ABSTRACT

Drawing from data from the Degrees and Other Formal Awards Conferred Survey conducted annually as part of the Higher Education General Information Survey, this report looks at the less-then-4-year degrees and certificates awarded between 1983 and 1985, including limited data from 1975 for trend analysis. First, highlighted findings indicate that: (1) associate degrees and postsecondary certificates or diplomas increased more rapidly than all other awards granted in higher education institutions from 1975 to 1985, although their growth slowed after 1983; (2) associate degrees accounted for 75% of all less-than-4-year degrees; (3) over 75% of all awards were in four major fields of study, i.e., business and management, liberal/general studies, health sciences, and engineering technologies; and (4) in 1985, women outearned men in less-than-4-year degrees by a margin of 60,600 awards. Following an overview of trends of the 1975 to 1985 decade, the report examines awards by major field of study and instructional program in the combined category of less-than-4-year awards. The report then turns to the categories of associate degrees, 1-but-less-than-4-year awards, and less-than-l-year awards. The next sections focus on state findings for academic year 1985, institutional findings, and the occupational outlook of top-ranking instructional programs. Appendixes comprising more than half the document explain the survey methodology and offer detailed data tables including information on awards by sex of student, field of study, level of award, type of institution, and state or other area. Center for Education Statistics

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries,"—Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

August 1987

Foreword

This report presents final data from the Degrees and Other Formal Awards Conferred survey conducted annually as part of the Higher Education General Information Survey (HEGIS). The survey is sent to 4-year and 2-year institutions of higher education in the public and private sectors which are ". . .legally authorized to offer and are offering at least a one-year program of college-level studies leading toward a degree." These institutions are accredited by an agency nationally recognized by the "J.S. Department of Education.

The focus of data in this report is less-than-4-year awards in institutions of higher education in academic years 1983 to 1985, with limited data from academic year 1975 for trend analysis. In 1975, the types of awards included associate degrees and postsecondary certificates or diplomas in programs that would be completed in at least 1 but less than 4 academic years by a student enrolled full time. Beginning in 1983, data were also collected for postsecondary certificates or diplomas in programs completed in less than 1 academic year.² (For more information, see the survey methodology in the appendix.)

Survey data were provided by college and university officials. CES greatly appreciates the cooperation and continuing efforts of survey respondents and State coordinators in providing data of high relevance to the education community and the general public.

Information on baccalaureate and post-baccalaureate awards at the naster's, doctor's, and first-professional levels is presented in a separate report entitled *Trends in Bachelor's and Higher Degrees*, 1975 to 1985, from CES.

¹U.S. Department of Education, Center for Education Statistics, *Education Directory, Colleges and Universities*, 1985-86, Washington, D.C., U.S. Government Printing Office, 1986.

Highlights

- Associate degrees and postsecondary certificates or diplomas in less-than-4-year programs increased more rapidly
 than all other awards granted by institutions of higher education from 1975-1985, although their growth has slowed
 since 1983.
- Associate degrees accounted for three-quarters of all less-than-4-year awards. However, total conferrals at this level have declined slightly since 1983.
- Over three-quarters of all awards in less-than-4-year programs were in four major fields of study: business and management, liberal/general studies, health sciences, and engineering technologies. However, awards in liberal/general studies and engineering technologies decreased in number.
- In academic year 1985, women outearned men in less-than-4-year awards by a margin of 60,600 awards, reversing the second place standing they held in 1975 when they earned 19,000 fewer awards.
- Liberal arts and sciences was the most popular instructional program in the Nation at the less-than-4-year level, accounting for 16.5 percent of all awards in 1985. General nursing and electronic technology were the second and third most popular programs.

Acknowledgments

This report was prepared by the Center for Education Statistics (CES), Postsecondary Education Statistics Division (PESD), under the supervision of Samuel Peng, Director, and Martin Frankel, Chief of the General Surveys and Analysis Branch (GSAB). Extensive technical assistance in computer operations was provided by William Freund, Deputy Director of PESD. Susan Hill, GSAB's technical advisor and reviewer on all publications, contributed ideas and reviewed the report for technical and policy considerations. Thomas Snyder and Charlene Hoffman of the Condition of Education Division (CED) and Stanley Kwaczala of PESD provided special data tabulations, and Geneva Davis of PESD assisted in computer graphics. Judi Carpenter and Summer Whitener performed quality control checks.

