IDENTIFIERS *Computer Use

ABSTRACT

In spring 1984, a survey was undertaken to determine what activities were being conducted by member institutions of the League for Innovation in the Community College to help staff members become more comfortable with and knowledgeable about computers. League members were asked to provide information on the current level of computer usage among various employee groups; overall planning for staff computer literacy; the focus of computer literacy programs; specific activities and methods used and projected; and conclusions drawn regarding the effectiveness of various approaches to computer literacy training. Study findings, based on information about 40 of the 55 League colleges, included the following: (1) the majority of respondents estimated that less than 30% of the employees, with the exception of office support personnel, used computers in their daily work; (2) the lowest use level was among instructional personnel for classroom management; (3) most colleges had a beginning structure for computer literacy, and one-third had earmarked money specifically for computer literacy for staff; (4) the focus of staff computer literacy efforts was clearly on microcomputers; and (5) the two leading methods for promoting computer literacy were to send employees to regular computer courses through fee payment and tuition waivers and to allow staff to use microcomputers in labs. Summaries of computer literacy activities by college, the survey instrument, and survey responses regarding computer literacy approaches are included.

BACKGROUND

The League for Innovation in the Community College is a national consortium of 150 institutions that includes 55 public community colleges and more than 850 private colleges in 13 states. The League is one of the first national educational organizations that functions specifically to stimulate innovation and experimentation.

During fall of 1983 the Board of Directors of the League approved the League Fellows Program. The purpose of the League Fellows Program is to provide for quality staff development of top leaders in member institutions and to provide for staffing in the League office that is more connected to the needs and interests of the member institutions. A League Fellow may work on League-wide projects while based at the home institution or, in special circumstances, may work in the League office in Laguna Hills, California.

One of the topics cited as appropriate for a League Fellow activity was an inventory and analysis of computer literacy programs for staff in League colleges. Preparing such an inventory also met the project requirement of the Institute for Leadership Development, in which the Director of Staff Development at Lane Community College was participating at that time. The Institute is a professional development project sponsored by the League for Innovation and the American Association of Women in Community and Junior Colleges (AAWCJC).

Consequently, in spring of 1984, as one of the first League Fellows projects, a survey was conducted from the Lane Community College Staff Development Office to find out what League colleges were doing to achieve computer literacy for staff.

For the purposes of the survey, computer literacy was defined as "Any activity (past, present, or future) designed to help your staff become more comfortable and knowledgeable about and able to use computers in whatever ways are appropriate to help your institution fulfill its mission in the coming years."

Thirty-three survey instruments were returned. They included information about 40 of the 55 colleges. One League district did not respond to the survey.

The survey (Appendix A) invited each institution to provide information on the following topics:

- Current level of computer usage among various employee groups
- Overall planning for staff computer literacy

- Focus of computer literacy program
- Specific activities and methods (current and projected)
- Conclusions drawn regarding effectiveness of various approaches and suggestions to colleges embarking on computer literacy efforts

This report contains a summary of findings and directory of League for Innovation institutions and contact people.

Special thanks are due to a number of individuals for their direct assistance with this project: Eldon Schafer, Jim Ellison, Larry Warford, Mildred Bulpitt, Carolyn Des Jardins, Sue Jordan, Diane DelRosso, Barbara Mathewson, Carol Clarke, Terry O'Banion, and the Lane Community College Printing and Graphics Department.

A salute is in order also to the people who were so cooperative in supplying the information about the various League districts and colleges.

FINDINGS

These findings are based on estimates and information provided by thirty-three respondents. Their responses represent forty colleges and one district office.

Current Level of Computer Use Among Various Employee Groups

Respondents were asked to estimate how many people in various job families currently use computer hardware in their daily work. The response range included "a few" (under 30%), "some" (30-60%), and "many" (over 60%).

Job families specified were:

1. Executives, top administrators
2. Middle management/department heads/directors
3. Office support personnel (secretaries, administrative assistants)
4. Technicians/specialists
5. Instructional--for computer assisted instruction
6. Instructional personnel--for classroom management (records, materials, word processing)

Daily computer use is still in its beginning stage at most colleges. With the exception of office support personnel, the majority of respondents estimated that "few" (less than 30%) employees in any group use computer hardware daily in their work. See Tables 1 and 2.

