ABSTRACT

An "Early National Estimates" survey of higher education, part of the Integrated Postsecondary Education Data System, is reported. Estimates from the survey indicate the following: fall 1988 enrollments in colleges and universities increased almost 2.5% over fall 1987; overall, degree awards remained fairly stable in academic year 1988, although awards to women increased; revenues and expenditures increased 7% and 6%, respectively, in fiscal year 1988; enrollment at U.S. institutions of higher education reached an all-time high of 12.8 million in the fall of 1988, an increase of 2.4% over 1987; enrollment increases have occurred despite steady declines since 1981 of the U.S. population of 18- to 24-year-olds, which has traditionally comprised the largest share of student enrollment; the estimated number of degrees conferred in 1988 was not significantly greater than the year before; degree awards at the master's and doctor's levels were stable between 1987 and 1988, but for first professional degrees, there were declines in awards to men and in awards at public institutions; and the current funds revenues of institutions of higher education reached an estimated \$116 billion in fiscal year 1988, and current funds expenditures and transfers totalled \$113 billion. Tables and a discussion of survey methodology are included. (SM)

Total enrollment at institutions of higher education in the United States reached a record high of 12.8 million students this fall, according to the "Early National Estimates" survey conducted by the National Center for Education Statistics. Estimates from the survey indicate that:

- . Fall 1988 enrollment in colleges and universities increased almost 2 1/2 percent over fall 1987.
- . Overall, degree awards remained fairly stable in academic year 1988, although awards to women increased.
- . Revenues and expenditures increased 7 and 6 percent, respectively, in fiscal year 1988.

The "Early National Estimates" survey, now in its third year of operation, is part of the Integrated Postsecondary Education Data System (IPEDS). The survey, conducted by telephone, included a sample of more than 600 institutions of higher education, representing over 3,500 such institutions in operation in 1988. The data and findings in this report are *early estimates* and subject to sampling errors. Actual data for the entire universe of institutions will be available in the fall of 1989. (See the Survey Methodology for more information.)

Enrollment

Enrollment at institutions of higher education in the United States reached an all-time high of 12.8 million this fall--an increase of 2.4 percent over last year (table 1). The increase follows 2 years of stable enrollment. Figure 1 and table 4 provide trend data on enrollment for the past 10 years.

Men and women enrolled in significantly greater numbers this year than last year. Women's share of total enrollment remained stable at about 54 percent. Full-time and part-time attendance were up from last year, and more students enrolled at the undergraduate and postbaccalaureate levels.

Increases in enrollment occurred primarily at 4- and 2-year institutions in the public sector. The sizable increase in postbaccalaureate enrollment of nearly 4 percent also occurred predominantly at public institutions.

The enrollment increases have occurred despite the steady decline since 1981 of the U.S. population of 18- to 24-year-olds,¹ which has traditionally comprised the largest share of student enrollment. The number of 18- to 24-year-olds has been declining because of the lower birth rates in the years

¹U.S. Department of Commerce, Bureau of the Census, Current Population Reports, "School Enrollment--Social and Economic Characteristics of Students: October 1986," Series P-20, No.429, and "United States Population Estimates by Age, Sex, and Race: 1980-1987." Series P-25. No. 1022.

following the large post-World War II baby boom (birth years 1947 through 1961). The baby boomers, who swelled the ranks of college enrollment beginning in the late 1960s, are now contributing to a steadily increasing population of older Americans.

The declining population of 18- to 24-year-olds was generally expected to contribute to overall decreases in college enrollment. However, while the number of 18- to 24-year-olds declined by almost 2.5 million between 1981 and 1986, their college participation rate rose slightly during that time, up almost 2 percent, resulting in stable enrollment figures for this age cohort overall. Also, older students enrolled in greater numbers. Between 1981 and 1986, the number of persons 25 years and older who were enrolled in college increased 11 percent.² The number of women enrolled in college is also up substantially since 1981. Table 5 provides trend data for college-age populations for the past 10 years.

Completions

The estimated number of degrees conferred (associate and higher) was 1,816,000 in academic year 1988, not significantly greater than the year before (table 2). However, the total number of degrees awarded to women was up slightly, due to an increase in awards to them at public institutions.

Undergraduate degrees

Associate degree awards showed no significant overall change from the year before, with total awards estimated at 430,000. The number of bachelor's degrees awarded (989,000) also remained stable.

Postbaccalaureate degrees

Awards at the master's and doctor's levels were stable between 1987 and 1988. For first-professional degrees, on the other hand, there were declines in awards to men, and in awards at public institutions.

Finance

The current funds revenues of institutions of higher education reached an estimated \$116 billion in fiscal year 1988, and current funds expenditures and transfers totalled \$113 billion (table 3). These increases represented changes of 7 percent in revenues and 6 percent in expenditures over the previous year, and were fairly consistent among public and private institutions.

²Ibid, Series P-20, No. 429. All age cohorts above 24 are included.

Survey Methodology

The 1988 data are based on responses from the 651 institutions on the Early National Estimates Panel (a stratified random sample representative of the universe of 3,587 institutions of higher education in the United States in the 1988 academic year). Selected data items from the Integrated Postsecondary Education Data System (IPEDS) survey forms were requested by telephone from the Early National Estimates Representative of each sample institution between mid-October and mid-November 1988. The data were edited in light of previous years' survey responses (where available) and were resolved for questionable data.