CES gratefully acknowledges the in-depth review of this report by Daniel Savage, American Association of Community and Junior Colleges, John Wirt and David Goodwin of the National Assessment of Vocational Education, U.S. Department of Education, and Charlene Hoffman, CED, CES, S. Department of Education.

Purpose of the Survey

The Degrees and Other Formal Awards Conferred survey provides the only national source of information on the availability of highly trained individuals and the location of a wide variety of organized occupational curriculums. These data are used extensively for resource planning at local, State, regional, and Federal levels. These data support the mandate in the Carl D. Perkins Vocational Education Act of 1984, as amended, Public Law 98 524, for information on completers of postsecondary vocational education.

xili

Overview of Trends of the 1975 to 1985 Decade

Less-than-4-year awards increased more rapidly than awards at all other levels in institutions of higher education from academic years 1974-75³ to 1984-85, and were second only to bachelor's degrees in number and share of total awards (table A).

In academic year 1975, 445,300 less-than-4-year awards were conferred, increasing to 614,700 in 1985 (figure 14—a growth rate of 38.0 percent (table A). In comparison, all other award categories in higher education, except first-professional awards, experienced either limited growth or slight decreases over this period. The share of less-than-4-year awards of total awards increased from 25.4 to 30.9 percent from 1975 to 1985 (figure 2). Only bachelor's degrees were awarded in greater numbers, although their share of total awards declined from 52.7 to 49.3 percent during this 10-year period.

Although both men and women contributed to the 38 percent rise in less-than-4-year awards from 1975 to 1985, women's gains were by far the more impressive (table B). For example, women accounted for almost three-fourths (73.5 percent) of the total increase in such awards during this period. Women also reversed their second-place standing relative to men. In 1975, women received 19,000 fewer less-than-4-year awards than men; by 1985, awards to women surpassed awards to men by 60,600. The large increase in women's awards surfaced primarily at the associate degree level, accounting for almost two-thirds (66.4 percent) of the total increase in women's awards from 1975 to 1985. The growth in less-than-4-year awards to women was triple the growth in awards to men from 1975 to 1985: men's awards increased 19.3 percent while women's awards rose 58.4 percent.

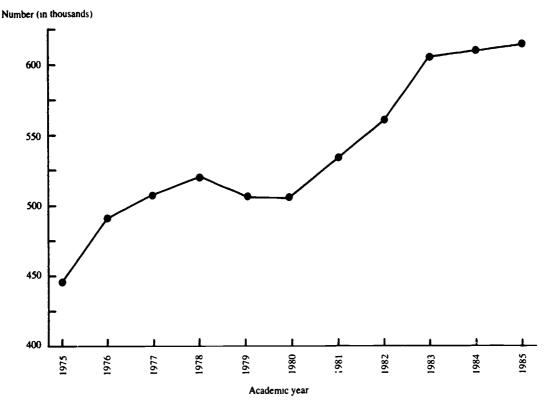

For baccalaureate and higher awards conferred from 1975 to 1985, awards to men declined 5/9 percent, in contrast to the 20/0 percent increase in such awards to women.

For simplicity, academic years (the period July 1-June 30) will be referred to by the year in which they end. For example, 1974-75 will be referred to as 1975.

SOURCE U.S. Department of Education. Center for Education Statistics. Degrees and Other Formal Awards Conferred surveys. 1975 and 1985

^{*}Some of this increase is due to the new category of less-than-1-year awards.

