| Schools, Enrollment znd Staffing, |  |

ABSTRACT
Core school enrollment and staffing data are presented from the historicai file of the National Catholic Education Association. Data are also pressented for Chapter l services, extended care programs, and coeducational and single-sex schools. The first part of the report presents a summary of demograpnic trends with an impact on public and private education. Information is based on reports submitted by 174 diocesan and archdiocesan offices of education or state Catholic conferences. Trends show increasing numbers of students at the preschool and elementary school levels, with an increase in Catholic preschool enrollment of nearly 300 percent in the last decade. In 1992-93, there were 8,423 Catholic schools, 7,174 of which were elementary schools. The total number of Catholic students had increased by 16,767 since the preceding year, to 2.567,630. Numbers and parcentages of minority students reflect population trends in 1992-93. The percentage of minority students had more than doubled since 19:0-71 and continued to increase. In 1992-93, 3,937 Catholic schools were in urban areas, and non-Catholics represented 12.3 percent of the total Catholic school enrollment. Almost 88 perisent of the faculty were lay men and women. Students in 5,306 Catholic schools were eligible for Chapter 1 services. Twenty-one exhibits present data on the Catholic schools. Appendix A is a summary report of basic school statistics in table form. Appendix $B$ lists states with enrollment increases. Appendix $C$ is a summary report of supplemental data by region. (SLD)

## PREFACE

Since 1969-1970 the National Catholic Educational Association (NCEA) has published a statistical report on Catholic elementary and secondary schools in the United States. Prior to this time extensive data did not exist for these and other private schools. This data was needed to understand this significant educational sector, to inform the discussion of other educational policy issues, including potential forms of federal and state aid, and to encourage and improve local management. With the assistance of the Carnegie Corporation of New York and the United States Office of Education, a database on Catholic schools was established and remains available in annual publications of the NCEA through 1974-1975. In 1975, the NCEA and the Curriculum Information Center Incorporated published a report and directory of Catholic schools. This publication continues the database and is now produced in cooperation with Fisher Publishing Company of Englewood, Colorado, and Market Data Retrieval of Shelton, Connecticut.

This year's report contains the core school enrollment and staffing data of the NCEA historical file. Additionally this year, we have collected data in our survey on Chapter 1 Services, extended care programs and coeducational and single-sex schools. The first part of the report presents a summary of the demographic trends impacting both public and private education. Comparisons are also made with other private schools and with the public sector.

The report is based upon information submitted by 174 archdiocesan and diocesan offices of education and, in some instances, state Catholic conferences. We are most grateful to these administrators and their staffs for their cooperation, resulting in a $100 \%$ response rate.

I am ̧rateful to the members of the Data Bank Committee: Mr. Michael Guerra, Executive Director, Department of Secondary Schools; Dr. Robert Kealey, Executive Director, Department of Elementary Schools; Ms. Barbara Keebler, Director of Public Relations; and Regina Haney, OSF, Executive Director, National Association of Boards of Education, for their suggestions and editorial assistance for this report. On behalf of this committee I wish to offer our special thanks to Ms. Geri Garvey and Ms. Jana Taylor for their outstanding service in collecting, organizing, and auditing the data which is the subsiance of this report and to Ms. Lisa Perry for her expert editorial support. In addition, I wish to thank Ms. Mary Mahar of Fisher Publishing Company and the staff of Market Data Retrieval for their marvelous assistance and cooperation.

## NCEA Data Bank

Frederick H. Brigham, Jr.
Executive Assistant to the President
National Catholic Educational Association

## HIGHLIGHTS

- Population trends show increasing numbers of students at preschool and elementary age levels.
- Catholic preschool enrollment increased by nearly $300 \%$ in the last decade.
- Catholic school erirollment in elementary and/or secondary schools has increased in 47 states.
- In 1992-93, there were 8,423 Catholic schools; of these, 7,174 were elementary and 1,249 were secondary.
- In 1992-93, the total number of Catholic school students was $2,567,630$ - an increase of 16,767 students since last year.
- The numbers and percentages of minorities at the elementary and secondary levels reflect the population trends in 1992-93.
- The percentage of minorities in Catholic schools has more than doubled since 1970-71 and continued to increase in 1992-93.
- In 1992-93, 3,937 Catholic schools were located in urban areas; of these, 1,012 were inner-city schools.
- In 1992-93, non-Catholics represented 12.3\% of Catholic school enrollment.
- In 1992-93, full-time equivalent faculty numbered 154,816 .
- In 1992-93, $87.6 \%$ of full-time faculty were lay men and women; $9.6 \%$ were sisters; $2.8 \%$ were brothers and priests.
- In 1992-93, the pupil/teacher ratio in Catholic schools for grades PK-12 was 16.6; in elementary schools the ratio was 18.1; in secondary schools the ratio was 13.0.
- In 1992-93, there were 2,869 Catholic schools offering extended care programs.
- In 1992-93, students in 5,306 Catholic schools were eligible for Chapter 1 services, with students in 4,481 Catholic schools receiving Chapter 1 services.

