DESCRIPTORS Abstracts; \*Bibliographies; \*Exceptional Child Education; Gifted; \*Handicapped Children; \*Regular Class Placement; \*Special Classes

ABSTRACT

The selected bibliography on regular class placement and special classes for handicapped and gifted children contains approximately 70 abstracts with indexing information explained to be drawn from the computer file of abstracts representing the Council for Exceptional Children Information Center's complete holdings as of July, 1972. Abstracts are said to be chosen using the criteria of availability of document to user, currency, information value, author's reputation, and classical content. Preliminary information explains how to read the abstract (a sample abstract is included which identifies the different parts of the abstract), how to use the author and subject indexes, how to purchase documents through the Educational Resources Information Center Document Reproduction Service (two order blanks are provided), an order blank for Exceptional Child Education Abstracts in which the abstracts are originally published, a list of indexing terms searched to compile the bibliography, and a list of journals from which articles are abstracted for the bibliography. Publication date of documents abstracted ranges from 1957 to 1971. (CB)

## The CEC Information Center on Exceptional Children

With a grant from the US Office of Education, the CEC Information Center was established at The Council for Exceptional Children to serve as a comprehensive source of information on research, instructional materials, programs, administration, teacher education, methods, curriculum, etc. for the field of special education. The Center functions as the Clearinghouse on Exceptional Children in the Educational Resources Information Centers (ERIC) program and also as a member center in the Special Education IMC/RMC Network. In addition, the CEC Center's program includes a commitment to a concentrated effort towards the development of products which will interpret research results into educational methods and practices.

### How to Use This Bibliography

The *Exceptional Child Bibliography Series* was initiated by the CEC Information Center to answer the need for rapid responses to specific requests for information. The volume of information requests received by the Center is analyzed and used as a guide in preparing special topic bibliographies in the field of exceptional child education. Abstracts contained in the bibliographies are drawn from the computer file of abstracts which represents the CEC Information Center's complete holdings as of the date indicated on each bibliography.

Selective editing by Information Specialists is performed on each bibliography. From the total number of abstracts drawn from the file on a particular topic, selection is made of only those judged to best meet the following criteria: availability of the document to the user, currency, information value, author's reputation, and classical content. The number of abstracts selected to appear in a bibliography may vary from one to 100, depending on the amount of suitable information available. Updating of bibliographies as new material becomes available is accomplished when the volume of new material reaches 25 percent of presently available material on a given topic.

### How to Read the Abstract

Each abstract contains three sections—bibliographic data, descriptors, and a summary of the document. The bibliographic section provides the document's identifying number (ED and/or EC), publication date, author, title, source, and availability. The descriptors indicate the subjects with which a document deals. The summary provides a comprehensive overview of the document's contents and in some cases document availability is announced here.

### How to Use the Indexes

Some bibliographies in *Exceptional Children Bibliography Series* contain author and/or subject indexes. In these bibliographies, readers seeking work on a specific aspect of the general topic may consult the subject index to be referred to specific abstract numbers. Abstracts dealing with several topics may be identified by finding the same abstract number under two or more subjects in the subject index.

### How to Purchase Documents

Documents with an ED number and EDRS availability indicated may be purchased from the ERIC Document Reproduction Service (EDRS). For your convenience an order form is provided on the back cover of this bibliography.

Abstracts appearing in the bibliographies have also been published in *Exceptional Child Education Abstracts*, the quarterly abstract publication of the Council for Exceptional Children. Approximately 750 abstracts covering the broad range of exceptionality appear in each issue. (Subscription order form below.)

### Sample Abstract Entry

Clearinghouse accession number → EC 01 0769

Publication date → Publ. Date Jun 68

Author(s) → Hensley, Gene, Ed.; Buck, Dorothy P. Ed.

Title → Cooperative Agreements between Special Education and Rehabilitation Services in the West. Selected Papers from a Conference on Cooperative Agreements (Las Vegas, Nevada, February, 1968).

EDRS mf, hc indicates document is available in microfiche and hard copy.\* → EDRS mf, hc

Abstract number used in Indexes → ABSTRACT 769

ERIC accession number. Use this number when ordering microfiche and hard copy → ED 025 864

Number of pages. Use this figure to compute cost of hard copy. → 44p.

Institution(s) → Western Interstate Commission For Higher Education, Boulder, Colorado; United Cerebral Palsy Research And Education Foundation, Inc., New York; Rehabilitation Services Administration (DHEW), Washington, D. C.

Contract or grant number → VRA-546T66

Descriptors—subject terms which characterize content → Descriptors: exceptional child education; cooperative programs; vocational rehabilitation; vocational education; administration; mentally handicapped; state agencies; cooperative education; educational coordination; cooperative programs; state federal aid; administrative problems; communication problems; equalization aid; work study programs; handicapped; cost effectiveness

Summary → Five papers discuss cooperative work study agreements between schools and vocational rehabilitation services in the western states. Areas discussed include the advantages of cooperative agreements, the forms and disadvantages of third party agreements, basic concepts of the programs, and an outline form to use when applying for matching funds; the relationship of special education, rehabilitation and cooperative plans, programs, and agreements; and California's past and present work study programs for the mentally retarded. Also reviewed are research demonstrating the economic feasibility of vocational training for the educable mentally retarded in the public schools and communication problems in work study programs. The conference summary considers the purposes, goals, essence of, and necessity for cooperative agreements. (Mk)

### ABSTRACT 10300

EC 001 380 ED 017 106  
 Publ. Date 67 108p.  
**Educating Visually Handicapped Pupils.**  
 New York City Board Of Education,  
 New York  
 EDRS Price 0.50;4.40

Descriptors: exceptional child education; counseling; administration; visuallyhandicapped; curriculum; blind; partially sighted; public schools; braille; educational methods; educational programs; guidance services; itinerant teacher programs; medical vocabulary; multiply handicapped; program administration; resource teachers; special classes; special programs; special services; teaching guides; New York City

Educational programs available to blind or partially blind children in New York City are described in this illustrated bulletin. Procedures for school placement, organization of special classes, and enrollment statistics are discussed. The resource class program and guidelines for both regular and resource teachers are presented. Other special programs (itinerant teacher program, multiply handicapped blind children, and special class organization) are discussed. Curriculum adaptations in the following areas are provided--language arts, speech, typing, mathematics, science, social studies, foreign languages, music, fine arts, industrial arts, home economics, and health education. Enrichment and corrective education programs, testing, extracurricular activities, trips, excursions, and leisure time activities are also described. The roles and responsibilities of the guidance and supplementary services, the administration, and the supervisory personnel are examined. Teaching guidelines and information on braille, instructional aids, and a glossary of medical terms are included. An appendix contains the answers to frequently asked questions, the eye report form (New York City), a bibliography of 50 items, and reference lists of agencies and sources of materials. This document was published by the Board of Education of the City of New York, 110 Livingston Street, Brooklyn, New York 11201, and is available for \$2.00. (CG)

**Demonstration of Differential Programming in Enrichment, Acceleration, Counseling, and Special Classes for Gifted Pupils in Grades 1-9. Final Report.**  
 California State Dept. Of Educ., Sacramento  
 OEC-10-109  
 EDRS Price 1.75;18.76

Descriptors: exceptional child education; gifted; teaching methods; profes-

sional education; counseling; curriculum; enrichment programs; acceleration; special classes; inservice teacher education; curriculum development; audiovisual instruction; teacher workshops; elementary schools; junior high schools; program development; demonstration projects; special programs; advanced placement programs; identification; group counseling; consultants; counseling; instructional programs; material development; California; California Project Talent