For office support personnel, however, six respondents estimated that many (60% or more) of this group use computers daily, and another fourteen respondents estimated that "some" (between 30% and 60%) office support personnel use computers daily.

The lowest use level was estimated to be among instructional personnel for classroom management (records, materials, word processing). Three-quarters of the sample (24 respondents) report that few instructors use computers daily for classroom management. Only one institution reported that a majority of instructors use computers daily in this way. See Appendix B for more information.

TABLE 1

PERCENTAGE OF STAFF CURRENTLY USING
COMPUTER HARDWARE IN DAILY WORK

Job Family	Few (under 30%)	Some (30%-60%)	Many (over 60%)
Top Management	*22 **67%	7 21%	4 12%
Mid-Management	19 58%	11 33%	3 9%
Office Support	13 39%	14 42%	6 18%
Technicians/Specialists	18 56%	13 41%	1 3%
Instructors (computer- assisted instruction)	20 52%	8 25%	4 13%
Instructors (classroom management, records, materials)	24 75%	7 22%	1 3%

**Per cent of the 33 respondents

TABLE 2

LEAGUE FOR INNOVATION INSTITUTIONS

ESTIMATED COMPUTER USE, JUNE 1984

Planning for Computer Literacy

Most colleges have a beginning structure for computer literacy in that two-thirds of the respondents do have a designated person, committee, or other arrangements to carry out computer literacy for staff. One-third of the respondents have formulated a specific definition of computer literacy, and one-fourth of them have stated goals, objectives, or activities for staff computer literacy.

One-third of the respondents earmarked money specifically for computer literacy for staff in their 83/84 budget. Forty-two per cent have designated such money for 1984/85.

Just over one-third indicated specific incentives or rewards beyond increased awareness, knowledge, or job effectiveness for staff who engage in computer literacy endeavors.

Additional rewards cited included funds for tuition, grants, travel, development of workshops or written manuals; leave or release time to attend workshops, develop materials, or implement specific applications; certificates of attendance; regular or graduate credit for formal courses; professional growth units toward movement on salary schedule; opportunities for advancement; and professional growth itself.

Program Focus

The focus of staff computer literacy efforts is clearly on microcomputers, with attention spread relatively evenly between overcoming "computer anxiety" (21 respondents), awareness/survey of applications (27 respondents), and instruction in specific applications (24 respondents).

Word processing is the application being taught most often (28 respondents). Topics mentioned least often included communications (modem, electronic mail, bulletin board, etc.--8 respondents) and student service applications (10 respondents).

Activities and Methods for Computer Literacy

Respondents were asked to rank thirty items as to whether they are, or will be, used "none", "some", or "much" for staff computer literacy.

The two leading methods for current staff computer literacy efforts involve integrating staff into regular programs and curricula. Over one-third of the colleges, for example, send employees to their regular classes through fee payment and tuition waivers. The same number of institutions also allow staff to use microcomputers in labs along with regular students.

The next most popular methods are classes, workshops, panels, seminars tailored specifically for staff, taught by college staff and manuals for hardware and software.

These trends are expected to continue in the future. The number of schools planning to use specially tailored classes taught by staff for staff, and microcomputers in labs for staff and students, is projected to increase by one-third.

The most interesting addition is the projected use of future planning activities for technology to achieve computer literacy for staff. It is in "much" use currently by only nine respondents, but is the most often mentioned method for "much" use in future staff literacy efforts.

Seventeen respondents are planning to use it "much" and 8 are planning to use it "some", for a total of 25 respondents.

Computer literacy through access to hardware at individual work stations is also projected to be more frequent in the future.

Methods least in use currently are those which require additional resources. They include:

- Microcomputers in labs designated strictly for staff use
- Microcomputers for staff to check out and take home
- Use of non-campus personnel for one-on-one or specially tailored staff training

Additional information on current and projected methods for computer literacy is displayed in Table 3.

Suggestions and Conclusions Based on Experience

Below is a summary of the most frequent responses to the questions, "Based on actual experience at your college, what conclusions have you drawn regarding effectiveness of various approaches to computer literacy?" and "What suggestions would you give a college embarking on computer literacy efforts?" The actual responses are contained in Appendix C.

