ABSTRACT

The publication was developed to provide cursory information about the people, places, and things essential to career and vocational education that may be seen at the Comprehensive Illinois Occupational Education Demonstration Center (CIOEDC) in Joliet, Illinois. The CIOEDC was designed to demonstrate several K-14 career and vocational education activities and programs that were originally sponsored by the Illinois Division of Vocational and Technical Education. Information is included on a series of five conferences (between October, 1975 and May, 1976) to provide visitors with an opportunity to observe these programs in operation. The following Projects are described with narrative and photographs: ABLE (Authentic, Basic, Life-centered Education), JOLIET (Job-Orientation Linking Industry and Education Today), WECEP (Work Experience Career Exploration Program), nucleonics course, career education grades 9-12, consumer and homemaking program, SIVE (System for Individualizing Vocational Education), computerized vocational information system, technical mathematics and physics programs, industrial engineering, preparedness program (for the unemployed, underemployed, and disadvantaged), a followup system for vocational education graduates, IOCP (Illinois Occupational Curriculum Project), a three-phase evaluation of occupational education programs, and the participating grade school, high school, and junior college districts in Joliet. (Author/MS)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). ERIC not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from led by ERIC 1a1.

confents

learning to learn

learning to live

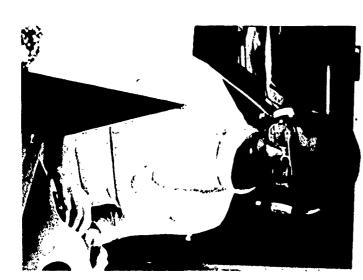

"From the very beginning of formal education, school experiences must arouse curiosity, encourage initiative, provide new alternatives, clarify attitudes and values, and help every individual establish life goals. The entire community and an individual's total environment must be utilized in this educational process. School curriculum and materials must relate to people and their daily lives. Teachers must organize learning experiences around life centered themes. These are not new directions, but they are newly recognized needs. We have been charged with the responsibility of demonstrating how those needs can be met through sound programs of Career and Vocational Education. We accept that charge willingly, for Career and Vocational Education are what we believe in. We take them seriously."

Jonn Boldney

Director, CIOEDC

learning to make <u></u>

Project JOLIET is living evidence of strong community involvement for the betterment of education. It embraces the heart of career education by utilizing the community as a classroom, and like Project ABLE, emphasizes interviewing and world of work themes. In 1970, the concepts of this program were formulated as community leaders and educators grappled with the problems of dropout prevention; their solution being the "Community Classroom", concept.

"Community Classroom" was coined to refer to planned, structured coreer visits to business, industry and government facilities. These community classroom visits differ from conventional field trips by emphasizing active student participation and focusing an people, not products. At each facility, small groups of students interview a broad cross section of workers at their formal work stations, and wherever feasible, perform "hands-on" tosks that are port of the daily work routine. Groups camplete a partially finished blueprint, put a final decoration on a cake, or make change from a cash register. At each station, workers are observed using the same academic and social skills studied in school, illustrating such concepts as accuracy and the need for math.

When factory workers or parents talk with students about their jobs, a sense of pride is evident. In fact, employers have a waiting list of their employees who are anxious to become a port of community classrooms.

Although Community Classrooms were originally conceived and conducted for junior high, teachers from preschool through eighth grade utilize the basic format. Visits are more structured for junior high, while primary teachers use their discretion in the people and places they see. Classroom activities are interspersed with follow-up experiences, whether they are in-depth studies of transportation or a visit to a turkey farm.

