ABSTRACT

This study evaluated the University of Tennessee at Chattanooga's Word Processing Center by surveying faculty and administrative use of word processing and personal computers. Questionnaires were sent to all faculty and academic and administrative departments, and 130 responses were received from faculty, 33 from academic departments, and 47 from administrative departments. The data indicate that at least 120 faculty had access to personal computers, and that there were 116 personal computers in academic departments and 95 in administrative departments. The dominant faculty software packages were MacWrite and Microsoft Word for the MacIntosh and Multimate and Word Perfect for the IBM PC. For the academic departments the prominent software packages were MacWrite, Microsoft World, and Multimate. Among the administrative departments there was little use of the MacIntosh, and among the IBM PC users the primary package was Multimate. The top priority of the Word Processing Center was grant proposals, and it appeared that there were few problems, if any, with the faculty over the established and publicized priorities. The Center now uses the HP3000 and software TDP (Text and Document Processor). However, this software is not very user friendly, and it is suggested that a major portion of the faculty would be aided significantly by the center's ability to utilize microcomputers in their work in support of the faculty. Eight recommendations are provided, including purchase of microcomputers, standardization of word processing software, and the introduction of some new services. The text is supplemented by 37 tables, and appendixes provide supporting documents and copies of the survey instruments. (EW)

INTRODUCTION

On December 11, 1987 Dr. Richard Gray requested me to conduct an evaluation of UTC's Word Processing Center. The evaluation should cover those points identified in John White's letter of December 8, (see Appendices A.1 and A.2) as well as several raised by Dr. Gray.

Objectives

From John White, the following objectives a, b, and c were suggested, and from Richard Gray objectives d and e:

- a) Identify what kinds and numbers of personal computers are on campus.
- b) Identify computer hardware and software which can be compatible to and accessed by most faculty computers.
- c) Prepare a list of equipment and/or software which will increase the effectiveness of the Word Processing Center.
- d) Assess Center's Operating Guidelines.
- e) Make recommendations on Center's reliance on mainframe software support, the range and priority of support services provided, and the exclusion of administrative user support services.

METHODOLOGY

During the Spring Semester of 1987-88 questionnaires were designed and distributed to all UTC faculty, academic departments, and administrative departments. Each questionnaire type was somewhat individualized to reflect both the types of word processing expected from the respondent and a goal to attempt to measure that individual's or unit's future needs for word processing. (See Appendices B.1, B.2, and B.3.)

These survey forms were tabulated by SPSS-X on the HP 3000 using both the Frequency and Cross Tabulations Procedures. Where possible, responses were aggregated by unit (such as College of Arts and Sciences and School of Engineering). However, in a number of cases, we could not identify the responding unit, as that response was missing. Further, on a few questions the requested response was not present; hence, those data could not be coded. This may cause some cross tabulated issues to appear to have more missing responses than at first seems likely. Telephone calls were made to academic and administrative department heads who appeared not to have completed the questionnaires. This process resulted in a few additional completed surveys. These were included in the analysis.

Interviews were held by the researcher with both John White and Connie Looney so as to determine their perceptions and aspirations on the issues to be researched. Guidelines in use currently by the Word Processing Center were examined (see Appendix C.1). Further, the Monthly Reports on Word Processing Center's activities were reviewed for the months of February and March (see Appendix C.2 and C.3), and for years 1981-87 (see Appendix C.4).

The format of the remainder of this report consists of the Analysis, Findings, and Conclusions.

ANALYSIS - Faculty

Respondents totaled 130 faculty members, of which 100 had valid department code responses. Valid departments were distributed in the amounts 56%, 10%, 15%, 8%, and 11% for Arts and Sciences, Business Administration, Engineering, Human Services, and Education units respectively. The complete distribution is in Table 1.