Less-Than-4-Year Awards, 1983-85

This section emphasizes data on less-than-4-year awards between 1983 and 1985, with highlights of 1985 data. Detailed comparisons of data between these years and previous years are impossible because of two major revisions in 1983 to the Degrees and Other Formal Awards Conferred survey which collects these data. A new award category—postsecondary certificates or diplomas of less than 1 year—was added to the survey, and award data were collected using the new Classification of Instructional Programs (CIP) developed by the U.S. Department of Education's Center for Education Statistics (CES).6

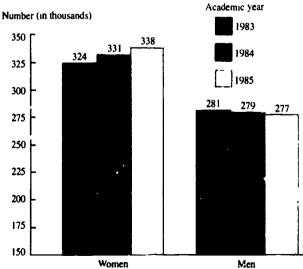

Under CIP, more than 1,000 instructional programs are grouped under 50 fields of study. In this report, data on awards by field of study have been summarized into 30 major fields and 36 miscellaneous subgroupings within those fields, consistent with the presentation of these data in the Digest of Education Statistics.⁷

This section is divided into four parts. The first part addresses the combined category of less-than-4-year awards, followed by three parts paralleling the three levels of awards within this catego. y: associate degrees, 1-but-less-than-4-year awards, and less-than-1-year awards.

Less-than-4-year awards (all levels combined)

Following an average annual growth of 4.0 percent from 1975 to 1983, the growth of less-than-4-year awards slowed to an average of .8 percent from 1983 to 1985 (figure 1). Total awards increased from 605,600 in 1983 to 614,700 in 1985, or 1.5 percent (table C). The limited growth in total awards from 1983 to 1985 was due to the decline in the number of awards to men (figure 3). Associate degrees to men declined 2.0 percent and one-but-less-than-4-year awards to men decreased 4.2 percent. In contrast, awards to women increased at all three award levels over the 3 years, for a 4.1 percent overall increase (table C).

Figure 3.—Less-than-4-year awards to men and women in institutions of higher education: Academic years 1983-85

SOURCE. Appendix table 1.0.

A crosswalk between the 50 CIP fields of study and the 30 major fields used in this report is contained in the appendix.

The CIP taxonomy is used to classify instructional programs across all postsecondary award levels—from less-than-I-year awards through first-professional degrees—and is the accepted government standard for education information surveys.

Table C.—Number and percent change in less-than-4-year awards in institutions of higher education, by level of award and by sex of student: 50 States and D.C., academic years 1983-85

| Level of award | 1983 | 1984 | 1985 | Percent change 1983-1985 |

Less-than-4-year awards, by major field of study

Over three-quarters of all less-than-4-year awards can be grouped into 'our major fields (table D). Awards in business and management, liberal/general studies, health sciences, and engineering technologies accounted for an average of 78.2 percent of all awards from 1983 to 1985. However, awards in liberal/general studies and engineering technologies declined, showing a respective decrease of 2.3 percent and 1.9 percent in awards over the 3-year period. While fewer men and women pursued liberal/general studies, both sexes contributed to the 5.6 percent growth in health sciences awards. Although primarily a field in which women predominate (with an average of 87.1 percent of such awards going to women from 1983 to 1985), health sciences awards to men increased 12.9 percent from 1983 to 1985, from 12,600 to 14,200.

Among men, over two-thirds of all awards were in the three major fields of engineering technologies, business and management, and liberal/general studies (table D). These fields accounted for an average of 69.0 percent of all awards to men from 1983 to 1985. Although the most popular major field for men was engineering technologies, the 1.1 percent decline in this category closely paralleled the overall decline in total awards to men noted earlier (table C). However, the declines in business and management awards (-3.2 percent) and in liberal/general studies (-3.7 percent) were even larger.

Among women, more than three-quarters of all awards (or an average of 79.5 percent from 1983 to 1985) were conferred in business and management, health sciences, and liberal/general studies (table D). Awards to women were highest in business and management, with an average of 111,200 conferrals from 1983 to 1985. The 9.4 percent growth in these awards to women was more than double the 4.1 percent growth in total awards to women. Awards to women in liberal/general studies followed a divergent trend, declining 1.2 percent over the 3-year period.

