CHAPTER I

INTRODUCTION

The Problem

The problem of this thesis may be stated in four questions: (1) To what extent are "Fast Offerings" paid by the membership of the Church of Jesus Christ of Latter-day Saints? (2) What changes, if any, have occurred in the amounts of these fast offerings paid over the years 1916 to 1936, inclusive? (3) What differences and similarities appear to exist in the amounts of fast offerings paid in the several stakes of the Church? (4) How do the rates of change in the amounts of fast offerings paid during these years compare with the rates of change in the Church population?

Significance of the Problem

As an institution the Church of Jesus Christ of Latter-day Saints is looked upon by its members as occupying a unique and important place in the history of mankind. Since this Church claims to be of Divine origin, one of the principles recognized to have been established anciently and embodied now in the present day belief and practices of this Church is that of the fast and the attendant fast offerings.

In the life of any institution such as the Church there are always those who support movements within the group and also those who fail to support such movements. This is particularly true if the support be of an economic nature. From its humble beginning in 1830, the growth of the Church has made any general monetary offering within it such that the extent of its observance might reflect something of the trends in both the faith and the economic life of its membership.

So far as the writer knows, no study has ever been made to discover the extent of the observance of the fast offering and its growth within the Church of Jesus Christ of Latter-day Saints. This study proposes, therefore, to assemble the available data on fast offerings. It attempts to interpret these data, and to show changes in the magnitude of this offering over a period of twenty-one years. Those changes may have considerable interest to mature students of sociological and economic problems, and they may possibly provide useful information for Church officials charged with the responsibilities of policy making.

The Data

In undertaking this study the writer found it necessary to sift from the Church records all available statistical material bearing on this problem. The records that contain this material, as compiled and kept in the Presiding Bishop's Office, show the number of Church members who pay fast offerings each year, the total amount paid, and the Church population of each Stake. Search of these records to obtain further information which might be of specific use in this study proved unfruitful.

Before any real progress could be made on the study it was necessary to secure permission from the Presiding Bishop's Office, to use the data upon which a study could be based. Permission to obtain these data was kindly granted as was permission to use them¹ in relation to the problems proposed in this study.

The statistical records of the Church are, therefore, the sources of information used for this study. These data on fast offerings are prepared originally each year in the Wards, then compiled into a Stake record by the Stake Clerk, and forwarded to the Pre-

1. Permission to use the compiled information from the records of the Church, for the years 1916 to 1936 inclusive, was given the writer in a letter, over the signature of Bishop John Wells, from the Presiding Bishop's Office, dated April 30, 1937.

siding Bishop's Office, where they are bound and become part of the permanent record of the Church. All such compilations are kept as annual records.

The Church records show in this connection three distinct items: first, the Church population of the Stake; second, the number of Church members who paid fast offerings; third, the total amount of fast offerings paid. This information for an interval of twenty-one years (1916-1936 inclusive) is the basis of the work reported here.

The writer feels that the original information is reliable in so far as it is humanly possible to make it.

Limitations of the Data

The data have certain limitations. Branches of the Church which are outside of any Stake Organization and the Missions of the Church, are not included in this study. Furthermore, the records of the Stakes show only the number of persons who actually paid fast offerings, although it is probable that frequently the offering of an entire family was credited to one person. For this reason it is obvious that the amount paid by those credited with payment sometimes appears as a goodly amount.

An apparent defect in the method of recording lies in the fact that only one member of a family appears usually to have been credited with payment, whereas the payment so credited undoubtedly should sometimes have been credited to the several persons of the entire family. Had the records shown data on this basis, the number credited with payment of fast offerings would undoubtedly have been much higher, and the per capita amount credited by those who participated would have appeared correspondingly lower.

Cautions about Possible Errors

In dealing with large bodies of statistical data, there is always the possibility of error. In a few cases of the records used in this study no figures were given, either for population, number who paid fast offerings, or the amount paid. In such instances, these items were left blank in the thesis. The writer has been careful in handling the data, and he employed help in checking and rechecking figures. In all of the computations a calculating and adding machine has been used.

Procedure used in Securing Source Data

To facilitate the work of securing the data and to guard against errors, a special form was worked out in which the tabulations could be transcribed accurately and systematically. This form consisted of a vertical column which listed the years from 1936 back to 1916. A second parallel column provided space to list the population by years. A third column showed the number of members who paid fast offerings each respective year, and a fourth column showed the total amount of fast offerings paid each year. For purposes of the study each Stake was assigned a number instead of its name.

Treatment of the Data

From the data secured it was possible to compute:

- (1) The per cent of the Stake population who paid fast offerings each year;
- (2) the per cent who paid no fast offerings;
- (3) the average per capita amount paid, as based on the stake population;
- (4) the average amount paid by those who were credited with payment annually;
- (5) the average amount paid per month by those who paid.

The computations made to express the per cent of the stake population who paid fast offerings consisted of dividing the recorded number of those who paid offerings by the total stake population for each respective year. The per cent found, deducted from one hundred, was taken to show the per cent of the stake population who paid no fast offerings in the same year. The average per capita amount paid, based on the stake population, was found by dividing the entire amount paid by all members of each stake by the population of the stake for the same year. The average amount paid by those credited with fast offerings in each stake was secured by dividing the total fast offerings of the stake by the figures representing the number of those in the stake who paid. The average amount paid per month by those who paid was secured by dividing twelve into the result secured in the previous operation.²

Use of Line graphs

In order to make more convenient comparisons of the data for the various stakes it was found desirable

2. The payment of fast offerings sometimes may have been "bulked" toward the end of each calendar year. The calculations herein have been made solely on an annual basis.

to express comparisons and contrasts by means of line graphs. By drawing the curve of population for the series of years for which data were available, and by drawing on the same chart a curve that expressed the point of division between those who paid no fast offerings and those who paid fast offerings over the same series of years, a graphic picture was produced to show over the time interval considered the trend of the population, the changes in the proportion of those who paid, and the changes in the proportion of those who did not pay fast offerings.

On a second chart the population curve was again drawn; while another curve which expressed the total amount of fast offerings paid each year was drawn with it. Such a graph permits one to make a comparison between the trend in Church population as expressed in numbers, and the growth of fast offerings expressed in dollars throughout the time interval considered.

On a third chart there was shown a curve that expressed the average per capita amount paid each year, based on population of the organized stakes of the Church. Above this curve another curve presented the average amount paid by those whom the records credited with payment of fast offerings. This method

permitted comparison of the per capita average to be made with the average paid by those credited with payment each year in the series of years for which the data were available. For final presentation these two curves, together with a curve presenting the per cent of Church population paying fast offerings, were presented in a single graph.

Further Treatment to Show Relationships

After checking the comparisons expressed in the three graphs already drawn, it became apparent that they failed to express all contrasts which appeared desirable to study. They failed to show all of the relationships between the part of the population who paid, the per capita amount contributed by those who paid, and the entire amount paid by the organized stakes of the Church. To overcome this deficiency it was found desirable to make a fourth graph, in which three curves expressing these quantities were drawn. The advantage of drawing the three curves in the one graph became apparent at once, because these three variables show interrelationships which could not be expressed if either curve were omitted and only the other two shown.

As these three curves were drawn to express per cent of population who paid, a per capita amount paid

and a total amount paid, the vertical spacing required the selection of a unit in which some common relationships might be expressed. As the highest percentage of the population who paid fast offerings in any one year never reached above thirty per cent, it is obvious that this curve should run below those expressing the per capita and the total amounts paid each respective year. Since at no time was an amount of two units per capita reached, any amount exceeding three units might have been designated as 100% of the possible per capita amount paid.

In checking over year-by-year the total amount paid in the stakes of the Church it was found that this aggregate at its peak exceeded two hundred thousand dollars, but it never reached three hundred thousand. This fact made it possible to use five hundred thousand dollars as a limit which might have been reached over the interval of time studied. Accordingly, any convenient space divided into five relative parts may be taken as the height of the ordinate of the graph, and to express for these curves respectively, 100%, five, and five hundred thousand dollars. This method then made it very convenient to express lower per cents and lower amounts for each within the space allotted and at the same time preserve a good proportion for each of the curves appearing on the graph.

For a further correlation of the fast offerings considered from a standpoint of environment, it was thought desirable to show contrasts, or comparisons, between Rural and Urban Stakes within the Church. These data are presented graphically in Figure 9. In graph "A" of this Figure the per cent of Church population paying fast offerings is presented, the curves showing respectively (1) the average for the Church, (2) that for the Urban population, and (3) that for the Rural population.

Similarly, graph "B" (Figure 9) presents the per capita amounts of fast offerings paid. In graph "C" the per capita amount paid by those who paid is presented.

By dividing the period studied into five year intervals and by setting the year 1936 alone, the data from which curves number one, two and three in Sections A and B of Figure 9, are presented as a bar graph in Figure 10. This Figure is divided into four sections A, B, C, and D.

As in 1916, the number of stakes in the Church was 72. By 1926 the number reached 93, while in 1936 there were 117 reporting (118 organized). It appeared desirable, therefore, to express this fact graphically, together with a representation of the range and variation in amounts of fast offerings paid by each

of the stakes in existence at the three different decades. Figure 11 has been drawn to present such data.

In Chapters III and IV, more detailed consideration is given to the data presented in the accompanying figures.

Limits of the Study

This study is limited to the magnitude of the fast offerings in the Church of Jesus Christ of Latter-day Saints over a time interval of twenty-one years, 1916-1936, inclusive. The writer desires simply to show the picture as it may be revealed from these data.

No attempt whatever is made to evaluate the present method of keeping records, of collecting, or of disbursing this offering. There is no consideration given to future policy or to the observance of this principle of fast offerings. The sole purpose of the study is to show what has happened over the period of years considered.

If those who have authority to formulate Church policy, should find anything in this study that is of worth to them, the study is humbly placed at their disposal.

CHAPTER II

HISTORY OF FAST OFFERINGS

Since the establishment of the Church of Jesus Christ of Latter-day Saints, the development of the observance of the Fast Day and the paying of fast offerings is most interesting and inspirational. This practice within the Church has been given much praise; numerous statements have been made in its favor. In this study, however, it is especially desired to give a resume' of its history in these the latter days, i.e., since the organization of the Church on April 6, 1830.

Fasting was a common practice anciently among the children of Israel, as the following quotation indicates:

"In the Old Testament 'To afflict the soul' is the term by which fasting is usually mentioned. ****Fasting probably meant complete abstinence, though the Talmude allowed lentils to be eaten during the period of mourning. No work was done during the fast and sackcloth and ashes were sometimes used. The usual reasons for a fast were either mourning or a wish to deprecate the Divine wrath.

In the New Testament, We hear that frequent additional fasts were imposed by tradition, and that strict observers kept two weekly fasts on Thursday and Monday--commemorating,

as it seems, the days on which Moses ascended and came down from the Mount. After the destruction of Jerusalem by Titus, a huge system of fasts was instituted, and the present Jewish calendar prescribes 22, besides the Day of Atonement, the Fast of Esther, and the four fasts of Zec 8:19.

Christianity and fasting. Jesus refused to lay down any specific injunctions to fast. To prescribe forms was not His purpose; all outward observance was to be dictated by an inward principle. He Himself probably kept the usual fasts, and individual ones as during the Temptation. But he laid emphasis in His teaching on the inutility of fasting except as a part of personal godliness, and gave plain warnings of its possible abuse by hypocrisy." 3

Very early in this dispensation the principle of fasting was revealed. A commandment given to the Prophet Joseph Smith, on August 7, 1831, is very specific as may be seen from the following:

"Thou shalt thank the Lord thy God in all things. Thou shalt offer a sacrifice unto the Lord thy God in righteousness, even that of a broken heart and a contrite spirit. And that thou mayest more fully keep thyself unspotted from the world, thou shalt go to the house of prayer and offer up thy sacraments upon my holy day; For verily this is a day appointed unto you to rest from your labors, and to pay thy devotions unto the Most High: Nevertheless thy vows shall be offered up in righteousness on all days and at all times;

3. Dictionary of the Bible. Edited by James Hastings. Charles Scribner's Sons. 1930. pp. 260-261.

But remember that on this, the Lord's day, thou shalt offer thine oblations and thy sacraments unto the Most High, confessing thy sins unto thy brethren, and before the Lord. And on this day thou shalt do none other thing, only let thy food be prepared with singleness of heart that thy fasting may be perfect, or, in other words, that thy joy may be full. Verily this is fasting and prayer, or in other words, rejoicing and prayer." 4

In the Comprehensive History of the Church, written by the assistant Church Historian, B. H. Roberts, the following information relative to the regular fast day observance is given:

"Among other calamitous events of the period 1851-7, was "the famine" of 1855-6. This was occasioned by a prolonged drought and a plague of grasshoppers during the summer of 1855, from which dual cause the crop that year was well-nigh a total failure. *****In addition to the loss of the other crops by drought and grasshoppers, great numbers of cattle died on the ranges from the severity of the winter of 1855-6, which also materially lessened the quantity of food. And while the quantity of food was lessened from these three causes combined, the immigration of the saints was unusually large, and during the same period "great numbers of gold hunters enroute for California, "says George A. Smith, church historian, "came into the valley destitute of food, who were fed and aided on their way from our scant supplies.

In all these times of scarcity, measures

4. Doctrine and Covenants. The Church of Jesus Christ of Latter-day Saints. Deseret News Press. Edition of 1920. p. 95. Section 59:7-14.

were taken to supply those who were unable to furnish themselves. A fast day was proclaimed for the Church on the first Thursday of each month, and the food saved in that way distributed among the poor; (The practice then begun has continued, and become a permanent institution in the Church, only the fast day has been changed from the first Thursday in the month to the first Sunday of the month.) and thousands of persons, who had an abundance of bread put their families on rations, in order to save the same for those who could not otherwise obtain it. And so wise and liberal were the regulations during these periods of scarcity, incident upon settling the territory, that no one perished or even suffered materially for the want of food, and all were remarkably healthy." 5

This fast day service was held the first Thursday of each month, and it included the paying of fast offerings. During the interval from 1831 to 1855, no record appears as to the regularity of the fast meeting and to the payment of the fast offerings. Reference is made in an article in The Deseret News⁶ to special meetings, and for the raising of funds for special purposes, but according to the record fast offerings did not become a permanent institution in the Church until 1855.

From 1855 until 1896 the fast day services, including the payment of fast offerings were held on the first Thursday of each month. In November, 1896, the General

5. A Comprehensive History of the Church. Century One. Deseret News Press. 1930. Vol. IV. pp.108-9-10.

6. The Deseret News. Church Section. June 25, 1932. p.6.

Authorities of the Church saw fit to change the time of the fast day services from the first Thursday of each month to the first Sunday of each month, and this practice⁷ has continued from then until the present.

With the introduction of the fast offering as part of the fast day observance in 1855, a new problem was presented. It then became necessary to devise a method of receiving and receipting correctly the fast offering. The responsibility of receiving the fast offering and keeping the records was placed upon the Bishops of the Wards. At the present time a compilation of these records is recorded in the quarterly and annual reports of each Ward and Stake.

