 IDENTIFIERS *PLAN Social Studies

ABSTRACT

PLAN Social studies curriculum attempts to assure that each student achieves educational objectives appropriate to his individual needs and interests. The guiding framework is presented in the form of a list of over one hundred long-range objectives (LRO's). The major objective areas are: inquiry, problem-solving and planning, affective objectives, social skills, quantitative skills, and knowledge objectives. Chapter 3 describes the curriculum for each level roughly corresponding to grades one through twelve, emphasizing the content and settings to which major objectives are applied. Chapter 4 presents a series of charts in which the explicit instructional objectives of the existing curriculum are identified both by level and by the (LFO) they serve. The order in which the content areas are presented is not dictated by the structure of the objectives; the instructional sequence can be shaped largely by the personal interests of the students and the availability of instructional materials. The key concepts, principles and facts of each knowledge objective are appended: social problems, history, cultures, sociology, anthropology, religions, American ethnic groups, American institutions, sociology, anthropology, religions, American ethnic groups, American institutions, social psychology, individual behavior, political science, American civics, basic economics, personal economics, geography and ecology. Appendix	Key Concepts, Principles and Facts for Each Knowledge Objective (VI): A Preliminary Draft

Chapter I

INTRODUCTION

Project PLAN tries to insure that each student achieves educational objectives appropriate to his individual needs and interests. The entire curriculum is organized under a detailed set of explicit instructional objectives grouped into modules of instruction. The measurement of student achievement on the objectives assigned and the flexibility of curriculum make PLAN potentially the first self-correcting educational system in existence. If certain students are not learning well by a particular method of instruction, a different kind of instruction can be substituted so that the instructional objectives can be achieved more efficiently.

The same type of feedback and correction is also necessary at the higher level of determining what the objectives of instruction will be. In the social studies this presents a challenge of major proportions since social studies educators and social scientists show little agreement among themselves as to what explicit educational objectives should have top priority. Nevertheless, in any operating educational system, priorities among objectives should be hammered out explicitly for if they are not explicit, implicit priorities which are subjective and largely unknown will determine the curriculum.

This document describes the existing PLAN social studies curriculum and presents a framework for a more ideal social studies curriculum toward which PLAN is striving through periodic revision. This guiding framework is presented in the form of a list of over one hundred long-range objectives (LRO's) organized into an outline to show the relation of general objectives to more specific objectives. A chart is also presented showing the detailed correspondence between instructional objectives in the existing curriculum and the LRO's.

Three uses are anticipated for this document:

1. To describe PLAN social studies as it is in the 1970-71 program and to compare this program objective-by-objective with the guiding framework of LRO's which are seen as having high priority.
2. To serve as a reference document for staff who are revising the social studies curriculum.
3. To serve as an information retrieval document for teachers, counselors and students who seek to locate modules and objectives which suit their particular interests and learning strategies.

Both the existing curriculum and the LRO's have benefitted from review by an

advisory panel of outstanding social studies educators of the nation.* Periodic future reviews and revisions are expected to improve the program further and keep it up to date.

The LRO's include several which are as fitting to some other subject matter area as they are to social studies. Problem solving and planning, for example, are agreed by all to be of utmost importance. However, they typically fall between table and chair in most educational curricula because they are not central to the traditional academic disciplines and are not the exclusive domain of any one subject matter area. By including them in the guiding framework, we do not intend to claim special relevance of these LRO's to social studies but rather to be sure that the top priority learning needs of students are met, regardless of subject matter boundaries. Many of the staff who prepared the existing curriculum had no idea that such objectives would be taken on as a responsibility of social studies, and this accounts in part for some of the discrepancies between what is and what is desired in a social studies curriculum as described herein.

In a more vertically structured subject matter such as mathematics, a significant part of a document such as the present one would be some presentation of the hierarchical sequences showing the prerequisite order in which various objectives must be reached if they are to build on one another. Such a mapping of prerequisites was planned for this document, in fact. On closer analysis, it appeared that nearly all social studies objectives are closely interwoven with many others but that in very few cases can one such achievement be said to be prerequisite to another in the sense that achievement of one is greatly impeded by not having achieved the other. With few exceptions (mostly in the area of quantitative skills), any of the LRO's listed in Chapter 2 could be learned either before or after any other with no appreciable loss of instructional efficiency, assuming the details of instruction were well planned. In social studies the general course of development from level one to level twelve is not primarily characterized by the unfolding of skill hierarchies, but rather by applying a given skill to an increasingly complex set of problems and contexts, so that the skills become more facile and useful over an ever wider range of settings. Since the order in which the settings or content areas are presented is not dictated by the structure of the objectives themselves, the instructional sequence can be shaped largely by the personal interests of the students and the momentary availability of instructional materials, which has both economic and motivational advantages.

In several instances LRO's stated in Chapter 2 refer to skills which are so general to the processes of learning and cognitive development that they have been taken for granted by the curriculum developers and not spelled out explicitly in the module objectives. In future revisions of PLAN social studies, an important procedure will be to identify those activities in teaching-learning units which

* Richard E. Gross, Stanford University; John E. Haefner, University of Iowa; John U. Michaelis, University of California; Roy E. Price, Syracuse University

contribute to certain LRO's but have not been identified as doing so. We have noted in Chapter 4 the most obvious instances of "hidden" instruction of this sort.

Chapter 3 describes the 1970-71 social studies curriculum of PLAN level by level, emphasizing the content and settings to which major objectives are applied. Chapter 4 presents a series of charts in which the explicit instructional objectives of the existing curriculum are identified both by level (which corresponds roughly to grade) and by which LRO they serve. This enables the reader to match specific objectives in the curriculum against LRO's and to note the levels at which any LRO is developed. The chapter also contains brief summaries after each group of LRO's indicating the major strengths and weaknesses of the present curriculum in achieving those LRO's.