California Project Talent was a 3 1/2-year project which demonstrated four types of programs for gifted children and youth. The enrichment demonstration analyzed the needs for inservice training of teachers, developed appropriate workshops and also invented, field tested, and disseminated special pupil units in (1) scientific discovery, methodology, and investigation through a study of graphic representation of statistical information using the Bloom Taxonomy, (2) creative expression through a study of the literary element of characterization using Guilford's Structure of Intellect Model, and (3) critical appreciation through a study of the fundamental forms of music using Bruner's Process of Education. The acceleration demonstration involved individual placement procedures and accelerated pupils from grades 2 to 4 by using a special summer session and by employing extensive case studies, counseling, and tutoring. The counseling-instructional demonstration showed interrelated goals, processes, and contents of English, social sciences, guidance, and small group counseling designed to improve communication skills, encourage development of values and philosophy of life, and promote more effective learning in social sciences and in English in grades 7 to 9. The special class demonstration showed the unique value of the all day, full week special class setting in improving problem solving, the ability to apply facts and principles, and insight into the nature of learning. Overall, (1) four new programs were invented, adopted, demonstrated, and disseminated, (2) related consultant, teacher, and counselor roles were described, (3) products produced included a film series, filmstrip, and program guidelines, and (4) gifted child programs were promoted, enriched, and expanded. A reference list cites 62 items. Appendixes provide project reports and case studies, list project developed films and guidelines, and present research related materials. (AA)

 Rubin, Eli Z. And Others  
**Emotionally Handicapped Children and the Elementary School.**  
 EDRS not available

Wayne State University Press, Detroit, Michigan 48202 (\$12.50).

Descriptors: exceptional child research; emotionally disturbed; behavior; grouping (instructional purposes); adjustment (to environment); emotional adjustment; social adjustment; behavior change; behavior problems; academic achievement; special classes; regular class placement; teaching methods; clinical diagnosis; family characteristics; case records; emotional maladjustment; statistical analysis; individualized instruction; research utilization

Eighty-three children, from kindergarten to second grade, showing evidences of chronic social, emotional, and academic maladjustment, were placed in a program consisting of a control group in regular class and an experimental group in one of two special classes with individualized instruction and therapeutic management. There was no significant difference between the experimental and control groups in classroom behavior, but the experimental group was significantly better in the following items on changes in classroom adjustment: mood, friendly approach, and daydreaming ( $p = .05$ ); and impulse control, intensity of overt anger, popularity, and quarrelsomeness ( $p = .01$ ). The experimental group showed significant improvement in attitude toward school ( $p = .05$ ) and in perception of stress at school ( $p = .05$ ). In contrast to other research, there was no significant difference between groups in performance on the Metropolitan Achievement Test. Results did not overwhelmingly confirm the hypothesis that special class programming is generally beneficial to emotionally handicapped children. The background to the study, the research design and methods, new hypotheses, and program changes are also described. (RP)

EC 001 325 ED N.A.  
 Publ. Date Apr 67 5p.  
 Darrah, Joan  
**Diagnostic Practices and Special Classes for the Educable Mentally Retarded: A Layman's Critical View.**  
 Council For Exceptional Children, Washington, D. C.  
 EDRS not available  
 Exceptional Children; V33 N8 P523-7  
 Apr 1967

Descriptors: exceptional child education; administration; mentally handicapped; program evaluation; educable mentally handicapped; special classes; research needs; regular class placement; grouping (instructional purposes); placement; research reviews (publications); student evaluation

Since cited research indicates that placement of the educable mentally retarded does not produce greater learning, improved social adjustment, or more constructive participation in society, the

justification for maintaining such classes is questioned. Diagnostic criteria used by the California State Department of Education in placing students in special classes are examined and found to be educationally sound. A review of research on adult adjustment, academic training, and social adjustment of retardates shows no apparent advantage of special classes. However, the responsibility for justification of the special classes system is placed with the professionals in special education at colleges and universities whose future research can evaluate the effectiveness of education for the retarded. CRP-619

Descriptors: exceptional child research; mentally handicapped; adjustment (to environment); achievement; environmental influences; children; mental retardation; special classes; training; child development; academic achievement; regular class placement; intellectual development; social adjustment; personal adjustment; educable mentally handicapped; comparative analysis

A comparison was made of the intellectual development, academic achievement, and social and personal adjustment of educable mentally retarded children enrolled in special classes and their peers in regular grades. About 125 children beginning first grade and having a mean IQ of 75 (Stanford-Binet scale) were divided randomly into an experimental group and a control group. A series of intellectual, academic, and personal adjustment measures was administered to all the children annually for 4 years. During this period an attrition of about three-fourths of the original sample took place. This, however, did not significantly affect the study results. There were no statistically significant differences in IQ gains between the special classes group and the regular grades group; several social factors were found to be related to increases in IQ. The analysis of academic achievement indicated that the special class was beneficial to children whose IQ's are 80 and below, but that it was not necessarily an effective educational setting for significantly improving academic achievement of children, usually classified as borderline or slow learners, who have IQ's above 80. Findings on personal adjustment showed that special classes encouraged the retardates to display originality and flexibility in their thinking. (JH)

What the Researcher Says about Teaching the Educable Mentally Retarded in the Regular Classroom.  
West Texas School Study Council, Lubbock, Technology Station  
EDRS mf,he

Descriptors: exceptional child education; teaching methods; mentally handicapped; educable mentally handicapped; regular class placement; teaching guides; adolescents; children; educational objectives; educational research; elementary education; federal aid; identification; secondary education; student evaluation; teaching techniques; Lubbock

The main purpose of this study of the literature is the publication of a functional teaching guide for teachers with educable mentally handicapped (EMH) students in regular classrooms. The guide considers characteristics and identification of the EMH, educational objectives, teaching methods, student evaluation, and federal aid. A number of characteristics are described, and techniques and procedures which have proved useful in teaching EMH children are presented. A bibliography of 45 items is included. (DF)

Descriptors: exceptional child education; aurally handicapped; classrooms; class size; classroom design; economic factors; social factors; teaching methods; team teaching; regular class placement; special classes

Integration of deaf and normally hearing children in the schools is considered. An experiment in New Zealand which provides a small room for six to eight deaf students adjacent to a regular class is described; provisions of the program include two teachers, combined classes for most subjects, and special help in communication skills for the deaf. Advantages mentioned are the social benefits to the children and the economic advantages of having the children live at home rather than in a boarding school. A floor plan of the classrooms is provided. (RP)

Descriptors: exceptional child research; mentally handicapped; self concept; special classes; rating scales; self evaluation; student attitudes; academic ability; academic aspiration; educable mentally handicapped; interviews; peer acceptance; self esteem; evaluation techniques; regular class placement; research reviews (publications); General Self-Concept of Ability Scale

To investigate change in the general self concept of ability of educable mentally retarded special class students, four equally spaced interviews were conducted with 51 students (mean age 11.63) over a 2-year period. Pupils answered questions about their academic ability from the General Self-Concept of Ability Scale; scores showed an ascending linear trend over the last 1 1/2 years of their placement in a special class while those reassigned to the regular classes all declined in self concept of ability. Special class students did not significantly increase in their awareness that according to others' definitions they were failures. The students had a more negative orientation to the special class during their second year ( $p$  less than .05), but there was no significant change in academic aspirations. Special class placement was found to have a positive effect on the children's self concept of ability which was based on self comparison with class peers. Students may have internalized the negative attitudes of others about the special class and not about their ability. (IE)