Of those responding, 120 have a micro computer for their personal use. When missing data is ignored, this amounts to 93% of the faculty completing the questionnaires (see Table 2). For future considerations, percentages will represent those frequencies with missing values ignored. Of these 120 who have access to personal computers the Macintosh, with 60%, and the IBM PC, with 26%, were dominant (see Table 3). When analyzed by academic unit (see Table 4), 43 of 60 Macintoshes were in Arts and Sciences and 9 were in Education. For IBM PCs, 9 and 7 of 21 were in Engineering and Business Administration respectively. It should be noted that thirty respondents could not be identified by academic unit.

About 95% of the respondents use a micro for word processing as reported in Table 5. Further, from Table 6, we see that MacWrite, Microsoft Word, Word Perfect and Multimate account for about 78% of the software word processing packages. From Table 7, where data are analyzed by micro type, we see that all the MacWrite and most of Microsoft Word is found on Macintosh and, similarly, all of Word Perfect and Multimate is found on the IBM. From Table 8, we see that faculty members of Arts and Sciences are very heavy users of MacWrite and Microsoft Word. Business Administration faculty members are heavy users of Word Perfect and Multimate; Engineering reported primarily Word Perfect usage with some MacWrite.

From Tables 9 and 10, we see that for faculty, the primary use of word processing within the area of instruction is for producing exams, with syllabi and course assignments not far behind. For faculty use of word processors in support of non-instructional matters, the primary use was for research papers, followed by departmental

reports and proposals. From Table 11, where data are analyzed by micro type, we see heaviest usage of the IBM PC in preparing research papers followed by course assignments, syllabi, and exams. From the data on Macintoshes we see a reverse pattern where exams, syllabi, research papers, and course assignments are the primary ones in descending order. The data appears to report that IBM PCs are primarily used for research and the Macintosh primarily for instruction.

From Tables 12 and 13, we see 11 faculty, or 9%, report heavy to moderate usage of UTC's Word Processing Center. Another 27 report usage to be seldom. This indicates 30% of the faculty make some use of the Center. Further 10 faculty, or 8%, make moderate to heavy use of TDP, the mainframe software package. When combined with users who report seldom usage, 22% of the faculty make some use of TDP themselves.

New word processing services desired by faculty were requested by 26 of the faculty. Of these, 11 requested more access to laser printers; four each wanted more extensive courses and graphics; faculty support and proficient technical typists were requested by 3 and 2 faculty respectively.

ANALYSIS - Academic Departments

Thirty-three (33) academic departments responded to the questionnaire appropriate to their areas (see Table 14). As you can determine from Table 15, a good cross section of those units was obtained, but 7 were anonymous.

From Tables 16 and 17, 33 departments reported using microcomputers and the use of word processing software on those micros. Two (2) departments did not use microcomputers. Table 18 reported on the numbers and types of micros. Obviously since there are a total of 44 responses from 33 departments, some departments had more than one type. Of these 33 departments 20 had Macintoshes, 11 had IBM PCs, 6 had Apple IIs, 4 had HP 150s and 3 had other. When analyzed by type of micro computer, the bulk of Macintoshes appeared in the College of Arts and Sciences, with only 1 or 2 in Engineering, Health and Human Services, and Education (see Table 19). Business Administration reported none. However, as seen in Table 20, Business Administration reported 3 departments using the IBM PC with Health and Human Services reporting 2 departments and Arts and Sciences, Engineering, and Education one IBM PC using department each.

When the primary word processing software for micros, used by academic department, was examined in Table 21, the three most used in descending order were MacWrite, Multimate, and Microsoft Word. The three packages second most used were Microsoft Word, MacWrite, and Apple Writer. Realizing that micro type influenced this

greatly, software was examined by Macintosh and IBM PC. For Macintosh, 10 departments used MacWrite most and 5 used Microsoft Word. For IBM, Multimate was the only strong response with 4 departments reporting its use (Table 22).

Table 23 reported that 10 departments, or 28%, made heavy to moderate use of word processing services. Another 15 reported seldom or never as to the use of their services. Hence, nearly 72% of departments report some use of Word Processing Center services. When the use of TDP by academic departments was examined in Table 24, 9 departments, or 26%, report heavy to moderate use of TDP. Another 10 departments report TDP usage as seldom or never. Hence, 56% of all departments report some usage of TDP on the HP 3000.