Chapter 2

LONG-RANGE OBJECTIVES FOR PLAN SOCIAL STUDIES

I. INQUIRY

A. Formulate questions

1. Make hypotheses to explain events
2. Identify issues in a decision or controversy
3. Understand and summarize opposing viewpoints

B. Generate inferences and rationales

1. Relate point to other relevant ideas
2. Make sensible inferences (explanations, predictions)
3. Specify in advance what kinds of evidence would test a hypothesis or answer a question
4. Organize questions, evidence and inferences into a coherent rationale or report

C. Find relevant information

1. Observe social phenomena sensitively and accurately
2. Locate stored information concerning social studies
 - a. Social or behavioral science reference works
 - b. Periodicals related to social studies
3. Use appropriate experts and resource persons
 - a. Locate experts
 - b. Interview or question effectively
4. Seek evidence and information efficiently, considering relevance, accuracy and cost

D. Analyze and evaluate information

1. Analyze a persuasive social message into the following elements: premises, definitions, assertions of fact, logical conclusions, recommendations, value statements, emotional appeals
2. Evaluate credibility of a source and likely biases
3. Judge validity of information in terms of own experience and beliefs

4. Identify omitted relevant factors
 5. Evaluate internal consistency of elements
 6. Evaluate against external criteria
 7. Decide which criteria for evaluation are most appropriate
- E. Maintain flexibility and perspective
1. Remain open to new information which conflicts with own views, and modify views accordingly
 2. Accept the uncertainty of most generalizations, theories and predictions of human behavior
 3. Take into account the complexity of causes of human behavior and social phenomena

II. PROBLEM-SOLVING AND PLANNING

- A. Identify and define problems in need of action
 - 1. Identify problem areas and judge their relative priorities
 - 2. Identify desired outcomes (objectives) and justify them in terms of value priorities
 - 3. State criteria by which achievement of outcome could be measured or verified
 - 4. Define a problem clearly in terms of gaps between current and desired status (using 2. and 3. above)
- B. Apply inquiry skills (I.) to problem whenever appropriate
- C. Find and evaluate alternative plans and solutions
 - 1. Locate or devise promising plans
 - 2. Evaluate each plan against objectives; weigh probabilities of gains and costs, including side effects and reactions of all persons concerned
- D. Execute a plan
 - 1. Choose and spell out a plan in detail, including actors, steps, feedback, contingencies
 - 2. Get review and necessary approval of plan; revise as needed
 - 3. Carry out plan
 - 4. Evaluate plan's effectiveness, referring to actual evidence of achievement of objectives
- E. Attack a problem, integrating skills A. through D.; make personal and social decisions wisely

III. AFFECTIVE OBJECTIVES

A. Approach and enjoy learning

1. Identify topics and problems of personal interest in the social studies area
2. Pursue learning interests to own satisfaction

B. Develop and express own values and opinions

1. Understand values as preferences or tastes, not as matters of truth
2. Develop and reexamine own values and priorities concerning:
 - a. health and safety
 - b. serving self versus others
 - c. choice, freedom, power
 - d. truth, honesty, dissent, conformity
 - e. interpersonal emotions and relations (sex, love, friendship, etc.)
 - f. peace, war, social conflict, racism, nationalism
 - g. government, democracy, tyranny, law
 - h. quality of environment
 - i. population
 - j. poverty and affluence
 - k. occupations and roles
 - l. recreation, leisure, aesthetics
 - m. change
3. Support social policy on basis of own values and relevant information
4. Rationally defend own position on a controversial issue
5. Act consistently with own stated values and priorities

C. Value oneself positively; appreciate own life and experience

IV. SOCIAL SKILLS

A. Treat others well

1. Consider the consequences for others of own actions
2. Try to help individuals and groups who are in great need
3. Defend rights and liberties of all kinds of people
4. Empathize: Try to understand why others behave as they do from other's viewpoint

B. Communicate face-to-face effectively

1. Listen to what others say; perceive nonverbal cues as well
2. Respond appropriately to others
3. Attempt to communicate clearly with others
4. Ask for clarification and feedback from others to be sure communication is sent or received accurately

C. Cooperate on a group task

1. Help group to move toward its goals
2. Attend to the needs of other group members
3. Lead a group effectively or recognize good leadership strategies and acts

D. Act effectively in the public interest

1. Recognize social action techniques and effectively apply those which meet own ethical standards
2. Locate and work through organizations designed to attack a given type of problem

V. QUANTITATIVE SKILLS

- A. Recognize uses and problems of measurement
 - 1. Recognize that measurement can make descriptions, comparisons and predictions of human behavior more precise
 - 2. Recognize many varieties of data and variables (physical, judgmental, discrete, continuous, etc.)
 - 3. Apply concepts of validity, stability and objectivity to compare types of measures
 - 4. Recognize main purposes and limitations of opinion polls, economic indices, psychological tests
- B. Make sound inferences from data and statistics
 - 1. Use common descriptive statistics (ratio, percentage, range, mean, median) to make simple inferences about location and dispersion from social science data
 - 2. Distinguish correlation from causation
 - 3. Use concept of probability in making inferences
 - 4. Recognize variation in confidence of inferences based on number and stability of observations
- C. Use graphs and tables presenting social studies data
 - 1. Interpret graphs and tables sensibly
 - 2. Construct graphs or tables which communicate and summarize data effectively
- D. Use globes and maps
 - 1. Locate points by using coordinates
 - 2. Relate locations to time and season via earth-sun relations
 - 3. Interpret globe and map content by color, line, and symbol, using legend. Include topography, climate, resources, political units, transportation routes, man-made places and products, and density distributions.

VI. KNOWLEDGE OBJECTIVES *

- A. Social problems: Know major contemporary social problems and some of the more promising techniques for attacking these problems:
1. Problems of social conflict — personal, ethnic, international, etc.
 2. Economic problems — poverty, employment, resources, over-population, etc.
 3. Environmental and health problems — pollution, urban blight, etc.
- B. History: Know major changes in the life of mankind since prehistory, including agricultural revolution, specialization, social class, technological development, commercial expansion, literacy, urbanization, mobility, westernization, mass communication.
1. Evolution of man and his tools
 2. World history
 3. The American experience
- C. Cultures: Know and compare cultures different from his own, including modern, primitive and traditional agrarian. Be familiar with at least one from each of the following areas:
1. Canada and the Arctic areas
 2. Latin America
 3. Western Europe
 4. Mid-East and North Africa
 5. Sub-Saharan Africa
 6. U.S.S.R. and Eastern Europe
 7. Japan and Korea
 8. China
 9. India and Southeast Asia
 10. Australia, New Zealand
 11. South Pacific islands

* The short, underlined title preceding each objective is only for convenient reference. It does not indicate the contents which follow with any precision. A more detailed specification of the important concepts, principles, and facts to be learned as part of each objective is presented in the Appendix.