- Hands-on instruction is essential, accompanied by adequate and direct access to hardware and software once people have been exposed and are ready to progress.
- Small group instruction and easy access to experts and resource people are recommended so staff have ample opportunity for questions. Suggestions included pairing experienced staff with beginners, training staff as trainers, and forming user groups as ways to respond to this need.
- Begin with those who are interested and integrate others as they become willing to be involved.

Table 3

	None	Some	Much	None	Some	Much
19. Self-paced print material	11 35%	17 55%	3 10%	5 19%	16 62%	5 19%
20. Books	2 6%	24 75%	6 19%	1 4%	18 64%	9 32%
21. Periodicals	2 6%	22 69%	8 25%	1 4%	18 64%	9 32%
22. Slides, tapes, films, video- discs, videotapes	11 35%	20 65%	-- --	3 11%	22 81%	2 7%
23. Telecourses	12 40%	15 50%	3 10%	5 19%	18 69%	3 12%

--For content, teach use of software with direct application to people's jobs rather than programming skills.

--Have a plan before you begin, with specific competencies, access to equipment, budget, and strategies for implementation in the classroom and/or office. On the other hand, several colleges suggested jumping in regardless, because, as one respondent said, "DO IT, because whatever it is, it will work."

Summary of Findings

In the majority of colleges, less than thirty per cent of the six identified job families use computers daily, with the exception of office support personnel.

Most schools have designated responsibility, but don't yet have detailed objectives or plans for staff computer literacy.

The intent to use planning for technology in the future as one of the leading staff literacy methods suggests that schools intend to fill the gap in identified objectives and plans.

Current focus is on teaching survey of applications and specific applications, with word processing mentioned most often.

Institutions are using existing resources (their regular classes, staff and labs) where possible and plan to continue this practice, with the addition of more in-house technology planning activities, and increased access to hardware at individual work stations.

Schools with experience in staff computer literacy recommend hands-on instruction with easy access to hardware, software, and individual help and support. They suggest beginning with those who are interested and keeping their interest by teaching use of software that provides direct assistance in their jobs rather than concepts of programming.

Conclusions

This is the first study of computer literacy activities for staff among League colleges, and as such merely scratches the surface. Things are moving quickly at many of the institutions, so some of the information (notably per cent of staff who use computers in their daily work) is probably already outdated.

It is clear that League institutions are taking action in this area, and will be looking for further ideas and resources. This inventory has documented a rich diversity of experience with computer literacy for staff among League schools. This background provides a potent resource from which to design and deliver future staff computer literacy activities.

MORAIN VALLEY COMMUNITY COLLEGE

"Computer literacy programs at Moraine Valley Community College currently are directed at encouraging faculty members through travel funds, tuition reimbursement, sabbatical leave grants, inservice programs, workshop funding and grant funding. There has been an emphasis through the faculty development program on encouraging the faculty already proficient in computers to adapt and develop programs for other faculty.

"An instructional microcomputer lab has been established with 16 Apple II and 14 Apple IIe microcomputers. These are used to instruct faculty and to encourage faculty to adapt portions of their courses to the computer. Parts or all of several math, word processing, sociology and psychology courses now use the lab. A major expansion and funding are under consideration at this time.

"Expansion of computer activity at all levels of the institution is currently under consideration. Hopefully this may be implemented within the next two to four years.

"To date, two graduate classes teaching BASIC and PASCAL languages for faculty were offered by an area university in the Moraine Valley microcomputer lab for the benefit of the faculty. Future courses are being considered. In addition, another area university offers stipends for Moraine

Valley faculty enrolled in their graduate Computer Science degree program."

COVER LETTER

SURVEY INSTRUMENT

Staff development

Lane
Community
College 4000 E. 30th Ave., Eugene, OR 97405

23

May 18, 1984

Dear

You are probably aware that I have been named a League Fellow to conduct a study of computer literacy programs for staff among the 54 colleges in the League for Innovation. We understand that you have been named the contact person for your college or district. We appreciate your willingness to take responsibility for getting the information from your college or district back to us in a timely manner. We plan to publish the findings as an inventory that specifies practices and a contact person for each League college. In those cases where we have just one of you designated as contact person for the entire district, we have included a copy for each college in your district. If, however, it is more feasible for you to respond for your district as a whole, please indicate that on the instrument you submit to us.

We anticipate considerable variation among computer literacy programs for staff. We are considering "computer literacy" to mean any activity (past, present or future) designed to help your staff become more comfortable and knowledgeable about and able to use computers in whatever ways are appropriate to help your institution fulfill its mission in the coming years.