The records of fast offerings during the earlier years, (1855 perhaps to 1916) were general in nature and they lacked uniformity. With the growing experience and changing needs of the Church an approach toward uniformity of records throughout its Stakes was found to be essential. As kept in these early records the information was rarely summarized, and hence it could not be made readily accessible for a comparative study. However, in the course of time the improvements in record keeping have made it possible in any comparative study to use more effectively the data collected from the entire Church.

7. Ibid.

CHAPTER III

AMOUNTS OF FAST OFFERINGS PAID BY MEMBERS OF THE CHURCH 1916-1936

The Basic Data which were Studied

The data obtained from the Church records which show by stakes the Church population, the number of persons credited with having paid fast offerings, and the amounts paid, are presented in Table I. The entire table showing this data for the 118⁸ stakes of the Church occupies forty pages of this report and is, therefore, presented as an appendix.

Further than to present the data contained in Table I and in some other tables which show basic data it did not seem necessary or desirable to the writer to present in detail the results as found for any single stake.

Total Fast Offerings paid in Stakes

In order to express the data recorded in Table I in a condensed form from all of the Stakes of the Church, the population, the number who paid fast offerings, and the total amount paid, were combined in one table. The result is presented in Table II. (See appendix)

8. In Table I the stakes total 119. This is the result of one stake having its name changed and appearing in the lists under both names. No duplication of computations, however, has been permitted as a result of this.

From the data set forth in Table II, the trends of the fast offerings paid within the Church and to be discussed in this study were found. To make it graphic the data from Table II have been reduced to Figure I.

The graphs have been drawn on semi-log paper, the vertical dimension representing units of population as expressed in graphs numbers one and three, while units of amounts of fast offerings paid as expressed by the same notation, for graph two. The units of time covering the years 1916 to 1936 inclusive, are shown similarly for all three graphs on the horizontal dimension.

For the year 1916, the data show that about one out of every eight persons in the Church paid fast offerings. The amount was approximately \$1.50 for each person who paid. In 1935, about one out of seven persons in the Church paid fast offerings. The amount paid was approximately the same per person as that paid in 1916.

In the year 1936, about one out of four persons in the Church within the stakes paid fast offerings, while the amount paid was approximately two dollars. During the interval, 1916-1936, the Church population within the stakes increased about fourteen per cent, while the number who paid fast offerings increased about one hundred eighty-five per cent. The amount paid by those who paid fast offerings increased about two and two-thirds times.

To make the data show the per cent of members of the Church within the organized stakes who paid fast offerings compare with those not credited with paying, Figure 2 was drawn. The upper edge of the shaded band is the population curve already presented in Figure 1. The lower edge of this band represents the line of demarkation between persons credited with paying fast offerings and those not so credited. The irregularities of this band are occasioned by the fluctuations not only of the recorded population of the Church within the organized stakes, but also by the fluctuations of the per cent of total membership who paid and who did not pay fast offerings. In general, one may perceive from Figure 2 that the relationship of those who paid to those who did not pay fast offerings over the entire period, 1916-1935, showed little variation. In 1936, however, the proportion of members who paid fast offerings compared with those not so credited shows a marked increase over the previous year, 1935.

Total in Urban and Rural Stakes

The organized stakes of the Church are groups of communities that in large part are rural, but some stakes

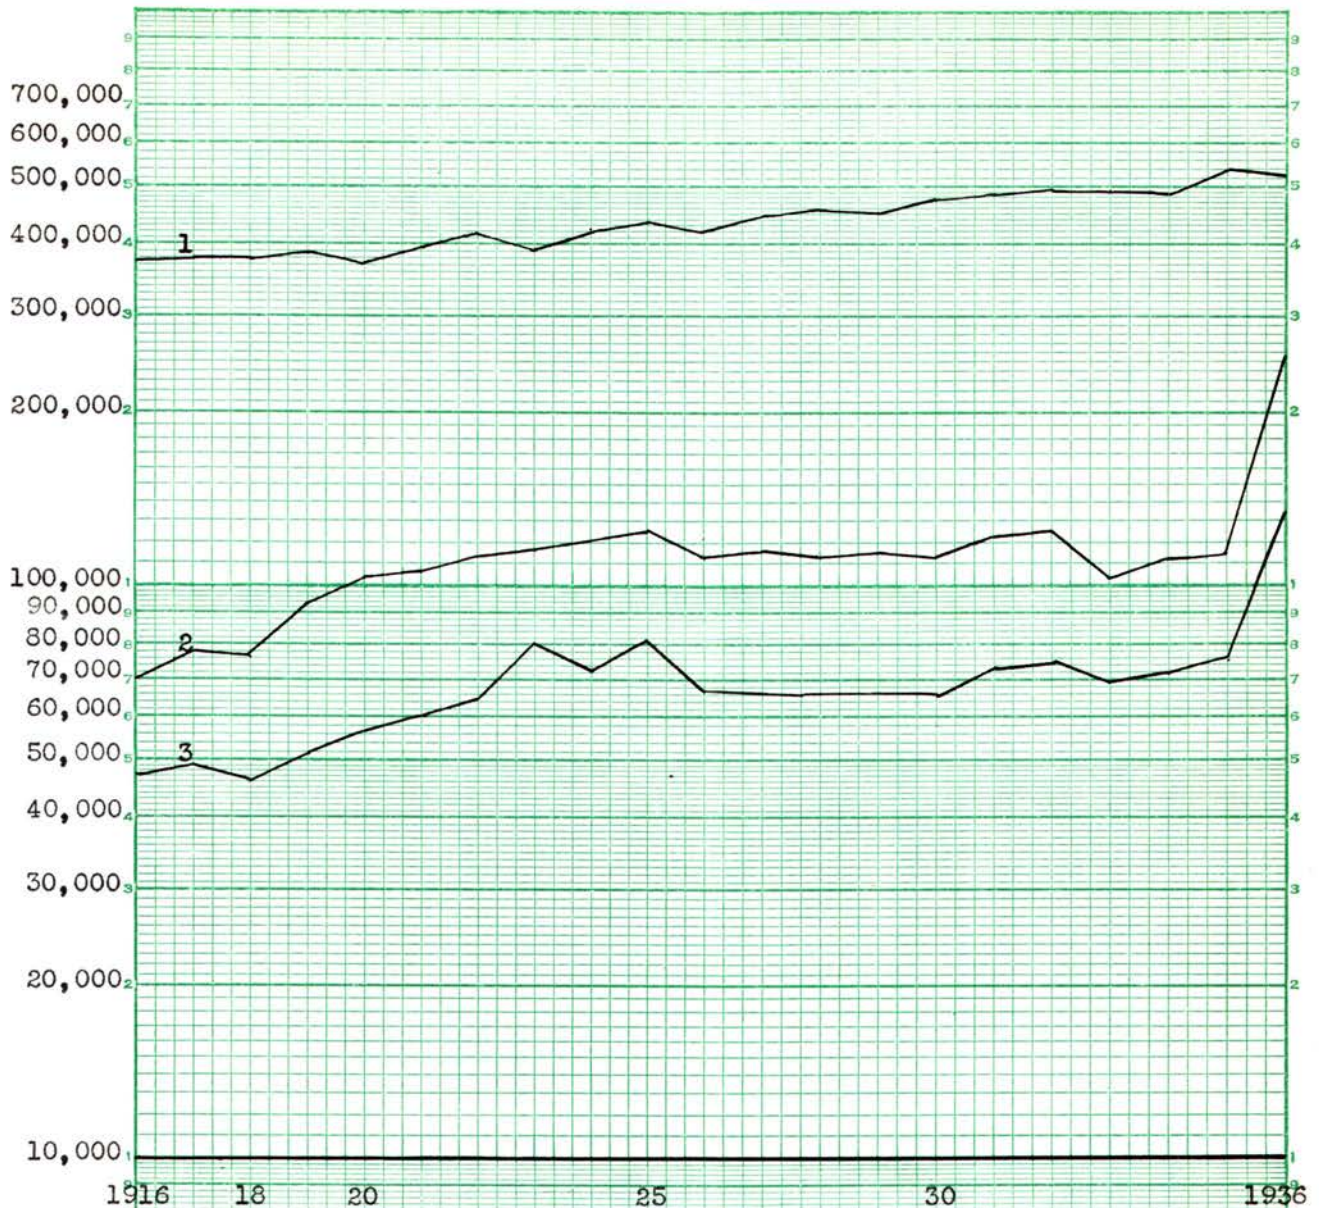

Figure 1. Rate of change in (1) Total Church Population, (2) Total Fast Offerings Paid, and (3) Number of Members paying Fast Offerings in the 118 Stakes of the Church of Jesus Christ of Latter-day Saints, 1916 to 1936.

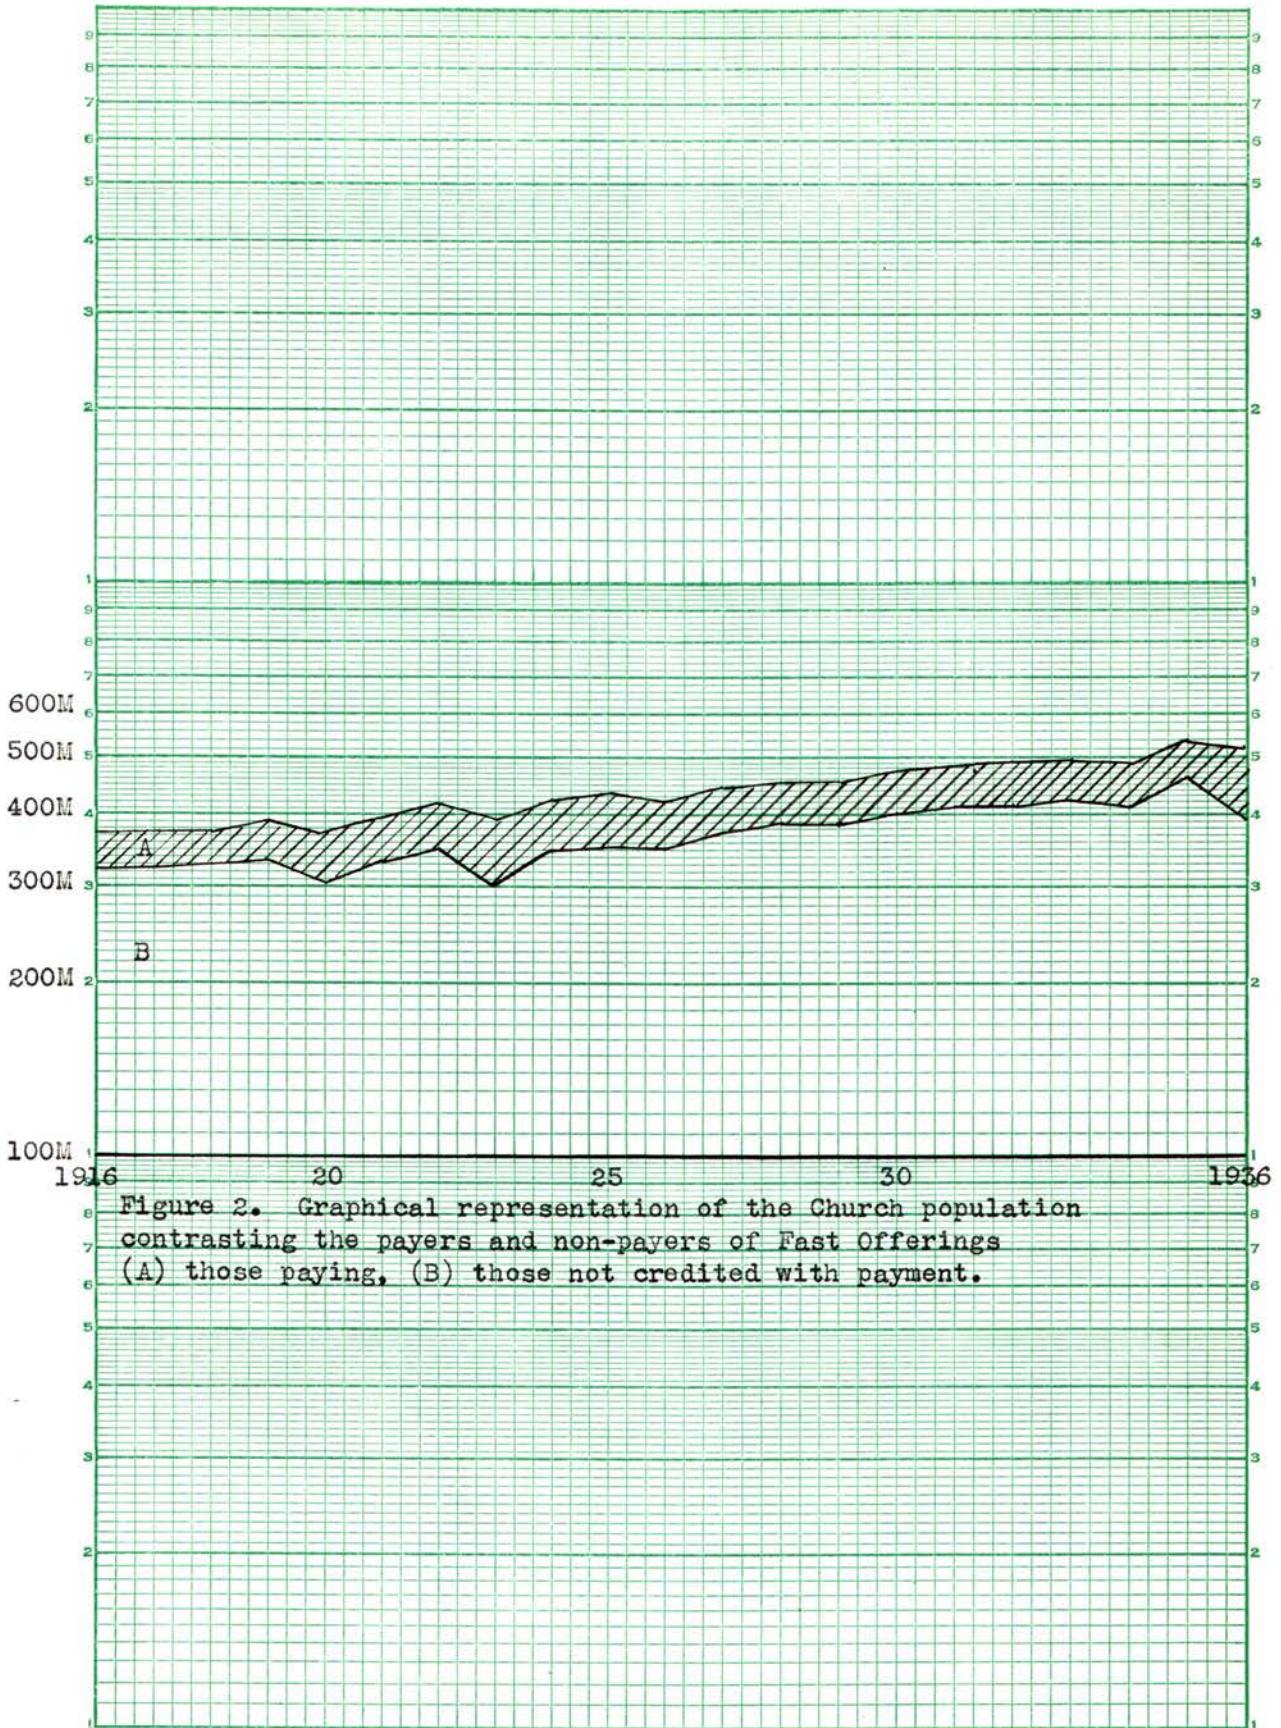

Figure 2. Graphical representation of the Church population contrasting the payers and non-payers of Fast Offerings (A) those paying, (B) those not credited with payment.

are situated in truly urban centers. This difference in situation suggested the possibility that there may be differences in payments of fast offerings between these rural and urban stakes. For this reason, it appeared desirable to separate the stakes on this basis. The population, and other data as given for the entire Church in Table II, are presented for the Urban stakes in Table III, and for the Rural stakes in Table IV. (See appendix) Analogous data has been used in the construction of graphs shown as Figures 3 and 4. This was done in the same manner as that used for the entire Church in Figure 1.

