.
3. *Hobbies and Special Interests* Tell him what your hobbies or special interests are, especially if they might be job related, such as drawing, building gadgets, designing your own clothes, doing seasonal work as a tax preparer, fixing cars. Also include non-job-related special interests such as being a strong football fan, coin collecting, and keeping tropical fish.
4. *Clubs and Organizations* Tell him about clubs or organizations you belong to such as Elks, ACLU, Bridge Club, bowling club, VFW, League of Women Voters, or PTA. This tells him what kind of person you are, and it is possible that he belongs to one of them or has in the past or has a family member who does.
5. *Personal Stability* Mention any facts about yourself that indicate personal stability and trustworthiness. Owning a home indicates your desire to stay in the area, as does your having lived in the area a long time. Marriage and children also carries this message. Tell him about your desire to stay in this area and what you like about it.
6. *Parents and Spouse* Briefly tell the interviewer about your husband (wife) and parents, describing something noteworthy about their background and occupation.

Only after you have described these personal items should you talk about your job skills and experience. Almost all interviewers will ask you to talk about the personal factors, but even if they don't,

try to mention them since the topic serves to create a friendly atmosphere. Then mention the following work related factors:

1. Your interest and experiences related to the job
2. Your past work experience
3. Your training or education
4. Your strong interest and enjoyment of your work

## 2. HAVE YOU EVER DONE THIS KIND OF WORK BEFORE?

You should never say "no" to this type of question, since no two jobs are alike and so, of course, you have never done exactly this same work. In all jobs, new skills and rules and details must be learned. A cook in one restaurant will never be preparing exactly the same foods with exactly the same equipment and exactly the same schedule as in any other restaurant. What the interviewer wants to know is whether you can learn to do the job in a reasonable time. Consequently, mention all of the experience you have had that makes it likely that you can learn quickly to do the work required in this specific job. Tell him about:

1. Your past experience
2. Your education and training related to the job
3. Nonpaid experience related to the job
4. How quickly you have learned that type of work in the past

As an example, the school principal asks you if you have taught Spanish, since the opening is for someone who can also teach one Spanish class. You haven't, but you would tell him that you took Spanish in college, have taught grammar and English, have an aptitude for languages, had spent time in Mexico, and would have no trouble handling it. Similarly, the interviewer might ask you whether you have worked as a bookkeeper and you haven't, but you could mention facts such as you kept some books as part of your previous job as secretary, you maintain an exact book of records of your family expenses, you had a bookkeeping course in high school, you're good with figures, and you're sure you could learn the necessary details quickly. If you are asked about whether you ever worked as a furniture salesman, you would similarly describe any selling experience, your interest and knowledge of furniture, your general ability as a salesman, and your assurance that you would learn very quickly.

## 3. WHY DO YOU WANT TO WORK HERE?

When an interviewer asks you why you wish to work for his company, he is attempting to learn whether you will be satisfied with your job and likely to stay. To reassure him you should mention as many positive features as you can about the company, such as:

1. The good reputation that the company has and your pride in telling people you work there.
2. You heard that the company is very fair and appreciates hard working employees (mention any employees who have described it to you).
3. The company has the kind of job that you are good at and like to do.
4. Convenience of job location to your home or to transportation facilities.
5. You like this type of work and you feel you can do a good job.

## 4. WHY DID YOU LEAVE YOUR LAST JOB?

When the interviewer asks you why you left your last job or why you want to leave your present job, he is trying to determine whether you had difficulties that may also arise in his company. This same question is also asked on some employment application forms. It has been discussed that employees usually leave a job for many reasons and that you should mention only those reasons that are favorable to you.

The fact that you did not do well in one company does not mean that you will not do well in another, so you shouldn't be concerned about leaving unmentioned any problem you might have had there. This situation might very well have been unique and would never again occur.

Some of the common reasons for leaving a job are that the company had a cut-back or a layoff, it was a seasonal job, it was a temporary job, it was only part time, it was only a good job while you were in school, it required too much travel away from home, it was not in a part of the country where you wanted to live, or the company was not doing well and could not keep up with the standard salary level. Other contributing factors may have been that you wanted to go into a different line of work for which you were well qualified and more interested, or that your company had a reorganization and didn't require the position you had any longer.

Avoid saying that you were fired, if you were; rather, mention the other factors involved, such as the job not being sufficiently oriented to your training or abilities, or that it involved a great deal of travel.

Whatever reasons you give, point out that the job for which you are being interviewed does not have the same problem as led to your leaving your last job. If you say that you left your last job because your other job involved too much travel, or was in a different area, or was not up to your skills, then point out that this job does not require travel, is in a part of the country where you want to live, or is more in line with your training aptitudes. If you were fired because of medical reasons, explain that they have been professionally taken care of. If you were fired because of family problems, assure the employer that they have been taken care of. Whatever the reason, explain in a positive manner how the situation has been, or will be, corrected.

In describing your last job, say as many positive things as you can about it even if it had many undesirable features—all jobs do. Do not say anything negative about the company or the supervisor—only that your needs did not fit in with the job. If you criticize the company or supervisor, the interviewer will view you as someone who is likely to do the same to him if you are hired in his company. On the other hand, he will regard you as appreciative and pleasant if he hears you speaking in a positive way about a company you left and will feel that you are likely to be appreciative and pleasant regarding the job for which you are interviewed.

#### 5. WHAT KIND OF SALARY DO YOU NEED?

When you are asked about your salary requirements in an interview, the interviewer is attempting to determine whether your expectations are too high for them. Of course, you want as much as the company is willing to pay. By naming a salary at this stage of the hiring process, you can only harm yourself. If you mention a lower salary than the interviewer has in mind, you may be hired at a level less than is standard and below what you might have obtained. If you mention a higher salary, it may be more than what he had been thinking of paying and he may well terminate the interview and decide he can't afford you. The wisest course is to avoid mentioning any specific figures or even a salary range until he has decided that you are the right person for the job and has offered it to you. Having decided that you are a good potential employee, he may well decide that he is willing to start you off at a higher salary level.

One way to answer the question of your required salary level is to tell the interviewer that you would work for whatever he feels is fair based on your qualifications and the company's standard salary level for that position. You might do this by saying, "I know you'll pay as much as I'm worth to you and I can't ask for much more than that," or "You probably have set rates and whatever that is, I'd feel that was fair," or "Your company has a reputation for fairness so I know you will pay an amount that is right for me."

After the interview is over and you have definitely been offered the job, you can then decide whether the salary is high enough. If the salary offered is too low when the job has been offered, tell the employer about the problem that you have in accepting the job. Tell him that you believe you can do better elsewhere, or that you have been paid more in similar jobs in the past, or that you have another possibility or offer that pays better, whichever one of these reasons applies to you. Tell him what all of

the positive attractions are of the job he has offered and how much you wish to accept if only the salary could be increased somewhat. Explain that your decision to accept would be much easier if he could find some way to offer a higher salary. If he is unable to do so, suggest that you would feel more comfortable if you had some assurance that a raise or promotion might be possible in the near future if your work will justify it.

#### **6. WHY SHOULD WE HIRE YOU INSTEAD OF SOMEONE ELSE?**

When you are asked this direct question, the interviewer is asking you, in a sense, to make his decision for him. If you have to hesitate or can think of only one or two reasons, then he will feel that the reasons are not too obvious or are not sufficient. You should quickly list your skills and positive characteristics. Some of these might be: I'm friendly and get along well with everyone; I'm very experienced; I'm very good at that type of work; I'm conscientious; I am efficient; I'm a company man for whoever I work for and give everything I've got; I don't have to be supervised and always get my job done correctly and quickly; I like this company and would enjoy working here; I'm not a clock-watcher; I'm dependable and don't take time off; I've got many extra skills that would be useful in the job besides the ones that are needed; I work harder than other people; I am always willing to work overtime and get the job done.

#### **7. HOW MUCH WERE YOU ABSENT FROM WORK IN YOUR LAST JOB?**

An employer wants to be able to depend on his employees being present, and this question is designed to determine whether he could depend on you. If you were absent a good deal because of some reason, tell the interviewer what the reason was and why you feel that will no longer be a problem. For example, "I was out for a gall bladder operation but I'm cured and that's no longer a problem. I'm in great health and don't expect to be taking any days off." If you are elderly or are a mother of young children or have some type of visible impairment such as a missing limb, this question of dependability is more likely to be asked. The same is true of some types of jobs that have an especially high absence rate and suffer a serious disruption when employees are absent, such as production line work. In answering this question, stress what your past reliability has been and give assurance of your future reliability.

#### **8. HOW IS YOUR HEALTH?**

A question about your state of health has the same intent as the previous question—how reliable an employee will you be. This is not the time to talk about your athlete's foot or an appendectomy you had as a child, or a backache or headache. The interviewer wishes to know whether you are likely to be absent because of health problems. You almost certainly do not intend to let health problems interfere with your job and so you should tell him that "My health is excellent" or "I have no health problems that will interfere with my work." Depending on your specific history, you could say, "I've never been out of work because of illness" or "I've never been out of work for sickness for more than one day at a time" or "I don't let small things interfere with my job."

If you have a physical problem that is not visible to others, such as a blood condition, a sore arm, a rash on your back, a slight hearing difficulty, or kidney problems, do not mention them unless they are so serious that they would prevent you from being a reliable employee. This is rarely, if ever, the case since almost all such conditions can be treated medically to a degree that enables you to function adequately in almost all jobs.

Suppose, however, that you have a physical problem that is visible to the interviewer. He will want to be reassured that it will not make you unreliable or incapable of doing your job. Examples of such physical problems are that you are in a wheelchair, you have a missing arm or leg or hand, you are blind, or you have a large hearing loss and are wearing a hearing aid. The first rule here is to have obtained a letter from your doctor to give to an interviewer stating that your physical problem does not require extensive additional treatment and does not interfere with your general ability to work.

The second rule is to mention the problem before the interviewer does, since he may feel embarrassed about discussing it and yet maintain a bias because of it.

Third, point out how you function normally in spite of the handicap by engaging in some action that you can perform that relates to your problem. For example, if you wear a visible hearing aid, ask him to whisper and turn up your volume control and repeat what he said. Or, if you have an artificial limb, pick up a piece of paper or some other object and also show him how you write. If you are in a wheelchair, show him how you can maneuver easily around the office and through doors. Tell him how well you function in spite of the disability, but be sure to actually demonstrate since the actual performance is more convincing than any statement. Then ask him to think of any situations he thinks you will have problems with and demonstrate to him how you will handle it.

The fourth rule is to point out how your disability actually makes you a better than average worker. Point out to the interviewer that when nonhandicapped workers see you working so well even with the handicap, they stop finding excuses for not being able to work very hard themselves. Also tell him that handicapped workers are usually very loyal to their employer and are less likely to complain and less likely to change jobs. These advantages apply to almost any disability, but, in addition, point out advantages that exist because of your specific disability. For example, if the employer knows you are an alcoholic, you can point out that now that you have recovered, you don't drink at all so you have less problems than most people who may occasionally have too much to drink. If the employer knows you have a criminal record, tell him that, because of your record, you can't take any chances at all and wouldn't even think of taking a pencil by mistake as other people do since you have too much to lose. If you are in a wheelchair, you can point out that you are less likely than others to wander off and talk to others since more effort is required; also, it is important to your health to stay busy constantly. If you are blind, you can point out that your other senses are more developed than normal and that you have developed the habit of maintaining constant alertness.

### 9. WHEN ARE YOU AVAILABLE FOR WORK?

When you are asked how soon you can start work, tell him as soon as possible. Many factors may be causing your hesitation about committing yourself, but now is not the time to mention them. You may not be sure you want the job, but this is something you can go home and think about and discuss with your friends. If you decide against it, you can call him as soon as you decide. However, if you express hesitation now, you may not receive the offer. Another hesitation you might have is that you are not sure how soon you can leave your other job, make travel arrangements, or cancel other appointments. If you mention these problems now, you may not have any reason to make these arrangements. Once the job is offered, try to make the necessary arrangements, and only if you can't should you call the employer and tell him you need the extra day or week before starting. If you find your current employer desires a week or two notice, then your new employer is likely to respect you for this and gladly allow you to start later since he knows now that you will do the same for him. A third reason for hesitation might be that you are waiting to hear about another position you applied for. In this situation, also, you should tell the interviewer you desire to start as soon as possible. Once the job is offered, you can then call the other job possibilities you have interviewed for and explain that you have an offer but would rather work at their company and request a decision before you have to make a decision. In general, an employer will have an increased estimate of your value as a worker if he knows you have other job offers, and he will also be flattered by your preference for him.

### 10. WHAT ARE YOUR GREATEST STRENGTHS?

When asked this type of question, mention all of your positive aspects: your skill, reliability, experience, enthusiasm, efficiency, organization, pride in a job well done, ability to get along with others, and so on. If the question is, "What is your single greatest strength?", mention something about your personal reliability, but also add that you have several major strengths and add them to your description.

#### 11. WHAT ARE YOUR WEAKNESSES?

Do not describe any possible weaknesses when asked this question. If some weaknesses exist, such as lack of experience or reliability, you surely intend to overcome them, so there is no reason to draw attention to factors that will probably not occur. Mention nothing negative. Instead, respond by telling him that you have no weakness that will prevent you from being an excellent employee. You might also state once again briefly your strongest points at this time.

#### 12. WHAT FIVE WORDS WOULD YOU SAY DESCRIBE YOU BEST?

When asked to select words to describe yourself, select only positive aspects. As in the previous questions, do not mention anything negative, but rather, answer as if you were asked to describe your strengths. Some words that might be appropriate include: reliable, conscientious, friendly, honest, cooperative, easy to get along with, hard-working, energetic, skilled, experienced, pride in work, responsible, respected, enthusiastic, dedicated, and likeable.

#### 13. WHAT WAS YOUR LAST EMPLOYER'S OPINION OF YOU?

The best answer to the general question about your last employer's opinion of you is to have an open letter of recommendation from your last employer, which you can then summarize and show to the interviewer.

Unless you were fired, your employer must have thought well of you or else he would not have continued to employ you. Of course, there are always some minor annoyances that everybody feels about any other person and the same is true about employers and employees. Since you wish to emphasize your positive characteristics, mention only those items that were positive and do not mention any of the negative. Even if you recognize that there were some things about you that your employer didn't like, do not exaggerate their importance by mentioning them here. Some of the aspects of your work that you feel your employer liked or, at least, did not complain about, might be your high level of skill, your trustworthiness, your reliability, your ability to get along with some people that most others couldn't get along with, your promptness, your willingness to work overtime when needed, and your good customer relations. If you cannot think of any, try to remember a chance compliment he gave you in passing and repeat it.

If you have an open letter of recommendation, it will speak for itself and you should give it to the interviewer. If not, suggest to the interviewer that he contact your employer, and express your assurance that you would receive favorable comments such as, "I know he will speak very highly of me. I worked for him for two years."

If you were fired or did get along badly with your previous supervisor, you might consider not mentioning that particular employer on your résumé if you feel that the situation would not repeat itself with other employers. However, you must be honest, so if your application form requires you to list his name, do so. You may be surprised to learn that your employer still had a very high regard for many of your abilities even though you were fired. Of course, the interviewer may not contact him; most do not. However, assume the best and mention only those qualities that you feel the employer liked.

#### 14. WHAT ARE YOUR LONG RANGE GOALS?

This type of question is sometimes phrased as "What kind of job do you hope to have in 10 years?" or "How long are you thinking of working for this company?" or "What are your future plans?" The interviewer is trying to find out whether you are serious about staying with this company or whether you are using this job only as a temporary stopover, or will be dissatisfied after a while. So, you should try to assure him of your intention to stay with the company and to grow in your career within the company, which, of course, you probably want to do if the job proves to be satisfying to you.

If you know beforehand that this company has many opportunities for advancement and encourages it, tell him that you "hope to become valuable to the company and to be promoted" as you earned it. However, be cautious in making this type of statement, since it can easily be interpreted as already showing dissatisfaction with the job at which you will be starting. Similarly, if you mention a particular position as your objective such as "I want, eventually, to be the head of a shipping department," your statement can easily be misinterpreted as revealing future problem competition.

The items to stress are that you like the company and that you hope to become a valuable employee to the company. As to your plans for staying with the company, reassure the interviewer with information such as "I don't plan on moving away, having a baby, getting married and moving, or going back to school," "I see no reason why I won't stay with this company for a long, long time. I know I'll be very happy with this company," "I like this area and don't ever plan on leaving," or "This job is just what I enjoy doing and I don't see any reason for leaving it."

The principle facts to mention are that you like the company, you like the work you'll be doing, you like the area, and that you have no plans that would require you to leave the job.

#### 15. WHAT KIND OF MACHINES OR EQUIPMENT HAVE YOU WORKED WITH? WHAT KIND OF EQUIPMENT CAN YOU OPERATE?

If the interviewer asks this question, then obviously, skill in operating machines is important and you should inform him completely of your experience and capability. Be very specific in mentioning equipment by giving the exact names of the machines you have operated, if you can recall them, thereby providing evidence of your familiarity, such as saying, "I've worked with the Acme Model 85 Arc Welder," or "I've used the IBM Selectric." However, also be general and mention all machines you can operate such as "I can operate Ditto machines, mimeograph machines, and complicated copying machines that collate automatically. I can use either manual or electric typewriters or the special type that has automatic spacing. I can use lettering equipment, such as the Leroy type, and can operate a switchboard." The more equipment you can operate, the more apparent it is that you are capable of learning about any other type that might be required on this job, even if you have not operated that type. If the interviewer asks specifically about your ability to operate a machine you haven't had experience with, do not say you haven't had experience but, rather, describe what types of similar machines or other machines you can operate and express your confidence that you can learn quickly.

#### 16. CAN YOU WORK UNDER PRESSURE OR TIGHT DEADLINES?

This question indicates that your job will involve working under pressure and deadlines, so reassure the interviewer by giving examples from paid or unpaid activities that involved deadlines and pressure. You might mention: episodes from your military service when a maneuver was made without notice; how you handled the last two days of political campaigning in your volunteer work; how well you performed when a large rush order suddenly had to be filled; how you managed to prepare for three final exams in one day in school; or how you handled a crisis when your boat was caught in a storm. Mention several examples, stressing how capable you were in rising to the occasion, that you did not mind the stress, and possibly enjoyed it.

#### 17. HOW OLD ARE YOU?

If an interviewer asks you how old you are, he is usually expressing some concern that you are either too young or too old for the job. The general rule for you to follow is to reassure him that your age will not present a problem and, furthermore, has some advantages.

If you are an older person, the interviewer may be concerned that you cannot change your ways, that you will resent being supervised by a younger person, and that you may be very close to retirement. You should reassure him about these matters. In addition, you should point out the advantages of your advanced years, which include the facts that you are now very settled in the area and not likely

2046

BEST COPY AVAILABLE

to move around or change jobs frequently; that you have mature judgment and good common sense; that you have many different skills and are therefore adaptable to changing job requirements; that you have an established sense of responsibility, a long history of punctuality and reliability; and, if applicable, that customers usually have more trust in older persons.

If you are very young, the interviewer is probably concerned that you are likely to leave soon, return to school, move from the area, or be unreliable and frequently absent or late. In your answer to his question about your age, you should reassure him about each of these possibilities. In addition, mention some of the advantages of being very young, such as that you are quick and eager to learn; that you do not have any bad work habits; that you are in very good health and therefore don't expect to need to take sick time; that you are especially eager to prove yourself and so you are willing to take on any new assignments; and that you are very willing to accept criticism or suggestions because you know you have much to learn.

#### 18. ARE YOU THINKING OF GOING BACK TO SCHOOL OR TO COLLEGE?

An interviewer will usually ask this question only of a younger applicant, and he is concerned that the person will be quitting soon, just as he was when he asked a young applicant how old he was. You should reassure him by mentioning considerations such as your desire to work for a few years or that work is very important to you, or that you have no desire to continue schooling and you want to build a future for yourself, or that you will take courses only at night. If you do not have a high school diploma, you may impress the interviewer by telling him that you definitely are going to attend classes in order to obtain your diploma, but intend doing so at night.

#### 19. ARE YOU MARRIED?

When the interviewer asks whether you are married, he is usually concerned that your marital status may present a problem in your job. In general, the fear is that a married person may be too tied down by family responsibilities to be flexible or dependable on the job, and a single person may be too unreliable. The answer you should give involves assuring the interviewer that your married or single status will not cause any interference with the job. Furthermore, your answer should include a statement of the advantages for the job of being single or married.

If you are married, you can point out that:

1. You are not going to be changing jobs because you have family responsibilities.
2. You are established in the area and your family likes it here.
3. You are able to travel and work overtime since your marital partner knows that is part of a job and accepts that fact.
4. You have made arrangements for the care of your children while you are working and will not need time off from work if they are sick. This point is especially important for women with young children.
5. Your marital partner has a permanent job and wants to remain in this area. This point is especially important for women since employers are often concerned that the woman may have to quit to be with her husband if he leaves the area even though she is happy with her job.
6. Talk about your marital partner and children, stating what kind of job your partner does and what your children's ages are and what school they attend. The interviewer may know your partner, be interested in his type of job, or have children the same age, thereby establishing a common area of interest between you.

If you are single, you can point out that:

1. You can travel in your job or work overtime without restriction since you have no family to tie you down.
2. You like the area and have friends or relatives here and intend to stay.
3. That marriage will not cause you to move. This is especially important for single women.

## **20. ARE THERE ANY QUESTIONS THAT YOU HAVE?**

This is often the final question that an interviewer will ask and is often asked merely as a gesture of courtesy. Do not attempt to obtain complete information about the job at this point, since you may unintentionally give the impression that you are not sure you really want the job. Wait until you have definitely been offered the job before asking questions about retirement benefits, chances for advancement, public transportation facilities, salary, and so on. This information may be critical for you in making your decision, but wait until you have been offered the job to ask about them. You should respond to this final question by giving him a compliment such as, "No, I have no questions. You've done a complete job in describing this company and the job requirements," or by indicating your strong desire to work, such as by saying, "The only question I have is 'how soon can I start work?'"

### **IF THERE ARE NO POSITIONS OPEN**

#### **Other Job Leads**

If the interviewer says that no positions are available at this time or that you are not qualified for the job he has open, ask him about job leads at other places. Write down the name and address of the company as he tells you and ask for the name and the telephone number of the person you should contact. Obtain as many of these leads as you can from him. The interviewer will have become fairly familiar with your skills and will usually be able and very willing to tell you about other job possibilities.

#### **Part-Time Job**

Tell the interviewer you would be interested in a part-time job if he has indicated no jobs are available. Part-time jobs often develop into full-time jobs in a short period.

#### **Call Back**

Before you leave, tell the interviewer you would like to call him in a few days to learn of his decision. By calling him back, you will make certain that you have not missed out on a job because of some unforeseen problem in his being able to contact you. Ask him when it would be convenient for you to call him to learn of his decision or should he desire more information. Also, if the employer has narrowed the choice down to a small number of equally qualified applicants, your call may well result in your being chosen rather than the others. If you learn during your callback that you were not chosen, you can still use that opportunity to ask for other job leads. As you leave, be sure to thank the interviewer and reassure him of your desire to hear from him soon. Make sure you smile. Have good eye contact, shake his hand, and tell him you enjoyed your interview.

## 2. WHY DO YOU WANT TO WORK HERE?

This company may be just one of several where you'd be happy to land a job. You may have chosen it because you heard there was an opening, because it's close to home, or simply because it's on your list of places to try. But that isn't what the interviewer wants to hear. He wants to know that you've done your homework, that you've selected his firm as a good place to work - for some specific reason you can explain to him with enthusiasm.

What reason? Ask around: Find out the company's reputation in it's field, in the community. Check you local library for information, read the trade journals.

It's not a bad idea to choose where you want to work. And you can.

## 3. WHAT DO YOU EXPECT TO BE DOING FIVE YEARS FROM NOW?

If the interviewer seems secure and confident, on the way up, a show of brash ambition on you part may sit well: "In five years? I'd like to be sitting right were you're sitting!"

The purpose of this query is simply to find out whether you're a good investment. Will you leave as soon as you can afford to stay home - or, at the opposite extreme, will you quit for a better job if you're not promoted fast enough?

The best answer you can give will indicate that you are serious about work, that you are realistic about how quickly you can get ahead, and that this job - far from being a stopgap or merely a means of paying the rent - fits into a well thought-out plan you've made. (Remember, you don't necessarily have to stick to the plan. The point is that you've made one. You're not just sitting around waiting for something to happen.)

## 4. DO YOU PLAN TO HAVE (more) CHILDREN?

You may never be asked this question directly, or any others that would intrude into your private life as a woman, such as, "How does your husband feel about your working?"... "What will you do if he's transferred?"... "How will you manage during school vacations?" But you'd best be ready to supply the information even so. It does you no good to show irritation - much less point out that such questions are technically illegal under the Equal Employment Opportunities Act - if you really want the job.

The charitable view to take about such inquiries is this: Your employer needs to know that you won't spend his time on your husband, your children or your supermarket. Watch for chances to reassure him when he asks these questions in disguised form. For example, "Is it 'Miss' or 'Mrs.'?" really means, "Are you married?" So it's less than helpful to say although it may be true, "I use 'Ms.'"

HOW DO YOU SPEND YOUR LEISURE TIME? can be another "fishing" question: the interviewer hopes you'll mention family outings with your children, if any, so that you're the one who has opened the subject of your motherhood, not he. The same may be true with "Are you free to travel?" - which is really asking what kind of coverage you have at home.

You can cut through all this by calmly stating the facts: You have made reliable well-tested arrangements so that your homelife will not encroach on your work life, either in time or in mental energy. A good line, if you can pull it off is "The same management techniques I hope to use in your department have worked for me at home. You needn't give a second thought to my family responsibilities." If that feels a bit thick on your tongue, simply acknowledge that you too want to keep your homelife out of your office and talk about how you and your husband have thought through the potential problem. You may be surprised to find how quickly the air is cleared when you volunteer this kind of information, showing yourself to be neither defensive nor resentful.

#### 5. WHAT WAS YOUR PREVIOUS SALARY?

Duck this as long as you possibly can. If your earnings have been high, revealing them too soon can cut off the interview before you have had a chance to show that you're worth every cent. If they've been low, as is more often the case, naming the amount will instantly categorize you, to your disadvantage. As a career counselor once said, "Miserably underpaid women will never allow their future salaries to be compared to what they've made in the past."

The job you're interviewing for probably has a preset salary, anyway; the employer has a range in mind for that position. In the government, and most large corporations, there are pay grade levels within each job category. So you may be able to get away without answering the question by asking "What range are we talking about here?"

Or you could say "Money's important and I want to discuss it with you, but there's something I'd like to clear up first..." thereupon skipping right to a specific question that will change the subject.

A woman in a career-counseling workshop, who was then making \$8,000 dodged the question of her current salary by saying - truthfully - "I'm scheduled for my third interview for a job in the \$12,000 range. I think I'll be offered that but unfortunately, it's in Boston. I'd rather not leave New York."

(By the way, even if you think in terms of your weekly or monthly salary, speak in annual sums.)

But suppose you do get boxed in to confessing that you're not in the big leagues, financially. How accurately must you answer the question? You can legitimately add about 20 percent to lower the value of the fringe benefits you have received, but don't risk the big lie. Better to suggest a reason why the figure is low: "That was my apprenticeship. I'm ready for bigger things now." Or "Of course, publishing is notoriously low-paying."

And keep your head up. The real question is what the new job is worth.

#### 6. HAVE WE COVERED EVERYTHING?

This is a tough question only if you're not ready for it, in which case you might sit, desperately trying to think of something and drawing only a blank. Actually, it's an ideal opportunity to tick off the high points of your resume again. As with your opening monologue, prepare and practice

a warming-up: "Let's see now, we've talked about my experience with X and Y and Z. Did I mention that I speak Spanish? That might be helpful in dealing with your plant in Puerto Rico."

This question also invites you to ask questions of your own. If the interview hasn't already covered such matters, talk about the degree of authority that accompanies the job's responsibilities, the promotion and salary-review policies and, particularly, how high a woman of your background could expect to go in the company. The interviewer will respect you for wanting to gather as much information as you can.

The dream interview would end with the employer taking you around to see the plant or office and letting you meet a few of the people you might be working with. (Just in case, leave some time open after each interview.) If you feel that the interview has gone well, you might make this suggestion yourself. "Would it be possible for me to meet Mr. So-and-so while I'm here?" If you're lucky, the interviewer will pick up the phone then and there; you'll have your next interview set up - if not, immediately, then soon afterward.

In any case, make sure before you leave that you understand what's to happen next. Are they to call you, or vice versa? If the interviewer is vague, pick up the reins: "May I call in a week or so to learn your decision?"

Follow-up with a letter, not merely to say thank-you but to reinforce what went well, correct what went wrong and add a point you forgot to make. (There's always at least one!) You might want to enclose another copy of your resume with this letter, suggesting that the interviewer pass it along to a certain colleague he mentioned.

Try to keep in touch, even if you're not offered the job. The person who's hired in your place may not work out, or a new opening may arise a few months hence.

Using these tactics, you'll find that no interview is ever a complete failure. At worst, an unsuccessful interview gives you practice for the big one, the one that will get you the job you want.

# INTERVIEW QUESTIONS

## What's Legal and What Don't You Have to Answer

A half dozen federal laws protect job applicants from questions that might be used to discriminate against them. Basically, the employer must prove (if challenged) that an interview question is directly related to the duties of the job for which you are applying.

Listed below are items which can be asked during the interview and items which are illegal to ask. Your job resume and employer application form also need not contain this information. You may, however, voluntarily provide any of the information below.

### You may be asked and should answer the questions:

- Where have you worked before?
- What duties have you performed on past jobs?
- What are your short and long-range career goals?
- Why are you interested in this organization?
- Tell me about yourself?
- What education have you completed?  
(If a certain level is required for the job.)
- How did you learn about this job?
- Who are people prepared to write or give references for you?
- What is your social security number?
- What is your address and phone number?
- What special qualifications do you have for this job?
- May I answer any questions about the job or organization?
- What are your greatest strengths and greatest weaknesses?
- Why does this job interest you?
- Why did you select this particular career?
- Are you willing to travel, to relocate?
- What job skills do you have?  
(When specific skills are needed)
- Do you have a license for the field?  
(if required)

(Note that questions of this type focus on the job, your specific qualifications for it, and your career goals.)

### You may be asked and need not answer these questions:

- Are you married?
- With whom do you live?
- If married, are you expecting to have children soon?
- What does your spouse do?
- Were your parents born in this country?
- How old are you? (But, may ask if you are legally old enough to work)
- Have you ever filed for bankruptcy?
- Where do you bank?
- Have you ever been arrested? (But, you may be asked to provide information on criminal convictions)
- How tall are you?
- How much do you weigh? (But may be asked about height and weight if they are necessary for the performance of a job)
- How many children do you have?
- If you have children, what kinds of day care arrangements have you made?
- What memberships do you hold in social, religious, and community groups?
- What is your military service status?
- If a veteran, what kind of discharge did you receive?
- Are you physically handicapped?

(Note that these questions delve into your personal life and are not legitimate occupational qualifications.)

Minichart developed by the Career Opportunities News. PO Box 190, Garrett Park, MD 20896. Special thanks are due to Professor Jan Kilby of Texas Lutheran College who helped to provide information on the illegal questions.

## PERSONAL APPEARANCE

### Your Health

Good appearance starts from the inside. Your eating and sleeping habits will effect your appearance. Eating a well-balanced diet and getting enough sleep will result in feeling good as well as looking good. Exercise is another area that benefits your total appearance. An active person looks more alert than an inactive person, and the body assumes a more pleasing shape.

### Body Odor

It is unrealistic to consider yourself well-groomed if you have a body odor. Most body odors are caused by perspiration under your arms and in the genital area. You can easily control body odors with products available today, frequent bathing, and some special tips. Bathing is the only way to control bacterial odor after it has occurred. It is possible now to purchase products which are antiperspirants and deodorant combined. For the most effective protection, the products should be applied immediately after you bathe.

### Fragrances

Fragrances applied to your person are designed to enhance your grooming. It is possible to detract from your grooming with excessive use of fragrance. Omitting it entirely deprives you of a little extra that can be a very enjoyable part of your grooming. A very important point to remember about fragrances is that they are not designed to cover unpleasant body odors. Use your fragrances to enhance your clean body, never to cover an undesirable odor. One thing you should be aware of is that when you are indoors, working closely with people, strong fragrances are offensive. Stick to the very subtle, light fragrances when you are working closely with people in offices or other enclosed areas.

### Hand Care

Your hands are practically always in view. Their grooming or lack of it are almost as often noticed as your face and hair. Protect your hands by using rubber gloves and hand creams. If you wish to use polish, a clear coat or an unobtrusive pastel is appropriate for business. Black, green, blue and sparkles are not appropriate for working women. Extremely long nails and chipped polish detract from your appearance.

### Hair

The main business requirement is that hair be clean and neat. Unruly styles will hamper you in business. Gently waved and somewhat full hairstyles are preferred to very curly or "glued-to-the-head" styles. How willing are you to learn the techniques needed to keep the style you select? How much time are you willing to spend daily on it to keep it attractive? How appropriate is the style for your life-style? Select a hairstyle that fits your activities. If your time is limited, do not select a hairstyle that will require a lot of care.

The business world is conservative. If you wish to change your hair color, do not make a drastic change. It will not go with your complexion and will usually look harsh. Coloring can be a great deal of trouble. You will need to touch-up the roots every four weeks. If time is one of your problems, you do not need to add this to your list.

### Makeup

Like clothes, faces have a certain look in business. Very simply, they are healthy, clean, and well-groomed. Start with a clean face, then apply moisturizer before anything else. A foundation gives your skin uniform color and texture. Slight imperfections in your complexion will be covered giving you a smooth, even skin tone.

Women use cosmetics to emphasize their features. Cheekbones can be emphasized with color; eyes with mascara; and lips with lipstick. Most businesswomen wear mascara and lipstick. Other cosmetics, if worn at all, are very subtle. People should not notice your makeup; they should notice the expression on your face. Use of eyeshadow is often criticized by businesspeople. If you choose to wear it at all, choose brown or gray and blend it to resemble shadows. Eyeliner must be very subtle. The purpose of blush is to contour your face and give you a healthy glow. Too much blush makes you look like a clown.

### Teeth

Teeth should be brushed and flossed after each meal. A regular dental check-up every six months prevents problems from arising. Breath fresheners or mints before an interview will temporarily solve bad breath.

Basics

Let's start from the inside to the outside. What you wear under your clothes effects how clothes look. If your undergarments are missing, you are not well dressed. A bra and slip are essential garments regardless of the weather. Your main concern is to select lingerie that is comfortable next to your skin and promotes a smooth line under your clothes. Bikini-style panties stretched over a less-than-firm stomach may make unsightly bulges that show up under your clothes. A slip that is too full for the dress you are wearing may look bulky under the dress.

Hosiery must be worn to your interview no matter what the weather. Neutral, flesh tones to grey, are the proper choice. Pastels, textured, and those with ornaments are totally wrong. Do not wear them to your interview.

Shoes should be a basic, closed, plain pump with a medium heel in a solid color. The color of your shoes should compliment your outfit. Shoes should be polished and unscuffed. Never wear spiked heels, barefoot sandals, or tennis shoes. Boots are not acceptable business attire.

## Clothing

What you wear to the interview is crucial. How you look has a lot to do with how you are seen. Oftentimes in the very first few minutes of the interview, the decision is made, whether it is going to be a turndown or a second interview. Dressing too casually or flamboyantly can ruin your chances. Slacks are totally unacceptable. Just as big a mistake is overdressing. The safest choice for any interview is an attractive suit or tailored dress in a conservative color worn with flesh-toned stockings and medium-heeled pumps. Even the executives in wildly creative fields (TV, music, advertising, etc.) will respect you for knowing that a job candidate should look businesslike.

Remember--40 percent of the job-seekers who stay unemployed do so because their personal appearance does not meet employer expectations. In business you are not dressing to express personal taste; you are dressing in a costume which should be designed to have an impact on your interviewer. If your clothes do not convey the message that you are competent, able, ambitious, self-confident and reliable, nothing you say or do will ever come over the negative signals emanating from your appearance. You are more competent and poised if you make yourself attractive, and the employer will react to you accordingly.

The ideal interview outfit is the suit. The business suit has important characteristics:

1. The jackets are tapered very little at the waist.
2. The contours of the body are obscured by the jacket.
3. The skirt is neither too full nor too tight but hangs either straight or flares gently, obscuring the contours of the body. It should cover the knee or fall one to two inches below the knee.

Because a business suit must look fresh all day, fabrics that do not wrinkle easily are best. The patterns in fabrics that look most professional are: solids, tweeds, and muted plaids. The best colors for business suits are: dark blue; medium, charcoal, or steel gray; black; camel; beige; dark maroon; and dark rust.

The business suit is worn with a blouse. Blouses with low necklines and other eye-catching treatments are distracting. You want the interviewer to look at you, not your clothes.

In addition to suits, dresses are acceptable interview wear; preferably worn with a jacket. The solid colors recommended for suits are suggested for dresses as well. Florals and feminine prints are often too casual. Long sleeves are appropriate for year-round wear. (Remember all business offices are air conditioned.) Denim, corduroy, clinging and shiny fabrics usually are not worn.

The following are NEVER acceptable for an interview:

1. Mini-skirts
2. Denim (in any form)
3. Pants
4. Leather
5. Sleeveless clothes
6. Halters or bare midriffs
7. See-through blouses
8. Socks
9. Low-cut dresses or blouses

Coats usually worn for business are of two types: a raincoat and a winter coat. Raincoats with zip-out linings are practical for most of the year. Coats should be long enough to cover the longest skirt. Short jackets are not worn to an office; save them for your ski trip.