Academic year 1985: Less-than-4-year awards, by instructional program⁸ and major field of study

The top-ranked instructional program was liberal arts and sciences, which conferred 101,500 awards in 1985 and accounted for 16.5 percent of an less-than-4-year awards (appendix table 3.0). This curriculum is generally pursued

^{*}Instructional programs are identified under CIP by unique 6-digit codes. The codes of programs referred to in this report are provided in appendix tables 3.0 to 3.11. The codes and programs are derived from the original CIP publication. A Classification of Instructional Programs. Washington. D.C., U.S. Government Printing Office, 1981. A complete list of the 1,000 instructional programs under CIP by their fields of study is available in Classification of Instructional Programs (CIP): 1985 Update. Washington. D.C., U.S. Government Printing Office. 1987

by students who plan to enroll in baccalaureate programs. Thus, a sizable proportion of awards at the less-than-4-year level are non-occupational in character.

General nursing and electronic technology were the second- and third-ranked instructional programs, with 40,900 and 25,300 awards, respectively. A business and management program -general business administration and management—ranked fourth, with 20,300 awards. Programs in this major field occupied 17 of the top 50 ranks, substantially higher than all other fields.

The largest number of awards to men (45,100) also occurred in the liberal arts and sciences instructional program (appendix table 3.1). Electronic technology came in second, with 23,500 awards. Programs in the field of business and management occupied five of the top 10 ranks, with awards in general business administration and management the most numerous, at 9,300. Instructional programs in the field of engineering technologies occupied 21 of the top 50 ranks. The field of protective services ranked in the top 10 with its law enforcement program, which conferred 3,400 awards.

Traditionally, men have received more awards in mechanically and technically-oriented programs. Of the top 50 programs for men in 1985, almost half were mechanical or technical in content (appendix table 3.1), in contrast to about 10 such programs for women (appendix table 3.2). One notable exception to traditional male awards is general nursing, which ranked 12th in all awards to men. Over 3,100 such awards were conferred in 1985, up from 2,600 in 1983 (appendix table 1.0).

For women, the number one instructional program was also liberal arts and sciences, in which 56,400 awards were conferred in 1985 (appendix table 3.2). Health sciences programs—general nursing and practical nursing—ranked second and third, with combined awards of 52,200. However, business and management programs occupied six of the top 10 ranks, with awards in general secretarial and related programs the most popular in this field.

Table D.—Number and percentage distribution of less-than-4-year awards for top-ranking fields of study, by sex of student: 50 States and D.C., academic years 1983-85

| Field of study | 19 | 83 | 1984 | | 1985 | |

Note.—Details may not add to totals due to rounding. Percents are based on actual, not rounded, figures

SOURCE: Appendix table 1.0.

Awards to women also followed traditional patterns, with about half of the top 50 instructional programs falling into clerical/secretarial and service-oriented areas (appendix table 3.2). One interesting finding was in the field of engineering technologies. Although only 2.1 percent of all awards to women were in this field, compared to 32.1 percent for men (table 1.0), women earned 1,800 awards in the non-traditional instructional program of electronic technology (appendix table 3.2)—far fewer than the 23,500 awards to men in this program (appendix table 3.1), but almost equal to the 1,900 awards to men in the closely allied program of electrical technology (appendix table 3.1).

Associate degrees

Associate degrees accounted for an average of 74.5 percent of all less-th: n-4-year awards between 1983 and 1985 (table C). Of the three award levels, only associate degrees declined in number—dropping from 456,400 in 1983 to 454,700 in 1985. The nominal decrease of .4 percent was due entirely to the 2.0 percent loss in awards to men—from 207,100 awards in 1983 to 202,900 awards in 1985 (appendix table 1.1). Associate degrees to women (who averaged 55.1 percent of all such awards from 1983 to 1985) rose slightly over this same period, from 249,300 in 1983 to 251,800 in 1985, or 1.0 percent.

Associate degrees, by major field of study

The most popular fields of study at the associate degree level were identical to those for all less-than-4-year awards combined. Business and management, liberal/general studies, health sciences, and engineering technologies accounted for an average of 7%.1 percent of all associate degrees between 1983 and 1985 (table E). Of these fields, only liberal/general studies decreased in awards over the 3 years, from 109,600 to 106,400, or 2.9 percent.

