ABSTRACT

A project was conducted to offer customized software to adult basic education (ABE) programs in Pennsylvania and to train the program participants on software customization principles. The project produced an updated list of software publishers and products that can be customized for adult education students. Workshops were presented on customization of software through the regional staff development centers. Software was customized for local programs to make it appropriate for the needs of the learners. Guidelines were developed for instructors of the programs that use the customization service about how to do future customization on their own. As a result of the project, 169 software programs that can be used to develop customized instruction for ABE students were identified and stored in a database in FileMaker Pro format. The project concluded that at present most Pennsylvania ABE providers are primarily interested in the electronic customization of the administrative aspects of their programs; the project scope was expanded to include software customization for both instructional and administrative purposes. The project also concluded that most providers need more technical training in this area to meet their needs. (The bulk of the document is a printout of the database. Each entry includes the following: product name, company name, address, telephone, fax and electronic mail address, subject area, instruction type, cost, media, platform, language, instruction level, and description. A description of software customization methods is also appended.) (KC)

Title: Customized Computer Software for ABLÉ Programs – Final Report

Project No.: 098-5013 Funding: \$31,019

Project Director: Dr. Eunice N. Askov Phone No.: 814-863-3777

Contact Person: Brett Bixler Phone No.: 814-863-3777

Agency Address: Institute for the Study of Adult Literacy

University Park, PA 16801-4756

### Purpose:

To offer customized software to the ABLÉ programs in Pennsylvania and train the ABLÉ program participants on software customization principles.

### Procedures:

Produced an updated list of software publishers and products that can be customized for adult education students. Presented workshops on customization of software through the regional staff development centers as requested. Customized software for local ABLÉ programs to make commercial software appropriate for the needs of their learners. Developed guidelines for instructors of the programs that use the customization service in how to do future customization on their own.

### Summary of Findings:

1. One hundred sixty-nine software programs that can be used to develop customized instruction for ABLÉ students were identified.
2. A database (in *FileMaker Pro* format) was developed to store information on these software programs.
3. Guidelines on how to customize instructional software were developed.
4. Workshops on customization of software were delivered throughout Pennsylvania.
5. Software for local ABLÉ programs was customized as requested.

### Comments (Conclusions, Findings, Barriers, if any):

At this time, most Pennsylvania ABLÉ providers are primarily interested in the electronic customization of the administrative aspects of their programs. Because of this, the project scope was expanded to include software customization for both instructional and administrative purposes.

Most Pennsylvania ABLÉ providers need more technical training in this area to meet their needs.

### Products (if applicable):

A database (in *FileMaker Pro* format) of 169 customizable instructional software programs was developed.

## Introduction

The goals of the proposed research were to offer customized software to the ABLE programs in Pennsylvania and train the ABLE program participants on software customization principles. This project took place during the 1994-95 fiscal year. ABLE providers nationwide who are interested in software customization for their programs will benefit from this report. The Project Director was Dr. Eunice N. Askov, Director of the Institute for the Study of Adult Literacy at Penn State. The Project Coordinator was Brett Bixler, Senior Instructional Designer at the Institute for the Study of Adult Literacy at Penn State. This report is available from:

Advance Clearinghouse and Resource Center

## Statement of the Problem

ABLE programs in the Commonwealth work with a diverse student body. Each program has its own philosophy, organization culture and resources, and student population. The unique aspect of this project was that it permitted Pennsylvania ABLE programs to adapt commercial computer software, which is generic by nature, to the unique needs and interests of each program.

The shift toward functional context instruction—instruction using the context of relevant work or life tasks—is one of the most important directions in adult literacy. The functional context approach to instruction, using the needs and interests of the learners to provide the context for instruction in basic skills, has been

demonstrated to be a more effective instructional approach than generic instruction (Sticht, 1987; Rockefeller Foundation, 1990). Learning is more relevant and meaningful; students are able to draw on past knowledge and experiences as they learn basic skills.

Adult literacy education uses the functional context approach in a wide variety of ways. Some workplace/workforce preparation programs take a functional approach, instructing workers and future workers in the specific basic skills required for their jobs using actual job materials for instruction. However, functional context can be used in almost any type of literacy program; for example, a family literacy program that helps adults read children's books so they can read to their own children is using the functional context approach to improve basic skills.