EDRS mf,he  
CRP-043

Descriptors: exceptional child research; mentally handicapped; adjustment (to environment); achievement; academic achievement; social adjustment; educable mentally handicapped; peer groups; special classes; student placement; regular class placement

Factors involved in the learning and adjustment of retarded children in special and in regular classrooms were assessed. Each group was evaluated with instruments testing intellectual capacity, school achievements, social acceptability, and adjustment to teachers and peers. Results suggested that such factors as physiological and psychological differences may influence acceptance in special classes, and may also, in our present educational system, mean that many

children, recognized as educable on the basis of IQ level, are being deprived of education entirely. The acceptance of special class programs for retarded children has been based on the assumption that such programs are able to achieve results different from those achievable in a regular class setting. The evidence of this study indicates that these differences do actually exist, for the superior academic achievement noted for the regular class group is balanced by the superior social adjustment of the coefficient of 0.94 displayed the reliability in individual diagnosis when interrelated with the Ethical Comprehension Test (ECT). Part 4, personality appraisal of EMH children, developed a system of analyzing picture-story procedures. It included a noninterpretive schema, a numerical summary, and the assignment of scores for personality. Part 5, on the Chicago Cooperative Research Practical Reading Test, was constructed to determine the reading progress of the EMH child. The reliability of the test was approximately 0.767. Intercorrelations suggested that achieving EMH children tended to achieve consistently. Part 6, a brief screening instrument for evaluating the academic skills and personal adjustment of EMH children, developed five tests and measuring devices. Construction, validation, and reliability were evaluated for the Word Recognition Test, the Chicago Adjustment Rating Scales, a behavior checklist for the personality evaluation of EMH children, sociometric questions, and interest maturity tests. Learning abilities of educable mentally handicapped (EMH) children were studied over a 4-year period. The research resulted in the development of a 6-part report. Part 1, on achievement and adjustment, employed the matched-pair method with approximately 700 samples of EMH children, 7 to 13 years of age. Results revealed that children in special classes responded better and had better behavior and adjustment patterns than

those in regular classes. Part 2, on teaching the EMH child, compared four methods of instruction. The experiment placed 50 EMH classroom teachers into five instruction groups. The results from testing the groups showed that the interests and units methods were not superior to the subject oriented approach. Part 3, on the Chicago Test of General Information and General Comprehension for EMH Children, was designed to measure the progress of the children in general aptitude areas and formulated curricular objectives. Its consistency

Descriptors: exceptional child research; mentally handicapped; achievement; attitudes; environmental influences; self concept; educable mentally handicapped; academic achievement; socioeconomic status; social influences; teacher influence; self evaluation; special classes; parent influence; sex differences; student attitudes; rural urban differences; academic aspiration; student placement; ability

The effect of special class placement on the self concept of ability was studied in 62 educable mentally handicapped students (mean age 11.6). Six observations were made in a time design series using scales of self concept of ability and academic aspirations and expectations, tests of significant and academic significant others, and a class evaluation questionnaire. On self concept of ability, results manifested a quadratic trend in scores; little variation in trends of means between high and low socioeconomic status of male and female groups; and pronounced variation between older and younger, and rural and urban groups, and among groups constructed on the basis of high, medium, and low initial scores on the scale. No downward linear trend occurred in academic aspirations or expectations and no changes resulted in affective orientation to the special class, in the proportion of subjects choosing the special class, or in significant others named (except for teachers). Also noted were a high degree of correspondence between significant and academic significant others named by the subjects and by members of a regular class; an increase in the proportion of subjects naming teachers as significant others ( $p$  less than .05); and, except for teachers, parents, and local adults who increased in proportion of mention ( $p$  less than .05), overall high agreement in academic significant others named. (JD)

Descriptors: exceptional child research; mentally handicapped; administration; achievement; child development; educable mentally handicapped; physical development; mental development; social development; special classes; academic achievement; urban schools; rural schools; regular class placement; program evaluation; grouping (instructional purposes)

The progress of young mental retardates in regular classrooms was evaluated and compared with that of their peers in special classes. The basis of comparison included mental development, progress in regular school subjects, achievement toward other educational goals, social adjustment inside and outside the classroom, and physical growth and coordination. These problems were studied in a large number of different school environments, including rural schools and large and small city school units. When the study was concluded and all data were analyzed, overall social and physical progress seemed to favor the special classes. However, the results showed that the subjects did better academic work in a regular classroom than those who were placed in a special class. (JH)

**Mental Age as It Relates to School Achievement Among Educable Mentally Retarded Adolescents.**

EDRS not available  
 Education And Training Of The Mentally Retarded; V4 N2 P53-6 Apr 1969

Descriptors: exceptional child research; mentally handicapped; academic achievement; educable mentally handicapped; special classes; effective teaching; intelligence differences

The concept of homogeneous special education classes for the educable mentally retarded is questioned as an optional means of educating children ranging from 50 to 80 in IQ scores. The results of this study indicate that teachers appear to be focusing their efforts on the less able members of the class. Consequently, the discrepancy between actual achievement and that expected in terms of mental age increases as the measured IQ score of the special class child approaches 80. (Author)

**Achievement Motivation Among Negro Adolescents in Regular and Special Education Programs.**

EDRS not available  
 American Journal Of Mental Deficiency; V74 N1 P20-6 Jul 1969

Descriptors: exceptional child research; mentally handicapped; motivation; educable mentally handicapped; Negro students; special classes; regular class placement; academic achievement; aspiration

One hundred fifty Negro adolescents (50 educable mentally retarded in special classes, 50 EMR in regular classes, and 50 subjects of normal intelligence) were compared for achievement motivation and objective goal setting behavior, using Thematic Apperception pictures, the Wide Range Achievement Test, and a task designed to measure aspiration reality and shift. Results seem to indicate that retarded Negro adolescents are more influenced by success than by failure, retarded Negro adolescents have achievement motivation comparable to normal subjects from the same socioeconomic background, special class experience makes EMR adolescents cautious in setting goals, and special class retardates anticipate failure to achieve goals while regular class retardates anticipate success and, in fact, show greater word recognition achievement. Descriptors: exceptional child research; gifted; teaching methods; administration; high school students; special programs; enrichment; accelerated courses; acceleration; advanced programs; curriculum; instructional materials; special classes; special services; teacher responsibility; program evaluation; student evaluation; student placement; organization; school surveys

Approaches to educating able students of 45 high schools were presented. Most of the special programs fall into one of two categories: special classes organized in place of regular ones, and attempts to enrich or accelerate those classes already scheduled. The curriculum of most of the schools for these students included English, physical science, mathematics, general science, and foreign language. They used such unique arrangements as rapid grade advancement, separate curriculum tracks, and rapid subject matter progression. Special materials, library

volumes, laboratory facilities and supplies as well as other aids were used. Teachers themselves were usually involved in some type of special preparation. Guidance, counseling, and special advisement were usually included. Some of the problems encountered included scheduling, instruction, grading, student attitude, and parent attitude. However, the educators and the evaluation of the students' performance proved that the programs were indeed beneficial. (RJ)

