ABSTRACT

This information analysis paper is based on a computer search of the ERIC database from November 1966 through May 1984 and on pertinent outside resources related to counseling older persons. Following the brief introduction, the historical development of gerontological counseling is discussed. Major issues in gerontological counseling are addressed, including the counseling needs of older persons, attitudes and agism, death and dying, assessment, and preparation, training and employment for gerontological counselors. Major strategies for working with older persons are described, including individual and group counseling, peer and paraprofessional counseling, specialized techniques for impaired older persons, and applications of counseling theories to older persons. Successful and model programs and techniques are highlighted. Future trends in gerontological counseling are delineated, and implications for counselors are proposed. A printout of the computer search is provided, including bibliographic citations and abstracts. (MCF)

INTRODUCTORY NOTE

A **Searchlight Plus** is an information analysis paper based on a computer search of the ERIC database from 1966 to the present and on pertinent outside resources. The paper reviews, analyzes and interprets the literature on a particular counseling topic and points out the implications of the information for human services professionals. The purpose of the **Searchlight Plus** is to alert readers to the wealth of information in the ERIC system and to create a product that helping professionals will find practical and useful in their own work.

Included with the paper is a printout of the computer search, which provides complete bibliographic citations with abstracts of ERIC journal articles and microfiche documents. Journal articles cited in the paper are identified by EJ numbers and are available in complete form only in their source journals. Microfiche documents are cited by ED numbers and are available in paper copy or microfiche form through the ERIC Document Reproduction Service. (Details are provided on the colored cover sheets at the back of the publication.) Documents may also be read on site at more than 700 ERIC microfiche collections in the United States and abroad.

COUNSELING OLDER PERSONS

Jane E. Myers, Ph.D., CRC, NCC

Ohio University, Athens

INTRODUCTION AND PURPOSE

The changing demography of the United States has had an impact on all facets of our society, including the counseling profession. One of the most significant changes, often referred to as "the greying of America," is the rapid increase in numbers of older persons. When America declared its independence in 1776, every 50th American was over the age of 65. This represented only 2% of the population, or some 2.5 million persons. By 1900, the numbers had grown to 3.1 million, or 4% of the population, or one in every 25 persons. Today some 26.6 million persons are "older." They represent over 11% of the population, or "Every Ninth American" (Brotman, 1982, p. 1).

Current population projections indicate that this trend will continue and the median age in our population will increase. It is estimated that over half of our population will be over age 50 by the year 2000 (Butler & Lewis, 1983). This half of the population includes many persons in need of mental health interventions. Butler and Lewis (1983) reviewed mental hospital and psychiatric hospital admissions data and concluded that the incidence and severity of mental health needs increases dramatically with advancing age. Conflicting data from a recent NIMH survey involving interviews with a random sample of adults indicates that the incidence of psychiatric problems decreases substantially after age 50. Apparently, older persons are overrepresented in clinical psychiatric populations.

Counselors have a professional responsibility to help meet the mental health needs of older persons. To do so most effectively, we need continually to assess, reassess, examine, and evaluate our base of knowledge concerning this population. Only through such periodic, reactive reviews can we determine ways to be proactive in meeting the increasing mental health needs of an expanding segment of our population (Myers, 1984a).

The purpose of this Searchlight Plus is to provide such a review, and in so doing to update the previous reviews completed in the ERIC database system (see ED 181 394, ED 105 366, ED 082 112, ED 061 572). Throughout the paper the terms "older persons," "older people," "aged persons," "elderly individuals," and so forth will be used interchangeably. The terms refer to persons aged 60 and above, a usage consistent with that of the U.S. Administration on Aging. The study of these persons is defined as "gerontology," as distinguished from geriatrics, which refers to a specialized medical practice with aged individuals. "Gerontological counseling," sometimes termed "gerocounseling," refers to the specialty within the counseling profession of working with older persons. A "gerontological counselor," then, is a professionally trained counselor who also has specialty training related to work with older people.

Gerontological counseling and counselors are the focus of the information discussed in this paper. The first section describes the historical development of the specialty, followed by an extensive mid-section discussing major issues in gerontological counseling. Counseling approaches and strategies appropriate to the older population are then reviewed, along with successful and model programs and techniques. The concluding section addresses future trends and implications of this information for counselors.

DEVELOPMENT OF GERONTOLOGICAL COUNSELING

An historical view of the counseling profession indicates an initial focus on the needs of school-age populations and young adults entering the work force. Disabled persons of working age were soon included as professional clientele. Within the past thirty years, an increasing emphasis on life span development has brought counselors out of traditional school settings and into community agencies, where they work with a broad variety of clients. Interest in work with older persons has followed this trend, but more slowly.

Interestingly, the earliest literature on counseling for older persons is found in the areas of vocational rehabilitation and employment services (ED 035 763, ED 023 225, ED 023 060, ED 016 111). These articles appeared between 1966 and 1967 and aroused little interest throughout the profession. Six years later, three articles appeared which suggested that older persons could benefit from counseling services (EJ 084 139, EJ 067 624, EJ 056 512).

The greatest impetus to the development of gerontological counseling occurred in 1975 and may be primarily attributed to two individuals. Blake, writing alone (EJ 120 620) and in concert with Kaplan (EJ 129 196), noted that older persons were (are) "the forgotten and ignored of (the counseling profession)" (p. 156). Salisbury (EJ 114 059) simultaneously published a study indicating that only 18 or 6% of all counselor education training programs offered even an elective course in counseling older persons. Schmidt (EJ 137 729) soon followed up with a suggestion for a thorough review of the literature on aging, with implications for counselors, while Odell (EJ 147 861) noted that counselors should be in the forefront as change agents to help mature adults over what amounts to one-third of a lifetime. Moreover, Sinick (EJ 149 996, ED 109 588) noted primary needs for counseling older persons in relation to careers, retirement, and dying. A new professional specialty thus was launched, and the need for gerontological counselors continues to grow (Glass & Grant, 1983).

In the late 1970's, both the counseling profession and the federal government became increasingly attuned to the mental health needs of older people. A variety of federal agencies began to sponsor research and demonstration programs in this area. Most notable were two special national projects funded by the Administration on Aging and conducted by the American Personnel and Guidance Association (APGA, now renamed as the American Association for Counseling and Development, AACD). The first project developed curriculum materials for preservice preparation of professional counselors (Ganikos, 1979; Ganikos et al., 1979). The second developed curriculum materials to train paraprofessional and peer counselors, including a manual for the design of training programs as joint efforts between counselor educators and service providers in community agencies (Myers, 1981a; Myers, Finnerty-Fried, & Graves, 1981; Myers & Ganikos, 1981).