## INTRODUCTION

In 1992-93, Catholic students and their teachers continued the success stories of the past. They now face the challenges of the present and of the future as they build on a sound foundation of commitment to the teachings of Christ, to the development of values and to growth in academic excellence. Recent studies show that Catholic students excel in reading, science and mathematical performance. A strong sense of community continues to be a distinctive quality of Catholic education. Dr. James Coleman, in his 1987 study, Public and Private Schools: The Impact of Communities, concludes that these characteristics are interrelated. Catholic high schools offer distinctive community support precisely because of the religious commitment of these schools, and this community support, in turn, helps to explain the remarkable success of Catholic schools with all students. One example: $83 \%$ of Catholic high school graduates go on to college.

A recent analysis of the National Educational Longitudinal Study of 1988 (NELS:88) by Dr. Penny Sebring, A Profile of Eighth Graders in Catholic Schools confirms that this same community support is an equally significant factor in the performance of students in Catholic elementary schools. As a result, these students are more inclined to participate in extracurricular activities. The study also found that their teachers are caring and nurturing and that there is more parental participation in the children's education than there is in public schools.

Independent research, together with studies commissioned by the National Catholic Educationai Association (NCEA), shows that Catholic schools are more effective in educating minority and low income students than are public schools. In the 1987 study referred to above, Dr. James Coleman, sociology professor at the University of Chicago, finds that, in general, Catholic schools seem to have done a better job of educating minority students. Black, Hispanic and other disadvantaged students at Catholic high schools not only have higher achievement levels, but the drop-out rate of these students is much lower than in public schools.

The findings of Dr. Sebring in her NELS:88 study support those of Coleman. This is especially evident in matters of equity where the gap between advantaged and disadvantaged students is significantly less in Catholic elementary schools than it is in public schools. She found this to be true of their performance in reading, mathematics, history/social studies and science. African American and Hispanic students do better in Catholic schools than in public schools and the gap between their performance and that of white and Asian students was smaller in Catholic schools. The same can be said for the performance of lower income students.

In his study, Dr. Coleman used data from the U.S. Department of Education's High School and Beyond report, based on a sample of 1,015 American high schools. He reviewed such variables as family type, socioeconomic status, neighborhood, and the type of school. His findings are that pupils in Catholic schools, compared to pupils in public schools, show greater achievernent in mathematics and verbal skills. Dr. Coleman determined that this difference could be explained by the greater number of standard math and English courses taken by students in Catholic schools comparable to students in public schools. The raw drop-out rate in public schools over a two year period (of the study) for grades ten to twelve was $14.3 \%$, of the private schools, $11.9 \%$, and Catholic schools, $3.4 \%$.

Coleman also found that for children of single parent families in public schools or private schools, the drop-out rate rose to more than 1.5 times that in two-parent families. But there is no increase in the
drop out rate for children from single parent families in Catholic schools. The natural support community that is offered by the parishes affiliated with the Catholic schools is an explanation for the better performance of these students.

NCEA studies, using data from the U.S. Department of Edacation's National Assessment of Educational Progress (NAEP), compared Catholic school students to the general school population for grades three, eight and ten. The 1983-84 study of reading proficiency revealed that there was a significant difference between the reading achievement of Catholic school students and all other students on all three levels. There also seemed to be very little difference between the achievement of white students and minority students in reading scores. (Lee, Valerie, Natioual Assessment of Educational Progress Reading Proficicucy: 1983-84 Catholic School Results and Natioul Averages Final Report 1985.)

In the area of religious outcomes and values, the findings from The Heart of the Matter (Guerra, Donahue, and Benson, 1990) revealed that Catholic students in Catholic high schools tend to endorse marriage and family values, community involvement and service for others commitment to church, and the importance of religion more than Catholic students in public schools.

In comparing Catholic and public school scores in the most recent NAEP study of math and science, Dr. Valerie Lee of the University of Michigan, using the U.S. Department of Education's NAEP data, found that Catholic school students in grades three, seven and eleven do better in math and science. (Lee, Valerie, 1985-86 National Assessment of Educational Progress: Proficiency in Mathematics and Science, p. 7.)