#### Accessories

There is one cardinal rule: Don't wear anything that jingles, wiggles, clanks, or glitters. Accessories should be silent, understated, and unobtrusive--never sexy. Dangling earrings, charm bracelets, metal bangles, chain collections, novelty pins, or garish, attention-getting items that distract listeners from what you are saying will dilute any woman's image. Only one pair of earrings is appropriate. At no time is a nose earring acceptable.

Hats and head scarves are unacceptable for the interview. As a matter of fact, hats and head scarves should never be worn in an office.

One favorite accessory of women deserves special mention--the carryall handbag. There is no denying that women need handbags, but you do not want to drag such an encumbrance to an interview. A small handbag that matches your shoes is appropriate.

Do not wear your sunglasses even if they are prescription. It is difficult to maintain eye contact if the interviewer cannot see your eyes.

### MANNERISMS

Another part of appearance that employers consider is manner. Manner refers to your personal behavior. How you act in an interview gives the employer an idea of how you might act on the job. Since you have little time to make an impression, your manner will greatly affect that impression.

Your manner during an interview should be natural but positive. Your manner will promote good appearance if you show that you are confident. You should always show employers common courtesy. However, do not overact. Honesty and sincerity are also elements of good manner.

When you deal with others, your nonverbal behavior communicates important messages. Effective attending behavior such as eye contact is a way of nonverbally communicating: "I'm listening," "I care about you and what you have to say," "I'm open to you," "I'm comfortable with you."

### The Handshake

The most established form of etiquette in our society is the handshake. When you are called in for your interview, greet the employer with a firm handshake and a smile. This is no place for "the wimpy handshake." Be sure your hands are dry before you enter the interview. A little unscented talcum powder will relieve sweaty palms.

### Posture

Posture and body movement have a major impact on the way we are perceived by others. We are presumed to be confident or self-conscious, relaxed or nervous, comfortable or uncomfortable according to the postures and body movements we exhibit. You don't need someone to tell you that downcast eyes, drooping shoulders, and a shuffling step are not signs of a confident, happy person. People generally interpret erect posture as meaning you are interested, ready, and cooperative--that the persons with whom you are communicating deserve your utmost attention. Well-tailored clothes fit well on a well-postured body, not on slumped shoulders or bulging stomachs. Use a long mirror, practice walking, standing and sitting to observe how you look. Try to correct the areas that need help.

Body language instantly signals your true feelings. Here is some language that shows confidence: sit up straight settled against the back of the chair; keep arms relaxed, hands resting quietly on lap; cross your legs only at ankles; keep feet on floor.

Nod your head occasionally to indicate that you are listening or that you are agreeing or disagreeing. Don't fidget. This can suggest nervousness, impatience or a need to use the bathroom. Don't barricade yourself behind crossed arms and/or hands in front of your face. Crossed arms indicate a defensive and closed attitude.

Eye Contact

Eye contact. Look at the other person, maintain a fairly steady, but relaxed eye contact. If you find this difficult, look at the tip of the nose or at the forehead, it will seem as though you are looking at the eyes. Avoiding eye contact gives the impression that you are hiding something or you are uninterested.

Facial Expression

Smile.

Energy Level

One of the greatest strengths you can convey at an interview is energy. The interviewer will sense how motivated you are at the interview and will use this as a major factor in evaluating you.

Poise/Self Confidence

If you give the appearance of being composed and self-assured, the interviewer perceives a person who projects self-confidence, competence, and preparation. All employers are looking for this type of employee.

Paperwork

The third aspect of appearance is the paperwork needed for a successful job search. Employers require you to fill out application forms. You must have paperwork that shows employers that you are neat, complete, and accurate. Paperwork includes resume, cover letters, applications, and references. Follow the guidelines set forth in the worksheets provided for each.

## PLANNING YOUR INTERVIEW

### PART TWO: "THE INTERVIEW"

The resume and cover letter did the trick. The company has requested an interview. Now what?

The interview, through which most people are hired, can be one of the most frightening aspects of job hunting.

"It's not always the best person who gets the job; it's the person who had the best interview."

After you get an appointment for an interview, you have some preparations to do. You need to learn as much as you can about the company and its concerns. You need to formulate answers to questions you may be asked about yourself. And you need to prepare yourself mentally and physically for a good first impression.

Job interviews can last a few minutes or a few hours. The length of the interview depends on the interviewer, the time available, the job, and the job-seeking skills and qualifications of the applicant. Most job interviews last about thirty minutes. They begin as soon as an employer sees you--or even before. Within five minutes most employers have decided whether or not you meet their expectations.

It may be necessary to fill out an application prior to the interview. In some instances you may be asked to complete a battery of tests--this may include typing, spelling, vocabulary, and math.

Preparation

Most interviews are lost well in advance of the actual meeting by the applicant's failure to do sufficient research to understand the employer's needs.

Research the company before you interview. Know what the company does, what type of work the employees do, and how large the company is, etc. Read brochures, leaflets, talk with employees, and review annual reports. If unable to get specific information about the company, you should know about the industry in general. Learn the name of the interviewer, and if possible, the correct spelling and pronunciation. Once you have researched the company, you can decide then how best to present your qualifications and skills as they apply to the job. If you do your homework about the company, you come across as a stronger candidate. It says to the interviewer that you are serious enough about this job to do the research.

Another aspect of your research is to confirm the exact location, date, and time of your interview. Be certain the location includes good directions, correct address, floor and room number. Find the best method of transportation and estimate travel time. If you need to travel by bus, call PAT to double check your bus schedule. You can make a trial run if necessary.

Be sure you have a few copies of your resume and references with you. Bring a working pen, pencil and notepad. It is a good idea to carry a small 3x5 card containing all pertinent information you will need to complete a job application. This should include social security number, previous jobs, addresses, telephone numbers, and dates.

Punctuality

Don't be late and don't be early. Nothing makes a worse impression than arriving late. If you cannot turn up on time for the interview, what on earth would you do as an employee? If there is the remotest chance that weather, traffic or hard-to-follow directions might be a problem, leave absurdly early just to be sure. If your car is hit by a meteor, go to a phone booth and ask to reschedule.

Getting to the office building 30 minutes before the appointment is good; presenting yourself to the receptionist at that time is not. It pressures the interviewer--and could make it look as though you have nothing better to do than read magazines in the waiting room. Instead, go to a nearby restaurant for a last-minute cup of coffee and a ladies' room check of your hair, makeup and clothing. It is best to greet the receptionist 15 minutes before your appointment.

### Introductions

Always go to your interview alone. When you go into the reception room of the company, give your name and the time of your appointment (and the name of the interviewer if you know it). The receptionist will probably ask you to be seated and wait. Don't be alarmed if there are other people waiting, too. Be friendly, reply to all questions courteously, but do not bother the receptionist or other employees with questions.

What do you do with your belongings? In cold weather, it is best to leave your outer coat, boots, or other paraphernalia in the reception room, hang them up if there is some arrangement such as hooks, hat racks, or closets available. It is definitely awkward to carry excess clothing into the interviewer's office.

When called into the interviewer's office, what should you say first? Greet the employer with a firm handshake and a smile. Be ready with an opening statement. Remember the interviewer does not know you; so the first thing you say is your name. In your most natural manner, tell the interviewer who you are--use the interviewer's name. "Good morning/Good afternoon, Ms. Winters, I am Mary Brown. I'm here to interview for the clerical position." After you give your name, the interviewer will probably ask you to be seated. Do not sit down until the employer asks you to be seated. Sit up straight. Keep your feet on the floor and your hands on your lap. Look the interviewer in the eye; however, do not stare. If you find it hard to keep eye contact, look at the interviewer's nose or eyebrows.

### Speech

After your general appearance, the next thing your interviewer notices is the way you speak. If you have not learned how to use good grammar by this time it may be too late to change very much. This makes it all the more important that you try to improve your speech skills and habits during the time you have left in school.

Do not chew gum or smoke. Gum is not a substitute for cigarettes or self-confidence. Gum chewing looks appropriate only in vintage movies about wise-cracking waitresses.

Slang words and phrases that are appropriate with your friends during your leisure time may not be appropriate in business situations. Choose your words carefully, avoiding fad phrases and local dialects. A good vocabulary is noticed and appreciated. You appear less intelligent when your vocabulary is weak and you use slang.

The rate at which you speak matters. Is it too fast or too slow? (Few are too slow.) The variation of pitch is important. Monotones are boring. Some enthusiasm for what you are saying should be reflected in varying pitch.

Listening

Few of us learn to listen. We listen only enough to know how we will respond. Once a question has been asked don't rush in with your answer before the last words are out of the interviewer's mouth. Pause for a few seconds, relax, and then respond. Silence is indeed, golden, and even a three-to-four second pause will create the impression that you are relaxed and confident. These short pauses will also give you a moment to frame your responses.

Interview Questions

Interview questions can be answered in a variety of ways. How you answer them often determines your success. When you analyze them, the types of questions themselves can be informational. Often they are asked simply to give you the opportunity to speak. You don't need to stick to simple answers; you can expand your answer to include what you want to emphasize about yourself.

An interview is not the time for surprises. To be at your best you must be ready to talk about yourself and your background. To prepare for interviews you must become familiar with the typical questions. The following pages contain lists of the common interview questions. You must be able to respond quickly and positively. Note any question that is difficult for you to answer. Think about, write down, and then practice presenting positive answers to both the easy questions and the hard ones.

This first list includes some of the most common interview questions.

1. Tell me about yourself?

The interviewer is not trying to uncover your personal problems or love life. This question is asked to find out about your job skills. It also allows the interviewer to see how well you express yourself. Be prepared to give an entire series of statements about your best qualifications for the job. Be specific and include examples to support your claims. Note that the question lets you talk about your dedication to attendance, punctuality, and dependability, as well as your skills. The following are examples:

"I can type sixty words per minute."

"I have just completed training and have learned the following skills ....."

"I have experience as a ....."

"I had an excellent attendance record at my last position."

"I work well under pressure."

"I am highly motivated and dependable."

2. What do you expect to be doing five years from now?

There are several reasons for asking this question. The interviewer may want to know if you are ambitious, plan ahead, or if you set goals for yourself. There are no correct answers. However, you should have a good positive answer prepared. The following are examples:

"I hope to become very good at my job and perhaps take some courses to become an executive secretary."

"I intend to learn the stock so well that I can become a buyer for the department."

3. What are your greatest strengths?

This is where you can tell the interviewer about your skills and achievements both in school and on the job, i.e. very organized; committed to completing a project; enjoy people, etc.

4. What are your greatest weaknesses?

This question is designed to give the interviewer negative information about you. It also tests your ability to handle tough questions. Stick to job-related information. Never be negative. Rather, turn any negative issue into a positive statement. Turn your weaknesses into a strength. Show that you are willing to work and to learn new skills. The following are examples:

Weakness: "I'm too slow."

Positive: "I'm often too careful about my work. Sometimes I work late to get my job done just right."

Weakness: "I don't like people telling me what to do."

Positive: "I tend to ask questions about what I am told to do so I can be sure I will do it right."

Do not tell the interviewer that you have no weaknesses. If you cannot think of one, say something positive about yourself. For example:

"Maybe it would be my curiosity about how things work. I like to learn new skills and see how things fit together."

5. What kind of office machines can you use?

Here is where you can list the office machines you can operate. These may include the typewriter, computer, stencil maker, and copy machine.

6. Can you work under pressure and deadlines?

If the employer asks this question, you can be sure it probably means this is part of your job. Your answer should assure the employer that you can work under pressure and deadlines. You should cite examples of previous jobs or related experience where you worked under such conditions. If you ever worked at any type of production job, you can mention that you often had to fill an order in a short period of time or on short notice. If you say you cannot work under pressure, you will probably not get the job.

7. Why did you leave your last job?

The employer asks this question to find out if you had any problems on your last job. If you did, you may have the same problems on a new job. Following are some tips on how to answer this question.

Never say anything negative about yourself or your previous employer. If you did have problems, think of a way to explain them without being negative.

Be very careful not to use the word fired when explaining why you left the previous job. Perhaps you were laid off or your position was cut. Use these words to explain what happened. If you were fired, you can explain using the words, "mutual consent."

Other common reasons for leaving a job are listed below:

"There was a general lay-off."

"The job was temporary, part-time, or seasonal."

"I moved to a new area."

"The company went out of business."

"There was no room for advancement."

"I wanted a job that would make better use of my skills."

More Interview Questions

What is the position for which you are applying?

How did you learn of this position?

What specifically about this position interests you?

Why do you want to return to work?

Do you have any special training?

Would you prefer on-the-job or a formal training program?

What can you do for this company now?

How would you be getting to work each day?

Do you have a driver's license?

Would you mind moving from this area if the company chooses to relocate you?

Can you do considerable traveling?

Would you be available for part-time work?

What hours are you available for work?

Will you be available for weekend work?

Can you work the night shift?

Will you be available for overtime work?

What did you like most about your last job?

What did you like least about your last job?

Why should I hire you?

Why do you want to work for this company?

Do you get along well with people?

Can you take instruction without becoming upset?

What do you do if you have a personality clash with your supervisor?

What if a personal problem interferes with your work?

What examples can you give that emphasize your interest in this kind of work?

How would you describe your personality?

Do you like routine work?

Do you have references?

Would your last employer recommend you?

What do you expect in terms of benefits?

What experience do you have that relates to the job you want?

### Controversial Questions

Some interviewers make a practice of asking a question or two that is controversial or even illegal. Such a question might have to do with politics, religion, personal, racial matters, or economics. If this kind of question is asked, give a mild, but straightforward answer.

There are many opinions on what is legal and illegal for an employer to ask. Illegal or not, they may come up in your job search. Choosing not to answer what you feel is an illegal question may result in your losing a potential job offer. Stick to a short, simple answer to the question. Often an employer intends no harm and is simply a poor or untrained interviewer. The following are examples of controversial questions.

What is your age? Religion? Creed? Marital status?

Who lives in your household?

Do you have children? If so, what are their ages?

Do you plan on having additional children?

Who will care for your children while you are at work?

The Offender Issue

In order to respond to the offender issue correctly, you must first know your exact offense. This can be determined by researching your record at the Clerk of Courts office in the County Courthouse. You need to know if your offense is a misdemeanor or a felony. You will need to understand the difference between a charge and a conviction. If you have been fined, paroled, or placed on probation, it is considered a conviction.

Once you have determined the nature of your offense, you can deal with it honestly and openly at the interview. Withholding this information from an employer can lead to termination of your employment. An employer has the right to terminate you if an undisclosed record surfaces at a later date.

Have you ever been convicted of a misdemeanor?

Have you ever been convicted of a felony?

This question will appear on your application. You are to answer truthfully. If your answer is yes, you will write the following on the application: "Will explain at interview." When the question is asked at the interview, you should admit that you have made a mistake, but that your life is now heading in a new direction. You are seeking employment and would appreciate this chance to make a new start. If you have just finished a training class, you will want to point this out to the interviewer. Again it is imperative to emphasize the positive. It is not always necessary to go into detail about the exact circumstances, but be prepared to elaborate if asked.

If the interviewer asks for the specific offense, try to explain the charge using the least harsh language. If you have difficulty stating your specific charge, you might feel more comfortable explaining as follows:

Prostitution: "I made some poor choices in my life and was charged with solicitation."

Retail theft: "I failed to pay for some merchandise that I took."

Assault: "I had an altercation with someone."

Drugs (Alcohol): "I abused myself with drugs (alcohol)".

Bad checks: "I wrote checks without having sufficient funds."

If you are a resident of TPC, you must tell the interviewer that you are living there and that someone will be calling to verify that you are at work.

One of the last interview questions an employer may ask is "Do you have any questions?" The employer asks this as a common courtesy, and as one more test. The job seeker who has no questions will probably assume that this person has no serious interest in the position.

You will do well simply by having one or two questions ready. These questions should not be aggressive. Your questions should be assertive and show concern for the position and the company. Rather than asking what the company can do for you, ask what you can do for the company.

The following list may serve as a guide to the kind of questions you might ask at the end of the interview.

What kind of training might I expect if hired for this position?

What hours will I be working if hired?

What will my responsibilities be?

\* What are the chances of advancement with this position?

Is this a salaried position or an hourly position?

### Closing

Seldom will you be offered the position at the end of the interview. An employer will need some time to consider you for the position. The employer may have other applicants scheduled for interviews. Usually the interview will end with the employer saying "I'll be contacting you soon to let you know my decision." This should be your cue to begin your call-back closing. This closing arranges for you to contact the employer. You might say "I have several interviews scheduled, but I am very interested in this position. Rather than risk missing your call, when may I call you?" The employer will appreciate this expression of your interest. When you call back as scheduled, you will be able to show once more that you are reliable and punctual.

Before leaving, shake the interviewer's hand and thank her/him for their time. Be sure to use her/his name.

Immediately following your interview, a thank you note should be sent. See "Planning Your Follow-Up Letter" packet for the necessary information.

Whether you get the job or not, consider the interview as an experience. The more interviews you have, the more likely it is that you will be offered a job.

*Interviewing  
Follow-up.*

2070

# AFTER INTERVIEW CHECKLIST

Fill out immediately after each interview. On the first line, write one or two words that tell where you were interviewed. On the second line, put the date. For all other entries, put a check mark if you dealt with the item satisfactorily; otherwise, put an "X" there. If you cannot remember an item, mark it with an "X."

Place of Interview _____								
Date of Interview _____								
1. Arrived on time								
2. Dressed properly								
3. Friendly with secretary and all others								
4. Introduced myself to interviewer and shook hands								
5. Described my qualifications								
6. Described my other interests and activities								
7. Gave a copy of résumé								
8. Gave copies of letters of recommendation								
9. Looked at interviewer while talking								
10. Kept good posture and avoided nervous mannerisms								
11. Mentioned who referred me or friends working there								
12. Mentioned sense of responsibility and dependability								
13. Mentioned interest in part-time job								
14. Obtained other job leads (if no job now)								

—continued

15. Arranged call back in four days							
16. Thanks and handshake at end							
Questions asked for which I should review answers:							
a. Last employment and why left							
b. Marital status, age, health, handicaps							
c. Future plans							
d. My skills and experience							
e. Salary I expect							
f. Other answers							

## INTERVIEW FOLLOW-UP

### RATIONALE

Simply having an application on file or having gone through an interview with an employer which did not result in an immediate position, does not mean this job seeker is covered for possible future positions with that organization, or that he has done all he could to obtain that particular position. If the job seeker contacts the employer a few days after having the initial interview, the employer will be more likely to remember that particular individual. This also may indicate that this job seeker has more ambition and desire to work for this organization than another individual. A contact such as this could influence the employer's decision or cause him to remember this job seeker when a position opens up in the future.

### HOW TO DO THIS

Since the object of this approach is to make the employer remember a particular individual, the best approach is to make a personal contact with the employer. Since revisiting each former interviewer would be both time consuming and expensive, the best approach for the job seeker to take is to call each of these people. Whenever a job seeker makes such a re-contact, he remembers to mention his name, the fact that he was interviewed, the position he was seeking, as well as restating his enthusiasm for obtaining that position and thanking the employer for his time. An important point which should be made here is that the job seeker should always ask for the person who interviewed him by name. This will prevent him from being connected with another person in the organization who would not know him and addressing the person by name would seem more personal which may result in the employer being more likely to remember him.

One example approach would be the following: "Hello, Mr. Smith, this is Bill Green, the person you interviewed last Thursday at 10:00 for the manager position. After speaking with you, I have decided that your organization would be an ideal place for me to work, and I was wondering if you had made a decision yet". Another example in a situation where the employer said he would call the job seeker would be, "Hello, Mr. Jones, this is Mary Smith, the girl you interviewed on Monday for the secretarial position. You mentioned that you would let me know what you decided by the end of the week. Since I have been out most of the time I thought that maybe I had missed your call so I am calling you to find out your decision, because I am very interested in working with your organization."

In situations where a telephone call cannot be used, such as when an employer cannot be contacted or when an expensive long distance call would be necessary a letter can be used. These letters should be sent out as soon as possible after the interview, preferably the next day.

2074

## PLANNING YOUR FOLLOW-UP LETTERS

An effective follow-up campaign is essential for getting offers.  
Effective follow-up:

1. Reminds the employer that you are unique and available
2. Reemphasizes your potential contribution and benefits to the employer
3. Clarifies any misconceptions an employer might have about you
4. Provides additional reasons for the employer to offer you the position--immediately
5. Accelerates the employer's decision-making process

After you have an interview, send a brief thank you. You can keep the communications ball rolling--and keep your name before potential employers--in letters that ask for more information or letters that inquire about the status of your application.

Two other kinds of letters are important: the letter of acceptance and the letter of rejection. Both kinds of letters should be written promptly upon accepting or rejecting a job offer.

The following pages contain the information and sample letters needed to write follow-up letters. On the page following the sample letters is a work sheet on which to write a draft of your letter. Have another person read your final draft to proofread and react to it.

Remember you may need to write other follow-up letters in the future. Keep a copy of your work sheet and update it as needed. All follow-up letters should maintain the format used in the sample letters. The same paper you used for your cover letter and resume should be used for your follow-up letter.

THE THANK YOU LETTER

Always follow up your interview with a thank you letter, not only as a courtesy, but as a lasting impression.

Type or write it up when you return home and mail it out as soon as possible (so he'll remember you). Address your letter to the specific person with whom you interviewed. Be sure you have the correct spelling of the person's name and job title.

The first paragraph should state that you wish to thank him or her for taking the time to interview you, and mention the exact time and date of the interview.

The second paragraph should re-iterate either your possible contribution to the department/company/agency or some important topic you felt you related to well with the interviewer, such as how you would fit in, or solve a problem that was discussed, etc.

The third paragraph should mention you are looking forward to hearing from them about the results of your interview. You may state where you can be reached (telephone number).

Keep the letter short and use simple direct language as well as correct spelling and grammar.

The following pages contain sample thank you letters. Be sure to use the same format as the samples. Use the worksheet on page 6 to write your thank you letter.

## *Thank You Letter*

- Restates interest and enthusiasm for job
- Compliments the company
- Applicant expresses his understanding of job requirements
- States willingness to come in for second interview
- Possibly a bit too long
- Grade: A-

4545 Easy Street  
Portland, ME 04105  
207-555-4554

Mr. Neal Anderson  
U.S. Paper  
120 Main Street  
Portland, ME 04100

Dear Mr. Anderson,

I'd like to thank you for taking time to meet with me about timber management position you are creating.

I enjoyed meeting with you and got a good feeling about the level of professionalism at your company. I'm excited and intrigued by the possibility of assuming this position, especially because it is a new one.

I believe I could be a successful member of the Woodlands Department. At International Paper, I set up a timber management system that saved thousands of dollars in wasted timber.

I'm sure the experience I had managing the 10,000 acre division would be extremely helpful in the management of the timber in this new position.

My experience as a research technician of the United States Forest Fertilization Project has also given me a deep understanding of forest fertilization management, which could easily be applied to this position.

I believe I have a good understanding of the requirements of the position you are creating. I look forward to the possibility of coming on board to evaluate what you've been doing and looking for ways to do better.

Finally, I look forward to the possibility of working with you and Mr. O'Sullivan. Thank you again for meeting with me. I would very much like to make U.S. Paper known for having the most productive—at the lowest cost—timber lands in the country. If I can elaborate on my qualifications or answer any questions, I would be happy to come back for a second interview.

Sincerely,

Michael D. Jercko

February 12, 1990

Integra Financial Corporation  
301 Fifth Avenue Building  
Pittsburgh, PA 15222

Dear :

It was a pleasure talking to you last Thursday at your office. Our meeting was very interesting and informative. It is quite important to me that you recognized my potential for employment with Integra Financial Corporation.

While I was very interested in working for your organization, since our meeting, I am even more enthusiastic about employment as a proof operator. I realize that this is an entry level position for someone with a B.S. but I am very serious about this opportunity.

Thank you for your consideration.

Sincerely,

2078

241 Glory Boulevard  
Pittsburgh, Pennsylvania 15290  
February 12, 1990

Mr. David Johnson  
Associate Director  
United Mental Health  
236 Forbes Avenue  
Pittsburgh, Pennsylvania 15244

Dear Mr. Johnson:

I appreciated the opportunity to talk with you on Friday, February 9, 1990 regarding the opening in your clerical department.

The information you shared with me about United Mental Health was excellent, and I am excited about the possibility of applying my education and experience to the position we discussed.

If I can provide you with any additional information, please let me know. I look forward to hearing from you soon.

Yours truly,

Margaret Smith Kennedy

1622 North Shore Drive  
Pittsburgh, Pennsylvania 15236  
February 13, 1990

Ms. Joanna Crosley  
Marketing Director  
The Johnson Crumpf Company  
1435 Commonwealth Avenue  
Pittsburgh, Pennsylvania 15201

Dear Ms. Crosley:

Thank you for the interview on Monday, February 12, 1990 for the position of receptionist in your department.

I am certain I would contribute significantly to the daily operation of your office.

I will be contacting you within the next week to learn of your decision regarding my application. Thank you again for your time and consideration.

Yours sincerely,

Katherine Peabody

2080

LETTER OF JOB ACCEPTANCE

Immediately after accepting a job offer, the letter of acceptance should be written promptly. Your reply to your new employer should be brief, personalized, and written in such a way as to reinforce the employer's decision to hire you. Be sure to indicate the date on which you will start work so there will be no misunderstanding. You would be surprised how many candidates do not report to work when they are expected.

Keep the following points in mind when composing your letter:

1. Accept the offer.
2. Refer to personal, written, or telephone offer.
3. Express your appreciation and pleasure at joining the company.
4. Notify new employer of your start date.
5. Address letter to the person who offered you the position.

The following two pages contain sample job acceptance letters. Use the work sheet on page 10 to write your letter of acceptance. Have another person read your final draft to proofread and react to it.

Sample Letter of Job Acceptance

111 South Elm Street  
Pittsburgh, Pennsylvania 15243  
February 14, 1990

Ms. Annabelle Carrington  
Personnel Manager  
Acme Printing, Inc.  
36 Abbingdon Way  
Pittsburgh, Pennsylvania 15211

Dear Ms. Carrington:

I am delighted to confirm my acceptance of the job as clerical assistant. As you already know, I am not going to report for another two weeks. But I have just given my present firm two weeks notice, and will report to you on February 28, 1990.

Let me repeat how pleased I am at getting this job. I was hoping that I would, as I feel that it is the perfect job for me; I know that I will fit into your company well.

Looking forward to seeing and working with you on February 28.

Cordially,

Barbara Bush

Pittsburgh, Pennsylvania 15236  
February 14, 1990

Mrs. Samantha Stevens  
Heavenly Employment Agency  
46 Starlight Way  
Pittsburgh, Pennsylvania 15345

Dear Mrs. Stevens:

I am very pleased to accept your offer for the position of data entry operator as outlined in your letter of February 13, 1990.

As we discussed at the interview, I am able to begin work on Tuesday, February 20, 1990. At your request, I am enclosing a copy of my Clerical Training Certificate.

I look forward to meeting the challenges of the job, and I shall make every attempt to fulfill your expectations.

Sincerely,

Gladys Rogers

Interview Follow-up Letter

January 24, 1992

Searle Pharmaceutical Company  
Mr. Tom Hatton  
P.O. Box 5700  
Lincoln, Nebraska 68505

Dear Mr. Hatton:

It was a pleasure talking with you on Wednesday. I found our conversation to be most interesting. It is quite important to me that you recognize my potential for employment with Searle.

I am confident of my ability to perform successfully in the pharmaceutical sales position and I am certain that hiring me will prove mutually beneficial. Thank you so much for your time and consideration. I look forward to hearing from you.

Sincerely yours,

James Kelley

2084

### WHY NO JOB WAS OFFERED

What are the reasons why you as an applicant sometimes receive only a thundering silence from prospective employers after your interview has been completed?

A well known placement director at Northwestern University recently made an interesting survey of 405 top firms to find these reasons:

1. Personality and manner; lack of poise; poor presentation of self; lack of self-confidence; timid; hesitant approach; arrogance; conceit.
2. Lack of goals and ambition, does not show interest, uncertain and indecisive about the job in question.
3. Lack of enthusiasm and interest, no evidence of initiative.
4. Poor personal appearance and careless dress.
5. Unrealistic salary demands, more interest in salary than in opportunity, unrealistic about promotion to top jobs.
6. Poor scholastic record without reasonable explanation for low grades.
7. Inability to express yourself well, poor speech habits.
8. Lack of maturity, no leadership potential.
9. Lack of preparation for the interview - failure to get information about the company and unable to ask intelligent questions.
10. Lack of interest in company and type of job they are offering.
11. Lack of extra-curricular activities without good reason.

12. Attitude of "what can you do for me" etc.
13. Objection to travel, unwilling to relocate to branch offices, plants.
14. Immediate or prolonged military obligation.
15. No vacation jobs or other work experience, and did not help finance her/his own education.

# Sources of Job Leads

Your newspaper, business magazine, or trade journal contains more than just want ads to help in your job-search. (Don't forget that a company's annual report is often the best source for these same kinds of leads.) Here are other stories to look at when developing a list of contacts for your search.

- Stories about products or services in great demand. Companies with hot products may be looking to expand their workforce. You may be able to get in on the ground floor by writing a dynamic cover letter to the company before they advertise for more workers.
- Your knowledge of technological breakthroughs, new patents, discoveries, and other developments in an industry or occupation can make a big impression in your letter, especially if you can catch onto the trend before anyone else does.
- Most business sections in both business/trade magazines and newspapers run a column listing promotions, retirements, and sometimes terminations and resignations. The out-going person may create an opening you could fill.
- Contract awards. When a company successfully bids on the right to manufacture goods or perform services for another company or the government, chances are the company awarded the contract will need more workers.
- Major events, such as a world's fair or Olympics in the city in which a company is located (or a company supplying such an event) create job openings.
- The opening of a new plant or facility can create opportunities.
- Reports of increased sales and earnings, which can be found not only in external publications, but also in the company's own annual report, may signal an expansion of the workforce.
- Is the corporate headquarters moving to your city or state? Undoubtedly the firm will need local people to fill openings.
- Mergers and acquisitions can create opportunities because many workers leave a merged company in the face of an uncertain future.
- Stock underwritings of new and developing companies may foretell opportunities because there will now be capital available to fill openings and create new positions.
- Articles on meeting speakers and award-winners can provide fodder for dynamic cover letters.

---

# Checklist

**Y**our cover letter is ready for mailing! Or is it? Compare it to this checklist to see if you've written the most dynamic letter possible.

- Is it an original letter rather than a mass-produced copy?
- Is it addressed to a named individual? (unless it is a response to a blind ad)
- If it's a response to a blind ad, is the salutation nonsexist?
- Does the letter grab the reader's attention in the first paragraph?
- Is it confident without being arrogant?
- Have you left out everything negative?
- Is the letter neat and attractive?
- Is every word spelled correctly? Is all grammar, syntax, punctuation, and capitalization correct? Is the letter free of typographical errors?
- Is it no longer than one page?
- Is the letter concise and to the point?
- Does it avoid such cliches as "I have taken the liberty of sending my resume enclosed herewith"?
- If it's in response to an ad, does the letter speak to the requirements of the position?
- Is it interesting?
- Does it project the image of a person you would like to get to know better if you were the employer? Have you read it from the employer's perspective?
- Have you told the employer what you can do for him rather than what he can do for you?
- Have you presented your Unique Selling Proposition?
- If you're a recent grad, have you avoided overreliance on an academic frame of reference?
- Have you avoided pleading for favors?
- Have you avoided getting too detailed?
- Have you spelled out what kind of job you're looking for?
- Have you avoided rewriting your resume in your cover letter?
- Have you avoided describing your personal objectives in vague terms?
- Have you avoided asking for career counseling?
- Have you avoided listing hobbies or interests unless relevant to the position?
- Have you listed accomplishments?
- Is it clear where the employer can reach you during business hours? Have you ensured that either a person or a machine will take the employer's call?
- Have you used action verbs?
- Have you requested action, and told the employer you'll call for an appointment?
- Have you signed your name boldly and confidently?

## JOB SEARCH STRATEGIES

METHOD	STRATEGY	TOOLS	PROS	CONS
Want Ads	Scan newspaper ads. Mail resume with cover letter tailored to specific job qualifications.	<ul style="list-style-type: none"> <li>• Newspapers</li> <li>• Journals</li> <li>• Cover Letters</li> <li>• Resumes</li> </ul>	Involves minimal investment of time in identifying companies. Resume and cover letter are sent for actual position opening.	Resume and cover letter will compete with large number of others. Many people search ads.
Employment Agencies	Respond to employment agency ads in newspapers; check phone book for names of agencies to contact.	<ul style="list-style-type: none"> <li>• Business attire</li> <li>• Resumes</li> </ul>	Fee-paid jobs for graduates in technical fields, and for those with marketable experience.	Usually of less help to nontechnical/inexperienced graduates. Likely to charge fees.
Mass Mailing	Send copy of resume and general cover letter to as many companies as possible.	<ul style="list-style-type: none"> <li>• Company address list</li> <li>• Cover letters</li> <li>• Resumes</li> </ul>	May net one or two positive responses.	Cover letter and resume must be outstanding in order to compete. Anticipate many rejection letters.
Tailored Mailing	Develop good cover letter tailored to a specific type of job. Send letter with resume to selected companies.	<ul style="list-style-type: none"> <li>• List of researched companies</li> <li>• Tailored cover letters</li> <li>• Resumes</li> </ul>	Better approach than the shot-in-the-dark method of mass mailing.	Requires investment of time in researching companies and in drafting cover letters.
In-Person Visit	Visit many corporations. Submit resume and complete application.	<ul style="list-style-type: none"> <li>• Business attire</li> <li>• Company addresses</li> <li>• Resumes</li> </ul>	Resume and an application are on file with the company.	Requires a lot of time to make a relatively small number of contacts.
Inside Contacts	Ask contact working within company to circulate resume.	<ul style="list-style-type: none"> <li>• List of company contacts</li> <li>• Resumes</li> </ul>	May learn of unadvertised positions. May result in "courtesy interview."	A contact in itself is not enough to get you a job. You may exhaust all contacts and still not have an offer.

## JOB DEVELOPMENT STRATEGIES

### Example One: Personnel Representative Known

- Student: Hello, may I speak with \_\_\_\_\_.
- Other: May I ask who is calling?
- S: My name is \_\_\_\_\_.
- O: And what is this regarding?
- E: I'm calling from the University of Pittsburgh. (STOP) If pressed, I would appreciate a few minutes of his/her time to answer a few questions for our labor market study.
- O: One moment please.
- E: Hello this is \_\_\_\_\_ (employer).
- S: My name is \_\_\_\_\_. I'm from the University of Pittsburgh and am conducting a very brief labor market survey. I would just like to know if you are doing any hiring [at this time]. If not, ask if he/she anticipates hiring in the near future. If they are hiring, try to find out: 1) position 2) general requirements and tasks of the job 3) hours worked (full or part time) 4) are they located on a bus line 5) are health benefits available 6) pay rate 7) to whom the resume should be addressed. Thank you for your time.

- \* Remember, you usually only have a few minutes; get as much information as possible.
- \* Be sure to make notes of your contacts on the job development form.
- \* If you obtain a job leads, write the information on the job lead form and share it with other staff as soon as possible.

If you don't know the name of an individual in the personnel office, try calling the receptionist and ask her/him to give you the name of a person in personnel as you must send them a letter. Then call back at another time and ask for the person by name. Be sure to document this information and update our employer files.

### Example Two: Specific Job Development

Generally, you will be searching for a particular position. Use the same script as before but see bracketed section. At that point you will say "for food service workers," for example.

A good way to develop your calling list in the absence of other lists is to use the Yellow Pages. For example, if you are job developing for printers, look up printing in the Yellow pages to formulate your list.

- \* Always make your list before you start making calls.

## CALLING SCRIPT

When speaking on the telephone, be friendly and enthusiastic. Speak clearly. Have a pen and paper handy. If the manager isn't available when you call, ask if there's a best time to try again.

- 1     **Call the manager and introduce yourself:**  
Good morning, is this Ms. Icanhireu?  
Hi, my name is Christopher B. Jobless.
- 2     **Say something friendly:**  
How are you this morning?
- 3     **Get down to business:**  
Ms. Icanhireu, last week I sent you a letter plus a copy of my resume. I wanted to follow up and see if you received it.
- 4     **Prepare for the unexpected:**  
Oh, I'm sorry to hear that you never received it. If I may, let me explain what it said: I've always admired the Wegotit Department Store and I'd like to learn about the career opportunities in your department...(don't stop - keep talking)
- 5     **Ask for the interview:**  
...Could you possibly spare a few minutes one day, at your convenience, to explore those opportunities with me?
- 6     **Prepare for the "put off":**  
Oh, I do understand. A lot of businesses have hiring freezes at this time of year. But, those freezes can't last forever...(don't stop - keep talking)
- 7     **Get the interview:**  
...Frankly, I'd like to be the first called when your freeze is lifted. Couldn't you please spare a few minutes to talk to me and see where I might fit in, once the freeze is lifted?
- 8     **Wrap it up and confirm the date:**  
Excellent. That's next Thursday at 4:15 sharp. Thanks so much. I appreciate your taking the time to meet with me.