Increasing interest in older persons throughout the counseling profession led to the publication of numerous special issues of journals addressing this population. These included the Personnel and Guidance Journal (Sinick, 1976), Counseling and Values (EJ 238 297), Journal of Employment Counseling (Ganikos, 1980), Journal of Rehabilitation (Myers, 1981b), The School Counselor (Capuzzi, 1982), Measurement and Evaluation in Guidance (Myers & Rimmer, 1982), and The Counseling Psychologist (Blake & Ganikos, 1984). These special issues addressed the needs of older persons in a variety of areas and helped to identify the major issues in gerontological counseling.

MAJOR ISSUES IN GERONTOLOGICAL COUNSELING

The major issues in gerontological counseling revolve around the question of whether older persons are different from persons of other ages. Though the answer is far from simple, it is accurate to say that older persons are more like persons of other ages than they are different. The problems that they have are of the same type as other individuals face (EJ 238 298); however, the degree to which these problems are experienced varies. Older persons tend to be faced with an increasing array of needs at the same time that they are experiencing a decreasing array of resources to meet those needs. It is important for counselors to understand the unique aspects of needs among older people (ED 182 678), even in areas where needs are shared in common with persons of other ages.

One of the major issues in the field relates to these special needs and life circumstances of older persons, and to how counselors can best help to meet these needs. Counseling needs of older persons are discussed below, within the framework of characteristics and concerns of the older population. Other major issues in this section include attitudes and agism, death and dying, and emerging subgroup issues. The remaining issues relate to assessment of older persons and to roles, preparation, training, and employment for gerontological counselors.

Counseling Needs of Older Persons

Myers (ED 174 907) reviewed the literature in gerontology and defined a framework for viewing characteristics of older persons in relation to their needs for counseling interventions. This framework arbitrarily divides the concerns of older individuals into four areas which are interrelated and interdependent (EJ 250 831). These include environmental concerns, activity needs, personal concerns, and interpersonal concerns. The extent to which older people are meeting needs in these areas is reflected in their level of satisfaction with life (Edwards & Klemmack, 1973; Lohmann, 1977).

Environmental Concerns of Older Persons. Environmental concerns is a general descriptor which identifies relatively concrete, tangible needs of older persons that affect their daily activities and capacity to live independently. These arise in large part from the interactive effects of life circumstances, such as declining health, reduced

income, restricted social contacts, and reduced access to resources (ED 174 907). Three major areas of concern here are responses to environmental needs, difficulties with obtaining service, and resource management.

It is relatively undisputed that environment is a major determinant of life satisfaction among older persons (EJ 291 082). Material well-being, including home, food, possessions, conveniences, and security, often appears as the dominant factor in determining quality of life (Flanagan, 1982). The literature in social gerontology is replete with examples and explanations of how the lack of these life components leads to an inability to live independently, with subsequent loss in all aspects of functioning, both physical and mental (Butler, 1974).

Independent living projects for older persons stress the need for home care services to facilitate independent living in community settings for as long as possible. A major difficulty in planning such projects is the lack of a clear definition of older people's needs, as well as effective means of meeting these needs (EJ 224 974). Examples of home services include housing information and assistance, help with housekeeping and chores, and assistance with shopping and meals preparation (EJ 189 965). The number one need in most surveys, however, is transportation and escort service (see Cull & Hardy, 1973).

Service needs such as these require the older person, with or without an advocate, to access the network of community resources. Information and referral programs are an excellent means of linking individuals in need with services, though these programs are not uniformly available (see Myers & Ganikos, 1981). Social services, while often needed, are also not uniformly available. Legal services, in particular, are an area in which the demand far exceeds the available resources (ED 038 791).

The close relationship between physical and mental health is becoming increasingly apparent. Environmental factors often have a direct effect on physical health and therefore on mental health. Consequently, counselors must address these concerns as part of a holistic approach to working with older people. An advantage to dealing with them is the improved rapport which results when concrete assistance is provided by the counselor (e.g., arranging transportation for medical appointments). Moreover, such actions set the stage for more in-depth interventions--who can self-actualize when they are hungry, in physical pain, or distracted by legal complications (see Myers, 1981b, 1983d)?

Activity Needs. Retirement and withdrawal, whether voluntary or not, occur to some extent in the lives of most older persons. Retirement is a "crisis" in the meaningful use of time (Havighurst, 1961). Denied access to paid work activities, and removed from the mainstream of society, many older people are faced with the need for meaningful activities and involvement. Counselors working with older persons must develop strategies for facilitating preretirement and retirement planning, career and work planning and placement (EJ 223 418), and use of leisure time. Educational programs are a significant component in each of these three areas.

Retirement. It is well-known that persons who retire to a planned life circumstance have fewer adjustment difficulties than those who fail to plan (EJ 029 924). The "retirement years" are as significant for non-working spouses as for persons who have worked throughout their lives. The importance of preretirement planning for all individuals cannot be overemphasized. Preretirement counseling is preventive in nature, while postretirement counseling often is remedial or palliative. The latter usually deals with specific problems, while the former tends to focus on informational, educational, and planning strategies (EJ 147 860). The counselor's role in both instances is to facilitate adjustment to an identical set of life circumstances and issues: the real and significant drop in income, loss of work and career status and identity, loss of social roles, and reduced access to resources. The needs and/or activities of older persons may change at this time, and counseling may be required to effect successful adjustment (ED 177 382).

A variety of approaches to preretirement planning may be found in the literature (see ED 259 541 for a review of several major programs). While some are based in industry (ED 149 182), others are community or education based (EJ 090 748, ED 112 478, ED 069 275). Most include a structured educational component, counseling, and an emphasis on planning (EJ 092 329). Group counseling has proven to be an effective approach (ED 140 167), as has peer counseling (EJ 247 852). The general goal in all instances is to help older persons define or solve problems for which they presently lack either the appropriate knowledge or skills (EJ 147 851, ED 177 381).