For the Rural stakes in the year 1916, the data show that about one out of every eight persons paid fast offerings. The average amount was approximately \$1.33 for each person who paid. In 1935, about one out of every seven and one-half persons paid fast offerings. For those paying the average amount paid was approximately \$1.42.

In 1936, about one out of every four persons paid fast offerings, while the average amount was approximately \$1.77 per person who paid. In this interval, 1916-1936, the population in the Rural stakes increased about forty-two per cent. The number who paid fast offerings increased one hundred ninety per cent. The total amount of fast offerings paid increased about three and three-fourths times.

9. The New York and California Stakes are excluded from those considered as Urban because their organization is comparatively recent, and they are not representative of the Urban stakes at the center of the Church.

The data for the Urban stakes show in the year 1916 that about one out of every seven persons in the Urban stakes of the Church paid fast offerings. The average amount was approximately \$1.97 for each person who paid. In 1935 about one out of every five persons paid fast offerings. The average amount paid was approximately \$1.64 for those who paid.

In the year 1936 about one out of every four persons paid fast offerings, while the average amount per person was approximately \$2.34. During the interval 1916-1936 the Urban stake population increased about forty-five per cent. The number who paid fast offerings increased three hundred per cent, while the total amount of fast offerings paid increased about three and one-third times in the same twenty-one years.

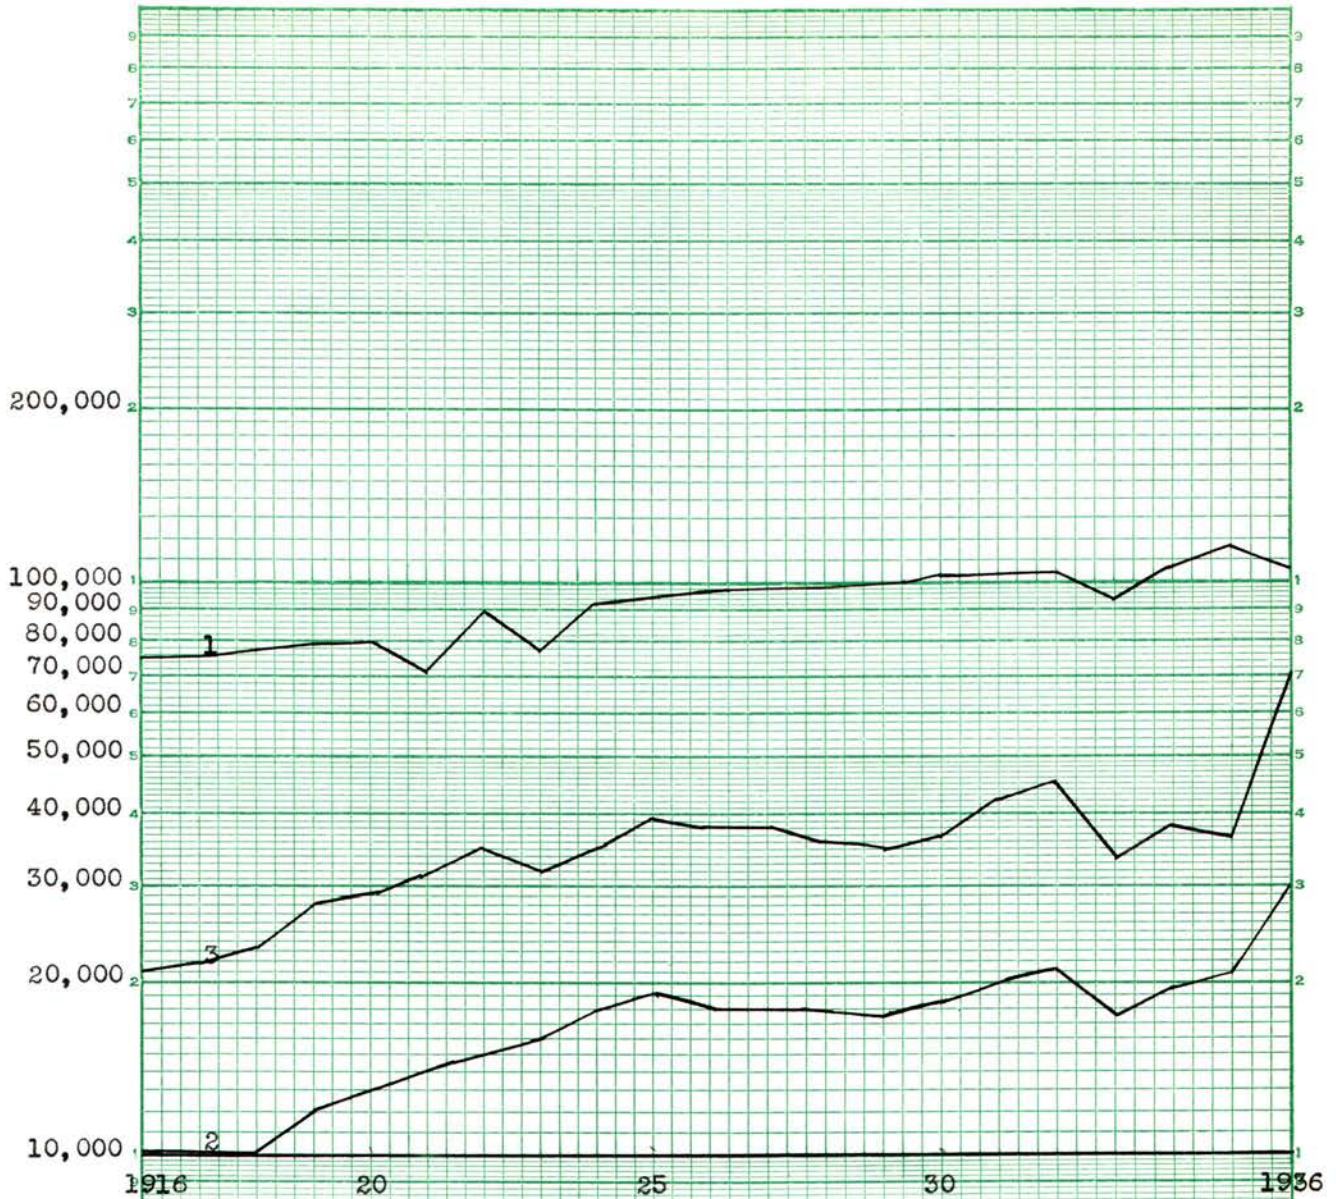

Figure 3. Comparative Rate of Change in (1) Total Urban Population, (2) Total Fast Offerings paid, and (3) Number Paying Fast Offerings in the 13 Stakes classed as Urban Stakes 1916-1936.

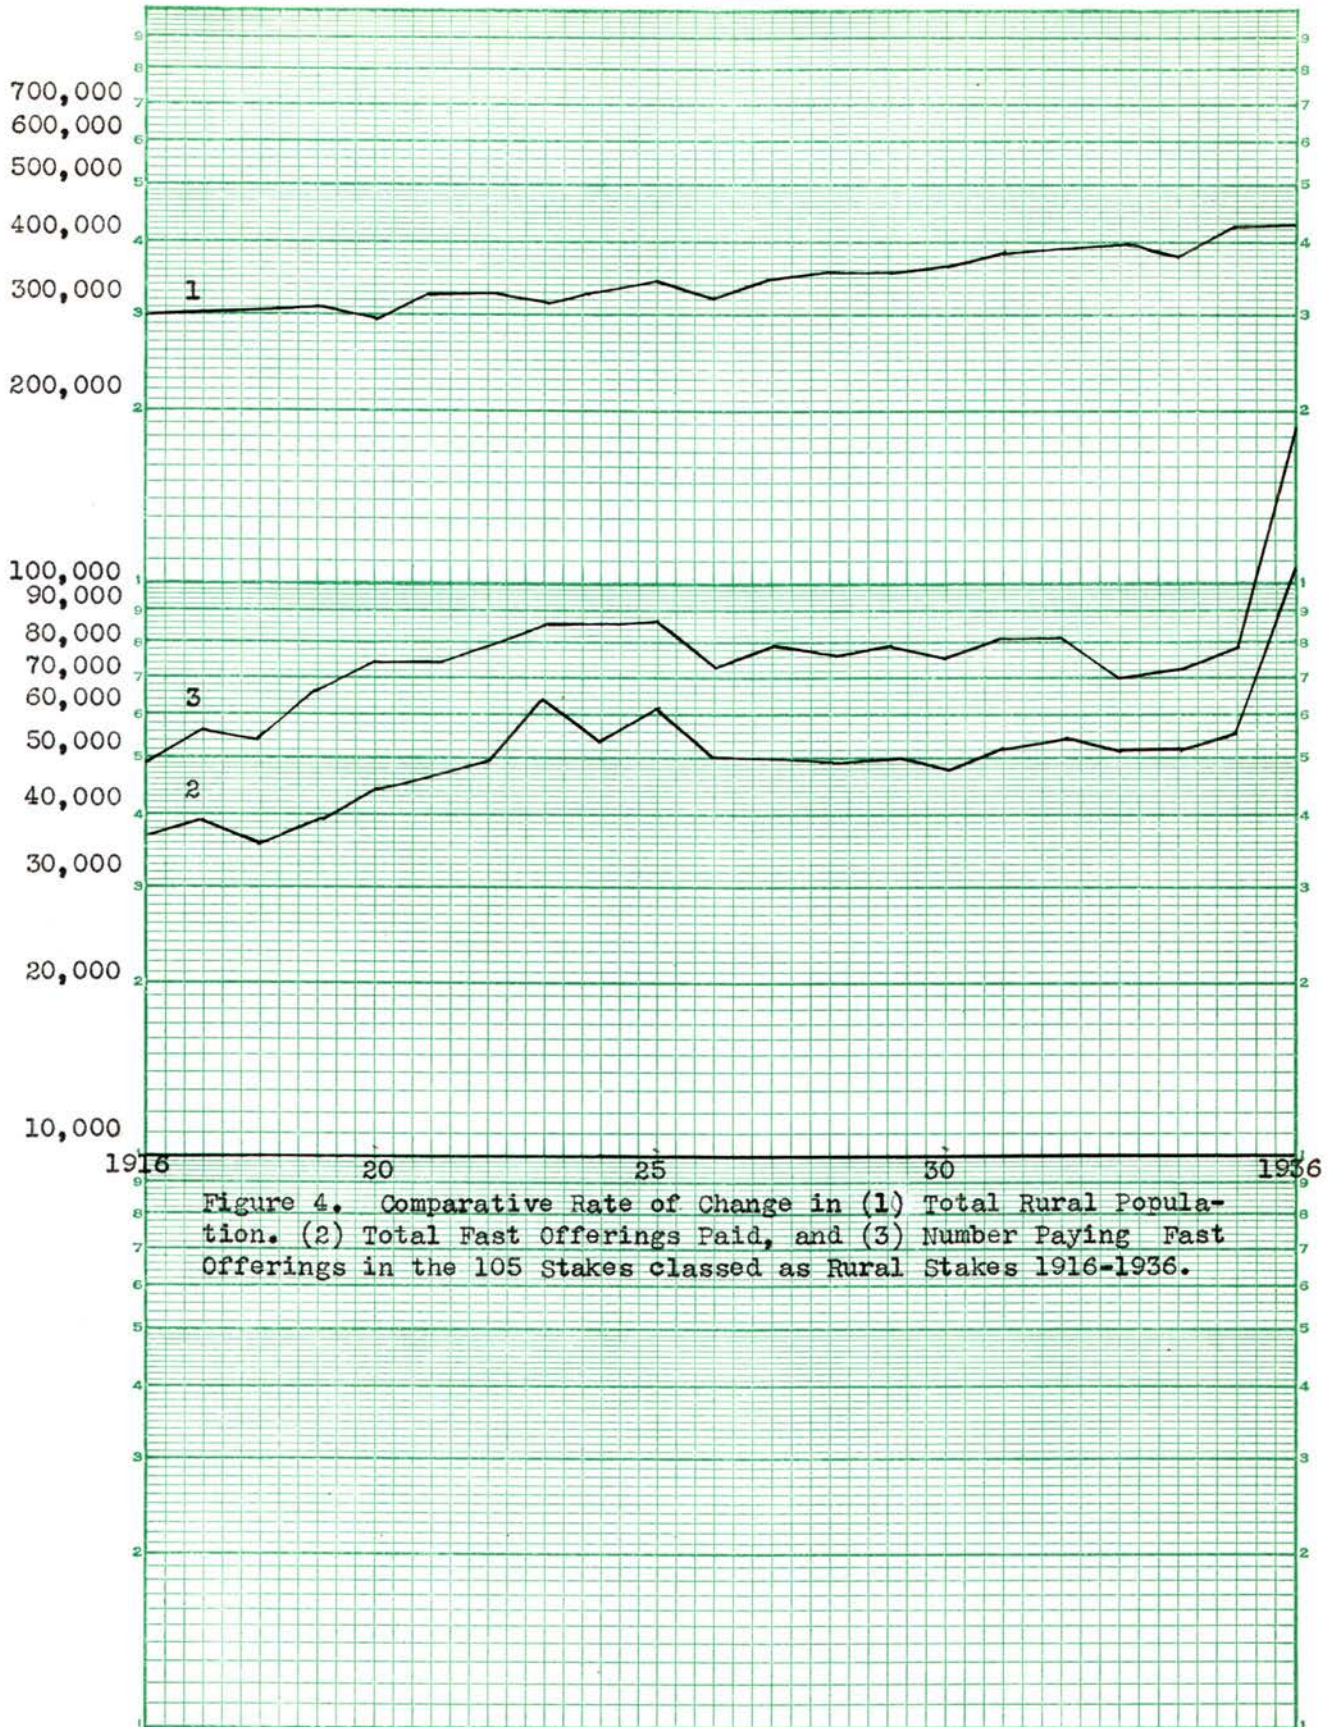

Figure 4. Comparative Rate of Change in (1) Total Rural Population. (2) Total Fast Offerings Paid, and (3) Number Paying Fast Offerings in the 105 Stakes classed as Rural Stakes 1916-1936.