Technology has also been advocated as a promising approach to instruction (U.S. Congress, 1993; Turner, 1993; Forlizzi, Askov, & Carman, 1993). Instructors find that computers, in particular, offer privacy to students to learn at their own pace and level. Students find the experience of using computers empowering, enabling them to engage in further learning. While these advantages are discussed in the recent report from the Office of Technology Assessment (U.S. Congress, 1993), what is not discussed are the difficulties that programs encounter when they try to customize software to use the functional context approach to meet the instructional needs of their unique learners.

In response to the research on the functional context approach to instruction, and the need to customize instruction to learners' needs and interests, a number of software publishers now offer customizable software. Staff at the Institute for the Study of Adult Literacy (ISAL) at Penn State compiled a list of customizable software for workforce literacy in the late 1980s as part of a larger software development project. The matrix of workforce literacy software titles and characteristics as well as the list of publishers has been a useful tool for practitioners (Askov & Clark, 1991). The matrix has been reproduced in *Closing the literacy gap in American business; A guide for trainers and human resource specialists* (Gordon, Ponticell, & Morgan, 1991), as well as cited in *Sociological Abstracts* and *International Education* database. The International Reading Association is also planning to reproduce it in a special compilation of articles in the *Journal of Reading* about adult literacy (personal communication, 1994).

However, the current matrix was only for workforce literacy; it was also out of date since the original research was done and compiled more than five years ago.

More publishing companies are now producing software for adult literacy and more are offering the option of customization.

Current software evaluations usually do not deal with the issue of customization. For example, the state departments of education of the northwestern U.S. have issued annual reports of software evaluations performed by adult education instructors and students (*Software Buyer's Guide*, 1993). While this resource is very valuable in providing evaluations of software, it does not provide guidance on customizing commercial software.

Furthermore, the process of actually customizing commercial software is not as easy as it should be. Ben Burenstein of Drexel University, serving Philadelphia adult education programs with computer technical assistance under an Act 143 grant, reported that he had shown instructors how to customize commercial software; yet to his knowledge no one had actually done it on their own (personal communication, 1994).

In a telephone survey of the nine regional staff development centers, conducted in March 1994, most of the centers believed that the programs in their regions did not use customized software; several said that they were unsure about answering the question. Interest in customization for instruction, testing, and record-keeping purposes was expressed by all ABLE programs funded by the Pennsylvania Department of Education. All centers expressed an interest in having a workshop presentation on software customization and said that an updated software evaluation would be of great benefit.

## Goal and Objectives

The specific objectives of the project were to:

1. update and expand the existing research on customization of computer software using the current database at ISAL and other sources;
2. produce an updated list of software publishers and products that can be customized for adult education students;
3. advertise customization services to local programs through the regional staff development centers;
4. present workshops on customization of software through the regional staff development centers as requested;

5. customize software for local ABLE programs to make commercial software appropriate for the needs of their learners;
6. develop guidelines for instructors of the programs who use the customization service in how to do future customization on their own;
7. compile the research on the updated list of software publishers, the existing matrix of customizable software, and guidelines for programs in how to customize software in the final report;
8. disseminate the final report through AdvancE and the regional staff development centers.

## Procedures

1. Update and expand the existing research on customization of computer software using the current database at ISAL and other sources.

The project manager identified 169 pieces of software which can be customized by a teacher or tutor. The project manager used catalogs, on-line database searches, and electronic queries and searches to compile this list.

2. Produce an updated list of software publishers and products that can be customized for adult education students.

Using a database (*FileMaker Pro*), the project manager constructed a database containing the information gathered for objective one (see Appendix B). A record from the database is shown below:

3. Advertise customization services to local programs through the regional staff development centers.

A letter was sent to all Regional Staff Development Centers on August 2, 1994. This letter was to be distributed by each Staff Development Center in a manner they felt was appropriate. Some Staff Development Centers copied the letter and distributed it; others included the letter in their newsletters.

A description of the project was published in the October issue of *What's the Buzz?* The project manager wrote an article on software customization for the *Mosaic*, Volume 4, Number 2 (issued in December). Included in the article was a description of the software customization project.

A second letter, which more clearly defined the project, was mailed on October 18, 1994 to all ABLÉ providers listed in the Institute for the Study of Adult Literacy's database.

A third letter, which defined the project and included details on customization of software for administrative purposes, was mailed on February 10, 1995 to all ABLÉ providers listed in the Institute for the Study of Adult Literacy's database.