Retirement can be, and for many older persons actually is, a positive developmental stage (ED 109 588). When problems in adjustment are encountered, they typically arise from attitudes toward work and retirement (EJ 236 136, EJ 220 972, EJ 163 909). These, in turn, have an impact on self-concept. Ease of retirement adjustment correlates

highly with level of education (EJ 084 231, ED 056 269) and the degree of choice in when to retire (EJ 281 272). Adjustment is similar for middle class women regardless of whether they worked outside the home prior to reaching retirement age (EJ 153 412).

Counselors dealing with retirement issues must have an accurate perception of retired life (EJ 220 973), and must understand the social and personal issues faced by retirees in order to help them plan and make successful adjustments (EJ 220 975, ED 149 182). They should be aware of recent legislative and regulatory actions impacting retirement (EJ 281 272), such as the Age Discrimination in Employment Act (ADEA). Perhaps most important is the need for counselors to be aware of their own attitudes and biases in relation to retirement and work roles (EJ 233 807).

Work. The various functions that work fulfills in the lives of individuals--e.g., income, status, meaning--do not lose salience at the time of retirement. Research continually shows that older persons, when given the opportunity to do so, often choose to continue working in some capacity. Certainly they have useful skills and talents that should not be "put out to pasture" (EJ 175 233). However, various barriers exist to make employment difficult for them (ED 016 111).

Some of the major issues for older workers are prejudice, obsolete skills, lack of education, and attitudinal problems (ED 023 060). Age discrimination in hiring practices continues in spite of federal legislation prohibiting such actions (EJ 103 667). Employment testing often discriminates against older job applicants (EJ 070 327). Fortunately, interventions are possible and many have proven effective in meeting the employment needs of older persons.

A variety of specialized employment programs have been developed to provide counseling, referral, training, and placement for older workers (EJ 238 238, EJ 221 092, EJ 221 089, EJ 215 558, EJ 102 168, EJ 024 244, ED 140 176, ED 035 763). The role of the counselor is central in all of these programs. Counselors can help older persons assess their abilities and relate them to the job market, and sometimes use testing as part of the assessment process (EJ 122 378, EJ 112 129, EJ 003 770). In addition to job placement, counselors have opportunities to assist older clients with career exploration and planning for new careers (EJ 149 996). Effective counseling requires thorough knowledge of the special needs and characteristics of older workers, including slower reaction times and decreased physical strength (EJ 029 692).

Many older persons have physical disabilities that affect their ability to work and create needs for specialized assistance in employment seeking (EJ 122 584, ED 023 225; Myers, 1983d). Vocational rehabilitation programs traditionally have not provided assistance to older disabled workers (ED 102 388; Myers, 1982). Counselors need appropriately specialized training programs (ED 074 323), as well as knowledge about laws and placement opportunities relating to both older and handicapped workers (EJ 221 090). Older people who are too severely disabled to maintain employment can be helped to find satisfying ways to use their time.

Leisure. Because of the important role of work as a source of self-satisfaction and self-definition, the transition from work to leisure may be difficult for older persons (EJ 221 091). Moreover, the types of leisure activities they pursue have an impact on their life satisfaction (EJ 146 218). Leisure counseling can assist older persons in making satisfactory adjustments (EJ 221 091, EJ 127 389). Techniques for leisure counseling with older persons include awareness, values clarification, and examination of the meaning of activities (EJ 166 852; Myers, 1983c). The Milwaukee Leisure Counseling Model offers additional strategies for use with the older population (EJ 166 853, EJ 166 851, ED 132 798). A key element in most of these strategies is education.

Education. Education in this context has a dual meaning. In one sense, it refers to educational techniques used by counselors as intervention strategies. In the other, it refers to educational opportunities for older persons outside the counseling interaction. Education for the leisure of retirement is an integral part of retirement preparation programs (EJ 141 940).

The issues involved in providing educational opportunities for older persons have been discussed extensively in the literature on adult education (see EJ 039 092, ED 206 236). What is most relevant here is the need for counselors to provide appropriate services to older students, whose needs for both information and counseling may be ignored (ED 180 551, ED 169 427). This includes advocacy for program planning to meet these needs (ED 110 132). Counselors can assist older persons with career and vocational exploration to help them retire "to" rather than "from" their lifelong careers (EJ 146 177, ED 212 900). They may find that more extroverted and intuitive older people will respond more readily to educational suggestions and pursuits (ED 215 110). Certainly, the variety of personal and interpersonal concerns discussed below will affect the readiness of older persons to participate in educational endeavors.

Personal Concerns. Personal concerns of older people include both physical and psychological dimensions. Common among these are one's changing biological health and needs, possible changes in personality, developing support networks, and coping with loss. All of these have an impact on life satisfaction, or a sense of psychological well-being in old age.

Physical Concerns. Declining physical strength and health is both common and "normal" among older persons. Virtually all studies of life satisfaction yield strong positive correlations of this variable with perceived health (Edwards & Klemmack, 1973; Flanagan, 1982). It is well-known that one's physical condition is far less important in determining adjustment than is one's attitude toward that condition. Though counselors cannot provide medical treatment, they can help older people to understand their physical changes and to adjust to them in a satisfying manner (EJ 291 082, EJ 250 831, ED 167 757, ED 165 756, ED 064 566).

Psychological Concerns. One of the major questions that gerontological psychologists have studied is whether there exist age-related changes in the structure of intellect and personality. Such changes are hypothesized because adult development requires a continuing ability to adjust and cope with new life experiences (EJ 147 848, EJ 147 847, ED 181 189).

Costa and McCrae (EJ 146 223) found that openness to new experiences differed with advancing age in a population of adult men. Panton (EJ 160 146) found that MMPI responses of aged prisoners were more neurotic and less psychotic than responses of younger prisoners. Other researchers using the MMPI with prisoners noted that greater age differences were associated with greater personality differences in multiple clinical areas (EJ 153 409). These studies all used cross sectional data, which can give spurious results if age-related changes are implied. The age differences are notable, but may disappear if longitudinal data are used. In other words, personality changes may occur, but the research is equivocal.

Changes in the structure of intellect also seem to occur over time, with marked declines in performance items on intelligence tests, including visual reproduction on the Wechsler scales (EJ 241 973). Much of this is due to slowed reaction times resulting from physical changes with advancing age. Attempts to relate personality changes to performance on cognitive tasks by older persons have been largely unsuccessful (EJ 151 115), as have attempts to substantiate age-related personality changes (EJ 273 949, EJ 148 721).