**Hearing Impaired Students Benefit from Supportive Programs.**

EDRS not available  
 Volta Review; V70 N1 P14-23 Jan 1968

Descriptors: exceptional child research; aurally handicapped; regular class placement; communication skills; remedial instruction; adjustment (to environment); vocational education; special programs; deaf; hard of hearing; resource teachers

Sixty-five hearing impaired and deaf students participated in a 3-year demonstration project providing supportive programs enabling them to attend educational institutions for the hearing. Divided into four groups according to degree of hearing loss and language deficiency, the participants received supportive programs in communication, education, orientation, and vocational training. Results indicated that the programs were effective. Concerns in planning the programs are described as are the programs themselves. (GD)

Descriptors: exceptional child research; emotionally disturbed; anti social behavior; behavior change; behavior development; behavior problems; change agents; classroom environment; elementary school students; habit formation; milieu therapy; motivation; reinforcement; socially deviant behavior; social reinforcement

The efficiency of behavior modification technology, as a therapeutic intervention process, has been amply demonstrated. The establishment of special educational settings for modification of deviant behavior, as reported here, provides opportunity for a controlled analysis of the effects of groups of experimental variables, where treatment in regular classrooms is less amenable to the analysis of cause and effect relationships. This paper described the development and evaluation of a treatment model designed for one class of deviant behavior: hyperactive, disruptive, acting out behavior in the classroom. Some 12 males, in grades 4, 5, and 6, average or above in intellectual ability, were the subjects. Socially acceptable behavior was reinforced by the accumulation of individual and group points exchangeable for free time for high valence activities. A variety of timing and recording devices were used to monitor behavior and points. Observations were made of subjects' behavior in special and regular classrooms. The treatment model proved very effective. Of three components, token reinforcement, social reinforcement, and aversive controls, social reinforcement exercised the greatest control. (BP)

Office Of Education (DHEW), Washington, D. C.  
EDRS mf,hc  
OEC-SAE-6445 CRP-146

Descriptors: exceptional child research; mentally handicapped; adjustment (to environment); comparative analysis; employment potential; program evaluation; followup studies; regular class placement; vocational adjustment; personal adjustment; social adjustment

A comparison was made of the present status of mentally retarded individuals who had been taught in special classes with the status of mentally retarded individuals who had not been enrolled in special classes. Subjects were mentally handicapped children who had attended public schools, the one group in the special education program not less than 1 year, and the other in the regular school program. Parental, sociological, and employment data were gathered; and comparisons were made in terms of identification and description of community, occupational, and personal postschool adjustments. It appeared that the subjects from both groups had done exceptionally well in becoming acceptable citizens within the community. This conclusion tends to agree with most of the recent studies carried out in regard to the adjustment of mentally retarded individuals who have been in special classes or institutions. (GC)

**A Comparative Study of the Speech Responses and Social Ages of Two Selected Groups of Educable Mental Retardates.**

Grambling College, Louisiana  
EDRS mf,hc  
CRP-513

Descriptors: exceptional child research; mentally handicapped; language; achievement; regular class placement; vocabulary; educable mentally handicapped; public schools; social development; speech skills; verbal development; word recognition

The relationship of educable mental retardates in regular and special classes with respect to vocabulary was studied. Subjects were 49 students from regular classes and 45 from special classes. The primary and elementary forms of the Word Meaning Section of the Stanford Achievement Tests were administered to each subject by four examiners. Tests were read to each subject separately to ascertain the vocabulary he could correctly recognize upon hearing. Correlation coefficients were computed for each group vocabulary and functional vocabulary, and between social age and recognition vocabulary and functional vocabulary. Additional experimental studies are needed to determine the relationship between educable mental retardates in regular and special classes with respect to social development and speaking vo-

cabulary. Also a comparative study of verbal output and social development should be made of familial educable mental retardates and nonfamilial educable mental retardates. (JL)

Descriptors: exceptional child education; handicapped children; special programs; student placement; program evaluation; regular class placement; ability grouping; special classes

The position of special education classes segregated from the normal is discussed and past research reviewed. Areas of concern include competition versus cooperation in our educational philosophy, the social and academic consequences of segregating exceptional children, ability grouping, and the impractical aspects of special education courses for teaching knowledge of the outside world. Suggestions for revising special programs are frequent interaction with the normal world, efforts to adjust the social attitudes and behaviors of the normal and exceptional group to each other, and the avoidance whenever possible of educational segregation. As a means to integrate children with learning disabilities into the regular class structure of the school, a plan has been developed which would provide for specialized services in a flexible organizational pattern. A revised system of state reimbursement to the local school systems is designed to maintain children with mild handicaps in the regular classroom; techniques used for the implementation are given. The Continuum of Program Design provides seven programs which can be used according to the various needs of the teacher and the children. The design of the pilot study is given and descriptions of the specific tests, instruments, and diagnostic tools to be used are outlined. Appendixes contain definitions of terms used, the parent and community education programs, data collection procedures and forms for children, teacher interviews and a survey, parent and home surveys, guidelines for informal interviews, schedule for phasing-in the pilot study, cost comparisons between the present program of services and the Continuum, cost formula, a framework for a cost-effectiveness analysis of the pilot study, overall administration table, recommended research instruments, and a bibliography. Descriptors: exceptional child education; handicapped children; teaching methods; behavior; regular class placement; learning disabilities; class management; teacher role; teacher education; administrator role; student problems; self concept; minimally brain injured; slow learners; emotionally disturbed; community programs; mentally handicapped

Designed for regular classroom teachers, the book concerns the minimally handicapped child. Concepts discussed are an introduction to special education and the problems of the mildly handicapped child who is mentally retarded, brain injured, or emotionally disturbed, and techniques to aid the teacher with student problems of self-concept, anxiety, attention, organizing, copying written material, coordination, abstract thinking, behavioral problems, and social immaturity. Also included are some additional aspects of the teacher's role such as assisting in identification, gathering information, using supportive services, participating in training programs, lesson planning, and consulting with parents. The role of the school administrator in supporting the teacher, the child, and the program itself and in working with the community is also presented along with the obligations of teacher-training institutions in teacher preparation and cooperation with the community. References follow each chapter. (LE/JM)

Descriptors: exceptional child education; visually handicapped; preschool children; educational methods; program planning; nursery schools; adjustment (to environment); instructional materials; readiness (mental); regular class placement; individual programs

The report discusses preschool blind children who have attended nursery schools with sighted children. Benefits were that the blind children gained independence, school learning carried over to the home, attitudes about self were generally good, and there were no detrimental effects on the other children who gained a sense of responsibility and desire to be helpful. Topics of concern are admission, questions of the nursery teacher, interpretation of the child's needs, introducing the blind child to school, participation in activities, performance, preparing the other children for a blind child, techniques used by teachers, standards of readiness, and an evaluation. **The Effects of Ability Grouping.**

EDRS not available  
Teachers College Press, Teachers College, Columbia University, New York, New York 10027.

