ABSTRACT

This document lists and discusses the development of Maryland's performance specifications for occupational programs. The introduction explains the process used to develop performance standards and specifications for 10 career cluster majors that were identified by a task force of educators and employers as high-demand occupational areas in Maryland and were approved by a verification work group consisting of occupational and academic teachers from 12 Maryland counties and representatives of 28 Maryland businesses. Potential uses of the performance specifications by educators/trainers, workers, and businesses are listed. Appendixes constituting more than 90% of the document contain profiles of Maryland's programs to prepare students for employment in the following occupational areas: allied health; bioscience technician; computer-aided drafting and design; carpentry; child care and guidance; electronics; graphic communication and printing; heating, air conditioning, and refrigeration mechanics; horticulture; and secretarial and related programs. Each profile includes the following: program cluster; program title; program description; and identified occupational, foundation, and workplace skills. (MN)

Introduction

Beginning in January 1994, a Program Standards Task Force involving educators and employers was established to develop new standards and specifications for the following 10 career cluster majors identified as high demand occupational areas in Maryland: Allied Health; Biological Technology/Technician; Construction/Carpentry; Child Care and Guidance; Drafting; Electronics; Graphics and Printing Communication; Heating, Air Conditioning, and Refrigeration Mechanics; Horticulture; and Secretarial and Related Programs. Initial outcomes were identified for validation using voluntary national skill standards where available and the most recent employer-validated task lists found in DACUM (Developing A CurricuUM) charts, V-TECS (Vocational-Technical Education Consortium of States) and other sources.

The task force created a process to ensure that the performance specifications are consistent with the workforce preparation needs projected for the twenty-first century. The new performance specifications enable educators to work with employers to create flexible and dynamic programs that are responsive to economic development needs. They focus on outcomes as well as content and clearly delineate all aspects of the industry. They emphasize technical and academic preparation, as well as employability skills. To include all aspects of the industry, instruction should contain planning, management, finances, technical and production skills, underlying principles of technology, labor issues, and health and safety.

Initially, the task force developed a prototype of the components of the new performance specifications and determined how the process would be used to redesign the specifications for nine established career cluster areas: Consumer Service; Hospitality and Tourism; Health and Biosciences; Business Management and Finance; Arts, Media, and Communication; Human Resource Services; Environmental and Natural Resource Systems; Manufacturing, Engineering and Technology; Transportation Technologies; and Construction and Development. The performance specifications were established to complement curriculum development, instruction, and assessment strategies. They are electronically stored and retrieved through computer software, enabling the performance specifications to be validated and regularly updated by employers in cooperation with educators at state and local levels.

In May 1995, under the leadership of MSDE, Industry/Education Advisory Groups were convened to verify technical, academic and employability skills for the 10 identified career cluster majors. The two-day verification process involved 32 industry representatives and 38 teachers on teams consisting of four industry representatives and four teachers, two from the career area and two from the academic or foundation skills areas. This product contains the results of that meeting. These documents will be made available to educators and other interested parties in both hard copy and disk format. They will be used to guide the development of curriculum assessments and instruction leading to the issuance of skill certificates in Maryland's School-to-Careers system. For further information on these products, contact Doris Sharkey, Project Coordinator, Maryland State Department of Education, Division of Career Technology and Adult Learning, 200 West Baltimore Street, Baltimore, Maryland 21201, phone (410) 767-0185, fax (410) 333-2099.

USES FOR PERFORMANCE SPECIFICATIONS

PERFORMANCE SPECIFICATIONS identify the knowledge, skills, and abilities an individual needs to succeed in the workplace. They define a common language of quality and expectations for everyone—employers, employees, job seekers, educators, and human resource managers.

Performance Specifications provide lines of communication between:

- ✓ Business and schools—to align school curricula with industry requirements, to update educational objectives as workplace demands change, and to ensure a better return on public and private training investments.
- ✓ Workers and schools—to help workers take responsibility for and make sound decisions about their own training.

For educators and trainers, performance specifications:

- ✓ Provide a framework for curriculum development.
- ✓ Clarify the technical and academic skills needed for employment.
- ✓ Provide more complete career information to students and families.
- ✓ Ease the school-to-work transition.
- ✓ Attract industry involvement.

For workers, performance specifications:

- ✓ Make explicit employer's expectations for hiring, performing, and career advancement.
- ✓ Help employees identify and prioritize their own training needs.
- ✓ Enhance employees' own employment security by creating a portable portfolio of industry-approved skills and credentials.

For business, performance specifications:

- ✓ Align individual skills with business' missions, visions, values, strategies, and goals.
- ✓ Boost productivity and competitiveness by increasing work flexibility.
- ✓ Reduce the costs of assessing job candidates, and reduce turnover by hiring candidates with known skills.
- ✓ Set a common school-to-careers agenda for educators and trainers--internal and external.

General information

These performance specifications are just the beginning of any good curriculum plan. The intention is that they be locally validated and, in conjunction with partners, used as articulation vehicles for Tech Prep programs or for apprenticeship agreements. They can be used to establish school-based and work-based learning agreements with business and industry partners.

Because of our interest in using state-of-the-art task lists and skills standards, the language is not parallel in all the lists. The intent was to validate and publish the most up-to-date lists available at this time. These lists will be reviewed periodically to ensure that they contain up-to-date industry skills.

New or revised program proposals should reflect what is needed in each local education system. Adjustments to the program descriptions and performance specifications can be made during the local validation process.

Performance specifications are available in two electronic formats: as WordPerfect documents and as V-TECS DIRECT data disks. To obtain copies of these disks in either or both of these formats, you may contact Doris Sharkey, Project Coordinator, Maryland State Department of Education, Division of Career Technology and Adult Learning, 200 West Baltimore Street, Baltimore, Maryland 21201, phone (410) 767-0185, fax (410)333-2099. This service is available to Maryland customers only.

ALLIED HEALTH

Program Title: Miscellaneous Allied Health Services, other **CIP #: 51.08,**
51.16, 51.26

Program Description:

This program prepares students to deliver health related services in a choice of health care settings, dependent on their senior specialty. The program provides a basic core of knowledge, skills, and attitudes common to direct patient care, diagnostic and therapeutic services. The senior course will include both clinical and classroom competencies. A geriatric nursing assistant certificate can be earned by meeting state requirements.

An integral part of the program completier's education is the participation in on-site observations of health professionals and planned clinical experiences in health service facilities. All clinical experiences for allied health are planned and supervised by the allied health staff who are credentialed or registered for their specialty of allied health.

NOTE: To meet state requirements for the geriatric nursing assistant component, clinical experiences are provided in a nursing home or extended care facility and are planned and supervised by a health occupations teacher who is a registered nurse. Content should include a focus on the special psychological, social and physical needs of the aging and licensing requirements for the geriatric nursing assistant.

Time Requirements

Planned, supervised clinical experiences of at least two hours for each hour of theory is recommended for this program. A minimum of 75 hours is required for the geriatric nursing assistant component which includes 37 1/2 hours of planned supervised nursing clinical experiences caring for geriatric patients in a nursing home or extended care facility.

Upon satisfactory completion of the geriatric nursing assistant component of the program the student is awarded a certificate of completion, which is issued by the school.