There are, however, some changes with advancing age that affect the ability of older persons to cope and adjust, as evidenced by the fact that the incidence of mental illness increases dramatically with advancing age (Butler & Lewis, 1983). As an example, the suicide rate among all groups of people is highest for older white men (Robins, West, & Murphy, 1977). While this phenomenon has been variously explained, there seems to be a complex relationship between two primary variables. One is the increased stress and loss that older persons experience--loss of spouse, friends, jobs, social roles, health--and the other is the lack of mental health services available to meet their needs (Myers, 1983a; Myers, Murphey, & Riker, 1981).

Interpersonal Concerns. Interpersonal or social concerns may be variously described using concepts such as support networks or support systems. In general they refer to relationships with others, such as spouses, children, other family members, and friends, as well as to group memberships, including multigenerational and peer groups. Some special considerations in each area are discussed below. For more information, the reader is referred to ED 190 105 and to the February, 1983, special issue of The Gerontologist, "Symposium: Aging and the Family, Informal Support Systems."

High satisfaction with life for older persons correlates highly with the following variables: being "younger," currently married, having frequent visits with neighbors, phoning others, and knowing large numbers of neighbors (Edwards & Klemmack, 1973). Flanagan (1982) determined that the single, dominant factor determining quality of life over the lifespan is the presence of a spouse. The second most important factor is having children. Lowenthal and Haven (1968) found that the presence of one single confidant is the crucial factor that mitigates for or against successful adjustment to aging.

The changing life circumstances and needs of older persons can create abrupt changes in family relationships, with resultant needs for adjustment. For those older persons who become more frail, although a minority of the population, increasing assistance is needed with daily living in order to maintain independence. This places great demands and strain on caregivers (EJ 199 220, EJ 188 376). When older persons are cared for in the home, numerous difficulties can arise. At an extreme, family violence and elder abuse may occur; indeed, it is increasingly prevalent (ED 226 291). Often the entire family becomes the unit of treatment (EJ 190 105, EJ 190 101, ED 229 697,

ED 225 644, ED 119 057). Family involvement is essential at all times, even after treatment programs for older people have been implemented (EJ 265 590).

The use of small groups with caregivers for frail elderly persons has proven to be an effective means of intervention (EJ 285 168, EJ 268 029, ED 156 933). Family therapy for older persons and their families is increasingly needed (EJ 242 068), though the newness of the field leaves many gaps in suggestions for successful strategies (see EJ 259 065 as an example). One promising approach is the identification of counselor roles in working with this group (EJ 043 762, ED 218 567). Counseling services are also a major need for adult children of older persons.

Attitudes and Agism

Attitudes toward older persons have been studied extensively. In the United States, as well as in many other countries, these attitudes are predominantly negative (Harris & Associates, 1974; Kilty & Feld, 1976; McTavish, 1971). They approximate attitudes toward members of other minority groups in terms of both general content and overall effect, leading Butler (1974) to coin the term "agism" to describe the situation. Agism is similar in nature to racism, sexism, and handicappism. The prevalent attitudes are often based on negative stereotypes, and they always result in devaluation and lowered status for older persons. Unfortunately, older people tend to internalize these negative attitudes (Dulcey & Ardila, 1976), and the subsequent effect on their self-concepts is similarly negative. "Gerontophobia," an unreasonable fear of growing old, developed in the U.S. in the late 18th century and has grown in remarkable proportion since that time (Fisher, 1977).

A review of the relevant literature shows the universality of these negative attitudes. They exist, for example, among both children (Murphey & Myers, 1982; Nishi-Strattner & Myers, 1983; Seefeldt, Jantz, & Galper, 1977) and university students (Dulcey & Ardila, 1976). Attitudes tend to be negative among rehabilitation counselors (Rasch, Crystal, & Thomas, 1977), gerontological practitioners (EJ 200 856), and mental health professionals (EJ 292 369). Clergy in one study tended to have less negative attitudes, though ministering to older persons was not their favorite pastime (EJ 137 721).

Attempts to change these negative attitudes have met with limited or no success. Burdman (1974) found that attitudes of rehabilitation counseling trainees became worse after exposure to a course in gerontology. Bear and Guy (1976) found that male subjects rated older people more favorably than did females. Labouvie-Vief and Baltes (EJ 129 178) were able to improve perceptions of adolescent females slightly through empathy training.

Negative attitudes toward older people are encouraged by popular media, for example, through jokes and humor (Davies, 1977; Richman, 1977), and are deeply ingrained in society. Ponzio (EJ 253 476) discusses three key components of prejudicial attitudes based on age: restrictiveness ("act your age"); distortion ("you can't do that"), and prejudice ("being old is always bad, sad...").

An example of how age biases affect the lives of older persons is in the area of sexuality. Commonly accepted myths lead us to believe that older persons have neither any interest in nor the capability for sexual relationships/activity. These myths are also held, to a great extent, by older people themselves, although a physiological base for them is lacking (Berezin, 1976). As a result, many older people either do not engage in sexual activities or feel guilty when they admit to having sexual desires (Kaas, 1978). Often, counseling is needed to help older persons accept "new" norms for sexual behavior that allow them to express and satisfy their sexual needs and desires (EJ 142 710).

Additional myths about older people which are commonly believed and which have a negative impact on them, individually and collectively, include the following erroneous statements: intelligence declines with age; older people cannot learn new things; older people are unproductive workers; most old people are unhappy; most old people are very lonely; most old people live in nursing homes; and most old people want to live with their children (Palmore, 1977). Many more misconceptions about older people exist and are widely believed, even among counselors; for example, that many or even most older people want to disengage as a preparation for dying. To counteract the impact of these beliefs, counselors must have accurate information about older people, about death and dying, and about the characteristics and concerns of specific subgroups of the older population.

Dying and Death

Attitudes toward dying and death have been studied extensively and generally seem to be negative. Widespread fears of dying exist (Montefiore et al., 1973), and these have an impact on attitudes toward older people (EJ 270 874). For younger persons, death is a distant, carefully avoided reality. For older persons, the advent of death is too close to be successfully avoided, and anxiety about it has been found to exist regardless of cultural or ethnic origin (EJ 233 742).