Unless you are well ahead of the rest of us in computer literacy for your staff, you will probably find yourself looking around your school and asking some of the questions for the first time. As such, they may be difficult to answer. Just do the best you can--your best estimate. At best, we may find that we are all further along than we think. At worst, the questions may provoke healthy conjecture as to where we can best go from here.

The findings will be published as a League document this summer and each college will receive a copy. I especially look forward to the opportunity to discuss questions or concerns about the findings in person with League representatives when they meet here on our campus next fall.

Please return the completed survey to me by Monday, June 11. Feel free to call me if you have any questions at (503) 747-4501, ext. 2577. Thank you for your help.

Sincerely,

Anne Stewart, Director
Staff Development

Lane Community College is an
Equal Opportunity/Affirmative Action/
Title IX Institution

cc: Terry O'Ranion

LEAGUE FELLOWS PROJECT

Staff Computer Literacy Inventory

Name of Your College: _____

A. Demographics (rough estimates)Staff

Number of full time staff _____

Head count of part time staff (include
non credit instructors) _____Budget

Operating budget for 1983-84 _____

Enrollment

Unduplicated head count--credit _____

or

Full time equivalent--credit _____

B. Current Use

To the best of your knowledge, what staff on your campus currently use computer hardware (microcomputers, mini-computers, main frame terminals) in their daily work?

1. Executives, top administrators:

_____ a few (under 30%) _____ some (30-60%) _____ many (over 60%)

2. Middle management/department heads/directors:

_____ a few (under 30%) _____ some (30-60%) _____ many (over 60%)

3. Office support personnel (secretaries, administrative assistants):

_____ a few (under 30%) _____ some (30-60%) _____ many (over 60%)

4. Technicians/specialists

_____ a few (under 30%) _____ some (30-60%) _____ many (over 60%)

5. Instructional personnel--for computer assisted instruction:

_____ a few (under 30%) _____ some (30-60%) _____ many (over 60%)

6. Instructional personnel--for classroom management (records, materials, word processing):

_____ a few (under 30%) _____ some (30-60%) _____ many (over 60%)

Computer Literacy Inventory

2

C. Overall Computer Literacy Planning

1. Has your institution formulated a specific definition of computer literacy?
 _____ No* _____ Yes. (Write in below or attach)
2. Does your college have stated computer literacy goals, objectives, or activities for staff (check all that apply)
 _____ No _____ Yes. (Attach or write in below)

Specify source:

- _____ in a formally adopted college-wide planning document
- _____ in collective bargaining agreements
- _____ other (please specify)

3. Has your college designated a person, committee, or made other arrangements to carry out computer literacy objectives for staff?
 _____ No _____ Yes. (Please describe)
4. Is there money earmarked specifically to support computer literacy in your current 83/84 budget?
 _____ No _____ Yes. Please describe source and amounts:

General Fund: _____

Outside Funds: _____

*If no, please use the definition given in the cover letter to guide you in responding to the remainder of the survey.

Computer Literacy Inventory

5. Is there money earmarked specifically to support computer literacy in next year's (84/85) budget?

 No Yes. Please describe source and amounts:

General Fund: _____

Outside sources, grants, etc.: _____

6. Besides increased awareness, knowledge, or job effectiveness, are there other incentives or rewards for staff participation in computer literacy activities (credit, certificates, advancement on salary schedule, etc.)?

 No Yes. (Please specify)

D. Program Focus

(Check all that apply to your college)

1. The focus at our campus is on literacy with:

- Mainframe
- Minicomputers
- Microcomputers

2. The focus of our computer literacy efforts is on:

- Overcoming computer anxiety
- Awareness--survey of applications
- General applications
- Administrative applications
- Secretarial or clerical applications
- Instructional applications
- Other
- Instruction in specific applications:
 - Word processing
 - Spreadsheet
 - Communications (modem, electronic mail, bulletin board, etc.)
 - Data base
 - Instructional applications--please specify:

Student service applications--please specify:

_____ Converting specific information and processes from manual to electronic hardware and software (putting your work on your new IBM PC, for example)

_____ Other

E. Specific Activities/Methods

Indicate to what extent the following resources/activities are made available by marking on each line one of the following: N (= none or minimal); S (= some); M (= much). If you don't know, leave it blank.