4. Present workshops on customization of software through the regional staff development centers as requested.

On September 24, 1994, the Project Coordinator presented two workshops on software customization at Region 3's First Annual Fall Workshop. On November 24, 1994, the Project Coordinator gave a presentation on the project at Region 5's Fall Workshop. On December 9, 1994, the Project Coordinator met with the Executive Director of the Reading-Berks Literacy Council to discuss their software customization needs. On January 30, 1995, the Project Coordinator gave a presentation on the project at a Region 7 staff development meeting. On February 6, 1995, the Project Coordinator gave a presentation on the project at the annual PAACE Conference in Hershey. On March 9, 1995, the Project Coordinator gave a presentation on the project at the Erie County Literacy Council. On March 30, 1995, the Project Coordinator gave a presentation on the project at Goodwill Industries in Pittsburgh. The Project Coordinator successfully applied to present a workshop on

software customization methods at the 1995 Adult Literacy & Technology Conference, to be held at Philadelphia in August 1995.

Feedback from these presentations (in the form of evaluation forms) indicated the presentations were clear and of good quality. A sample evaluation form is included in Appendix A.

A lecture presentation method, combined with mini-presentations, sharing, and questions, was used effectively. In most cases, the workshops dealt with the attendee's main interests in an understandable way. Most of the workshop attendees felt the presented topics were useful. By the end of a workshop, most of the workshop attendees felt they were ready to take the first step towards software customization.

5. Customize software for local ABLE programs to make commercial software appropriate for the needs of their learners.

The project manager provided multiple telephone consultations on software customization to interested ABLE providers. In many cases he was able to refer the caller to an appropriate piece of software for his or her needs. In other cases he researched possible alternatives and provided the caller with the appropriate information.

The project manager constructed a database for the Franklin County Literacy Council. This massive task took a great deal of time to complete. Franklin County Literacy Council now has a database for tracking tutor and student information which is flexible enough to accommodate change as needed.

Early in the project it became apparent that many ABLE providers were primarily interested in customizing software for the administrative aspects of their programs. Customization for their learners was a secondary, albeit important, concern. Because the philosophies and methodologies for software customization are sufficiently broad enough to accommodate both these needs, the project was able to carry forward without a major revision in its objectives. The Project Coordinator revised the terminology used to describe software customization to include administrative needs.

6. Develop guidelines for instructors of the programs that use the customization service in how to do future customization on their own.

These guidelines were developed in the process of writing the software customization article for the *Mosaic*, Volume 4, Number 2, and while developing the workshop presentations. These guidelines are included in Appendix C.

7. Compile the research on the updated list of software publishers, the existing matrix of customizable software, and guidelines for programs in how to customize software in the final report.

The list of software programs was completed in June 1995. The resulting database (in *FileMaker Pro* format) is included in this report in print as well as electronic form. The guidelines for software customization are included in the Appendix C of this report.

8. Disseminate the final report through AdvancE and the regional staff Development centers.

This report meets this goal. In addition, the printed form of the software customization database (see goal 7, above) was mailed to all Pennsylvania Regional Staff development Centers for dissemination.

## Conclusions

This project met all its goals. Objective 5 - "Customize software for local ABLE programs to make commercial software appropriate for the needs of their learners," - was not met as robustly as the Project Director and Coordinator had anticipated. While the Project Coordinator was able to adequately assist many people via the telephone, few ABLE providers were interested in having software customized for them by the project. The main reason for this is that Pennsylvania ABLE providers are not ready to take advantage of software customization processes for their students. While many people who attended the software customization workshops were enthusiastic about the possibilities of customization, few followed up by implementing such a project. Most of the workshop attendees

were not computer experts. The concept of software customization – a high-level, multi-step process – may have deterred them from doing so.

The one software customization effort the Project Coordinator did undertake (a database for tracking students and tutors in a literacy program) consumed a major amount time. This reflects the project's initial research that showed the process of customizing commercial software is not as easy as it should be.

The database of 169 pieces of instructional software that can be customized by a teacher or tutor is an invaluable resource for anyone wishing to customize software. It will quickly become dated, however.

## Recommendations

At this time, many Pennsylvania ABLE providers are primarily interested in customizing the administrative aspects of their programs. For most programs, this means they need to track program information electronically. This coincides with the Pennsylvania Department of Education's effort to provide a common database for reporting program information to the Pennsylvania Department of Education. While this provided database will meet some of a program's requirements, it will not meet any program's requirements entirely. Many people the Project Coordinator communicated with expressed individual, unique needs. They will need to add to and augment what the Pennsylvania Department of Education provides them with. To achieve a fully customized system, providers will need training on the uses of technology in this area. They also need a support system to help them move through difficult areas during development of these systems.