Descriptors: ability grouping; student grouping; homogeneous grouping; academic achievement; self concept; teacher rating; student evaluation; grouping (instructional purposes); regular class placement; student placement; educational research

To examine the positive and/or negative effects of ability grouping, 2219 children from 45 elementary schools in the greater New York area were arranged in 15 various grouping patterns and studied from the beginning of the fifth grade to the end of the sixth grade. Data relating to academic achievement, self attitudes, school interest and attitude to school, peer ratings, and teacher ratings were compiled and analyzed. Results showed that ability grouping per se has neither positive nor negative effects on a child's overall development. Although it was found that ability grouping is not inherently good or bad, it was stressed that the manner and focus of various groupings can be designed to produce both

effects. A selected bibliography is included, and extensive appendixes provide the statistical data resulting from the study. (RD)

**Assessing the Reintegration of Exceptional Children into Regular Classes.**  
EDRS not available  
Teaching Exceptional Children; V2 N3  
P113-9 Spr 1970

Descriptors: exceptional child research; emotionally disturbed; regular class placement; behavior patterns; behavioral objectives; student evaluation; evaluation techniques

In a study of the reintegration of exceptional children into regular classes, the stages involved were determining whether children were ready for reintegration, preparing them for the change, assessing the initial effect of the change, and doing followup observation. Measurement techniques involved using behavioral observation for diagnosis, recording daily progress, and creating cumulative records. A study was run of behaviors (handraising, leaving seats, talking out, and teacher response) before and after integration with the conclusion drawn that special students were successfully integrated, and their placement did not significantly affect the regular class students. Due to the brevity of the study, little significant information was gained from the sociometric measures of class play, incentive orientation, and locus of control. (JM)

Examined are policies and practices in the field of special education, and the extent to which they are educationally based and relevant to school learning and behavior problems. The focus is on the mildly handicapped child (educable mentally handicapped, emotionally disturbed, behaviorally disordered, educationally handicapped, learning disabled, brain-injured). It is argued that traditional services as represented by self contained special classes should be discontinued immediately for all but the severely impaired. Professionals' statements of dissatisfaction with the status quo are presented. The structure and operation of the Council for Exceptional Children and the Bureau for Education of the Handicapped are reviewed in terms of sensitivity to the need for change. A new approach for defining exceptionality is given. (KW)

**Is Special Education Necessary?--Can This Program Possibly Be Reduced?**  
EDRS not available  
Journal Of Learning Disabilities; V3 N9  
P434-9 Sep 1970

Descriptors: exceptional child education; comparative education; educational trends; regular class placement; mentally handicapped; remedial instruction; Denmark

In Denmark special education has become a well established institution, and in recent years the program has developed to the extent where about 15% of all Danish school children at some time or other during their course of schooling

will have received some form of remedial instruction. The introduction of different preventive measures is described as having in no way reduced the apparently rather heavy need for instruction of this nature. In view of the fact that special education is often tantamount to a segregation of the pupils concerned from the rest of their class, the conflict with the general philosophy which tends to let the largest possible number of the pupils in a class stay together throughout the entire compulsory education period is examined. Views are presented on the question of whether it will be possible to reduce the need for special education by means of an overall expansion of the general educational facilities, to a sufficient extent so as to also take care of the educational needs of the pupils in question. Journal Of Learning Disabilities; V3  
N12 P618-28 Dec 1970

Descriptors: exceptional child research; learning disabilities; program planning; language handicapped; neurological defects; regular class placement; drug therapy; educational planning

Fifty matched pairs of otherwise normal, underachieving pupils with neurologically based language-learning disorders were divided into experimental and control groups. Experimental subjects remained in regular classes in school and received individualized teaching outside of school hours from specially trained clinicians. Control subjects were enrolled in special education classes and did not receive clinical teaching after school. Half of the experimental and half of the control subjects had anticonvulsive medication prescribed by their physicians. The groups were pre- and post-tested for changes in academic achievement and mental functioning. Experimental groups made significantly greater gains in both variables than did the control groups. Medicated groups did not make greater gains when compared with unmedicated groups. Implications are that schools should refrain from referring such children to special education classes, and that they should leave them in regular classes and provide them with individualized supplementary teaching outside of regular school hours. Descriptors: exceptional child education; aurally handicapped; educational programs; state programs; public schools; special classes; regular class placement; state standards; California

The study to determine ways in which the educational programs for the deaf and hard of hearing in California's public schools might be strengthened and improved was undertaken by the State Department of Education assisted by statewide committees of teachers and administrators involved in programs for the deaf. The final report, consisting of recommended guidelines for statewide planning for the education of the deaf and severely hard of hearing, covers eight aspects of the educational program: special educational provisions, minimum essentials for preschool and elementary programs, minimum essentials for high school programs, assignment of pupils to regular classes, program of evaluation, industrial arts and vocational-technical courses, programs for pupils with additional handicaps, and policies and procedures for admission, transfer, and dismissal. Exceptional Children; V37 N5 P381-4  
Jan 1971

Descriptors: exceptional child education; regular class placement; special classes; student placement; handicapped children; educational philosophy

The philosophical issues surrounding the controversy in special education of special class placement versus regular class placement for handicapped children are discussed. Three areas of difficulty in solving the controversy are noted to be adherence to the past, approaching with a priori conclusions, and the failure to critically examine the present constructs in use. Presuppositions of special class efficacy and the need for empirical validation are explored. (RD)

A program of resource rooms and a Child Evaluation Center operated by the Board of Cooperative Educational Services (Buffalo, New York) are described. The roles of the parent and teacher, criteria and admissions procedure, schedule arrangements, and program content are discussed. Reaction to the program is indicated by an expansion of resource rooms from 11 units (1969-70) to 23 units (1970-71). (RD)

**The Effects of Integration and Social Class on the Acceptance of Retarded Adolescents.**  
EDRS not available  
Education And Training Of The Mentally Retarded; V6 N1 P20-4  
Feb 1971

Descriptors: exceptional child research; educable mentally handicapped; regular class placement; social attitudes; mentally handicapped; peer acceptance

Two questions relating to the social acceptance of educable mentally handicapped adolescents in an integrated junior high school were investigated. Seventy educable mentally handicapped boys were selected. Conclusions drawn were that the length of time a retarded student is integrated does not apparently influence his acceptance, and that social class appears to be related to social acceptance. Taken from a telephone survey of 57 researchers by the CEC Information Center, the article covers an interview with Dr. Frank Hewett concerning the

Madison Plan. Dr. Hewett describes the Plan as essentially an effort to create an administrative and instructional framework within which it might be possible to combine several disability groups into a single program, providing them with supportive help through behavior modification, to prepare them for the regular classroom. Interview questions probe such areas as organization, staffing, and facilities, effectiveness, personnel training, and guidelines for implementation. (CD)

**Integrated Classrooms.**  
EDRS not available  
Journal of Rehabilitation; V37 N2 P14-6  
Mar-Apr 1971

Descriptors: exceptional child education; physically handicapped; regular class placement

The article identifies some critical problems in the area of education of physically handicapped children and suggests some remedies. Examples are cited which illustrate problems caused by unnecessary segregation of the physically handicapped in special classes and schools. Difficulties caused by the wide range of age, intelligence, and types of behaviors and disabilities in such classes are pointed out. The paper argues that the kinds of problems discussed would diminish if physically handicapped children were placed in regular classes according to their developmental and educational needs rather than in special classes on the basis of medical diagnosis. How to meet their physical and medical needs in a regular classroom is briefly discussed. (KW)

**Recent Influences of Law on the Identification and Placement of Children in Programs for the Mentally Retarded.**  
EDRS mf,hc

Speech Given at the Convention on Placement of Children in Special Education Programs for the Mentally Retarded (Lake Arrowhead, California, March 7-10, 1971).