Counseling for persons who are frail and/or dying is a relatively new area of concern, as is grief or bereavement counseling. Specific approaches to working with older persons in these contexts are described in several articles. Aslin (ED 094 278) discusses the need for counselors to facilitate adjustment to aging concurrently with the development of a realistic perspective toward death. Kemp (1984) describes peer group counseling as an effective way for counselors to learn with older clients how best to prepare for the inevitability of death. Wass and Myers (EJ 270 874) describe psychosocial aspects of death among older persons and discuss a variety of implications of this information for counselors.

Additional information on counseling for dying and death may be found in the literature on hospice programs. The hospice approach provides families with an opportunity to participate in the dying process, and allows counselors an opportunity for continuity throughout dying, death, and survivor bereavement (ED 200 842).

Emerging Issues for Subgroups

Several major subgroups of the elderly population have received attention in the literature. These groups have common characteristics and needs that lend themselves to specialized counseling interventions. The older groups described below include ethnic minorities, women, disabled and institutionalized individuals, homosexuals, rural residents, and substance abusers.

Older Ethnic Minorities. Counselors need to be sensitive to culturally different clients and to their position of "double jeopardy." These individuals are a minority within a minority, subject to discrimination from multiple sources (EJ 147 857). Their quality of life may be poor, being affected by factors such as income, health, crime, nutrition,

transportation, and housing (EJ 268 001). The problems of older Black persons have been studied more extensively than those of other ethnic minorities (EJ 231 645, EJ 167 398, EJ 147 846), but increasing attention is being paid to the unique concerns of older American Indians (ED 231 587, ED 125 818) and Hispanics (ED 229 465).

Older Women. The problems of aging are sometimes referred to as the problems of women, because women far outnumber men in the older population. Widowhood and bereavement have become almost "natural attributes" of an older woman's life because of the greater life expectancy for women than for their spouses (ED 076 893). Many older women provide care for their disabled husbands for some time prior to death, with resultant strain and low morale (EJ 199 220).

Attempts have been made to study factors that impact the mental health of older women and to provide appropriate interventions (EJ 249 632, EJ 231 658). Examples include widow-to-widow programs that have been effective in dealing with bereavement issues (ED 076 893) and other group counseling programs that have dealt with general issues of concern to older women (EJ 197 504). Intervention programs must take into consideration the individual differences among women and provide diversity to attend to individual needs (EJ 147 856, ED 221 802). The various roles that women can assume are important issues, as well as the impact of traditional and changing values (EJ 257 509). Occupational opportunities and restrictions, especially those associated with mid-life reentry into the work force, must be considered (EJ 003 770). Minorities within this minority, such as older American Indian women, have additional unique needs (ED 125 818). Other minority groups with special needs are those older women who have never had children (Myers & Navin, 1984) and those who divorce after many years of marriage (EJ 233 796).

Disabled Older Persons. It has been estimated that over 85% of all older persons have one or more chronic physical illnesses that limit their ability to engage in daily living activities (Blake, 1981). While mental and physical health are strongly interrelated, a large proportion of older people also have significant mental health problems.

Much of the literature relating to older disabled individuals concerns rehabilitation of these persons for employment (see EJ 221 090, EJ 062 469, ED 106 111, ED 023 225; Myers, 1981b, 1983d, in press; Navin & Myers, 1983). Those who are unable or do not want to work may need assistance with independent living, and their families may benefit from interventions as well (EJ 188 376). Speech, hearing, and vision problems are common occurrences among members of the older population (EJ 122 584, EJ 059 037, EJ 050 953).

A major issue in dealing with older people is the necessity for differentiation between organic brain disease, which is not currently amenable to treatment, and depression, which is potentially treatable and reversible (EJ 246 803). The impact of misdiagnosis has serious implications for life and health (EJ 229 750). Unfortunately, the differential diagnosis of Alzheimer's and related organic diseases is complex, lengthy, and extremely difficult (EJ 274 064).

Institutionalized Older Persons. Less than five percent of older persons reside in long-term-care institutions, while another 10 to 15 percent need assistance in living independently (Blake, 1981). Many have a primary diagnosis of senile dementia, a potentially treatable condition (see Myers, 1981b). Specialized approaches to treatment, such as social skills training (EJ 231 633) and reality orientation (EJ 277 775; Myers, in press) have been used with these persons with some degree of success. Preadmission counseling in these settings is an important need to help prevent rapid deterioration (EJ 173 188).

Additional specialized programs have been developed for those older people living in other institutional settings. These include persons in foster home environments (Rhode Island University, 1969), and those residing in prisons (EJ 169 317).

Homosexual Older Persons. The special needs of older homosexual persons have been identified and described (EJ 264 043). Specialized approaches to help meet these needs have also been explored (see EJ 264 043, EJ 262 865). While traditional counseling approaches may be appropriate, older persons with concerns relating to homosexuality may be expected to have a variety of complicating characteristics, including strong traditional values that prohibit openness in discussing sexual concerns.

Older Rural Residents. Older persons residing in rural areas must face the problems of rural isolation in addition to those of aging (Myers, 1984b). Outreach and cooperative services are needed to locate and assist these persons in meeting their physical and mental health needs (ED 204 698). In-home counseling is a particularly expensive service to provide, but one which is greatly needed (ED 219 199).

Older Substance Abusers. Chronic abuse of medications is common among older persons and may be "iatrogenic," or physician induced (Jernigan, 1981). Also common but hard to diagnose is alcohol abuse; a major problem of older persons, it is extremely difficult to treat (EJ 243 665).

Assessment of Older Persons

While counseling for older people is a relatively new area of involvement, attention to assessment issues with this population is of even more recent advent. A variety of issues about the special assessment needs of older people have been raised, including tailoring any instruments and testing sessions to the needs and capabilities of older people, as well as revalidating and renorming present instruments (Rimmer & Myers, 1982). Studies of response styles of older persons indicate potential differences that can impact assessment outcomes (EJ 249 697, EJ 122 296). A recent special issue of Measurement and Evaluation in Guidance (Myers & Rimmer, 1982) provides a state-of-the-art view of testing for older people. It includes reviews of available instruments, testing needs, and issues in areas such as life satisfaction, death and dying, counseling needs of older persons, leisure assessment and retirement maturity.

