ABSTRACT	
*	lisurvey of currently enrolled students was

OI CUFFERITY enrolled students was administered in spring 1978 to assess student opinion regarding the recently implemented on-line admission and registration procedures at Thomas Melson Community College (TNCC) 5 Students were asked to rate each vervice area--initial contact, admission, counseling, advising, finar 11 aid, registration, tuition, and purchase of textbooks--on a four we at scale ranging from 1.0 (poor) to 4.0 (excellent). Additional personal information on each student was also collected, including data on how, when, and where registration occurred. Results indicated that the survey sample (N=684) was somewhat unrepresentative of the entire student population; particularly underrepresented were part-time and unclassified students. For those students responding (N=436), overall ratings were good in all service areas. Availability of information about the college, the admission procedures, and the bookstore received the highest mean scores (2.95, 2.88, and 2.87, respectively). Faculty advising and the registration - process were rated somewhat jess favorably, with mean scores of 2.66 . and 2.53, respectively. Those items in each of the service areas relating to the helpfulness of the college staff consistently had the highest ratings. Results are displayed in tables and graphs and the survey instrument is appended. (DB)

· · ·

In the winter quarter in 1978, Thomas Nelson Community College began a phased implementation of an on-line admission and registration system in an effort to expedite the entry of both new and returning students to classes at the college. The new system was designed to alleviate much of the frustration many students typically experience in admission to the college and registration for classes. While many students and staff at the college praised the new system, there were, nevertheless, occasional complaints about the various aspects of the system and it was clear there was still room for improvement.

In March of this year, the Administrative Cabinet requested the Office of Institutional Research to conduct an assessment of the entire admission and registration process through a survey of students currently enrolled at the college. The purpose of the survey was to identify the strengths and weaknesses of the process and to gather suggestions for improvement. The survey dealt with all phases of admission and registration: initial contact, admission, counseling, advising, financial aid, registration, twition payment, and put hase of textbooks.

PURPOSE

### II. V PROCEDURES

The Office of Institutional Research developed the instrument used in this survey in conjunction with the offices of Student Services, Financial and Administrative Services, and Instruction. Instruments used in similar surveys reported in ERIC and elsewhere were either too general in nature or were formated in such a way that they were inappropriate for an assessment of the admission and registration process at TNEC.

Each of the phases in admission and registration at the college -initial contact, admission, counseling, advising, financial aid, registration. tuition payments, and purchase of textbooks -- was subdivided into its component services and students were asked to rate each service on a four point scale ranging from excellent to poor, assuming they had used the service or had an opinion. In addition, students were asked to comment on each phase 'of the process in an effort to solicit more detailed information on their experience.

Another section of the instrument sought information on how, when, and where the student registered for classes so that the context of the student's ratings could be understood. The final section of the instrument solicited personal information to properly define the sample and to allow for <u>fur</u>ther analysis of the data. Of particular interest were the different perspectives of part-time and full-time students.

Thirty sections with an enrollment of 684 were selected as the survey sample. The sections were selected to approximate the proportion of day/night, on-campus/off-campus, college parallel/occupational-technical students enrolled at the college. The survey was administered in the classroom during the ninth week of the spring quarter. Although there was some risk the sample might not be representative of the population with this procedure, it did assure that the instrument could be administered in a controlled environment and that i problems with response rate and improperly completed questionnaires would be minimized. In any event, it was felt that those variables most likely to impact service ratings for admission and registration could be controlled -primarily the variables relating to student status.

Personal data for respondents were compared to those for enrollees in the spring quarter to evaluate the representativeness of the sample. A Chi square test of goodness-of-fit was used to see if there was a significant difference in the number of cases in the sample as compared to the population for the variables sex, race, age, student status, campus status, and degreestatus.

Weighted means were computed for each item in the service ratings and for each service category. The service ratings were then cross-tabulated with a number of other variables -- curriculum, student status, method of registration, time spent in registration, method of tuition payment, and time spent paying tuition: Finally, the service ratings were ranked individually and by category.

#### III. FINDINGS

Of the 684 students registered in the sections in the sample, 436 were attending class and completed the survey questionnaire. Table 1 contains a description of the survey sample and the spring quarter population. The results of a goodness-of-fit test between the sample and the population for each variable in Table 1 indicated that the sample classly approximated the population only for the variables sex and campus status. Statistically significant Chu squares (significance level = .05) for race, student status." age, and degree status indicated that the sample differed substantially from the population for each of these variables.