	<u>83/84</u>	
	<u>Present</u>	<u>Projected</u>

Planning/Problem Solving

- 1. Future planning activities for technology
- 2. Work-group problem solving to integrate human and computer components into a specific work setting

Group Training Opportunities

- 3. Regular community college computer classes, workshops (credit or non-credit)
 - Encouragement to enroll
 - Release time to attend
 - Fee payment, tuition waivers
- 4. Classes, workshops, seminars offered by agencies other than your college (university, computer dealers, etc.)
 - Encouragement to enroll
 - Release time to attend
 - Funding to pay fees, travel

- 5. Classes, workshops, panels, seminars tailored specifically for staff
 - Taught by college staff
 - Taught by non-college personnel

Hardware/Software Access

- 6. Microcomputers available in labs for staff to use along with students

	<u>83/84</u> <u>Present</u>	<u>Projected</u>
<u>Hardware Access, cont.</u>		
7. Microcomputers in student labs with designated hours just for staff	_____	_____
8. Microcomputers in labs designated only for staff	_____	_____
9. Access to hardware at individual work stations		
a. Microcomputers	_____	_____
b. Terminals to mainframe or minicomputer(s)	_____	_____
c. Access to modems and other communications equipment	_____	_____
10. Microcomputers for staff to take home on loan	_____	_____
11. Software loan/check-out	_____	_____
12. Discounts for staff purchase (personal) of hardware/software	_____	_____
<u>Individualized Learning Opportunities</u>		
13. One-to-one training by colleagues at the college (formal or informal)	_____	_____
14. One-to-one training by non-campus personnel	_____	_____
15. Technical support (phone hot line, identified experts to consult)	_____	_____
16. Release time for practice on the job	_____	_____
17. Release time for curriculum design/redesign	_____	_____
18. Manuals for hardware and software	_____	_____
19. Self-paced print materials	_____	_____
20. Books	_____	_____
21. Periodicals	_____	_____
22. Slide tapes, films, videotapes, videodiscs	_____	_____
23. Telecourses	_____	_____

Computer Literacy Inventory

F. Summary of Your Program

- Based on your previous responses, please provide a statement of not more than 100 words that summarizes current computer literacy activities and plans at your college:
- Contact person(s) for more information (indicate their position or responsibility in relation to computer literacy).

-
- Please attach any materials descriptive of your program--brochures, workshop schedules or advertisements.
 - If your college has developed its own instructional materials in computer literacy for staff, please indicate name of person to contact for review.
 - If appropriate for use at other colleges, indicate cost for acquisition and name of contact (if other than above.)

G. Evaluation

Other colleges would like to benefit from your experiences.

- Based on actual experience at your college, what conclusions have you drawn regarding effectiveness of various approaches to computer literacy?
- What suggestions would you give a college embarking on computer literacy efforts?

Please use the attached sheet to assess effectiveness of specific projects implemented on your campus.

Detail on Specific Computer Literacy Projects for Staff

Objectives (desired change or outcome)	Target	Description of Approach/Activities	Amount Spent	Funding Source	Estimated Effectiveness of this Approach
<p>FOR EXAMPLE:</p> <p>Increase number of faculty using computer assisted instruction by 20%</p>	<p>Faculty</p>	<p>Faculty member enrolls in a term-long seminar with a microcomputer to use at home during the term</p>	<p>\$70,000 for hardware</p> <p>\$30,000 for personnel (lab instruc- tion)</p>	<p>WSF Grant</p>	<p>M = minimal A = adequate/good E = excellent</p> <hr/> <p>E</p>

APPENDIX B

**INSTITUTIONS WHERE "MANY" INDIVIDUALS (OVER 60%) IN THE JOB FAMILY
ARE ESTIMATED TO USE COMPUTER HARDWARE IN THEIR DAILY WORK**

**INSTITUTIONS WHERE "MANY" INDIVIDUALS (OVER 60%) IN THE JOB FAMILY

APPENDIX C

**CONCLUSIONS REGARDING EFFECTIVENESS OF VARIOUS
APPROACHES TO COMPUTER LITERACY**

DETAILS ON SPECIFIC COMPUTER LITERACY PROJECTS

APPENDIX C

"BASED ON ACTUAL EXPERIENCE AT YOUR COLLEGE, WHAT CONCLUSIONS HAVE YOU DRAWN REGARDING EFFECTIVENESS OF VARIOUS APPROACHES TO COMPUTER LITERACY and WHAT SUGGESTIONS WOULD YOU GIVE A COLLEGE EMBARKING ON COMPUTER LITERACY EFFORTS?"

