The contents of this report were developed under a grant from the U.S. Department of Education, #H326T130013. However, those contents do not necessarily represent the policy of the US Department of Education, and you should not assume endorsement by the Federal Government. Project Officer, Jo Ann McCann.

Introduction

This, the 30th annual *National Child Count of Children and Youth Who Are Deaf-Blind*, is the first and longest running registry and knowledge base of children who are deaf-blind in the world. Begun in 1986 on behalf of the U.S. Department of Education, it represents a nearly thirty year collaborative effort between the National Center on Deaf-Blindness (NCDB), its predecessors, and each state and multi-state deaf-blind project throughout the country, as well as those projects funded in the Pacific Trust territories, the Virgin Islands, and Puerto Rico. Initially requested by the U.S. Department of Education as an examination of the discrepancy between the National Deaf-Blind Child Count and the Office of Special Education Program's (OSEP) annual December 1 counts of children and students with disabilities being served under IDEA Part C or Part B, the child count has expanded over time to inform the work of a range of OSEP-funded deaf-blind projects during the ensuing years, including the current national, state, and multi-state technical assistance and dissemination projects.

The National Deaf-Blind Child Count has been collaboratively designed, implemented, and revised to serve as the common vehicle to meet federal grant requirements for both the State and Multi-State Deaf-Blind Technical Assistance Projects and the National Deaf-Blind Technical Assistance Center, as well as serve as a common data collection and reporting mechanism for use across the country. Consistent with the priorities under which NCDB, its predecessors, and the state and multi-state deaf-blind projects are funded, this national child count is used to help identify national and state technical assistance needs for children and youth who are deaf-blind, their families, and the service providers and systems that serve them.

The deaf-blind child count is conducted each year to supplement OSEP's Federal Part C and Part B child counts, (December 1 Special Education Child Count), **which include children as deaf-blind only when deaf-blindness is their single disability**. In contrast to OSEP's December 1 Special Education Child Count, the National Deaf-Blind Child Count data is collected for children whose disability is solely deaf-blindness, as well as those who are identified with deaf-blindness and also have additional disabilities. This is a critical distinction in that nearly 90% of the children and youth on the National Deaf-Blind Child Count have one or more additional disabilities. Consequently, a majority of children who are deaf-blind or have deaf-blind intervention needs are not identified as such on OSEP's December 1 Special Education Child Count.

Between December 1, 2014 and December 1, 2015, state and multi-state deaf-blind projects reported 10,671 children and youth were eligible to

receive services. On December 1, 2015, state and multi-state deaf-blind projects reported that 10,083 children and youth were eligible to receive services. Of these, 9,574 were both eligible to receive deaf-blind project services and were being served through either Part C or Part B of IDEA. **Therefore, a total of 9,574 children and youth are included on the December 1, 2015 Deaf-Blind Child Count.**

Across the United States, 571 infants (birth to 2) and 8,936 children and young adults (3-21) were identified and reported as deaf-blind by the state and multi-state deaf-blind projects on the December 1, 2015 National Deaf-Blind Child Count. An additional 67 students were reported by those projects, who by their respective state's legislation or regulation, continue to provide services through the end of the school year in which the student turns 22 years of age. Thus, a total of 9,574 infants, children, and young adults were identified as deaf-blind by the state and multi-state deaf-blind projects. This represents a slight decrease from the previous year.

In contrast, the U.S. Department of Education (2016) reports that 1,408 students (3-21) were identified as deaf-blind on [OSEP's December 1, 2014 Part B Special Education Child Count](#). Due to the non-categorical nature of Part C, no infants or toddlers are reported as deaf-blind since they are all reported as developmentally delayed or at-risk by their state Part C lead agencies. This discrepancy of more than 80% between Part B and Part C reporting of children and youth who are deaf-blind and the National Deaf-Blind Child Count is significant. State and multi-state deaf-blind project directors consistently indicate that most Part C lead agencies and State Education Agencies report their children and students with deaf-blindness as being developmentally delayed, multiply disabled, and/or visually impaired or hearing impaired, rather than identifying them as deaf-blind. Concerns about the under-identification of deaf-blindness and its resulting unique intervention requirements have been a consistent problem and one that often results in a lack of, or delay in receiving, appropriate intervention and instruction critical to children's early development (Herbster, 2015; Mueller, 2006; Purvis & Schalock, 2014). The opportunity for early identification, intervention and the provision of instructional services aimed at the unique needs of young children and students who are deaf-blind is a critical component that cannot be lost.