Descriptors: legislation; student placement; legal responsibility; educable mentally handicapped; educational trends; mentally handicapped; identification; court cases; regular class placement

In discussing the recent legislative influences on the identification and placement of children in programs for the mentally handicapped, the author presents a brief overview of the development of the concept of special education as indicated by significant court rulings of the late nineteenth and early twentieth centuries. Major legal decisions of the past decade are described relating to areas of state definitions of disability and eligibility, validity of placement (with particular

emphasis on intelligence testing as a primary criterion), discriminatory placement of minority groups, parent rights, and ability grouping or tracking. The author also summarizes the implications of the cited cases in terms of testing, placement procedures, individual rights, and the trend of special education itself. (RD)

Descriptors: exceptional child research; educable mentally handicapped; student placement; admission criteria; regular class placement; special classes; elementary school students; identification; grouping (instructional purposes)

To compare the performance of children in classes for the educable mentally handicapped (EMH) with their peers (age mates) in regular classes on relevant dimensions, to investigate the validity of class placements using multiple criteria, and to determine the relationship between class placement and demographic variables, 378 children in EMH classes and 319 in regular classes (aged 11 years) were compared. The Slosson Intelligence Test for Children and Adults, an adaptation of the Test of Social Inference, an adaptation of the Temple Informal Reading Inventory, and the Auditory Reception and Verbal Expression subtests from the 1968 Illinois Test of Psycholinguistic Abilities were given. The distributions were converted into T-scores and the children scoring above and below a T-score of 45 (equivalent in the research data to an IQ of 75) on each of the variables were identified. Applying Jastak's concept of multiple criteria led to the authors' suggestion that the diagnosis in 25% of the children in EMH classes may be erroneous in that they scored above the cutting point on at least four of the five criteria. Only 31% of those in the EMH classes failed either four or five of the five criteria. The authors note that the findings support efforts to maintain most children found in EMH classes in the regular classroom through the use of tutoring and resource rooms. (Author/RD)

**A Proposed Program of Personal Adjustment for Visually Handicapped Pupils.**  
Cincinnati Public Schools, Ohio, Division of Special Education  
Bureau of Elementary and Secondary

Education (DHEW/OE), Washington, D. C.  
EDRS mf, hc

Descriptors: exceptional child research; visually handicapped; personal adjustment; program proposals; administration; curriculum development; after school programs; summer programs; personnel needs; teacher qualifications; visually handicapped mobility; visually handicapped orientation; regular class placement; Ohio

A proposal for a personal adjustment program for visually handicapped students is described to contain three primary components: the ongoing curriculum which encourages techniques of modification and application of the presently existing regular curriculum to the needs of the blind; the extended school program which provides out-of-school services as an additional, compensatory aid to the handicapped children; and a summer session to be offered throughout the high school years. Personnel needs are suggested to include braille teachers, mobility instructors, the classroom teacher of a specialized subject who will integrate the visually handicapped into the regular classroom, and personal adjustment teachers. Suggestions of teacher roles and qualifications, and the development of summer teaching training institutes are noted. Activities and financial implications of the three primary components of the program are discussed. General recommendations for program policy and further study are enumerated. (RD)

Descriptors: exceptional child education; visually handicapped; physical education; recreation; physical activities; games; regular class placement

Four articles deal with physical education or recreational activities for the visually handicapped. Oral O. Miller explains bowling for the blind, mentioning in particular the activities of the American Blind Bowling Association. The integration of visually handicapped children into a public elementary school physical education program is discussed by Gladys Johansen. Activities used to attain the listed objectives of such an integrated program are described (body conditioning exercises, rope jumping, physical fitness tests, games and relays, tumbling, pole climbing, balance beams, stunts, self-testing activities, and ice skating). In the third article, Charles Buell suggests some adaptations which have proved effective in enabling blind students to participate in physical education activities with the rest of their sighted class. Suggestions pertain to ball games, track and field and physical fitness tests, tag games, races, and other activities. The final article, by Lester Citron, points out

fun, exercise, and perceptual training benefits blind children can obtain from kicking tin cans, and outlines a game which can be played with them. (KW)

**The Effect of the Emotionally Disturbed Child in the Public School Classroom.**  
EDRS not available  
Psychology in the Schools; V8 N1 P23-6 1971

Descriptors: exceptional child research; emotionally disturbed; behavior; regular class placement; behavior change; group dynamics; group behavior

The study investigated whether behavioral contagion would occur when an emotionally disturbed child is placed in a regular classroom. Three types of seating arrangements (Treatments 1, 2, and 3) were planned for nine different social studies classes, each treatment employed in a separate class in each of grades 4, 5, and 6. In Treatment 1, the emotionally disturbed student (as determined by the Lambert and Bower Behavior Rating of Pupils) was surrounded by eight socially accepted students (as determined by the Modified Ohio Social Acceptance Scale). In Treatment 2, the emotionally disturbed student was surrounded by 8 socially rejected students, and in Treatment 3, both socially accepted and rejected students were seated around him. After 3 months, teachers again administered the Behavior Rating of Pupils. Results showed no significant differences between or among treatments and no modification of the behavior of any of the groups of children (socially accepted, rejected, or accepted-rejected) at any grade level. Thus behavioral contagion was not observed. (KW)

**Study of Students from Special Classes Who Have Been Returned to Regular Classes.**  
Scarborough Board of Education, Ontario, Canada  
EDRS mf, hc

Descriptors: exceptional child research; learning disabilities; regular class placement; social adjustment; student evaluation; questionnaires; interpersonal competence

The purpose of the study was to assess the impact of regular class placement on learning problem students. Consideration was given to academic achievement, personal and social adjustment, peer relationship, and students' perceptions of the class. Fifty-seven learning problem students were selected from four types of learning disabilities classes: opportunity (educable, slow learner), perceptual, behavioral (including multiply handicapped), and special reading.

Questionnaires distributed to the class teacher and interviews with the children were used to collect data. According to the teachers' evaluations, all groups but the opportunity class group achieved according to expectation. Overall personal and social adjustment, as perceived by the teachers, was considered similar for all groups. The special students were shown to give favorable responses to questions related to their feelings about the regular class. It was revealed by comparison that the opportunity class students were the most positive of the groups. Samples of the teacher questionnaire and student interview questions are included in the appendix. (CD)

**Social Acceptance of EMRs Integrated into a Nongraded Elementary School. Volume 1, Number 20.**  
 Research Institute for Educational Problems, Cambridge, Massachusetts  
 EDRS mf, hc

Descriptors: exceptional child research; educable mentally handicapped; peer relations; regular class placement; discriminatory attitudes (social); mentally handicapped; nongraded primary system; special classes; elementary school students; social attitudes

Twenty intermediate and 16 primary grade children were administered sociometric questionnaires to determine the social acceptance of three groups of children: normal children, educable mentally handicapped who were integrated into the academic routine of a nongraded school, and educables who remained segregated in a self-contained class. Results were felt to show that both integrated and segregated educable mentally handicapped were rejected significantly more often than normal children, that younger children are more accepting of others than older children, that boys express more overt rejection than girls, and that integrated educables are rejected more than segregated ones by boys but not by girls. The conclusion was advanced that regardless of intellectual level, the labelling of certain children as retarded may affect the expectations that normal children maintain for them; and that the same behaviors that lead to rejection when exhibited by normals may not result in social rejection when exhibited by children classified as mentally handicapped. (Author/CD)