**DRAFT**

2095

## FIVE STEPS INVOLVED IN APPLYING FOR A JOB

1. Develop a list of prospective employers you will contact from all of the communities in which you would be willing to work--this is your job search plan.
2. Find out as much as you can about the employers and the jobs that may be available before you actually go talk to the employer.
3. Contact the employer, preferably in person or by mail, and provide them your resume. (A completed application and copies of letters of recommendations may also be appropriate.
4. Follow-up with another visit, a letter or telephone call a week or two after the initial contact to let the employer know you are really motivated.
5. A third or fourth follow-up contact may also be appropriate (and necessary). Use your good judgement about timing the follow-up contacts and vary your methods (mail, in-person, telephone).

appendix 33

# REQUEST FOR INTERVIEW CHECKLIST

	Telephone calls													
	1	2	3	4	5	6	7	8	9	10	11	12	13	14
1. Give <u>your name</u>														
2. Ask for <u>name of department head</u>														
3. Give <u>your name to department head</u> <u>and call him by his name</u>														
4. Give <u>your qualifications</u>														
5. Tell him who <u>referred you</u> (if anyone)														
6. Ask for <u>interview</u>														
7. <u>Repeat request for interview for</u> <u>possible openings</u>														
8. Ask for <u>other leads</u> a) Name of person, company, address, telephone number b) permission to use <u>his name</u>														
9. Tell him you will <u>check back</u>

### JOB HUNTING - PART III USING THE TELEPHONE TO SOLICIT INTERVIEWS

Here we would like to discuss the most efficient method of soliciting job interviews - the telephone call.

Once you have defined the type of job you are seeking, compile a list of firms and organizations that would seem to offer possibilities.

There are many resources for doing such research; some of them are right at hand while others will require a trip to the library. Both the yellow and white pages of your telephone directory can be an amazing source of leads. For example, suppose you have some photography and writing experience and are interested in some aspect of film production. Although Pittsburgh doesn't sound like a very promising market for such work, the yellow pages lists 27 independent film production companies here, not to mention all the advertising agencies and large industrial companies that produce their own advertising, technical and training films.

The library will offer further leads through industrial directories such as Standard and Poor's and Moody's, government directories, and "The Encyclopedia of Professional Associations." The latter will offer names and addresses both of the national headquarters of various professional associations to which you could write for local leads, and also in some cases, the local chapter or secretary.

Another important source of leads is through word-of-mouth. This may sound a little silly but it is important to let everyone know you are looking and what you are looking for. Tell friends, strangers, professors, casual acquaintances. One woman who was looking for a job in public relations mentioned the fact to a hitchhiker she picked up. It turned out that he knew the president of a local ad agency, got her an interview and yes, she was offered a job. A law student happened to mention to the travel agent who arranged his honeymoon that he wished he had a job to support his bride. Two days later the travel agent's boyfriend, a lawyer, called the student to say he needed an assistant. Another interview -- another job offer!

Once you have a tentative list, set aside a particular period each day for your telephoning and decide how many calls to make each day. Some employment specialists recommend that you make ten calls a day, others feel that five is sufficient. Let your own tolerance and energy level be your guide.

Briefly note on a piece of paper the points you wish to make so you don't mumble or fumble once you get a potential employer on the line. You might jot down such things as "Mr./Ms. \_\_\_\_\_, my name is Susan Smith. I have a background both in writing and photography and have created several short films and promotional slide-tape exhibits. I'm looking for work in industrial film production and am especially interested in \_\_\_\_\_ Co." It should not be a speech and you should not read it -- it's just there to help you in case you need help.

1.) Do not call the personnel office. Get the names of the director of whatever office you are interested in -- marketing, computer operations, public relations, etc. It's easiest to get it from the company's operator.

2.) When you reach the department head, don't ask if he or she has any openings. Merely introduce yourself briefly, mention your relevant skills, say you are interested in working for that department and ask if you might come in for an interview. Don't be put off by being told there are not current openings. Say you would still like to come in.

3.) If this receives another negative answer, ask if he or she can suggest another place you might contact for the same sort of job. If he or she makes a suggestion, say "May I use your name in making the contact?"

4.) Anytime you are unable to secure an interview, at least ask if you may send your resume to whomever you are talking to. It's better than nothing and if something opens up, he or she may remember your call and can contact you if a resume is on file.

5.) Dial the weather report or dial-a-prayer and practice a couple of times, or even better, enlist the help of a friend. Call him or her and go through your routine. Ask for criticism and feedback. You might form a mutual help group with one or more friends who are also job hunting.

## Questions to Ask When Interviewing for Information

Before you conduct an informative interview, you should prepare a script of questions that you want to have answered. Don't cheat on this step. Think carefully about what questions will be most likely to uncover the information that will help you most. Your list need not exceed five questions - you don't want to make your subject feel bludgeoned.

Here are some suggestions to help you get started on your own list.

1. What academic degree is required for this work? Are there exceptions?
2. What skills are most important to this work? What are some ways of developing them?
3. What kinds of experience are essential?
4. If you were to change jobs, what are some other possibilities?
5. What future do you foresee for the job market in this career?
6. Are there spin-offs or developing areas that you consider interesting?
7. What kinds of experiences, paid employment or otherwise, would you most strongly recommend? What about internships or volunteer experience?
8. Are there magazines or journals in the field which I could begin reading now? Are there any books that you suggest?
9. Is there a local professional group that meets regularly? Do they offer student memberships? Whom should I contact?
10. Who else do you suggest I speak with?

## I. INTRODUCTION

This booklet is not intended to be a detailed legal reference on the filling of Federal positions. The Office of Personnel Management is the authority on personnel management regulations and to comprehensively cover all the rules and regulations that cover staffing, one would have to refer to the Federal Personnel Manual. Office of Personnel Management Manual X-118 provides the minimum qualification requirements for positions in the Federal Service.

What this booklet is supposed to be, is a handy, easy to understand reference to assist community service employment representatives help their clients who are interested in Federal positions. The contents is set up to show the different ways people can be appointed to positions in the Federal Service. The different appointment authorities are not exclusive and applicants can pursue more than one of the ways to secure a Federal job and he or she can apply for more than one position. They should also understand that agencies may be considering filling a position at different grade levels and/or through more than one of the appointment authorities described.

It is very important that applicants submit the necessary forms for positions by the closing date specified in the job announcement in which they have an interest. Their application should be complete both in terms of all the items and in terms of their detailed experience. Limitations they place on geographic availability, willingness to travel, willingness to accept part-time positions, and types of positions they want to consider will effect the number of jobs for which they can be considered. Finally, we do not anticipate many jobs to be filled in the immediate future, but if only one job is filled, everyone should have an equal chance.

FEDERAL EXECUTIVE BOARD EEO COMMITTEE

## 2. HOW FEDERAL JOBS ARE FILLED

Most positions in the Federal Service are filled through competitive examinations. This means applicants will compete on a merit basis for the right to be referred, considered and selected. At one time, competitive examination meant almost exclusively written tests. While tests are still used in screening candidates for some positions, many positions are filled through an examination process in which your education and/or experience is evaluated relative to the position for which you wish consideration.

### Office of Personnel Management - The Examination Process

WHO ARE ELIGIBLE? U. S. Citizens who meet the minimum qualification requirements stated in the job announcement.

HOW TO APPLY: Individuals interested in Federal employment should visit the Federal Job Information Center located in Room 119 of the Federal Office Building. At the Job Information Center, he or she will see listings of positions for which the Office of Personnel Management is accepting applications. The listing will show: The job title and series, salary grade level, filing period, job location, number of vacancies anticipated, where to get forms, and a control number. The applicant will either have to fill out a form and place it in a box to have the job announcement sent to him or her, or write to an Office of Personnel Management Area Office to secure it. The procedure appropriate will be spelled out on the listing.

After you apply for a position or, if required, after you take a written examination, application processing time will usually vary from 4 - 8 weeks, depending on the position and the office that is processing your application. NOTE: When you fill out the application forms, it is very important to fully complete all the required forms making sure you answer all questions and providing full details about your experience and/or education. Applications received that are missing required forms, or are incomplete in any way will be returned, thereby delaying the processing of your application.

After your application has been processed, you will receive a Notice of Rating or Notice of Results through the mail. This will show if you were found qualified (eligible) for the position for which you applied. If you were found eligible it means that your name has been placed on a list along with other eligible applicants who applied for the position.

Where the applicant's name is placed on the list, which is called a register, will be dependent upon the score he or she receives on the examination and veterans' preference entitlement. If there was no written examination, the score assigned will be based upon education and/or experience the candidate has for the job. If the candidate is a veteran, he or she will have five points added to their score. If he or she suffered a disability in the service but it has been rated at less than ten percent, he or she will have ten points added to his or her score. If they are a compensable veteran, a disability rating by the VA of ten percent or more, and they were rated eligible for the position, their name is placed at the top of the list with only other compensable veterans with higher scores ranked higher on the listing or register.

When agencies have position vacancies and have no internal candidates they wish to consider for a position vacancy, they will request names from the Office of Personnel Management of candidates from the register (listing of eligibles). Candidates will be certified to the agency with the position vacancy based upon their ranking. The agency may select from the top three candidates certified who have expressed interest in the position. Agencies will make inquiry of certified candidates to determine if they still wish consideration for the position. The agency's selection is limited to the top three candidates who have indicated their interest and availability. An agency cannot pass over a veteran with a higher score than a non-veteran. After selection is made, the register is returned to the Office of Personnel Management and the names of those candidates not selected are returned to the listing or register.

Individuals may receive inquiries as to availability and then not hear anything further. There may be several reasons for this to occur. Most frequently, the reason is that inquiries were sent to all of the candidates certified and there were three candidates with higher rankings who expressed interest. A second reason may be the position was filled through the use of one of the special appointment authorities described, the position may have been filled at a higher or lower grade, or the position was not filled because of new budgetary constraints. If candidates have questions, the Personnel Office of the agency should be able to give them the reason.

Chances for employment depend on several factors, some of which are:

- The number of requests we receive to fill positions for which you are eligible.
- The conditions of employment required (temporary work, location of vacancy, travel, etc.) and whether you will accept those conditions.
- The number of people who appear on the list along with yourself.
- Your qualifications in comparison to others.

Since it is impossible to know all this information ahead of time, we cannot predict your chances of securing employment.

3. SPECIAL APPOINTMENT AUTHORITIES

- a. TAPER means temporary appointment pending establishment of a register. This authority can be authorized by the Office of Personnel Management to an agency. It gives them recruitment authority to fill a permanent position when there are insufficient eligible applicants on a Register. After three years of TAPER service employees may be converted to career employment if their work performance has been satisfactory and they meet the qualification requirements for the position.

WHO ARE ELIGIBLE? U. S. Citizens who meet the minimum qualification requirements stated in the position vacancy announcement.

HOW TO APPLY:

The position vacancy announcement will provide information about the job(s), location, salary level, qualification requirements, application procedures, and the closing date of the position vacancy announcement. It is essential that applicants file the necessary forms prior to the announcement closing date. Otherwise, they may not be considered. Questions regarding the position vacancy announcement should be directed to the agency which has posted the position.

## b. FEDERAL PAC JOBS

Trainee level Professional and Administrative Careers (PAC) are aimed toward college seniors, graduate students, and other applicants with appropriate training or experience. Regulatory and compliance work, administrative and management functions, claims and benefits examining, social services, or other technical work (as opposed to clerical or professional support occupations), generally have an entry grade of GS-5 or GS-7, and a journeyman level of GS-9 or above.

The procedures for filling these positions require that agencies first attempt to fill the jobs from within the Federal service. Since these positions are in the Excepted Service, when outside hiring is necessary for PAC positions, agencies are authorized to recruit, evaluate qualifications, and make selections from among people who apply directly to them. Persons interested in obtaining information about these jobs should contact the agencies where they wish to work.

We expect that employment opportunities for PAC positions will be limited, making competition for appointments extremely keen. In the past, the best opportunities have been in the following occupations:

Contract/Procurement - Department of Defense  
Internal Revenue Officer - Internal Revenue Service  
Inventory Management - Department of Defense  
Quality Assurance - Department of Defense  
Social Insurance Claims Examiner/Rep. - Social Security Administration  
Supply Management - Department of Defense

Remember, you will need to contact each agency in which you are interested to find out if they have PAC vacancies for which you qualify.

Listed below are the entry level occupations currently covered by this hiring procedure:

<u>Series</u>	<u>Title</u>	<u>Series</u>	<u>Title</u>
011	Bond Sales Promotion	132	Intelligence

1130	Public Utility Specialist	2144	Cargo Scheduling
		2150	Transportation Operations

4. SPECIAL APPOINTMENT AUTHORITY FOR THE HANDICAPPED

Handicapped individuals may be hired under competitive appointment authorities or the special appointment authorities described below.

WHO ARE ELIGIBLE? Handicapped individuals certified by a State Vocational Rehabilitation Counselor or a Veterans Administration Rehabilitation Counselor as being capable of performing the duties of the position and who meet the minimum qualification requirements.

SPECIAL APPOINTMENT AUTHORITIES

A. 700 hour Trial Appointment. To qualify, the individual must meet either:

- (1) minimum qualifications for that position;  
or
- (2) be certified by a State Vocational Rehabilitation Counselor or a Veterans Administration Rehabilitation Counselor as being capable of performing the duties of that position.

The appointment may lead to an excepted position.

B. A Schedule A Appointment. This is for an individual who meets or is certified capable. After two years in a Schedule A Appointment an individual may be non-competitively converted to a competitive appointment.

SPECIAL ACCOMMODATIONS

A. OPM, when appropriate, will use special examination procedures to assure abilities are properly assessed. Examples are:

- (1) Readers
- (2) Examinations in Braille
- (3) Tape or large print
- (4) Interpreters for test instructors
- (5) Modifications of parts of a test for hearing impaired individuals
- (6) Extra time to complete the test for motion impaired individuals

B. When hired, agencies will also make accommodations. Examples are:

- (1) Interpreters for hearing impaired
- (2) Readers for visually impaired
- (3) Modified job duties
- (4) Restructured work sites
- (5) Altered work schedules

HOW TO APPLY

Some agencies will accept applications prior to the occurrence of a position vacancy, if the application is submitted on Standard Form 171, "Application for Federal Employment," and specifies a particular position and salary grade for which the applicant wants consideration. Other agencies which experience little turnover may not accept unsolicited applications. It would be advisable to contact the agency's personnel office regarding their policy.

## 6. TEMPORARY APPOINTMENTS

Federal Agencies may do their own recruiting to fill temporary positions or they may request assistance from the Office of Personnel Management. Temporary positions will be posted in The Federal Job Information Center and with the State Employment Service Office.

WHO ARE ELIGIBLE? U. S. Citizens who meet the minimum qualification requirements stated in the position vacancy announcement.

### HOW TO APPLY:

The position vacancy announcement will provide information about the job(s), location, salary level, qualification requirements, application procedures, and the closing date of the position vacancy announcement. It is essential that applicants file the necessary forms prior to the announcement closing date. Otherwise, they may not be considered. Questions regarding the position vacancy announcement should be directed to the agency which has posted the position.

If there are no written tests, applicants will be rated and ranked based upon their education and/or experience which is related to the position for which they are applying. After the applicants have been assigned a rating (score), their names will be placed on a listing called a register according to score. Selection will then be made from the top ranked candidates.

7. Movement Between Agencies: Federal Employees Looking For Career Opportunities With Other Federal Agencies - Promotions & Transfers

WHO ARE ELIGIBLE? Federal employees who currently hold a career-conditional or career appointment in the Federal Service.

There are two ways in which Federal Employees may seek consideration for promotion and/or transfer to a position with another Federal agency different from the one in which they currently work.

1. Position Vacancy Announcements

Position Vacancy Announcements open to all status employees and not limited to employees of a particular agency. These announcements are circulated to the personnel offices of agencies and posted on the second floor bulletin board. However, this does not prohibit you from contacting the personnel office of agencies to inquire of such vacancies.

Interested Federal employees should follow the application procedures outlined in the position vacancy announcement. It is very important to the requirements of the job for which they are applying. They should be specific and relate all duties performed in a job rather than just those done most often.

2. Unsolicited Applications

Some agencies will accept applications prior to the occurrence of a position vacancy if the application is submitted on Standard Form 171, "Application for Federal Employment," and specifies a particular position and salary grade for which the applicant wants consideration (i. e., Management Analyst, GS-11). Other agencies who experience little turnover or have prohibitions in their union contracts which require consideration of bargaining unit employees first, may not accept unsolicited applications. It would be advisable to contact the agency's personnel office regarding their policy.

For most positions, there are experience requirements which require a year at the next lower grade performing work which is considered specialized experience. For

lower graded clerical positions, this requirement may only be six months. This means that a person whose experience is in one specialized field may not qualify for a position at the same salary grade in another specialized field. If there are questions regarding eligibility, contact the personnel office of the agency to which the applicant wants to apply. Qualification requirements are stated in Civil Service Manual X-118 and applicant eligibility by the agency filling the position. These determinations are reviewed as part of agency and Office of Personnel Management audits and evaluation of the the facility's Personnel Management Program.

EMPLOYMENT OF PERSONS WITH PHYSICAL  
IMPAIRMENTS IN THE FEDERAL SERVICE

### **Policy**

It is the policy of the Federal Government to provide equal employment opportunity for qualified persons with physical (includes visual and hearing) impairments in all positions where they are able to perform the job duties efficiently and safely.

### **Program**

The Office of Personnel Management (OPM) conducts a vigorous program for applicants who are handicapped, working through its central office in Washington, D.C. and through each of its 10 regional offices and more than 60 area offices across the country.

Much of the progress of the program has been accomplished through the provisions of the Rehabilitation Act of 1973 (P.L. 93-112, as amended), which require Federal agencies to develop and implement affirmative action program plans for the hiring, placement, promotion, and retention of handicapped individuals. To facilitate employment, Federal agencies may use either competitive or special appointing authorities. Realistic physical standards, based on the actual tasks of a position, require that applicants possess only the minimum medical qualifications necessary for safe and efficient performance of the duties of a particular position. Reasonable accommodation may also be considered in determining an applicant's ability to perform the duties of a job.

### **The Agency Coordinator**

In order to insure that all handicapped applicants receive full employment consideration, Federal agencies designate Coordinators for Selective Placement in each of their installations which have an employment office. The coordinators provide advice and counsel concerning employment and work with hiring

officials to assure that handicapped applicants and employees receive full consideration for all employment and promotion opportunities.

### **Avenues to Employment**

#### **Competitive Appointments**

Most Federal employees, including those who are handicapped, obtain their jobs competitively, through the following procedures:

- An applicant applies for and establishes eligibility on an OPM register, either by passing a written test (special testing is available for severely handicapped individuals) or by having their experience and education evaluated by OPM.
- When filling a vacancy, an agency requests a list of qualified people from the appropriate OPM register.
- The agency may then interview and select for the vacancy.

#### **Special Appointing Authorities**

Although the overwhelming majority of disabled employees in the Government obtain their jobs through the competitive procedures, there are many others for whom the ordinary procedures will not function fairly or accurately. To meet the needs of those who have severe physical impairments, an agency may use any of the following special appointing techniques. These are:

- The 700-hour trial appointing authority which gives individuals an opportunity to demonstrate their ability to perform the duties of a position. Applicants must either meet the minimum qualifications standards (including taking and passing a written test if required) or be certified by a State vocational rehabilitation (VR) counselor or a Veterans Administration (VA) rehabilitation counselor as being capable of performing the duties of the position. This is a temporary appointment which may lead to an excepted position.

- The Schedule A, section 213.3102 (u) excepted appointing authority for severely physically handicapped persons who have: (1) successfully completed a 700-hour trial appointment, or (2) have been certified directly to a position by a State VR or VA counselor.

### **Conversion to Competitive Service**

After 2 years of successful performance in a continuing position, an employee serving in the excepted service under Schedule A, section 213.3102(u) may be noncompetitively converted to a competitive appointment upon the recommendation of his/her supervisor.

### **Special Accommodations**

#### **Testing**

When appropriate, OPM uses special examination procedures for applicants who are physically handicapped to assure that their abilities are properly assessed and that they are not discriminated against because of their impairments. Special testing arrangements are determined on an individual basis depending on the applicant's disability. For example: (1) readers, examinations in braille, tape, or large print for visually impaired competitors; (2) interpreters for test instructions, modifications of parts of tests for hearing impaired competitors; and (3) extra time to complete the test for motor impaired persons.

#### **Accommodations on the Job**

When Federal agencies hire a person with a physical impairment, every effort is made to accommodate the individual to insure that they can perform to their full potential and ability. Agencies may, for example: (1) provide interpreter service for the hearing impaired, (2) utilize readers for the visually impaired, (3) modify job duties, (4) restructure work sites, and (5) alter work schedules.

### **How to Apply**

The Office of Personnel Management provides Federal job information through a network of Federal Job Information Centers (FJICs) throughout the United States. For answers to questions regarding employment in the Federal Government, you can visit, write, or call the nearest FJIC. They are listed in the white pages of most telephone directories under "U.S. Government." If one is not listed in your directory you can obtain the number of the FJIC in your state by dialing your information directory assistance operator. A call can save you unnecessary time and effort.

### **Other Information**

Some agencies in the Federal Government are exempt by law from these procedures. For a listing of these agencies (e.g., U.S. Postal Service) contact the nearest FJIC.

Applicants who have physical impairments may need to complete physical and vocational rehabilitation processes which will enable them to meet basic qualifications. Individuals who need this assistance should contact their State Office of Vocational Rehabilitation. Veterans with service-connected disabilities should contact the Veterans Administration.

Pamphlets describing application procedures and information prepared specifically for veterans with service-connected disabilities may be obtained from the FJIC.

## INFORMATION FOR PERMANENT JOB APPLICANTS

PERSONNEL SERVICE (05)  
VA MEDICAL CENTER  
UNIVERSITY DRIVE "C"  
PITTSBURGH, PA 15240  
(412) 692-3538/3580

The VA Medical Center (VAMC), University Drive (in the Oakland area) also recruits for jobs at the VAMC, Aspinwall. We do not recruit for positions at the VAMC, Highland Drive or the VA Regional Office, Federal Building. These are separate VA offices and they do their own recruitment.

### Permanent Jobs - How They Are Filled

This Medical Center fills vacant permanent positions by various methods depending on the type of job, availability of qualified applicants, etc.

Recruitment and consideration of candidates for such vacancies is accomplished by using one or more methods of recruitment. Any method may be used and started or cancelled at any time in the process. Methods of recruitment may include consideration of:

1. Permanent VA employees for promotion, demotion or reassignment.
2. Former permanent Federal employees eligible for reinstatement.
3. Permanent Federal employees from other Federal agencies.
4. Candidates under special procedures for hiring the severely handicapped.
5. Veteran Readjustment Appointments Program (See attached).
6. Veterans with a compensable service connected disability of 30% or more.
7. Candidates in specific occupations for which the VA or this VAMC has direct hire authority, (i.e., physician; registered nurse; nurse anesthetist; podiatrist; optometrist; dentist; licensed practical nurse; canteen service jobs; certified respiratory, registered respiratory, corrective, physical, occupational, and recreation therapist; audiologist/speech pathologist; dietitian; librarian; medical records administrator; orthotist-prosthetist; pharmacist; clinical psychologist, social worker and diagnostic radiologic technicians).
8. Office of Personnel Management (OPM) competitive exam applicants (See attached "How Federal Jobs are filled Through the Office of Personnel Management").

Individuals who meet the criteria for one or more of the first 7 methods of recruitment may be able to file an application through or directly with this VAMC. Ask for additional information.

If you do not qualify for any of the first seven methods we will not be able to accept an application from you at this VAMC directly. You should review the information on the attached "How Federal Jobs Are Filled Through the Office of Personnel Management - Exam Process", and the sample "Federal Job Opportunities Summary" if you are interested in employment.

VETERANS READJUSTMENT APPOINTMENT  
PROGRAM

The Veterans Readjustment Appointment (VRA) Program is a hiring program that applies to certain Vietnam era and post-Vietnam era veterans. Employment and advancement opportunities are provided through a non-competitive appointment which leads to competitive status after satisfactory completion of two consecutive years of VRA permanent employment in a Federal job and completion of a training plan. This appointment authority allows most Federal departments and agencies to accept employment applications from VRA candidates directly.

While Federal agencies may accept an application from a qualified VRA applicant, this does not mean that the VRA applicant will be automatically considered for employment. It is only one of many recruitment methods used to fill Federal job vacancies.

VRA candidates must meet job qualification/education requirements of the position for which they are applying. All VRA applicants must have had active duty military service which exceeds 180 days (unless discharged for a service-connected disability) and discharge was not dishonorable. In addition, the veteran must meet at least one of three following requirements:

- 1. A veteran who served on active duty after the Vietnam Era, i.e., after May 7, 1975 (A Post Vietnam Era veteran).
- 2. A Vietnam Era veteran (VEV) who has a service-connected disability. (The Vietnam Era is August 5, 1964 to May 7, 1975)
- 3. A Vietnam Era veteran (VEV) who has service for which a campaign badge was authorized. The campaign badges and expeditionary medals authorized for operations during the Vietnam Era include:

Vietnam Service Medal, 07/03/65 to 03/28/73;

Armed Forces Expeditionary Badges for:

- Congo, (Only for service between 11/23 - 27/64);
- Dominican Republic, 04/28/65 to 09/21/66;
- Korea, 10/01/66 to 06/30/74;
- Vietnam (includes Thailand)  
(Only for service between 08/05/64 to 07/03/65);
- Cambodia, 03/29/73 to 08/15/73;
- Cambodia Evacuation, 04/11 - 13/75;
- Vietnam Evacuation, 04/29 - 30/75;
- Army of Occupation of Berlin,  
(Only for service between 08/05/64 to 05/07/75).

TIME LIMITS ON ELIGIBILITY:

December 18, 1991 - Last date most VRA candidates may be hired. However, some recently discharged veterans may be hired up to December 31, 1993.

## Veterans Readjustment Appointments

### Expanded Job Opportunities In the Federal Service

**NEW--FOR VETERANS**

Public Law 102-16, effective March 23, 1991, makes it even easier for Federal agencies to hire Armed Forces veterans who served during and after the Vietnam era.

The VRA (Veterans Readjustment Appointment) authority is a special hiring program. Eligible veterans do not have to take examinations or compete with nonveteran candidates. VRA appointees are initially hired for a 2-year period. Successful completion of the 2-year VRA appointment leads to a permanent civil service appointment.

#### ★ Who Is eligible for a VRA appointment?

Veterans who served more than 180 days active duty, any part of which occurred during the Vietnam era (August 5, 1964 to May 7, 1975), and have other than a dishonorable discharge, are eligible if they have (1) a service-connected disability or (2) a campaign badge (for example, the Vietnam Service Medal).

Post-Vietnam-era veterans, who entered the service after May 7, 1975, are eligible if they served on active duty for more than 180 days and have other than a dishonorable discharge.

The 180-day service requirement does not apply to veterans discharged from active duty for service-connected disability.

#### ★ How long are veterans eligible for VRA appointments after they leave the service?

Vietnam-era veterans qualify for a VRA appointment until 10 years after discharge or until December 31, 1993, whichever date is later.

Post-Vietnam-era veterans are eligible for 10 years after the date of their last discharge or until December 17, 1999, whichever date is later.

Eligible veterans with a service-connected disability of 30% or more can be hired without time limit.

#### ★ Are there any other restrictions on eligibility for a VRA appointment?

No. Under the new VRA law, all veterans described above are eligible. (The law eliminated a previous requirement that VRA appointees have fewer than 16 years of education.)

#### ★ What jobs can be filled under the VRA authority?

Federal agencies now can use the VRA authority to fill any white collar position up through GS 11, blue collar jobs up through WG 11, and equivalent jobs under other Federal pay systems.

#### ★ How do veterans apply for VRA appointments?

Veterans should contact the agency personnel office where they want to work. Agencies recruit candidates and make VRA appointments directly without getting a list of candidates from OPM. Veterans can get a list of local agency personnel offices from the Veterans Representative at the OPM offices listed on the back of this sheet.

#### ★ Are disabled veterans entitled to special consideration?

Agencies must give preference to disabled veterans over other veterans.

#### ★ Is training available after appointment?

In some cases, agencies provide special training programs for VRA appointees. A program could include on-the-job assignments or classroom training.

#### ★ Can VRA appointees work part-time?

Agencies may be able to set up part-time work schedules for individuals who want to attend school or handle family or other responsibilities.

## HOW FEDERAL JOBS ARE FILLED THROUGH THE OFFICE OF PERSONNEL MANAGEMENT (OPM)

A high percentage of Federal service positions are filled through OPM Competitive Exams. For many it is the only application process available to them. Applicants are required to compete on a merit basis for the right to be referred, considered and selected. While written tests are still used in screening candidates for some positions, many positions are filled through an exam process in which your education and/or experience is evaluated relative to the position for which you wish consideration. You must meet the minimum qualification requirements stated in the OPM job announcement to be eligible.

After your application and/or written exam has been processed by OPM you will receive a Notice of Rating or Notice of Results through the mail. This notice will show if you were found qualified (eligible) for the position for which you applied. If eligible it means that your name has been placed on a list, called a register, along with other eligible applicants who applied for the position. Where your name is placed on the OPM register is dependent on the score you receive on the exam and veterans preference entitlement. If there was no written exam, your score will be based on education and/or experience. Qualified candidates that meet the requirements for Veterans Preference points may have extra points added to their score. Most will receive 5 points extra while others may receive 10 points extra (e.g., disabled veterans).

When agencies such as this VAMC have a vacancy and wish to seek candidates for consideration from the OPM register, they request from OPM a list of candidates on the register. Candidates are certified to the agency based upon their ranking. If an agency is interested in the candidates that have been certified to them, they may make an inquiry as to their availability. If an agency decides to hire a candidate from the OPM list they receive, the selection is limited to the top three candidates who have indicated their interest and availability. An agency generally cannot pass over a veteran with a higher score than a non-veteran. After a selection is made, the register is returned to OPM and the names of the candidates not selected are returned to the register.

Individuals may receive inquiries as to availability and then not hear anything further. There may be several reasons for this. Frequently, the reason is that inquiries were sent to all of the candidates certified and there were three candidates with a higher ranking who expressed interest. Other reasons include filling the position by the use of another method, filling it at a higher or lower grade, or not filling the position.

This VAMC uses the OPM Exam process to fill some positions. Most common positions include clerk, clerk-typist, medical clerk, clerk-stenographer, secretary (stenography or typing), nursing assistant, part-time food service workers and a number of medical technician and technologist positions in the lab, nuclear medicine, etc. See the attached sample "Federal Job Opportunities Summary."

# FEDERAL JOB OPPORTUNITIES SUMMARY

FJOL NO. PH-91-06  
EFFECTIVE DATE: JUNE 3, 1991

OFFICE OF PERSONNEL MANAGEMENT  
PHILADELPHIA AREA OFFICE  
600 ARCH STREET  
PHILADELPHIA, PA 19106

## SAMPLE GENERAL INFORMATION FOR APPLICANTS

Federal Job Opportunities List (FJOL): This list provides information on positions for which applications are currently being accepted. Most positions in this list are for Pennsylvania, Camden County, NJ and Delaware.

This list is published on the 1st of each month. A supplement is issued the 16th of each month. We also publish a Nationwide List which contains federal job opportunities located anywhere in the nation or the world, not necessarily in the local area. Both lists are posted in the Federal Job Information Center (FJIC) and various State Employment Service Offices.

How to Apply: Application forms, qualification requirements and filing information can be obtained from the address in "REMARKS" or on List A (See "Forms Code" column). List A appears at the end of this listing.

Applications will be accepted only for a specific position, grade level, and work location that is currently listed on the FJOL. Applications submitted for positions, grade levels, and work locations not currently listed and incomplete application packages will not be accepted.

Be sure to pay special attention to the filing period listed for each position. Application forms will not be available, nor accepted before the opening date. Applications postmarked after the closing date will not be accepted. All Application Request Forms or written requests must be received in the office no later than the closing date for that position in order for us to respond.

Qualification Requirements: Generally, there is a separate Qualifications Information Statement (QIS) or announcement for each position. It describes the experience, education, knowledges, skills and abilities required. Be sure to read these requirements carefully. Though the QIS covers several grade levels, you may apply and be considered only for the position and grade for which applications are currently being accepted.

Citizenship and Age Requirements: United States citizenship is required for positions in the competitive service.

The minimum age for most jobs is 18 (or 16 if you are a high school graduate). Certain positions, by law, have maximum age limitations.

Notice of Results: You will be sent a Notice of Results showing whether you are eligible or ineligible. If you are eligible for a position for which a list of eligibles (competitor inventory) is maintained, your numerical rating may also be shown. For specialized positions (i.e., GS-9 and above) for which no competitor inventories are maintained, Notices do not show numerical ratings.

BEST COPY AVAILABLE

Starting salaries- General Schedule (GS) Positions

GS-1	\$11,015	GS-5	\$16,973	GS-9	\$25,717	GS-13	\$44,348
GS-2	\$12,385	GS-6	\$18,919	GS-10	\$28,322	GS-14	\$52,406
GS-3	\$13,515	GS-7	\$21,023	GS-11	\$31,116	GS-15	\$61,643
GS-4	\$15,171	GS-8	\$23,284	GS-12	\$37,294		

Pay for Wage Grade (WG) Positions: The hourly wage for trades and craft (WG) positions depends on the geographic location of the position. The current pay rate for individual Wage Grade positions is shown in the "Remarks" column of the FJOL.

Special Salary Rates: For certain positions for which there is a shortage of qualified applicants, the starting salary is higher than the normal starting salary for the grade. The FJOL indicates, where appropriate, the jobs to which special rates apply.

Temporary Positions: Federal agencies have the authority to fill certain temporary positions through special procedures. Therefore, if you are interested in temporary employment, you may apply directly to Federal agencies for consideration. Vacancy notices for these positions are posted separately in FJIC's and are available at State Employment Service Offices.

Positions Filled Under Delegated Examining Authority: Some Federal agencies have been given authority to recruit and examine directly for jobs in certain occupations. These jobs may not appear on the FJOL. Separate announcements are issued by the agency, and are posted in FJIC's and State Employment Service Centers.

Special Filing Privileges: If you are a disabled veteran, Purple Heart recipient, recently (120 days or less) discharged veteran, mother of a veteran who died in action or is totally disabled, unremarried widow/widower of a veteran, spouse of a totally disabled veteran with service connected disability, or recently (120 days or less) returned from overseas Federal civilian employment, filing deadlines may not apply to you. Contact the FJIC for additional information.

Federal Job Information Center: The Federal Job Information Center (FJIC) is open Monday through Friday from 8:30 a.m. to 3:30 p.m. You may also request forms by calling the Center at (215) 597-7440, or by writing to the Center. In the FJIC complete listings of current Federal opportunities are posted and interested applicants may obtain desired information and forms by completing an Applicant Request Form, and depositing it in the drop box in the Center. Completed application forms may also be deposited in the drop box.

THE FEDERAL GOVERNMENT IS AN EQUAL OPPORTUNITY EMPLOYER.

# OFFICE OF VOCATIONAL REHABILITATION

217 PITTSBURGH STATE OFFICE BUILDING

300 LIBERTY AVENUE

PITTSBURGH, PENNSYLVANIA 15222

## CERTIFICATION FOR SCHEDULED B EXCEPTED SERVICE 213.3202 (k)

TO:

FROM: Office of Vocational Rehabilitation

This is to certify that at present, mental health treatment and vocational rehabilitation have progressed to the stage where there are reasonable expectations that \_\_\_\_\_ is capable of functioning in the Federal position of \_\_\_\_\_ and related positions, and that any residual disability is not likely to interfere with performance on the job.

We further verify that \_\_\_\_\_ has documented history of mental illness which includes periods of hospitalization and/or outpatient treatment within the previous two years, and is either currently unemployed as a result of the illness or had a significant period (at least thirty consecutive days) of substantially disrupted employment within the past two years because of this mental illness, or else, had his education or training disrupted or terminated due to mental illness.

\_\_\_\_\_  
REHABILITATION COUNSELOR

\_\_\_\_\_  
PSYCHIATRIST OR PSYCHOLOGIST

It is understood that I must also meet qualifications (education, experience, and/or training) for this position, and that in some instances, the hiring agency may require passing a non-competitively given test.

It is also understood that this appointment is for a maximum of two years and that continued Federal employment will then be subject to appointment through competitive examination procedures. This special two-year employment authority was established by the Federal government to allow individuals who have had significant psychiatric problems, which disadvantaged them, the opportunity to update their skills and establish a successful performance record. This is part of the selective placement and equal employment opportunity program.

\_\_\_\_\_  
Applicant's Signature

2127

## Subchapter 6: Employment of the Mentally Restored Persons

### 6-1. DEFINITION

A mentally restored person is one who has experienced some mental or emotional difficulty, has received professional treatment either in or outside of an institution and has been judged by competent medical authority as ready to resume normal activities including employment.

### 6-2. JOB RESTRICTIONS

As a general rule, a history of mental illness is not disqualifying for Federal employment provided that the applicant's status has been certified by competent medical authority and the applicant is capable of performing the duties of the position. However, there are some exceptions, such as when the illness may have a continuing effect on employment, e.g.:

(1) *Security*. Executive Order 10450, as amended, requires investigations of histories of mental illness because of the required disqualification for certain jobs when it is found that there has been "any illness, including any mental condition, of a nature which in the opinion of competent medical authority may cause significant defect in the judgment or reliability of the employee."

(2) *Other*. There are some types of positions for which applicants are screened carefully for emotional stability and maturity. These may involve unusual responsibility, overseas assignments, or other especially demanding requirements.