A variety of attempts have been made to determine the usefulness of available psychometric instruments with older people. Lacks and Storandt (EJ 266 815) used the Bender Gestalt to assess possible brain damage in older people. Newmark et al. (EJ 266 805) and Britton and Savage (EJ 003 066) examined the use of the MMPI in psychiatric evaluation of elderly individuals, while Fillenbaum and Pfeiffer (EJ 146 022) investigated the validity of the Mini-Mult for this purpose. Fitzgerald, Pasewark, and Fleisher (1974) compared the efficiency of the Gerontological Apperception Test and the Thematic Apperception Test for determining difficulties of older persons. The TAT has also been used in comparison with the TCB, Themes Concerning Blacks, to evaluate potential intervention needs of minority individuals (EJ 261 178).

Special scales, such as the GULHEMP, have been developed to assess work potentials and skills of older persons. These scales include both physical and mental capacities as part of the evaluation. Special work attitude scales for older workers are also available (ED 092 769). Vocational interest inventories have been found useful in career counseling with older persons in general, and with older women in particular (ED 095 369).

The measurement of life satisfaction has been an important concern (EJ 291 082), and a variety of assessment instruments have been developed specifically for use with older individuals. The most widely used is the Life Satisfaction Index, though several others are increasingly being implemented (see Lohmann, 1977; Myers & Rimmer, 1982). The Older Persons Counseling Needs Survey (ED 174 907) was also developed specifically as an adjunct for counselors.

Assessment with older people generally involves a multidimensional approach designed to evaluate numerous facets of behavior, mental status, and capacity for independent living and psychological growth. Examples of the use of psychological batteries for these purposes may be found in several sources (EJ 270 924, ED 140 110). The purpose of these batteries often is to differentiate "normal" from pathological processes (ED 140 110), or to define indices of capacity in older individuals (EJ 224 974). A major problem arises in organizing complex data to be relevant and meaningful and to describe accurately the individuals being evaluated (ED 123 515).

Difficulties with psychometric assessments often are circumvented through the use of non-test methods. For example, the study of observed behavioral mannerisms may be used to determine possible adjustment problems and assess their seriousness (EJ 245 344). Anxiety can be detected and treatment plans developed using clinical interviews (EJ 269 553). The efficacy of non-test methods is directly correlated with the skills of the person conducting the assessment. These, in turn, are related to his or her training and experience in working with older people.

Roles, Preparation, Training, and Employment of Gerontological Counselors

One of the more exciting aspects of the specialty of gerontological counseling is that roles for counselors are still in a developmental stage. Counselors new to this specialty can still seek out new settings, populations and subpopulations, and can define their potential roles and skills to new audiences. In this section, some of the roles defined to date are discussed. It should be noted that potential roles for counselors exist in relation to all the counseling needs and major issues discussed throughout this paper (see also ED 182 678).

Johnson and Riker (EJ 259 175) identified seven goals and 21 roles as essential for counselors working with older persons, giving priority to the preventive aspects of interventions. A major preventive aspect, as discussed in an earlier section, is preretirement counseling, an area which numerous authors advocate as a priority need for older populations (ED 112 987). Retirement education is a major component, which may or may not be provided within educational settings. In addition, the increasing numbers of older students have given rise to new roles and programs for gerontological counseling, especially in community colleges (ED 192 822, ED 180 551, ED 130 737, ED 112 987).

Counselors working with older persons will find themselves performing traditional functions such as vocational, career, and employment counseling, but with specific knowledge of the needs of older adults required for successful interventions (EJ 221 087, EJ 090 833, ED 209 615). Strategies related to work and/or retirement counseling will vary depending on the mandatory or voluntary nature of the retirement choice (EJ 220 975).

Somewhat traditional for counselors in general, yet very much an emerging area in work with older people, is that of family counseling. Major roles exist for gerontological counselors to help older people and their families cope with the aging process (ED 218 567), including such specific concerns as adjustment to nursing home placements (ED 156 933) and preventive interventions for elder abuse (ED 226 291, ED 225 644).

Less traditional roles could include assisting older people with concrete needs such as housing, social services, information and referral, and social involvements (EJ 189 965, EJ 158 405, ED 174 907, ED 165 755). Successful outcomes will necessitate interfacing with other helping professions, such as occupational therapy (EJ 115 144) and social casework (EJ 273 949, EJ 204 334).

The broad range of roles for gerontological counselors has important implications for professional preparation programs. Linking training in gerontology and counseling has become a profession-wide concern (Myers, 1984a). Within the past decade, preservice training programs offering coursework in gerontological counseling have proliferated, increasing from only 18 in 1975 to over 130 in 1983 (Myers, 1983b). Concomitant with this increase in courses has been greater attention to training issues and curricula (EJ 238 298, EJ 209 159; Myers, 1981a). Certain competencies and specific knowledge are necessary; for example, familiarity with state and federal legislation affecting older people (ED 122 752).

The recent advent of gerontological counseling has implications for inservice training as well, since most practicing counselors did not have access to gerontology training in their graduate coursework. Preservice training programs (ED 163 356) and correspondence courses (EJ 153 323) can provide the necessary information for practicing counselors. In addition, a variety of short term training programs and curricula have been developed to meet inservice training needs (EJ 259 135, ED 192 133, ED 158 198; Myers, 1981a).

It is difficult to discuss training without simultaneously considering the potential for employment. Given the newness of the specialty in terms of practice and preparation, and the need for counselors to define appropriate roles, the question of employment opportunities certainly is viable. Fortunately, recent research indicates that most persons trained to work with older people are, in fact, employed in settings where they can utilize their skills (Myers & Blake, 1984). Techniques that have proven to be effective are discussed in the next section.

GERONTOLOGICAL COUNSELING APPROACHES AND STRATEGIES

Although work in this area is also relatively new, a variety of approaches and strategies for working with older persons have been proposed. Some of the major strategies are discussed here, including individual and group counseling, peer and paraprofessional counseling, applications of generic and other theories to counseling with older people, and specialized techniques for impaired older persons. Model programs using these techniques are discussed in a later section. Before discussing techniques or programs, however, it is helpful to review some general considerations involved in counseling with older people.