 Teacher of the Deaf; V69 N407 P161-74  
 May 1971

Descriptors: exceptional child research; aurally handicapped; hard of hearing; regular class placement; research reviews (publications); identification; incidence

Broad types of procedures used to identify children with hearing losses are described, and data from studies on the incidence of different types of hearing impairment among students in regular schools is summarized. It is pointed out that criteria for the identification of hearing loss in the ordinary school population are not well defined. Literature is reviewed which deals in particular with the substantial though in part unrecognized number of children in regular schools who have mild or moderate hearing losses but who are unlikely to receive special understanding or treatment. More research into the incidence, nature, and educational implications of moderate hearing loss is urged. Based on evidence cited in the literature review, it is concluded that the best hope for the majori-

ty of hearing impaired children is for regular teachers to treat them as children with a learning problem in a classroom setting along with other children who need extra help in learning. (KW)

 Bureau of Elementary and Secondary Education (DHEW/OE), Washington, D. C.  
 EDRS mf, hc

Descriptors: exceptional child research; disadvantaged youth; learning difficulties; early childhood education; intervention; preschool children; diagnostic teaching; regular class placement; demonstration projects; Texas; Elementary and Secondary Education Act Title VI

Described is the special education component of an early childhood education project for culturally disadvantaged preschool children. The component's purpose was to determine if children deviating from their peers could be educated as an integral part of the regular class. Children with an IQ under 80 were provided individual prescriptions in the regular classroom by a teacher assistant. Language development prescriptions were provided outside the classrooms for children with gross motor problems, learning disabilities, or immature speech. Instructional strategies and content in the areas of social and emotional development, motor development, language development, and parent education are detailed. Evaluation showed that the special education students had posttest mean scores only slightly below those of the other children and above those of day care and kindergarten comparison groups. Greatest gains were made by 3-year-olds. Most of the children entering with IQ's under 80 were able to enter regular first grade classes. It was concluded that individual and language development prescriptions were successful and that early childhood programs can accommodate children deviating from their peer norm in the same classroom. (See ED 046 174, EC 031 258 for project's interim report.) (KW)

**Forum: A Training Based Model For Special Education.**  
 EDRS not available  
 Exceptional Children; V37 N10 P745-9  
 Sum 1971

Descriptors: exceptional child education; handicapped children; educational methods; regular class placement; special education teachers; models; administrative change

Presented is an overview of a training based model for special education services whose goal is to equip regular classroom teachers with skills enabling them to cope with problem situations. The model is set forth as an alternative to the special services model presently utilized by special education, i.e., special classes for exceptional children. Proposed in reference to children with relatively mild behavioral, emotional, or learning problems, the proposed alternative changes the emphasis from exceptional children to exceptional situations in the school. Outlined are some criteria to be met in the areas of creation of a zero reject model, the supportive role of special educators, and self sufficient regular teachers. Touched upon are implications for direct service functions for administrative functions, for teacher education, and for legislation. It is recommended that special education, rather than being child centered, become teacher centered with the upgrading of the skills of all teachers a goal. (KW)

 Exceptional Children; V37 N10 P754-5 Sum 1971

Descriptors: exceptional child education; handicapped children; special classes; regular class placement; teacher attitudes; administrator attitudes; surveys

Fifty teachers, administrators, and school psychologists in daily educational contact with exceptional children were interviewed to determine opinions on special class versus regular class placement for mildly exceptional children. Twenty-seven favored retaining the present program of special classes, and 23 advocated placement in the regular classroom, citing special provisions which should be made to integrate the exceptional child. Classroom teachers more often favored retention of special classes, while the nonteaching educator interviewed tended to prefer regular class placement of the mildly exceptional. (KW)

**Possible Effects of Integration of the Deaf Within a Typical Vocational School Setting.**  
 EDRS not available  
 Journal of Rehabilitation of the Deaf; V4 N4 P30-41 Apr 1971

Descriptors: exceptional child research; aurally handicapped; regular class placement; peer relationship; deaf; peer acceptance; vocational schools; employment potential

The purpose of the study was to examine both the hearing and deaf person's views

of class integration in regard to the deaf person's job potentialities and the degree of social relationship. Three classes that had both deaf and hearing students were tested. Hearing students in the experimental group were noted to have checked more occupations listed in the test than the hearing in the control group. The deaf in the control group were found to have checked more occupations than the deaf in the integrated classes (experimental group). In regard to the degree of social relationship, the experimental deaf group was noted as being closer than the control deaf group. Researchers concluded that classroom association seemed to be a factor in increasing a deaf person's view of his acceptance by a normal hearing population. A decrease of job potentialities was seen by those deaf students in integrated classes. One of the reasons speculated upon was that a deaf student's contact with normal hearing students may produce a more realistic and limiting view of the number of occupations a deaf person could perform. (CD)

**Lipreading Skills of Hearing Impaired Children in Regular Schools.**  
 EDRS not available  
 Highlights; V50 N2 P4-8 Sum 1971

Descriptors: exceptional child research; aurally handicapped; lipreading; regular class placement; hard of hearing; Children's Speechreading Test

Forty-nine hearing impaired children enrolled in regular schools (ages 3 to 9) and 32 of their normal hearing siblings took the Children's Speechreading Test. Results were compared with those from a peer group of hearing impaired children who attended New Mexico schools for the deaf. The hearing impaired enrolled in regular schools did better on the test than their siblings, and both groups had lipreading skills superior to those of the New Mexico students. In both hearing impaired groups there was a low positive correlation between IQ and lipreading scores. In the integrated hearing impaired group, extent of hearing loss did not seem to decisively affect the scores, and there was a low positive correlation between vocabulary and speechreading ability. Suggestions are made for further research. (RJ)

**The Itinerant Resource Teacher: A Manual for Programs with Gifted Children.**  
 North Carolina State Department of Public Instruction, Raleigh, Division of Special Education  
 EDRS mf, hc

Descriptors: exceptional child education; gifted; resource teachers; itinerant teachers; state programs; administrative organization; program design; guidelines; North Carolina

Prepared for the use of schools in North Carolina, the manual discusses the use of itinerant resource teachers in the educational program for gifted children. Although pertaining primarily to the gifted and talented program on the elementary and junior high levels, the manual could be adapted to the senior high program also. Discussion of the philosophy and objectives of the Itinerant Resource Teacher Program for Gifted Children indicates that the itinerant teacher acts as a resource person to the regular teacher as well as to the children, thus supplementing rather than supplanting the regular teacher. A section in question and answer format explains the concept of the itinerant resource teacher, and a description is given of ways to implement the program in a school setting. Several sample schedules are presented to illustrate how the program might be implemented in a school system. Also covered are additional professional responsibilities of the resource teacher and some factors to consider in the process of evaluating both the students' progress and the program. (KW)

Descriptors: exceptional child services; professional personnel; public schools; counselors; resource teachers; health personnel; school psychologists; student personnel services; administrator role; instructional staff; Iowa

Examined are the roles of special service personnel (SSP) who provide support services for Iowa public school teachers by three methods: helping a specific child, helping develop instructional program content, and helping develop new instructional skills. The 13 SSPs include counselor, director of special education, educational consultant, hearing clinician, itinerant/resource teacher, principal, regional education media center, school psychologist, school nurse, school social worker, speech clinician, vocational rehabilitation counselor, and work-experience coordinator. SSPs are available at three organizational levels in Iowa: local school system, county or merged county school system, and area served by regional educational materials center. A brief explanation of teacher preparation for using SSP includes gathering materials on learning problems, gathering information on behavior problems, and use of SSP in content areas or development of teacher skills. The latter half of the work is devoted to an overview of each of the 13 SSPs, with discussion focus on their basic functions and contributions to child, teacher, and total educational program. Concluding the work is a short discussion on evaluating results of SSP services. (CB)