It is apparent from discussions with ABLE providers at workshops and via the telephone that most ABLE providers will not proceed with software customization for their students until they have their administrative customization needs met.

The database of 169 pieces of instructional software which can be customized by a teacher or tutor should be updated periodically. Perhaps this database could be turned over to an organization that specializes in such things, such as the Northwest Literacy Resource Center (1701 Broadway, Seattle, WA 98122, 206-587-3880).

# Appendix A - Workshop Evaluation Form

## Software Customization Workshop Evaluation

1. Circle the number which corresponds to your reaction to the statement: the general purpose of the workshop was:

NOT CLEAR		CLEAR		VERY CLEAR
1	2	3	4	5

2. Circle the number which corresponds to your reaction to this statement: "The presentation of the workshop was..."

POOR QUALITY		AVERAGE		GOOD QUALITY
1	2	3	4	5

3. Several presentation methods were used in the workshop. Place a check in the space provided to indicate the effectiveness of the method in presenting workshop topics.

EFFECTIVE	NOT EFFECTIVE	
___	___	Lecture
___	___	Mini-presentations
___	___	Sharing and questions

4. How close was this workshop to your interests and background?

- \_\_\_ It was too advanced.
- \_\_\_ I understood almost everything, but the workshop missed my main interest.
- \_\_\_ It dealt with my main interests in an understandable way.
- \_\_\_ It was too basic; few, if any, new ideas were presented.

5. The following topics were discussed during the workshop. Place a check in the space provided to indicate the usefulness of the topic to you.

USEFUL	NOT USEFUL	
___	___	Overview of the computer
___	___	Explanation of customizable software
___	___	Theory on preparing your data for use in customizable software
___	___	Explanation of databases
___	___	Specific examples of customizable software
___	___	Other (PLEASE SPECIFY)

---

---

---

6. What additional information on customizing software would be most helpful? If you need more space, write on the back of this sheet.

7. How prepared do you now feel to customize software? If you need more space, write on the back of this sheet.

Media	Floppy Disk	Platform	<input type="checkbox"/> DOS <input type="checkbox"/> Windows <input checked="" type="checkbox"/> Macintosh <input type="checkbox"/> Apple II <input type="checkbox"/> Other...	Instruction Level	

**Description** This program allows teachers to quickly and easily create on-screen or printed language drills in a variety of formats: multiple choice, matching and sentence jumbles. Teachers may create lessons by entering questions directly into a "lessons" stack or by importing them from a text file. Contains a utility stack for detailed record keeping and operation instructions. Requires HyperCard 1.2 or higher.

<b>Description</b>	<p>Sounds American is an accent improvement program that presents American English sounds that are difficult for non-native speakers. A directory helps people from 30 different language backgrounds identify the sounds to work on. Students can record speech and immediately compare it to the correct intonation. The Authoring Version enables you to create totally customized exercises.</p>

<b>Description</b>	This series was developed to help students acquire vocabulary skills through carefully sequenced lessons which present material, ask questions, and give feedback. Hints or explanations are used to guide the student to the correct answer. Each disk keeps individual student records and class summaries. The content can be easily modified. The Apple version is compatible with the Unicorn Board and Adaptive Firmware Card or IntelliKeys (see index).

<b>Description</b>	<p>A tutorial which develops students' ability to learn vocabulary through investigating and assembling information, rather than memorizing meanings. They read a sample sentence, insert the word into a sentence, identify the meaning, part of speech, prefix, root, and suffix, and learn the syllabic division. Includes a built-in teacher's utility to specify which sets of target words on any of the three disks, and to view and print student's records.</p>

## Appendix C - Software Customization Methods for Instructional Software

### Introduction

Most customizable instructional software provide you with a "shell" or pre-set format for presenting your content. The customization occurs when you take your content and add it to the shell. To take full advantage of a piece of customizable software you must be able to use existing storage software, such as databases, to assist in modifying the software. Manually inputting content into a customizable software package is tedious, frustrating, and prone to error. If you have your content previously stored electronically it will be easier to input it into the software, as well as saving you a great deal of time. Each customizable software package is unique in its data and input requirements. You must be flexible enough to adapt your instructional content to meet each program's demands.