Project JOLIET is a grass roots career awareness program, its mainstay is strong local support, not reliance on outside funding. It is this support which has given credence to its stability and steady growth Community support is a **must**, in Joliet, it's outstanding

work experience

RETRET education

The Career Education 9-12 program is a system to improve school-community linkages best explained in terms of community resources. These resources are the core of career and vocational education. They are the people, places, and things outside the classroom which explicate the real world and the skills needed to make it—on the job or at home

Career education 9-12 is not a career education curriculum or an instructional program for high school students, but a liaison system between education and the entire community. The sysoperations of education when they themselves become active participants in the process role in recruiting and orienting local community people to contribute their time and expertise. tem operates under the direction of a Community Resource Coordinator This person plays a key However, it is not all a one way street, since the general public gains better insight into the real

schooling are unequaled for exposure to the latest tools and modern equipment. The job seems and prepare for life endless, but so is the potential for expanding educational opportunities for students to learn about A liaison person serves a variety of functions, from paving the way for career visits to setting

creases, and the number of teachers doing career education increases a must when the number of people visiting class rooms increases, the number of career visits inis also where the community resource coordinator fits in Systematically collecting and filing is There must be thousands of teachers across the nation with files on community resources. That

consumer and

homemaking

education

The Cansumer and Homemaking Program is designed for the person required to perform the dual role of wage earner and homemaker. Both male and female, married and single, have to cope with the realistic problems of learning how to, shop comparatively, da financial planning, figure income tax, use credit wisely, and obtain loans in short, they learn to deal with the nitty-gritty of every day life

Survival skills in today's consumer oriented society ore much different than they once were. As high school youth become wage earners and reach social independence, it is increasingly important to learn how to effectively cope with daily decisions. Their health and welfare will depend an their own wise choices. Adverse factors such as misleading advertising, peer group pressure, social and cultural background, and poverty require special attention to obtain self sufficiency. In Illinois, Consumer and Homemaking programs are designed for high school and junior college students as well as adults, with special emphasis for the economically and educationally disadvantaged.

In Joliet teachers have individualized Consumer and Homemaking education for helping individuals to:

- discover what they value in life
- make decisions to satisfy short- and longterm goals
- manage time, money and energy in reaching goals
- obtain goods and services (i.e. housing furnishings, clothing, food, personal items, medicine, recreation, health services, etc.)
- understand budgeting, comparison of prices, and installment buying
- be familiar with insurance, savings, investments, and taxes
- utilize consumer aids and community resources
 assume consumer rights and responsibili-

If we intend to provide students with the tools and survival skills they need, Consumer and Homemaking Education is not only important it's imperative.

techmical

mathematics

Why have a Technical Moth and Technical Physics course as opposed to regular math and physics? For the same reason that Texas colleges offer Cowboy English for their agricultural majors—it's tailored to the specific needs of a student pursuing a career of a highly technical nature.

Mathematics or physics can be more than stumbling blocks to students. They may also be the missing links between a youth and the career he or she is inferested in.

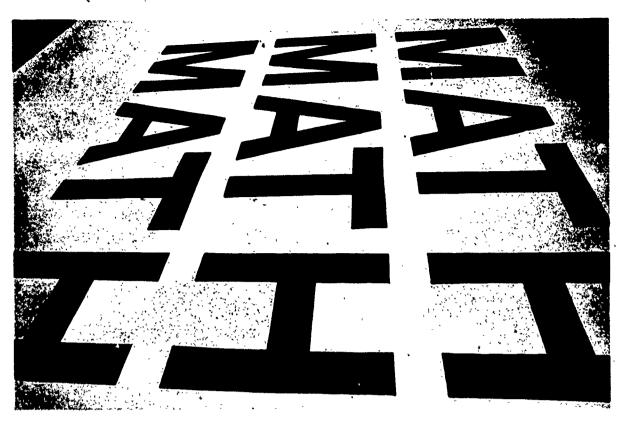

The Tech Math and Physics programs are structurally identical, with anly the course cantent differing from math to physics Both utilize a "core" approach giving the needed basics to students no matter what their specific career aspirations might be For instance, in math, this core material consists of measurement studies as well as a focus on developing precision and accuracy in using integral, fractional, and decimal measures Emphasis is placed on improving the students' ability to add, subtract, multiply, divide measurements, use formulas, and work percentage problems

After the core material is mastered, individualized study begins Two general "tracks" are followed Some students

(Continued on Page 21)

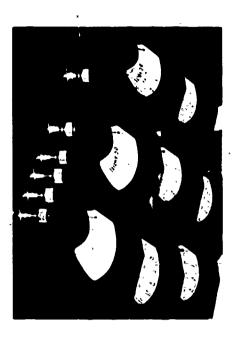

technical physics :