### 6-3. APPOINTMENT

a. *Competitive. Appointment Procedure*. Many mentally restored persons are able to compete successfully in Civil Service examinations and to establish eligibility in keeping with their backgrounds of education and work experience.

b. *Temporary. Appointment Procedure*. In order to provide the mentally restored person an opportunity to demonstrate job readiness without requiring a firm commitment on the part of the employer, OPM has established a special procedure for a trial appointment

using a temporary not to exceed 700-hours appointment authority (FPM chapter 316, section 4-6e). Once the employer is convinced that the employee can perform the duties of the position, the person may, if eligible be hired competitively, or reinstated, or converted to the accepted service under a Schedule B, section 213.3202 (k) appointment.

c. *Excepted. Appointment Procedure*.

(1) *Introduction*. The excepted appointment authority in Section 213.3202(k) of Schedule B was developed to provide mentally restored persons with ample opportunity to update their skills and to establish a successful performance record to counteract prejudice on the part of the employers. Until more experience is gained, use of this appointing authority requires prior approval of the Office of Personnel Management.

(2) *Definitions*. (a) For the purposes of this appointing authority, "mentally restored individual" refers to a person who has been unable to work for a significant period of time due to psychiatric or emotional illness, has received or is participating in professional treatment either in or outside of an institution, but is currently able to function successfully in a position for which he/she qualifies.

(b) "Significant period of substantially disrupted employment" refers to any period of time after the onset of illness during which the individual is unable to work, provided that such period is at least 30 consecutive calendar days. The 30 day period may be waived by the Office of Personnel Management based on consideration of other factors including:

- a work history which shows a record of shorter duration of acute illness which prevents employment.
- a work history which shows periods of noncompetitive employment. For example, sheltered workshop experience may be viewed as noncompetitive and as part of a rehabilitation process. Work performed on a piece or commission basis may also be considered noncompetitive in nature.
- a work history which shows a record of short periods of employment due to frequent or recurring acute illness.

(3) *Eligibility.* (a) Under this authority mentally restored persons must meet the following conditions:

- have a documented history of mental illness which includes periods of hospitalization and/or outpatient treatment. Treatment must have been within the previous 2 years;
- be certified by either a State or VA vocational rehabilitation counselor as being capable of functioning in a specific position. Documentation for certification should include a statement by a psychologist or psychiatrist as to capability to function in a work setting;
- be currently unemployed as a result of the illness or have had a significant period of substantially disrupted employment within the previous 2 years.

(4) A person without a previous work history (summer employment excluded) is not eligible for employment under this authority unless he/she can demonstrate that his/her education or training was disrupted or terminated due to mental illness requiring hospitalization or extensive outpatient treatment.

(5) *Appointment Procedures.* (a) *General.* Appointments may be made under the usual rules governing Schedule B appointments. Employees must meet the minimum qualifications for the position and grade, including a written test, if required. No person appointed under this authority may serve for more than 24 consecutive months pursuant to this appointment. It is anticipated that persons hired under this authority will no longer be at a competitive disadvantage after 2 years on the job. Thus, they must compete for any future Federal appointment, or have reinstatement or other noncompetitive eligibility.

(b) *Repeated Appointments.* Persons who have been appointed under this authority may be reappointed for an additional 2 year appointment, provided that there is

a break in service of at least 90 days as a result of mental illness, which is certified as resulting in the inability of the individual to work. Each appointment shall be limited to 2 years.

(c) *Temporary Appointments* not to exceed 700-hours. An agency initially may employ a mentally restored individual on a 700-hour trial appointment (see 6-3b, above) which then may be converted to a Schedule B appointment. In such cases the 2 year period for the Schedule B appointment includes time served in a temporary appointment.

(d) *Mobility.* Commencing 90 days after the effective appointment date, the agency may reassign or promote the employee. Such action shall not change the effective date upon which the appointment terminates.

(e) *Other Appointments.* Nothing in this section should be considered as restricting or in any way limiting the employment of mentally restored individual through reinstatement, or any other appropriate hiring authority.

(6) *Retired persons* serving under this appointment receive all benefits including Civil Service retirement.

(7) *Requests for approval.* Requests for approval of appointments under 5 CFR 213.3202 (k) are to be made, in Washington, D.C. metropolitan area, to the Director, Selective Placement Programs, Office of Affirmative Employment Programs; or, in the field to the director of the appropriate Office of Personnel Management region, attention: Affirmative Employment Program Manager.

(8) *Recordkeeping.* Any certificate issued under the authority by a State vocational rehabilitation or Veterans Administration counselor must be maintained in a medical folder, rather than in the mentally restored person's official personnel folder (OPF).

c. **Physical Examinations.** As a general rule, handicapped individuals will have their fitness for employment—initial assignments and, as necessary, position changes—determined through the use of SF 78, Certificate of Medical Examination, to make sure that their placements are proper, effective, and compatible with their impairments. Only those functional requirements and environmental factors applicable to the specific job are to be designated. The SF 177, Statement of Physical Ability for Light Duty Work, however, may be used when deemed proper and appropriate by the appointing officer. In either case, the personnel physician or designated medical officer (ch. 792, this part) will review the health qualification findings for the purpose of recommending employment where the abilities of the individual are predictive of successful performance in the position without hazard to the individual or others.

d. **Written Tests.** Where written tests are required by the Office of Personnel Management or approved for use by the Director, Office of Personnel and Labor Relations, appropriate arrangements will be made for applicants with physical impairments to demonstrate pertinent knowledges, skills, and abilities by testing methods adapted to their special needs and circumstances. This includes those who are blind, deaf, and all others who may have difficulties in taking an examination in the normal manner.

e. **Placement Evaluations** (ch. 300, this part). Special attention will be given to the 90-day placement followup and the probationary (trial) period certification as one means of ensuring that the handicapped employee is properly placed and has full opportunity to succeed. Should another assignment be indicated or if termination cannot be justifiably avoided, appropriate personnel action will be taken. (See ch. 302, par. 9, this part, for trial period requirements as well as separations during the trial period.)

## 7. REASSIGNMENT IN LIEU OF DISABILITY RETIREMENT

Employees who become handicapped as a result of work injuries, off-the-job accidents, or disease will be given full opportunity to continue employment in their present positions or, if possible, assigned to more suitable positions. If necessary, vocational rehabilitation services of public or private agencies, at no cost to the VA, will be utilized to every practical degree to prepare the handicapped employee for continued employment (For reporting purposes, care should be taken that the personnel records of employees acquiring a reportable handicap or becoming entitled to disability (Veteran) preference are properly updated to reflect the appropriate changes.)

## 8. SEVERELY PHYSICALLY HANDICAPPED

a. Field stations may appoint severely physically disabled veterans and other persons who are considered to be severely physically handicapped (see FPM ch. 306, sec. 4-2 and FPM ch. 213) using the 700-hour trial appointment procedure or the excepted appointment procedure under section 213.3102(u) of Schedule A without prior approval from the Office of Personnel Management. Individuals appointed under this authority may be converted non-competitively after 2 years of successful performance to career-conditional appointments (or career, if appropriate) depending on the length of creditable service. (See FPM ch. 306.)

b. VA Regional Office Counseling Psychology and Medical Center Counseling Psychology Staffs will utilize the "Certification Procedure" (FPM ch. 306, sec. 4-2d) for placement of severely physically handicapped individuals to the maximum extent possible in order to effect 700-hour trial appointments or excepted appointments under section 213.3102(u) of Schedule A. Counseling Psychology Staffs and Station Coordinators will pursue such techniques as part-time and intermittent appointments, job restructuring, worksite modifications and elimination of architectural barriers to facilitate placement and employment of severely physically handicapped individuals.

## 9. THIRTY PERCENT COMPENSABLY DISABLED VETERANS

Under Civil Service Regulation 315.707 (formerly Civil Service Regulation 315.703d), a disabled veteran who has a compensable service-connected disability of 30 percent or more may be appointed under a non-competitive appointment leading to conversion to career or career-conditional employment. (Details on this authority and other provisions for disabled veterans are found in ch. 307, this part.)

## 10. MENTALLY RESTORED

a. The employment of qualified mentally restored individuals will also receive positive consideration. Such consideration is consistent with our responsibility to provide treatment and rehabilitation for mentally ill veterans. Accordingly, appointing officers will work with medical officials concerned and with other appropriate officials to facilitate the suitable employment and utilization of these persons.

[b.] Schedule B, section 213.3202(k). This excepted appointment authority was developed to provide mentally restored persons with ample opportunity to update their skills and to establish a successful performance record to counteract prejudice on the part of employers. To be eligible for appointment as a mentally restored individual, the person must be at a severe disadvantage in obtaining employment because of a psychiatric disability evidenced by hospitalization and/or outpatient treatment and have had a significant period of substantially disrupted employment because of the disability. In addition, the person must be certified to a specific position by a State vocational rehabilitation counselor or a VA psychologist (or a VA psychiatrist). (See FPM ch. 306.)

[c.] VA Regional Office Counseling Psychology and Medical Center Counseling Psychology Staffs will utilize the "Certification Procedure" (FPM ch. 306) for placement of mentally restored individuals to the maximum extent possible in order to effect excepted appointments under Schedule B, section 213.3202(k). Counseling Psychology Staffs and Station Coordinators will pursue such techniques as part-time and intermittent appointments, job restructuring or other reasonable accommodation to facilitate placement and employment of mentally restored individuals.

#### 11. MENTALLY RETARDED

The VA has an agreement with the Office of Personnel Management that grants authority for VA appointing officers to employ mentally retarded persons under Schedule A, section 213.3102(t) authority as described in FPM chapter 306, subchapter 7. Practically every station in the VA has some positions involving routine and repetitive work that qualified, mentally retarded individuals can per-

form satisfactorily. Accordingly, appointing officers will seek out possible applicants from their State Vocational Rehabilitation Agency for employment consideration. Through careful and considered placement action, the employment of these persons can be mutually advantageous to the VA and the individual. Individuals appointed under this authority may be converted non-competitively after 2 years of successful performance to career or career-conditional appointments depending on the length of creditable service. (See FPM ch. 306.)

#### 12. REHABILITATED OFFENDERS

VA stations will participate in the employment of rehabilitated offenders to the extent feasible under section 213.3102(x) of Schedule A. In addition, field station Directors and the Director, Central Office Personnel Service, are authorized to enter into agreements with Federal and District of Columbia prisons to implement the work release program as described in FPM chapter 306, subchapter 8. A copy of each agreement will be forwarded through channels to the Director, Office of Personnel and Labor Relations (054).

#### 13. OUTSTANDING HANDICAPPED FEDERAL EMPLOYEES OF THE YEAR

a. **General.** The Office of Personnel Management has an annual awards program to recognize 10 Outstanding Handicapped Federal Employees of the Year (FPM ch. 306, subch. 10). The Annual Awards Ceremony is held during the first full week in October to coincide with National Employ the Handicapped (NETH) Week. Field stations should review the progress and accomplishments of their handicapped employees and nominate an individual they believe deserving of consideration as a candidate for the VA's nominee for the Outstanding Handicapped Federal Employees of the Year. Field station nominees should receive particular recognition in connection with local NETH Week activities.

BEST COPY AVAILABLE

**Reason for this  
booklet****INTRODUCTION TO WORK INCENTIVES FOR PEOPLE WITH DISABILITIES**

One of the Social Security Administration's highest priorities is to help beneficiaries with disabilities achieve a better and more independent lifestyle by helping them take advantage of employment opportunities. The President has stated, "We believe that all persons with disabilities must be fully integrated into mainstream society, so they can live fulfilling and rewarding lives. During our years in public office, we have compiled strong records of support for public and private initiatives to enhance the independence and productivity of persons with disabilities." We at Social Security take these words very seriously and intend to do our part to remove the barriers which exist that prevent this goal from being achieved.

The enactment of the Americans With Disabilities Act (ADA) is a major step in the continued progress toward full empowerment for people with disabilities. Our mission to encourage employment and productivity is in keeping with the mandate provided by the ADA and other significant legislation such as the Rehabilitation Act and the Developmental Disabilities Assistance and Bill of Rights Act.

This booklet was prepared to assist professionals in the public and private sectors who work with people with disabilities. Your role as counselor, educator, representative or advocate provides you with communication opportunities not directly available to Social Security staff. By becoming familiar with the work incentive provisions in this booklet, you can help people with disabilities and their families make important decisions about employment.

This booklet is a guide to help you understand our work incentives. It is not intended to be used in making determinations about eligibility or benefits in particular cases. A person who needs information on a particular case should contact the local Social Security office.

**Background**

The Social Security Administration directs two disability programs:

- o Social Security Disability Insurance (SSDI); and
- o Supplemental Security Income (SSI).

These programs are similar in many respects but also have important differences, some of which are explained later in this booklet.

### **Purpose of work incentives**

The SSDI and SSI programs should not be viewed as exclusive and permanent sources of income to the person with disabilities. They should, in every case possible, be used as stepping stones to improving a person's economic condition.

Work incentives are intended to give beneficiaries the support they need to move from benefit dependency to self-sufficiency.

The work incentives explained in this booklet are designed to help people with disabilities enter or reenter the workforce by protecting their entitlement to cash payments and/or Medicaid or Medicare protection, until they can support themselves.

### **Organization of this booklet**

Because some people receive both SSDI and SSI payments and others receive only SSDI or SSI, the information in this booklet is grouped into the following six sections:

- o General SSDI and SSI program information;
- o An overview of SSDI and SSI work incentives;
- o Work incentives that apply to both programs;
- o SSDI only work incentives;
- o SSI only work incentives; and
- o Special work incentives for beneficiaries who are blind.

To help you identify and apply each work incentive, the top right-hand corner of this page explaining each incentive is labeled to show the program(s) to which the incentive applies.

### **Replacement of previous publication**

This booklet replaces and obsoletes all previous editions.

## ELIGIBILITY REQUIREMENTS

This section gives basic information about the SSDI and SSI programs so you can better understand how the work incentives apply. The specific provisions cited here are not work incentives.

### SSDI

To be eligible for SSDI, a person must:

- o Have worked and paid Social Security taxes (F.I.C.A.) for enough years to be covered under Social Security; some of the taxes must have been paid in recent years;
- o Be considered medically disabled; and
- o Not be working or working but earning less than the substantial gainful activity (SGA) level.

### SSI

To be eligible for SSI based on a medical condition, a person must:

- o Have little or no income or resources (refer to the Glossary for definitions of income and resources);
- o Be considered medically disabled; and
- o Initially not be working or working but earning less than the SGA level. Once on the rolls, work activity does not affect a person's continuing eligibility.

Work activity does not affect initial or continuing eligibility for a person who is blind.

## HOW WE FIGURE PAYMENT AMOUNTS

### SSDI

The SSDI payment amount is based on a worker's lifetime average earnings covered by Social Security. The payment amount may be reduced by workers' compensation payments (including Black Lung payments) and/or public disability benefits (e.g., certain state and civil service disability benefits). It is not affected by other income or resources.

### SSI

The SSI payment amount is based on the amount of other income which the person receives, his or her living arrangement and the state in which he or she lives. The basic payment is known as the Federal Benefit Rate. The Federal Benefit Rate is adjusted each year to compensate for cost-of-living increases. Most states pay an additional amount known as a State supplement. The amount and qualifications for these supplements vary from state to state.

To figure the SSI payment amount, we add the Federal Benefit Rate and the State supplement and then subtract the person's countable income. (See page 35.) Countable income includes income received by the person or some income received by the person's spouse or parent(s). Once a child turns age 18, the parents' income and resources are no longer considered in determining the child's eligibility or payment amount.

Not all income that a person receives is counted. For example, any part of a scholarship or grant that is used to pay for tuition, books, fees or related educational expenses is not counted. The sections on work incentives explain some of the ways that income can be excluded.

**SSDI**

**WAITING PERIOD**

A worker who becomes disabled must wait 5 full calendar months after disability begins before receiving SSDI benefits.

No new waiting period is required, if a worker returns to the disability rolls within 5 years of leaving the rolls.

NOTE: Children, widows, and widowers are subject to different rules.

**SSI**

No waiting period is required before receiving SSI benefits.

## **MEDICARE QUALIFYING PERIOD--SSDI ONLY**

### **What it is**

The first 24 months of disability benefit entitlement is the waiting period for Medicare coverage. During this qualifying period for Medicare, an SSDI beneficiary may be eligible for health insurance through a former employer. The beneficiary should contact the employer for information about health insurance coverage.

### **How months are counted**

One month is counted for each month of disability benefit entitlement.

### **When previous periods count**

Months in previous periods of disability may be counted towards the 24-month Medicare qualifying period if the new disability begins:

- o Within 60 months after the termination of the workers receiving disability benefits; or
- o Within 84 months after the termination of disabled widows' or widowers' benefits or childhood disability benefits; or
- o At any time if the current disabling impairment is the same as, or directly related to, the impairment which was the basis for the previous period of disability benefit entitlement. (This provision applies to beneficiaries whose prior period of entitlement to disability ended after February 29, 1988.)

## **SUBSTANTIAL GAINFUL ACTIVITY**

### **What it is**

SGA is the performance of significant and productive physical or mental work for pay or profit.

### **How much it is**

The SGA level is average countable earnings over \$500 per month for non-blind beneficiaries. (See page 45 for the blind SGA amount.)

We will deduct from gross earnings the cost of items a person needs in order to work and the value of support a person needs on the job due to the impairment before we decide if work is SGA.

### **How it applies**

#### **SSDI**

It applies to SSDI in determining initial and continuing disability entitlement.

#### **SSI**

It applies to SSI only in determining initial eligibility for SSI disability payments.

It does not apply to SSI beneficiaries who are blind.

## WHEN WE REVIEW A DISABILITY CASE

### How often reviews are done

We review a disability case periodically to see if a person's condition has medically improved or if he/she can perform SGA. The timing of these reviews is described below:

- When the original disabling condition is expected to improve, we review the case on or about the date the improvement is expected;
- When medical improvement is possible, we review the case after 3 years;
- When medical improvement is not expected, we review the case after 7 years;
- When we receive information that the person may have returned to work or appears to have improved, we review the case at the time we receive the information; or
- When an SSI recipient becomes eligible for benefits under section 1619 or when there are changes in the 1619 status, we review the case at the time of eligibility or change, but not more often than once a year.

If we find the person is no longer disabled because of medical improvement related to the ability to work, we stop benefits unless he or she is in a vocational rehabilitation program. (See "Continued Payment to Individuals Under a Vocational Rehabilitation Program" on page 24.)

# OVERVIEW OF WORK INCENTIVES

## How they help people

### SSDI

## OVERVIEW OF WORK INCENTIVES

Most people with disabilities want to work. It is important for disability beneficiaries to understand that they can still receive benefits while they try to work. Anyone who represents or deals with working SSDI or SSI beneficiaries should encourage them to contact the Social Security Administration and ask about work incentives and how they can affect their benefits.

Work incentives provide support over a period of years to allow the disability beneficiary to test the ability to work and gradually become self-supporting and independent. In general, a person has at least 4 years to test the ability to work, including full cash payments during the first 12 months and a period in which cash benefits can be started again without a new application. The person continues to have Medicare coverage during this time.

The SSDI work incentives are:

- o Impairment-Related Work Expenses;
- o Trial Work Period;
- o Extended Period of Eligibility;
- o Continuation of Medicare Coverage;
- o Medicare for People With Disabilities Who Work; and
- o Continued Payment Under a Vocational Rehabilitation Program.

Each work incentive is discussed in detail later in this booklet. While the above information gives you an idea of some of the support offered to SSDI beneficiaries who want to work, it is important to view all of the work incentives as a total package to fully appreciate the level of support offered to help people achieve their goal of greater economic independence.

**SSI**

Over 4.4 million Americans receive SSI because of a disability. Many of these people would like to work but are afraid that if they do, they will lose their SSI checks and Medicaid coverage. The SSI work incentives offer these people ways to continue receiving their SSI checks and/or Medicaid coverage while they work. Some of the incentives can increase their net income to help cover special expenses they may have in order to work, to train for a job or to set up their own business.

Once a person begins to receive SSI, work activity will not cause SSI to stop as long as the person is still disabled. Even if the person cannot receive SSI checks because of the amount of earnings, eligibility for Medicaid may continue indefinitely. In many cases, if a person loses his/her job or is unable to continue working, he/she can begin receiving checks again without filing a new application.

The SSI work incentives are:

- o Impairment-Related Work Expenses;
- o Earned Income Exclusion;
- o Student Earned Income Exclusion;
- o Blind Work Expenses;
- o Plan for Achieving Self-Support (PASS);
- o Property Essential to Self-Support;
- o Section 1619 Work Incentives; and
- o Continued Payment Under a Vocational Rehabilitation Program.

Each provision is discussed in detail later in this booklet. These incentives offer persons who receive SSI because of disability an opportunity to overcome some of the barriers that may have kept them from working.

# SSDI AND SSI WORK INCENTIVES

## IMPAIRMENT-RELATED WORK EXPENSES

### What they are

The costs of certain impairment-related items and services that a person needs to work are deducted from gross earnings in figuring SGA, even if these items and services are also needed for non-work activities. The deductions can be made only if:

- o The cost of the item or service is paid by the person with the disability; and
- o The person has not been, and will not be, reimbursed for the expense.

### How they are deducted

The amount a person pays towards the cost of the items and services is deducted from gross earnings. Only after these expenses are deducted is a determination made as to whether "countable earnings" represent SGA. Impairment-related work expenses may reduce earnings below the SGA level.

### How they apply to SSI monthly payments

Impairment-related work expenses are also excluded from earned income in figuring an SSI beneficiary's monthly payment amount.

### Who determines whether expenses are deducted

The Social Security Administration field office determines whether expenses may be deducted from earnings. In making this determination, the field office may:

- o Request the beneficiary or the representative to verify the need for an impairment-related work expense (this may be done by telephone or in writing); and
- o Ask a beneficiary or representative if:
  - The item/service is related to the impairment and is necessary to enable the person to perform his or her job;
  - The person is personally paying for this item/service (and to submit proof(s)); and
  - Some other source is paying for the item/service, and how long that funding will continue.

**When expenses are deductible**

Impairment-related work expenses are deductible for both SGA and SSI payment purposes when:

- The expense enables a person to work;
- The person, because of a severe physical or mental impairment, needs the item or service for which the expense is incurred in order to work;
- The cost is paid by the person with a disability and is not reimbursed by another source (e.g., Medicare, Medicaid, private insurance);
- The expense is "reasonable"--that is, it represents the standard charge for the item or service in the person's community;
- The expense (for SGA purposes) is paid in a month in which the person with a disability is or was working (occasionally, an impairment-related work expense may be used before the first or after the last month of work activity); and
- The expense (for SSI payment purposes) is paid in a month in which earned income is received or work is performed while the person used the impairment-related item or service. (In unusual situations, when the payment of an impairment-related work expense does not correspond to a work month, it may be possible to deduct it.)

**EXAMPLES OF EXPENSES LIKELY AND NOT LIKELY TO BE DEDUCTIBLE**

**DEDUCTIBLE**

**1. Attendant Care Services**

- a. Performed in the work setting.
- b. Performed in the process of assisting in preparing for work, the trip to and from work and after work (e.g., bathing, dressing, cooking, eating, etc.).
- c. Services which incidentally also benefit the family (e.g., meals shared by the individual and his/her family).
- d. Services performed by a family member for a cash fee where the family member suffers an economic loss by reducing or terminating work in order to perform such services.

**NOT DEDUCTIBLE**

**1. Attendant Care Services**

- a. Performed on non-workdays or involving shopping or general homemaking (e.g., cleaning, laundry, etc.).
- b. Performed for someone in the family other than the beneficiary (e.g., babysitting).
- c. Services performed by a family member for a cash fee where the family member suffers no economic loss.
- d. Services performed by a family member for payment "in-kind" (e.g., room and board) whether or not the family member suffers economic loss.

DEDUCTIBLE	NOT DEDUCTIBLE
<p><b>2. Transportation Costs</b></p> <ul style="list-style-type: none"><li><b>a.</b> The cost of structural or operational modifications to a vehicle which the person needs in order to drive to work, even if the vehicle is also used for non-work purposes.</li><li><b>b.</b> The cost of driver assistance or taxicabs where such special transportation is not generally required by unimpaired individuals in the community.</li><li><b>c.</b> Mileage expenses for an approved vehicle at a rate determined by the Social Security Administration and limited to travel-related to employment.</li></ul>	<p><b>2. Transportation Costs</b></p> <ul style="list-style-type: none"><li><b>a.</b> The cost of a vehicle whether modified or not.</li><li><b>b.</b> The cost of modification to a vehicle not directly related to the impairment or critical to the operation of the vehicle (e.g., paint or decor preferences).</li><li><b>c.</b> The cost of travel related to obtaining medical items or services.</li></ul>

**DEDUCTIBLE**

**3. Medical Devices**

- a. Wheelchairs, hemodialysis equipment, pacemakers, respirators, traction equipment and braces (arm, leg, neck, back, etc.).

**4. Work-Related Equipment and Assistants**

- a. One-handed typewriters, typing aids (e.g., page-turning devices), measuring instruments, reading aids for persons who have visual impairments, electronic visual aids, braille devices, telecommunications devices for people with hearing impairments and special work tools.
- b. Expenses for a person who serves as a reader for a visually impaired person, expenses for an interpreter for a hearing impaired person and expenses for a job coach.

**5. Prosthesis**

- a. Artificial hip and artificial replacement of an arm, leg or other parts of the body.

**NOT DEDUCTIBLE**

**3. Medical Devices**

- a. Any device not used for a medical purpose

**4. Work-Related Equipment and Assistants**

- a. Any work-related device not paid for by the person with a disability or, in the case of a self-employed individual, equipment previously deducted as a business expense

**5. Prosthesis**

- a. Any prosthetic device that is primarily for cosmetic purposes.

**DEDUCTIBLE**

**6. Residential Modifications**

**a. Individual Employed Outside Home**

(1) Modifications to the exterior of the house which permit access to the street or transportation (e.g., exterior ramps, railings, pathways, etc.).

**b. Individual Self-Employed at Home**

(1) Modifications made inside the home in order to create a work space to accommodate an impairment (e.g., enlargement of a doorway leading into an office or workroom, the modification of office space to accommodate problems in dexterity, etc.).

**NOT DEDUCTIBLE**

**6. Residential Modifications**

**a. Individual Employed Outside Home**

(1) Modifications to the house primarily intended to facilitate functioning in the home environment (e.g., enlargement of interior door frames, lowering of kitchen appliances and bathroom facilities, interior railings, stairway chairlift, etc.).

**b. Individual Self-Employed at Home**

(1) Any modification expenses previously deducted as a business expense in determining SGA.

**BEST COPY AVAILABLE**

<b>DEDUCTIBLE</b>	<b>NOT DEDUCTIBLE</b>
<p><b>7. Routine Drugs and Routine Medical Services</b></p> <p>a. Regularly prescribed medical treatment or therapy that is necessary to control a disabling condition (even if unsuccessful), such as anti-convulsant drugs or blood level monitoring; radiation treatment or chemotherapy; corrective surgery for spinal disorders; anti-depressant medication, etc. The physician's fee relating to these services is deductible.</p>	<p><b>7. Routine Drugs and Routine Medical Services</b></p> <p>a. Drugs and/or medical services used for only minor physical or mental problems (e.g., routine physical examinations, allergy treatment, dental examinations, optician services, etc.).</p>
<p><b>8. Diagnostic Procedures</b></p> <p>a. Objective of procedure must be related to the control, treatment or evaluation of a disabling condition (e.g., electroencephalograms, brain scans, etc.).</p>	<p><b>8. Diagnostic Procedures</b></p> <p>a. Procedures paid for by other sources (e.g., Vocational Rehabilitation Agency, Medicaid) or not related to a disabling condition (e.g., allergy testing).</p>

**DEDUCTIBLE**

**9. Non-Medical Appliances and Devices**

- a. In unusual circumstances, when devices or appliances are essential for the control of a disabling condition either at home or in the work setting (e.g., an electric air cleaner for an individual with severe respiratory disease), and this need is verified by a physician.

**10. Other Items and Services**

- a. Medical supplies of an expendable nature (e.g., incontinence pads, elastic stockings, catheters, etc.).
- b. The cost of a guide dog including food, licenses and veterinary services.

**NOT DEDUCTIBLE**

**9. Non-Medical Appliances and Devices**

- a. Devices used at home or at the office which are not ordinarily for medical purposes (e.g., portable room heaters, air conditioners, dehumidifiers, humidifiers, etc.) and for which the individual has no verified medical work-related need.

**10. Other Items and Services**

- a. An exercise bicycle or other device used for physical fitness unless verified as necessary by a physician.

## SUBSIDIES

### What it is

A subsidy is support a person receives on the job which could result in more pay than the actual value of the services the person performs. We deduct the value of subsidies when we determine SGA. Subsidies do not reduce countable income for SSI.

### How it applies

Some workers with disabilities are not yet able to do a job as well as non-impaired workers without receiving some form of subsidy or work support. Examples of subsidies are:

- o Giving the worker with a disability more supervision than other workers doing the same or a similar job for the same pay; and/or
- o Giving the worker with a disability fewer or simpler tasks to complete than other workers doing the same job for the same pay.

Only earnings that represent the real value of the work performed are used to determine if work is at the SGA level. If an employer has difficulty setting the real value of the work and/or the amount of the subsidy, the Social Security Administration will make a determination of the value of the work.

## **CONTINUED PAYMENT UNDER A VOCATIONAL REHABILITATION PROGRAM**

### **To whom it applies**

It applies to persons who are receiving SSDI or SSI benefits who improve medically and, therefore, are no longer considered disabled by the Social Security Administration.

### **What it does**

SSDI and SSI benefits will continue if, at the time disability medically ceases:

- The person is actively participating in an approved state or (effective November 1, 1991) an approved non-state public or private vocational rehabilitation program; and
- Completion or continuation of the program is likely to enable the person to work permanently.

### **How long benefits continue**

Cash payments and health insurance continue until the rehabilitation services are completed or until the person ceases to participate in the program.

### **Who makes the decision**

The Social Security Administration, with the aid of vocational rehabilitation information, determines eligibility for continued payments, based on the criterion that the person's participation in the vocational rehabilitation program will increase the likelihood of permanent self-sufficiency and independence from the disability rolls.

# SSDI WORK INCENTIVES

2191

## TRIAL WORK PERIOD

### How it helps people

Many people with disabilities would like to work but are afraid to try because of concern that their benefits might stop. The trial work period lets people test their ability to work or run a business for at least 9 months in spite of their disability, without affecting their disability benefits. They continue to get full benefits during the trial work period no matter how much they earn.

### When it begins

Entitlement to a trial work period begins with the month in which the worker with a disability becomes entitled to disability benefits or the month in which the application is filed, whichever is later. (A person is not entitled to a trial work period if he or she is not entitled to disability benefits. A person is not entitled to disability benefits if he or she performs SGA level work within 12 months of onset of the impairment(s) which caused work to stop and before an award of disability benefits.)

### What is counted as a trial work period month

Each month in which earnings are more than \$200 (or over \$200 in net earnings or more than 40 hours of work in a month for the self-employed) is counted as a month of the trial work period. When the beneficiary has accumulated 9 such months (not necessarily consecutive) within a 60-month rolling period, the trial work period is completed.

Effective January 1, 1992:

- o A person will not use up his/her trial work period unless the 9 trial work months are completed within a rolling 60-month period; and
- o A person will get a new trial work period every time he/she becomes reentitled to a new period of disability based on a new application.

### What happens after it is completed

After the trial work period, the Social Security Administration reviews the work. SGA earnings during or after the trial work period normally indicate that the beneficiary is able to work in spite of a disabling impairment (see page 9 for a discussion of SGA):

- o If the work is not SGA, SSDI benefits continue; or
- o If the work is SGA, cash benefits continue for 3 more months (this is known as the "grace period"), then they stop. The person is now in the extended period of eligibility.

## EXTENDED PERIOD OF ELIGIBILITY

### What it is

The extended period of eligibility is a consecutive 36-month period during which cash benefits will be reinstated for any month the person does not work at the SGA level. Benefit checks can be started again without a new application, disability determination or waiting period. This reinstatement of benefits saves critical time for the beneficiary and replaces the loss of earnings.

### When it begins

The extended period of eligibility begins the month following the end of the trial work period.

**NOTE:** Benefits can be reinstated within the 36-month period. However, benefits may be paid for an even longer period of time if a person is unable to perform SGA.

### How it helps people

The extended period of eligibility reassures the beneficiary that disability benefits can be paid after the trial work period if he/she is unable to perform SGA anytime during the 36 months.

## EXAMPLES

### Example 1

Mr. Ray has been working at the local toy factory despite his arthritis. His 9th month of trial work was December 1987. The field office evaluated his work and found that he was performing SGA; eligibility for disability payments ceased in January 1988. He continued to earn above the SGA level through April 1988. (During this period, the Disability Determination Services made a medical severity determination and decided that Mr. Ray's impairment was still disabling.)

After Easter, orders dropped off and Mr. Ray was laid off. The field office found that he did not perform SGA in May 1988 through August 1988 (inclusive).

With the development of the Turnip Patch Doll, orders picked up, and Mr. Ray went back to full-time work. He performed SGA from September 1988 through December 1988 (inclusive).

Mr. Ray's arthritis got worse, and from January 1989 through April 1989 (inclusive) he worked part-time, not performing SGA.

In May 1989, feeling better, he went back to full-time work. His earnings have been above the SGA level ever since.

**Question:** What was the first month of his extended period of eligibility?

**Answer:** January 1988 (the first month immediately following the completion of the 9th month of trial work).

**Question:** If Mr. Ray's earnings continue to be above the SGA level, what will be the last month of his extended period of eligibility?

**Answer:** December 1990 (the month before the first month of SGA after the 36th month).

**Question:** What were the extended period of eligibility months for which he could potentially be paid?

**Answer:** January 1988, February 1988, March 1988 (the grace period), May 1988 through August 1988 and January 1989 through April 1989 (non-SGA months).

**Example 2**

Mrs. Bell began receiving SSDI benefits in January 1982. She returned to work in April 1986. Her trial work period ended in December 1986. In January 1987, the field office evaluated her work and determined it not to be SGA and disability payments continued.

Mrs. Bell continued to work at the non-SGA level until August 31, 1990. She then obtained a new position in which she earned above the SGA level. In October 1990, the field office made a determination that based on her work activity she no longer was eligible for disability payments as of September 1990.

**Question:**

What was the first month of her extended period of eligibility?

**Answer:**

January 1987 (the first month, immediately following the completion of the 9th trial work service month).

**Question:**

What is the last month of her extended period of eligibility?

**Answer:**

November 1990 (the second month following the month in which the person's eligibility for disability payments ceases because of work activity).

**Question:**

What are the extended period of eligibility months for which she could potentially be paid?

**Answer:**

January 1987 through November 1990; i.e., all non-SGA months during the extended period of eligibility as well as the month of cessation and the following 2 months (grace period). The extended period of eligibility would terminate effective December 1990.

## CONTINUATION OF MEDICARE COVERAGE

### What it does

SSDI beneficiaries can receive at least 39 months of hospital and medical insurance after the trial work period. This provision allows health insurance to continue when a person goes to work and is engaging in SGA.

### How it helps people

Although cash benefits may cease due to work, the beneficiary has the assurance of continued health insurance.

## EXAMPLES

### Example 1

John Smith had been entitled to Medicare since May 1987, his 25th month of disability insurance entitlement. Although he continued to have a severe impairment, he completed a trial work period on September 30, 1988 (his 9th trial work period month). If he continues working over the SGA level (\$500 a month) throughout the extended period of eligibility (the 36-month period after the trial work period ends), his entitlement will continue through September 30, 1991. His Medicare will continue through December 31, 1991 (39 months after the trial work period ends), unless he medically recovers prior to that time.

The time line below depicts the major events in John Smith's Medicare coverage. Other work incentives must be reviewed in order to understand the total support offered to him.

**Example 2**

Mary Jackson was entitled to disabled widows benefits beginning June 1986. She completed a trial work period February 1988. If she continues to engage in SGA, her extended period of eligibility will end February 1991 (36 months after the trial work period ended). Although she had only served 21 months of her Medicare waiting period (24 months are required) by the time she completed her trial work period, her disabled widow's benefit entitlement will continue for 36 months during her extended period of eligibility. The months in the extended period of eligibility will continue to count toward her Medicare qualifying period.

Thus, her Medicare coverage will begin June 1988, the fourth month of her extended period of eligibility. If her medical condition remains disabling, Mrs. Jackson's Medicare entitlement will end in May 1991, 3 months after her extended period of eligibility ends. As can be seen from the time line below, Mrs. Jackson received her Medicare benefits due to the extended period of eligibility work incentives. Mrs. Jackson continues to receive the support she needs in her work attempt.

The time line below depicts Mary Jackson's Medicare coverage and the work incentives support she received (trial work period and extended period of eligibility).

## MEDICARE FOR PEOPLE WITH DISABILITIES WHO WORK

### What it is

Certain people who have returned to work may purchase continued Medicare coverage, after premium-free Medicare coverage ends, due to work as long as he/she remains medically disabled. If the person becomes medically disabled again within 5 years (7 years for widow(ers) and disabled adult children) after the prior period of disability ends, he/she does not have to serve another 5-month waiting period to get benefits or Medicare.

### Who is eligible

Anyone who:

- o Is not yet 65; and
- o Continues to have a disabling impairment; and
- o Whose Medicare stopped due to work.
- o Premium Hospital Insurance (HI Part A) can be purchased at the same monthly cost which uninsured eligible retired beneficiaries pay;
- o Premium Supplemental Medical Insurance (SMI Part B) can be purchased at the same monthly cost which uninsured eligible retired beneficiaries pay; or
- o Hospital Insurance can be purchased separately without Supplemental Medical Insurance, but Supplemental Medical Insurance can only be purchased if Hospital Insurance is also purchased.