The most popular fields of study pursued by men and women also paralleled those for all less-than-4-year awards combined. An average of 70.8 percent of all associate degrees awarded to men between 1983 and 1985 were in the combined fields of engineering technologies, liberal/general studies, and business and management. Engineering technologies was the only major field among these three fields to show an increase in awards to men during this period, rising 2.4 percent. For women, business and management, health sciences, and liberal/general studies accounted for an average of 78.8 percent of all associate degrees between 1983 and 1985. Of these fields, only awards in liberal/general studies decreased, dropping 1.7 percent from 1983 to 1985.

Academic year 1985: Associate degrees, by instructional program and major field of study

Liberal arts and sciences was the number one instructional program at the associate degree level, a counting for 100,500 awards, or 22.1 percent of all awards at this level (appendix table 3.3). General nursing ranked second, with 8.9 percent of the total. With the exception of electronic technology, ranking fourth, all other programs in the top 10 were in the field of business and management.

The largest number of awards to men (44,600) also occurred in the liberal arts and sciences program, which comprised 22.0 percent of all associate degrees awarded to men (appendix tables 3.4 and 1.1). General nursing was among the top 10 programs, ranking eighth. Two instructional programs in the field of protective services also ranked in the upper 10—law enforcement and criminal justice technology—with combined awards of 5,600. Over half of the top 50 programs in awards to men were in the fields of business and management and engineering technologies.

Liberal arts and sciences was also the number one instructional program for women, accounting for 55,900 associate degrees, or 22.2 percent of all such degrees awarded to women (appendix tables 3.5 and 1.1). Eight of the top 10 programs were in the field of business and management. Law enforcement and electronic technology appeared among the top 50 programs for women. Over half of the top 50 programs were in the fields of business and management and health sciences.

One-but-less-than-4-year awards

One-but-less-than-4-year awards accounted for an average of 20.1 percent of all less-than-4-year awards between 1983 and 1985 (table C). These awards increased from 120,000 to 123,700 during this period, or 3.0 percent. While 1-but-less-than-4-year awards to wor...n increased by 6,200, awards to men at this level declined by 2,600 (appendix table 1.2). In contrast to 1983, when awards to women at this level comprised just under half (49.0 percent) of total 1-but-less-than-4-year awards, by 1985, these awards to women were in the majority (52.6 percent).

One-but-less-than-4-year awards, by major field of study

Four major fields of study captured the vast majority of awards at the 1-but-less-than-4-year level. Business and management, engineering technologies, health sciences, and visual and performing arts accounted for an average of 86.5 percent of all awards at this level between 1983 and 1985 (table F). Of these fields, engineering technologies and visual and performing arts decreased in awards over the three years, suffering net losses of 2,900 awards and 2,100 awards, respectively.

The majority of awards to men fell into three major nelds—business and management, engineering technologies, and visual and performing arts—which averaged four-fifths of all awards to men at this level (80.9 percent) from 1983

to 1985. Awards in engineering technologies decreased by 2,300, in contrast to the gain of 1,300 awards at the associate degree level in this major field.

Four-fifths of all awards to women fell into two major fields of study—business and management and health sciences. These two fields accounted for an average of 80.7 percent of all 1-but-less-than-4-year awards to women from 1983 to 1985. Awards in business and management increased more rapidly than those in health sciences, with a net gain of 5,300 awards in the former field compared to 800 in the latter.

Academic year 1985: 1-but-less-than-4-year awards, by instructional program and major field of study

Practical nursing was the top-ranked instructional program, accounting for almost 1G percent of all 1-but-less-than-4-year awards (appendix table 3.6). Two other health sciences programs—nursing assisting and dental assisting—also ranked in the upper 10 programs.

Electronic technology was the number one program in awards to men, with 6,500 awards (appendix table 3.7). Programs in the field of engineering technologies accounted for 7 of the top 10 programs and half of the top 50 programs.