Uses of word processing by academic departments were reported in Table 25. Most frequent usage was for letters, followed by syllabi, exams, and research papers. These data were aggregated in Table 26 to form a weighted ranking of usage. The top four were letters, exams, syllabi, and research papers. Proposals ranked sixth out of ten categories for usage of word processors. When queried about needed new word processing services, the only one requested was PC access to mainframe data base linkage.

ANALYSIS - Administrative Departments

Questionnaires mailed to administrative users resulted in 47 responses. These departments responding are given in Table 27. Of the 47 respondents, 44 departments reported in Table 28 the use of microcomputers and 3 reported no use. Similarly in Table 29, 41 departments reported the use of word processing on their departmental micro computers. Tables 30 and 31 reported eight administrative departments with a Macintosh and 27 with an IBM PC. There are 4 administrative departments in Table 32 with Apple IIs, 7 with HP 150s, and 9 with other types.

The software primarily utilized for word processing is reported in Table 33. It reports the most frequently used packages in order to be Multimate, WordStar, Microsoft Word, and Word Perfect with 10, 8, 6, and 6 responses respectively. When analyzed for PC type in Table 34, the IBM PC leaders were Multimate, WordStar, and Word Perfect with 9, 5, and 4 responses respectively. The Other category (I suspect those to be IBM clones) reported 3 users for Microsoft Word and 1 each for Word Perfect and WordStar. For Macintoshes, the only two reported were MacWrite and Microsoft Word with 2 and 1 responses respectively.

Currently administrative users do not make use of Word Processing Center services. Hence these departments were asked if they would make use of the center if the centers services were available. For administrative users 12, or 27%, reported that they

would make heavy to moderate usage of the Center. Further, 24 and 8 departments, 55% and 18% respectively, reported seldom or never as usage. These data are reported in Table 35.

Similarly, use of TDP on the HP 3000 was reported in Table 36. Administrative users now have access to this product if they can access the Academic Series 58. Of the responding departments 10, or 22%, report their usage to be heavy to moderate. Another 4 and 32 departments, or 9% and 79% respectively, report usage to be seldom or never.

From Table 37, we see that primary and dominant usage made of administrative departmental word processors are letters, reports, and proposals. Much farther back are other items such as tables, newsletters, and charts.

When queried about new services for word processing, 7 respondents from administrative departments suggested items. None were reported by more than one respondent. Those services reported were:

- Standardize Micros/Software
- Service awareness "?"
- Trouble Shooter
- On Line Typesetter
- Support Staff for Faculty
- Laser Printers
- Administrative Support

FINDINGS

a. In summary there are at least 120 faculty with access to a personal computer, 116 personal computers in academic departments, and 95 in administrative departments. These latter two groups of computers are distributed among 33 academic departments and 41 administrative departments. Of these 300 plus micros, 131 are Macintoshes, 119 are IBM PCs, and the remainder include HP150s, Apple IIs, and IBM "clones."

b. The dominant faculty software packages are MacWrite and Microsoft Word for the Macintosh and Multimate and Word Perfect for the IBM PCs. For academic departments, MacWrite and Word are again the primary software packages, while for the IBM PC the primary package is Multimate. Among the administrative departments, there was little use of the Macintosh; among the IBM PC users the primary package was Multimate, followed at a distance by Word Star and Word Perfect.

c. Appendix D includes sample Macintosh and IBM PC hardware and software configurations. The better Macintosh configuration (see Appendix D - Point B) with large screen and Laser Printer will cost UTC about \$7,600. A reasonable IBM configuration (see Appendix D - Point C) using the existing HP Laser would be about \$3,500.

d. The Guidelines of the Word Processing Center quote "The Center exists to serve the academic area (faculty) for special word processing needs as an extension of the typing services normally provided by the departmental secretaries." It supports the following categories: "Grant Proposals, Tests, Course Syllabi, Class Handouts, Manuscripts (books, articles, papers, and monographs), and Other (reports, vitae, letters, and surveys)." "Priority order is Grant Proposals, Tests, Course Syllabi, Class Handouts, Manuscripts, and Other."