### The kind of Medicare that can be purchased

### The enrollment period

An individual may enroll:

- o During his or her initial enrollment period;
- o During the annual general enrollment period (January 1 thru March 31 of each year); or
- o During a special enrollment period if covered under an employer group health plan.

**When the state pays premiums**

States are required to pay Hospital Insurance premiums for qualified working individuals with disabilities. Qualified individuals are those who:

- o Are eligible to enroll in premium Hospital Insurance for people with disabilities who work;
- o Meet certain income and resource standards; and
- o Are ineligible for Medicare on any other basis.

NOTE: Workers who are disabled should contact their respective State agency for information.

# SSI WORK INCENTIVES

2209

## EARNED INCOME EXCLUSION

### What it does

This provision allows most of a person's earned income, including pay received in a sheltered workshop or work activities center, to be excluded when figuring the SSI payment amount. The Social Security Administration excludes the first \$65 of earnings in a month plus one-half of the remainder. This means that less than one-half of a person's earnings are counted when figuring his/her SSI payment amount. This exclusion is applied in addition to the \$20 general income exclusion.

### Examples

The following examples show how the earned income exclusion is advantageous to the beneficiary. In Example 1, the person receives \$161 SSDI each month; in Example 2, the person receives wages of \$161 per month.

#### EXAMPLE 1

\$161	(SSDI)
<u>-20</u>	(General income exclusion)
\$141	(Countable income)

#### EXAMPLE 2

\$161	(Earned income)
<u>-20</u>	(General income exclusion)
\$141	
<u>-65</u>	(\$65 earned income exclusion)
\$ 76	
<u>+2</u>	(1/2 remaining earnings)
\$ 38	(Countable income)

\$446	(1994 Federal Benefit Rate)
<u>-141</u>	(Countable income)
\$305	(SSI payment)

#### AVAILABLE INCOME

\$161	(SSDI)
<u>+305</u>	(SSI)
\$466	(Total income)

\$446	(1994 Federal Benefit Rate)
<u>-38</u>	(Countable income)
\$408	(SSI payment)

#### AVAILABLE INCOME

\$161	(Earned income)
<u>+408</u>	(SSI)
\$569	(Total income)

## STUDENT EARNED INCOME EXCLUSION

### What it does

It allows a person who is under age 22 and regularly attending school to exclude up to \$400 of earned income per month. The maximum annual exclusion is \$1,620.

### Definition of "regularly attending school"

"Regularly attending school" means that the person takes one or more courses of study and attends classes:

- o In a college or university for at least 8 hours a week; or
- o In grades 7-12 for at least 12 hours a week; or
- o In a training course to prepare for employment for at least 12 hours a week (15 hours a week if the course involves shop practice); or
- o For less time than indicated above for reasons beyond the student's control, such as illness.

A person who is home taught because of a disability may be "regularly attending school" by:

- o Studying a course or courses given by a school (grades 7-12), college, university or government agency; and
- o Having a home visitor or tutor who directs the study.

### How it is applied

The student earned income exclusion is applied before the general income exclusion or the earned income exclusion.

## PLAN FOR ACHIEVING SELF-SUPPORT

### What it does

A plan for achieving self-support (known as a PASS) allows a person with a disability to set aside income and/or resources for a specified period of time for a work goal. For example, a person could set aside money for an education, vocational training or starting a business. The plan can help a person establish or maintain SSI eligibility and can also increase the person's SSI payment amount.

### Who can have a plan

A PASS does not affect an SGA determination for initial eligibility decisions. Income and resources that are set aside are excluded only under the SSI income and resources tests.

Any person who is blind or disabled who receives SSI or could qualify for SSI can have a plan. It is important to keep in mind that as earnings go up, the person who does not need a plan now may need one next month to remain eligible or to increase the SSI payment amount.

### Requirements

The plan must:

- o Be designed especially for the person;
- o Be in writing;
- o Have a specific work goal which the person is capable of performing;
- o Have a specific timeframe for reaching the goal;
- o Show what money and other resources received will be used to reach the goal;
- o Show how the money and resources will be used;
- o Show how the money set aside will be kept identifiable from other funds;
- o Be approved by the Social Security Administration; and
- o Be reviewed periodically to assure compliance.

**Who may help  
set up a plan**

Anyone may help the person with the plan, e.g., vocational counselors, social workers or employers. The Social Security Administration evaluates the plan and determines its acceptability. The Social Security Administration also helps people put their plans in writing.

**How a plan is  
used to figure  
SSI eligibility  
and/or payment  
amount**

Resources set aside under a plan are not counted towards the \$2,000 resource limit. If income is set aside under a plan, it is excluded in the same way as blind work expenses, i.e., after all other applicable exclusions are applied. (See example under Blind Work Expenses on page 47.)

## PROPERTY ESSENTIAL TO SELF-SUPPORT

### What it does

This provision allows a person to exclude certain resources which are essential to the person's means of self-support.

### How it works

Property which is used in a trade or business or used by a person for work as an employee is totally excluded as of May 1, 1990. For example, the value of tools or equipment which a person needs for work is totally excluded. For periods prior to May 1, 1990, the total exclusion only applied to property which was required by an employer.

Up to \$6,000 of equity value of non-business property which is used to produce goods or services essential to daily activities is excluded (e.g., land used to produce vegetables or livestock solely for consumption by the person's own household).

Also, up to \$6,000 of equity value of non-business income-producing property is excluded provided that the property yields an annual rate of return of at least 6 percent. This \$6,000/6 percent rule also applies to property used in a trade or business for periods prior to May 1, 1990.

## SECTION 1619 WORK INCENTIVES

### Special SSI Payments for People Who Work (Section 1619(a))

#### What it does

This incentive allows SSI beneficiaries to receive SSI cash payments even when earned income (gross wages and/or net earnings from self-employment) exceeds the SGA level.

NOTE: It does not apply to SSI beneficiaries who are blind because the SGA requirement has never applied to them.

#### Requirements to qualify

To qualify for this incentive, the person must:

- o Be eligible for an SSI payment for at least 1 month before he/she begins working at the SGA level;
- o Still be disabled; and
- o Meet all other eligibility rules, including the income and resource tests.

#### How it applies

People who have earnings above the SGA level can continue to receive SSI cash payments as long as they are still disabled and meet all other eligibility requirements. The person's payment amount will be calculated in the same way as for someone who is not working at the SGA level. (See earned income exclusion Example 2. on page 35.) The person will remain eligible for Medicaid.

#### What it does

### Continued Medicaid Eligibility (Section 1619(b))

This incentive continues Medicaid coverage for most working SSI beneficiaries under age 65 when their earnings become too high to allow an SSI cash payment.

NOTE: Effective May 1, 1991, a person age 65 or over who is blind or disabled may qualify for continued Medicaid coverage under section 1619(b).

**Requirements to qualify**

To qualify for this incentive, a person must:

- o Have been eligible for an SSI cash payment for at least 1 month;
- o Still meet the disability requirement;
- o Still meet all other non-disability requirements;
- o Need Medicaid in order to work; and
- o Have gross earned income which is insufficient to replace SSI, Medicaid and any publicly funded attendant care.

The Social Security Administration uses a threshold to measure whether a person's earnings are high enough to replace his/her SSI and Medicaid benefits.

The threshold amount is based on:

- o The amount of earnings which would cause SSI cash payments to stop in the person's state; and
- o The annual per capita Medicaid expenditure for the state.

If the person's gross earnings are higher than the threshold amount for his/her state, the Social Security Administration can figure an individual threshold if the person has:

- o Impairment-related work expenses (see pages 15-22);
- o Blind work expenses (see pages 46-47);
- o A plan to achieve self-support (see pages 37-38);
- o Publicly funded attendant or personal care; or
- o Medical expenses above the state per capita amount.

**Continued Medicaid eligibility in certain states**

The following states use their own definitions of eligibility for Medicaid purposes which differ from SSI eligibility criteria:

Connecticut  
Hawaii  
Illinois  
Indiana  
Minnesota

Missouri  
Nebraska  
New Hampshire  
North Carolina  
North Dakota

Ohio  
Oklahoma  
Virginia

People in these states will continue to be eligible for Medicaid under the section 1619(a & b) incentive as long as they were eligible for Medicaid in the month before they became eligible for section 1619.

**Special Benefits for Section 1619 Recipients Who Enter a Medicaid Facility****What it does**

This provision allows an individual who is eligible under section 1619 to receive an SSI cash benefit for up to 2 months while in a Medicaid facility or a public medical or psychiatric facility.

**Medicaid facility**

Usually when an SSI recipient enters a Medicaid facility (i.e., a facility where Medicaid pays more than 50 percent of the cost of care), the SSI payment is limited to \$30 per month minus any countable income. However, if the person is eligible under section 1619, the benefit will be figured using the full Federal Benefit Rate (see page 35) for up to 2 months.

**Public medical or psychiatric facility**

Usually when an SSI recipient enters a public medical or psychiatric facility, he/she is not eligible to receive an SSI payment while in the facility. However, if the individual is eligible under section 1619, SSI cash benefits continue for up to 2 months. For this provision to apply, the facility must enter into an agreement with the Social Security Administration allowing the person to keep all of the SSI payment.

### **Reinstating Eligibility Without a New Application**

#### **What it does**

This provision enables people to regain eligibility for SSI cash payments or continued Medicaid coverage after a period of ineligibility without filing a new application.

#### **Cash payments**

A person who is eligible for continued Medicaid coverage under section 1619(b) can begin receiving SSI cash payments at any time earnings drop below the break-even point. (See glossary for a definition of break-even point.)

A person who is ineligible for continued Medicaid coverage because earnings exceed the threshold can regain eligibility for SSI cash payments if income drops below the break-even point within 12 months.

#### **Medicaid coverage**

A person who is ineligible for continued Medicaid coverage because earnings exceed the threshold can regain eligibility for Medicaid coverage if earnings drop below the threshold within 12 months.

# SPECIAL RULES FOR PEOPLE WHO ARE BLIND

## **SPECIAL RULES FOR PEOPLE WHO ARE BLIND**

### **How they help**

Work incentives, in general, are special rules that help people, who are blind and people with other disabilities, return to work or work for the first time. Some of the rules apply only to people who are blind. These rules are designed specifically to make it easier for people who are blind to go to work.

**NOTE:** Blindness is defined as central visual acuity of 20/200 or less in the better eye with best correction which has lasted or is expected to last a year or longer.

### **HOW SGA IS APPLIED TO PERSONS WHO ARE BLIND**

#### **How SGA is applied to blind beneficiaries who work**

The SGA level for beneficiaries who are blind changes each year to reflect changes in general wage levels. For example, in 1994 the SGA level for people who are blind is \$930 per month. This amount is higher than the SGA level of \$500 a month that applies to non-blind disabled workers.

#### **How SGA is applied to self-employed beneficiaries who are blind**

Self-employed persons who are blind are evaluated for SGA on the sole criterion of earnings. A separate evaluation of the time spent in the business is not made as it is for non-blind self-employed persons.

#### **How SGA is applied to blind beneficiaries who are age 55 or older**

After attaining age 55, if earnings exceed the SGA guidelines but the work done requires a lower level of skill and ability than that done before age 55, then benefits are only suspended, not terminated. Therefore, eligibility for Social Security benefits may continue indefinitely and benefits may be paid for any month earnings fall below SGA.

**NOTE:** Impairment-related work expense(s) deductions apply to blind SSDI beneficiaries who work.

## BLIND WORK EXPENSES

### What it does

Any earned income which a blind person uses to meet expenses needed to earn that income is not counted in determining SSI eligibility and the payment amount if the person is:

- o Under age 65; or
- o Age 65 or older and received SSI payments due to blindness (or received payments under a former state plan for aid to the blind) for the month before he or she attained age 65.

Because the blind work expenses work incentive is more advantageous, impairment-related work expenses do not apply to the blind SSI beneficiary who works.

NOTE: The expenses do not need to be related to the person's blindness.

### Examples of blind work expenses

Some examples of blind work expenses are:

- o Dog guide expenses;
- o Transportation to and from work;
- o Federal, state and local income taxes;
- o Social Security taxes;
- o Attendant care services;
- o Visual and sensory aids;
- o Translation of materials into braille;
- o Professional association fees; and
- o Union dues.

NOTE: The above listing is not all-inclusive.

**How blind work expenses are used to figure SSI payments**

Blind work expenses are used to reduce the amount of earnings which is counted when figuring the SSI payment amount. The following example shows how the blind work expense exclusion affects a person's SSI payments. This example uses the same circumstances as Example 2 under the SSI "Earned Income Exclusion," except this person also has blind work expenses of \$40 per month.

**EXAMPLE**

\$161	(Earned income)
<u>-20</u>	(General income exclusion)
\$141	
<u>-65</u>	(Earned income exclusion)
\$ 76	
<u>+2</u>	(1/2 of remaining earned income)
\$ 38	
<u>-40</u>	(Blind work expenses)
\$ 0	(Countable income)

\$446	(1994 Federal Benefit Rate)
<u>-0</u>	(Countable income)
\$446	(SSI payment)

**AVAILABLE INCOME**

\$161	(Earned income)
<u>+446</u>	(SSI)
\$607	(Total income)

## SPECIAL SERVICES PROVIDED

There are a number of services and products specifically designed to ensure that beneficiaries who are blind are informed of their rights and responsibilities under the Social Security programs.

### Social Security letters

Letters and other correspondence can be received by certified mail, by telephone or in person by notifying the Social Security Administration.

### Audio cassettes

The Red Book is available on a cassette tape. Also, available is the booklet "If You Are Blind...How Social Security and SSI Can Help."

### Publications available in braille

The Social Security Administration offers the following related publications (including the Red Book) in braille and are available upon request:

- o Disability (Publication No. 05-10029);
- o Supplemental Security Income (SSI) (Publication No. 05-11000);
- o Medicare (Publication No. 05-10043);
- o Understanding Social Security (Publication No. 05-10024)--A general but comprehensive overview of the Social Security program;
- o Working While Disabled - How Social Security Can Help (Publication No. 05-10095)--A simple explanation of the work incentives under Social Security and SSI for beneficiaries who want to work;
- o Working While Disabled (Publication No. 05-11017)--A guide to plans for achieving self-support (PASS) while receiving SSI;

- When You Get Social Security Disability Benefits - What You Need to Know (Publication No. 05-10153)--A guide to your rights and responsibilities while receiving Social Security disability benefits;
- When You Get SSI - What You Need to Know (Publication No. 05-11011)--A guide to your rights and responsibilities while receiving SSI; and
- If You Are Blind - How Social Security and SSI Can Help (Publication No. 05-10052)--A guide to the special work incentive rules that apply only to beneficiaries who are blind.

## GLOSSARY

### **Blind Work Expenses (SSI)**

Provides that any earned income of a person who is blind which is used to meet expenses reasonably attributable to earning the income is not counted in determining SSI eligibility and the payment amount.

### **Break-Even Point (SSI)**

The dollar amount at which total income precludes SSI payment. As countable income increases, SSI payments decrease until the person is no longer eligible for any SSI payment. A person's break-even point varies with his/her earned/unearned income mix, applicable income exclusions and State supplement eligibility, if any.

### **Continuing Disability Review (SSDI and SSI)**

The process of obtaining complete current information about the person's condition and any work activity to determine if the Social Security Administration should continue disability payments.

### **Countable Income (SSI)**

The amount of money remaining after certain exclusions are deducted from total income--used in determining SSI eligibility and payment amounts.

### **Deeming (SSI)**

The process of considering the income and resources of a parent or spouse to be the income and resources of the person who is applying for or receiving SSI benefits.

### **Extended Period of Eligibility (SSDI)**

Permits the reinstatement of SSDI benefits, without a new application, disability determination or waiting period, to those people whose cash benefits were previously ceased because of SGA, if they discontinue SGA within 36 months following the trial work period. They must still meet the disability requirements.

**Impairment-Related  
Work Expenses  
(SSDI and SSI)**

Applies to all SSDI and those SSI beneficiaries who are not blind. Provides that the cost to the person with a disability of certain items and services related to the impairment and needed to work (e.g., attendant care services, medical devices, etc.) can be deducted from earnings in determining if the person is engaging in SGA. The items and services may also be needed for normal daily activities. These same impairment-related work expenses can be deducted, under certain circumstances, from earned income to determine an SSI beneficiary's countable earned income.

**Income (SSI)**

SSI income is:

Earned income--money received from wages or self-employment earnings; unearned income--money received from other sources such as Social Security or Veteran's benefits pensions; in-kind income--free food, clothing or shelter; and deemed income--the portion of the income of a spouse or parent or sponsor of an alien which is used in computing the SSI payment amount. (In-kind and deemed income are types of unearned incomes.)

**Medicaid (Medi-Cal  
in California) (SSI)**

Medical coverage provided to a person by the state title XIX program.

**Medical  
Improvement  
Expected  
(SSDI and SSI)**

When a disability determination is made and it is determined that the disabling impairment may improve, the case is diaried for a future medical review (medical reexamination).

**Medicare (SSDI)**

Two-part health insurance program for eligible disabled and retired people:

- o Hospital Insurance under Medicare (HI Part A); and
- o Supplementary Medical Insurance under Medicare (SMI Part B).

**Medicare for People  
With Disabilities  
Who Work (SSDI)**

Allows certain people with disabilities who have returned to work to purchase continued Medicare coverage after premium-free Medicare ends due to work activity. The amount of the monthly premium will be the same as the premium amount charged uninsured people for Medicare hospital insurance and for medical insurance. States are required to pay hospital insurance premiums for qualified working individuals with disabilities.

**Plan for Achieving  
Self-Support (SSI)**

Applies only to the SSI program. Under a plan, a person is permitted to set aside income and/or resources over a reasonable period of time in order to obtain occupational training or education, purchase occupational equipment, establish a business, etc., thereby enabling the person to become financially self-supporting. The income and resources set aside under a plan are excluded from the SSI income and resource tests.

**Property Essential  
to Self-Support (SSI)**

Applies only to the SSI program. This provision allows full or partial exclusion of certain property necessary for self-support.

**Resources (SSI)**

Resources can be anything a person owns, such as a bank account, stocks, real property or personal property.

**Substantial Gainful  
Activity (SSDI and SSI)**

Performance of significant duties over a reasonable period of time in work for pay or profit (generally earnings averaging more than \$500 per month for non-blind--both SSDI and SSI). The SGA level for beneficiaries who are blind changes each year to reflect changes in general wage levels. For example, in 1994 the SGA level for people who are blind is \$930 per month.

**SSDI**

Used to denote title II Social Security Disability Insurance.

**SSI**

Used to denote title XVI Supplemental Security Income.

**Trial Work Period  
(SSDI)**

Begins with the month of entitlement; however, it cannot begin earlier than the month the application is filed. It ends after 9 months (not necessarily consecutive) of work for over \$200 per month (or over \$200 net earnings or over 40 hours of work per month if self-employed) by an SSDI beneficiary. For the 9 months to be accumulated, they must occur within a 60-month rolling period. The trial work period gives a beneficiary the opportunity to test work ability. A determination of the ability to perform SGA is not made until after the trial work period is completed.

## INTRODUCTION

This booklet focuses on the workings of two federally administered programs, both of which provide financial aid to individuals with disabilities. You apply to the Social Security Administration for benefits, and they will determine based on work history (among other disability related criteria) the benefit program(s) for which you are eligible.

The **Supplemental Security Income (SSI)** program is a federally-financed and administered program which provides a Minimum Income Level for individuals who are "aged", "blind" or "disabled", who have limited financial resources and little or no income. This essentially is a federal welfare program.

The SSI amount that you receive comes from federal and state money. The federal SSI monthly amount for 1994 is \$446 for an individual and \$699 for a couple. Pennsylvania, like approximately half of the states, adds a State funded supplement to this which brings the 1994 Pennsylvania SSI monthly maximum rate to \$478.40 for an individual, and \$717.70 for a couple.

Throughout this booklet the Pennsylvania SSI amounts are used. If you receive benefits in another state the amounts will be different, but the formulas used to figure deductions and reductions will remain the same. The rules governing the SSI and SSDI systems are federal rules and therefore are the same in every state. Some individual claims representatives may apply these rules more strictly than others. This booklet, however, explains the rules as they are written.

For people receiving Supplemental Security Income, please keep in mind that in order to remain eligible for benefits your resources (such as your bank account) must remain under \$2000 for an individual and under \$3000 for a couple. If your resources go over that amount in any month you will be charged with an overpayment, which means you will have to pay back the money you received in that month.

**Social Security Disability Insurance (SSDI)** on the other hand, is income from an insurance policy which you would have paid into while you were working as part of your Social Security payment. The amount that you would be eligible to receive in benefits is determined by the amount that you have paid in. With SSDI there is no resource limit, you may have any amount of money in the bank.

If the amount of SSDI for which you are eligible is less than the SSI maximum rate you may also receive SSI. The combination of the two checks will equal the SSI maximum rate.

## GENERAL INFORMATION

SMVSSDI

### 1. WHAT DO I NEED TO DO IF I GO TO WORK?

#### MOST IMPORTANT --> YOU MUST KEEP GOOD RECORDS

**KEEP YOUR OWN RECORDS** – Your Claims Representative at the Social Security Office keeps a file containing information about your benefits. IT IS EXTREMELY IMPORTANT THAT YOU ALSO KEEP RECORDS ABOUT YOUR DISABILITY BENEFITS, YOUR JOB, WAGES YOU RECEIVE, WORK HOURS, WHEN YOU WORKED, AND WHERE YOU WORKED. Doing this will make it easier for you if there is ever a problem with your benefits.

#### • KEEP ALL LETTERS AND NOTICES

Open each letter or notice right away, read them carefully, and be sure to do whatever is asked of you by the deadline that appears in the letter.

If something in the letter or notice is confusing to you call either your claims representative, whose name and phone number should be in the upper right hand corner of letters or notices received from the local Social Security Office, or call The MATRIX ADVOCACY PROJECT (215) 438-8200.

Keep all letters and notices that you get from Social Security together in one envelope, folder, or box. Do not throw away any letters or notices, you may need to look at that information again at a later date.

#### • KEEP COPIES OF EVERYTHING YOU SEND TO SOCIAL SECURITY.

Whenever you write to the Social Security Office be sure to put your name, the date of the letter, and Social Security Number on each letter (and each page of the letter) and all forms.

Keep a copy of all letters that you send to Social Security.

BEST COPY AVAILABLE

2255

1

2254

• **KEEP A WRITTEN RECORD OF ALL PHONE CALLS YOU MAKE TO SOCIAL SECURITY.**

Before making your call write down each of your questions to help you remember to ask them all.

During, or right after the call write down:

- the date and time you called;
- who you spoke to;
- what you asked; and,
- what you were told.

• **SOCIAL SECURITY HAS AN "800" NUMBER.**

The Social Security Administration has an "800" telephone number 1-800-772-1213 which we would suggest that you use only for asking questions about Social Security policies or procedures.

If you have a question about your specific case, or if you want to give Social Security information about your case, it is best to talk directly with your claims representative. The name and phone number of your claims representative should appear in the upper right hand corner of all letters that you receive from your local Social Security office.

If you have any other questions about how SSI or SSDI works, about the meaning of a letter you have received, or about how working will impact your benefits, call **The MATRIX ADVOCACY PROJECT** between 9:00 a.m. and 5:00 p.m., Monday through Friday (215) 438-8200.

• **WHEN YOU GO TO WORK, ALWAYS KEEP YOUR PAY STUBS** -- You will need to show exactly how much you earned, where you worked, and when you worked.

Social Security counts as **"EARNED INCOME"** all the checks/money you receive in the month you received them, even if the money was earned the month before.

• If you do not have pay stubs, a letter from your employer on letterhead stating how much you earned for the month should be sent in at the end of each month.

Social Security counts the **GROSS INCOME AMOUNT** in each month; the **gross amount** is the full amount of the check before taxes and other deductions are taken out, not the Net Amount: the net amount is the amount of money you get when you cash the check.

You must take in or mail the originals (not photo copies) of all pay stubs to your Claims Representative at Social Security. These must be given to your claims representative at the end of each month (Social Security must receive them by the tenth day of the next month).

- Make sure that you keep copies of all pay stubs.

**REMEMBER -- RESPOND QUICKLY TO ALL LETTERS FROM SOCIAL SECURITY WHEN THEY ARE ASKING YOU FOR INFORMATION, OR WHEN THEY ARE TELLING YOU THAT YOUR BENEFITS WILL BE CHANGED OR STOPPED. IF THE LETTER IS NOT CLEAR TO YOU, GET SOMEONE TO HELP YOU UNDERSTAND IT RIGHT AWAY!**

**SUPPLEMENTAL SECURITY INCOME (SSI)**

IN ALL SITUATIONS WHERE THE SSI CHECK IS REDUCED DUE TO INCOME RECEIVED, THE CHECK EFFECTED WILL BE THE SECOND MONTH AFTER THE MONTH WHEN THE INCOME IS RECEIVED, (unless otherwise stated). THIS MEANS: IF YOU EARN MONEY IN JANUARY YOUR MARCH CHECK WILL BE EFFECTED.

**2. WHAT IS UNEARNED INCOME AND HOW DOES IT AFFECT MY SSI CHECK?**

• **UNEARNED INCOME** is any money that you have received but did not work for, other than your SSI check. This could include such things as:

- Social Security Disability Insurance (SSDI)
- Veterans Benefits
- Unemployment Benefits
- State Disability

- The first \$20 of unearned income received in any month will not reduce your SSI check at all, this is your "GENERAL DEDUCTION".
- Unearned income over \$20 in any month reduces your SSI check by \$1 for every \$1 of unearned income you receive.

**Example #1:** This person gets \$305 a month from the Veterans Administration (UNEARNED INCOME), his SSI check would be effected like this:

\$305.00	(Unearned Income - VA Benefits)
-20.00	(minus the twenty dollar "General Deduction")
\$285.00	(equals "Countable Income")
\$478.40	(Pennsylvania SSI maximum rate 1994)
-285.00	(minus the countable income figured above)
\$193.40	(equals the SSI check amount for that month)

Keep in mind that since the check effected is two months later, if your income is not steady you must budget carefully. In the month you receive earnings you will have your SSI check and the income, but two months later you may only have the reduced SSI check.

### 3. WHAT IS EARNED INCOME AND HOW DOES IT AFFECT MY SSI CHECK?

- **EARNED INCOME** is money you have received for working or from self-employment. (This pay could be from work at your job or money earned at a workshop)
- Social Security counts your **GROSS EARNED INCOME**, which is your pay before any taxes or other deductions have been taken out.
- Earnings are counted in the month you are paid, even if some or all of it was earned the month before.

- The first \$65 of gross earned income will not reduce your SSI check, this is your "EARNED INCOME DEDUCTION".
- Gross earned income over \$65 reduces the amount of your SSI check by \$1 for every \$2 of income (\$1 is subtracted from your check for every \$2 you make over \$65).
- If you have no unearned income but you do have earned income, the \$20 General Deduction can then be added to the \$65 Earned Income Deduction giving you an \$85 total deduction.

This means that the first \$85 of gross earned income (before any taxes or other deductions are taken out) received in any month will not reduce your SSI check at all.

Once you receive over \$85 in gross earnings in a month, your check will begin to be reduced. It will be a \$1 reduction in the amount of your check for every \$2 of earnings over \$85.

**Example #2:** This individual makes \$305 in a month from a job (EARNED INCOME), and has no unearned income. Her SSI check would be effected like this:

\$305.00	(Earned Income - Wages)
-85.00	(minus the total deduction, \$20 + \$65)
\$220.00	
+ 2	(\$1 reduction for each \$2 in earnings)
\$110.00	(equals "Countable Income")
\$478.40	(Pennsylvania SSI maximum rate 1994)
-110.00	(minus the countable income figured above)
\$368.40	(equals the SSI check for that month)

The check that will be effected is two months later so be very sure to budget your money properly so that you have enough money to pay your rent in two months.

BEST COPY AVAILABLE

**4. IF I RECEIVE BOTH UNEARNED AND EARNED INCOME IN THE SAME MONTH, HOW IS MY SSI CHECK EFFECTED?**

- Countable income has to be figured separately for unearned income (using the \$20 General Deduction), then the earned income (using the \$65 Earned Income Deduction), and then add the two figures.

**Example #3:** An individual receives \$220 a month from Social Security Disability insurance (which is **UNEARNED INCOME**), and makes \$315 a month from a job (which is **EARNED INCOME**) his SSI check would be effected like this:

Step 1	-	\$220.00	(Unearned Income - SSDI)
		- 20.00	(minus the twenty dollar General Deduction)
		\$200.00	(equals "Countable Unearned Income")
Step 2	-	\$315.00	(Earned Income - Wages)
		- 65.00	(minus the \$65 Earned Income Deduction)
		\$250.00	
		\$250.00	(from above)
		+ 2	(\$1 reduction for each \$2 in earnings)
		\$125.00	(equals the "Countable Earned Income")
Step 3	-	\$200.00	(Countable Unearned Income)
		+ 125.00	(Countable Earned Income)
		\$325.00	(Equals the Total Countable Income)
Step 4	-	\$478.40	(Pennsylvania SSI maximum rate 1994)
		- 325.00	(minus the total countable income)
		\$153.40	(equals the amount of the SSI check)

**5. WHEN MUST I MAKE SOCIAL SECURITY AWARE OF MY INCOME?**

- At the end of any month in which you have Unearned Income over \$20, that Social Security does not already know about, you are to report it to your Claims Representative at Social Security. You will need to tell that person.

the source of the income, and  
the amount of the income.

- If you make over \$85 of Earned Income (gross wages) in any month (or over \$65 if you also have Unearned Income), you should call your Social Security Claims Representative and tell them that you are working and you will send your pay stubs at the end of the month.

Originals of pay stubs should be taken in or mailed after the last payday of each month.

- If your pay checks do not have a "stub" to send in, Social Security will accept a letter from your employer on the employer's letterhead which states your gross earnings for that month. This will have to be done each month.

Social Security must have the information on your wages by the 10th day of the following month.

The SSI check effected by your income will be the check received the second month following the month you received the earnings.

- This means: if you have Earned Income over \$85 in January, your March check will be the one effected.

Keeping your Claims Representative informed of all income will help you avoid an overpayment which you will have to pay back.

**6. HOW MUCH CAN I MAKE BEFORE I STOP GETTING AN SSI CHECK?**

- Your SSI check will continue to be reduced by \$1 for every \$2 you earn over \$85 until your earnings reach what Social Security calls the **BREAK EVEN POINT**. At that time, you will no longer receive an SSI check. The Breakeven Point is calculated by reversing the formula used to figure deductions. The 1994 Pennsylvania Breakeven Point is figured as follows:

BEST COPY AVAILABLE

2261

2260

\$ 478.40 = Full SSI check each month (Pennsylvania 1994)  
 x 2 (\$2 for every \$1 that would have been reduced)  
 \$ 956.80  
 + 85.00 = General Deduction + Earned Income Deduction  
**\$ 1041.80 = 1994 PENNSYLVANIA BREAK EVEN POINT**

- If you have Unearned Income such as SSDI, or receive free room and board, the "Breakeven Point" for you will be lower.

**Example #4:**

This person received \$120 in Unearned Income for the month which has reduced her SSI check to \$378.40. She does not get the \$20 General Deduction since this would have already been subtracted from the unearned income, so she gets only the \$65 Earned Income Deduction. Her Breakeven Point would be calculated as follows:

\$ 378.40 (SSI after Unearned Income reduction)  
 x 2  
 \$ 756.80  
 + 65.00 (Earned Income Deduction)  
**\$ 821.80 (her Breakeven Point)**

- If your earnings reach or go over the Breakeven Point, it means you will stop getting your checks beginning the month of the earnings, not two months ahead like the other deductions related to these work incentives.
- As long as you continue to get at least a \$1 SSI check, you will receive your full Medicaid benefits. Medicaid is the medical coverage you receive, which in Pennsylvania is Medical Assistance, Health Pass, or an HMO which may be offered instead of Medical Assistance. The Medicaid program is administered by the State.
- See Sections 9 (on PASS) and 10 (on IRWE) below for descriptions of allowable deductions to lower your Countable Income.

**7. DO I LOSE MY MEDICAID WHEN MY WAGES ARE OVER THE BREAK EVEN POINT AND I NO LONGER GET AN SSI CHECK?**

- You do not necessarily lose your medical coverage when your income causes you to stop getting a check, you may be eligible for an SSI category called 1619(b).
- To be eligible for 1619(b) you must have stopped getting your SSI check due to earnings (you did not lose your check due to recovery from your disability or excess resources).
- In most cases, if you have Medicaid before going to work, you can keep your Medicaid after you earn over the Breakeven Point as long as:
  - you continue to have a disability and need Medicaid in order to work; or,
  - your employer does not offer medical coverage, or comparable medical coverage, or you cannot afford to pay for it; or,
  - you have used your Medicaid in the past 12 months and will have a need to use it in the next 12 months.
- You are eligible for continued medical benefits under 1619(b) as long as you meet the above criteria, and your income is not more than \$17,479.60/yearly (which is \$1,464.10/month or \$388.12/week). This is referred to as the Pennsylvania "THRESHOLD AMOUNT", each state has it's own Threshold Amount. If you have high medical costs a higher threshold may be set for you.
- As long as you continue receiving your Medicaid, your SSI check will be started again any time your income drops below the Breakeven Point.

BEST COPY AVAILABLE

This is called **REINSTATEMENT**, you will not have to apply again, just notify your Claims Representative at the end of each month about your income.

For Reinstatement to occur you must continue to notify your Claims Representative of your income at the end of each month.

### 8. WHAT HAPPENS IF MY SSI CHECK AND MEDICAID IS STOPPED DUE TO MY EARNINGS AND I GET SICK AND CAN NOT WORK?

● If within one year of your losing both your SSI check and Medicaid your gross earned income drops below the Breakeven Point or you have no income at all due to losing your job, Social Security will reinstate you. This means they will start your SSI check without you having to apply again.

● If you lose your job more than one year after all benefits have stopped, you will have to reapply for benefits through the same process you used when you first applied.

### 9. WHAT IS "P.A.S.S." AND HOW CAN IT HELP ME WITH MY VOCATIONAL GOALS?

● P.A.S.S. -- Plan for Achieving Self-Support -- is a way to put away income (other than your SSI check) to help you reach a vocational goal while not having that money be considered as countable income or resources.

● The purpose of a PASS plan is to help you move toward being financially self-sufficient by letting you put away money to help you achieve your vocational goal(s).

● PASS allows you to save income and/or resources for a vocational goal such as: education, vocational training, starting a business, buying tools, uniforms, transportation, hiring a job coach, etc.

- PASS plans must have a specific vocational goal that you are capable of reaching.
- PASS plans must be written and designed especially for you and your vocational goal(s).
- PASS plans must be approved by Social Security.
- PASS plans will be reviewed from time to time by Social Security, to see if you are doing what the PASS plan says you will do.
- PASS plans can reduce or eliminate countable income that would usually cause your SSI check to be reduced or stopped.
- PASS plans are first approved for 18 months. An 18 month extension may be granted if needed, and another extension of 12 months may be granted after that (for a total of 48 months maximum).
- PASS plans must show how the money and/or resources will be used.
- Money saved in a PASS is not counted as a resource even if it is over the \$2000 limit for an individual.
- PASS money should be kept in a separate bank account so that the money saved in a PASS is easily identified as separate from other resources.
- When the PASS money is spent you must keep all receipts to show that the money was spent for those things approved in the PASS.

**Example #5:** This man has a PASS plan which says he will pay \$100 a month to hire a job coach. This is what would happen:

\$ 285.00	(gross earned income)
- 85.00	(General and Earned Income Deductions)
\$ 200.00	
+ 2	
\$ 100.00	(Countable Income before PASS)
- 100.00	(PASS deduction)
\$ 0.00	(Countable Income)

Because there is no countable income this person would receive his full SSI check. Note that the PASS deduction is from Countable Income, not from gross earnings.

**10. HOW CAN MY DISABILITY-RELATED EXPENSES BE USED TO LOWER THE COUNTABLE INCOME THAT REDUCES MY SSI CHECK?**

- I.R.W.E.'s -- Impairment Related Work Expenses -- are expenses that can be deducted from earned income to reduce the countable earned income that would otherwise reduce your SSI check.
- IRWE's apply to you if you pay for work related expenses, which due to your physical or mental disability are necessary in order for you to be able to work.
- Payments must be reasonable and paid by you in cash, checks, or money orders, and at the end of the month you send in the receipts to your Claims Representative.
- Only work related expenses which are not reimbursable from Medicaid, Vocational Rehabilitation, or other sources are usable under IRWE.
- There is no time limit on using an IRWE as long as it is needed in order to work. This means you can use IRWE's as long as you are receiving SSI and are working.

- IRWE's must be approved by Social Security.

**Example #6:** This person has an earned income of \$285 this month and has Impairment Related Work Expenses of \$100, this is how her SSI check would be effected:

\$ 285.00	(gross earned income)
- 85.00	(general and earned income deductions)
\$ 200.00	
- 100.00	(IRWE deduction)
\$ 100.00	
+ 2	
\$ 50.00	(Countable Income)

This person's SSI check would then be reduced by \$50. Note that the deduction occurs before dividing by two, this is different from PASS. In effect this means that you get credit for one-half of your work related expenses.

**11. WHAT HAPPENS TO MY SSI CHECK IF I HAVE TO GO INTO THE HOSPITAL FOR A MONTH OR MORE?**

- If you go into the hospital and your doctor expects you to be in the hospital for a full calendar month or more (all the days in a month), your Social Security Claims Representative at the local office must be contacted right away and they will need a letter from your doctor saying how long you are expected to be in the hospital.
- If you do this, you will continue to get your full SSI check for up to 2 months while you are in the hospital. This will help you to keep paying your rent.
- After two months your check will be reduced to \$30 a month until you come out of the hospital.
- If you do not notify Social Security your SSI check will be reduced to \$30 for each full calendar month you are in the hospital.