Practical nursing was the number one instructional program for women, and accounted for 17.9 percent of all awards to women at this level (appendix tables 3.8 and 1.2). Other health sciences programs in the top 10 were nursing assisting, dental assisting, and medical assisting. General secretarial and related programs ranked secon in awards, and cosmetology ranked third.

Note.—Details may not add to totals due to rounding Percents are based on actual, not rounded, figures SOURCE: Appendix table 1.2.

Less-than-1-year awards

As noted previously, this level of awards was new to the Degrees and Other Formal Awards Conferred survey in 1983. The smallest of the three levels of less-than-4-year awards, it accounted for an average of 5.4 percent of all such awards between 1983 and 1985 (table C). Less-than-1-year awards increased from 29,100 to 36,400 over these three years—a net gain of 7,200 awards. Awards to women, in the majority at this level, averaged 56.2 percent of the total (appendix table 1.3). This was the only category of less-than-4-year awards in which men achieved overall gains from 1983 to 1985. During this period, less-than-1-year awards to men rose from 12,800 to 15,500—a net gain of 2,700 awards. The number of awards to women rose by 4,500—from 16,300 in 1983 to 20,800 in 1985.

Less-than-1-year awards, by major field of study

Three-quarters of all awards at the less-than-1-year level were in the fields of business and management, engineering technologies, and health sciences, which accounted for an average of 74.8 percent of all less-than-1-year awards from 1983 to 1985 (table G). All three fields increased in awards during this period, although the gain in engineering technologies was miniscule—a net gain of 11 awards—in contrast to health sciences, which netted 2,300 additional awards, and business and management, which gained 2,100 awards.

Most awards to men at this level were in the major fields of engineering technologies, business and management, and the nealth sciences, which accounted for an average of 62.1 percent of all awards to men at this level from 1983 to 1985. Awards in engineering technologies stabilized at 4,300 over the three years, while awards in business and management and health sciences made respective net gains of 500 awards and 700 awards.

The vast majority of awards to women fell into two major fields, business and management and health sciences, identical to the 1-but-less- than-4-year level. Awards in these two fields accounted for an average of 81.6 percent of all awards to women at this level over the 3-year period. Although the average number of awards to women was slightly higher in health sciences than in business and management, both fields showed net increases of 1,600 awards from 1983 to 1985.

Academic year 1985: Less-than-1-year awards, by instructional program and major field of study

Nursing assisting was the number one instructional program at this level and accounted for just over 10 percent of all less-than-1-year awards (appendix table 3.9). Emergency medical technician-ambulance ranked second, with 2,500 awards. Programs in the fields of health sciences and business and management accounted for 9 of the top 10 instructional programs in number of awards, and 29 of the top 50 programs at the less-than-1-year level.

The largest number of awards to men (1,600) was in the emergency medical technician-ambulance program (appendix table 3.10). Truck and bus driving ranked second with 1,100 awards. Of the top 50 programs, nearly half were in the field of engineering technologies.

The largest number of awards to women (3,400) was in nursing assisting, and five of the top 10 programs were in the field of health sciences (appendix table 3.11). Just over half of the top 50 programs for women at this level were in the field of business and management, with the remaining programs distributed across several other fields.

State Findings: Academic Year 1985

Conferrals of less-than-4-year awards varied widely by State, influenced by factors such as State demographics and the number and enrulment size of higher education institutions. In total conferrals, California, New York, Florida, and Illinois were the top-ranked States, in that order (appendix table 2.0). Total awards ranged from a high of 75,900 in California to a low of 800 in Alaska and Montana.

The less-than-1-year award level was the only category to show zero conferrals in some States (appendix table 2.0). These States may have institutions which confer such awards, but do not meet the eligibility criteria for inclusion in the Degrees and Other Formal Awards Conferred survey which collected the data for this report. (See foreword and survey methodology sections of this report.)

The top four States in conferrals of less-than-4-year awards by private institutions were New York, Pennsylvania, Ohio, and Massachusetts (appendix table 2.2). Together, these States accounted for over one-third (38.8 percent) of all such awards. In the public sector, institutions in California, New York, Florida, and Texas comprised over one-third (35.4 percent) of all such awards (appendix table 2.1).