A rank order of service ratings for each service item and for each service category is reported in Tables 2 and 3 respectively. In addition, the service ratings are illustrated for full and part-time students in Figure 1. A summary of these data together with the related comments is presented for each service category.

Information about TNCC. The weighted mean for this category (2.95) was the highest of the 9 categories. Moreover, all three items in this category were ranked in the top ten. Generally, the service was rated as good. There were scattered comments about the need for additional information and the shortage of Bulletins.

Admission. This category was ranked second among the nine in the survey with a weighted mean of 2.88, again reflecting a good rating. Among the items in the category, admission forms were rated more positively (2.93) than the helpfulness of the admissions staff (2.92) or the admission procedure . (2.79). There were no significant differences in the ratings between fulltime and part-time students on any of the admission items. Students generally commented that admission took too long and that a student had to go to several places to get admitted to TNCC.

<u>Counseling</u>. Counseling ranked seventh among the categories with a weighted mean of 2.68 indicating a fair to good evaluation. Information and planning for transfer to a 4-year college (2.53), help with personal problems (2.58), and help with program planning (2.63) received the lowest ratings in the category. Part-time students rated the hours of the Counseling Center much less favorably (2.61) than did full-time students (2.86) but otherwise there were no major differences between the two groups in this category. Typically, students noted that it was difficult to get an appointment with a counselor, that they did not know their counselor, and that more counseling was needed in the evening.

Advising by Faculty. With a weighted mean of 2.66 (generally fair to good), this category ranked next to last in the survey. Students rated help with career planning (2.50) and information and planning for transfer to a 4-year college (2.50) the lowest. Part-time students, however, were somewhat more favorable in their evaluation of information and planning for transfer to a 4-year college than were full-time students.

Divisions are ranked by faculty advising ratings in Table 4 (students were sorted into divisions-based on their curriculum). The Public Services

25

DIVISIONS RANKED BY FACULTY ADVISING RATINGS

Note: Students assigned to divisions on the basis of their curriculum.

~

· · ·

17

Division ranked first in four out of the five items. The range in the ratings was greatest on the availability of faculty advisors and the interest of the faculty advisors. Students in the Communications and Humanities Division gave these items the lowest ratings. With respect to the items, information and planning for transfer to a 4-year college and chreer planning; the ratings, were lowest among students in the Natural Science and Mathematics Division.

18

Student comments focused on the poor availability of faculty advisors \* and their lack of interest and information.

<u>Self-Advising</u>. Although a majority of the sample did not use the service or chose not to rate the service, those who did rated it generally good (2.86). While part-time students rated the availability of information in self-advising much higher than full-time students, the comments in this section stressed the need for more information. Also, some students noted that the procedure was better than advising by faculty. Others felt the self-advising procedure needed to be improved.

<u>Financial Aid</u>. With a weighted mean of 2.83, this category ranked fifth and this generally reflected a good evaluation. Like self-advising, a majority of the sample never used financial aid or chose not to rate the service. Only 28 percent of the respondents said they had applied for financial aid. Among the items in the category, financial aid application forms received the highest rating (2.95) and, out of the 45 items rated in the survey, it ranked fourth. The timeliness of the receipt of funds received the lowest rating (2.62).

Part-time students rated the hours of the financial aid office lower than full-time students and a number of students noted the difficulty that working students have in dealing with the office when it closes at 5:00 p.m. Of some

**26**,

Registration. This category received the lowest rating in the survey (2.53). It was also identified by respondents as the area that needed the greatest improvement. All three of the items relating to the availability of courses received the lowest ratings and ranked 43, 44, and 45 out of the 45 items in the survey. Also, scheduling ranked second as the area.needing the most improvement and many students complained of the lack of needed courses and sections.

Fifty-nine percent of the respondents said they waited an hour or more to register and many of the students commented that it took too long to register. Unfortunately, technical problems with the on-line registration system in spring quarter did cause substantial delays in the first week of registration.