The Provost has told the researcher that Grant Proposals must be the top priority. Further the unit reports to the Director of Grants and Research in the area of the Associate Provost for Graduate Studies and Research. Hence the focus seems reasonable and supportive of its supervising structure. From discussions with Word Processing Center staff, there seem to be few problems, if any, with the faculty over the established and publicized priorities system. From observation and empirical data on the Center's output, the services offered are reasonable and workable. If added services are taken on, these must be done carefully so as to not undo those currently supported. These areas might include some administrative departmental support and potentially certain spread sheet and graphics services such as charts and overhead transparencies.

f. The Word Processing Center was established in 1981 and has since its inception utilized the HP3000 and software TDP (Text and Document Processor). This software made use of ASCII terminals and hence allowed all public and other terminals to have access to word processing functions. This package is best for long documents and has been superseded for many applications by word processing on personal computers. Reliance on the HP3000 has made archival, backup, and restore functions very easy, dependable, and routine. The HP Operator does most of the work in routine backups. The HP3000 does utilize disk storage; the use by TDP is ever consumptive of this medium. Each year a request for materials to be removed is made by Ms. Looney. Without fail, the storage involved grows each year.

However, a greater problem with TDP is the fact that it is line driven (you work and look at one line at a time) and typists cannot see the effects of their formatting efforts until they run a "final." The TDP is not WYSIWYG, "What you see is what you get." Hence typists must be able to enter their formatting commands and know what such a command will do at final time. This is a degree of abstraction more akin to programming than to secretarial work and many find TDP difficult.

Current micros are very user friendly, employ visual WYSIWYG, include graphical design features, and provide for rapid entry, formatting, review, and revision of documents. The staff of the Center, Ms Cleveland and Ms. Looney have utilized personal computers in the Micro Lab in support of UTC faculty. A major portion of our faculty would be aided significantly by the Center's ability to utilize micros in their work in support of the faculty. Then work done by the Center could be given back to the faculty member on diskette, on which it could be later used and updated on either the personal computer of the faculty member or the Center.

An interesting usage of a computer is the use of say a Macintosh equipped with an external 5.25" drive and appropriate software. Macintosh files can be transferred to this device which writes an IBM compatible diskette. This diskette can be taken to any IBM PC that has a 5.25" disk drive (most of them at this time). The file can be read by the IBM PC and processed whether it is word processing or spread sheet data. At the most advanced level, the systems are compatible, ie. Word on the Macintosh and Word on the PC. At the most difficult level, one writes a file in ASCII from the Macintosh and writes it to a diskette which is carried to an IBM PC and read into its CPU. This file is then formatted quickly and simply by the PC operator. The researcher and the CECA Secretary have used this system well for about one year. There are also programs such as Word Exchange that transfer to and from Word from Multimate, Word Star, and Word perfect to name several. The point is that a Macintosh can now go from most word processors to any other word processor and micro.

With regards to needed or requested services, academic and administrative departments submitted only 1 and 7 responded respectively. In the later group there were two requests that ought to be listed. These are "support staff for faculty" and "administrative support." Among the faculty of 26 requests for new services there were 11 for more laser printers, 3 for more faculty support, and 2 for technical typists. It is the researcher's impression from these comments and the number of units with personal computers and word processors that

there is no major perceived need among academic and administrative departments for more word processing services. Probably those departments are getting done what needs to be done and on a satisfactory time schedule. The need is still at the faculty level since there is insufficient support from departmental secretaries generally to accomplish the course revisions, syllabi, vitae, articles, and books for which faculty members often require support. That is not to say the Word Processing Center cannot do more. For example, in 1987-88 services to support Self Study Reports were offered to both the School of Business Administration and Department of Human Ecology. Only the latter utilized these offered services. In 1981 the Center did the Vice Chancellor for Administration and Finance's Budget document. The Center should make more faculty and others aware of this no charge service so as to attract more customers.