- When you go into the hospital you are not likely to be thinking about notifying Social Security, therefore, it would be helpful to you if the people close to you know about this rule.

## SOCIAL SECURITY DISABILITY INSURANCE

(SSDI)

SSDI HAS TOTALLY DIFFERENT WORK INCENTIVE RULES FROM SSI. WITH SSDI, THERE IS NO GRADUAL REDUCTION OF YOUR CHECK. YOU WILL EITHER GET YOUR ENTIRE SSDI CHECK OR NO CHECK AT ALL. HERE IS HOW IT WORKS:

SSDI

### 12. WHAT IS A TRIAL WORK PERIOD IN SSDI?

- On SSDI you are entitled to a 9-MONTH TRIAL WORK PERIOD which allows you to return to work, and get re-adjusted to working while still receiving your entire SSDI check.
  - The nine months of a Trial Work Period do not have to be in a row to be counted. They can be stretched out over time. You have nine months of trial work period available over a five year period.
- The computer will look back five years from the current month and count how many Trial Work Months have been used. It will do that every month by adding the current month and dropping the oldest month.
- After January of 1990, any month your gross earned income is \$200 or more, that month will be counted as a trial work month. (Before January 1990 any month when your gross earned income was \$75 or more count as trial work month.)
  - Be aware of the fact that the amount of money you earn during the Trial Work Period, though it will not effect your check, will be one of the factors which will be used during a Disability Review to help determine if you are still disabled.

- During the trial work period, you will have the wages you have earned, your Medicare, and will continue to receive your SSDI check.
- After you have used your Nine Month Trial Work Period, Social Security will schedule you for a disability review, sometime within the next three months.
- If during this disability review, Social Security decides you are **no longer disabled**, you will receive 3 more months of SSDI checks and Medicare and then benefits will end. (see question 19 on appeals)
- If Social Security decides you are **still disabled** you get an EXTENDED PERIOD OF ELIGIBILITY.

### 13. WHAT IS THE EXTENDED PERIOD OF ELIGIBILITY IN SSDI?

SSDI

- The Extended Period Of Eligibility in SSDI begins immediately after you have completed your 9 months of trial work. It lasts for 36 consecutive months, whether you work or not.
  - During this 36-month period, you will receive your full SSDI check for each month when your gross earned income is below **SUBSTANTIAL GAINFUL ACTIVITY (SGA)**.  
Substantial Gainful Activity is most often considered to be \$500.
- On an individual basis, however, Substantial Gainful Activity can be set lower, if Social Security believes that you are keeping your income low just to avoid losing your SSDI.
- During the Extended Period of Eligibility when your monthly income is above \$500, you will not receive your SSDI check.

The SSDI check which will be effected by this income will be the second month after the month in which the income was received. If you are in your Extended Period of Eligibility, and you earn \$600 in January, you will not receive a March check.

If you earn under \$500 in the next month you will then receive your check for that month.

- You keep your Medicare throughout your 36 month Extended Period of Eligibility, whether you are receiving a check or not.
- See Section 14 below for a deduction that may be used to reduce countable income and enable you to continue to get your SSDI check during the Extended Period Of Eligibility.
- The first month after your 36-month Extended Period of Eligibility has ended when your gross earnings are over \$500 (SGA), your SSDI ends.

This could be the first month after the Extended Period of Eligibility ends or the two-hundredth month.

If you are again in a position where you cannot work, after you stop receiving benefits, and you are still considered disabled, you can re-apply for benefits.

If you begin to receive SSDI again after re-application, you will have a new Nine Month Trial Work Period available to you.

#### 14. CAN I USE IMPAIRMENT-RELATED WORK EXPENSES WITH SSDI?

- I.R.W.E.'s -- Impairment Related Work Expenses -- are expenses that can be deducted from gross earnings to reduce countable income.

- IRWE's apply to you if you pay for work related expenses which are necessary due to your physical or mental disability in order for you to be able to work.

- You can use IRWE's to reduce the amount of gross earned income counted as long as what is being bought is needed for you to be able to work.

- IRWE's must be approved by the Social Security Office.

- Expenses must be reasonable and be paid by you in cash, checks, or money orders and then receipts submitted to your Claima Representative at the end of the month.

- Only work related expenses which are not reimbursable from Medicare, Vocational Rehabilitation, or other sources are usable under IRWE.

- IRWE's have two uses for people on SSDI:

It can reduce countable income to under \$200 in order to not use a trial work month; or,

Keep income under \$500 enabling you to continue to receive your SSDI check during your Extended Period Of Eligibility.

Money is not reimbursed to you, the lowering of countable income is the only effect the IRWE will have.

- For people receiving SSDI, IRWE's are deducted 100% from gross earned income.

#### Example #1:

This person is on SSDI and in the Extended Period of Eligibility. This month she has an income of \$585, and has \$100 of Impairment Related Work Expenses. The SSDI check would be effected like this:

BEST COPY AVAILABLE

2271

\$ 585.00 (gross earned income)  
 - 100.00 (IRWE deduction)  
 \$ 485.00 (Countable Income)

Countable income is under \$500, so she gets her full SSDI check.

SSDI

**15. WHAT IS EXTENDED MEDICARE?**

- After you have completed your Extended Period of Eligibility, the next month that you gross over \$500 you will no longer get your SSDI check, but you will get 3 more months of extended Medicare coverage.
- After that three month period, Medicare Buy-In allows you to buy Medicare coverage for a monthly premium, if you are under 65 and remain disabled.

**ISSUES EFFECTING BOTH SSI and SSDI**

**16. WILL WORKING RESULT IN A DISABILITY REVIEW?**

SSI/SSDI

- If you are getting SSI and start making \$500 gross earned income or more, you are then in a category called 1619(a). The effect this will have on you is that Social Security will do a disability review on your case within 12 months.
- If you are getting SSDI a disability review will be done at the end of your Trial Work Period.
- Even if you do not work Social Security will do periodic disability reviews of your case, for most people this will be every 3 to 4 years.

**17. WHAT IF SOCIAL SECURITY SAYS I AM NO LONGER DISABLED?**

SSI/SSDI

- You can appeal the decision and if you are still receiving treatment or rehabilitation services you have a chance of the decision being overturned.
- If you are receiving vocational rehabilitation services and continuing to do so will improve your chances of employment and removal from SSI/SSDI, you may continue to receive your check under Section 301, even though Social Security says you are recovered. In this case you can keep your benefits until you complete the approved vocational rehabilitation program.

SSI/SSDI

**18. WHAT IF I AM HOMELESS?**

- The Social Security Office will make special arrangements to have a homeless person's check sent to a third party. The third party can be a relative, friend, or organization.

- If you are living in a public shelter you may receive a full SSI check for up to 6 months within any 9 month period. This rule is to enable you to save money for permanent housing.

**19. WHAT IF I GET A LETTER FROM SOCIAL SECURITY SAYING MY SSI OR SSDI WILL BE CHANGED?**

SSI/SSDI

**YOU HAVE THE RIGHT TO APPEAL ANY DECISION THAT SOCIAL SECURITY MAKES EFFECTING YOUR BENEFITS!**

- This includes denial of benefits, reduction of benefits, termination of benefits, charge of overpayment, or any other action effecting your benefits that you disagree with.

- You have 60 days from the time you receive the notice from Social Security to file your appeal.
- If you appeal within 10 days of receiving a notice from Social Security, your benefits will not be changed until the appeal is ruled upon.
- If you are charged with an overpayment you may be able to get a Waiver of the Overpayment ruling (not have to pay it back).
  - This can be done if the overpayment was not your fault; and, if it would be a financial hardship for you to pay it back.
  - There is no time limit on filing a Waiver of Overpayment.
  - If money is already being taken out of your check you can still file for a waiver of the overpayment.
  - If the waiver is granted money will stop being taken out of your check, but you will not get back what has already been taken out.
- The most that can be taken out of your check without your permission is 10% of the total check. If the check is \$478.40, the most that can be taken out is \$47.84.

GLOSSARY

**APPEALS** - The process of requesting that Social Security reconsiders a decision they have made, which will effect your benefits. You will have to provide information explaining why they should re-think their original decision. (page 19)

**BREAK-EVEN POINT** - This is the amount of monthly income you can make on SSI when you will no longer be eligible to receive your SSI check. (page 7-8)

**CLAIMS REPRESENTATIVE** - The individual at the local Social Security office who has been assigned to handle your case.

**COUNTABLE INCOME** - The amount of your income, after appropriate deductions, which will reduce your check. (page 3-7)

**DISABILITY REVIEW** - A process where Social Security reviews your situation to determine if you continue to be eligible to receive benefits. This is done usually every 3-4 years. (page 18)

**EARNED INCOME** - Money received from working. This can be at a job, in self-employment, or from working in an agency sponsored workshop. (page 4-5)

**EARNED INCOME DEDUCTION** - The first \$65 that you can receive in a month from earned income which will not reduce your SSI check at all. (page 4-5)

**EXTENDED PERIOD OF ELIGIBILITY** - The thirty-six month period following the completion of the 9-month Trial Work Period for people on SSDI. (page 15-16)

**EXTENDED MEDICARE** - Three additional months of Medicare that you are given after no longer being eligible for SSDI. (page 18)

2276

2277

**GENERAL DEDUCTION** - The first \$20 that you can receive in unearned income in a month which will not reduce your SSI check. If there is no unearned income this can be applied to earned income in addition to the Earned Income Deduction. (page 3-5)

**GROSS INCOME** - Income amount before any deductions for taxes, insurance, social security, and other such deductions are made.

**IRWE** - Impairment Related Work Expenses (page 12-13, 16-17)

**OVERPAYMENT** - Receiving benefits for months when you are not eligible due to unreported income or resources. This is money that will have to be paid back to Social Security.

**PASS (SSI)** - Plan for Achieving Self Support. (page 10-12)

**REINSTATEMENT** - When you are placed back on benefits without having to reapply for them. (page 9-10)

**1619(a)** - A category of SSI when you begin to have gross earnings over \$500 Social Security will schedule you for a Disability Review within twelve months. (page 18)

**1619(b)** - Program for extended Medicaid benefits for SSI recipients. (page 9)

**SECTION 301** - This allows you to continue to receive benefits while you are in an approved vocational rehabilitation program until you complete that program, even after you have been determined to be no longer disabled. (page 19)

**SUBSTANTIAL GAINFUL ACTIVITY (SGA)** - An income amount between \$300 and \$500, over which SSDI beneficiaries do not receive a check when you are in the Extended Period of Eligibility. The figure most often used for SGA is \$500. (page 15-16)

**THRESHOLD AMOUNT (SSI)** - The amount of income over which you are no longer eligible for 1619(b) extended Medicaid benefits. (page 9)

**TRIAL WORK PERIOD** - For SSDI beneficiaries only, any month where you earn over \$200 is considered a trial work month. You have available to you nine trial work months in a rolling five year period. (page 14-15)

**UNEARNED INCOME (SSI)** - Income received without having worked for it, from such sources as Veterans Benefits, Retirement, or other such sources. (page 3-4)

**WAIVER OF OVERPAYMENT** - Appeal process for the reconsideration of a charge of overpayment. (page 20)

2279

**11.11 Anterior poliomyelitis.**

With:

- A. Persistent difficulty with swallowing or breathing;
- or
- B. Unintelligible speech; or
- C. Disorganization of motor function as described in 11.04B.

**11.12 Myasthenia gravis.**

With:

- A. Significant difficulty with speaking, swallowing, or breathing while on prescribed therapy; or
- B. Significant motor weakness of muscles of extremities on repetitive activity against resistance while on prescribed therapy.

**11.13 Muscular dystrophy with disorganization of motor function as described in 11.04B.****11.14 Peripheral neuropathies.**

With disorganization of motor function as described in 11.04B, in spite of prescribed treatment.

**11.15 Tabes dorsalis.**

With:

- A. Tabetic crises occurring more frequently than once monthly; or
- B. Unsteady, broad-based or ataxic gait causing significant restriction of mobility substantiated by appropriate posterior column signs.

**11.16 Subacute combined cord degeneration (pernicious anemia) with disorganization of motor function as described in 11.04B or 11.15B, no significantly improved by prescribed treatment.****11.17 Degenerative disease not listed elsewhere such as Huntington's chorea, Friedreich's ataxia, and spino-cerebellar degeneration.**

With:

- A. Disorganization of motor function as described in 11.04B or 11.15B; or
- B. Chronic brain syndrome. Evaluate under 12.02.

**11.18 Cerebral trauma:**

Evaluate under the provisions of 11.02, 11.03, 11.04 and 12.02, as applicable.

**11.19 Syringomyelia.**

With:

- A. Significant bulbar signs; or
- B. Disorganization of motor function as described in 11.04B.

**12.00 MENTAL DISORDERS**

The mental disorders listings in 12.00 of the Listing of Impairments will only be effective for 3 years unless extended by the Secretary or revised and promulgated

again. Consequently, these listings will be effective on August 28, 1988.

**A. Introduction:**

The evaluation of disability on the disorders requires the documentation of a terminable impairment(s) as well as a certain degree of limitation such impairment(s) the individual's ability to work and whether the conditions have lasted or are expected to last for a period of at least 12 months. The listings for mental disorders are arranged in eight diagnostic categories: organic mental disorders (12.02); schizophrenia and other psychotic disorders (12.03); organic mental disorders (12.04); mental retardation and anxiety related disorders (12.06); somatoform disorders (12.07); personality disorders (12.08); addiction disorders (12.09). Each diagnostic listing 12.05 and 12.09, consists of a set of findings (paragraph A criteria), one or more of which must be met, and which, if met, lead to additional restrictions (paragraph B criteria) which must also be met. There are additional findings (paragraph C criteria) in listings 12.05 and 12.09 discussed therein.

The purpose of including the criteria in paragraphs A and B of the listings for mental disorders is to medically substantiate the presence of a mental disorder. Specific signs and symptoms under any of the listings 12.02 through 12.09 cannot be considered in isolation from the description of the mental disorder contained at the beginning of each listing category. Impairments should be analyzed and reviewed under the mental category(ies) which is supported by the individual's clinical findings.

The purpose of including the criteria in paragraphs B and C of the listings for mental disorders is to describe those functional limitations associated with mental disorders which are incompatible with the ability to work. The restrictions listed in paragraphs B and C must be the result of the mental disorder which is manifested by the clinical findings outlined in paragraph A. The criteria included in paragraphs B and C of the listings for mental disorders have been chosen because they represent functional areas deemed essential to work. An individual who is severely limited in these areas as the result of an impairment identified in paragraph A is presumed to be unable to work.

The structure of the listing for substance addiction disorders, listing 12.09, is different from that for the other mental disorder listings. Listing 12.09 is structured as a reference listing; that is, it will only serve to indicate which of the other listed mental or physical impairments must be used to evaluate the behavioral or physical changes resulting from regular use of addictive substances.

The listings for mental disorders are so constructed that an individual meeting or equaling the criteria could not reasonably be expected to engage in gainful work activity.

Individuals who have an impairment with a level of

severity which does not meet the criteria of the listings for mental disorders may or may not have the residual functional capacity (RFC) which would enable them to engage in substantial gainful work activity. The determination of mental RFC is crucial to the evaluation of an individual's capacity to engage in substantial gainful work activity when the criteria of the listings for mental disorders are not met or equaled but the impairment is nevertheless severe.

RFC may be defined as a multidimensional description of the work-related abilities which an individual retains in spite of medical impairments. RFC complements the criteria in paragraphs B and C of the listings for mental disorders by requiring consideration of an expanded list of work-related capacities which may be impaired by mental disorder when the impairment is severe but does not meet or equal a listed mental disorder. (While RFC may be applicable in most claims, the law specifies that it does not apply to the following special claims categories: disabled title XVI children below age 18, widows, widowers and surviving divorced wives. The impairment(s) of these categories must meet or equal a listed impairment for the individual to be eligible for benefits based on disability.)

#### **B. Need for Medical Evidence:**

The existence of a medically determinable impairment of the required duration must be established by medical evidence consisting of clinical signs, symptoms and/or laboratory or psychological test findings. These findings may be intermittent or persistent depending on the nature of the disorder. Clinical signs are medically demonstrable phenomena which reflected specific, abnormalities of behavior, affect, thought, memory, orientation, or contact with reality. These signs are typically assessed by a psychiatrist or psychologist and/or documented by psychological tests. Symptoms are complaints presented by the individual. Signs and symptoms generally cluster together to constitute recognizable clinical syndromes (mental disorders). Both symptoms and signs which are part of any diagnosed mental disorder must be considered in evaluating severity.

#### **C. Assessment of Severity:**

For mental disorders, severity is assessed in terms of the functional limitations imposed by the impairment. Functional limitations are assessed using the criteria in paragraph B of the listings for mental disorders (descriptions of restrictions of activities of daily living; social functioning; concentration, persistence, or pace; and ability to tolerate increased mental demands associated with competitive work). Where "marked" is used as a standard for measuring the degree of limitation, it means more than moderate, but less than extreme. A marked limitation may arise when several activities or functions are impaired or even when only one is impaired, so long as the degree of limitation is such as to seriously interfere with the ability to function independently, appropriately and effectively. Four areas are considered.

1. *Activities of daily living* including adaptive activities such as cleaning, shopping, cooking, taking public

transportation, paying bills, maintaining a residence, caring appropriately for one's grooming and hygiene, using telephones and directories, using a post office, etc. In the context of the individual's overall situation, the quality of these activities is judged by their independence, appropriateness and effectiveness. It is necessary to define the extent to which the individual is capable of initiating and participating in activities independent of supervision or direction.

"Marked" is not the number of activities which are restricted but the overall degree of restriction or combination of restrictions which must be judged. For example, a person who is able to cook and clean might still have marked restrictions of daily activities if the person were too fearful to leave the immediate environment of home and neighborhood, hampering the person's ability to obtain treatment or to travel away from the immediate living environment.

2. *Social functioning* refers to an individual's capacity to interact appropriately and communicate effectively with other individuals. Social functioning includes the ability to get along with others, e.g., family members, friends, neighbors, grocery clerks, landlords, bus drivers, etc. Impaired social functioning may be demonstrated by a history of altercations, evictions, firings, fear of strangers, avoidance of interpersonal relationships, social isolation, etc. Strength in social functioning may be documented by an individual's ability to initiate social contacts with others, communicate clearly with others, interact and actively participate in group activities, etc. Cooperative behaviors, consideration for others, awareness of others' feelings, and social maturity also need to be considered. Social functioning in work situations may involve interactions with the public, responding appropriately to persons in authority, e.g., supervisors, or cooperative behaviors involving coworkers.

"Marked" is not the number of areas in which social functioning is impaired, but the overall degree of interference in a particular area or combination of areas of functioning. For example, a person who is highly antagonistic, uncooperative or hostile but is tolerated by local storekeepers may nevertheless have marked restrictions in social functioning because that behavior is not acceptable in other social contexts.

3. *Concentration, persistence and pace* refer to the ability to sustain focused attention sufficiently long to permit the timely completion of tasks commonly found in work settings. In activities of daily living, concentration may be reflected in terms of ability to complete tasks in everyday household routines. Deficiencies in concentration, persistence and pace are best observed in work and work-like settings. Major impairment in this area can often be assessed through direct psychiatric examination and/or psychological testing, although mental status examination or psychological test data alone should not be used to accurately describe concentration and sustained ability to adequately perform work-like tasks. On mental status examinations, concentration is assessed by tasks such as having the individual subtract serial sevens from 100. In psychological tests of intelli-

gence or memory, concentration is assessed through tasks requiring short-term memory or through tasks that must be completed within established time limits. In work evaluations, concentration persistence, and pace are assessed through such tasks as filing index cards, locating telephone numbers, or disassembling and reassembling objects. Strengths and weaknesses in areas of concentration can be discussed in terms of frequency of errors, time it takes to complete the task, and extent to which assistance is required to complete the task.

4. *Deterioration or decompensation in work or work-like settings* refers to repeated failure to adapt to stressful circumstances which cause the individual either to withdraw from that situation or to experience exacerbation of signs and symptoms (i.e., decompensation) with an accompanying difficulty in maintaining activities of daily living, social relationships, and/or maintaining concentration, persistence, or pace (i.e., deterioration which may include deterioration of adaptive behaviors). Stresses common to the work environment include decisions, attendance, schedules, completing tasks, interactions with supervisors, interactions with peers, etc.

#### D. Documentation:

The presence of a mental disorder should be documented primarily on the basis of reports from individual providers, such as psychiatrists and psychologists, and facilities such as hospitals and clinics. Adequate descriptions of functional limitations must be obtained from these or other sources which may include programs and facilities where the individual has been observed over a considerable period of time.

Information from both medical and nonmedical sources may be used to obtain detailed descriptions of the individual's activities of daily living; social functioning; concentration, persistence and pace; or ability to tolerate increased mental demands (stress). This information can be provided by programs such as community mental health centers, day care centers, sheltered workshops, etc. It can also be provided by others, including family members, who have knowledge of the individual's functioning. In some cases descriptions of activities of daily living or social functioning given by individuals or treating sources may be insufficiently detailed and/or may be in conflict with the clinical picture otherwise observed or described in the examinations or reports. It is necessary to resolve any inconsistencies or gaps that may exist in order to obtain a proper understanding of the individual's functional restrictions.

An individual's level of functioning may vary considerably over time. The level of functioning at a specific time many seem relatively adequate or, conversely, rather poor. Proper evaluation of the impairment must take any variations in level of functioning into account in arriving at a determination of impairment severity over time. Thus, it is vital to obtain evidence from relevant sources over a sufficiently long period prior to the date of adjudication in order to establish the individual's impairment severity. This evidence should include treatment notes, hospital discharge summaries, and work evalua-

tion or rehabilitation progress notes if these are available.

Some individuals may have attempted to work or may actually have worked during the period of time pertinent to the determination of disability. This may have been an independent attempt at work, or it may have been in conjunction with a community mental health or other sheltered program which may have been of either short or long duration. Information concerning the individual's behavior during any attempt to work and the circumstances surrounding termination of the work effort are particularly useful in determining the individual's ability or inability to function in a work setting.

The results of well-standardized psychological tests such as the Wechsler Adult Intelligence Scale (WAIS), the Minnesota Multiphasic Personality Inventory (MMPI), the Roschach, and the Thematic Apperception Test (TAT), may be useful in establishing the existence of a mental disorder. For example, the WAIS is useful in establishing mental retardation, and the MMPI, Rorschach, and TAT may provide data supporting several other diagnoses. Broad-based neuropsychological assessments using, for example, the Halstead-Reitan or the Luria-Nebraska batteries may be useful in determining brain function deficiencies, particularly in cases involving subtle findings such as may be seen in traumatic brain injury. In addition, the process of taking a standardized test requires concentration, persistence and pace; performance on such tests may provide useful data. Test results should, therefore, include both the objective data and a narrative description of clinical findings. Narrative reports of intellectual assessment should include a discussion of whether or not obtained IQ scores are considered valid and consistent with the individual's developmental history and degree of functional restriction.

In cases involving impaired intellectual functioning, a standardized intelligences test, e.g., the WAIS, should be administered and interpreted by a psychologist or psychiatrist qualified by training and experience to perform such an evaluation. In special circumstances, nonverbal measures, such as the Raven Progressive Matrices, the Leiter international scale, or the Arthur adaption of the Leiter may be substituted.

Identical IQ scores obtained from different tests do not always reflect a similar degree of intellectual functioning. In this connection, it must be noted that on the WAIS, for example, IQs of 69 and below are characteristic of approximately the lowest 2 percent of the general population. In instances where other tests are administered, it would be necessary to convert the IQ to the corresponding percentile rank in the general population in order to determine the actual degree of impairment reflected by those IQ scores.

In cases where more than one IQ is customarily derived from the test administered, i.e., where verbal, performance, and full-scale IQs are provided as on the WAIS, the lowest of these is used in conjunction with listing 12.05.

In cases where the nature of the individual's intellectual impairment is such that standard intelligence tests,

as described above, are precluded, medical reports specifically describing the level of intellectual, social, and physical function should be obtained. Actual observations by Social Security Administration or State agency personnel, reports from educational institutions and information furnished by public welfare agencies or other reliable objective sources should be considered as additional evidence.

#### **E. Chronic Mental Impairments:**

Particular problems are often involved in evaluating mental impairments in individuals who have long histories of repeated hospitalizations or prolonged outpatient care with supportive therapy and medication. Individuals with chronic psychotic disorders commonly have their lives structured in such a way as to minimize stress and reduce their signs and symptoms. Such individuals may be much more impaired for work than their signs and symptoms would indicate. The results of a single examination may not adequately describe these individual's sustained ability to function. It is, therefore, vital to review all pertinent information relative to the individual's condition, especially at times of increased stress. It is mandatory to attempt to obtain adequate descriptive information from all sources which have treated the individual either currently or in the time period relevant to the decision.

#### **F. Effects of Structured Settings:**

Particularly in cases involving chronic mental disorders, overt symptomatology may be controlled or attenuated by psychosocial factors such as placement in a hospital board and care facility or other environment that provides similar structure. Highly structured and supportive settings may greatly reduce the mental demands placed on an individual. With lowered mental demands, overt signs and symptoms of the underlying mental disorder may be minimized. At the same time, however, the individual's ability to function outside of such a structured and/or supportive setting may not have changed. An evaluation of individuals whose symptomatology is controlled or attenuated by psychosocial factors must consider the ability of the individual to function outside of such highly structured settings. (For these reasons the paragraph C criteria were added to Listings 12.03 and 12.06.)

#### **G. Effects of Medication:**

Attention must be given to the effect of medication on the individual's signs, symptoms and ability to function. While psychotropic medications may control certain primary manifestations of a mental disorder, e.g., hallucinations, such treatment may or may not affect the functional limitations imposed by the mental disorder. In cases where overt symptomatology is attenuated by the psychotropic medications, particular attention must be focused on the functional restrictions which may persist. These functional restrictions are also to be used as the measure of impairments severity. (See the paragraph C criteria in Listings 12.03 and 12.06.)

Neuroleptics, the medicines used in the treatment of

some mental illnesses, may cause drowsiness, blunted effect, or other side effects involving other body systems. Such side effects must be considered in evaluating overall impairment severity. Where adverse effects of medications contribute to the impairment severity and the impairment does not meet or equal the listings but is nonetheless severe, such adverse effects must be considered in the assessment of the mental residual functional capacity.

#### **H. Effect of Treatment:**

It must be remembered that with adequate treatment some individuals suffering with chronic mental disorders not only have their symptoms and signs ameliorated but also return to a level of function close to that of their premorbid status. Our discussion here in 12.00H has been designed to reflect the fact that present day treatment of a mentally impaired individual may or may not assist in the achievement of an adequate level of adaptation required in the work place. (See the paragraph C criteria in Listings 12.03 and 12.06.)

#### **I. Techniques for Reviewing the Evidence in Mental Disorders Claims to Determine Level of Impairment Severity:**

A special technique has been developed to ensure that all evidence needed for the evaluation of impairment severity in claims involving mental impairment is obtained, considered and properly evaluated. This technique, which is used in connection with the sequential evaluation process, is explained in § 404.1520a and § 416.920a.

#### **12.01 Category of Impairments-Mental**

#### **12.02 Organic Mental Disorders:**

Psychological or behavioral abnormalities associated with a dysfunction of the brain. History and physical examination or laboratory tests demonstrate the presence of a specific organic factor judged to be etiologically related to the abnormal mental state and loss of previously acquired functional abilities.

The required level of severity for these disorders is met when the requirements in both A and B are satisfied.

A. Demonstration of a loss of specific cognitive abilities or affective changes and the medically documented persistence of at least one of the following:

1. Disorientation to time and place; or
2. Memory impairment, either short-term (inability to learn new information), intermediate, or long-term (inability to remember information that was known sometime in the past); or
3. Perceptual or thinking disturbances (e.g., hallucinations, delusions); or
4. Change in personality; or
5. Disturbance in mood; or
6. Emotional lability (e.g., explosive temper outbursts, sudden crying, etc.) and impairment in impulse control; or
7. Loss of measured intellectual ability of at least 15 I.Q. points from premorbid levels or overall impairment

2283

BEST COPY AVAILABLE

index clearly within the severely impaired range on neuropsychological testing, e.g., the Luria-Nebraska, Halstead-Reitan, etc.;

AND

B. Resulting in at least two of the following:

1. Marked restriction of activities of daily living; or
2. Marked difficulties in maintaining social functioning; or
3. Deficiencies of concentration, persistence or pace resulting in frequent failure to complete tasks in a timely manner (in work settings or elsewhere); or
4. Repeated episodes of deterioration or decompensation in work or work-like settings which cause the individual to withdraw from that situation or to experience exacerbation of signs and symptoms (which may include deterioration of adaptive behaviors).

**12.03 Schizophrenic, Paranoid and Other Psychotic Disorders:**

Characterized by the onset of psychotic features with deterioration from a previous level of functioning.

The required level of severity for these disorders is met when the requirements in both A and B are satisfied, or when the requirements in C are satisfied.

A. Medically documented persistence, either continuous or intermittent, of one or more of the following:

1. Delusions or hallucinations; or
2. Catatonic or other grossly disorganized behavior; or
3. Incoherence, loosening of associations, illogical thinking, or poverty of content of speech if associated with one of the following:

- a. Blunt affect; or
- b. Flat affect; or
- c. Inappropriate affect;

OR

4. Emotional withdrawal and/or isolation:

AND

B. Resulting in at least two of the following:

1. Marked restriction of activities of daily living; or
2. Marked difficulties in maintaining social functioning; or
3. Deficiencies of concentration, persistence or pace resulting in frequent failure to complete tasks in a timely manner (in work settings or elsewhere); or
4. Repeated episodes of deterioration or decompensation in work or work-like settings which cause the individual to withdraw from that situation or to experience exacerbation of signs and symptoms (which may include deterioration of adaptive behaviors);

OR

C. Medically documented history of one or more episodes of acute symptoms, signs and functional limitations which at the time met the requirements in A and B of this listing, although these symptoms or signs are currently attenuated by medication or psychosocial support, and one of the following:

1. Repeated episodes of deterioration or decompensa-

tion in situations which cause the individual to withdraw from that situation or to experience exacerbation of signs or symptoms (which may include deterioration of adaptive behaviors); or

2. Documented current history of two or more years of inability to function outside of a highly supportive living situation.

**12.04 Affective Disorders:**

Characterized by a disturbance of mood, accompanied by a full or partial manic or depressive syndrome. Mood refers to a prolonged emotion that colors the whole psychic life; it generally involves either depression or elation.

The required level of severity for these disorders is met when the requirements in both A and B are satisfied.

A. Medically documented persistence, either continuous or intermittent, of one of the following:

1. Depressive syndrome characterized by at least four of the following:

- a. Anhedonia or pervasive loss of interest in almost all activities; or
- b. Appetite disturbance with change in weight; or
- c. Sleep disturbance; or
- d. Psychomotor agitation or retardation; or
- e. Decreased energy; or
- f. Feelings of guilt or worthlessness; or
- g. Difficulty concentrating or thinking; or
- h. Thoughts of suicide; or
- i. Hallucinations, delusions or paranoid thinking; or

2. Manic syndrome characterized by at least three of the following;

- a. Hyperactivity; or
- b. Pressure of speech; or
- c. Flight of ideas; or
- d. Inflated self-esteem; or
- e. Decreased need for sleep; or
- f. Easy distractability; or
- g. Involvement in activities that have a high probability of painful consequences which are not recognized; or
- h. Hallucinations, delusions or paranoid thinking;

OR

3. Bipolar syndrome with a history of episodic periods manifested by the full symptomatic picture of both manic and depressive syndromes (and currently characterized by either or both syndromes);

AND

B. Resulting in at least two of the following:

1. Marked restriction of activities of daily living; or
2. Marked difficulties in maintaining social functioning; or
3. Deficiencies of concentration, persistence or pace resulting in frequent failure to complete tasks in a timely manner (in work settings or elsewhere); or
4. Repeated episodes of deterioration or decompensation in work or work-like settings which cause the individual to withdraw from that situation or to experience

exacerbation of signs and symptoms (which may include deterioration of adaptive behaviors).

### 12.05 Mental Retardation and Autism:

Mental retardation refers to a significantly subaverage general intellectual functioning with deficits in adaptive behavior initially manifested during the developmental period (before age 22). (Note: The scores specified below refer to those obtained on the WAIS, and are used only for reference purposes. Scores obtained on other standardized and individually administered tests are acceptable, but the numerical values obtained must indicate a similar level of intellectual functioning.) Autism is a pervasive developmental disorder characterized by social and significant communication deficits originating in the developmental period.

The required level of severity for this disorder is met when the requirements in A, B, C, or D are satisfied.

A. Mental incapacity evidenced by dependence upon others for personal needs (e.g., toileting, eating, dressing, or bathing) and inability to follow directions, such that the use of standardized measures of intellectual functioning is precluded;

OR

B. A valid verbal, performance, or full scale IQ of 59 or less;

OR

C. A valid verbal, performance, or full scale IQ of 60 to 69 inclusive and a physical or other mental impairment imposing additional and significant work-related limitation of function;

OR

D. A valid verbal, performance, or full scale IQ of 60 to 69 inclusive or in the case of autism, gross deficits of social and communicative skills with two of the following:

1. Marked restriction of activities of daily living; or
2. Marked difficulties in maintaining social functioning; or
3. Deficiencies of concentration, persistence or pace resulting in frequent failure to complete tasks in a timely manner (in work settings or elsewhere); or
4. Repeated episodes of deterioration or decompensation in work or work-life settings which cause the individual to withdraw from that situation or to experience exacerbation of signs and symptoms (which may include deterioration of adaptive behaviors).

### 12.06 Anxiety Related Disorders:

In these disorders anxiety is either the predominant disturbance or it is experienced if the individual attempts to master symptoms; for example, confronting the dreaded object or situation in a phobic disorder or resisting the obsessions or compulsions in obsessive compulsive disorders.

The required level of severity for these disorders is met when the requirements in both A and B are satisfied, or when the requirements in both A and C are satisfied.

A. Medically documented findings of at least one of the following:

1. Generalized persistent anxiety accompanied by three out of four of the following signs or symptoms:
  - a. Motor tension; or
  - b. Autonomic hyperactivity; or
  - c. Apprehensive expectation; or
  - d. Vigilance and scanning;

or

2. A persistent irrational fear of a specific object, activity, or situation which results in a compelling desire to avoid the dreaded object, activity, or situation; or
3. Recurrent severe panic attacks manifested by a sudden unpredictable onset of intense apprehension, fear, terror and sense of impending doom occurring on the average of at least once a week; or
4. Recurrent obsessions or compulsions which are a source of marked distress; or
5. Recurrent and intrusive recollections of a traumatic experience, which are a source of marked distress;

AND

B. Resulting in at least two of the following:

1. Marked restriction of activities of daily living; or
2. Marked difficulties in maintaining social functioning; or
3. Deficiencies of concentration, persistence or pace resulting in frequent failure to complete tasks in a timely manner (in work settings or elsewhere); or
4. Repeated episodes of deterioration or decompensation in work or work-like settings which cause the individual to withdraw from the situation or to experience exacerbation of signs and symptoms (which may include deterioration of adaptive behaviors);

OR

C. Resulting in complete inability to function independently outside the area of one's home.

### 12.07 Somatoform Disorders:

Physical symptoms for which there are no demonstrable organic findings or known physiological mechanisms.

The required level of severity for these disorders is met when the requirements in both A and B are satisfied.

A. Medically documented by evidence of one of the following:

1. A history of multiple physical symptoms of several years duration, beginning before age 30, that have caused the individual to take medicine frequently, see a physician often and alter life patterns significantly; or
2. Persistent nonorganic disturbance of one of the following:
  - a. Vision; or
  - b. Speech; or
  - c. Hearing; or
  - d. Use of a limb; or
  - e. Movement and its control (e.g., coordination disturbance, psychogenic seizures, akinesia, dyskinesia; or
  - f. Sensation (e.g., diminished or heightened).
3. Unrealistic interpretation of physical signs or sen-

2285

BEST COPY AVAILABLE

sations associated with the preoccupation or belief that one has a serious disease or injury;

AND

B. Resulting in three of the following.

1. Marked restriction of activities of daily living; or
2. Marked difficulties in maintaining social functioning or
3. Deficiencies of concentration, persistence or pace resulting in frequent failure to complete tasks in a timely manner (in work settings or elsewhere); or
4. Repeated episodes of deterioration or decompensation in work or work-like settings which cause the individual to withdraw from that situation or to experience exacerbation of signs and symptoms (which may include deterioration of adaptive behavior).

**12.08 Personality Disorders:**

A personality disorder exists when personality traits are inflexible and maladaptive and cause either significant impairment in social or occupational functioning or subjective distress. Characteristic features are typical of the individual's long-term functioning and are not limited to discrete episodes of illness.

The required level of severity for these disorders is met when the requirements in both A and B are satisfied.

A. Deeply ingrained, maladaptive patterns of behavior associated with one of the following:

1. Seclusiveness or autistic thinking; or
2. Pathologically inappropriate suspiciousness or hostility; or
3. Oddities of thought, perception, speech and behavior; or
4. Persistent disturbances of mood or affect; or
5. Pathological dependence, passivity, or aggressivity; or
6. Intense and unstable interpersonal relationships and impulsive and damaging behavior;

AND

B. Resulting in three of the following:

1. Marked restriction of activities of daily living; or
2. Marked difficulties in maintaining social functioning; or
3. Deficiencies of concentration, persistence or pace resulting in frequent failure to complete tasks in a timely manner (in work settings or elsewhere); or
4. Repeated episodes of deterioration or decompensation in work or work-like settings which cause the individual to withdraw from that situation or to experience exacerbation of signs and symptoms (which may include deterioration of adaptive behaviors).