In the NCEA 1986 study, Catholic High Schools: Their Impact on Low litcome Students, the role of teachers is seen as a significant factor in the success of these students. The study states: "The strongest motivator affecting teachers in ... Catholic schools is the desire to teach in this kind of educational environment. The second strongest is their view of teaching as ministry, and third, their love of teaching. These motivations do much to explain why good things happen in ... Catholic high schools. Teachers confirm the informal reports of students that ... teachers often work with students outside class time. Teachers also overwhelmingly express respect and appreciation for their school colleagues" (p. 194). These findings reflect the work of Catholic school teachers in all schools.

In September 1992, NCEA released findings of a new Gallup survey which measured public opinion on the issues of partental choice of schools and the funding of school choice, as well as on the quality of education provided by U.S. schools.

The clear majority of the 1,239 adults surveyed - 70 percent - indicated support for a governmentfunded voucher system which would provide a certain amount of money for each child so that parents could send children to the public, private or parochial school of the parents' choice. When Americans were asked if they would be willing to see some of their tax money now going to public schools used to fund educational choice at any public, private or parochial school, three in five adults - 61 percent - did favor use of tax money for this purpose.

As part of the research project, NCEA also commissioned the Gallup Organization, Inc. to assess attitudes toward education in the U.S. by assigning grades (A through F). Asked to rate schools nationally, 62 percent of adults gave an $A$ or $B$ to Catholic schools.

As the above instances attest, there is mounting evidence of quality in Catholic schools. This report provides a statistical description of the numbers of students and teachers in U.S. Catholic elementary and secondary schools. Changes are constant, and the challenges to administrators, teachers, parents, and students become more complex and demanding each year. However, Catholic schools continue to enroll more than $50 \%$ of all private school students. In educational achievement they are pacesetters not only for other private schools, but for all schools in the nation.

## REPORT CARD ON SCHOOLS IN THE UNITED STATES

# A SUMMARY OF <br> DEMOGRAPHIC TRENDS <br> IN PUBLIC AND PRIVATE EDUCATION: A CONTEXT 

## U.S. Population Trends

Current population trends are important to both public and private schools. According to the United States Department of Commerce, Bureau of Census, the birih rate (birth/ 1000 persons) rose slightly during the past decade. Since the population is greater, the number of births has been incieasing. The 16.8 birth rate produced $4,179,000$ births in 1990, the most since 1960. However, a decline to 3,941,310 births in 1995 and to $3,874,892$ in 2000 is projected.

## School-age Population

According to the National Center for Education Statistics, these population trends are reflected in the increasing numbers of students at preschool, elementary and secondary levels. These upward trends in preschool and elementary students began in 1986. In 1991 secondary schools began to show an increase. The steady increase of students in these three age brackets is detailed in Exhibit 2.

## Enrollment in Public and Private Schools

The following exhibit shows a substantial steady increase in preprimary enrollment for ages 3,4 and 5 in both private and public schools between October 1970 and October 1991, according to the National Center for Education Statistics.

EXHIBIT 3: Preprimary Enrollment by Attendance Status 1970-1991

SOURCE: U.S. Department of Education, National Center for Education Statistics, Preprimary Enrollment, various years; U.S. Department of Commerce, Bureau of the Census, Current Population Survey, unpublished data.

Elementary school enrollment dropped during the 1970s in both public and private schools, but underwent little or no change in the first half of the 1980s. High school enrollment in public schools rose during the early-mid 1970s but then turned downward. Private school enrollment at the high school level changed little from 1970-2002. Exhibits 4 and 5 show these enrollment levels.

EXHIBIT 4: Public and Private School Enrollment by Grade Level 1970-2002

## Teachers and Pupil-Teacher Ratios by Level

Since 1981, there has been a steady increase in the number of teachers, K through 12 , in both public and private schools. At the same time, overall K-12 pupil-teacher ratios continued to decline after 1981, as is evidenced in the Exhibit 6.

This is the second year that NCEA has compiled data on both full and part-time staff positions in addition to collecting data for students from PK-12. Therefore, the 1991-92 and 1992-93 data reflect these changes in the pupil-teacher ratios.

The overall pupil-teacher ratio in Catholic schools for PK-12 in 1992-93 was 16.6. In Catholic elementary schools for 1992-93, the ratio was 18.1; in Catholic secondary schools, it was 13.0. The overall pupil-teacher ratio is unchanged from last year. In Catholic elementary schools for 1991-92, the ratio was 18.0 and in secondary schools, 13.3.