(Continued from Page 19)

pursuing careers in the technical arms who need a full year of math or physics study one set of modules, while those needing less take the other "track"

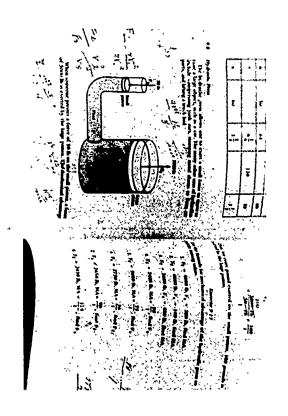

Those students in a technical area requiring one semester cover the core material, followed by a series of specially developed units written specifically for their needs. These individual units are based upon input from faculty in each specific technical area. For example, units in record keeping and payroll are available for those in the Automotive Program while units on power equations are available for those in the Electrician Certificate program. These students thus receive the training as well as the credit they need.

At the very outset, adaptations and modifications were necessary to meet the needs of Joliet Junior College students. The materials for the courses originally developed at Parkland College, Champaign, Illinois, were designed for their own semester system, yet Joliet Junior College operates on a quarter system But then, Tech Math and Tech Physics were neither meant to be static courses nor traditional academics. They were developed with a flexibility to meet the very specific needs of future technicians.

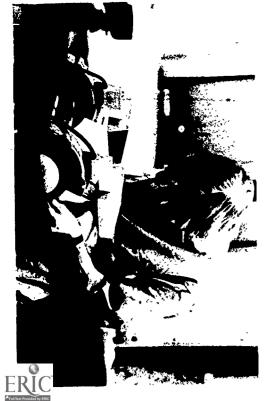

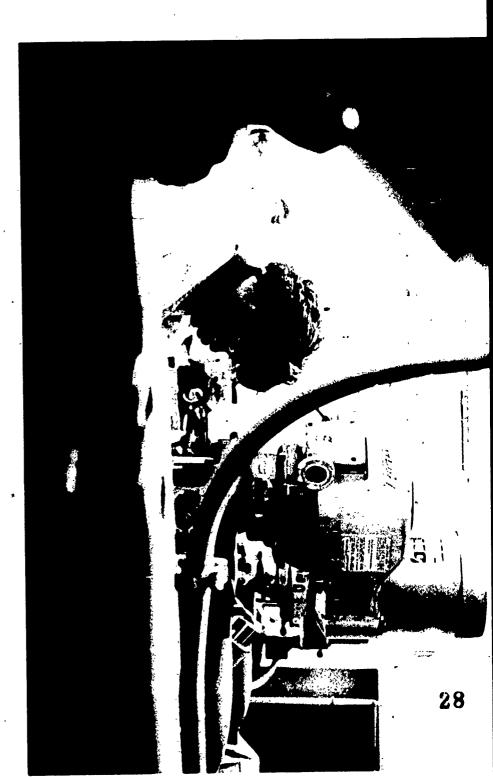

industrial engineering

Students do not have to barn a college degree to join the field of engineering. There are many jobs which may be filled by specialized technicians. The Industrial Technology Program has sufficient flexibility to not only prepare technicians for actual jobs, but also meet students' individual needs.

Local industries have been working with educators to outline the basic steps or job skills needed for becoming technicians. These are broken down by job function allowing students to progress through each step at their own pace. Participants may demonstrate their ability and advance either as part-time or full-time students. Options allow students to shift from day to evening classes during any session.

Industrial Engineering, as a result, provides ready-to-work die designers, drawing checkers, topographical draftsmen, tool room machinists, manufacturing engineers, numerical control programmers, and so on. Any graduate manifests skill competency by job function. That really means students are equipped with the pragmatic skills required to enter undustry as technologists.