RECOMMENDATIONS

- a. De-emphasize the HP3000 and TDP and emphasize word processing software on micro computers.
- b. Purchase an Apple Macintosh II with Laser at \$7,600
Less expensive options are in Appendix D.

Sixty percent of the faculty and half of the departments utilize Macintoshes. Utilizing the appropriate external disk and software allows word processing documents to be transferred easily to the IBM PC.

- c. Purchase an IBM PC at \$3,200 to be used with HP Laser.
- d. Utilize the Macintosh II with external 5.25" drive to output ASCII files that are transferable to IBM PC. These files may be converted with an exchange program, such as listed in Appendix D, when formatting is to be carried from one software package or computer to a different type.
- e. Standardize on Multimate or Word Perfect for IBM users and MacWrite and Microsoft Word for Macintosh users.
- f. Occasionally departments will have work that is high volume, large amounts of input, or very specialized. These non-routine tasks should be fitted into the Word

Processing Center's schedule. This includes academic and administrative departments. It is particularly important not to upset known standards until the volume of new requests, if any, can be determined. /

- g. With micro based software for word processing offer new or improved services such as questionnaire design, data entry for spread sheets along with simple row and column totals, simple graphics and overhead transparency production.

Note: It is the researcher's perception, supported by data from all questionnaires that the Word Processing Center is doing a very good job with the equipment and software they have. No one criticized them when asked "what new word processing services were needed?" immediately after questioning them as to use of the Center and TDP. In fact, because of the questionnaire, some called CECA to inquire as to whether services were being discontinued and to protest if they were.

SUBJECT: Word Processing Center - Evaluation and
Recommendations

DATE: December 11, 1987

As a follow-up to our recent discussion, I would like for you to conduct an evaluation of UTC's Word Processing Center. Your evaluation should cover those specific items identified in the attached letter from John White, dated December 8, 1987.

In addition to the points raised by John, I would like your assessment of the Center's operating guidelines (see attachment). I would be particularly interested in your recommendations concerning the Center's current reliance on mainframe software support, the range and priority of support services provided, and the exclusion of administrative user support services.

Your efforts on this assignment should not interfere with your on-going efforts to develop a Disaster Recovery Plan for UTC's computer installations. I would hope that your schedule would enable the completion of the Word Processing assignment, culminating in a written report to me, by May 1, 1988.

I will, of course, be pleased to provide clarification of this request and to assist you in any way that I can.

Chattanooga, TN 37403
(615) 755-4431

December 8, 1987

Dr. Richard Gray
Associate Provost, Budget, Personnel
and Information Management
UTC

Dear Dr. Gray:

Thank you very much for meeting with Dr. Ernst and me to discuss plans to improve the effectiveness of the Word Processing Center. I appreciate your interest and the continued support of the Center by Lloyd Davis and the staff of CECA.

As a follow-up to our discussion, I have enclosed the Word Processing Center Guidelines. This document defines the purpose and work categories of this office. In addition, I am including a summary of today's conversation for your review:

INTRODUCTION

There are many faculty and departmental computers on campus which are not compatible with Hewlett Packard hardware and software. This means that documents cannot be returned to faculty on floppy discs or transferred to their computers for their revision; we must store documents on the mainframe for infinity when, in some cases, a test or course syllabi may require a single word change each year. Of course, this puts demands on our limited storage space and the faculty member is placed on a priority list and must wait for very minor revisions.

RESPONSE

Dr. Gray has suggested that Lloyd Davis conduct an assessment of the Center between January 4 and May 1, 1988. Possible Objectives of the assessment are as follows:

- a. Identify what kinds and numbers of personal computers are on campus
- b. Identify computer hardware and software which can be compatible to and accessed by most faculty personal computers

- c. Prepare a list of equipment and/or software which will increase the effectiveness of the Word Processing Center.