In reviewing the child count data submitted over the years, it is notable that children who are deaf-blind are highly diverse. Clearly, children who are deaf-blind are as varied as the number reported and the nature and extent of deaf-blindness in children is often misunderstood (Malloy & Killoran, 2007; McCormick, 2015; Schalock, 2015). These children represent one of the lowest incidence yet most diverse group of learners receiving early

intervention and special education services. They are an extremely heterogeneous group whose sensory losses are often accompanied by additional physical or cognitive disabilities, complex medical needs, and/or behavior challenges.

Data Elements in the Deaf-Blind Child Count

Throughout the history of the child count, NCDB and its predecessors have continuously revised the child count language and reporting elements to a) remain current with *IDEA* Section 618 Part C and Part B data requirements, b) ease the data collection burden of the projects, and c) increase process and cost efficiencies.

Current data elements target both *IDEA* Section 618 requirements and the collection of information to guide state-specific and national technical assistance. Existing data elements have been broken out into specific Part C and Part B elements using Section 618 language. Reported data elements that are consistent with the *IDEA* mandated child counts include:

- Race/Ethnicity
- Part B and C Category Codes
- Early Intervention Setting (Birth through 2)
- Educational Setting (3-5 and 6-21), and
- Part C Exiting Status (Birth through 2), and
- Part B Exiting Status (3-21)

Data elements have also been included to assist in developing state and national technical assistance initiatives (e.g., collection of demographic and needs assessment information). These include:

- Gender
- Etiology
- Documented Vision Loss
- Cortical Vision Impairment
- Documented Hearing Loss
- Central Auditory Processing Disorder
- Auditory Neuropathy
- Other Impairments or Conditions
- Living Setting
- Intervener Services, and
- The use of corrective lenses, listening devices and/or assistive technology

Considerations for the Reader

When reading the information that follows, the reader should note that:

- Though the *IDEA* definition is now used as the common definition of deaf-blindness, each state or multi-state deaf-blind project has the discretion of establishing the criteria for their own project services.
- The National Deaf-Blind Child Count is collected in a timeline consistent with *IDEA* Section 618 data requirements. A point-in-time “snapshot” is used to reflect those infants, young children, and students identified and eligible for services from state and multi-state deaf-blind projects on December 1 of each year. Thus, in many instances, projects serve more infants, young children, and students over the course of the year than are reported on December 1.
- The language and reporting elements used in the National Deaf-Blind Child Count are consistent with those found in Section 618 of *IDEA*.
- The National Deaf-Blind Child Count data presented are based on aggregate data reported by each state and multi-state deaf-blind project. While the aggregated counts provide a national perspective, there is substantial variability in the individual state project data reports.

Trends in the Deaf-Blind Child Count

1. The overall December 1, 2015 “Snap Shot” count increased to 9,574; an increase of 190 from 2014. Overall, the total number of children and youth served during the year also increased from 10,471 to 10,671.
2. While 1,130 children and youth exited from the censuses of the state and multi-state projects, a total of 1,335 were added through child find and referral efforts.
3. Newly identified children and youth spanned the age range from birth through 21. Nearly half (47.9%) were birth through 5 years of age. In other ways, these newly identified individuals mirror the overall population.
4. The distribution of children/youth across age groups has remained relatively stable over the past five years, with a slight shift toward a younger overall population. There has been a slight overall decrease in the percentage of the total deaf-blind child count represented by

infants, birth to 2 years of age (6.2% - 6.0%). Early identification and referral to the deaf-blind programs continues to be an issue with less than 100 infants, birth to one year of age being included on the National Deaf-Blind Child Count.

5. The prevalence of CHARGE Syndrome continues to increase. In 2015 there were 926 children and youth identified as having CHARGE Syndrome. While still relatively rare, the prevalence of children with Stickler Syndrome and Dandy Walker Syndrome has also continued to increase.
6. The percentage of children/youth identified as needing further vision testing has decreased from about 7% to 6.1% over the past six years.
7. The percentage of children and youth identified as needing further hearing testing has decreased from 8.2% to 6.9% over the past six years.
8. The number of children identified as having received cochlear implants has increased from 167 in 2005 to 1,085 in 2015 an almost 650% increase during this time period. This increase spans the age ranges, from infants to young adults.
9. Overall, the number of children and youth with additional disabilities has increased. In 2005, over 20% of the children and youth on the National Deaf-Blind Child Count had no additional disabilities. In 2015, over 11% had no additional disabilities. In 2005, just 13.1% of the children and youth on the count had four or more additional disabilities. In 2015, almost 44% had four or more additional disabilities.
10. The percentage of young children ages 3 to 5 educated in a regular early childhood education setting some portion of the day has more than doubled in the past decade from less than 15% to 34%.
11. Over 61% of the children and youth in school age special education are being served at least portion of their day in a regular classroom in their local school. This is consistent across the age span.
12. Nearly one quarter (23.1%) of the children and youth on the 2015 National Deaf-Blind Child Count participate in the regular curriculum as indicated by participating in statewide assessments tied to regular grade level standards. This is down slightly from 2014. This percentage increases to 41.5% when only those who are at the age