BROOKDALE COMMUNITY COLLEGE

The most effective approach seems to be hands-on work with canned software but any approach is excitedly and hungrily received.

- (1) Do not make the main focus programming--we avoid it completely.
- (2) Make it hands-on, if possible, with lots of supervision for answering questions.
- (3) Have applications of interest to all participants--we ran a word processing and a courseware workshop where everyone got onto a micro.
- (4) Most importantly, DO IT because whatever it is--it will work.

COAST COMMUNITY COLLEGE DISTRICT

Golden West College

Computer literacy needs to be an integral part of a comprehensive staff development program. It should not be seen as more or less than another tool in the instructor's toolbox. To treat it otherwise makes it appear like a fad.

Don't wait until you have found the right equipment, just use what you have. Literacy is a continuum, some are more literate than others. Use your own staff to teach it. This does wonders for morale.

CUYAHOGA COMMUNITY COLLEGE

Our experiences have proven that hands-on instruction is most effective.

Get as many of your administrators and faculty to actually use the computer as quickly as possible.

DALLAS COMMUNITY COLLEGE DISTRICT

Brookhaven College

Try to sort participants into rank beginners, beginners, the "initiated" and "experts" for session planning. Offer sessions in series, like units, with assigned homework in between. Keep instructor-learner ratio low. Have learners bring their own micros, when possible.

Cedar Valley

Group sessions are beneficial for computer awareness, but be prepared to provide individualized instruction for those who desire it.

Ensure that software and hardware are available in sufficient quantities. Much frustration was encountered because of insufficient hardware/software and computer experts for consultation.

Eastfield College

Start with **small group of interested** individuals (20 people). Progress to other groups, the persons from these groups will work one-to-one with others who haven't attended formal training and eventually a large number of individuals will slip into the mainstream.

Hold formal, small group instruction. Give actual hands-on training (one or two persons per machine). Show actual applications (not programming).

El Centro

Caution! Be prepared to take interested persons to desired goals. Initial interest and enthusiasm has/can be quickly stopped if potential for growth and support is not available.

Richland College

We did not spend **enough time planning**. We bought equipment first, and have been learning to use it, and how to teach how to use it, since. We did not know **anyone** who had a similar experience (bringing a campus into the computer age), so we had to learn the hard way.

Learn from the campuses who have already begun. Send representatives for on-site visits to talk with our new "experts" in computer literacy.

FOOTHILL-DeANZA COMMUNITY COLLEGE DISTRICT

Introducing staff to computers and incorporating computers into the curriculum needs to be an on-going effort over several years. Begin with word processing and record keeping and expand according to interest.

Develop a comprehensive plan that includes easy access by staff to computing equipment and a designated resource person.

JOHNSON COUNTY COMMUNITY COLLEGE

Careful planning of complete objectives and competencies needed should be done before embarking on a program. People must see a need to learn about computers and have them accessible.

KIRKWOOD COMMUNITY COLLEGE

Problem solving through the use of a computer by students in their area of study is the best return as a result of educating faculty in the use of computers.

LOS ANGELES COMMUNITY COLLEGE DISTRICT

L.A. Trade Technical

If it appears to reduce workload, people like it.

Let people "play" with the machines at leisure in addition to having structured seminars.

West L.A.

Initiate a "train the trainer" program first, followed by seminars, by disciplines, re: current trends, uses and materials available. Establish cross-discipline advisory committee for strategic and technical planning purposes; obtain budgetary commitments.

MARTCOPA COMMUNITY COLLEGES

People learn best with hands-on activities.

Give participants the opportunity to practice what they are taught.

MIAMI-DADE COMMUNITY COLLEGE

New World Campus

- (1) A slow process.
- (2) Persuade and exemplify rather than dictate use.
- (3) A costly process.

Be patient, very supportive and provide opportunities for direct access to hardware and software.

South Campus

Our greatest successes have been with software with direct applications to the job. The faculty and staff get interested and then further computer literacy activities are engaged in.