## CATHOLIC EDUCATION 1992-93

## Number of Schools

In 1992-93, there were 8,423 Catholic schools in this country; of these, 7,174 were elementary and 1,249 were secondary. In the 1980s the number of Catholic schools in some regions mirrored the demographic movements throughout the country during this period. Where appropriate, especially in urban and suburban areas, consolidation was a significant factor in the realignment of Catholic schools. Most Catholic schools were coeducational at both the elementary and secondary levels. (See Appendix C.)

## (1) Regional Distribution

The National Catholic Educational Association divides the nation statistically in the following six geographical regions:
New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont Mideast: Delaware, District of Columbia, Maryland, New Jersey, New York, Pennsylvania Great Lakes: Illinois, Indiana, Michigan, Ohio, Wisconsin Great Plains: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota
Southeast: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia
West/Far West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oklahoma, Oregon, Texas, Utah, Washington, Wyoming.
Exhibit 7 presents the number of schools by region and Exhibit 8 the percentages of this distribution. It is evident from the latter that the Mideast and Great Lakes regions have had more than $50 \%$ percent of the total number of Catholic schools in the past ten years. The Southeast shows an increase in elementary schools for the second consecutive year.

| West/Far West | 15.9 | 100.0 | 100.0 |

## (2) Types of Schools

The types of Catholic schools are determined by the authority of their administration. Under this classification there are four: parish (those administered by a single parish), inter-parish (those administered by two or more parishes), diocesan (those administered by the diocesan office of education), and finally private (those administered by a religious order or a private corporation). Exhibit 9 indicates that most elementary schools are parish schools; between 1981-82 and 1992-93, however, there was growth in the number and percentage of inter-parish, diocesan, and private elementary schools. This growth in elementary inter-parish, diocesan, and private schools underlines the reorganization of Catholic education through consolidation. Elementary inter-parish and private schools continued to increase in 1992-93. Most secondary schools are either private or diocesan; however, Exhibit 9 shows a slight increase in the percentage of iriter-parish schools over the past decade.

## EXHIBIT 9 <br> Types of Schools

## ELEMENTARy

## Secondary

Number

Percentage

## (3) Location of Schools

During the 1980s both elementary and secondary schools flourished in urban areas; in the 1990s this trend continues. The number of urban secondary schools has risen since last year, as has the number of rural elementary schools. Of 8,423 schools, 3,937 are in urban areas; of these, 1,012 are in inner-city settings.

## Exhibit 10 Locations of Schools

Elementary

## SECONDARY

* The base vear for comparison in this report is 1982-83. Because statistics were not available for these years on the type and location of schools, 1981-82 has been used for Exhibits 9 and 10.

## ENROLLMENT

## (1) Growth Trends for Preschool and Kindergarten

In the past decade, preschool enrollment has increased by almost 300 percent. This sharp increase in preschool enrollment reflects the response of Catholic schools to the needs of parents. The numbers of kindergarten students also continued to increase as detailed in Exhibit 11.

## EXHIBIT 11 <br> Growth Trends for Preschool and Kindergarten

## (2) Enrollment by grade level

Catholic school enrollment by grade level from preschool to grade 12 is shown below in Exhibit 12 (Statistics for individual dioceses and states may be found in Appendix A.). Especially evident is the increase of K-12 enrollment in 27 states (See Appendix B.).

## EXHIBIT 12 Enrollment by Grade Level

|  | 1982-83 |  | 1991-92 |  | 1992-93 |  |

| Total (PK-12) | $3,038,570$ |  | $2,550,863$ |  | $2,567,630$ |  |

* The numbers of ungraded students are not available until 1982-83.
** Beginning in 1991-92, NCEA statistics for total enrollment included PK statistics.

## (3) Enrollment by Region

In enrollment by region, as shown in Exhibits 13 and 14, the Mideast and Great Lakes continued to show more than half of total enrollment in Catholic schools. However, in the last two years, there was a small increase in the percentage enrollment in New England and the Plains.

## EXHIBIT 13 Enrollment by Region

* Prior to 1991-92, statistics for total enrollment did not include PK enrollment. Therefore, figures listed below for United States enrollment before 1991-92 will correspond to the total minus PK figure in Exhibit 12; the post 1991-92 figures will correspond to the total with the PK figure included.

| Elementary | $1982-83$ | $\mathbf{1 9 9 1 - 9 2}$ | $\mathbf{1 9 9 2 - 9 3}$ |

## (4) Enrollment in Key States

As detailed in Exhibit 15, ten states accounted for two-thirds of Catholic school enrolment; New York, Pennsylvania, California, Illinois and Ohio - the top five - had $47 \%$ of this enrollment.