CHAPTER IV

ANALYSIS OF FAST-OFFERING PAYMENTS ON A PER CAPITA AND A PERCENTAGE BASIS

From the data contained in Tables I to IV, the per cent of the population of the Church who paid fast offerings, the amounts per capita paid, and the amounts credited per capita to those who paid were computed. This was done for each of the years considered in this study. The data were assembled for each stake and they are shown in Table V.

Similar data compiled for the entire Church are presented as Table VI; data for Urban Stakes in Table VII; while in Table VIII, the data for the Rural stakes are shown. ¹⁰ (See Appendix)

Per Cent of the Church population who paid Fast Offerings

Thirteen per cent of the Church population paid fast offerings of some amount in the years 1916 and 1917. The number declined to twelve per cent in 1918, then increased gradually to twenty per cent

10. An individual study of each separate stake in the Church, if presented graphically from the data shown in Table V, would involve an enormous amount of work and it might not contribute much to this study. Therefore, no attempt has been made to present such data for each stake separately.

in 1923. A general decline then followed. At first it was abrupt, but through the latter years it became more gradual, reaching fourteen per cent in 1935.

These data for all stakes in the Church as presented in Table VI are shown graphically in Figure 5. Curve one represents the per cent of the Church population credited with having paid fast offerings.

In contrast to this general decline in fast offerings over a twelve year interval, 1923-1935, the facts for the year 1936 showed that in that year twenty-five per cent of the Church population within the stakes paid fast offerings. This was nearly double the proportion of Church members who paid fast offerings in 1935, and it was double the proportion who paid offerings in 1916.

Amounts of Fast Offerings Paid Per Person

For those who paid at all nineteen cents per capita was paid as fast offerings in 1916. From 1916 to 1923 the per capita payment for the total stake membership increased to thirty cents. Then followed a general decline in the amounts paid. At first the decline was gradual, but through the latter years the decline became abrupt. Only twenty-one cents per capita was paid in the year 1933 and again in 1935. The nineteen cents paid in 1916

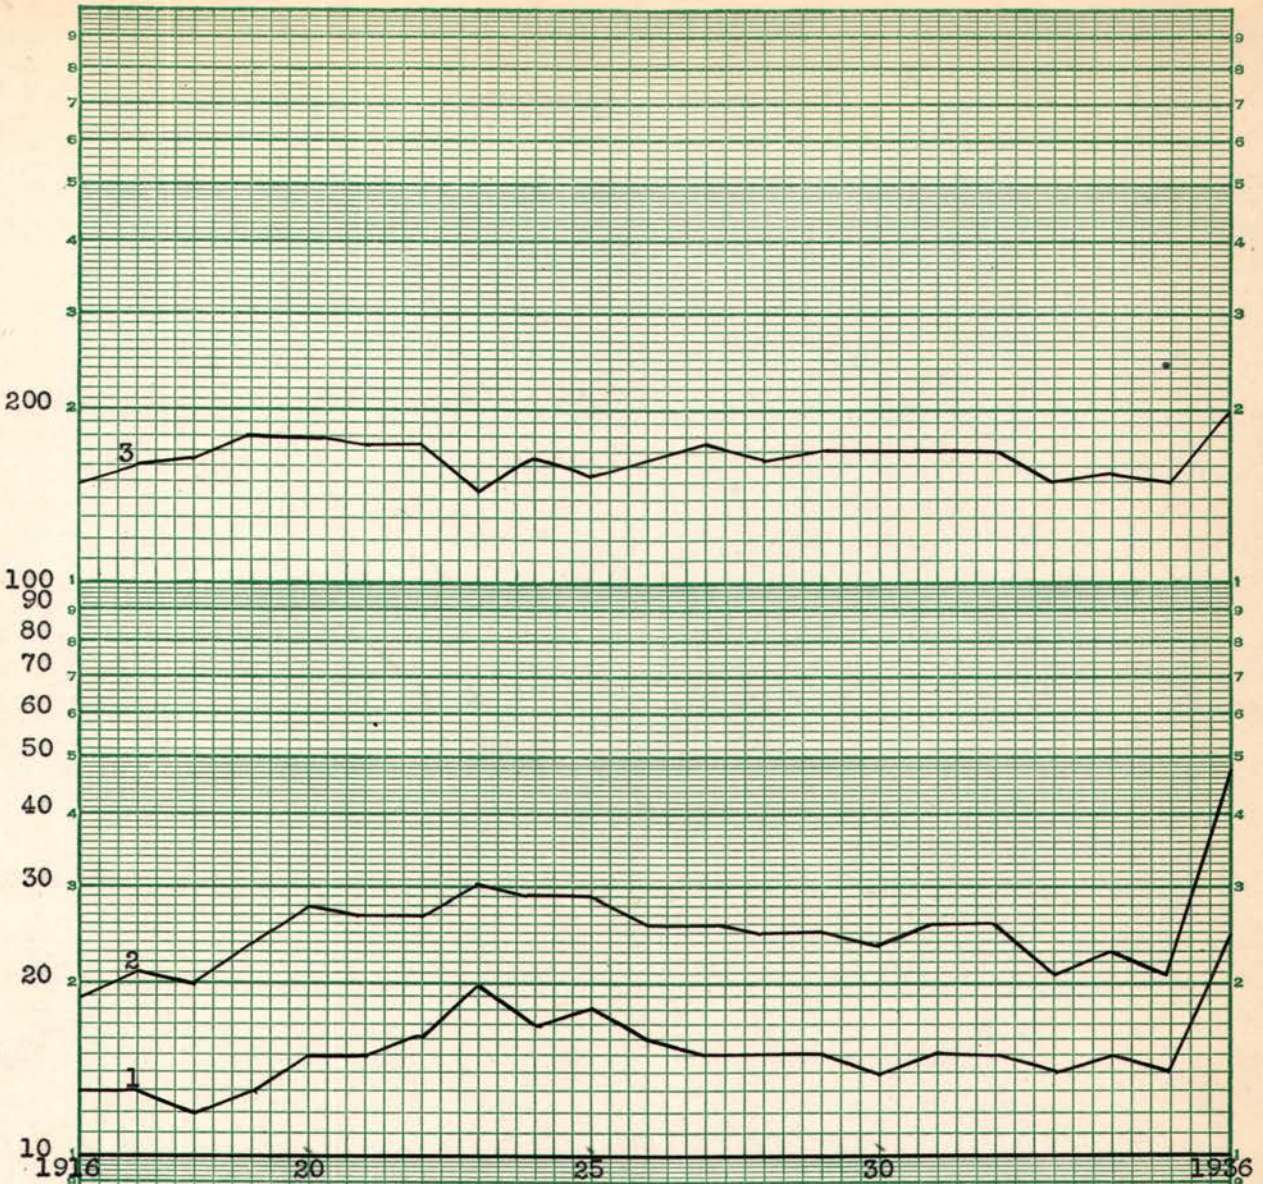

Figure 5. Comparative Rates of Change in (1) Percent of Church Population paying Fast Offerings, (2) Per-capita Amount of Fast Offering Paid, and (3) Per-capita amount paid by those who paid in the 118 Stakes of the Church, 1916-1936.

was the lowest per capita amount paid in any year in the entire period, although in each of the years 1917, 1933 and 1935, twenty-one cents was paid. This amount was but slightly above the payment in the year 1916. In curve two of Figure 5 the per capita amount of fast offerings paid during 1916-1936 is shown.

In marked contrast to this decline in the per capita payment of fast offerings in the Church over the twenty year interval, 1916-1935, forty-nine cents per capita was paid in the stakes of the Church in the year 1936. This was two and six-tenths times as much as the amount paid per person in 1916. It was sixty-five per cent greater than the per capita amount paid in 1923. The year 1923 showed the highest per capita payment between the years 1916 and 1935. The per capita payment in 1936 was one and one-third times more than the per capita payment in 1935.

In 1916 an average of \$1.49 was paid as fast offerings by each person who paid. From 1916 to 1919 there was a regular increase in this amount up to \$1.81. Then followed a gradual decline to the year 1923 when a per capita payment of \$1.46 was made by those who paid. This was the lowest per capita payment for any of the years from 1916 to 1936.

A rather regular curve of per capita payments continues from 1924 to 1932, but after 1932 there was an abrupt decline to \$1.50 for 1933, \$1.54 for 1934, and \$1.51 in 1935. Within the interval 1916-1935, the per capita payment by those who paid fast offerings was the lowest in 1916. The second lowest year was 1923. The year 1935 was the third lowest.

In 1936 the per capita payment of fast offerings made by those who paid increased to \$1.93. This amount represented an increase over the year 1935 of about twenty-eight per cent, while it exceeds the lowest year (1923) by thirty-two per cent. The amount of fast offerings paid per capita by those who paid during 1916-1936 is represented in curve three of Figure 5.

Fast Offerings paid in Urban and in Rural Stakes

In most populations marked economic differences may be expected to exist between industrial centers and sparsely populated areas. It is interesting to study the differences in the fast offerings payments between the Urban and Rural populations of the Church. For this study, therefore, the organized stakes of the Church were classified into two groups, Urban and Rural. This was done in order to discover and compare any possible differences in the payment of fast offerings made in Urban and Rural areas.

Thirteen stakes that embrace the most thickly populated areas within the Church were classified as Urban stakes. The remaining one hundred five stakes were classified as Rural stakes. Based upon this division, the data presented in Tables VII and VIII for the Rural and Urban stakes respectively were compiled in the same manner as were the data in Table VI for the entire Church.

Payment of Fast Offerings in Urban Stakes

For the years 1916, 1917, 1918, fourteen per cent of the population thus classed as Urban paid fast offerings. From that point on the increase is irregular but upward to the year 1923 when twenty-one per cent of the Urban population paid fast offerings. This was the highest record of payment for the years 1916 to 1935. From 1924, when twenty per cent paid, until 1935, the general trend showed an increase of approximately twenty-nine per cent in the number of Church members who paid any fast offerings in the Urban stakes of the Church.

The data shown in Table VII (see appendix) are presented graphically in Figure 6. In this Figure curve one represents the per cent of Urban Church population who paid fast offerings.