 Volta Review; V73 N6 P359-64 Sep 1971

Descriptors: exceptional child education; aurally handicapped; regular class placement; program descriptions; foreign countries; elementary school students; Canada

The ultimate goal of the integration program of the Montreal Oral School for the Deaf is described as full integration of all hearing impaired students into regular schools for the hearing. Classrooms are located in three regular school buildings, where a ratio of no more than 30 hearing impaired to 500 hearing children is maintained, to provide optimum opportunities for integration. Reported is an additional integration effort, in which five hearing impaired students were integrated with 90 regular fifth and sixth graders in an innovative open-area environment school. Quotations from the regular teachers, regular students, and teacher of the hearing impaired involved (who acted as a resource person) illustrate that the experience was felt to have been beneficial, both socially and academically. **The Integration of Young Deaf Children into Ordinary Educational Programs.**

EDRS not available  
 Exceptional Children; V38 N1 P29-32 Sep 1971

Descriptors: exceptional child education; aurally handicapped; regular class placement; early childhood education; preschool children

The author states that the labels deaf and hard of hearing are diagnostically and psychologically unsound as applied during two successive levels of preprimary intervention: infant education and home training (0-3 1/2 years) and a more structured child centered educational program (3 1/2-6 years). Provision of early parent support and multiple service options including nursery school experience with hearing children enables, the author

feels, certain youngsters to continue in mainstream educational programs. Criteria for the selection of candidates for realistic integration and a description of the roles of the diagnostic teacher and a variety of supportive specialists are delineated. (Author)

**Out of the Classroom: The Birth and Infancy of the Resource Center at Hauula.**

EDRS not available  
 Exceptional Children; V38 N1 P53-8 Sep 1971

Descriptors: exceptional child education; educable mentally handicapped; resource teachers; regular class placement; program descriptions; mentally handicapped; Hawaii

The article, dealing with the concept of a resource center as an alternative to special class placement especially for socio-culturally deprived children with mild learning problems who have been labeled educable mentally retarded, describes the development of a resource center in the special education program at Hauula School (Oahu, Hawaii). Explained are the original commitment and followup procedures to dissolve the self contained educable classes and to identify specific individual needs in the areas of the basic skills tested by the Windward Test Battery. Special education teachers worked with the students and regular teachers to gradually integrate all but two of the 36 students labeled educable into regular classrooms. In the special education room, which became known as the Resource Center, small groups of students or individual students worked with special education teachers on needed special skills or subjects during certain scheduled periods of the day. The Resource Center teachers continue to consult with regular teachers, try new procedures, and train other teachers in procedures appropriate for regular classrooms and in use of the Windward Test Battery and other screening instruments. (KW)

To order ERIC REPORTS include complete information for all order form items. Please print or type all information clearly.

1. Complete "bill to" and "ship to" addresses. Be sure to complete "ship to" address if different from "bill to". A like "ship to" address may be completed as "SAME". Include zip code.
2. Order by printing ED number in designated space. ED accession numbers are listed in Research in Education (RIE). RIE may be purchased from: Superintendent of Documents, GPO, Washington, D.C. 20402.
3. Include number of copies (1, 2, 3, etc.) to be ordered in appropriate space. Use MF space for microfiche copies, use HC space for hard copy (paper). Check RIE for availability of document in MF and HC.
4. Include price from the rate schedule. (Refer to price schedule on back.) Prices are also published in current issues of RIE.
5. Some ED numbers represent a series of titles, and will be billed by title, not ED number. A list of applicable ED numbers is available.
6. Extend number of copies and price for total price for each entry.
7. Add items 1 through 15 and insert amount in "Sub-Total" box.
8. Add state sales tax for Illinois and Maryland or check box and cite tax exemption number for Illinois and Maryland only.
9. Add "Sub-Total" and "Tax" and insert amount in "Total" box.
10. Indicate payment method desired. Payment must accompany all orders of \$10.00 or less. Make all drafts payable to EDRS.
11. Sign AUTHORIZATION and date order.
12. Include only 15 entries per form. Complete and sign additional forms if required.
13. Quality warranty. LIPCO will replace products returned because of reproduction defects or incompleteness. The quality of the input document is not the responsibility of LIPCO. Best available copy will be supplied.

## PRICE LIST

Microfiche Copy – Each Title	.65
Hard Copy – Each Title by number of pages:	
Pages: 1 - 100	3.29
101 - 200	6.58
201 - 300	9.87
301 - 400	13.16
401 - 500	16.45
Each Additional 100 pages or portion thereof.	3.29

1. Book Rate or Library Rate postage is included in above prices.
2. The difference between Book Rate or Library Rate and first class or foreign postage (outside the continental United States) rate will be billed at cost.

## TERMS AND CONDITIONS

### 1. PRICE LIST

The prices set forth above may be changed without notice; however, any price change will be subject to the approval of the U.S. Office of Education Contracting Officer.

### 2. PAYMENT

The prices set forth above do not include any sales, use, excise, or similar taxes which may apply to the sale of microfiche or hard copy to the Customer. The cost of such taxes, if any, shall be borne by the Customer.

Payment shall be made net thirty (30) days from date of invoice. Payment shall be without expense to LIPCO.

### 3. REPRODUCTION

Materials supplied hereunder may only be reproduced by not-for-profit educational institutions and organizations; provided however, that express permission to reproduce a copyrighted document provided hereunder must be obtained in writing from the copyright holder noted on the title page of such copyrighted document.

### 4. CONTINGENCIES

LIPCO shall not be liable to Customer or any other person for any failure or delay in the performance of any obligation if such failure or delay, (a) is due to events beyond the control of LIPCO including, but not limited to, fire, storm, flood, earthquake, explosion, accident, acts of the public enemy, strikes, lockouts, labor disputes, labor shortages, work stoppages, transportation embargoes or delays, failure or shortage of materials, supplies or machinery, acts of God, or acts or regulations or priorities of the federal, state, or local governments, (b) is due to failures of performance of subcontractors beyond LIPCO's control and without negligence on the part of LIPCO, or (c) is due

to erroneous or incomplete information furnished by Customer.

### 5. LIABILITY

LIPCO's liability, if any, arising hereunder shall not exceed restitution of charges.

In no event shall LIPCO be liable for special, consequential, or liquidated damages arising from the provision of services hereunder.

### 6. WARRANTY

LIPCO MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO ANY MATTER WHATSOEVER, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

### 7. CHANGES

No waiver, alteration, or modification of any of the provisions hereof shall be binding unless in writing and signed by an officer of LIPCO.

### 8. DEFAULT AND WAIVER

a. If Customer fails with respect to this or any other agreement with LIPCO to pay any invoice when due or to accept any shipment as ordered, LIPCO may without prejudice to other remedies defer any further shipments until the default is corrected, or cancel this Purchase Order.

b. No course of conduct nor any delay of LIPCO in exercising any right hereunder shall waive any rights of LIPCO or modify this Agreement.

### 9. GOVERNING LAW

This Agreement shall be construed to be between merchants. Any question concerning its validity, construction, or performance shall be governed by the laws of the State of New York.