The overall response rate for the 1988 "Early National Estimates" data collection was 97 percent. Weighted response rates for each type of data collected were: Enrollment--97 percent, Completions--97 percent, and Finance--90 percent. The sample weights were adjusted to account for nonresponse. The sample data were then weighted to national estimates using ratio estimation which uses previous years' data for the universe of institutions.

The "Early National Estimates" data are subject to both sampling and nonsampling error. While it is difficult to measure nonsampling error, the magnitude of sampling error can be indicated by the confidence interval for an estimate. For this sample at the 95 percent confidence level, total estimates are within 1 to 2 percent of what would have been obtained from a survey of all institutions of higher education (see text table). Data for the universe of all postsecondary institutions in the IPEDS surveys will be available in fall 1989.

This is the third year of "Early National Estimates" data collection. The 1986 "Early National Estimates" have been evaluated by comparing seven critical estimates with the final counts of institutions of higher education from IPEDS.³ All final counts that were examined except one, total part-time enrollment, were within the 95 percent confidence intervals around the corresponding estimate.

For more information on the sample selection, data collection, estimation methodologies, or for individual standard errors for the sample estimates in this report, please contact the authors of this publication.

³WESTAT, Inc., "Integrated Postsecondary Education Data System Early Estimates, Final Report," 1988, pp. 3-4.

Accuracy of selected data from the
"Early National Estimates" survey, 1987 and 1988

(In thousands)

Data item	Total estimate	95 percent confidence intervals*		
		Percent	Low	High
1987 Fall enrollment	12,544	± 1.7	12,335	12,753
1988 Fall enrollment	12,849	± 0.7	12,764	12,935
1986-87 degrees	1,813	± 0.8	1,798	1,826
1987-88 degrees (associate and higher)	1,816	± 0.7	1,804	1,828
1986-87 revenues	\$108,288,120	± 1.0	\$107,233,625	\$109,342,614
1987-88 revenues	115,502,540	± 0.9	114,516,487	116,488,592
1986-87 expenditures	106,424,547	± 1.0	105,322,017	107,527,077
1987-88 expenditures	112,764,927	± 0.9	111,723,355	113,806,498

*The upper and lower confidence limits shown for each estimate represent the accuracy of these estimates in light of sampling error. Although the actual values of the items are not known for the universe of institutions, the upper and lower limits have been constructed so that the actual values fall between them at the 95 percent confidence level. These margins of error are also presented as a percent of the total estimate in the percent range column.

Acknowledgments

NCES wishes to thank the institutions in the Early National Estimates Panel for providing the data on which these estimates are based. All those involved in the data collection, data processing, and report preparation worked quickly to release these early estimates. Preliminary data were reviewed by education association representatives. The authors gratefully acknowledge the comments and suggestions of the peer reviewers of the draft report--Joseph Popovich of the Maryland State Board of Higher Education; and Debra Gerald, John Gugel, and George Wade of NCES. Of special note is the contribution of the following NCES project members: Susan Broyles, Kerry Gruber, Austin Lin, Paul Mertins, and Summer Whitener.

--Less than 0.5 percent.

N/A = Not applicable.

*Only percent changes which are noted by an asterisk are statistically different from zero at the 95 percent confidence level. Percent changes were calculated on actual, not rounded, values. Caution should be exercised when collectively interpreting several percent changes noted by an asterisk. The confidence level that all of the percent changes being considered are statistically different from zero may be less than 95 percent.

**Estimates include nonprofit and for-profit institutions.

***Data for private 2-year institutions are not shown separately because the number of institutions sampled was small and the standard errors large.

NOTE: Details may not add to totals because of rounding. The 95 percent confidence intervals, expressed as a percent of the total estimates, are ± 0.7 percent for fall 1988 and ± 1.7 percent for fall 1987. The confidence interval percents for each estimate are available upon request. Postbaccalaureate includes graduate and first-professional enrollment.

Level						
4-year	94,810,388	101,580,261	*7.1	93,397,858	99,202,515	*6.2
2-year	13,477,732	13,922,279	*3.3	13,026,689	13,562,412	*4.1
Selected control/levels***						
Public 4-year	57,673,675	61,536,769	*6.7	56,643,881	60,084,994	*6.1
Private 4-year	37,136,713	40,043,492	*7.8	36,753,978	39,117,521	*6.4
Public 2-year	12,160,614	12,694,392	*4.4	11,809,323	12,443,035	*5.4

*Only percent changes which are noted by an asterisk are statistically different from zero at the 95 percent confidence level.

**Estimates include nonprofit and for-profit institutions.

***Data for private 2-year institutions are not shown separately because the number of institutions sampled was small and the standard errors large.

NOTE: Details may not add to totals due to rounding. The 95 percent confidence intervals, expressed as a percent of the total fiscal year 1988 estimates, are ± 0.9 percent for revenues and ± 0.9 percent for expenditures and transfers. The confidence interval percents for each estimate are available upon request. These data are not directly comparable to the data from previous years presented in other NCES publications, such as the Digest of Education Statistics, from which Pell grant disbursements have been removed. Revenues have traditionally exceeded expenditures primarily because of the time lag in institutions' expenditure of revenues, which may not be in the same fiscal year in which the revenues are received.