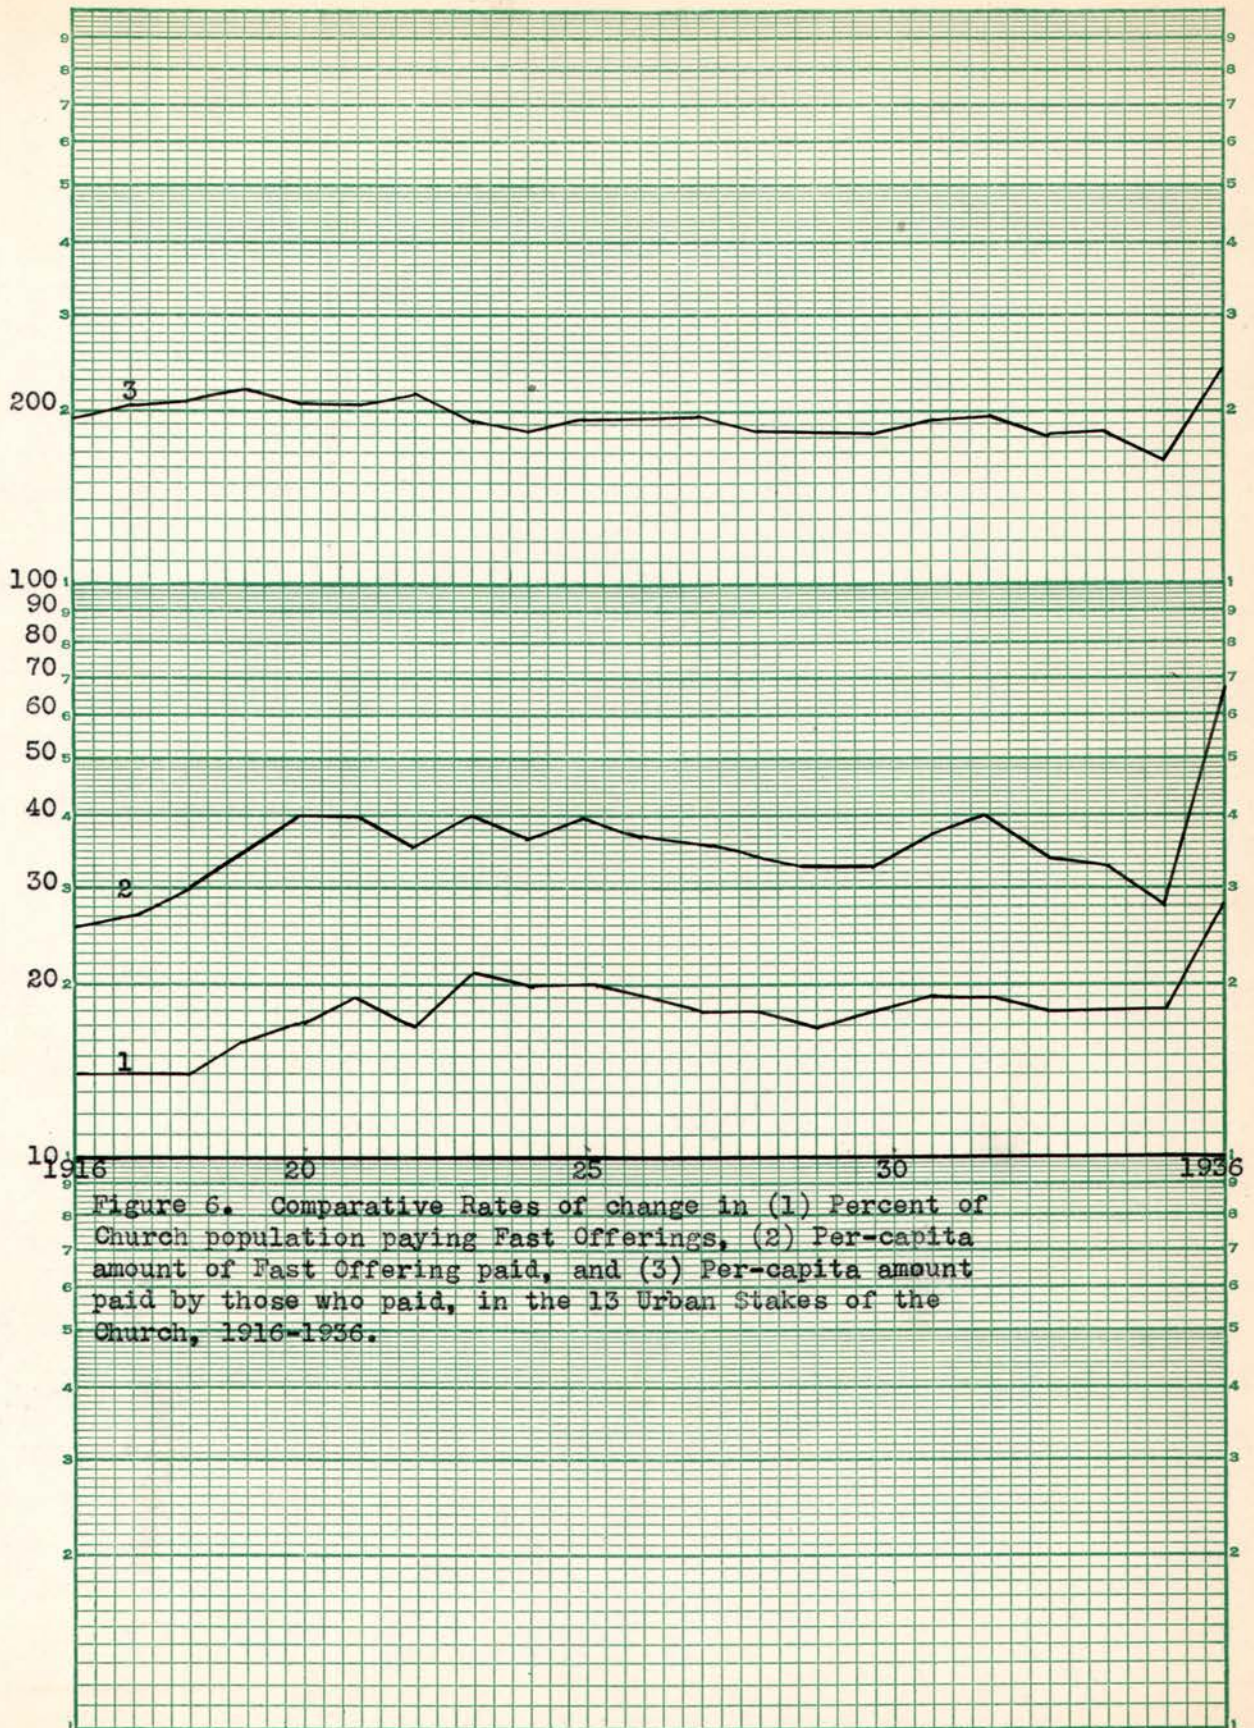

Figure 6. Comparative Rates of change in (1) Percent of Church population paying Fast Offerings, (2) Per-capita amount of Fast Offering paid, and (3) Per-capita amount paid by those who paid, in the 13 Urban Stakes of the Church, 1916-1936.

In the year 1936 twenty-eight per cent of the Urban population of the Church paid fast offerings. This was an increase of about fifty-five per cent over the number who paid in 1935. In the stakes classified here as Urban the total amount paid as fast offerings for 1936 was one hundred per cent above the payment for 1916.

In 1916 the per capita fast offerings paid by the membership of the Urban stakes was twenty-six cents. There was a rapid rise from 1916 to 1923, when forty cents per capita was paid. The 1923 payment was followed by a general but fluctuating decline to twenty-eight cents per capita in 1935. The 1936 per capita payment in Urban stakes was sixty-five cents. This is shown in curve two Figure 6.

The per capita payment of fast offerings in the Urban stakes in 1936 was an increase over 1935 of about one hundred thirty-two per cent. The 1936 payment was an increase of about one hundred fifty per cent over the year 1916.

In 1916 the per capita amount paid by those who paid in the Urban stakes was \$1.97. This was followed by a rapid increase to \$2.20 in 1919. There was then a gradual but irregular decline to \$1.64 in 1935. In 1936 the per capita amount paid by those who paid was \$2.34. This is shown in curve three of Figure 6.

The increase in per capita amount paid by those who paid fast offerings in the Urban stakes in 1919 over that of 1916 was about twelve per cent. The per capita amount paid by those who paid in 1935 was about twenty per cent below that of 1916, and about thirty-four per cent below the high payment of 1919. The per capita amount paid by those who paid in 1936 was about nineteen per cent above the payment made in 1916 and about forty-three per cent above the payment made in 1935.

Fast Offerings paid in the Rural Stakes

In the year 1916, twelve per cent of the Church population in the stakes classified here as rural were credited with the payment of fast offerings. There was a gradual increase up to the year 1923, when twenty per cent of the members in these stakes participated. From the peak of 1923 there was a marked decrease in 1935 when only thirteen per cent of the Rural stake population paid fast offerings. From the years 1916 to 1935 there was a total ultimate increase of but one per cent. This is shown in Table VIII and curve one of Figure 7.

Twenty-four per cent of the population in these Rural stakes paid fast offerings in 1936. The increase over 1935 was eighty-five per cent, while it was one hundred per cent increase over 1916. The increase in percentage of Rural population who paid fast offerings in 1935 over 1916 was eight-tenths of one per cent.

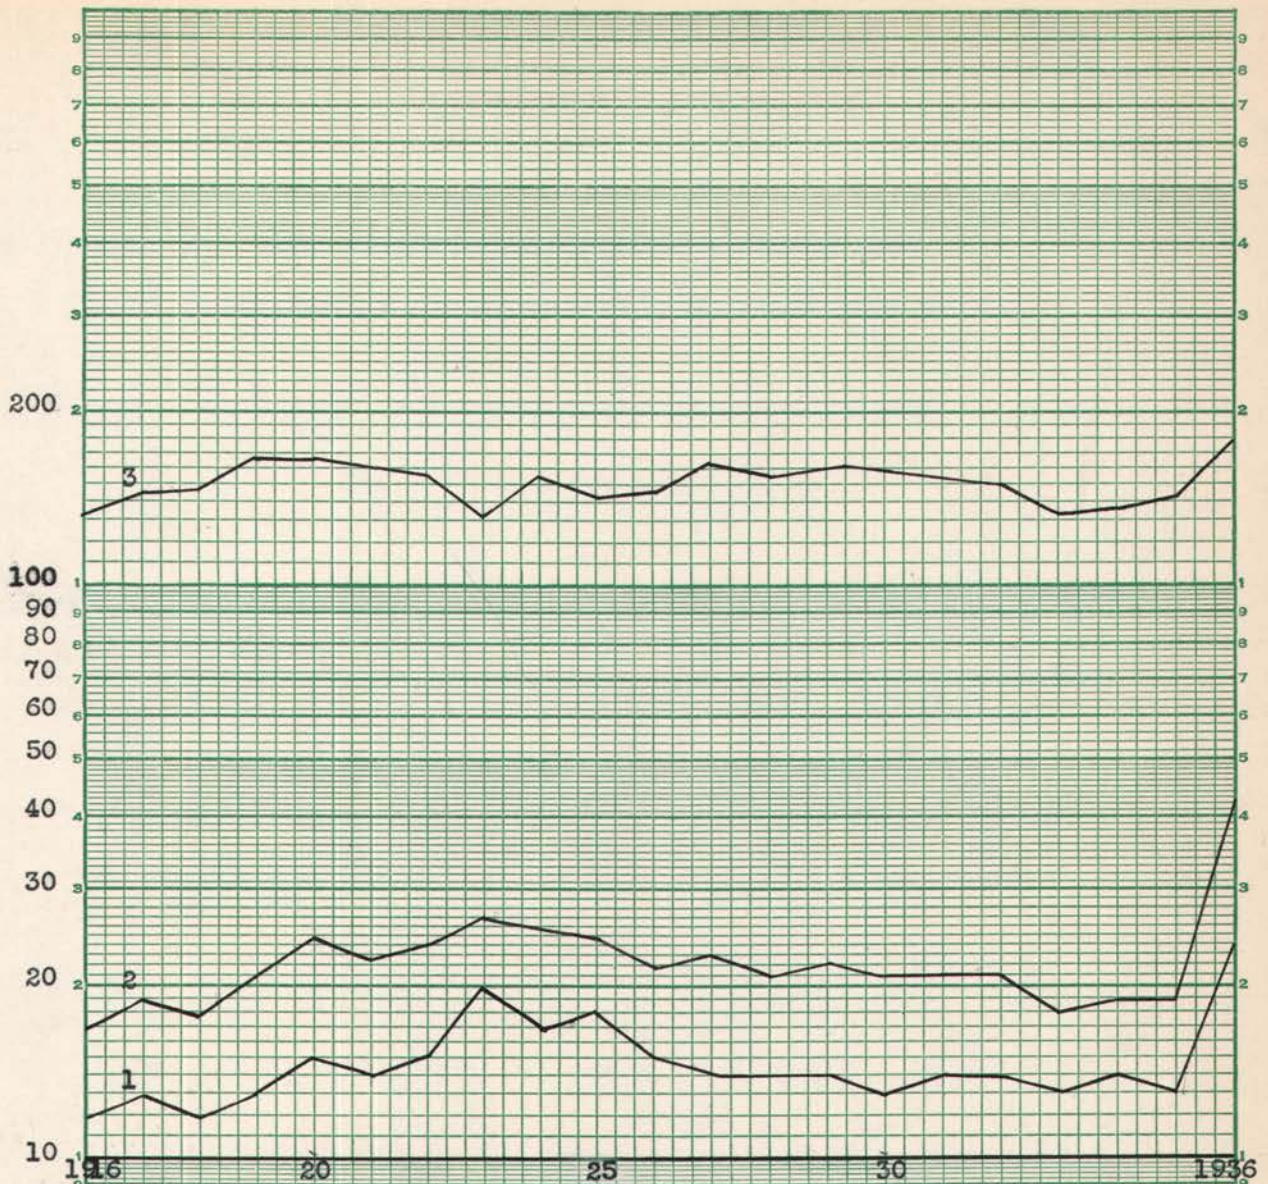

Figure 7. Comparative Rates of Change in (1) Percent of Church Population paying Fast Offerings, (2) Per-capita amount of Fast Offering Paid, and (3) Per-capita amount paid by those who paid, in the 105 Rural Stakes of the Church, 1916-1936.

In 1916 the per capita fast offerings paid by the membership of the Rural stakes was seventeen cents. There was a general rapid increase in the per capita amount of fast offerings paid in the Rural stakes to twenty-seven cents in 1923. There followed a general but somewhat irregular decline in per capita amounts paid to the 1935 payment which was nineteen cents. There was a payment of forty-three cents in 1936.

The most noticeable irregularity in per capita fast offerings paid for the Rural stake membership occurred in 1933 when there was a per capita amount paid of but eighteen cents. The increase in the per capita amount paid by the membership of the Rural stakes between 1916 and 1935 was about twelve per cent. The increase in 1936 of per capita fast offering payment for the Rural stake population over 1935 was approximately one hundred twenty-six per cent.

In 1916 the per capita amount paid by those who paid was \$1.33. The next four years the increase is fairly regular and rapid, reaching a height in 1920 of \$1.69. From the year 1919 the amount paid by those who paid in the Rural stakes is noticeably irregular, but it has a general tendency to decline until the year 1935, for which a payment of \$1.42 was recorded. The amount paid in 1936 was \$1.77. This is shown in curve three of Figure 7.

The lowest per capita amount paid by those who paid in the Rural stakes during the interval 1916 to 1936 occurred in 1923 when there was a payment of \$1.32. The increase of payment in 1935 over 1916 was about seven-tenths of one per cent. In 1936 the payment was a thirty-three per cent increase over 1916. It was a twenty-five per cent increase over the payment in 1935.

Per cent, Per capita and Total Amounts of Fast
Offerings paid in Stakes of the Church
 11

The total amount of fast offerings paid by the organized stakes in the Church from 1916 to 1936 is shown in Figure 8. Curves one and two of this figure are the same as one and two in Figure 5. Here they have been brought closer together and a third curve (same as curve two Figure 1) has been added.

The fluctuations that occur in the per cents of Church population who paid, as represented by curve one of Figure 8, are affected by an increase or decrease in the number who paid fast offerings. The fluctuations in curve two are an expression of the increase or decrease in the per capita amounts paid by those who paid fast

11. After considering the data already discussed it became obvious that other relationships existed and that they should be developed. To do this it became necessary to regroup certain curves that have already been shown. This regrouping and analysis is given here.

offerings. Curve two also depicts the average amount paid by those who paid fast offerings. It is obvious that the two curves would have paralleled each other at all analogous points throughout their lengths if the per capita amount paid by the stake membership had remained constant.

As the two curves (per cent of Church population who paid and the per capita amount paid by those who paid fast offerings) now appear they are parallel at no common points due to the fact that the per capita amount paid constantly fluctuated to a different degree than did the per cent of population who paid. Normally one might expect that as the per cent of population who paid fast offerings increased, the per capita amount paid may have decreased. Thus the two effects would offset each other and the result would be a fairly uniform total paid by the organized stakes. But the total amount paid does not show a constant trend for more than about four consecutive years, 1922 to 1925. From 1925 to 1935 there is a decided fall, followed with a sudden rise in 1936. Curve three in Figure 8 shows these facts.

It is now in order to point out the irregularities and the similarities to be observed in the three variable functions represented by the curves of Figure 8.

From 1916 to 1918 the per cent of Church population

who paid fast offerings shows a slight decline. The per capita amount paid by those who paid shows an abrupt increase. The total fast offerings paid in all the stakes of the Church for the years 1916 to 1918 shows an increase.

The per cent of Church population who paid fast offerings and the per capita amount paid by those who paid for the year 1919 shows a pronounced increase over the years 1916 to 1918. While in 1919 the total fast offerings paid for the Church population within the stakes showed the greatest increase of any year preceeding 1936.

From 1919 to 1923 the per cent of Church population who paid fast offerings shows an increase, while from 1923 to 1935 there is a pronounced decrease. The per capita amount paid by those who paid reached the highest point in 1919, then follows a precipitate decline to the lowest point reached in 1923. From 1923 to 1927 the rise is irregular, while there is an accelerating decline to 1933, with but little change to 1935. These facts are revealed in curve two Figure 8.

The total amount of fast offerings paid by the stake membership of the Church from 1919 to 1925 shows an increase. This increase in fast offerings is the result of an increase

in stake population, even though for the same time interval the per capita amount of fast offerings paid by those who paid decreased.

The total amount of fast offerings paid by the stake membership of the Church for the years 1925 to 1930 shows a consistent decrease.

There was a decline in the per cent of stake population who paid fast offerings from 1925 to 1930, while for the same time interval the per capita amount paid by those who paid showed a slight increase. It appears that the decline in the number who paid practically offset the per capita amount paid, notwithstanding the increase in population continued to exhibit the upward trend.