- D. Sociology and anthropology: Know and apply concepts for analysis and comparison of all societies and their institutions.
- E. Religions: Know main characteristics of major religions of the world and their relationship to the evolution of political and social institutions.
- F. American ethnic groups: Know values and ways of life of different ethnic, religious, and socioeconomic groups within our society.
- G. American institutions: Know values and origins of main social institutions in the United States and his own local region.
- H. Social psychology: Know and apply concepts and principles of social interaction and group behavior.
- I. Individual behavior: Know basic patterns of individual human behavior.
- J. Political science: Know basic values, issues, and concepts of political action and contrasting political ideologies.
- K. American civics: Have a working knowledge of governmental structures, functions, and channels and sources of power and influence in the American political system.
- L. Basic economics: Know economic concepts and principles and the major variations in economic systems.
- M. Personal economics: Know practical economic considerations important in decisions about employment, buying and selling, contracts, investment and saving, and taxes.
- N. Geography and ecology: Know major variations in the natural environment, the basic ways in which man adapts to such variations, and spatial distributions of man and his resources.

Chapter 3

SUMMARY BY LEVEL OF THE 1970-1971 PLAN SOCIAL STUDIES PROGRAM

In the PLAN system "level" corresponds approximately to grade level, but it should be kept in mind that individual students at any given level may choose or be assigned modules from lower or higher levels if these fit their individual programs of study. For each level the three or four major themes are described below, with a general indication of the types of objectives emphasized. The modules listed on the right side of the page correspond to the themes on the left. Each module is identified by a five-digit number and contains from one to eight of the instructional objectives which appear in the charts in Chapter 4. A module requires on the average about two weeks to complete. Most students do not take every module at a level. Different students are assigned different sets and sequences of modules according to their needs. Nine modules from various levels were omitted from the list below because they did not fit any of the themes.

	MODULES
LEVEL 1	
<u>The Structure and Function of the Family</u>	
Develop the concept of family and relate it to his own social setting and to the basic functions of families around the world	40-052 40-053 40-057
<u>Basic Needs of People</u>	
Learn the basic needs of all people and common ways in which they are met.	40-054 40-055 40-056
<u>Basic Economic Concepts</u>	
Acquire the economic concepts of producer, consumer, services and goods, and apply them to neighborhood settings.	40-058 40-059 40-060

LEVEL 2

Basic Resources

Learn the main sources and processes involved in production of goods to meet the basic needs of people	40-116 40-117 40-118 40-120
--	--------------------------------------

The Neighborhood

Acquire the concept of neighborhood and relate it to his own environment and to settings different from his own.	40-101	40-108
	40-102	40-109
	40-103	40-110
	40-104	40-119
Know of common local institutions and the primary function of each.	40-105	40-121
	40-106	40-124
Recognize examples of problems or needed changes in a neighborhood.	40-107	

Communication Media

Acquire the concepts of communication and mass media.	40-111	40-113
	40-112	

LEVEL 3

Characteristics of a Community

Acquire the concepts of community, culture, natural environment, and interdependence within and between communities.	40-151	
	40-152	
Learn ways in which a community helps individuals meet their basic needs.		

Communities Around the World

Learn how cultures vary in accordance with their needs to adapt to the contrasting natural environments of the world.	40-153	40-161
	40-154	40-163
	40-155	40-164
	40-157	40-166
Learn the principle that social customs vary greatly within a given type of natural environment.	40-158	40-167
	40-160	40-168

Planning A Community

Learn to plan the major features of a community in relation to the natural environment and the basic needs of people.	40-169	
---	--------	--

Map Skills and Geography

Identify topography and climate of major regions of the world using globe and maps with legends.	40-177	
	40-178	

LEVEL 4

Inquiry Skills

Identify and define human problems, locate social studies information sources, and learn to inquire about problems systematically. Develop and evaluate plans for dealing with problems of human resources and relations, natural resources, communication, and transportation.	40-207	
	40-208	
	40-212	
	40-213	
	40-214	
	40-215	

State and Region

Learn about own state and region.	40-209	40-211
	40-210	

Cultural Values

Learn the economic concept of exchange and some of the values shared by Americans.	40-201	
	40-202	

Map Skills

Use map coordinates and legends	40-205	
	40-206	

LEVEL 5

World History Overview

Relate in time and place the major changes in mankind during the last ten thousand years.	40-274	
---	--------	--

American Ethnic Groups

Recognize the varied cultural origins of the American people and begin to relate those to current social conditions.	40-268	
	40-269	
	40-270	
	40-271	
Apply systematic inquiry steps in understanding the origins and problems of American ethnic groups.	40-272	
	40-273	
Develop and express own values about ethnic relations.	40-275	

American Studies

Compare typical contemporary American life styles with earlier American life styles.	40-258	40-264
	40-259	40-267
	40-260	
Relate basic economic concepts and map skills to the establishment of communities and use of resources in the United States.	40-261	
	40-262	

Map Skills

Use compass, map scales, and time zones.	40-251	40-255
	40-252	40-256

LEVEL 6

Latin American Studies

Conduct systematic inquiry and develop plans on economic and political problems of Latin America.	40-315	40-340
	40-316	40-341
Know the location and climate of the nations of Latin America.	40-317	40-342
	40-322	40-343
	40-323	
Know ethnic origins of the population of Latin America and its effects on current social conditions.	40-334	
	40-336	

Characteristics of Human Society

Acquire the concepts of cooperation, conflict, interdependence, technology, and society.	40-324	40-329
	40-325	40-330
Make simple comparisons among societies in terms of economics, politics, religion, and the above-listed concepts.	40-326	40-338
	40-327	40-339
	40-328	

Geography and Map Skills

Use latitude, longitude. Know the Earth's main climates and natural resources.	40-306	40-311
	40-307	40-312
	40-309	40-313
	40-310	40-314

LEVEL 7

The American City

Know the role that the American city has played in the development of our nation. Relate the history of the American city to migration, industrialization, and government.	40-401	40-408
	40-402	40-409
	40-403	40-411
	40-404	40-412
	40-405	40-413
	40-406	40-414
	40-407	40-415
		40-421

Contemporary Social Problems

Identify and analyze the major contemporary social problems of our society including: (a) minority conditions, (b) civil rights and liberties, (c) Vietnam, (d) population, (e) pollution, (f) urban disorder, (g) congestion .	40-382	40-393
	40-386	40-395
	40-387	40-416
	40-388	40-417
	40-389	40-419
	40-390	40-420
	40-392	

The Individual in the Contemporary United States

Weigh alternative values and choices concerning major adolescent decisions, including: (a) peer group relations, (b) generation gap, (c) use of leisure, (d) smoking, alcohol, drugs, etc., (e) family relationships, (f) law and rights .	40-371	40-377
	40-373	40-379
	40-374	40-394
	40-375	40-400
	40-376	40-418
Develop concepts of interpersonal emotions including empathy, authoritarianism, dependence .		