**12.09 Substance Addiction Disorders:**

Behavioral change or physical changes associated with the regular use of substances that affect the central nervous system.

The required level of severity for these disorders is met when the requirements in any of the following (A through I) are satisfied.

- A. Organic mental disorders. Evaluate under 12.02.
- B. Depressive syndrome. Evaluate under 12.04
- C. Anxiety disorders. Evaluate under 12.06.
- D. Personality disorders. Evaluate under 12.08.
- E. Peripheral neuropathies. Evaluate under 11.14.
- F. Liver damage. Evaluate under 5.05.
- G. Gastritis. Evaluate under 5.04.
- H. Pancreatitis. Evaluate under 5.08.
- I. Seizures. Evaluate under 11.02 or 11.03.

**13.00 NEOPLASTIC DISEASES, MALIGNANT.**

**A. Introduction:**

The determination of the level of impairment resulting from malignant tumors is made from a consideration of the site of the lesion, the histogenesis of the tumor, the extent of involvement, the apparent adequacy and response to therapy (surgery, irradiation, hormones, chemotherapy, etc.), and the magnitude of the post therapeutic residuals.

**B. Documentation:**

The diagnosis of malignant tumors should be established on the basis of symptoms, signs, and laboratory findings. The site of the primary, recurrent, and metastatic lesion must be specified in all cases of malignant neoplastic diseases. If an operative procedure has been performed, the evidence should include a copy of the operative note and the report of the gross and microscopic examination of the surgical specimen. If these documents are not obtainable, then the summary of hospitalization or a report from the treating physician must include details of the findings at surgery and the results of the pathologist's gross and microscopic examination of the tissues.

For those cases in which a disabling impairment was not established when therapy was begun but progression of the disease is likely, current medical evidence should include a report of a recent examination directed especially at local or regional recurrence, soft part or skeletal metastases, and significant posttherapeutic residuals.

**C. Evaluation:**

Usually, when the malignant tumor consists of a local lesion with metastases to the regional lymph nodes which apparently has been completely excised, imminent recurrence or metastases is not anticipated. A number of exceptions are noted in the specific Listings. For adjudicative purposes, "distant metastases" or "metastases beyond the regional lymph nodes" refers to metastasis beyond the lines of the usual radical en bloc resection.

Local or regional recurrence after radical surgery or pathological evidence of incomplete excision by radical surgery is to be equated with unresectable lesions (except for carcinoma of the breast, 13.09C) and, for the purposes of our program, may be evaluated as "inoperable."

Local or regional recurrence after incomplete excision of a localized and still completely resectable tumor is not

## Who Should Read This Booklet?

You should!

Whether you're young or old, male or female, single or with a family—this booklet is for you and about you. That's because Social Security has programs that affect everybody.

Chances are you're either paying Social Security taxes or getting Social Security benefits—or you're related to somebody who is.

Whatever your situation, this booklet has information you will find helpful and useful.

It was prepared by the Social Security Administration and tells you what you need to know about Social Security while you're still working and what you need to know when it's your turn to collect benefits. It also provides an overview of Medicare and Supplemental Security Income (SSI) benefits.

Other booklets are available that explain all of the Social Security programs in more detail. And we have prepared a series of leaflets and factsheets that provide information about some of the finer points of Social Security. Page 33 lists some of these brochures.

*Please Note:* This booklet provides a general overview of the Social Security program. The information it contains is not intended to cover all provisions of the law. For specific information about your case, contact a Social Security office.

### *We'd Like Your Comments*

We'd like to know what you think about this booklet. Is there something you don't understand? Are there other topics you need to know about? Send your comments to:

## Part 1—Social Security's Future ... And Yours!

### Is Social Security In Your Future?

Before we get started explaining the program, we think it's important to answer the first question many people have about Social Security. Perhaps you've asked it yourself. That question is: "Will Social Security be there when I need it?"

The simple and logical answer is, "Yes it will." But that answer deserves an explanation.

If you're concerned about the future of Social Security, it's probably because you've heard misleading stories about Social Security money being used for other purposes (which are partially true) and reports that the system's trust funds contain only "worthless IOU's" (which are false). Here are the facts. Out of every dollar you pay in Social Security taxes:

- 73 cents goes to a trust fund that pays monthly benefits to about 29 million retirees and their families and to about 8 million widows, widowers, and children of workers who have died;
- 19 cents goes to a trust fund that pays for the health care of 34 million Medicare beneficiaries; and
- 8 cents goes to a trust fund that pays benefits to about 5 million people with disabilities and their families.

Money not needed to pay these benefits is invested in U.S. government bonds—generally considered the safest of all investments. And the government uses the money it has *borrowed* from Social Security, just as it uses the money that you may have invested in treasury bonds, to pay for all the services and projects it provides for our citizens. But, just as the government pays you back with interest when you redeem your bonds, it has always made good on its obligations to Social Security. There's

no reason to believe it won't continue to do so. If you own treasury bonds, it's a safe bet you don't consider them to be "worthless IOU's." We don't either. Our investments will be honored and we, in turn, will honor your investment in Social Security. It will be there when you need it!

### When Will You Need Social Security?

Now that we've answered your first question and told you that Social Security will be there when you need it, the next question you may ask yourself is this: "When will I need it?"

If you're like most people, you tend to think of Social Security as a retirement program. Although it's true that most of our beneficiaries (about 60 percent) receive retirement benefits, many others get Social Security because:

- they are disabled;
- they are a dependent of someone who gets Social Security; or
- they are a widow, widower, or child of someone who has died.

So, depending on your circumstances, you may be eligible for Social Security at any age. In fact, Social Security pays more benefits to children than any other government program. Today, 45 million people, almost one out of every six Americans, collect some kind of Social Security benefit.

### How To Reach Us When You Need Us

The Social Security Administration has about 1,300 offices in cities and towns across America. Of course, you're always welcome to visit the office nearest you.

But the easiest way to reach us is to call our toll-free number: **1-800-772-1213**. You can get information 24 hours a day. You can speak to a service representative between 7 a.m. and 7 p.m. on business days.

If you have a push-button (tone) phone, recorded information and services are available after 7 p.m. weekdays and all day on weekends and holidays.

If you want to speak to a representative, the best times to call are early in the morning and early in the evening. And if you can, it's best to call later in the week and later in the month. When you call, have your Social Security number handy.

Hearing-impaired callers using "TDD" equipment can reach Social Security between 7 a.m. and 7 p.m. on business days by calling 1-800-325-0778.

The Social Security Administration treats all calls confidentially—whether they're made to our toll-free numbers or to one of our local offices. We also want to ensure that you receive accurate and courteous service. That's why we have a second Social Security representative monitor some incoming and outgoing telephone calls.

---

### **Your Future ... And This Booklet**

Here's one final message about Social Security's future, your future, and this booklet: Social Security will be there—whenever you may need it.

But even though Social Security will be ready for you, will you be ready for Social Security?

This booklet will help you with the kinds of plans and decisions you need to make now in order to ensure a brighter and more secure financial future for you and your family.

## **Part 2—What You Need To Know About Social Security While You're Still Working**

---

### **How Social Security Works—The General Idea**

The basic idea behind Social Security is a simple one. You pay taxes into the system during your working years, and you and members of your family receive monthly benefits when you retire or become disabled. Or, your survivors collect benefits when you die.

*Here's An Important Point:* Social Security is not intended to be your only source of income. Instead, it is meant to be used to supplement the pensions, insurance, savings, and other investments you will accumulate during your working years.

---

### **Your Social Security Number**

What's your Social Security number? You probably know it as well as you know your own phone number.

We use your Social Security number to track your earnings while you're working and to track your benefits once you're getting Social Security.

Almost everybody reading this booklet already has a Social Security number. Today, even most young children have a number because the Internal Revenue Service requires that a Social Security number be shown on tax returns for all dependents age one and older.

In fact, most parents apply for a Social Security number for their newborn child when they provide information for the child's birth certificate. That's because most states make applying for a Social Security number part of the birth registration process. This is taken care of before the mother and child leave the hospital.

In addition to its "official" uses, banks, insurance companies, and many other businesses and government agencies use the Social Security number for recordkeeping purposes. Although we can't prevent others from asking for your number, you should know that if you give it to them they can not use it to get your Social Security records. We will not give out your records, without your written consent, unless the law requires or permits it.

The Social Security Administration is aware of concerns about the increasing uses of the Social Security number for identification and recordkeeping purposes. That concern centers on the issue of your right to privacy and the increasing possibility that it could be invaded if all your records are kept under one number. If a business or other enterprise asks for your Social Security number, you can refuse to give it to them. However, that may mean doing without the purchase or service for which your number was requested. Our primary message is this: be careful with your Social Security number and protect its privacy whenever possible.

**If you need a Social Security number, if you lost your card and need another one, or if you need to change your name on your current card, just call or visit a Social Security office. We'll ask you to fill out a simple one-page application form. And we'll ask to see certain documents depending on your situation. (We need to see originals or certified copies.)**

Some typical examples are:

- A birth certificate and some form of identification for a new card;
- Some form of identification for a replacement card;
- A marriage certificate or divorce papers for a name change.

## **The Taxes You Pay**

Social Security taxes are used to pay for all Social Security benefits. In addition, a portion of your taxes is used to pay for part of your Medicare coverage. General tax revenues, not Social Security taxes, are used to finance the Supplemental Security Income (SSI) program.

### **If You Work For Someone Else**

You and your employer pay taxes for Social Security and Medicare. In 1994, you and your employer each pay 7.65 percent of your gross salary, up to \$60,600. The deduction might be labelled "FICA" on your pay slip. That stands for Federal Insurance Contributions Act, the law that authorized Social Security's payroll tax.

### **If You Work For Yourself**

If you're self-employed, you pay 15.3 percent of your taxable income into Social Security, up to \$60,600. However, there are special deductions you can take when you file your tax return that are intended to offset your tax rate.

*For More Information:* If you would like to learn more about self-employment tax rates, call or visit Social Security to ask for a free copy of the factsheet, *If You're Self-Employed* (Publication No. 05-10022).

### **Extra Taxes For Medicare**

If you make more than \$60,600 in 1994, you continue to pay the Medicare portion of the Social Security tax on the rest of your earnings. The Medicare portion of the tax is 1.45 percent for employers and employees each, and 2.9 percent for self-employed people.

## You Become Eligible For Social Security By Earning "Credits"

You must work and pay taxes into Social Security in order to get something out of it. (Of course, some people get benefits as a dependent or survivor on another person's Social Security record.)

As you work and pay taxes, you earn Social Security "credits." In 1994 you earn one credit for each \$620 in earnings you have—up to a maximum of four credits per year. (The amount of money needed to earn one credit goes up every year.)

Most people need 40 credits (10 years of work) to qualify for benefits. Younger people need fewer credits to be eligible for disability benefits or for their family members to be eligible for survivors benefits if they should die.

During your working lifetime, you probably will earn many more credits than you need to be eligible for Social Security. The fact that you earn these extra credits does not increase your eventual Social Security benefit. However, the income you earn while working will increase your benefit, as you will learn in the next two sections.

**For More Information:** If you want to learn more about the number of credits you would need to qualify for benefits, just call or visit Social Security to ask for a *Personal Earnings and Benefit Estimate Statement* (see the next section), or ask for a free copy of one of the following booklets: *Retirement*, (Publication No. 05-10035), *Survivors* (Publication No. 05-10084), or *Disability* (Publication No. 05-10029).

## How Much Will You Get From Social Security?

The amount of your Social Security benefit is based on factors such as your date of birth, the type of benefit you are applying for, and most important, your earnings.

This booklet will explain in a general way how a Social Security benefit is figured. In the back of this booklet, you will find tables that give examples of Social Security benefits. But if you would like a detailed, personal estimate of your Social Security retirement, disability, and survivors benefits, all you have to do is call or visit Social Security and ask for it. We will send you a form you can use to get a *Personal Earnings and Benefit Estimate Statement*.

## How Your Benefit Is Figured

In general, a Social Security benefit is based on your earnings averaged over your working lifetime. This is different from many private pension plans that are usually based on a relatively small number of years of earnings.

In its simplest terms, here's how your Social Security benefit is figured:

**Step 1**—We determine the number of years of earnings to use as a base.

**Retirement benefits:** For everybody born after 1928 and retiring in 1991 or later, which includes most people reading this booklet, that number is 35 years. Fewer years are used for people born in 1928 or earlier.

**Disability and survivors benefits:** We use most of the years of earnings posted to your record.

**Step 2**—We adjust these earnings for inflation.

**Step 3**—We determine your average adjusted monthly earnings based on the number of years figured in step 1.

**Step 4**—We multiply your average adjusted earnings by percentages in a formula that is specified by law.

That formula results in benefits that replace about 42 percent of a person's earnings. This applies to people who had average earnings during their working years. The percentage is lower for people in the upper income brackets and higher for people with low incomes. (That's because the Social Security benefit formula is weighted in favor of low-income workers who have less opportunity to save and invest during their working years.)

### **If You Didn't Earn Enough Credits To Get Social Security**

If you haven't worked long enough to get Social Security, or if you get only a small amount, you may be eligible for Supplemental Security Income, or SSI. For more information, see page 22.

## **Part 3—What You Need To Know When You Become Eligible For Social Security**

### **How And When To Sign Up For Social Security**

You can apply for benefits at any Social Security office. The easiest way to file a claim is to call our toll-free number ahead of time for an appointment. That number is: 1-800-772-1213.

For disability, survivors, and SSI benefits, you should apply as soon as you're eligible. (The rest of this chapter will help you decide if and when you are.) When signing up for retirement, we ask that you talk to a Social Security representative in the year before the year you plan to

retire. That's because the rules are complicated, and it may be to your advantage to start your retirement benefits before you actually stop working.

### **What Records Will You Need?**

To show that you are eligible for Social Security and to help us decide how much your benefits should be, there are certain documents we may ask you to provide. The ones you'll need depend on the circumstances of your claim. Here is a list of some of the documents you may need when you sign up for Social Security:

- Your Social Security card (or a record of your number);
- Your birth certificate;
- Children's birth certificates (if they are applying);
- Marriage certificate (if signing up on a spouse's record);
- Your most recent W-2 form, or your tax return if you're self-employed.

This is just a partial list to help you get prepared. When you actually sign up for Social Security, we'll let you know if other documents are needed.

*Here's An Important Point:* If you don't have all the documents you need, don't delay signing up for Social Security. We'll help you get the information you need.

### **Direct Deposit**

You have a choice of how you receive your Social Security or SSI payments. Your benefit can either be deposited directly into your bank account or come to you in the mail. Most people have their benefits deposited in their bank account because it is safer and more convenient than receiving checks. It is also more efficient and saves money for the government.

If you choose direct deposit, have your checkbook or any papers that show your bank account number with you when you sign up for Social Security.

### **Retirement Benefits**

This section of the booklet provides a brief overview of Social Security retirement benefits. If you want to learn more about the program, call or visit Social Security to ask for a free copy of the booklet, *Retirement* (Publication No. 05-10035).

#### **Full Retirement**

If you were born before 1938, you will be eligible for your full Social Security benefit at the age of 65.

However, beginning in the year 2000, the age at which full benefits are payable will increase in gradual steps from 65 to 67. This affects people born in 1938 and later. For example, if you were born in 1940, your full retirement age is 65 and 6 months. If you were born in 1950, your full retirement age is 66. Anybody born in 1960 or later will be eligible for full retirement benefits at 67.

#### **Reduced Benefits As Early As 62**

No matter what your "full" retirement age is, you may start receiving benefits as early as 62. However, if you start your benefits early, they are reduced five-ninths of one percent for each month before your "full" retirement age. For example, if your full retirement age is 65 and you sign up for Social Security when you're 64, you will receive  $93 \frac{1}{3}$  percent of your full benefit. At 62, you would get 80 percent. (Note: The reduction will be greater in future years as the full retirement age increases.)

*Here's An Important Point:* There are disadvantages and advantages to taking your benefit before your full retirement age. The disadvantage is that your benefit is permanently reduced. The advan-

tage is that you collect benefits for a longer period of time. Each person's situation is different, so make sure you check with Social Security before you decide to retire.

### **What About Late Retirement?**

Some people continue to work full time beyond their full retirement age—and they do not sign up for Social Security until later. This delay in retirement can increase your Social Security benefit in two ways:

- Your extra income usually will increase your "average" earnings, and the higher your average earnings, the higher your Social Security benefit will be.
- In addition, a special credit is given to people who delay retirement. This credit, which is a percentage added to your Social Security benefit, varies depending on your date of birth. For people turning 65 in 1994, the rate is 4.5 percent per year. That rate gradually increases in future years, until it reaches 8 percent per year for people turning 65 in 2008 or later.

### **How Much Will You Get?**

On Page 11, we explained how you can get a personalized estimate of the benefits you are due. In addition, there is a chart on Page 34 that gives examples of retirement benefit rates.

### **Disability Benefits**

This section of the booklet provides a brief overview of Social Security's disability program. It concentrates primarily on benefits for people who have worked and earned enough Social Security "credits" to qualify for disability on their own work record.

However, it is important to note that other kinds of disability benefits are available from Social Security, depending on your circumstances. These include:

- Widows and widowers with disabilities who are eligible for benefits on the record of a spouse;
- People with disabilities who have low income and few assets who might be eligible for SSI benefits;
- Children over age 18 with disabilities who might be eligible for Social Security benefits on the record of a parent, or children of any age with disabilities who might be eligible for SSI benefits on their own.

**For More Information:** Because disability is one of the most complicated of all Social Security programs, we recommend that you call or visit Social Security to ask for a free copy of the booklet, *Disability* (Publication No. 05-10029), for more in-depth information.

For information about benefits available to children with disabilities, see page 24 of this booklet, or call or visit Social Security and ask for a free copy of the publication, *Social Security and SSI Benefits For Children With Disabilities* (Publication No. 05-10026).

### What Do We Mean By "Disability"?

What is a "disability"? The dictionary defines it as "a physical or mental condition that prevents a person from leading a normal life." But Social Security's definition of disability is more specific and is generally related to your ability to work.

To qualify for disability from Social Security, you must have a physical or mental impairment that is expected to keep you from doing any "substantial" work for at least a year. Generally, monthly earnings of \$500 or more are considered substantial. Or you must have a condition that is expected to result in your death.

This is a strict definition of disability. Unlike many private pension plans or even other government disability programs, Social Security is not intended for a temporary condition. In other words, there is no such thing as a "partial" disability payment from Social Security.

### What You Should Do If You Become Disabled

If you become disabled, you should file for disability benefits as soon as possible. You can do this by calling or visiting any Social Security office.

You can shorten the time it takes to process your claim if you have the following medical and vocational information when you apply:

- The names, addresses, and phone numbers of your doctors, and of hospitals, clinics, etc., where you have been treated; and
- A summary of where you worked in the last 15 years and the kind of work you did.

**Here's An Important Point:** Social Security's disability rules are different from those of other private plans or government agencies. So the fact that you qualify for disability from somebody else does not mean you will be eligible for Social Security. Further, the fact that you have a statement from your doctor indicating you are disabled does not mean you will be automatically eligible for Social Security disability payments.

### When Do Your Disability Benefits Start?

If we decide you are disabled, in most cases your monthly benefits will begin with the sixth full month of your disability. Here's a simple example of how this works:

John has a severe heart attack on March 15. He files for disability on March 29, and his claim is approved on May 30. September is the sixth full month that he is disabled, so his benefits begin that month. Social Security checks are usually paid on the third of the following month, so John's first check (the September check) will arrive October 3.

**Here's An Important Point:** Do not delay signing up for Social Security because of this "waiting period." By filing early, all the paperwork will be

processed before your first check is due. There is no waiting period for disabled children's benefits or for SSI disability payments.

### How Much Will You Get?

On Page 11, we told you how you can get a personalized estimate of any benefits you are due. There is a chart on Page 35 that gives examples of disability benefit rates.

### Workers' Compensation

If you get workers' compensation or certain other government disability benefits, your Social Security disability benefit may be reduced. Or, your Social Security benefits may reduce your other disability payments. The sum of all disability payments to you and your family cannot exceed 80 percent of your earnings averaged over a period of time shortly before you became disabled.

### How Long Will Your Disability Benefits Continue?

You will continue to get disability benefits unless your condition improves or you return to "substantial" work (see Page 16). We check your claim periodically to determine if this is the case. To help us decide, you may be asked to undergo a special test or examination that we will pay for.

### Incentives To Return To Work

There are special rules that help people who would like to return to work but are concerned about the effect this might have on their disability benefits. These rules offer special incentives that permit people to try working without the risk of a sudden loss of their monthly benefits and their Medicare coverage.

*For More Information:* If you would like to learn more about these special work incentives, call or visit Social Security to ask for a free copy of the booklet, *Working While Disabled ... How Social Security Can Help* (Publication No. 05-10095).

## Benefits For Your Family

This section of the booklet provides a brief overview of benefits payable to members of your family when you are eligible for retirement or disability benefits.

### Who Can Get Benefits?

When you start collecting Social Security retirement or disability benefits, other members of your family might also be eligible for payments. For example, benefits can be paid to:

- Your husband or wife if he or she is 62 or older (unless he or she collects a higher Social Security benefit on his or her own record);
- Your husband or wife at any age if he or she is caring for your child (the child must be under 16 or disabled and receiving Social Security benefits);
- Your children, if they are unmarried and:
  - Under 18; or
  - Under 19 but in elementary or secondary school as a full-time student; or
  - 18 or older and severely disabled (the disability must have started before age 22).

### How Much Can Family Members Get?

Usually, each family member will be eligible for a monthly benefit that is up to 50 percent of your retirement or disability rate. However, there is a limit to the amount of money that can be paid to a family on your Social Security record. The limit varies, but is generally equal to about 150 to 180 percent of your retirement benefit. (It may be less for disability benefits.) If the sum of the benefits payable on your account is greater than this family limit, then the benefits to the family members will be reduced proportionately. Your benefit will not be affected.

## Benefits For Divorced People

If you are divorced (even if you have remarried), your ex-spouse can be eligible for benefits on your record. In some situations, he or she could get benefits even if you're not receiving them. In order to qualify, your ex-spouse must:

- Have been married to you for at least 10 years;
  - Be at least 62 years old;
  - Be unmarried;
  - Not be eligible for an equal or higher benefit on his or her own Social Security record, or on someone else's Social Security record.
- Here's An Important Point:* If your ex-spouse receives benefits on your account, it does not affect the amount of any benefits payable to you or your other family members.

## Survivors Benefits

This section of the booklet provides a brief overview of the benefits payable when a family breadwinner dies. For more information, call or visit Social Security to ask for a free copy of the booklet, *Survivors* (Publication No. 05-10084).

### Who Can Receive Survivors Benefits?

When you die, certain members of your family may be eligible for benefits on your Social Security record if you had earned enough credits while you were working.

The family members who can collect benefits include:

- A widow or widower who is 60 or older;
- A widow or widower who is 50 or older and disabled;
- A widow or widower at any age if she or he is caring for a child under 16 or a disabled child who is receiving Social Security benefits;

- Children if they are unmarried and:

- Under 18; or
- Under 19 but in an elementary or secondary school as a full-time student; or
- 18 or older and severely disabled (the disability must have started before age 22);
- Your parents, if they were dependent on you for at least half of their support.

### Special One-Time Death Benefit

If you had enough credits, a special one-time payment of \$255 also will be made after your death. This benefit is paid only to your widow(er) or minor children.

### Benefits To Divorced Widows And Widowers

- If you are divorced (even if you have remarried), your ex-spouse will be eligible for benefits on your record when you die. In order to qualify, your ex-spouse must:
- Be at least 60 years old (or 50 if disabled) and have been married to you for at least 10 years;
  - Be any age if caring for a child who is eligible for benefits on your record;
  - Not be eligible for an equal or higher benefit on his or her own record;
  - Not be currently married, unless the remarriage occurred after 60—or 50 for disabled widows. (In cases of remarriage after the age of 60, your ex-spouse will be eligible for a widow's benefit on your record or a dependent's benefit on the record of his or her new spouse, whichever is higher.)
- Here's An Important Point:* If your ex-spouse receives benefits on your account, it does not affect the amount of any benefits payable to other survivors on your record.

## How Much Will Your Survivors Get?

The amount payable to your survivors is a percentage of your basic Social Security benefit—usually in a range from 75 percent to 100 percent each. However, there is a limit to the amount of money that can be paid each month to a family. The limit varies, but is generally equal to about 150 to 180 percent of your benefit rate. If the sum of the benefits payable to your surviving family members is greater than this limit, then the benefits to your family will be reduced proportionately.

The *Personal Earnings and Benefit Estimate Statement*, explained on Page 11, will provide you with a more accurate measurement of potential survivors benefits payable on your record. In addition, there is a chart on Page 36 that gives examples of survivors benefit rates.

## Retirement Benefits For Widower(s)

If you are receiving widows or widowers (including divorced widows or widowers) benefits, you should remember that you can switch to your own retirement benefits (assuming you're eligible and your retirement rate is higher than your widow's rate) as early as age 62. In many cases, a widow(er) can begin receiving one benefit at a reduced rate and then switch to the other benefit at an unreduced rate at age 65. The rules are complicated and vary depending on your situation, so you should talk to a Social Security representative about the options available to you.

---

## Supplemental Security Income

This section of the booklet provides a brief overview of the Supplemental Security Income (SSI) program. For more information, call or visit Social Security to ask for a free copy of the booklet, *SSI* (Publication No. 05-11000).

## What Is Supplemental Security Income?

Supplemental Security Income is usually called "SSI" for short. Although this program is run by Social Security, the money to pay for SSI benefits does not come from Social Security taxes or Social Security trust funds. SSI payments are financed by the general revenue funds of the U.S. Treasury.

SSI makes monthly payments to people who have low incomes and few assets. In addition, to get SSI you must:

- Be living in the U.S. or the Northern Mariana Islands;
- Be a U.S. citizen or be living in the U.S. legally;

And you must be:

- 65 or older; or
- Blind; or
- Disabled.

**Here's An Important Point:** Children as well as adults can get SSI benefits because of blindness or disability. See Page 24 for more information.

## Income And Asset Limits For SSI

To get SSI, your income and the value of the things you own must be below certain limits.

By the term **income**, we mean the money you have coming in such as earnings, Social Security, or other government checks, pensions, etc. But we also mean "non-cash" items you receive such as the value of free food and shelter.

How much income you can have and still get SSI depends on whether you work or not—and in which state you live. Although there is a basic national SSI payment rate, some states add money to the national payment, so they have higher SSI rates and higher income limits than others. Check with your local Social Security office to find what the SSI rates and income limits are in your state.

Assets are the things you own such as property, cash, and bank accounts. But we don't count everything you own when we decide if you can get SSI. For example, we don't count your home and many of your personal belongings, and we usually don't count your car.

You may be able to get SSI if the things you own that we count are worth no more than:

- \$2,000 for one person; or
- \$3,000 for a couple.

Unlike the income category, these limits do not change from state to state.

### How Much Can You Get From SSI?

How much you will get from SSI depends on your other income and where you live. The basic monthly SSI check is the same in all states—\$446 for one person and \$669 for a couple. But some states add money to the basic rate, so you may get more if you live in one of these states. You will get less if you have other income or if someone helps pay for your food and shelter.

For more information about SSI rates in your state, contact your local Social Security office.

### SSI For People With Disabilities—Including Children

People with disabilities, including children, can get SSI if their income and assets are below the limits discussed in the previous sections.

Most of the rules used to decide if a person has a condition severe enough to qualify for Social Security disability benefits also apply to SSI.

And as with Social Security, the SSI program has special plans designed to help people who want to try going back to work without the risk of suddenly losing their benefits or Medicaid coverage. To learn more about

these special plans, ask for a copy of the booklet, *Working While Disabled ... How Social Security Can Help* (Publication No. 05-10095).

Social Security has special guidelines for evaluating disability in children filing for SSI benefits. If you have a child with a disability, contact your local Social Security office to apply for SSI disability benefits.

For special information about benefits for children with disabilities, ask for a copy of the publication, *Social Security and SSI Benefits For Children With Disabilities* (Publication No. 05-10026).

### Other Help You Can Get

Most people who get SSI can also get food stamps and "Medicaid" assistance. Medicaid, which is a different program than Medicare, helps pay doctor and hospital bills. For more information about food stamps, ask Social Security for a copy of the factsheet, *Food Stamp Facts* (Publication No. 05-10101). For more information about Medicaid, contact your local social services office.

---

### Medicare

Medicare is our country's basic health insurance program for people 65 or older and many people with disabilities.

You should not confuse Medicare and Medicaid. Medicaid is a health insurance program for people with low income and limited assets. It is usually run by state welfare or social service agencies. Some people qualify for one or the other; some qualify for both Medicare and Medicaid.

This booklet provides only a brief overview of the Medicare program. If you would like to learn more about Medicare, call or visit Social Security to ask for a free copy of the booklet, *Medicare* (Publication No. 05-10043).

## Medicare Has Two Parts

There are two parts to Medicare:

- Hospital insurance (sometimes called "Part A") — This helps pay for inpatient hospital care and certain followup services; and
- Medical insurance (sometimes called "Part B") — This helps pay for doctors' services, outpatient hospital care, and other medical services.

## Who Is Eligible For Hospital Insurance (Part A)?

Most people get hospital insurance when they turn 65. You qualify for it automatically if you are eligible for Social Security or Railroad Retirement benefits. Or you may qualify on a spouse's (including divorced spouse's) record. Others qualify because they are government employees not covered by Social Security who paid the Medicare part of the Social Security tax.

In addition, if you have been getting Social Security disability benefits for 24 months, you will qualify for hospital insurance.

Also, people who have permanent kidney failure that requires maintenance dialysis or a kidney replacement qualify for hospital insurance if they are insured or if they are the spouse or child of an insured worker.

Almost everybody qualifies for hospital insurance through one of the above methods. But if you don't and if you're 65 or older, you can buy hospital insurance just like you can buy other health insurance policies.

## Who Can Get Medical Insurance (Part B)?

Almost anyone who is eligible for hospital insurance can sign up for medical insurance. Unlike Part A, which was paid for by your taxes while you worked and is free when you're eligible for it, Part B is an optional program that generally costs \$41.10 per month. Almost everybody signs up for this part of Medicare.

## How Do You Get Medicare?

If you are already getting Social Security benefits when you turn 65, you will be automatically enrolled in Medicare (although you have the opportunity to turn down "Part B").

If you are disabled, you will be automatically enrolled in Medicare after you have been getting disability benefits for 24 months. (And you can turn down "Part B" if you want.)

If you turn 65 but plan to keep working and do not plan to sign up for Social Security at that time, you should call or visit a Social Security office so we can help you decide if you should sign up for Medicare only.

There are many other rules associated with Medicare enrollment including penalties for not enrolling in Part B when you're first eligible. Please contact your Social Security office for more details.

## What Does Medicare Pay For?

Medicare hospital insurance helps pay for:

- Inpatient hospital care;
- Skilled nursing facility care;
- Home health care;
- Hospice care.

Medicare medical insurance helps pay for:

- Doctors' services;
- Outpatient hospital services;
- Home health visits;
- Diagnostic X-ray, laboratory, and other tests;
- Necessary ambulance services; and
- Other medical services and supplies.

### What Medicare Does Not Pay For

Not all health services are covered by Medicare. For example, Medicare does not pay for:

- Custodial care;
- Dentures and routine dental care;
- Eyeglasses, hearing aids, and examinations to prescribe and fit them;
- Nursing home care (except skilled nursing care);
- Prescription drugs; and
- Routine physical checkups and related tests.

### Help For Low-Income Medicare Beneficiaries

If you get Medicare and have low income and few resources, your state may pay your Medicare premiums and, in some cases, other "out-of-pocket" Medicare expenses such as deductibles and coinsurance. Only your state can decide if you qualify. To find out if you do, contact your state or local welfare office or Medicaid agency. For more general information about the program, contact Social Security and ask for a copy of the leaflet, *Medicare Savings For Qualified Beneficiaries* (HCFA Publication No. 02184).

## Part 4—What You Need To Know After You Sign Up For Social Security

After you've signed up for retirement, disability, survivors, Medicare, or SSI benefits, your involvement with Social Security is just beginning. This section of the booklet provides a brief overview of a few things you need to know about your benefits and how they work.

When you start getting Social Security, we send you a booklet that explains your rights and responsibilities. In addition, we produce a variety of publications that explain other facts you need to know about Social Security and SSI. If you need more information, call or visit

Social Security to tell us your situation. There is probably a pamphlet or factsheet we can send you that will answer your questions.

### What You Need To Report To Us

People who get Social Security should let us know when something happens that might affect their benefits. Here are some examples:

- If they move;
- If they get married or divorced;
- If their name changes;
- If their income or earnings change;
- If a child is born or adopted;
- If a beneficiary is imprisoned;
- If they leave the United States;
- If a beneficiary dies.

### If You Disagree With A Decision We Make

Whenever we make a decision that affects your eligibility for Social Security or SSI benefits, we send you a letter that explains our decision. If you disagree with our decision, you have the right to appeal it. In other words, you can ask us to review your case. If our decision was wrong, we will change it.

**For More Information:** To learn more about the appeals process, call or visit any Social Security office to ask for a copy of the factsheet called *The Appeals Process* (Publication No. 05-10041). In addition, you have the right to be represented by a qualified person of your choice when dealing with Social Security. For more information, ask us for a copy of the factsheet, *Social Security And Your Right To Representation* (Publication No. 05-10075).

## How Your Earnings Affect Your Benefits

There is a provision in the law that limits the amount of money you can earn and still collect all your Social Security benefits. This provision affects people under the age of 70 who collect Social Security retirement, dependents, or survivors benefits. (Earnings in or after the month you reach age 70 won't affect your Social Security benefits.) **People who work and collect disability or SSI benefits have different earnings requirements and should report all their income to Social Security.**

**If you are under age 65**, you can earn up to \$8,040 in 1994 and still collect all your Social Security benefits.

However, for every \$2 you earn over \$8,040, \$1 will be withheld from your Social Security benefits.

**If you are age 65 through 69**, you can earn up to \$11,160 in 1994 and still collect all your Social Security benefits.

However, for every \$3 you earn over \$11,160, \$1 will be withheld from your Social Security benefits.

We count only the earnings you make from a job or your net profit if you're self-employed. This includes compensation such as bonuses, commissions, and vacation pay. It does not include such items as pensions, annuities, investment income, interest, Social Security, veterans, or other government benefits.

**For More Information:** If you would like to learn more about the Social Security earnings limits and how they affect you, call or visit any Social Security office to ask for a free copy of *How Work Affects Your Social Security Benefits* (Publication No. 05-10069).

## Your Benefits May Be Taxable

Some people who get Social Security will have to pay taxes on their benefits. You will be affected only if you have substantial income in addition to your Social Security benefits.

**If you file a Federal tax return as an "individual,"** and your combined income\* is between \$25,000 and \$34,000, you may have to pay taxes on 50 percent of your Social Security benefits. If your combined income\* is above \$34,000, 85 percent of your Social Security benefits is subject to income tax.

**If you file a joint return**, you may have to pay taxes on 50 percent of your benefits if you and your spouse have a combined income\* that is between \$32,000 and \$44,000. If your combined income\* is more than \$44,000, 85 percent of your Social Security benefits is subject to income tax.

**If you are a member of a couple and file a separate return, you probably will pay taxes on your benefits.**

\*"Combined income" means your and your spouse's adjusted gross income (as reported on your Form 1040) plus nontaxable interest plus one-half or your Social Security benefits.

**For More Information:** If you would like more information about the taxation of your Social Security benefits, there are some IRS publications that will help you. Call or visit IRS to ask for a copy of Publication 554, *Tax Information for Older Americans*, and Publication 915, *Social Security Benefits And Equivalent Railroad Retirement Benefits*.

## When Somebody Needs Help Managing Benefits

Sometimes, people who receive Social Security or SSI are not able to handle their own financial affairs. In those cases, and after a careful investigation, we appoint a relative, a friend, or another interested party to handle their Social Security matters. We call that person a "representative payee." All Social Security or SSI benefits due are made payable in the representative payee's name on behalf of the beneficiary.

**Here's An Important Point:** If you have "power of attorney" for someone, that does not automatically qualify you to be his or her representative payee.

If you are a representative payee, you have important responsibilities.

- You must use the Social Security or SSI benefits for the personal care and well-being of the beneficiary. Any excess funds must be saved on the beneficiary's behalf.
- You must keep Social Security informed of any events that might affect the beneficiary's eligibility for benefits. For example, you should tell us if the beneficiary moves or gets a job. And, of course, you should tell us when the beneficiary dies.
- You must file a periodic accounting report with Social Security that shows how you spent or saved the benefits you were paid.

**For More Information:** If you would like to learn more about receiving benefits on behalf of another individual, call or visit any Social Security office to ask for a copy of the brochure, *A Guide For Representative Payees* (Publication No. 05-10076).

## Other Booklets Available

We said right up front that this booklet was intended to provide a general overview of Social Security programs and how they might affect you. Throughout this booklet, we referred you to other publications whenever the situation required more information or a more detailed explanation.

The Social Security Administration and the Health Care Financing Administration (the Medicare people) produce many publications and factsheets designed to help explain these programs to you. Here is a list of some you may find helpful.