The Industrial Engineering Technology Program, Aeveloped at Moraine Valley Community College, Palos Hills, Illinois, has been integrated into the Mechanical Design and Mechanical Production Programs at Joliet Junior College

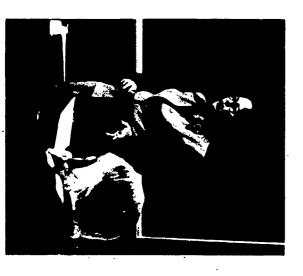

ssemberbderd

The woman aut of the labor market for 20 years, the school dropout, the non-English speaking person, and the adult worker without a high school ciploma—all may have need of the special services available in the Preparedness Program at Joliet Juniar Callege

The Preparedness Program seeks to help persons who fall in these categories by affering a package deal, resulting in individual career and educational "client" plans for each participant. These plans

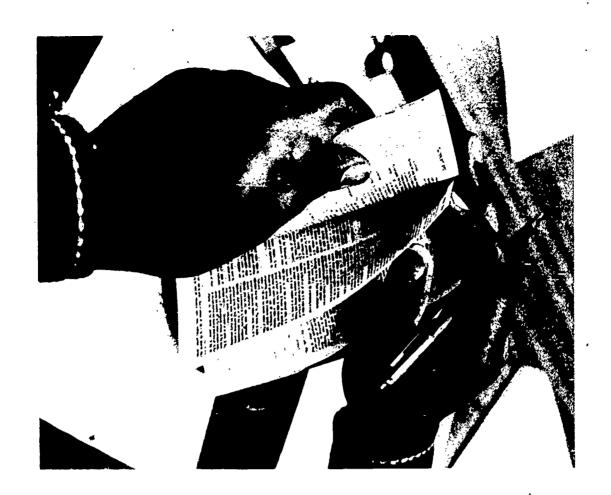

may include aptitude and general interest tests, career counseling, career exploration mini caurses, or work in developing basic reading, writing, or computation skills. In order to accomplish the intent of these plans, skilled training is usually required. Wherever passible, jab placement is included. There are faur basic camponents to the Johet Juniar College's Program.

- Jabs far Women
- Early School Leavers
- Adult Basic Education, General Education Development Test preparation, and English as a second language
- Audia-tutorial laboratories for individualized math, reading and writing

The Preparedness Pragram attempts to identify and serve not only the underemployed or the unemployed, but also the educationally and economically disadvantaged. Its flexibility permits participants to utilize any four of its basic components simultaneously. An added plus is a policy which permits enrollment at any time during the school year. The result of Preparedness is career readiness.

Perscriptive individual client plans are the key to realizing career goals

schools and to determine the comprehensive work force in large metropolitan areas Jaliet is where it all started, and it's still going. OCP is transportable. It is used to organize advisory boards in small rural

The Three-Phase Evaluation of Occupational Education Programs was developed to promate excellence in local programs and to assure an accountability of funds.

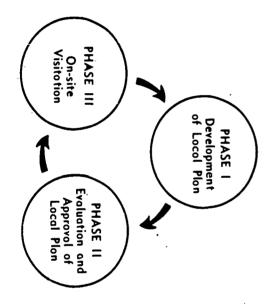

More than seven hundred local school districts in Illinois submit "One and Five Year Plans". In this first phase, local districts establish priorities and goals they wish to accomplish in the con-ext of local conditions. This allows for autonomy that helps meet local needs and yet provides general direction for statewide programs. The Local Plan also serves as a basis for a contractual agreement between the district and Division of Vocational and Technical Education.

During Phase Two, the Local One and Five Ygar Plan is evaluated by DVTE staff. Local communities' programs must conform to standards of excellence and continuity. Prescriptive improvements may be suggested before approval status is granted, of not only each occupational course, but also the overall Local Plan.

Phase Three is evaluation. This last phase is more than a paper and pencil check list. On-site visits are conducted by teams of people outside the district. Visiting teams are comprised of administrators of vocational education, department chairmen and teachers, community people with experience in business and on advisory boards; professional educators.

at universities; students who have gone through career programs; and the DVTE staff. The function of this visitation team is to provide the district with a profile of their occupational program, suggest areas for improvement, and determine if the district's program operation is in conformance with the One and Five Year Plan

Long hours, exhaustive interviews, and intensive discussions are necessary to pull together the final evaluation report that is presented to the local district and state staff. All this isn't easy, but the results pay off