LEVEL 8

Political Action

Develop and evaluate plans of action to accomplish political goals .	40-452	40-458
	40-453	
Acquire the concepts democratic, oligarchic, and dictatorial; criteria, objectivity, and evidence .	40-455	
	40-457	

American History and Government

Know basic facts from 18th and 19th century American history and government . These modules are designed to enable students to pass various standardized exams such as the New York Regents' Exam .	40-462	40-466
	40-463	40-467
	40-464	40-468
	40-465	

The Analysis of Social Problems

Identify issues and evaluate information about American social problems .	40-451	40-460
	40-454	40-461
Apply systematic inquiry to American historical and social problems .	40-456	
	40-459	

LEVEL 9

Cultural Geography

- Acquire the concept of environment and its significance to the development of culture. 40-384
42-564
- Acquire the concepts of biological and cultural adaptability. 42-565
42-566
- Identify the major races of mankind as well as the major population centers and migrations of those races.

Geographic Analysis

- Be familiar with at least four of the areas studied (Latin America, Africa, China, USSR, Australia, S.E. Asia, Europe, Mideast) in terms of: (a) location, (b) general climate, (c) general resource wealth (arable land, minerals, relative population size, relative area, technological development), (d) ethnic makeup. 42-543 42-554
42-544 42-555
42-545 42-560
42-546 42-561
42-547 42-562
42-550 42-563
42-551
- Acquire an understanding of the relationship between the above geographic characteristics and a nation's role in world affairs. 42-552
42-553

Civics

- Identify, relate, and give examples of each of the seven major principles of the American political system (popular sovereignty, limited government, separation of powers, checks and balances, judicial review, federalism, adaptability to changing social and economic conditions). 44-542 44-551
44-544 44-557
44-545
44-546
44-548
44-549
44-550
- Identify basic rights of a United States citizen.

Economics

- Recognize economic issues related to the government's role in American social change. Learn fundamentals of consumer economics. 44-552 44-558
44-553 44-559
44-556 44-560
44-557

LEVEL 10

International Decision-Making

Know major types of organizations for dealing with international problems and their major strengths and weaknesses. (a) Economic, military, and cultural alliances (b) The United Nations	42-556	
	40-640	
	43-663	
	43-664	
	43-665	
Attain the concept of comparative advantage and apply it to international decision-making.	43-666	

History of Western Beliefs

Know time and location of major civilizations, religions, and migrations of the world.	43-644	43-654
	43-645	43-655
	43-647	
Know the major historical changes that have occurred throughout the history of the Western world.	43-648	
	43-649	
Know the major philosophical foundations of Western civilization (democracy, capitalism, feudalism, individualism, industrialization, socialism, Christianity, Judaism, rationalism).	43-650	
	43-651	
	43-652	
	43-653	

Nationalism and Militarism

Acquire the concepts of nationalism, imperialism, colonization, mercantilism, militarism, and dictatorship.	43-641	43-658
	43-643	43-659
	43-646	43-661
Analyze motives for national aggression, applying the concepts of comparative advantage and group identification.	43-657	43-662

LEVEL 11

Research Skills in the Social Sciences

Apply systematic inquiry procedures to research in the social sciences.	40-541	40-772
	43-642	40-775
	43-656	40-896
	43-660	

Minorities and Rights

Recognize the history and current issues of the struggle of minorities in the United States for their rights.	40-751	40-760
	40-752	40-761
	40-753	40-762
	40-758	40-763

Power, Conflict, and Control

Recognize a variety of ways in which power, conflict, and control have been exercised in the United States.	40-756	40-770
	40-757	40-771
	40-764	40-774
Know the major historical events and trends of twentieth century America.	40-767	40-776
	40-768	40-778
	40-769	

Economic Trends

Acquire basic economic concepts. Recognize economic trends and conditions of poverty.	40-754	40-765
	40-755	40-773
	40-759	40-777

LEVEL 12

General Concepts and Problems of Political and Economic Behavior

Acquire basic political and economic concepts including in-group, role, status, socialization, specialization, organization, authority, legitimacy, norms, ideology, political culture, scarcity, consumption, production, goods and services, factors of production, investment, saving, allocation.	40-871	
	40-872	
	40-887	
	40-888	
	40-892	
	40-899	
	40-900	
Apply the above concepts to the analysis of environmental destruction and international conflict.		

Comparative Political Systems

Characterize and compare the political cultures of the United States, USSR, and Communist China.	40-873	40-879
	40-874	40-882
	40-875	40-886
Critically evaluate political propositions and develop views on them.	40-876	40-901
	40-877	40-902

Comparative Economic Systems

Characterize and compare the economic systems of the United States, USSR, and Communist China.	40-880	
	40-893	
	40-894	
Critically evaluate economic propositions and develop views on them.	40-897	

Chapter 4

THE MATCH BETWEEN LONG-RANGE OBJECTIVES AND CURRICULUM

Each four-digit number entered in the charts on the following pages signifies an instructional objective now being taught in PLAN social studies. A statement of each objective appears in the Master Objectives List for the '70-'71 program and in the Teacher's Supplements.

The level at which each instructional objective is usually mastered is indicated on the left margin of the chart. The Long-Range Objectives (LRO's) listed in Chapter 2 are coded by number and letter only across the top of the chart. At natural breaks in the list of LRO's a summary of the match between LRO's and curriculum appears just below the chart.

1. Inquiry

	A	1	2	3	B	1	2	3	4

The long-range objectives (LRO's) included in I. A and B, taken as a group, could be retitled "constructive thought" or "open-ended inference."

They are generally well represented by module objectives across all levels. In addition, there is probably a good deal of practice of these skills implicit in the learning activities of many module objectives not listed above; constructive thought is so basic that it is often taken for granted by writers of module objectives.

An LRO in this group which needs more attention in the curriculum is I. B 3 — specifying kinds of evidence needed. A similar need occurs under II. A 3, which also calls for specifying evidence or criteria.

PLAN students get frequent practice in finding relevant information (IC) in social studies (as well as in language arts) up through Level 9. In fact, students who take the materials-general TLU's get substantially more practice than is indicated above, since the materials-general TLU's require the student to locate his own resources. At Levels 10 to 12 there should be more practice in information skills, especially in the use of experts and community resources outside the school.

Analysis and evaluation of information (ID) is well represented in both social studies and language arts modules from Level 7 upward. The abstract thought and logical analysis required for this LRO are often difficult for younger elementary students and probably less interesting to them. It is appropriate, therefore, that intensive work on this LRO begins only at Level 7.

The mental flexibility and perspective (IE) which support effective inquiry need more explicit attention somewhere in the curriculum. Good social studies teachers may take these for granted, but until they are spelled out and measured as achievements it is unsafe to assume that instruction adequately develops this frame of mind.