John White will, in turn, prepare a 5 year plan for equipment/software acquisition and enhancement of the Center. The plan will be based on the recommendations of Dr. Davis.

SUMMARY

Hopefully, the proposed project can serve as a model for other universities of our size, and the results of our efforts can be disseminated through professional journals and presentations.

In closing, let me thank you again for meeting with us today.

Sincerely,

John White

A.2.2

GUIDELINES

WORD PROCESSING CENTER

113 RACE HALL

PURPOSE: The Center exists to serve the academic area for special word processing needs as an extension of the typing services normally provided by the departmental secretaries.

WORK CATEGORIES: The Center provides support services in the following categories: Grant Proposals, Tests, Course Syllabi, Class Handouts, Manuscripts (books, articles, papers, and monographs), and Other (reports, vitae, letters, and surveys). The processing of documents outside the categories listed above will be done only upon the approval of the Associate Provost for Graduate Studies and Research.

CHARGE: The Center is considered an academic support unit; therefore, no fee will be charged to the individual faculty member or the academic department using the service.

PRINTERS/STYLE OF PRINT: The Center uses a Diablo printer with a Titan 10 printwheel for printing documents. The Titan 10 corresponds to an IBM Courier 72 10-pitch element. At the user's request, a document may also be printed using a Prestige Elite or Letter Gothic 12-pitch element. The Diablo at this time is unable to print any characters not ordinarily found on a standard typewriter keyboard (i.e., Greek letters and other foreign languages, mathematical symbols, italics, etc.). However, the center has access to the HP2680 and is in the process of purchasing a Laser Jet Plus Printer. These printers are equipped with features such as bold or italic characters, foreign language symbols, subscripts, superscripts, and graphics.

PROCEDURE:

- Step 1. Faculty member must submit document to Center (retaining copy for your files), and fill out a Request for Service form.
- Step 2. Word Processing Specialist enters document into the computer exactly as it has been submitted. (PLEASE BE SPECIFIC: margins, spacing, 10/12 pitch, page numbering, etc.)
- Step 3. A draft of the document is printed for proofing and editing.

- Step 4. Faculty member picks up draft, edits it using red ink, circles line numbers on which changes appear, and returns edited draft to the Center.
- Step 5. Corrections are entered into the computer and a draft printed indicating the changes made in the document.
- Step 6. Steps 3-5 are repeated until the document is ready for a final printing - usually, three drafts are sufficient. (Please retain copy of last numbered draft, along with copy of "Request for Service" form, in your files for possible changes at a later date - changes must be noted on a numbered draft.)
- Step 7. One final copy is printed on the faculty member's choice of paper (i.e., bond or typing paper furnished by the Center or letterhead furnished by the user).
- Step 8. Final copy is picked up at the Center.
- Step 9. At the close of each semester, The faculty member will have the option to continue storage of the document for a second semester. The center will eliminate those files which are being stored that are no longer needed.

STORAGE POLICY: If storage is needed for more than one year, persons who utilize the Hewlett Packard on campus or whose computer is compatible with the TDP program used at the center will be given the option of having documents transferred to their own accounts rather than having them purged. Persons without these capabilities will be notified after one year of storage prior to purging the document. If necessary, arrangements may be made through Academic Computing to store the document on tape.

WHEN A FILE IS SENT TO AN INDIVIDUAL'S ACCOUNT, THE CENTER WILL KEEP A COPY OF THE FILE FOR ONE MONTH BEFORE PURGING.

LEGIBILITY: All material submitted must be legible to the Word Processing Specialist.

PRIORITY OF DOCUMENTS:**

New Documents and Revisions of more than 10 lines on Existing Files

1. *Grant Proposals
2. Tests
3. Course Syllabi

4. Class Handouts
5. Manuscripts (books, articles, papers, and monographs)
6. Other (vitae, letters, reports, etc., are done only as scheduling time permits)

*If more than one grant proposal is being processed at the same time, the proposal having the earliest deadline will receive top priority.