and/or grade level for which state assessments are administered are considered.

13. While educational placement does not determine access to the regular curriculum, nearly 69% of those students taking state assessments tied to regular grade level standards were in the regular classroom some portion of their day. Again, this was down slightly from 2014.
14. Data on children and youth receiving intervener services was collected on a pilot basis during the 2014 deaf-blind child count, with some state deaf-blind projects collecting the information. A total of 402 children and youth were reported as receiving intervener services on the 2014 National Deaf-Blind Child Count. The category was fully implemented in 2015, and 587 children and youth were reported as receiving intervener services on the 2015 National Deaf-Blind Child Count.
15. The number of youth graduating from high school with a regular diploma has more than doubled (from 99 to 220) in the past nine years.

Implications

- The continued trend toward educational placement in inclusive settings, especially at the pre-school level, is significant and positive for children and families. The trend does, however, have profound implications on the need for information, resources, and access to expertise in deaf-blindness being available at a local level. Concurrently, as schools and Part C agencies continue to appropriately place and serve children locally, there are increased needs for more interventionists and teachers with a knowledge of deaf-blind intervention and instruction, as well as individualized supports, including the provision of intervener services.
- While access to the general curriculum and graduation from high school has improved for the population of children and youth who are deaf-blind, significant efforts are needed to expand these opportunities.
- The apparent continued under-identification and referral to deaf-blind programs of very young children remains an important need. Infants and toddlers greatly benefit from having access to expertise in deaf-blindness and must receive appropriate services that address the

impacts of dual sensory impairments. Further, parents and families of these infants and toddlers can benefit from supports established within states. Without such early identification and referral to state deaf-blind programs, access to needed services and supports is compromised.

- Trends demonstrate that what has historically been one of the lowest incidence, yet most heterogeneous populations, continues to become even more so. As our nation's population becomes more diverse ethnically, racially, culturally, and even linguistically, our national, state, and local systems need to continue to adapt to provide effective services to these children and youth and their families.
- The population continues to be diverse in terms of experiencing additional disabilities. Ninety percent has one or more additional disabilities, and over 40% have four or more. The increasing level of complexity in the needs and challenges faced by this population also requires continued evolution and adaptation in national, state, and local systems to provide needed services effectively.
- There is a continued trend in the identification of children and youth who are deaf-blind and living at home with their parents, extended family or foster parents. Currently, 93.6% of children are living at home in their local communities. In contrast, only 1.8% are identified as living in a private residential facility (the next most common setting).
- Given that almost all children and youth who are deaf-blind live in a home setting, providing supports to families (nuclear, extended, and foster), is critical. Supports that include access to parent networks and providing leadership/self-advocacy skills training continues to be critical components in the umbrella of services needed for children who are deaf-blind and their families.
- Post-secondary education, or employment has important implications for the continued development of effective post-secondary supports for the numbers of students on the National Deaf-Blind Child Count who are exiting Part B every year, whether through having received a diploma or certificate, simply aging out, or transitioning to adult services. This is especially the case for the growing numbers of young adults receiving a certificate of completion or diploma, which has grown from 160 to 281 over the past 8 years.
- Finally, technology is having an increasingly important place in the lives of children and youth who are deaf-blind. The past several years has seen rapid use of assistive technologies with these children, where

in 2007, less than 1/3 of the population was identified as making use of some form of assistive technologies not related to vision or hearing (32%) to 45% in 2014.

- The numbers of children and youth with cochlear implants has grown dramatically over the past five years. This increase, spanning the age ranges from infants to young adults, may require significant program development within the Deaf-Blind Network to provide appropriate supports for this growing population.

These implications provide a broad summary of the needs and challenges for the population of children who are deaf-blind, their families and those that serve them.