12						

Students get substantial practice in identifying and defining problems (IIA) from Level 4 to Level 9. Finding and evaluating solutions is required at all levels from 2 upward, and this includes the spelling out of detailed plans on paper. Practice in actually carrying out plans (other than study assignments) and evaluating their effects is lacking, however.

One of the strongest features of PLAN social studies is that it stimulates students to form and examine their own values on a wide variety of important social issues (IIB2, a to m), and to apply these values to defending their own stands on controversial issues (IIB4).

Appreciating oneself (IIC) is probably an important basis for developing and expressing one's own values and interests and for most other school achievements as well. The PLAN system of assigning modules which students are likely to pass rather than fail is probably conducive to development of a positive self-image. PLAN offers students alternative modules based partly on their individual interests, and some Guidance modules enable students to explore their occupational interests and abilities. These features of PLAN provide a context which suggests to the student that his own individual personality and needs are important. But there needs to be measurement periodically of how students evaluate themselves personally and socially, and efforts to help those students who perceive themselves as failures.

Long-range objectives IVA and IVD are often considered to be outside the realm of school responsibility, simply because they are typically applied outside school. The importance of these LRO's is seldom denied, and no other institution has clear responsibility for their achievement, so it seems appropriate for schools to do what they can. The groundwork which PLAN presently supplies in this area appears under IVA4 (empathy), which is perhaps a prerequisite condition for being motivated to achieve A1 to A3. Also, several module objectives require recognition of effective social action techniques (IVD1).

Face-to-face communication is mainly the responsibility of language arts, where these skills are scheduled for mastery by the end of Level 7. Social studies provides additional practice at several levels.

Cooperation (IVC) is scantily dealt with as an explicit objective in PLAN. However, there are a large number of learning activities at all levels requiring cooperation with a group or partner. About half of all module objectives involve such cooperation at Levels 1 to 8 and a smaller proportion at Levels 9 to 12. (In all such modules IVC should perhaps be indicated as a developmental objective.) These provide extensive opportunities to practice cooperation but they do not focus the student on specific skills needed in small group situations.

Globe and map skills (VD) are among the few social studies LRO's which call for a definite hierarchical sequence of development. This skill hierarchy unfolds systematically from Levels 2 to 6 and is applied broadly later, mainly at Level 9.

Measurement, statistics, and quantitative inference (VA&B) are almost completely absent from the social studies curriculum. The absence is not serious because the mathematical fundamentals for all these LRO's are included in PLAN Mathematics. Social studies does develop skills in the use of graphs and tables (Levels 6 to 8), and it could be further improved by providing upper level students with practice in applying basic measurement and statistical skills to social science data.

The knowledge objectives (VI) have received the heaviest emphasis by far in PLAN social studies, as in most other social studies curricula. Two disadvantages of such a heavy emphasis on knowledge are that it leaves too little time for other important objectives and that it is often dull for students. Perhaps as new modules are added giving students more alternatives, any particular knowledge objective will be sought by fewer students, but those few will have greater interest in that knowledge and will benefit more from the instruction.

Coverage of all 14 knowledge objectives is thorough with the exception of VI-1. Psychology and other studies of individual human behavior are of great value and interest to students and merit more than 9 module objectives in the entire curriculum. This area may have been neglected because it falls between science and social studies and is claimed by neither. The shortage is partially compensated for by a Level 5 science module which deals with individual differences, heredity and environment.

Appendix

KEY CONCEPTS, PRINCIPLES AND FACTS FOR EACH KNOWLEDGE OBJECTIVE (VI): A PRELIMINARY DRAFT

A concept is defined here as a unitary idea, usually labeled with a single word. Most concepts helpful in dealing with people and understanding them are almost universal in our culture and are learned informally outside of school (e.g., parent, friend, love, fear, etc.). These are not included in the following lists only because of their great number. Principles relate concepts to each other and have a high degree of generality across settings and times. Facts are relatively objective relations among objects, events and concepts, relations which tend to be specific to a time or place and which are so well accepted that there is little or no dispute over their truth.

To list all the concepts, principles and facts found useful by social scientists would be a formidable task. Furthermore, the first twelve years of schooling would provide only a tiny fraction of the time needed for students to learn them all. The strategy for relating such content to PLAN social studies is as follows: We treat concepts quite differently from principles and facts. A concept is a quite flexible and generally useful tool which a student is likely to find useful in some way even though any given generalization involving that concept may be of questionable validity or practicality. We have, therefore, attempted a fairly comprehensive listing of concepts for each of the knowledge objectives.

Principles are listed and hence considered worthy of being learned for their own sake only if in our judgment they meet both of the following criteria:

1. The principle will have important applications for most high school graduates regardless of their further education or occupation, not just for social scientists alone nor even for college graduates alone.
2. The general validity of the principle across settings is fairly certain. Admittedly, this is a subjective judgment wherever hard evidence is not available.

For facts, the criteria of selection are, first, importance to most graduates as described in number 1. above, and, second, the likelihood that it will be considerably more valuable to the graduate to have the fact committed to memory than to be able simply to find it in some convenient reference work or other information source. Fortunately, these criteria exclude nearly all facts and a large share of the generalizations and principles familiar to social scientists. This great bulk of facts and generalizations excluded from the list of priority long-range objectives should not be considered lost to PLAN social studies students, however. Many of them provide useful content vehicles for acquiring the important skills and

knowledge spelled out here. For example, a principle of great importance but doubtful validity makes an excellent topic on which to practice inquiry, value development, and rational defense of a position. Or again, the many facts in social studies which are not worth memorizing still serve as important material in learning activities aimed toward objectives such as problem solving, planning and locating relevant information.

A valuable extension of the present framework will be a record indicating which modules and objectives in the PLAN curriculum teach or apply the specific concepts, principles and facts listed. This task was begun, but a detailed tracking of key concepts through the existing module objectives could only be partially completed with the funds available.

To minimize the length of the Appendix, we have usually avoided repeating a concept or principles relevant to two or more objectives. Some apparent gaps in a given objective may be due to this procedure. In a few instances we have entered a concept on two lists to provide coherence. There is no attempt to state principles and facts with eloquence, only to communicate the message in the simplest possible terms.

The lists of concepts, principles and facts are in no sense final. So far, in the limited time available, we have scanned a fairly large number of documents and included those principles and facts which seemed to meet our screening criteria. We expect additional concepts, principles and facts to be added in future revisions.

A.

SOCIAL PROBLEMS

Concepts:

cost effectiveness	comparative advantage
compromise	government as private initiative

Principles:

Although laws do not of themselves change people's attitudes, laws can modify behavior which in turn may change these attitudes.