Table H lists the top 10 States in confernals of less-than-4-year awards at each award level. California, New York, and Texas were the only States to appear among the top 10 at each level.

Table H.—Top 10 States conferring less-than-4-year awards in institutions of higher education, by level of award, State, and number of awards: Academic year 1985

| Level of award | | | | | | | |
|-----------------------------|-------|----------------------------------|--------|-------------------|--------|--|--|
| Less-than-1- year awards | | l-but-less-than 4-year awards | | Associate degrees | | | |
| Florida | 4,800 | California | 16,700 | California | 55,200 | | |
| California | 3,900 | Illinois | 11,100 | New York | 50,000 | | |
| Wisconsin | 2,400 | Pennsylvania | 9,000 | Florida | 32,800 | | |

| Alabama | 1,200 | Alabama | 4,600 | North Carolina | 11,100 | | |

SOURCE. Appendix table 2 0

Institutional Findings: Academic Year 1985

The number of institutions of higher education granting less-than-4-year awards varied considerably at each award ievel (table I). Less-than-1-year awards were granted by only 13.2 percent of all institutions. In contrast, 61.3 percent of all institutions granted associate degrees.

As expected, more 2-year than 4-year institutions conferred awards at each award level. For example, at the less-than-1-year award level, 26.9 percent of all 2-year institutions, versus 4.1 percent of all 4-year institutions, granted such awards. Associate degrees showed an even wider gap by institutional level: 96.6 percent of 2-year institutions awarded associate degrees, versus 37.9 percent of 4-year institutions.

At the 2-year level, public institutions were more likely than private institutions to grant all three levels of less-than-4-year awards. The greatest difference was at the 1-but-less-than-4-year award level: only 48.0 percent of private institutions conferred such awards, versus 80.1 percent of public institutions. Public and private 2-year institutions were much closer in associate degree conferrals. At the public level, 98.0 percent awarded associate degrees, trailed closely by private institutions, 93.0 percent of which granted these degrees.

Table I.—Institutions of higher education conferring less-than-4-year awards, by level of award, and by control and level of institution: 50 States and D.C., academic year 1985

| | | | | Level | f award | | |
|----------------------|---|-----------------------------|-------------------------------|-----------------------------------|-------------------------------|------------------------|-------------------------------|

Note.—Details may not add to totals due to rounding. Percents are based on actual, not rounded, figures. SOURCE: Degrees and Other Formal Awards Conferred survey, 1985.

Public 2-year institutions also granted the largest number of less-than-4-year awards (table J and figure 4). In academic year 1985, 453,900 of the total awards, or 73.8 percent, were conferred by these institutions. Private 2-year institutions were a distant second, granting 11.7 percent of all such awards. Private 4-year institutions edged out public 4-year institutions by a slight margin, 7.4 percent compared to 7.1 percent.

Figure 4.—Percentage distribution of less-than-4-year awards, by control and level of institution:

Academic year 1985

SOURCE Degrees and Other Formal Awards Conferred survey, 1985.

The top 50 institutions in conferrals of less-than-4-year awards are listed in table 4.0. Miami-Dade Community College in Florida ranked number one in the nation with 5,200 awards, granting almost 500 more awards than The American College in Pennsylvania, which ranked second. Eighty-six percent of the top 50 institutions were 2-year public institutions, of which over two-thirds were community or junior colleges. The four 4-year institutions on the list were split evenly between the public and private sectors. The top 50 institutions awarding associate degrees, 1-but-less-than-4-year awards, and less-than-1-year awards are listed in tables 4.1 to 4.3, respectively.

Occupational Outlook of Top-Ranking Instructional Programs in Academic Year 1985

Twenty-seven of the top 50 instructional programs (less-than-4-year awards combined) in academic year 1985 were linked to specific occupations, using the Vocational Preparation and Occupations Handbook published in 1979 by the National Occupational Information Coordinating Committee. These occupations were examined in terms of their employment outlook, as published in the 1981 edition of the Occupational Outlook Handbook, which forecasted expected employment opportunities through the 1980's. Table K lists the instructional programs, in descending order of total awards in 1985, and their employment outlook. With few exceptions, the popularity of these programs is supported by their employment prospects.