## EXHIBIT 15

Student Enrollment: Ten Largest States

| State | $\mathbf{1 9 8 2 - 8 3}$ | $1991-92$ | $1992-93$ |
| :--- | ---: | ---: | ---: |
| New York | 396,400 | 299,309 | 298,413 |
| Calitornia | 269,700 | 244,262 | 247,522 |
| Pennsvlvania | 302,500 | 247,877 | 246,678 |
| Illinois | 26,200 | 222,981 | 221,325 |

| Percent | $67.9 \%$ | $67.0 \%$ | $66.5 \%$ |

## (5) Enrollment in Key Dioceses

The 20 largest dioceses serve almost $50 \%$ of the total enrollment in Catholic elementary and secondary schools. These dioceses are larger than the metropolitan area of the same name. Most of the enrollment in these 20 key dioceses does come from the major city and the immediate suburbs of that area, as illustrated in Exhibit 16.

## EXHIBIT 16 <br> Enrollment in Key Dioceses

| Diocese | $\mathbf{1 9 8 2 - 8 3}$ | $\mathbf{1 9 9 1 - 9 2}$ | $\mathbf{1 9 9 2 - 9 3}$ |

| Percent | $50,5 \%$ | $48,5 \%$ | $47,9 \%$ |

## (6) Enrollment of Ethnic Minorities

Catholic schools, especially in urban areas, continue to serve increasing numbers of ethnic minority students. Exhibit 17 illustrates that the percentage of ethnic minority students has more than doubled in all Catholic schools, from $10.8 \%$ in 1970-71 to $23.5 \%$ in 1992-93. Seventy-seven percent of minority enrollment is in Catholic elementary schools, $23 \%$ in secondary schools.

## (7) Enrollment of Non-Catholics

Most Catholic school students are Catholic. However, there has been a significant increase of nonCatholic students - from $10.6 \%$ in 1982-83 to $12.3 \%$ in 1992-93 - as is shown in Exhibits 18A and 18B. Secondary schools continue to have a higher percentage of non-Catholics - $15.3 \%$ in 1992-93 - whereas elementary schools have $11.4 \%$. The Southeast and West/Far West regions have the highest percentages at both the secondary and the elementary levels in 1992-93.

## STAFFING OF CATHOLIC SCHOOLS

## (1) Number of Teachers

In 1992-93, the total full-time equivalent (FTE) teaching staff in Catholic elementary and secondary schools was 154,816 . Last year was the first year that both full and part-time teaching staff totals were collected. Conseq rently, the FTE reflects the number of part-time staff positions and must be kept in mind when comparing to previous years' staffing totals. There wer - 109,825 elementary school teachers and 44,991 secondary school teachers. Of these, $88 \%$ are lay teachers. Exhibit 19A shows the number of sisters, brothers, priests and lay teachers; Exhibit 19B shows the percentages.

## EXHIBIT 19B

Full-Time Equivalent Teaching Staff-by Percentages

| Elementary | 1982-83 | 1991-92 | 1992-93* |

* Since 1991-92 FTE staffing totals include full and part-time figures.
** Since 1991-92 data collection includes the statistical breakdown of brothers/priests into two distinct categories.

## SELECTED PROGRAMS IN CATHOLIC EDUCATION

## Extended Care

The 1992-93 data collection of Catholic elementary schools revealed that, of our 7,174 elementary schools, 2,869 had extended care programs. Exhibit 20 illustrates the breakdown by regions. See Appendix C for a summary report by region, state and diocese.

Exhibit 20
Schools with Extended Care Programs

| Region | Schools with Extended Care |
| :--- | :---: |
| New England | 168 |
| Mideast | 670 |
| Great Lakes | 573 |
| Plains | 191 |
| Southeast | 522 |
| West/Far West | 745 |
| Total | 2,869 |

## Chapter 1 Services

The 1992-93 collection of data from our elementary and secondary schools revealed that, of our 5,306 Catholic elementary and secondary schools with students eligible for Chapter 1 Services, 4,481 schools had students receiving these services. Exhibit 21 shows the number of schools with students eligible, and the number of schools receiving Chapter 1 services by region. For a complete summary of schools by region and state, refer to Appendix C.