People often seek solutions to social problems through government action when the private sector cannot cope with the problems for lack of will or lack of coordination.

I. SOCIAL CONFLICT

Concepts:

adjudication	isolation
alliances	minority
arbitration	negotiation
coalition	neutrality
compromise	parochialism
cultural pluralism	power, force
diplomacy	prejudice
discrimination	racism, ethnocentrism
escalation/de-escalation	sovereignty
foreign policy	stereotype
internationalism	treaty
international organization	war

Principles:

Individuals often come into conflict with each other when (a) there are differences of value or opinion, (b) there is competition for certain privileges, material objectives, or tokens of success, (c) one person feels himself the victim of another, in terms of his person, his property, or his rights.

Although there may be some instinctual tendencies toward identifying an "in-" and an "out-group," prejudices against specific types of people are apparently learned since they can be modified grossly by experience.

Cultural diversity and ethnic differences can add to the richness of life .

Every national government believes in the moral rightness of its own foreign policy .

Facts:

The United Nations is the successor to the League of Nations as the world's most current effort to promote international peace and social welfare .

At this point in history powerful nations are sovereign and operate solely on what they see as their own interests. For them, international agreements and law have little effect and are only adhered to when vital interests are not at stake .

Historically, alliances among nations are of short duration although they may produce long-term consequences. The United States is presently allied with other nations in the North Atlantic Treaty Organization (NATO), the South East Asia Treaty Organization (SEATO), and the Organization of American States (OAS).

2. ECONOMIC PROBLEMS

Concepts:

automation	poverty, affluence
consumer	resources
cultural disadvantage	slum
employment	subsidy
ghetto	urban renewal
inflation	welfare
job obsolescence	

Principles:

The opportunity for acquiring further wealth is greater for those who already have it than for the poor .

Poor education, poor housing, inflation, and racial or class discrimination can limit people's capacity to meet their economic needs through their own abilities and efforts .

Technological invention and industrial expansion rapidly develop some industries and destroy others, demanding new skills and discarding old ones, creating problems of unemployment for those with skills no longer needed .

Facts:

There are a disproportionate number of ethnic minorities among the poor in the United States.

People in economically affluent countries use 30-50 times more natural resources than those in underdeveloped countries. The earth could not long sustain an entire world population using resources at this rate.

3. ENVIRONMENT AND HEALTH

Concepts:

conservation	nutrition-malnutrition
crime	pollution
environment	population density
mental health	

Principles:

Population growth worsens many other human problems, including poverty and pollution.

Facts:

If the present rate of population growth continues there will be massive deaths from famine, disease or war, as well as a marked deterioration of the environment.

Most of the people of the world suffer from malnutrition. Even in affluent countries a good deal of malnutrition exists from poverty or ignorance.

A sizeable share of man's problems are partly mental in nature.

B.

HISTORY

Concepts:

artifact	history
change	invention, innovation
diffusion	time (long spans)

Principles:

All history is interpretation. Different historians make different interpretations.

Change has been a universal condition of human society. The tempo of change has increased markedly in the recent past.

No modern society has evolved more than a small fraction of its present cultural heritage. Each is deeply indebted to the contributions of other civilizations.

1. EVOLUTION OF MAN AND HIS TOOLS

Concepts:

adaptation	migration
evolution	mutation
food-getting	natural and social selection
genetic drift	pre-history
genetic mixture	race

Principles:

Over millions of years man's brain gradually evolved its capacity for rational thought as his tools and language became more complex.

The body which man inherits has changed hardly at all since history began ten thousand years ago. The great changes since then have been cultural, not genetic.

Genetic differences among races are trivial or very subtle. Socially important differences among races are learned (cultural).

2. WORLD HISTORY

Concepts:

agricultural revolution	militarism
alphabet	nationalism
civilization	secularization
colonization	social class

commercial expansion, mercantilism	technological development
communication	transportation
imperialism	urbanization
industrialization, economic development	westernization

Facts:

The Agricultural Revolution caused cities, wealth, specialization, trade, and population growth.

As a result of wealth, trade, better transportation, population growth, cities, and specialization, there grew up written languages and printing, large scale commerce, cultural interaction and diversity, war, social class.

The time, location, and major contributions of the following civilizations of man:

Ancient Egypt

Mesopotamia

Ancient India (Indus River)

Ancient China (Yellow River)

Greece (Hellenic and Hellenistic)

Rome

Byzantium

Dark Ages in Europe and Arabia

Middle Ages in Europe

Ancient African kingdoms - Ghana, Mali, Songhay

The Renaissance in Europe

Pre-Columbian civilizations in America

The time, location (major countries or area involved), causes, and effects on society of the following general trends:

Growth of nation-states

Exploration and colonization of the New World

Rationality, education

Secularization

Industrial Revolution

Urbanization

Imperialistic expansion

The major events of the 20th century, their causes and their effects on society:

- World War I and the Treaty of Versailles
- The Russian Revolution
- The Great Depression
- Communication, transportation improvements
- World War II and Hitlerian Germany
- The Cold War and space race
- The Americanization/westernization of most of the world
- Rising expectations among underdeveloped countries and underprivileged classes
- The Korean War
- The Vietnamese War
- Breakdown of the traditional family

3. THE AMERICAN EXPERIENCE

Concepts:

- Jacksonian Democracy Monroe Doctrine
- Jeffersonian Democracy Sectionalism
- Manifest Destiny

Facts:

The time, areas involved, causes, and effects of the following major events in United States history:

- Colonization
- The Declaration of Independence and the American Revolution
- The Articles of Confederation and the Constitution
- Westward expansion
- Slavery, abolitionist movement
- The Civil War
- Reconstruction
- The rise of big business and labor unions
- The civil rights movement

C.

CULTURES

The concepts useful for understanding any given culture or comparing cultures are listed mainly under D.

D.

SOCIOLOGY AND ANTHROPOLOGY

Concepts:

art forms	interdependence
assimilation	military
child-rearing, socialization	neighborhood
community	ritual
culture	role
culture lag	rural
custom, tradition	social class
education	social structure, organization
family, marriage	society
feudalism	status, prestige (ascribed and achieved)
ideology	technology
institution	urban, urbanization, suburban
interaction	values (mores, norms)

Principles:

There is no scientific basis for claiming one culture is superior to another overall.

The more complex the society is, the more cooperation is required, either voluntarily or enforced by authority.

All cultures provide for the essential needs of human group life but differ in the means by which they fulfill these needs. Different cultures result in different modes of thought and action. People generally prefer the culture of their own society but should recognize that they would probably prefer another culture if they had been subject to its influences to the same degree.