Revisions of less than 10 lines on existing files will be made as soon as possible.

**Changes in the above priority guidelines may be made by the Center's supervisor whenever he/she deems it necessary.

LEAD TIME: The following lead times are suggested for each category of document.

- | | |
|--------------------|---|
| 1. Grant Proposals | 2 working days for each 10 pages of text |
| 2. Tests | 3 working days for each 10 pages of text |
| 3. Course Syllabi | 4 working days for each 10 pages of text |
| 4. Class Handouts | 5 working days for each 10 pages of text |
| 5. Manuscripts | 8 working days for each 10 pages of text |
| 6. Other | Estimate of turnaround time will be given when document is submitted. |

USE OF DIABLO ONLY: Faculty members may request use of the Diablo to print documents which they have already entered in the computer; however, the Center's supervisor will determine when the Diablo is available for such use based on the needs of the Word Processing Center. The Center will have top priority.

COMPUTER RELIABILITY: The Word Processing Center uses the TDP Program of the campus computer, Hewlett-Packard Series 58. Although every effort will be made to meet deadlines, some situations (such as computer down time) may arise which are beyond the control of the Center.

FROM: Lloyd Davis *LD*
RE: Faculty Word Processing

During the past four years, many of the faculty have purchased their own microcomputers. There has been a dramatic increase in the use of word processing by our faculty. In fact, the most popular microcomputer application used by the faculty appears to be word processing.

I have been requested by Dr. Gray to evaluate our word processing capabilities and make recommendations to him in several areas including what new services, if any, should be provided to our faculty in the area of word processing.

As an early step in this study, I am requesting you to complete the attached survey and return it to me by February 29. This survey is to measure faculty usage in word processing on a microcomputer, either the property of the individual or the institution. The survey is one page long and should take only a few minutes to complete. The surveys do not request your name and will remain anonymous. I will make the compiled results available to the university community at a later date.

If I can provide further information, please contact me at 4387. Thank you, in advance, for your assistance.

GUIDELINES AND PROCEDURES

WORD PROCESSING CENTER

113 RACE HALL

755-4052

PURPOSE: The Center exists to serve the academic area (faculty) for special word processing needs as an extension of the typing services normally provided by the departmental secretaries.

WORK CATEGORIES: The Center provides support services in the following categories: Grant Proposals, Tests, Course Syllabi, Class Handouts, Manuscripts (books, articles, papers, and monographs), and Other (reports, vitae, letters, and surveys). The processing of documents outside the categories listed above will be done only upon the approval of the Associate Provost for Graduate Studies and Research.

CHARGE: The Center is considered an academic support unit; therefore, no fee will be charged to the individual faculty member or the academic department using the service.

PRINTERS/STYLE OF PRINT: The Center houses a Hewlett Packard LaserJet (2638) printer. This printer is equipped with features such as bold and italic characters and subscripts and superscripts. It can print gothic 12 pitch, courier 10 pitch, elite 12 pitch and proportional typeface.

The Center can access the HP2680 Laser Printer located in Hunter which is equipped with features such as bold or italic characters, foreign language symbols, subscripts, superscripts, and graphics.

The Center also has a Diablo 1650 Printer with several printwheels for printing documents. The Titan 10 corresponds to an IBM Courier 72 10-pitch element. It also prints with Prestige Elite or Letter Gothic 12-pitch printwheels, both of which correspond to IBM typing elements. The Diablo at this time is unable to print any characters not ordinarily found on a standard typewriter keyboard (i.e., Greek letters and other foreign languages, mathematical symbols, italics, etc.).