Develop a plan both for computer literacy and implementation in the classroom/office.

MORaine VALLEY COMMUNITY COLLEGE

Any computer literacy program should involve those staff members already proficient helping those who are not. The program needs to be diverse and creative to meet the needs of all the faculty and to encourage and inspire those who are reluctant.

ST. LOUIS COMMUNITY COLLEGE**Florissant Valley**

A formal college course for credit and offered at a time convenient for faculty and staff, has resulted in approximately fifty staff and faculty completing the course.

(1) Form a campus committee. Must have a reasonable budget (e.g., \$3,000 to \$5,000). (2) Offer a course, in-house, with released time. (3) Increase travel for computer related conferences.

Forest Park

Develop a specific plan; provide funds and release time to implement.

SANTA FE COMMUNITY COLLEGE

Training should be informal (i.e., non-threatening). Faculty should attend seminars because of desire rather than a command performance.

DETAIL ON SPECIFIC COMPUTER LITERACY PROJECTS FOR STAFF

Objectives (desired change or outcome)	Target	Description of Approach/Activities	Amount Spent	Funding Source	Estimated Effectiveness of this Approach M = minimal A = adequate/good E = excellent
ST. LOUIS-- FLORRISANT					
1. Increase faculty knowledge of micro applications in their areas	Faculty	Staff Forum (workshop using IBM, Apple and TRS-80 micros and commercial and other software demonstrations)		Professional Growth Comm. budget	A
2. Increase staff and fac. microcomputer literacy	Faculty and staff	Faculty and staff enroll in microcomputer literacy course. Study general applications, BASIC, and spend three hours per week in Microcomputer Lab.	\$3,750	Tuition waivers	E
3. Increase awareness of other institutions' computer applications	Faculty and staff	A. Faculty and staff join state-wide consortium (Missouri Computer Facilitating Committee)	Approx. \$30 each	Individual pays	E
		B. Faculty and staff travel to regional and national conferences on computing	\$20,000	Budgeted travel funds	E
BROOKDALE COMMUNITY COLLEGE					
1. Begin 3 pilot projects: music, reading, writing 1983/84	Faculty	Faculty in each department attend workshops to learn to use their (1) departmental micro (2) word processing and (3) a "courseware day"	\$8,000 hardware \$2,000 software \$800 wkshps.	Operating budget	(1) E (2) E (3) A/E
2. Introduce all interested staff to computers	Staff	Attend half-day computer literacy workshop (20-30 attendees at each of six sessions)	Lunches	Operating budget	E

Objectives (desired change or outcome)	Target	Description of Approach/Activities	Amount Spent	Funding Source	Estimated Effectiveness of this Approach
--	--------	---------------------------------------	-----------------	-------------------	--

M = minimal
A = adequate/good
E = excellent

BROOKDALE COMMUNITY COLLEGE, cont.

3. Begin 15 additional pilot projects in numerous subjects 1984/85	Faculty	Same approach as first item, but much more one-on-one assistance/consultation plus more advanced workshops will be presented	\$45,000, hardware; \$6,000, software; \$1,500 wkshps.	Operating budget.	Future
--	---------	--	--	-------------------	--------

EASTFIELD

Introduce campus personnel to microcomputers and the micro's usefulness	Faculty and staff	Small group workshops--12 hours in length in two- or three-hour blocks	\$200	Staff development funds	E
---	-------------------	--	-------	-------------------------	---

DELTA COLLEGE

Objective has been to facilitate the use of available microcomputers and software to the extent demanded by all full time personnel	Faculty, staff, administration and clerical	Subcommittee of the Professional Development Committee has guided computer literacy development since spring 1983. Formal approach is taught by Delta College faculty. One- and two-day "hands-on" workshops with 15 to 30 participants in each. Some are introductory overviews and others are specific one topic workshops to develop initial skills and knowledge.	Approximately \$6,500	Individual participants, \$15-\$20 ea. + Professional Development Committee funds + Delta College Foundation, \$1,500 + Institutional services	E
---	---	---	-----------------------	--	---

Objectives (desired change or outcome)	Target	Description of Approach/Activities	Amount Spent	Funding Source	Estimated Effectiveness of this Approach
					M = minimal A = adequate/good E = excellent