Certain institutions in societies, such as the family, religion, and education, tend to change less rapidly than do other elements of societies, and so are the main preservers of tradition.

All enduring social organizations or groups devote energy both to achieving group goals and to maintaining their own internal control and external power.

Society usually assigns the lowest social roles and economic tasks to newcomers and minority groups, thereby creating the concept of inferiority-superiority and limiting life's chances for these groups.

Children growing up within a society tend to learn that its particular behavior patterns, folkways, institutions and values are "right" and that those of other societies are "wrong". (socialization)

Contact between cultures causes changes in them.

Kinship is a cultural phenomenon rather than a biological one. Each culture defines the various statuses of kinship and the roles of these statuses according to its own beliefs and values.

E.

RELIGIONS

Concepts:

beliefs	revealed religion
gods	rules of behavior
myth	sacred
priest	secular
prophets	supernatural, magic
religion	taboo

Principles:

A function of religion is providing an explanation of events in life that seem obscure, uncertain, or fearsome--and thus demand meaning so suffering can be reduced and security can be achieved.

In larger societies, with improved technologies and a larger body of exact knowledge, the area of activity regarded as sacred is smaller and that regarded as secular larger.

Facts:

Most major religions have promised some form of immortality in return for faith and loyalty.

All major religions have developed a social structure to retain power and control, a structure which often overlaps other social and political institutions.

The place, time, and manner of origin; the basic tenets; and the position of the religion in the world today should be known for the following:

Buddhism

Christianity

 Catholicism

 Protestantism

 Mormonism

Confucianism

Hinduism

Islam

Judaism

F.

AMERICAN ETHNIC GROUPS

Facts:

Most ethnic minorities have long held a low socioeconomic position in U.S. society. Advances toward equality have begun in recent years, although full socioeconomic equality has not yet been attained.

Religious freedom is an American tradition, even though Christianity has been the prevailing religion.

How the following groups differ in values or ways of life from the main stream of American society; the origins, reasons and times of immigration to the United States of these groups; and their present social status:

Afro-Americans

American Indians

Oriental-Americans

Latin-Americans

European-Americans (e.g. Irish, Polish, Italians, etc.)

Jews

G.

AMERICAN INSTITUTIONS

Concepts:

American family and marriage	mass communication media
business	materialism
free enterprise	organizations (private and public)
individualism	schools
labor	work ethic

Facts:

American people vary greatly in habits of life and social values.

Marriage is the formal basis for sex and child rearing. Lately other alternatives are being sought, but marriage still prevails.

Our modified market economy has produced affluence and a consumer-products-oriented society, ironically in presence of poverty, war, pollution and other grave social ills. Youth and minorities have highlighted and protested this paradox.

The mass communication media have altered American culture profoundly and have great potential for education, propaganda and social control.

American government began decentralized and is becoming more centralized and more bureaucratic.

The American military is controlled by a civilian head.

Most American schools are public, universal, traditional, and bureaucratic.

Free enterprise is a major economic value in the U.S. Mergers into large corporations is a strong trend; there is increasing government control and subsidization of large business. These trends apply also to agriculture; there are fewer farmers, bigger farms.

Technological development of U.S. is the highest in the world; this has led to extended education and great specialization.

Concepts:

aggression	in-group, out-group
attitudes	interpersonal relations and interaction
belongingness	leader-follower
communication	model
competition	norms
conflict - groups, interpersonal	panic, hysteria
cooperation	passive resistance
conformity-nonconformity	peer
deviant	support
domination	reciprocal
empathy	reference group
games (interpersonal)	social control
groups - small, large, crowd	stereotype
imitation	superior-subordinate

Principles:

A person learns the values, language, roles and ways of thought of his culture mainly by interacting with others and by unconscious imitation of models.

Interpersonal relationships and membership in groups are important aspects of persons' lives because so many goals and satisfactions are most easily attained in groups, and in some cases, only through association with other people.

In the immediate presence of a group, a person's judgment and feelings are often strongly influenced by the group, especially to the extent the person identifies with the group and the group feeling is strong in a certain direction.

One person takes on different roles in different groups and situations.

Groups exert social control on any member who deviates far from the behavior expected in his role. Common techniques of getting him to conform are slurring, jeering, gossip, and reward for conformity such as praise and acceptance. Social control, particularly in complex societies, is also achieved by laws, infractions of which result in formal penalties.

The amount of change in opinion resulting from receiving a communication will increase with:

- pressure toward uniformity of opinion
- status of source
- consistency of message with central values and beliefs of receiver
- lack of biasing motive apparent in source.

People prefer the company of, and cooperate more with, others who are more like them in social values.

I.

INDIVIDUAL BEHAVIOR

Concepts:

adapt	identity
ambition	individuality
anxiety	maturation
behavior	mental set, orientation
choice	motivation, needs
compartmentalization	personality
compensation	projection
conflict (internal), frustration	rationalization
creativity, expression	reinforcement
displacement	repression
emotion	response
environment	responsibility
expectations	satiation
fantasy, wishful thinking	security
feedback	self-image
frustration	stimulus
habit	unconscious
heredity, genetic	values
	withdrawal

Principles:

The typical order of priority which humans place on their needs is:

1. Bodily safety
2. Food, water and sleep
3. Approval by other people who are important to them
4. Sex, love, friendship and parenthood
5. Self-respect

As a biologic organism, the individual possesses at birth certain physiological needs, but the methods of satisfying these needs and their subsequent development are to a great extent socially determined by his particular cultural unit.

Learning and genetic inheritance both have a significant part in creating diverse individual human personalities.

People are often unaware of the motives and values which guide their behavior and affect their perception of the world around them.

In thought and behavior people seek experiences which are pleasant or which they have learned to associate with pleasure, and avoid experiences which are painful or which they have learned to associate with pain.

People usually act the way they have before in similar situations.

In making a conscious decision a person only chooses among alternatives he thinks of, and there are often many he overlooks. Those who search for new alternatives often find new ways to succeed.

People tend to see and remember what fits their own frame of reference. They seek consistency among their beliefs and actions.

The longer and more recently a person has continuously pursued a given activity, the more likely it is he will seek some other pleasure or pursuit instead.

J.

POLITICAL SCIENCE

Concepts:

anarchy	liberal, progressive
authority (legitimacy), jurisdiction, office, official	monarchy
bureaucracy	nationalism
centralization, decentralization	participation
colonial government	political socialization
conflict	power, control
conservative, reactionary	public interest (general welfare)
corruption	radical
democracy	republic
elite	responsibility, duty
government, the state	responsiveness of government
issue	revolution
justice	rights and freedoms
laissez-faire	security
law, constitution	totalitarianism, autocracy (fascism, dictatorship, authoritarianism)
leaders, how chosen	voting, franchise

Principles:

People establish governments to make laws and help maintain peace and order; to protect rights and liberties; to provide services for the general well-being; and to provide protection from outside forces.