- PROCEDURES - next 2 pages

PROCEDURE:

- Step 1.** Faculty member must submit document to Center (retaining copy for your files), and fill out a Request for Service form.
- Step 2.** Word Processing Specialist enters document into the computer exactly as it has been submitted. (PLEASE BE SPECIFIC: margins, spacing, 10/12 pitch, page numbering, etc.)
- Step 3.** A draft of the document is printed for proofing and editing.
- Step 4.** Faculty member picks up draft, edits it using red ink, circles line numbers on which changes appear, and returns edited draft to the Center.
- Step 5.** Corrections are entered into the computer and a draft printed indicating the changes made in the document.
- Step 6.** Steps 3-5 are repeated until the document is ready for a final printing - usually, three drafts are sufficient. (Please retain copy of last numbered draft, along with copy of "Request for Service" form, in your files for possible changes at a later date - changes must be noted on a numbered draft.)
- Step 7.** One final copy is printed on the faculty member's choice of paper (i.e., bond or typing paper furnished by the Center or letterhead furnished by the user).
- Step 8.** Final copy is picked up at the Center.
- Step 9.** At the close of each semester, the faculty member will have the option to continue storage of the document for a second semester. This is necessary in order to eliminate files that are no longer needed to provide space for new projects.

STOPAGE POLICY: If storage is needed on an inactive file for more than one year, persons who utilize the Hewlett Packard on campus or whose computer is compatible with the TDP program used at the Center will be given the option of having documents transferred to their own accounts rather than having them purged. These can still be accessed by the Word Processing Center and worked on at any time by Word Processing Specialists. Personal accounts may be obtained by contacting Ms. Beth Craig in Academic Computing, 413-B Hunter Hall. Persons without these capabilities will be notified after one year of storage prior to purging the document. If necessary, arrangements may be made through Academic Computing to store the document on tape.

WHEN A FILE IS SENT TO AN INDIVIDUAL'S ACCOUNT, THE CENTER WILL KEEP A COPY OF THE FILE FOR ONE MONTH BEFORE PURGING FROM WORD PROCESSING ACCOUNT.

LEGIBILITY: All material submitted must be legible to the Word Processing Specialist.

PRIORITY OF DOCUMENTS:**

New Documents and Revisions of more than 10 lines on Existing Files

1. *Grant Proposals
2. Tests
3. Course Syllabi
4. Class Handouts
5. Manuscripts (books, articles, papers, and monographs)
6. Other (vitae, letters, reports, etc., are done only as scheduling time permits)

*If more than one grant proposal is being processed at the same time, the proposal having the earliest deadline will receive top priority.

Revisions of less than 10 lines on existing files will be made as soon as possible.

****Changes in the above priority guidelines may be made by the Center's supervisor whenever he/she deems it necessary.**

LEAD TIME

The following lead times are suggested for each category of document, however, please do not hesitate to contact the Word Processing Center for an estimated turnaround time for your project, as we may be able to adjust our present workload to meet your deadline need.

- | | |
|--------------------|---|
| 1. Grant Proposals | 2 working days for each 10 pages of text |
| 2. Tests | 3 working days for each 10 pages of text |
| 3. Course Syllabi | 4 working days for each 10 pages of text |
| 4. Class Handouts | 5 working days for each 10 pages of text |
| 5. Manuscripts | 8 working days for each 10 pages of text |
| 6. Other | Estimate of turnaround time will be given when document is submitted. |

COMPUTER RELIABILITY: The Word Processing Center uses the TDP Program of the campus computer, Hewlett-Packard Series 58. Although every effort will be made to meet deadlines, some situations (such as computer down time) may arise which are beyond the control of the Center.

Please feel free to call us at 755-4052 anytime you have a question pertaining to the Center as it relates to your typing needs (such as deadline needs or typeface requirements, etc.) We will try to work with each faculty member in any way possible to meet his/her needs and deadlines.

TO: John White
 FROM: Word Processing Center
 SUBJECT: Monthly Report - February, 1988
 DATE: February 25, 1988

Listed below are the documents that are currently in progress in the Word Processing Center. In addition to these documents, there are 400 other manuscripts, books, test, syllabi, vitae, etc. that may require editing at a later date. The Center requires an estimate turnaround time of two weeks, (estimate of turnaround time will be given when document is submitted) and encourages all users to submit documents legibly and in order. (Documents are entered into the computer exactly as they are submitted.)