### Using Databases to Store Your Content

The best way to store instructional content is electronically so it can be used, copied, and modified easily. Databases offer one way to store and organize content so that you can copy it into other programs with a minimum of fuss. As an example, if you wished to customize several vocabulary software programs, it would be beneficial to store vocabulary words, definitions, distractors, and sentences in a database. You could then "dump" this content from the database into the vocabulary software programs.

### Database Structure

The structure of an ordinary database is defined by records, fields, and forms. A record of information (see Figure 1) contains pieces of information about a particular subject. For example, if you had a database of vocabulary words, each record would contain information on one word. If your database contained 20 records, you would have information on 20 words.

# The Database

Figure 1 — Records in a database.

Each record in a database contains different pieces of information called fields (see Figure 2). Each field holds a specific piece of information. In this example, each record has a word field, a definition field, and a sentence field.

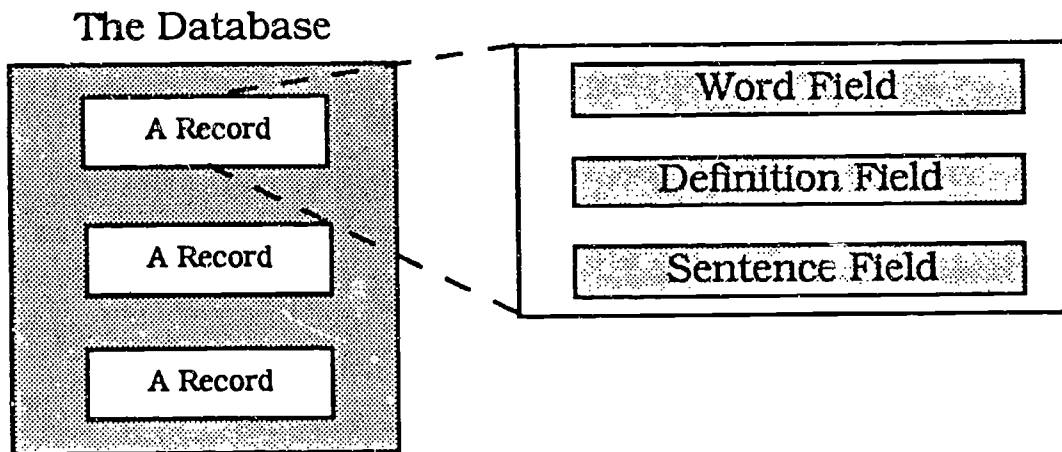

Figure 2 — Fields in a record.

Fields can contain different types of information. When setting up a database, you establish what type of information each field in a record will hold.

Text	John Smith
Number	198345
Date	11/09/90
Time	12:00 PM
Picture	
Calculation	Field 1 + Field 3
Summary	Sum of Field 3 in all recs.

Figure 3 — Types of fields.

Once you create a database and define the fields for each record, you can create different ways to view the information. These forms (or viewing layouts) do not change the data, just how they are displayed (see Figure 4). Think of this as walking around a house and looking in different windows. What you see will change from window to window, but the contents of the house remain the same. In our example, there could be an entry form (for entering new data), a words only form (for just viewing the words), and a printing form used to print the records neatly.

Figure 4 — Different forms for a database.

## How to Transfer Your Data to a Customizable Software Program

After creating a database with records, fields, and forms, you transfer data from the database to the customizable software program. There are three ways to do this. The method depends on the computer's capabilities and the requirements of the customizable software program.

The first method of transferring data is to export data to a file in a format usable to the customizable software. Most databases allow you to export data in a number of ways, including text or ASCII (data can be opened in a word processor), database formats (data that is transferred from one database format to another), spreadsheet formats (data that can be analyzed in a spreadsheet), and various other formats that may be particular to either the software or the computer. After you export data, the customizable software program can read the newly created file and import content for use. This is an ideal situation, but it does not occur very often because most customizable software programs do not have import capabilities nor can they directly read a file exported from a database.

The second method of exporting data is to copy and paste between the database and the customizable software program. If your computer allows you to open both the database and the customizable software program at the same time, you can easily open the database, copy a piece of information out of a field, switch to the customizable software program, and paste the information into the correct spot.

This is more cumbersome than the first method, but it is faster than manually inputting your data. It is also safer, as you will avoid typing mistakes.

The third method of transferring data is to input data manually. This is the slowest and most error-prone of the three methods. There is only one advantage of this method. You can print the database with the data in the proper order for reference as you input the data into the customizable software program.