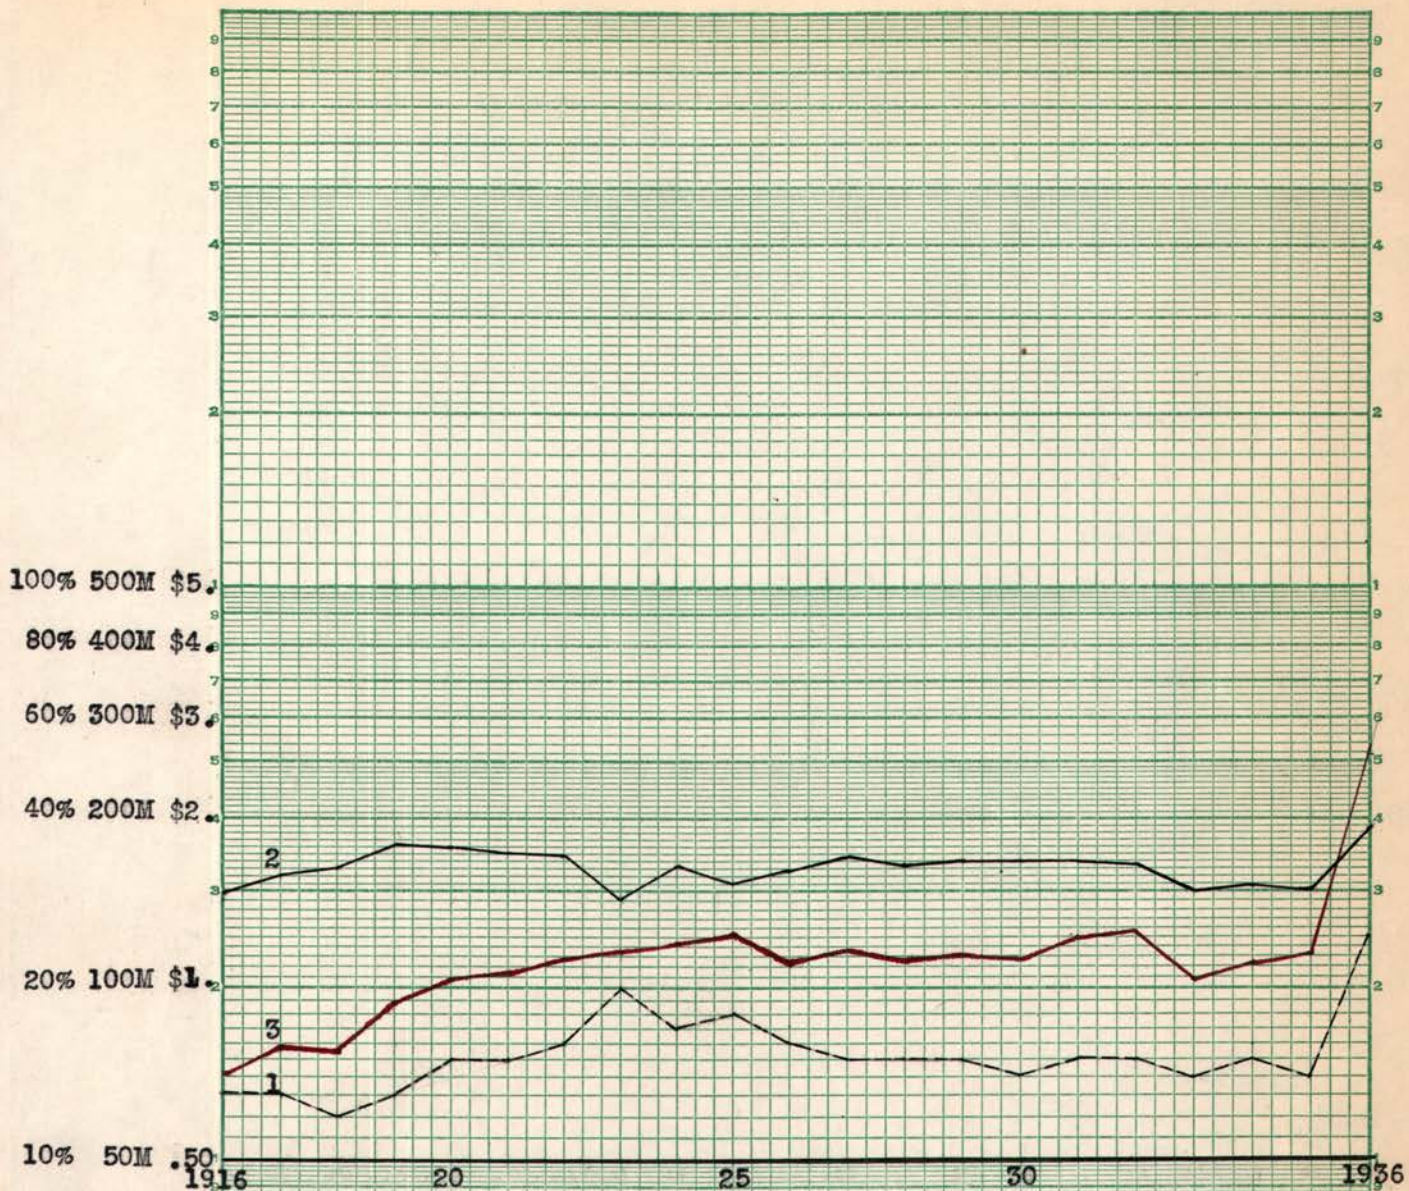

The year 1931 showed an increase in the per cent of Church population within the stakes who paid fast offerings and a slight decline in the per capita amount paid by those who paid. There was a decided rise in the total amount of fast offerings paid by the stake membership. This rise in the total amount of fast offerings paid can be accounted for by the influence in per cent of the Church population who paid and in the increase in population.

For the year 1933 there was a decline in the per cent of the Church population within the stakes who paid

fast offerings, the per capita amount paid by those who paid and the total amount of fast offerings paid. In the year 1934 a slight rise is noted.

The year 1935 showed a decrease in the per cent of Church population within the stakes who paid fast offerings. There was also a decrease in the per capita amount of fast offerings paid by those who paid. In contrast there was an increase in the total amount paid by the membership of the stakes. This increase in the total amount paid may have been the result of an increase in population within the stakes for the year 1935.

In the year 1936 there was a pronounced increase in the per cent of Church population within the stakes who paid fast offerings and in the per capita amount paid by those who paid. The increase in the per cent who paid and the per capita amount paid is ample to account for the increase in the total amount of fast offerings paid by the stake membership within the Church. Curves one, two and three of Figure 8 show these facts.

8 Figure 8. Analysis of relationships between (1) Percent of Church Population paying Fast Offerings, (2) Per capita amount of Fast Offerings paid, and (3) Total Fast Offerings paid, in the 118 Stakes of the Church, 1916-1936

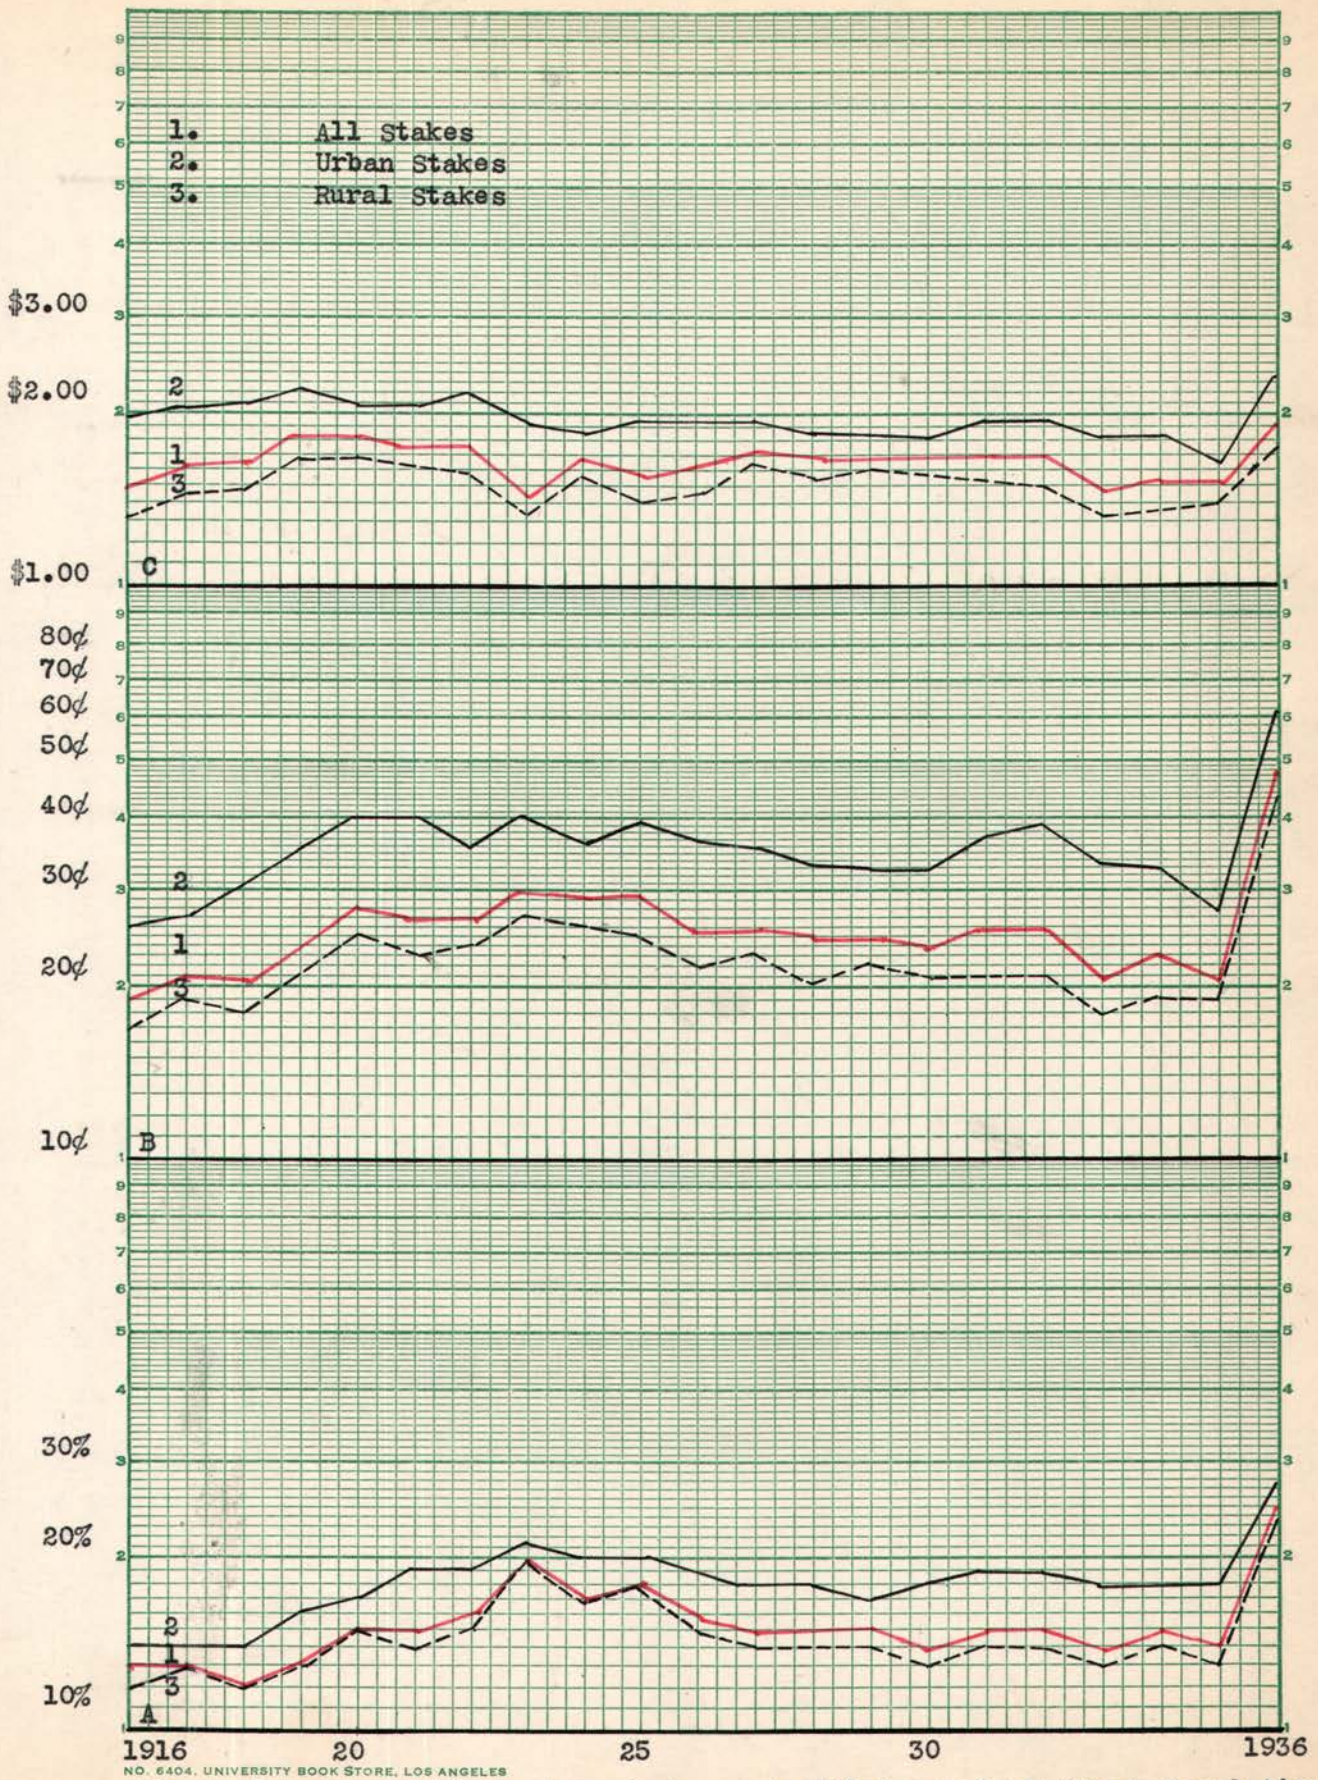

Rates of change in fast offerings for Urban,
Rural and Combined Stakes

The Rural population of the organized stakes of the Church was consistently about four times greater in total members than was the Urban population for the years 1916 to 1936. This fact makes it possible to proceed with reasonable assurance of safety to draw comparisons between these two groups of stakes. Such comparisons (see Tables VI, VII, VIII) are shown graphically in Figure 9.

For the years 1916 to 1936 the average per cent of the population who paid fast offerings in the Rural stakes was always below the per cent of Church population who paid fast offerings. The average per cent of the Urban population who paid from 1916 to 1936 was above the per cent of Church population who paid fast offerings.

An apparent source of error appears here because the per cents are figured to the closest whole number and fractional differences are omitted. Sections A, curves one, two and three of Figure 9 show these facts.

The average per capita amount paid and the per capita amount paid by those who paid fast offerings in the Rural stakes was always below the same amounts paid by the population for all of the stakes, while the Urban stakes were above. Sections B and C, with curves one, two and three in Figure 9 show these facts.