- *Retirement* (Publication No. 05-10035)—A guide to Social Security retirement benefits
- *Disability* (Publication No. 05-10029)—A guide to Social Security disability benefits
- *Survivors* (Publication No. 05-10084)—A guide to Social Security survivors benefits
- *Medicare* (Publication No. 05-10043)—A guide to the Medicare program
- *SSI* (Publication No. 05-11000)—A guide to the Supplemental Security Income program
- *Social Security And SSI Benefits For Children With Disabilities* (Publication No. 05-10026)—An overview of benefits available to children
- *A Guide To Social Security And SSI Disability Benefits For People With HIV Infection* (Publication No. 05-10020)—An explanation of benefits for people with the AIDS virus
- *Financing Social Security* (Publication No. 05-10094)—A factsheet that provides an overview of Social Security's trust fund operations

These and other publications can be obtained free of charge at any Social Security office or by calling our toll-free number: 1-800-772-1213.

# Examples of Benefits

## Approximate Monthly Benefits If You Retire At Full Retirement Age And Had Steady Lifetime Earnings

Your Age In 1994	Your Family	Your Earnings in 1993				\$57,600 Or More <sup>1</sup>
		\$20,000	\$30,000	\$40,000	\$50,000	
45	You	\$ 777	\$1,044	\$1,177	\$1,301	\$1,400
	You and your spouse <sup>2</sup>	1,165	1,566	1,765	1,953	2,100
55	You	777	1,043	1,157	1,244	1,302
	You and your spouse <sup>2</sup>	1,165	1,564	1,735	1,866	1,953
65	You	752	998	1,076	1,127	1,147
	You and your spouse <sup>2</sup>	1,128	1,497	1,616	1,690	1,720

<sup>1</sup> Use this column if you earn more than the maximum Social Security earnings base.

<sup>2</sup> Your spouse is assumed to be the same age as you. Your spouse may qualify for a higher retirement benefit based on his or her own work record.

**Note:** The accuracy of these estimates depends on the pattern of your actual past earnings and on your earnings in the future. Your actual benefit probably will be higher because these estimates are shown in today's dollars.

## Approximate Monthly Benefits If You Become Disabled In 1994 And Had Steady Earnings

Your Age	Your Family	Your Earnings In 1993				\$57,600 Or More <sup>1</sup>
		\$20,000	\$30,000	\$40,000	\$50,000	
25	You	\$ 777	\$ 1,044	\$1,177	\$1,302	\$1,382
	You, your spouse, and child <sup>2</sup>	1,166	1,567	1,765	1,953	2,073
35	You	777	1,044	1,177	1,302	1,364
	You, your spouse, and child <sup>2</sup>	1,166	1,567	1,765	1,953	2,047
45	You	777	1,044	1,172	1,266	1,303
	You, your spouse, and child <sup>2</sup>	1,166	1,567	1,759	1,899	1,954
55	You	777	1,039	1,137	1,201	1,226
	You, your spouse, and child <sup>2</sup>	1,166	1,558	1,706	1,801	1,839
64	You	756	1,000	1,082	1,132	1,152
	You, your spouse, and child <sup>2</sup>	1,135	1,501	1,624	1,699	1,729

<sup>1</sup> Use this column if you earn more than the maximum Social Security earnings base.

<sup>2</sup> Equals the maximum family benefit.

**Note:** The accuracy of these estimates depends on the pattern of your actual past earnings. Your actual benefit probably will be higher because these estimates are shown in today's dollars.

Deceased Worker's Earnings In 1993

Workers' Age	Your Family	\$20,000	\$30,000	\$40,000	\$50,000	\$57,600 Or More <sup>1</sup>
35	Spouse and 1 child <sup>2</sup>	\$1,166	\$1,566	\$1,764	\$1,952	\$2,056
	Spouse and 2 children <sup>3</sup>	1,458	1,829	2,061	2,279	2,400
	1 child only	583	783	882	976	1,028
	Spouse at age 60 <sup>4</sup>	556	746	841	931	980
45	Spouse and 1 child <sup>2</sup>	1,166	1,566	1,760	1,908	1,968
	Spouse and 2 children <sup>3</sup>	1,458	1,829	2,055	2,228	2,296
	1 child only	583	783	880	954	984
	Spouse at age 60 <sup>4</sup>	556	746	839	910	938
55	Spouse and 1 child <sup>2</sup>	1,166	1,558	1,706	1,800	1,838
	Spouse and 2 children <sup>3</sup>	1,458	1,819	1,991	2,102	2,146
	1 child only	583	779	853	900	919
	Spouse at age 60 <sup>4</sup>	556	743	813	858	876

<sup>1</sup> Use this column if the worker earned more than the maximum Social Security earnings base.  
<sup>2</sup> Amounts shown also equal the benefits paid to two children, if no parent survives or surviving parent has substantial earnings.  
<sup>3</sup> Equals the maximum family benefit.  
<sup>4</sup> Amounts payable in 1994. Spouses turning 60 in the future would receive higher benefits.

Note: The accuracy of these estimates depends on the pattern of your actual past earnings. Your actual benefit probably will be higher because these estimates are shown in today's dollars.

# Fingertip Facts

Here's a summary of important Social Security information

## 1994 Social Security and Medicare Taxes

- You and your employer each pay 7.65 percent up to \$60,600
- If you're self-employed, you pay 15.3 percent up to \$60,600

## Extra Taxes For Medicare In 1994

- You and your employer each pay 1.45 percent on all wages above \$60,600
- If you're self-employed, you pay 2.9 percent on all net earnings above \$60,600

## Work Credits In 1994

- For each \$620 you earn, you receive one Social Security "credit" up to four per year
- Most people need 40 credits to be eligible for retirement benefits
- Younger people need fewer credits to qualify for disability and survivors benefits

## Average 1994 Social Security Benefits

- retired individual: \$674
- retired couple: \$1,140
- disabled individual: \$641
- disabled individual with a spouse and child: \$1,092
- widow(er): \$631
- young widow(er) with 2 children: \$1,316

## 1994 Earnings Limits

- If you're under 65, you can earn up to \$8,040 with no reduction in benefits; for every \$2 you earn over \$8,040, \$1 is withheld from benefits
- If you're 65-69, you can earn up to \$11,160 with no reduction in benefits; for every \$3 you earn over \$11,160, \$1 is withheld from benefits
- If you're 70 or older, there is no limit on your earnings

## 1994 SSI Payment Rates

- (does not include state supplement, if any)
- \$446 for an individual
  - \$669 for a couple

## THE REALITIES OF FINANCIAL DISINCENTIVES

While job placement is typically viewed as the end result of most psychiatric-vocational rehabilitation efforts by the counselor, for the client it is only the beginning. The following videotape illustrates the realities of both the incentives and disincentives to employment faced by persons having a psychiatric disability. Consumer concerns are discussed in terms of two broad categories of change and adjustment necessitated by employment. The first covers the more specific and tangible financial picture as changes occur across the entire spectrum of consumer benefits as a result of earned income. Consumers must cope with reductions of varying amounts in SSI, SSDI or public assistance checks, the loss of food stamps, energy, child care, and transportation assistance, and often significant increases in housing and utility costs. Budgeting, banking, and financial planning may become formidable tasks especially for those who have had limited experience in these areas. Confusion around changes in medical insurance and fears about complete loss of coverage are frequently paramount.

The second major area of change and adjustment facing the newly employed consumer lies in quality of life issues, such as management of one's time, social and recreational activities, and affairs of everyday living. Adjusting one's sleep schedule, laundry and shopping days, social activities, and medical appointment times around fluctuating work schedules requires improved time management skills and can be highly stressful.

It is recommended that counselors maintain an intimate working knowledge of the various benefit programs in which their clients participate and be willing to intervene directly in them and advocate on behalf of their clients. Education, support, and direct skills teaching in areas such as budgeting and time and money management may be necessary over a sustained period of time if consumers are to successfully maintain their newfound employment and achieve a truly more independent and autonomous status.

## CASE STUDY

### Background Information

The patient dates her first psychotic episode in 1970 when she was living with her grandfather. At that time, she says she had auditory hallucinations receiving special messages from pictures on the wall, as well as from the television set. The voices were saying to her that she was sick. Additionally she reports religious ideation and states that St. Peter and God were talking to her telling her to "be religious." She describes delusions that she felt she was "Diane Ross." Additionally she reports social isolation and decreased concentration, depersonalization. At times she has felt that her surroundings were unreal to her. She said that at times her thoughts were "mixed up" and she recalls that her friends and family could not understand what she was trying to say. The patient reports that at the time of her first psychiatric episode, her mother and four half siblings had moved to Washington, D.C. She states that she did not want to go to Washington, D.C. and elected to stay with her grandfather.

Following the patient's first psychotic episode, she was hospitalized at Woodville for two months and then followed at Western Psychiatric Institute and Clinic (WPIC) as an outpatient. She was taking Thorazine, Stelazine, and Vivactil at that time. However, she failed to keep her appointments at WPIC. Patient's schizophrenia was in remission from 1970 until 1975. During this period of time, patient received her beautician's license in 1971 and moved to Washington, DC to live with her mother and to work as a beautician. She maintained her job approximately for three years, at which time she had her second psychiatric episode and moved to Greensburg where her grandfather was living. She was placed in Westmoreland Hospital psychiatric ward for approximately 2 months. Following her hospitalization, she went to live with grandmother in Squirrel Hill. She refused follow-up after discharge. While at her grandmother's she obtained a job as a beautician in Pittsburgh and later in East Liberty. Her schizophrenia was in remission from 1976 to 1978 when she developed her third psychotic episode. She was again hospitalized at Westmoreland Hospital for approximately two months and transferred to Torrance Hospital where she remained from December 1978 to February of 1980.

Patient was born in Pennsylvania. She denies any perinatal or developmental problems. She denies any serious family problems while growing up. However, she stated the household consisted of her mother, grandfather, grandmother, patient, three siblings, and several aunts and uncles. (Patient's grandmother had 14 children and most of the children remained in the household.) Patient's mother married in 1955 when patient was 3 years of age. Patient's mother had 4 children to this marriage; subsequently, patient has three half brothers, two of whom are twins, and one half sister. When patient was ten years of age, family moved to N.B. She was in the fourth grade at that time. Patient states that she had difficulties at school in the fifth grade. She left school after 10th grade at the age of 17 in 1969.

The patient carries a diagnosis of a Seizure Disorder which was diagnosed in 1985 at St. Francis Hospital. Apparently at that time the patient suffered 2 seizures following what was felt to be a neuroleptic malignant syndrome treated with Prolixin. At that time, her CPK and temperature were elevated. An EEG at that time was read as showing a possible focal abnormality in the frontal lobes. She was started on Dilantin and Phenobarbital and was discharged on Dilantin. She has had no further seizures since 1985. She also has a history of beta-thalassemia minor as well as iron deficiency anemia. She reports a history of rheumatic fever as a child. She has no known sequelae except for a possible heart murmur. She acknowledges a history of alcohol and marijuana use in the past. She has no known drug allergies. Physical examination was remarkable for moderate obesity. Neurological examination was nonfocal.

#### Hospital Admission - 1988

This black female is known previously to WPIC and TLC but most recently has been followed at St. Francis Hospital. She has a probable history of medication noncompliance. She presented initially to St. Francis emergency room on the night prior to admission with multiple somatic complaints. At the time of her presentation to the DEC, she complained of auditory hallucinations, visual hallucinations consisting of visions in the sky and seeing things in people's faces, a fear of crowds, concerns that she will be murdered, feeling that others talk about her and receiving messages from the television. She denied any suicidal ideation but was concerned that the voices or fear of others will force her to hurt herself in some way. There is no homicidal ideation. She reported decreased sleep and decreased appetite. There are no depressive symptoms. She acknowledged a past history of alcohol and marijuana use but none currently and has no other history of any other drug use or IV drug use. She acknowledged "missing" some medication doses but it was unclear at the time of admission how much or how often she would miss taking her medications. She says that her aunt brought her down from D.P., just north of Pittsburgh on the night prior to admission, but that she actually lives in Oakland. She has her own apartment and lives independently with SSI. She has a sporadic work history. She reported no recent stressors.

#### Narrative Summary of Treatment Course

Problem #1: PSYCHOTIC DISORDER. The patient was admitted to the 11th floor for a full evaluation. On admission, her mental status examination showed her to be alert and appropriately dressed and groomed. She appeared quite anxious and somewhat guarded but was cooperative. She presented her history in a vague manner and was unclear about many historical details. Her mood was described as "frightened." Her affect was blunted, anxious and nonlabile. She admitted to auditory and visual hallucinations, paranoid delusions and ideas of reference related to the television. There was no suicidal or homicidal ideation. Her thoughts were generally well organized. Her insight was very poor and her judgment was impaired. She appeared somewhat restless, and there was mild cogwheeling on exam. The patient was initially started on her reported dosage of Haldol of 35 mg per day. However, there was some question of the patient's compliance, and she did appear to have mild

extrapyramidal side effects. The Haldol was decreased to 10 mg b.i.d. which was tolerated well by the patient and her restlessness appeared to resolve. In addition, she was treated with Cogentin 2 mg b.i.d. During the course of her hospitalization, the patient showed a gradual improvement in her symptoms. Our impression was that the patient probably had not been taking her medications as prescribed as an outpatient. At the time of her discharge, the patient was in stable condition. She was greatly improved and had no evidence of auditory or visual hallucinations, paranoid ideations or other type of delusional ideas. She was tolerating her medications quite well. There was no evidence for any suicidal or homicidal ideation. The patient was able to go out on pass on one occasion prior to discharge, and this went well. In addition, education was provided for the patient regarding her follow up care as well as the importance of her medications with the stress being on the patient's compliance. The patient agreed to continued follow up through WPIC. In addition, the patient was able to attend 2 sessions at TLC during this hospitalization and will continue there as an outpatient.

PROBLEM #2: SEIZURE DISORDER. The patient's history was suggestive of an isolated seizure event. She has no previous seizure history and has had none since 1985. A sleep deprived EEG was obtained and the results were essentially unremarkable. It was elected to taper and discontinue the patient's Dilantin in light of the present findings. The patient's initial Dilantin dosage on admission was 400 mg per day. This was decreased to 200 mg per day prior to her discharge. The patient was given a 5 day supply which she would stop after the five days.

PROBLEM #3: ANEMIA. The patient initially presented with a mild anemia and a greatly reduced MCV. Her iron supplementation was discontinued and iron studies were obtained which showed evidence for an iron deficiency anemia. In addition, her old medical records were reviewed and it was felt that the patient in the past has had a mixed picture of beta-thalassemia minor, iron deficiency anemia and anemia of chronic disease. With the low iron studies, it was felt that the patient should be restarted on iron supplementation and treated for a period of six weeks. At that time, her blood studies can be repeated and reevaluated.

#### Hospital Admission - 1989

The patient is known to WPIC by an inpatient admission from 5/17/88 to 6/1/88 on the 11th floor. Patient has been followed up at TLC since then and has been treated with Haldol 10 mg b.i.d. and Cogentin 1 mg b.i.d. Patient was referred today by her TLC therapist, who was recommending admission.

The patient reported that she had been feeling quite well and was going to TLC three days a week and taking her medicine until three weeks ago. She went away to visit her mother in Virginia and she stopped taking her medicine. She said that she stopped taking it because she felt very good and she thought that she didn't need it anymore. She reported that the vacation was a positive time, although her mother worked each day and she was at home by herself and began to feel quite bored and lonely. Her mother was also talking with her

about having the patient come and live in Virginia with her and the patient was not open to that idea. She stated that she returned to Pittsburgh on 5/27/89 and since then she has been feeling "real bad." She has not been able to sleep and will stay up all night long playing her stereo, her appetite is decreased, she is experiencing increased energy with restlessness and pacing and decreased concentration with racing thoughts. She reports that she has been "fantasizing and not in touch with reality." She said that her fantasies include being married and having children, and being a recording star, and having a good job and being very rich. She has not returned to TLC since she came back from vacation and she has not called her therapist. Today Ms. F. called her and asked her to come in to TLC to speak with her. At first the patient was reluctant to do so but then she agreed. She reported all of her symptoms and her noncompliance to medication to her therapist who recommended that she come up to the DEC to be admitted. Patient also reported that for the past several days she has been keeping to herself in her CRR apartment and not talking with her roommates; she's locked herself in the bedroom and she has not been showering nor taking care of her personal hygiene. She reports talking to herself and carrying on conversations with herself and laughing out loud. She stated that she has not been hearing voices but been "manufacturing voices in her head and making up voices." She states that she is getting messages from the TV and the radio, although she is not able to say what those messages are and she feels that people are watching her. She reports that if she stares too long at the floor or at the walls, she will begin to see Jesus Christ or the devil.

The patient admitted to some passive death wishes thinking that life is not worth living but she denied any suicidal ideation or plan. She denied any homicidal ideation but she stated that in the past when she has gotten sick, she would hear a voice telling her to get a machine gun and to start shooting people. The patient stated, "I'm afraid that that might happen again." She denied any drug or alcohol use but she stated that when she drinks Pepsi or water she pretends that it's beer and that she is drinking alcohol and smoking cigarettes. The patient stated that she does not know why she stopped taking her medicine when she knew she was going to get sick. She stated that she feels that she needs to be in the hospital in order to prevent herself from getting worse.

PHYSICAL EXAMINATION - 1990

VITAL SIGNS: Weight: 196. Blood pressure supine: 122/76. Standing blood pressure: 118/84. Pulse: 82 and regular. Temperature: 35.6 degrees C. Height: 63 inches. Respirations: 20 per minute.

GENERAL APPEARANCE: Obese black female in no acute distress.

SKIN: Warm and dry, the turgor is good.

MUSCULOSKELETAL: Negative for joint deformity or effusion. There is an increased lumbar lordosis.

HEENT: Normocephalic, atraumatic. The fundoscopic exam is unremarkable for AV nicking, hemorrhage or exudate. The TMs are intact and pearly gray, the breath roads are clear, the oral cavity and pharynx are unremarkable for inflammation or lesion.

NECK: The thyroid is of normal size and consistency.

GLANDS: No lymphadenopathy is noted.

BREASTS: Negative for masses or nipple discharge.

LUNGS: Clear to auscultation and percussion.

CARDIOVASCULAR: Regular rate and rhythm without murmur, gallop, click or rub, there are no bruits, there is no peripheral edema. The pulses are intact and equal bilaterally.

ABDOMEN: Obese, soft and non-tender with normoactive bowel sounds and no masses or organomegaly.

GENITALIA: Normal pap smear in Sept. 1989. Not due yet.

RECTAL: Normal exam Sept. 1989. Not due yet.

NEUROLOGIC: Alert and oriented x 3, the cranial nerves and cerebellum are intact. Reflexes are 2+ and equal bilaterally, the plantar is downgoing bilaterally, the sensory and motor systems are intact. No tremors or focal neurologic signs are found.

## SUMMARY OF PERFORMANCE - VOCATIONAL ASSESSMENT, 1990

### Work Behavior and Functional Physical Capacities

Gladys demonstrates a sound awareness of appropriate worker behavior. She consistently reports to her correct work area on time and completes assigned projects as scheduled. She attends to verbal instructions and attempts to follow through with supervisory suggestions. She maintains a positive work attitude and adequate frustration tolerance for challenging work tasks. Her social interaction skills with co-workers and supervisors are also positive for the work situation.

Gladys is able to follow a daily work schedule and independently initiate familiar work tasks. She maintains a clean work area and is able to find materials needed to complete job responsibilities. She demonstrates a working knowledge of common kitchen utensils and handles equipment and food items appropriately. She abides by rules and regulations of the work situation and demonstrates adequate personal hygiene skills necessary for working in food service. Gladys demonstrates the prerequisite skills for food service entry level positions; however, she may need further training to strengthen basic skills (e.g., needs to improve measurement skills and understanding of cooking terms and following written recipes which she may encounter in some jobs).

Gladys is able to maintain at least a six hour work day involving light duty work. She is able to maintain work tolerance for standing, stooping, bending and reaching without any significant indications of fatigue. However, her work production would not meet the demands for the fast food industry. Also, given her history of emotional illness, it is recommended that she participate in work situations which involve minimal amounts of time pressures. It appears that she is better suited for food service positions which provide more structure and fewer interruptions or variations from daily routines.

Gladys demonstrates a sound awareness of her how disability impacts her ability to function in various work settings. She acknowledges that employment positions which involve high levels of responsibility, high production demands and performance levels under stress are inappropriate. She also seems to acknowledge the importance of adherence to her medication regime and individual therapy in order to maintain daily functioning and employment. Throughout this evaluation Gladys did not exhibit any symptoms related to her schizophrenia. She was able to function adequately in work situations which involved mild to moderate stress levels.

### Cognition and Learning Ability for the Work Environment

Gladys' learning ability is enhanced when provided concrete directions that are accompanied by visual demonstration or a model. She experiences greater difficulty on tasks which require more abstract thinking. Her proficiency in learning and organizing increases for concrete tasks that involve manual manipulation of materials. She has greater difficulty

manipulating and organizing verbal information and concepts in the absence of a concrete reference. Her performance on the Perceptual Memory Task indicates that her ability to learn through visual and auditory modes is in the average range. Observation during the administration of the test also reveals that she is strategic and flexible in her approach to learning new tasks. However, her lack of confidence and tendency to become anxious when confronted with new or challenging tasks may impede her learning rate. Gladys is capable of reading and comprehending concrete instructions but would have difficulty handling written language which requires a high degree of moderately complex conceptualization. Based on her academic achievement and her performance during the evaluation, it is felt that Gladys is better suited for training programs which emphasize practical application, provide an opportunity for repetition of newly learned skills, and allow for self-pacing.

### Summary and Recommendations

Based on data and information obtained through the evaluation, it would appear that Gladys is capable of working at a competitive level. She appears to possess a strong work ethic and excellent worker behaviors which could enhance her employability. Gladys appears to have adequate insight into her vocational weaknesses, yet appears to underestimate her abilities and will require support in recognizing her strengths. Gladys also acknowledges the importance of adherence to her prescribed medication regime and maintenance of individual therapy in order to control/manage her schizophrenia.

Gladys' career interest remains in the food service occupations. She desires employment as a food prep and/or baker working in a hospital, institution, or cafeteria type setting. However, at this present time, she needs to strengthen her specific skills and increase her knowledge base and self-confidence in order to enhance her employment potential and secure a position in the food service field. To assist Gladys in achieving her vocational goal the following is recommended:

1. Participation in Community College of Allegheny County Food Service training program for special needs adults. This training program could allow for self pacing and practical application of learned skills for Gladys. Emphasis in training should include strengthening basic skills (e.g., following written instructions for recipes, measurement skills, cooking terms, safety judgment and procedures including appropriate care, and use of equipment operation). Programming should also include a transitioning phase, or a gradual reentry into the work force by providing a practicum placement so that Gladys can increase confidence levels and be given support to practice skills learned in the classroom and gradually adjust to the demands of a competitive employment situation.

2. Upon completion of this program, Gladys should be provided with job placement services. Services should include the identification of appropriate job matches with respect to skill level and production demands. Stressors inherent to various job settings (such as with the fast food industry) should be considered when placing Gladys on the job. Gladys would also benefit from job search skills training and job interview skills training.
3. Continued involvement in individual therapy and maintenance of present medications for the management of schizophrenia.

### CRR PROGRAM FUNCTIONING - 1991

Gladys has been functioning well during this review period. She consistently sets and keeps all appointments in a timely manner.

Gladys attends the cooking group at the CFC occasionally. Gladys successfully hosted a spaghetti dinner for the CFC consumers. Gladys has not been able to participate in as many CFC functions due to her work schedule at Magee Women's Hospital.

Gladys maintains a positive relationship with her friends at CFC and in the community.

Gladys' relationship with her mother who lives in Virginia and her grandmother who lives in Pittsburgh is a very positive one.

Gladys told me "that the CFC has helped her so much and she does not know where she would be without it."

Gladys also stated "that she would like to start working on the possibility of moving, to supportive housing, maybe in a year."

Gladys enjoys her house and roommates.

### Day Programming/Vocational

Gladys continues to work at Magee Women's Hospital 17 to 18 hours a week. Gladys works as a cook in the dietary and nutrition department. Gladys enjoys her job very much and has made it known to her supervisor that she would like to work more hours if they are made available.

Gladys attends special events at the CFC and enjoys coming to the cooking group whenever she has the time off from work.

Income

\$399.84	Magee Women's Hospital
<u>211.99</u>	SSI
\$611.83	per month

Current Medications

Ferrous sulfate	5 grams 3 times a day with food
Diphenhydramine 50 mg	Two tablets at bedtime
Feldene 20 mg	One tablet at bedtime
Folic Acid 1 mg	One tablet at bedtime
Haloperidol 1 mg	One tablet at bedtime

Medical Issues. None at present. Gladys' last checkup was in late August and she is doing very well.

Service Plan Goals Accomplished

Gladys has made it known to her supervisor that she would like to increase her hours of employment. Gladys will work more hours when they become available.

Gladys has a long term goal, that is known by her supervisor, to work full time.

Gladys has made progress on budgeting her monies to cover rent, food, etc.

Service Plan Goals to Continue

01 Gladys will build social networks:

- Gladys will explore adult social activities
- Gladys will look into Peoples, her church and other agencies for adult social information
- Gladys will maintain her current social networks, CFC and other friends

02 Gladys will work on budgeting to save money to purchase house supplies for her expected move in the future:

- Gladys will work on long term savings
- Gladys will identify items needed to purchase
- Gladys will utilize the money management group to help her work on these goals

## RECOMMENDATIONS

It was recommended by participants in the UR meeting that staff work quietly but continuously on those things Gladys needs to do or learn in the next year, preparatory to moving out of the program.

Concern was also expressed over Gladys' wish to live alone after leaving the program. Staff should explore with her her living situation before she moved into the program and help her to realize that the support of a roommate, even one who nags her, may be crucial to her ability to live without housing support.

## EDUCATIONAL/EMPLOYMENT CHRONOLOGY

1988-89	Telephone sales for insurance marketing firm
1991-present	Magee Women's Hospital - Food Service

## Vocational Readiness and Job Placement: 1989 to Present

Gladys was referred to Neuropsychological Assessment and Rehabilitation Services (NARS) on 9/19/89 by her primary clinician in WPIC's partial hospitalization program (TLC) for "assessment of readiness for vocational training and/or job placement." Gladys had been attending TLC three mornings per week for the past year and participating in Womens' Group, Needlework, Music Group, and the Breakfast Club. Her symptoms of schizophrenia had been in remission since June 1989 when she was hospitalized for a one week period in order to restart her medications, which she had discontinued during a visit with her mother in Virginia because she "felt so good." Medication regimen included Haldol Decanoate 25 mg IM q 4 weeks, Haldol 5 mg qHS, Cogentin 1 mg qHS, and Benadryl 50 mg qHS. Gladys was supported by \$400.00 per month from SSI and \$24.00 per month in Food Stamps; her rent at the Community Residential Rehabilitation facility (CRR) was \$185.00 per month. Gladys was unemployed at the time of her referral to NARS and had last worked from 12/88-2/89 doing telephone sales but was unable to meet the daily quotas. Prior to this job she had worked from 3/82-7/83 as a clerk/bagger for a local Council Thrift store.

Due to staff shortages within NARS, Gladys was placed on a waiting list for services until 11/2/89 and was seen on a twice monthly outpatient basis for the next four months. She was consistently pleasant, cooperative, and well invested in sessions. Initially she was adamant in denying interest in any type of educational or training program and expressed her vocational goal as an entry-level job in food service or the clerical field. Rehabilitation plan was focused toward further clarification of employment objectives and enhancement of job seeking skills. Psychoeducational and vocational assessments were completed, job applications were obtained and completed, and referral to the Office of Vocational Rehabilitation (OVR) was agreed upon for job placement assistance, possibly in a supported employment position. OVR intake and all necessary supporting documentation were complete by March 1990, but Gladys's assigned counselor went on an emergency medical leave of absence until July 1990. OVR desired that Gladys undergo a 7 day, "hands-on" work evaluation in her identified area of interest (food service) at the Rehabilitation Institute of Pittsburgh, which was immediately undertaken and successfully completed (see previous work evaluation). When presented with the option of pursuing further "hands-on" training in the food service field in a program known for thorough training and excellent job placement rates for graduates (Community College of Allegheny County), Gladys changed her mind about "schooling" and became quite excited about the program. She began the two semester, 5 days per week training program on 8/25/90 and enjoyed immediate success, earning 100% on exams, "Student of the Week" award, and a Certificate of Achievement at the first semester's end. The only negative feedback which she received was that her facial expression did not always express how she was actually feeling but she was able to discuss this with her teachers. During training, Gladys kept in regular contact with NARS by telephone, and came into the clinic over Christmas break. In January 1991 she

interviewed successfully for a 4-week practicum in the Dietary department of a local hospital. She found her initial employee-trainer problematic and her school instructor was able to have another trainer assigned to her. She worked for two weeks packaging, delivering and collecting cafeteria trays, and for two weeks directly in the cafeteria. She was hopeful of receiving a job offer from the hospital, and was hired on a part-time basis on 3/16/91. Her work hours fluctuated between 7:00 a.m. to 3:30 p.m. and 4:00 p.m. to 8:00 p.m.. The OVR provided work uniforms, shoes, and two monthly bus passes, as well as ongoing assistance in money management and budgeting.

Gladys made several urgent telephone calls to her NARS clinician during her first full month of employment, requiring immediate and extensive intervention during this already stressful, transitional time. On April 4, 1991 Gladys reported confusion about the effects of earned income on her SSI benefits because she had been given contradictory information by NARS, OVR, and the Social Security office. The correct income deduction and reporting guidelines were reviewed with her and she expressed a sufficient comprehension of these.

Gladys telephoned again on April 23, 1991 and was quite upset and confused regarding health insurance. As she was unable to afford the cost of traditional Blue Cross/Blue Shield insurance, she had selected a Health Maintenance Organization (HMO) during her new employee orientation. She had proudly taken her new insurance card and pay stubs for a new financial interview at WPIC, as a change in income or insurance requires. She was dismayed at being informed that WPIC was not on her HMO's list of approved providers and that Medical Assistance could not continue to pay for her psychiatric treatment because they viewed her HMO as a primary insurance carrier. Gladys's NARS clinician clarified this situation with her HMO, and Gladys was to be scheduled with an approved HMO service provider within the week as she was due for her monthly Haldol injection. Three days later, Gladys called back very upset and confused about why her HMO had scheduled then canceled her new doctor's appointment. The HMO had excluded Gladys from psychiatric coverage due to the presence of a pre-existing condition, a chronic illness, and the receipt of disability payments. Medical Assistance agreed to continue coverage upon receipt of this in writing, and Gladys continues to receive her primary psychiatric treatment and long-term supportive services at WPIC. She will continue to pay \$32.00 per month for HMO coverage of physical conditions until she can drop this coverage at open enrollment time because it is redundant with Medical Assistance.

As of March 1992, her one year employment anniversary date, Gladys had made an excellent adjustment to her part-time competitive employment and continued to report much personal satisfaction and improved self-esteem secondary to working.

WESTERN PSYCHIATRIC INSTITUTE AND CLINIC  
DISCHARGE SUMMARY

NAME: \_\_\_\_\_ HOSPITAL NUMBER: \_\_\_\_\_  
DATE OF ADMISSION: 8-21-95 DATE OF DISCHARGE: 7-2-96  
PROGRAM: PRAS ATTENDING Rosyvee Guzmán, B.A.  
Michelle Geckle, MEd, CRC

Ms. \_\_\_\_\_ is a 21 year old, white, single mother of a 7 year old son. Ms. \_\_\_\_\_ was referred to Psychiatric Rehabilitation and Assessment Services (PRAS) on 8-21-95 by Nina Bridenbaugh, LSW of the Comprehensive Care Program (CCP) of Western Psychiatric Institute and Clinic (WPIC) for vocational services. Ms. \_\_\_\_\_ presented to WPIC on 11-9-94 with different symptoms of depression. It appears that her symptoms began soon after the 7/94 death of the main support in her life, her maternal grandmother. Diagnoses as of 11/94 include Major Depression Single Episode, Rule Out Major Depression, Recurrent, Other Specified Family Circumstances, Asthma, Physical Abuse and self-defeating and dependent traits. She was pregnant throughout her 9th grade year and gave birth to her son in 6/89 at age 15. Her work experience is limited primarily to "under-the-table" babysitting and yardwork. Ms. \_\_\_\_\_ is supported by Welfare (cash benefits of \$320.00/month) and food stamps. She took cosmetology in vocational technical classes in high school. In her last session at PRAS on 4-3-96, Ms. \_\_\_\_\_ expressed plans of moving out of her mother's house and starting a landscaping job.

Ms. \_\_\_\_\_ kept 14 appointments in PRAS, frequently cancelling or not appearing for scheduled sessions. Treatment provided for Ms. \_\_\_\_\_ included assistance in planning for an educational/training program, exploring career options with resource materials, verifying program costs, financial aid sources, applications and admission forms, schedule of courses and credits, and help with child care.

Ms. \_\_\_\_\_ has not responded to attempted contacts following her absence at three consecutive appointments. Therefore, her case is closed.

PROGRAM: NARS ATTENDING Michelle Geckle, M.Ed.  
CLINICIAN

, a 32 year old, white, married female, was referred to NARS on 4-18-88 by D. Mazzie, RN, MSN of the Mood Disorder Clinic for assistance in exploring career and educational opportunities. Diagnoses at referral were Dysthymic Disorder and Major Depression, Recurrent. Cathy had received treatment for depression since 1979 and was followed in the Center of Psychotherapy Training by K. Gaitskill, M.D. since 5-5-88.

Cathy presented to NARS with a history of having held a number of what she considered to be unskilled or semi-skilled jobs, i.e.: receptionist, nurse aide, billing clerk, pipefitter, and most recently, order filler in a warehouse on a seasonal basis. She expressed a desire to undergo vocational assessment and career counseling to help develop long-term and potentially more satisfactory career goals. She specifically desired a college-level education, having completed half of a 2 year Electronics Technology Training Program at Penn Technical Institute in 1986 under Office of Vocational Rehabilitation sponsorship and found it "too boring".

Cathy was seen for a total of 14 individual sessions over a period of 13 months. She was generally, prompt, articulate and invested in career exploration and activities related to selecting a college and an educational program. Services provided for Cathy included vocational assessment (please see NARS Interim Summary), career counseling and guidance, and referral an liaison services with the Office of Vocational Rehabilitation, counselor Mary McCloskey and then Bob Shields, and with CCAC and The University of Pittsburgh.

Full Office of Vocational Rehabilitation sponsorship was secured for Cathy and she entered \_\_\_\_\_ Campus in 1-89 taking 17 credits. She earned a 3.82 QPA at midterm which she maintained through her final exams. At her last session in NARS on 5-22-89 Cathy had registered for 16 credits for the Fall 89 semester, and was back working at the warehouse for the summer. Her plan was to transfer to the University of Pittsburgh after 2 years at CCAC into the Business/Liberal Arts Dual Major Program. She did not feel in need of any further services from NARS at this time but felt that she may like some assistance with job search issues near the time of her graduation. She may be referred back to NARS for this purpose at that time.

## NEUROPSYCHOLOGICAL ASSESSMENT AND REHABILITATION SERVICES

### Discharge Summary

Name:  
WPIC #:  
Admission Date: 12/7/  
Discharge Date: 2/16/

, a 31 year old white single female, was referred to Neuropsychological Assessment and Rehabilitation Services on 11/10/83 by Lloyd Benjamin, M.D., of the 10th floor Mood Disorders Module for a vocational assessment and assistance in investigating alternate employment opportunities. Ms. is known to Western Psychiatric Institute and Clinic and has been followed actively on an outpatient basis by Steven Sittenfield, M.D., Corporate Services, since 10/19/82; diagnosis is Borderline Personality Disorder.

Ms. has been employed full-time for the past 14 years as an operator for Bell Telephone, since her graduation from high school. She reported finding her employment stressful and anxiety-producing. At the time of her referral, Ms. presenting problems included the following: (1) difficulty with the decision to remain at her present job for two more years (in order to receive 85% retirement benefits) or to seek alternative employment; (2) uncertainty regarding her current vocational abilities, interests, and potential; (3) lacking adequate and accurate information regarding feasible and realistic occupational alternatives.

Ms. was seen in N.A.R.S. for a total of nine sessions from 12/7/83 to 2/16/84, after having cancelled two initial appointments. She was consistently on time for sessions, casually dressed, but rather sloppy in appearance at times. Ms. was able to discuss her work-related concerns openly, but seemed reluctant to take responsibility for making decisions or initiating changes regarding her present employment situation. She often conveyed the impression of being overwhelmingly confused and helpless regarding the nature of N.A.R.S. services, as well as treatment plan goals and methods. Two sessions were necessary in order to clarify her expectations of N.A.R.S. clinician, her presenting problems, and treatment goals.

As requested by Dr. Sittenfield, treatment for Ms. was time-limited (six weekly individual sessions following completion of her treatment plan), and primarily informational in nature. A vocational assessment was completed and the results were interpreted and discussed with Ms. Career, educational, and occupational information from various resources was provided and discussed in sessions. The pros and cons of her current job vs.

2348

feasible alternatives were a major topic of discussion, and during her final session Ms. related that she had reached the decision to remain at her present job, at least for two more years, and felt comfortable with this decision. She planned to put in another transfer request in June, 1984, which will mark one year of perfect attendance for her. All of her previous transfer requests have been denied on grounds of excessive absenteeism secondary to multiple hospitalizations. Ms. also acknowledge that she had gained an adequate understanding and knowledge of her current level of vocational functioning and potential, as well as a more comprehensive knowledge of employment and career alternatives.

In reviewing her treatment plan, Ms. concluded that she has attained both of her initial goals, and no longer felt in need of further services from N.A.R.S. clinician.