Government by law is often more just than government by absolute authority in that most laws apply equally to everyone, so that persons in positions of authority are restrained by law from excessive personal favoritism and bias in their decisions. However, law can also be used to maintain unequal advantage, as in laws that protect slavery.

Power tends to corrupt those who hold it.

Economic power usually brings political power, and vice versa.

Public exposure via mass media is a source of power.

Government activities are paid for mainly by taxation.

Facts:

Representative democratic government had roots in ancient Greece. It has taken hold on a large scale only in the last three centuries, beginning in Western Europe and the United States. It is now valued as an ideal in many parts of the world, but slow and erratic in its progress, largely because of educational and economic limitations and the established power of autocracies.

K.

AMERICAN CIVICS

Concepts:

boycott, protest	guaranteed rights
budget, taxation	influence, informal, channel, contact
checks and balances	interest groups, pluralism
civil disobedience	judicial
committee system (seniority)	law, civil and criminal cases
Constitution	law, due process
corruption, bribery	legislative
dissent	limited government
division of powers	lobbying
elections, general and primary	mass communication media, propaganda
executive	national sovereignty vs. states' rights
government - national	parties, convention
government - state	petition, referendum, recall
government - local	secret vote
government bureaucracy - civil service	voting blocs

Facts:

U. S. and its states are constitutional governments. The Bill of Rights and other parts of constitution guarantee all citizens fundamental rights and liberties, such as freedom of speech and assembly, and equal protection under the law.

Powers are traditionally divided between legislative, executive, and judicial branches but the powers today are often shared, e.g., the executive initiates most major legislation, and the courts influence implementation of legislation by interpretation.

Nationally, the legislative branch is made up of two houses representing the people of different states in their passage of laws, taxes, and appropriations. Each state has a legislative body similar to Congress.

Legislation is created and controlled largely through committees, and control of committees is determined mainly by seniority.

Powerful interest groups have a strong influence on all branches of government at all levels.

The power of the President has increased in this century. The President directs most military and foreign actions.

Executive functions are implemented through various agencies. Executive agencies created to implement certain laws tend to seek their own self-preservation and power. Regulatory agencies typically serve the corporations they are supposed to regulate rather than the public interest.

Public officials are appointed, or elected in secret vote by adult citizens (secret to prevent bribing and threatening of voters). Legislators and chief executives are elected.

Candidates of the Democratic and Republican parties fill nearly all state and national elective offices. The majority party controls appointments to chair congressional committees.

Competing political ideas and interest groups prevent one group from getting too much power and enable a wider range of ideas to influence public policymakers.

Great concentration of military or economic power can lead to political domination or dictatorship.

Abuses and inefficiencies in government can be reduced if citizens are alert and act to correct them. Ways citizens can influence government policy are: write or talk to public officials; have private or public discussions of civic matters; join and work with political parties and interest groups; petition; hold public office; write to editors; protest, vote.

Disadvantaged groups in the U.S. are demanding more and becoming better organized, and thus are gaining more political power.

L.

BASIC ECONOMICS

Concepts:

capital	management
collective bargaining	market economy, free enterprise
command economy	marketing, advertising
competition	mixed economy
consume, consumer	money, exchange, barter
co-ops, collective enterprise	monopoly, cartel, collusion
depression, recession	need, want
distribution - transportation	pricing
division of labor, specialization	production, products
economic system, economy	profit, loss
economic interdependence	property, ownership, sharing
employment	scarcity
exploitation	services
factory, manufacture, process	stocks and bonds
goods	supply - demand
government regulation	trade, import, export
inflation	unions (guilds)
industrialization	wealth
labor (work), human resources	

Principles:

Scarcity is the basic problem in all societies in that man has virtually unlimited needs and wants, and limited resources to satisfy his needs. Since resources are limited, man must make choices regarding their use.

In a market economy, prices indicate the relative value of goods and services. These prices reflect the willingness of buyers to buy and sellers to sell; they also influence the decisions of both consumers and producers. High price tends to restrict present consumption and to stimulate production of a larger supply in the future. Low price has the reverse effect. Raising or lowering competitive price by artificial means, whether by private monopoly or governmental authority, is likely to aggravate the situation that the action is designed to alleviate, unless the change in price is accompanied by the power to control future demand or supply.

Division of labor (specialization) usually increases efficiency and interdependence among people.

The amount of individual production depends in part on the informal standards of work performance which workers set for their own group.

In order to increase production, some consumer goods must be sacrificed for capital goods. The more economically poor a national community, the more difficult it becomes to make these sacrifices.

Facts

The Communist bloc nations have varied forms of government-controlled economies; they are for the most part austere and allow little freedom, but there is little severe poverty or starvation.

The United States, Great Britain and nations of its former empire, Western Europe, and Japan are primarily market economies, modified by varying forms and degrees of government limitations.

In undeveloped and colonized nations (mostly Africa, Mideast, Latin America and tropical Asia) people have few skills and a low standard of living, and resources are exploited mainly by outside economic interests. Feudal or autocratic government preserves the status quo and waxes fat, though unrest is increasing.

Most of the world is still made up of agriculturally-based peasants controlled by a few powerful land owners.

Primitive (economies) societies exist, but they are diminishing in number.

M.

PERSONAL ECONOMICS

Concepts:

budget
standard of living
utility, cost-effect
value, worth

1. employment

automation
cost of living, real income
fringe benefits
income, wages
job obsolescence
skills, labor market

2. buying and selling

cost
credit
installment buying
interest rates
wholesale, retail

3. investment

corporation
depreciation - appreciation
dividend
insurance
investment (vs. consume)
liquidity
speculation
stocks, bonds

Concepts:

adaptation, change	local
arctic, antarctic, polar	nomad
basic needs	rainforest
climate, weather	resources
communication	stability, homeostasis, closed system
continents	transportation
ecosystem, ecology	tropical
environment, environmental influences	

Principles:

People in different cultures or different stages of civilization react differently to similar environments.

Some areas of the world are much more favorable to food production than others for reasons of climate and soil. There are large areas completely incapable of food production on a large scale, e.g., deserts, tropical jungles, mountains.

Because of his urgent need for food, water and shelter, man adapts to different environments in different ways in order to make use of their varied resources.

Facts:

Major climates, their causes and locations

Location of each continent and ocean by name