NO. 6404, UNIVERSITY BOOK STORE, LOS ANGELES

Figure 9. Comparative rates of change in (A) Percent of Church Population paying Fast Offerings, (B) Per-capita amounts of Fast Offering Paid, and (C) Per-capita amount paid by those who paid in (1) All Stakes of the Church, in (2) Urban Stakes, and in (3) Rural Stakes.

In checking the variations that occurred in the per cent of Church population who paid fast offerings, the per capita amount paid by the population and the per capita amount paid by those who paid fast offerings within the Urban and Rural stakes it was found that frequently individual stakes in Rural areas exceeded individual stakes in Urban centers. For this reason there is no absolute ground of demarkation by which it can be said that in all cases Urban stakes showed a higher per cent of population who paid, per capita amount paid are a higher per capita amount paid by those who paid.

Fast Offerings Payments Presented Graphically

The comparisons of the average payments of fast offering in the Urban, Rural and total stakes with respect to per capita amounts paid and the per cent of membership who paid fast offerings are made more clear when they are presented graphically. This is done by dividing the period 1916 to 1936 into four consecutive five-year intervals and by treating the year 1936 as a separate interval.

The per capita amount of fast offerings paid in the Urban stakes for the years 1916 to 1920 were in excess of thirty cents. The average per cent of the population who paid fast offerings was about sixteen per cent.

From 1921 to 1925 in the Urban stakes the average per capita amount paid exceeded thirty-eight cents. The average per cent of members who paid exceeded nineteen per cent. In the following five year period, 1926 to 1930, there was a noticeable decrease in the average per capita amount paid and in the average per cent who paid. In the interval from 1931 to 1935 the average per capita amount of fast offerings paid decreased to about thirty-two cents, but the average percentage of members who paid exceeded eighteen per cent.

In contrast to all preceeding years the average per capita amount paid in 1936 reached sixty-five cents, and in this year twenty-eight per cent of the Urban membership paid some amount of fast offerings. Section A Figure 10 show these facts.

It is noticeable that the average per capita amount paid and the average per cent of the Rural stake population who paid fast offerings was lower in every time period considered than was that for the Urban stakes. The average per cent of the Rural stake population who paid fast offerings is higher comparatively than is the average per capita amount paid when these relationships for the Rural population are compared to analogous relationships of the Urban population. Section B Figure 10 show these facts.

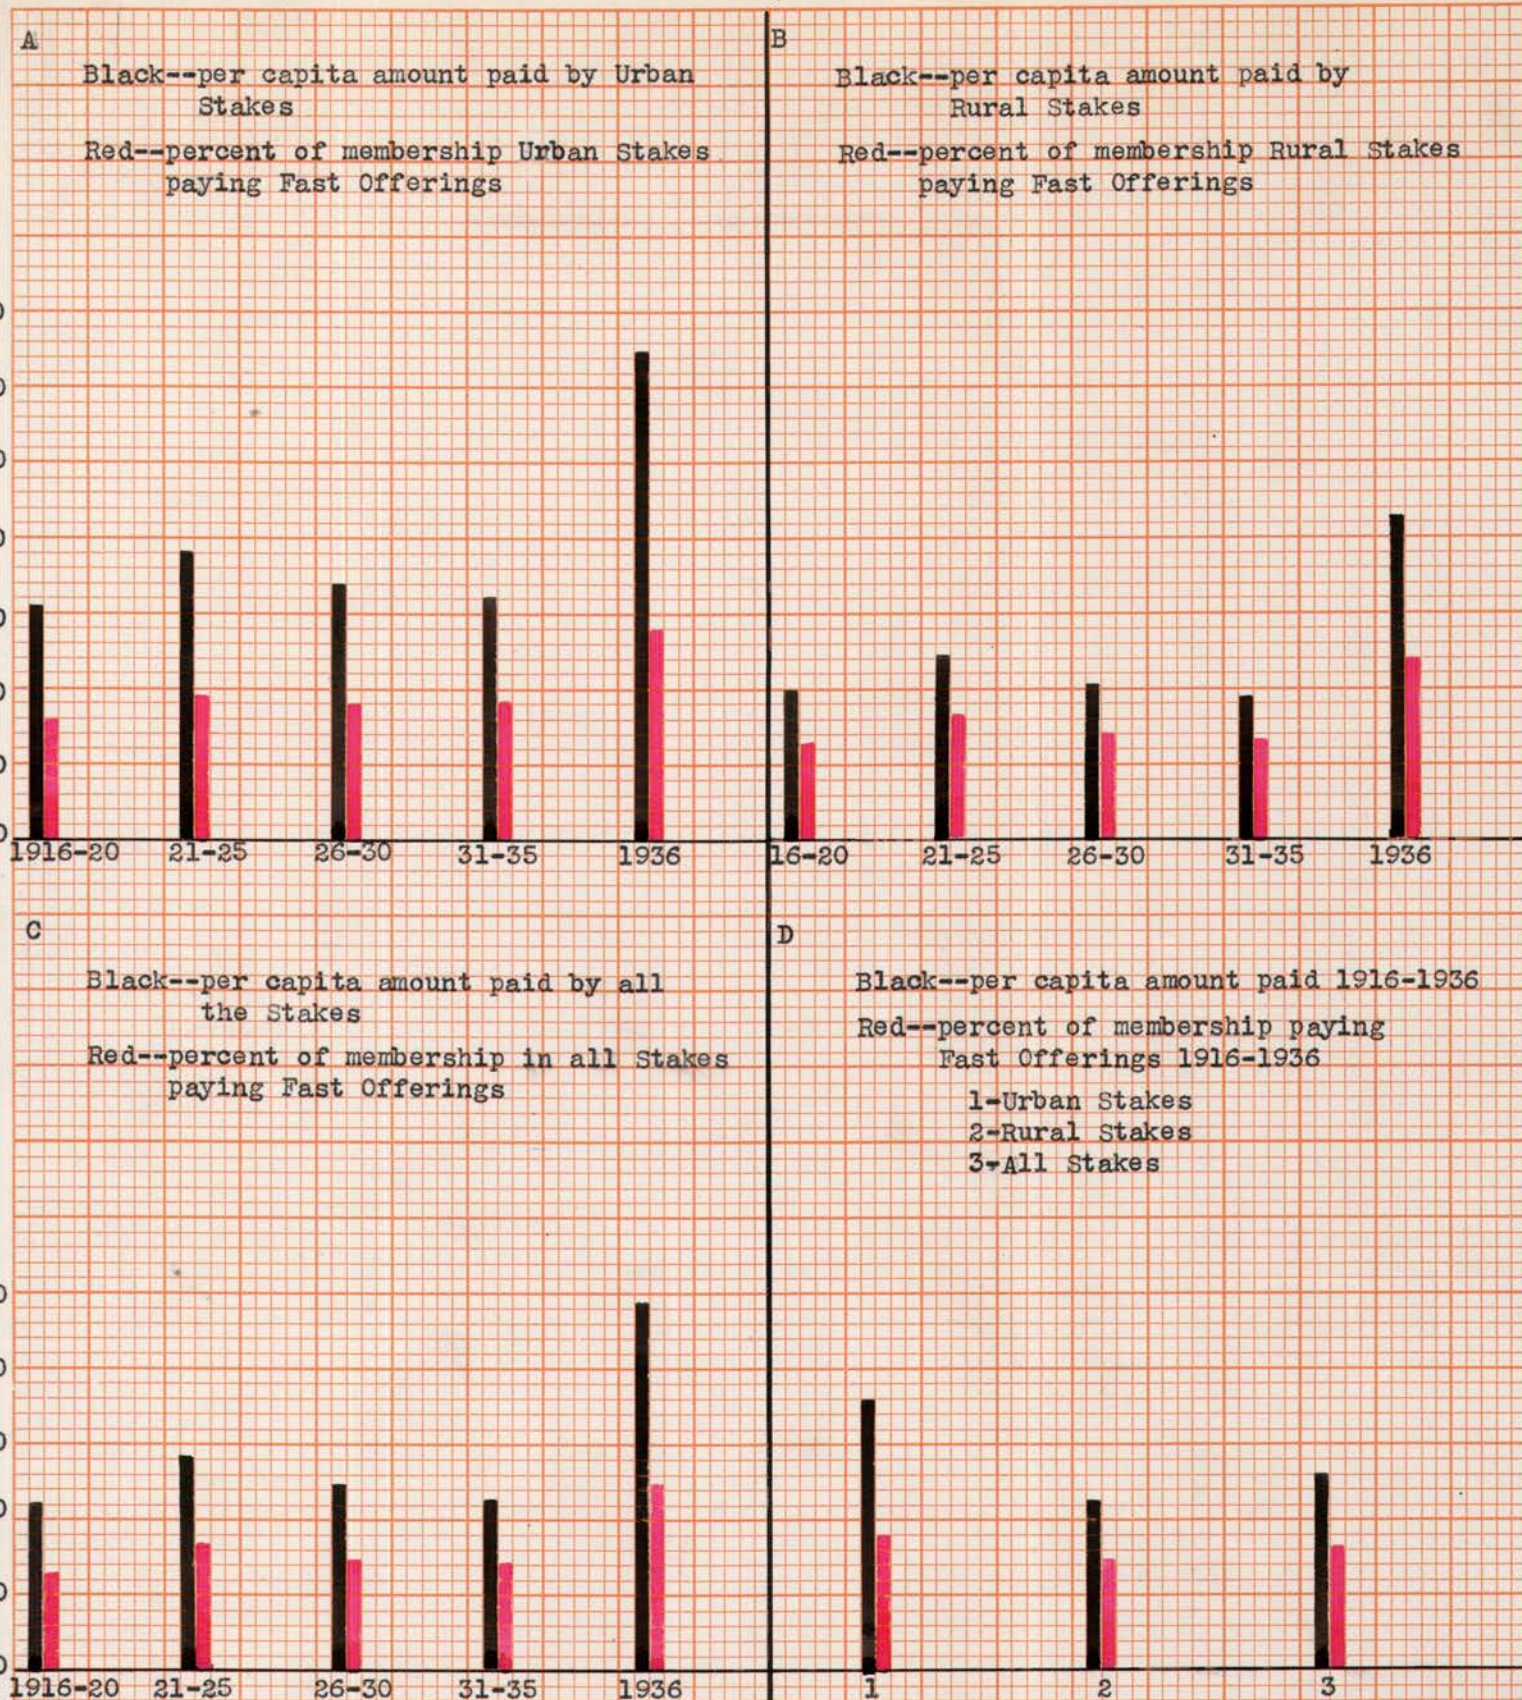

Figure 10. Graphical representation of per capita amounts paid and percent of membership paying Fast Offerings (1916-35) grouped by five year intervals with 1936 comparisons and summary. (A) Urban Stakes; (B) Rural Stakes; (C) All Stakes; (D) Summarization of Urban, Rural and All Stakes.

The average per capita amount paid and the average per cent of the Church population of all the stakes who paid fast offerings are intermediate between the relationships of the Urban and Rural stakes. These facts are revealed in Section C Figure 10.

A higher average per capita amount and a higher average percentage of the Urban stakes membership paid fast offerings than was the case in the Rural stakes. The evidence for this is shown graphically in Section D of Figure 10.

Variations in Total Amounts of Fast Offerings

Paid over a Period of Years

In total dollars of fast offerings paid in 1916, the lowest stake reported a payment of about \$150.00, while the highest stake paid \$5300.00. The mean total amount paid in 1916 was \$650.00. Of the seventy-two stakes which paid in 1916, fifty-nine fell below the payment of \$1500.00

In 1926 the diversity among the stakes in total amounts paid increased. The lowest of the ninety-three stakes reported a total payment of about \$100.00, while the highest total amount reported from any one stake was \$7500.00. The mean total amount was \$800.00. Eighty-two of the ninety-three stakes fell below a fast offering payment of \$2000.00.