General Considerations in Counseling Older People

There is general agreement that training in traditional or generic counseling skills is necessary for all practicing professional counselors. In addition, those counselors wanting to work with older persons need specialized training and preparation, as discussed above (Myers, 1981a, 1983b). O'Brien and others (EJ 197 499) note that the use of basic helping skills with older persons is essential, but that additional strategies specific to the needs of older people are also required for counseling effectiveness. Salmon (EJ 238 299) notes that these strategies need to be comprehensive, and that the quality of life for older persons can best be improved using a multifaceted approach. He suggests the need to include leisure, retirement, and education, among others, in any counseling programs for older people.

The establishment of rapport with older individuals, as noted earlier, is dependent to some extent on the willingness of the counselor to become involved in the older person's daily living concerns. Another significant factor is the counselor's age; older persons tend to prefer older helpers, with the exception of physicians (EJ 238 342). The level of communication is also affected by these age preferences (EJ 222 437). For example, it has been found that older persons tend to self-disclose at a higher rate and level when interacting with counselors whose ages are similar to theirs (ED 221 774). French and Thorson (ED 155 522) suggest that rapport may be obtained with older clients when counselors make an effort to treat each client as an individual, worthy of dignity and respect, and to listen, observe and empathize before beginning additional interventions.

Before rapport can be established, or even attempted, older persons must express a willingness for counseling involvement. In general, older persons tend to be less knowledgeable than younger people about the availability of mental health services, and also less willing to use such services (EJ 261 213). They value independence, including the self-sufficiency shown in dealing with one's own emotional distress (see Myers, 1981b; Myers, Murphey, & Riker, 1981). Not only is service utilization low, the availability of mental health services for older persons is inadequate to meet the needs that do exist (ED 172 056; Myers, 1983a).

Group Counseling with Older Persons

The smallest group implemented with older persons typically involves a married couple, or an older person and another relative, often an adult child (ED 156 933). Retirement can create new strains on a relationship, as older persons begin to relate in a new way simply because they are spending more time together. Counseling can help to ease the transition (EJ 181 050). Counseling older couples in relation to sexuality may be conducted for individual couples (EJ 142 710) or in multiple couple programs (EJ 269 584, EJ 182 988).

Numerous other support and therapy groups have been initiated for older persons. They tend to differ for institutional populations as opposed to those who are community-living (see ED 046 137). Within institutional settings, a high proportion of the elderly residents are mentally frail and/or impaired, either organically or functionally or both. Common group techniques for use with these persons include reminiscing, reality therapy, remotivation, and

resocialization (EJ 236 230, ED 225 195). Support groups for the relatives of frail elderly persons also are needed (EJ 268 029, EJ 256 011, ED 156 933).

Group methods are effective in treating loneliness and isolation and improving social interaction skills (EJ 253 497, EJ 236 230), as well as in helping older persons and their families cope with loss (ED 200 885). Insight-oriented therapies were shown to be slightly more effective than behavioral approaches in treating noninstitutionalized older persons in one study (EJ 177 249), while cognitive behavioral therapies were shown to be effective in another (ED 211 867). Group work within day care programs can help to prevent or postpone institutionalization (EJ 129 069). Correspondingly, groups for healthy older adults can help to stimulate continued learning, growth, and development, and positive attitudes toward aging (EJ 291 067, EJ 245 452, EJ 209 155).

Peer Groups for Older Persons

Becker and Zarit (ED 142 904) suggest that human relations skills improve as people age, which is a strong argument in favor of training older persons to be facilitative helpers. Given the dearth of professional mental health services, the training of paraprofessional and peer counselors is a potentially effective means of meeting the mental health needs of older persons (EJ 137 727; Myers, 1981a). General considerations in selecting and training older adults as peer counselors have been identified (EJ 261 217), and a variety of training packages have been developed and used successfully with the older population (see EJ 186 441, ED 223 787, ED 208 307, ED 206 939, ED 174 871; Myers, 1981a; Myers & Ganikos, 1981; Myers, Finnerty-Fried, & Graves, 1981).

Older persons have been trained as individual peer counselors and paraprofessional group leaders (EJ 137 727). They have proven to be effective helpers in a variety of programs, including structured support groups for health education (EJ 256 064), nutrition education (EJ 280 667), and memory strengthening (ED 210 594). Through visitation programs, older peer counselors have helped to improve self-esteem and morale of both homebound (EJ 291 083) and institutionalized older persons (ED 234 307, ED 057 326). Homebound, visually disabled persons have been helped with problem solving and coping strategies through peer telephone support networks (EJ 259 080).

Older peer counselors have been involved in career and vocational counseling through projects in community agencies (ED 210 603) and educational settings (ED 132 252). They have served as role models for nontraditional students (ED 130 214) and as peer advisors on consumer issues (EJ 210 514). They have also been used successfully to assist social service agencies in dealing with abuse and neglect (ED 198 224). It appears that older persons can be trained as effective aides regardless of the particular counseling approach or therapy implemented in a given setting.

Applying Counseling Theories and Therapies to Older Persons

Older persons are an extremely heterogeneous and diverse population, and counselors must remain flexible in determining their needs and selecting appropriate interventions (ED 189 492). The experience, attitudes and biases of the counselor will have a great impact on therapeutic outcomes (EJ 249 704). It is possible to apply any of the traditional counseling therapies to older persons, and some examples of attempts to do so are given below. Certain approaches to work with older persons which have received more in-depth study and use are also discussed.

Individual psychotherapy has proven to be effective with older adults (EJ 152 696). Both behavioral and cognitive therapies have been used in treatment of depression (ED 189 492), as well as more humanistically oriented approaches (ED 172 083). Multimodal behavior therapy has helped to reduce the incidence of reported problems in group counseling endeavors (EJ 259 125). Families have been taught behavior management strategies to help them cope with impaired older individuals (EJ 275 948). Behavioral techniques such as reality orientation, remotivation, and resocialization have been used effectively with confused older persons in institutional settings (EJ 277 775).

Within health care environments, models for identifying and overcoming learned helplessness have been explored (EJ 275 908, ED 174 874). The importance of crisis intervention techniques for use with older persons has been emphasized based on the large number of stressful events to which older persons are exposed (ED 225 063).

Career development theories have been reviewed as a potential means of helping understand and meet the needs of older people (EJ 221 088, ED 193 573). Basic concepts of career development and career counseling have been used successfully to help older persons make meaningful occupational choices (ED 132 252). Assertion training may be used effectively alone or in combination with career and other counseling strategies (EJ 135 715).