The Occupational Outlook Handbook describes prospective job opportunities in terms of the expected demandsupply relationship. The precise terms used in the Handbook are as follows:

Excellent. Demand much greater than supply

Very good. Demand greater than supply

Good or favorable. Rough balance between demand and supply

May face competition. Likelihood of more supply than demand

Keen competition. Supply greater than demand

Table K.—Employment outlook of top-ranking instructional programs in number of awards conferred (less-than-4-year awards combined) by institutions of higher education: 50 States and D.C., academic year 1985

| Rank among 1985 awards | | Instructional program and code | Employment outlook |
|---------------------------|------------------|--|----------------------|
| 2 | 18.1101 | Nursing, general | Good |
| 3 | 15.0303 | Electronic technology | Good |
| 5 | 17.0605 | Practical nursing | Very good |

| 48 | 07.0604 | Legal secretarial | Good |
| 50 | 15.0805 | Mechanical design technology | Good |

Appendix

Survey Methodology

This report highlights final data on less-than-4-year awards by institutions of higher education for academic years 1975 and 1983 to 1985, provided by the annual Degrees and Other Formal Awards Conferred survey. This survey is part of the Higher Education General Information Survey (HEGIS).

Data were collected on less-than-4-year awards granted by institutions of higher education between July 1 and June 30 of each survey year. The universe of 1,807 institutions in 1975 and 3,379 institutions in 1985 was determined by the HEGIS survey of Institutional Characteristics, conducted annually. In 1985, the universe comprised 3,337 degree-granting institutions and 42 rabbinical schools, which do not confer formal awar so. Reports were received from 3,019 institutions.

Survey data were edited for major reporting and processing errors, as well as consistency with the previous year's response. Institutions were contacted when problems could not be resolved by survey editors. Imputations using the previous year's data were made for 276 nonrespondent institutions. The remaining 42 nonrespondents' records were zero-filled because the institutions were new to the HEGIS universe in 1984 or 1985 and did not respond to either survey. These institutions are small, and thus the total number of degrees and other awards conferred by the institutions would not have significantly changed the overall findings.

In 1983, two major revisions were made to the survey. A new award category—postsecondary certificates or diplomas of less than 1 year—was added to the survey, and award data were collected using the new Classification of Instructional Programs (CIP) developed by the U.S. Department of Education's Center for Education Statistics (CES). Under CIP, more than 1,000 instructional programs are grouped under 50 fields of study. In this report, data on awards by field of study have been summarized into 30 major fields and 36 miscellaneous subgroupings under those fields, consistent with the presentation of these data in the Digest of Education Statistics. A crosswalk between these major fields of study and the CIP fields is provided on pages 22-24 of this appendix.

In this report, less-than-4-year awards is a combined category which includes the following three levels:

Associate degree. An award that normally requires at least 2 but less than 4 academic years of full-time-equivalent college work.

1-but-less-than-4-year award. An award that requires completion of an organized program of study at the postsecondary level consisting of at least 1 but less than 4 academic years of full-time-equivalent college work. This category does not include associate degrees.

Less-than-1-year award. An award that requires completion of an organized program of study at the postsecondary level consisting of less than 1 academic year of full-time-equivalent college work.

Note.—At the associate degree level, data were imputed by field of study for 103 institutions for 1983 and 23 institutions for 1984 which did not report data. Data for the 18 nonrespondents in 1985 were imputed at the total levels only, so field of study data do not add to grand totals by 2,537 (1,025 men, and 1,512 women).

Note.—At the associate degree level, data were imputed by field of study for 103 institutions for 1983 and for 23 institutions for 1984 which did not report data. Data for the 18 nonrespondents in 1985 were imputed at the total levels only, so field of study data do not add to grand totals by 2,537 (1,025 men, and 1,512 women)