For the year 1936 one hundred seventeen stakes

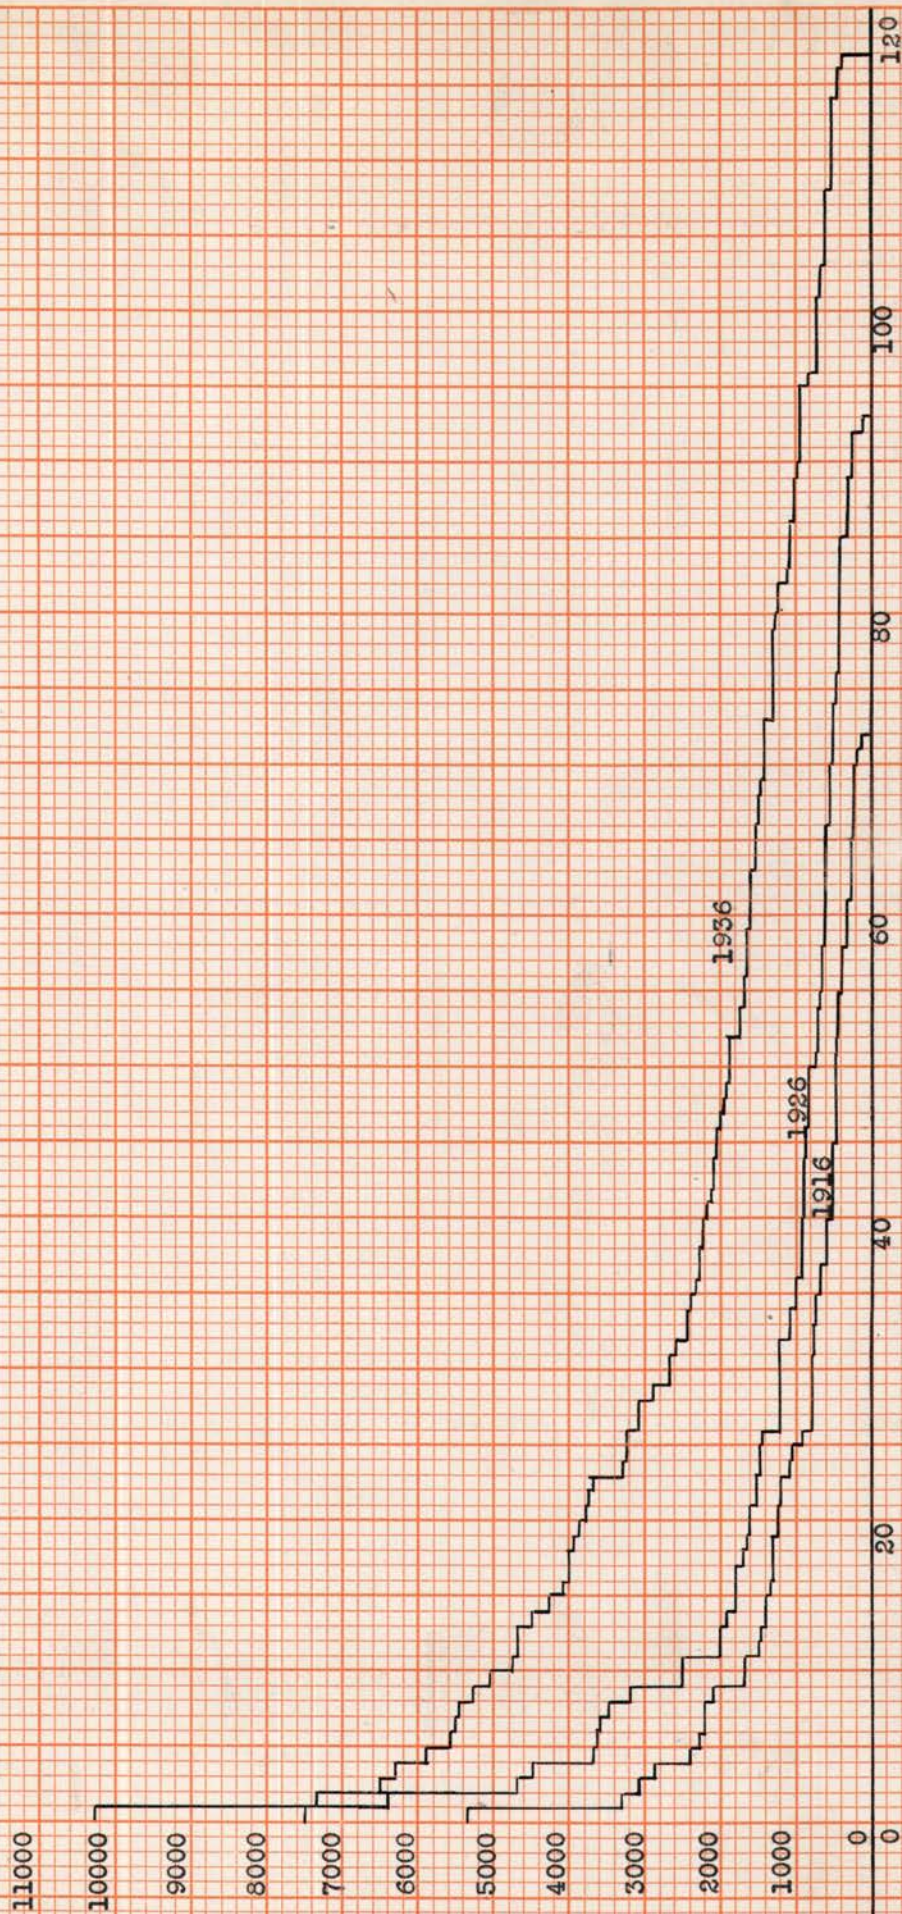

Figure 11. Variation in Total Amounts of Fast Offerings Paid in the Individual Stakes of the Church at three different decades.

reported the payment of fast offerings. In 1936 the lowest amount paid was about \$400.00, while the highest amount attained was about \$10,300.00. The mean total amount paid in 1936 was \$1600.00, but by far the greater number, eighty-nine, of the one hundred seventeen stakes fell below a payment of \$3000.00.

In 1916 about sixteen per cent of the stakes of the Church paid in excess of \$1500.00 each as fast offerings. In 1926 about twenty-four and in 1936 about fifty per cent of the stakes paid fast offerings in excess of \$1500.00. From the data presented it is evident that in total dollar payment of fast offerings the year 1935 would have closely approximated the decade ending in 1926. Figure 11 shows these facts.

CHAPTER V

THE INCREASE OF FAST OFFERINGS IN 1936 OVER PREVIOUS YEARS

The data presented in this report show first that both the per capita and total payment of fast offerings had gradually receded from 1916 to a low point at the end of the year 1935. The per capita amount paid within the organized stakes of the Church in 1935 was twenty-one cents. This was only two cents above the 1916 payment, and it was nine cents per person below the payment of fast offerings in 1923. In view of this change in payment of fast offerings over the twenty year period 1916 to 1935, and in view of what happened in 1936, the writer believes that some definite change in administrative view point took place about 1935. There was probably an attempt made to restore the fast offering payments to their previous place in the Church.

As far as the writer knows, the Church leaders made no public statements about their desires to increase the fast offering payment until the annual conference of the Church held in April 1936. From what was said then, it appears that they had for sometime been anticipating some possible changes in administrative policy. At a meeting

of the priesthood held April 6, 1936, a general plan for the improved economic security of the Church membership was discussed.¹²

Evidence of the fact that payment of fast offerings was considered by Church leaders to be necessary and was to be included in the projected security plan is contained in extracts of sermons delivered at a later date and in which fast offerings are mentioned. These extracts are presented here:

"It gives me very great pleasure indeed to announce that we have had a remarkable and splendid increase in the tithes of the people since this Security Plan was first announced. We have also had, as I remember it, fully 100 per cent increase in the amount of Fast Day Offerings paid. I rejoice in this, and when we ask the people to comm off the "dole" so to speak, we ask every man who has a farm to farm it and not to let it lie idle, and collect money from the government of the United States." 13

"In regard to the matter of improvement in the observance of fast offerings, of course, there have been only about three months, as shown by the report, since the instruction and encouragement given by the First Presidency; but the fast offerings have increased for the first six months of this year forty per cent as compared with the same period last year, and the number who have paid fast offerings has increased forty-one per cent. There has been an increase in per capita of practically the same proportion. One of the interesting

12. "Launching of A Greater Church Objective." The Deseret News. Church Section. Article by H.A.S. April 25, 1936.
13. One Hundred Seventh Semi-Annual Conference Report of the Church of Jesus Christ of Latter-day Saints. Published at Salt Lake City, Utah. October 2,3,4,1936. p.7.

evidences of what can be done with regard to fulfilling the request of the First Presidency that there be not less than one dollar paid during the year per capita of the Church membership by all members of the Church is shown by one ward, at least, in the Church, during the past four or five years. That is the San Francisco ward of the San Francisco stake. For the past five years, they have had an average of over one dollar per capita of Church membership in that ward; and it is a ward that is made up largely of wage earners and people who are engaged in daily labor and earning moderate amounts.

"The fast offering, of course, is intended to serve two purposes; the first is that it represents the fasting of members of the Church, --the abstaining from two meals,--- and the attendance at fast and testimony meeting. The people are strengthened spiritually through such fasting, praying, and testimonies. Secondly, in recognition of the needs of those who are not so fortunate as they, that they give the equivalent in value of those two meals. Thereby, they suffer no financial loss and they gain a great spiritual benefit. That is the true spirit of the observance of fast offering.

"It is reported to us that, in some instances, in order to make a better record, bishops have encouraged the giving of funds or obtaining of funds to be credited to their ward that do not represent the individual giving by the head or the members of the family. We would suggest that the spirit of this principle and the manner of observance should be carefully followed. It is for the spiritual benefit of all Church members as well as for the aid of those who are in need, and should be carried out in the spirit thereof as instructed by the First Presidency."¹⁴

14. Ibid. pp. 83,84.

The Church Security Program was launched toward the end of April 1936.¹⁵ At that time a specified goal of one dollar per capita payment in fast offerings was set up by the Church leaders for the membership of the Church.¹⁶

In 1936 a definite change in the payment of fast offerings occurred. Of the 118 organized stakes of the Church in 1936, numbers 61, 80 and 89 exceeded in 1936, the one dollar per capita fast offering payment. The data are shown in Tables I, II, V and VI. In the year 1936 the average per capita payment for the entire membership of the stakes increased to forty-nine cents. The three stakes in which the payments of fast offerings in 1936 exceeded one dollar per capita, show amounts that exceeded the Church average of that year by 114 to 171 per cent above the forty-nine cent average.

The three stakes with lowest per capita payments for the stake membership in 1936 were numbers 8, 11, 98. The average payment for the stake membership for these three stakes was about sixteen cents, while the Church average was forty-nine cents. More stakes fell below the forty-nine cent average than exceeded it.

-
15. One Hundred Seventh Annual Conference Report of the Church of Jesus Christ of Latter-day Saints. Published at Salt Lake City, Utah. April 4,5,6, 1937. p.4.
16. One Hundred Seventh Semi-Annual Conference Report. October 2,3,4, 1936. p. 83.

In the year 1935 fourteen per cent of the stake membership within the Church paid fast offerings. The per capita amount paid based upon entire stake membership was twenty-one cents, while the per capita amount paid by those who paid fast offerings was \$1.51. In contrast to 1935, the 1936 payments were as follows: twenty-five per cent of the total stake membership paid some fast offerings. The per capita amount paid based upon stake membership was about forty-nine cents, while the per capita amount paid by those who paid fast offerings was \$1.93.

For the twenty year period 1916-1935 the highest recorded proportion of total Church membership which paid fast offerings was twenty per cent. The highest per capita amount paid based upon total stake membership was thirty cents. The highest per capita amount by those who paid was \$1.73. The 1936 payments exceeded these previous payments in all three instances. There was a five per cent increase in the proportion of total membership which paid; a nineteen cent increase in per capita amount paid based on total membership, and there was a twenty cent increase in the per capita amount paid based upon those who paid fast offerings.

The inauguration of the Church Security Plan, with its emphasis upon the payment of fast offerings resulted in the phenomenal increase in fast offerings found to have been paid in the year 1936.

CHAPTER VI

SUMMARY AND GENERALIZATIONS

Introduction

In this study an attempt has been made to determine the status and the change in amounts of the fast offerings paid in each of the years from 1916 to 1936 within the organized stakes of the Church of Jesus Christ of Latter-day Saints. The general problem was analyzed into four specific questions:

To what extent are "Fast Offerings" paid by the membership of the Church of Jesus Christ of Latter-day Saints?

What changes, if any, have occurred in the amounts of these Fast Offerings paid over the years 1916 to 1936 inclusive?

What differences and similarities appear to exist in the amounts of Fast Offerings paid in the several Stakes of the Church?

How do the rates of change in the amounts of Fast Offerings paid during these years compare with the rates of change in the Church population?

The data

The available data were obtained under the following heads: first, the Church population of the Stakes; second, the number of Church members who paid fast offerings; third, the total amount of fast offerings

paid. This information was found for a period of twenty-one years, 1916 to 1936 inclusive. It is found in Table I an appendix.

From the data secured it was possible to compute the following facts: first, the per cent of stake population who paid fast offerings; second, the per capita amount of fast offerings paid by the stake membership; third, the per capita amount of fast offerings paid by those who paid. This information is reported as Table V.

Line graphs on logarithmic scales were used to show the changes in the fast offering payments over the twenty-one years studied. These graphs are somewhat self-explanatory, and they are found throughout chapters three and four of this report.

In order to make certain comparisons it was found necessary to divide the Stakes into two groups. The two classifications are known in this report as the Urban and the Rural Stakes. Of the 118 Stakes, thirteen are classed as Urban and 105 as Rural.

The data for this study came into existence in a disturbed period in a perplexing economic world. The data could, therefore, be subjected to certain economic analyses. The writer is aware of this economic problem but he has purposely and consciously limited the analysis of this study to the analysis that is presented in this report.

Observations from the Data

The organization of the Church of Jesus Christ of Latter-day Saints took place on April 6, 1830. From that date until 1855, fasting was observed and fast meetings were held, but it appears that during that time fast offerings were not paid.

In the year 1855 the payment of fast offerings was definitely connected with the fast day service. From 1855 to 1896, the fast day service was held on the first Thursday of each month. From 1896 until the present time, by a decision of the general Church authorities, the fast day service was changed from the first Thursday to the first Sunday of each month.

The growth of membership and stakes within the Church of Jesus Christ of Latter-day Saints has been rapid. This fact is evident from the data contained in this report. In 1916 there were 72 stakes and in 1936 there were 118. With this growth in membership and organization changes in record keeping became necessary. Incompleteness of the older records made it impossible to secure summaries of data about fast offerings prior to the year 1916.

Major changes that have occurred

The data in this report indicate that for the years

1916 to 1936 inclusive, the Church population in the stakes increased from 374,534 to 533,913. This is an increase of about 43 per cent. For the same interval of time the per cent of Church population who paid fast offerings rose with some fluctuations from twelve per cent in 1918, to twenty per cent in 1923, to fourteen per cent in 1935, then to twenty-five per cent in 1936.

Prior to 1936 the per capita amount of fast offerings paid within the organized stakes of the Church was nineteen cents in 1916, thirty cents in 1923, which was the highest recorded amount prior to 1936. But in 1936 this per capita payment amounted to forty-nine cents based upon stake population. The per capita amounts paid by those who paid any fast offerings for the same interval are as follows: in 1916, \$1.49; in 1923, \$1.46; while in 1936, it rose to \$1.93.

For the twenty year period of 1916-1935, the total Church membership increased about 43 per cent. The percentage of Church membership who paid fast offerings in any amounts increased about eight eight per cent. The amount of fast offerings based on total membership increased about ten per cent and the per capita fast offerings paid by those who paid anything increased from \$1.49 to \$1.51, or an increase of about one and one-half per cent.

Further Interpretation of the Data

When considered quantitatively the data in this report show that the increase in the amount of fast offerings paid together with the per capita amounts paid up to 1935 did not keep pace with the increase in Church population within the Stakes.

In contrast with the trend in previous years, the year 1936 showed an increase of 133% over the per capita payment of the Church membership within the stakes for the year 1935. This represents an increase from twenty-one cents per capita in 1935 to forty-nine cents per capita in 1936.

The year 1936 also shows marked increases in the per cent of membership who paid fast offerings in any amount and an increase in the per capita amount paid by those who paid. The total amount of fast offerings paid in 1936 exceeded all records of any previous year included in this study.

As explained in Chapter three, the stakes were divided into two groups, urban and rural. The data show that payments of fast offerings with respect to total amounts, to per capita amounts and to percentage of membership paying at all that the Urban stakes were higher than the Rural stakes.

To show the spread in amounts of fast offerings paid in the individual stakes, the three decades 1916, 1926 and 1936 were presented in graphic form. The spread in amount paid varied widely. In 1916 the totals from the stakes varied from \$150.00 to \$5300.00. This was a variation in per capita payment of fourteen cents to sixty cents. In 1926 the total amounts received from individual stakes varied from \$100.00 to \$7500.00; this was a variation in per capita payment of six cents to seventy-eight cents. In 1936 the total amounts received from individual stakes varied from about \$400.00 to \$10,300.00; this was a variation in per capita payment of twenty cents to ninety-four cents.

The year 1936 showed marked increase over the total amount paid in 1935, and over the maximum paid by any stake in 1935. The stake paying the highest amount in 1935 was exceeded in 1936 by a payment of \$2800.00. The per capita increase of 1936 over 1935 was twenty-eight cents.

The data reported in this study reveal the fact that from 1916 to 1935 the payment of fast offerings had not increased in proportion to the increase in Church population. The year 1936 shows outstanding increases in every aspect of the problem.

The reason for the phenomenal increase in the year 1936 appears to have been the administrative emphasis placed upon fast offering payment when the Church Security Program was inaugurated. This program carried with it the impetus and dynamic leadership of the general Church authorities. A response in fast offering payments from the Church membership came as a result of such leadership.