MIAMI DADE--SOUTH CAMPUS

1. Increase number of faculty using computers in instruction	Faculty	Faculty member enrolls in a term-long seminar with a microcomputer to use at home during the term	\$40,000 for hardware; \$5,000, software; \$15,000 for personnel (lab instruction)	State grant SPD Budget	E
2. Increase computer literacy of faculty and staff	Staff, faculty, and administrators	Faculty and staff register for an individualized, guided study module on microcomputers. Using the guide, they use a variety of software and microcomputers	-0- (Personnel costs are involved-- but in both cases the trainers have these activities as part of their work load)	---	E
3. Familiarize staff with specific applications software	All employees	Individuals register for software specific workshops which introduce them to programs such as PFS, VisiCalc, Bankstreet Writer, Applewriter II, etc.		FSPD budget FSPD budget	E

KIRKWOOD COMMUNITY COLLEGE

Increase the number of computer literate faculty by 25	Faculty	Faculty member enrolls in a self-paced independent study program in a centralized lab. Faculty member is then assisted in the process of integrating computer use into the curriculum. (The development of projects to be completed by the student through the use of computers.)	\$40,000 for hardware \$35,000 for personnel	Title III grant	A
--	---------	---	---	-----------------	---

40

Objectives (desired change or outcome)	Target	Description of Approach/Activities	Amount Spent	Funding Source	Estimated Effectiveness of this Approach
					M = minimal A = adequate/good E = excellent

MARICOPA COMMUNITY COLLEGES

<p>1. To encourage faculty commitment for further use of computers for instructional purposes. To provide faculty with basic skills necessary to use educational applications of computers that will improve the quality of education.</p>	<p>Faculty</p>	<p>Computer Literacy Project operates out of the district office to serve the seven campuses, and consists of the following two projects:</p> <p><u>Faculty Computer Literacy Project</u>--Each semester, a new group of 50 faculty take a computer home to use; software is checked out to them. They attend class once a week (3 hours) all semester.</p>	<p>\$250,000</p>	<p>General funding</p>	<p>E</p>
	<p>Faculty, staff, administration</p>	<p><u>Workshop Series</u>--A series of computer literacy workshops (43 in fall 1984) is provided for all employees.</p>			

Objectives (desired change or outcome)	Target	Description of Approach/Activities	Amount Spent	Funding Source	Estimated Effectiveness of this Approach
--	--------	---------------------------------------	-----------------	-------------------	--

M = minimal
A = adequate/good
E = excellent

BROOKHAVEN COLLEGE

Promote micro usage and teach familiarity with Wordstar	All faculty and staff	Wordstar training	Unknown (bought by district)	Central Admin.	A to E, depending on instructor
Move textbook requisition from typewriters to mainframe via micros with D/BASE II application	Division chairs and secretaries,	Textbook requisition software training	Software was obtained free from Central Administration	Central Admin.	A

SANTA FE COMMUNITY COLLEGE

Increase faculty awareness of computers and their uses in the classroom	Faculty	Faculty attend workshop/seminar to learn the mysteries of a computer class taught by experienced professional with broad background in computers	\$4,000 for Equipment	SPD Funds	A
---	---------	--	-----------------------	-----------	---

MIAMI-DADE-NEW WORLD COLLEGE

Faculty and Administrators	Faculty and administrators enroll in a series of 5 (15 credit hours) graduate courses in computer education at a local university. Tuition is paid by campus staff and program development funds.	\$18,400 (total) \$12,000 (84-85)	Florida Staff and Program Development Funds.	42 E
----------------------------	---	--------------------------------------	--	---------

Objectives (desired change or outcome)	Target	Description of Approach/Activities	Amount Spent	Funding Source	Estimated Effectiveness of this Approach
JOHNSON COUNTY COMMUNITY COLLEGE					
Introduce concept of computer literacy and spark interest.	Entire staff	In-service program	\$2,000	Staff Dev. Budget	E
Encourage Creative use of computer on the job	Entire Staff	Computer Contest	\$ 500	Foundation	E
Discount Program	Entire Staff	User group organized through local dealer and IBM discount	20% discount		E
Teach: Introduction to Software usage or Programming	Entire Staff	A list of courses is attached. All tried to meet the needs of various groups. Some wanted to learn to program while others only needed to learn to use software.	All Courses \$6,000 for the year		E All were well received

M = minimal
A = adequate/good
E = excellent