Table 5 contains a ranking of divisions by the registration ratings. With respect to those items relating to the availability of courses, the Communication and Humanities Division and the Natural Science and Mathematics Division tended to have the highest ranking although on one item, the availability of required courses during the day, the Natural Science and Mathematics Division. had the lowest ranking. The Business Division had the lowest ranking overall while the Engineering Division had the lowest ranking on the availability of required courses at night and the Public Services Division had the lowest ranking on the availability of courses in major.

A cross-tabulation of student ratings on registration items with student responses on how long it took students to register revealed that the longer it took a student to register the more likely he was to rate the service lower.

20.

29

Table 5

This was particularly true for the clearness of directions, the hours of registration, the locations for registration, the availability of required courses during the day, and the helpfulness of the college staff.

Tuition Payment. Out of the nine categories in the survey, this 'category ranked sixth with a weighted mean of 2.81 indicating generally a good evaluation. Students rated the helpfulness of the college staff the highest (2.90) and the deadline for payment the lowest (2.71).

Forty percent of the students indicated they paid tuition in person on the deadline whereas 24% said they paid when they registered and 11% paid by mail. The rest said they paid by other means. Twenty-three percent said they waited in line an hour or more to pay their bill. Students commented about the inadequate space for students in the business office and about the long lines for payment.

Like the fatings on registration, the fatings on tuition payment items tended to be lower the longer the student had to wait to pay his bill based on a cross-tabulation of student ratings with student responses on how long it took to pay tuition. This relationship was strong for all of the tuition payment items."

Bookstore. This category ranked third with a weighted mean of 2.87 -a good fating. All of the items on the bookstore had good ratings with the notable exception of the refunding policy for returned textbooks (2.54). This item stood out not only in the ratings but also in the comments. Comments on this service were particularly strong and they focused on the refunding policy for books. In contrast to the good rating to helpfulness of staff, several comments on the staff were negative and there was also criticism of the hours of the bookstore.

Other Comments. Beyond the ratings on the nine service categories, the students offered a number of general comments. Among those, many students stated that they wanted to see a counselor or advisor and that they thought the counselors and advisors should be more informed and available. Also, a number of students said they had scheduling needs that were not met, particularly in the evening.

### IV. CONCLUSION

The survey sample was somewhat unrepresentative of spring quarter enrollment, particularly with regard to part-time students and unclassified students. The sampling procedures accounted for this problem to some extent although it is very difficult to get a representative sample of part-time and unclassified students when a survey is administered in the classroom. Part-time students and unclassified students are more likely to drop out of class or be absent from class than full-time students or degree-seeking students and hence will be underrepresented in any classroom sample.

In terms of the findings, the Admission and Registration survey identified several strengths and weaknesses in the procedures used at TNCC. Overall, the service ratings were good. Of some interest were those items in each of the service categories relating to the helpfulness of the college staff. These items consistently had the highest ratings.

Two of the service categories, faculty-advising and registration, were rated somewhat less favorably than the other seven categories. With respect to faculty advising, students did not feel that faculty were well informed or that they showed much interest in advising. Moreover, they stated it was difficult to get appointments with faculty advisors. Students apparently wanted advising and counseling services, however, since many of them stressed

23

the need for them in their comments. Hence, the college needs to focus on improving the services rather than reducing or eliminating them.

A specific area of focus might be more information for career planning and for transfer to a 4-year college which was a weakness both in counseling and in facuity advising. Students felt they needed more and better information in these areas.

Service ratings for registration were affected somewhat by technical problems with the on-line system in spring quarter which have now, for the most part, been corrected. However, those items relating to the availability of courses were not affected and since they were rated the lowest of any of the 4S items in the survey, scheduling would seem to be the major weakness in the process. The exact nature of the scheduling problem varied somewhat across divisions and each division might address the problem differently. One need did stand out and that was the need for more courses in the evening -particularly those courses required in a curriculum.

Three other weaknesses stood out in the survey results. First, evening students generally complained that many offices in the college were not easily accessible to evening students. Counseling, faculty advising, and financial aid were singled out in the comments. The college should explore ways to expand these services in view of the increasing proportion of part-time and evening students. Secondly, students criticized the long lines in the . business office and the inadequate space for students paying tuition. Additional cash registers being-installed in the business office and the planned relocation of the business office should alleviate these problems. Finally, the refunding policy for returned textbooks received very low ratings and some rather strong criticism. The policy would seem to merit some review.