Social network theory has been applied to work with older persons to help in analyzing relationships and needs for social interaction and support (EJ 257 508). This approach is helpful in working with multiple problems faced by older adults (ED 179 863). There is some evidence that older persons who remain active and involved (i.e., have effective social networks) have less need for counseling intervention (EJ 220 744). Life enrichment programs represent attempts to insure meaningful involvements among older persons (EJ 254 839).

A major therapeutic technique used with older persons is life review, identified by Butler (1974) as a universally occurring phenomenon related to life satisfaction in older individuals. Reminiscence has been used in attempts to improve cognitive functioning (Hughston & Merriam, 1982) and to treat depression and low self-esteem, though positive outcomes have not always been evident (EJ 257 503). One application of this approach, Life Enhancement Counseling, has proven effective in treatment of depression and feelings of meaninglessness among elderly Cuban individuals (EJ 275 017, EJ 252 048, ED 203 207, ED 198 224).

SUCCESSFUL AND MODEL PROGRAMS AND TECHNIQUES

A number of successful programs for providing counseling to older persons have been described in the literature. Some are similar to programs for persons of other age groups, while others have unique features that reflect the special concerns of older individuals. Myers and Salmon (1984) reviewed such counseling programs nationwide, and assessed both the shortcomings and potentialities of current efforts. The approaches described here are not meant to be exhaustive of the possibilities, but rather to give a flavor of the diversity of strategies that have been implemented.

Paraprofessional and peer counseling programs, discussed earlier, have been an effective avenue for interventions with older persons (EJ 186 441). In addition to those programs already mentioned, paraprofessionals have been used for outreach, needs assessment, and service linkage with isolated older persons (ED 064 566, ED 057 326).

One type of program which depends to a great extent on volunteers, or trained paraprofessionals, is the Hospice. The hospice concept provides for a team approach to medical and psychosocial services for terminally ill individuals and their families. Older widows have been trained as effective hospice volunteers (EJ 246 774), and hospice nurses have responded positively to communication skills training (ED 203 148). Support programs and mental health training for hospice staff and volunteers are essential aspects of care in this work, which tends to be demanding and stressful (EJ 229 727, EJ 274 082, ED 179 885).

In addition to volunteer experiences, many older persons want to become involved in paid work activities. A variety of successful counseling programs designed to help older workers have been developed, including the Referral/Employment Network for Elderly Workers (RENEW) (EJ 215 558), the Alpine Project for assisting chronically unemployable older workers (ED 134 872), Project HIRE (ED 196 487), and the Adult College Career Employment Support Services (ACCESS) (ED 212 900). Numerous career transition programs involving counseling for older people have been implemented (EJ 193 768, ED 193 573, ED 177 382, ED 132 252), as well as programs oriented more specifically to job training and placement (EJ 261 162, EJ 030 617, ED 035 763). Evaluations of programs designed for training and placement of older workers tend to be positive (ED 035 763).

Although training is a major component of vocationally oriented counseling programs, educational experiences for older persons are much more diverse in nature. Counseling and educational programs for older learners, especially in community college settings, are increasing in number (ED 234 826, ED 202 492, ED 201 353, ED 196 490, ED 194 128, ED 187 362, ED 181 959, Ed 136 852, ED 132 252). Four-year institutions are becoming increasingly involved in programs for older persons (EJ 256 172), such as Project 60 at Cleveland State University (ED 236 960) and the Elderhostel programs which are held at many college campuses throughout the country (ED 147 575). Counseling is an integral aspect of educational program planning involving older persons (ED 103 614, ED 032 511).

Other, less traditional counseling and supportive strategies for meeting the mental health needs of older persons have been implemented. For example, counselors are developing more and better linkages with the medical profession, so that counseling within private medical practices is becoming a realistic and beneficial service (EJ 285 132). Intergenerational programs, involving interactions between older adults and children or adolescents, are

proving to have beneficial outcomes for both ends of the age spectrum (Murphey & Myers, 1982). One unique program involved older adults in a public housing project as adoptive grandparents for high school students with mental retardation (EJ 090 840).

Another novel, yet not so new, technique for impacting the mental health of older persons involves the use of pets as companion animals (EJ 285 173) and as adjuncts in psychotherapy to increase social interaction, provide comfort, and reinforce independence (EJ 242 003). Though the research on pet therapy is equivocal (Cusack & Smith, 1984), the potential for effective interventions is great.

FUTURE TRENDS AND IMPLICATIONS FOR COUNSELORS

As the greying of our population continues, and the sheer numbers of middle aged and older persons continues to grow, counselors will increasingly be challenged to develop and utilize their helping skills with this population. It is not enough merely to react; rather, it is necessary that we be proactive in considering and planning for the future.

Naisbitt (1982), in his best selling book Megatrends, suggests important trends that have implications for counselors. Though he is only one of many futuristic writers, Naisbitt provides ideas that can be used in planning. The progression of society from an industrial base to an information base, the shift from centralization to decentralization, the movement from institutional help to self-help, and more--all have implications for the progress of our profession.

One means of being proactive is for counselors to be aware of and sensitive to the legislative process and the potential for legislation that will assist older persons. The most recent federal Vocational Education Act, for example, provides grants to educational institutions to establish model centers for vocational education for older persons (see ED 224 964). Manpower legislation affects employment opportunities for older people (ED 117 347).

The Older Persons Comprehensive Counseling Assistance Act has been introduced into the U.S. Congress several times over the past decade. If passed, it would provide funds for counselor training as well as counseling services to

numerous older persons (ED 146 490). Such legislation needs a groundswell of public support if it is ever to gain the support of legislators. Counselors who are concerned with meeting the needs of older persons must be willing to be active advocates for those needs, with policy makers as well as individual older adults.

Simultaneously, we have a professional responsibility to improve the delivery of counseling services to older persons in every way possible. Research to determine effective strategies for helping older persons is needed, including research on the differential effectiveness of various techniques with subgroups of the older population. Counselor training programs can be revised to incorporate known information about older persons as well as new information generated through continuing research and development efforts. Through experience, we will learn how best to serve older people, and through shared knowledge we will improve our services. Continuing examination of the database will help counselors to further define and clarify roles and functions so that, in turn, they can help older people live satisfying and fulfilling lives.

Abstract of Document	AB The 1980's may be remembered as the decade of the older woman, due in part to demographics and also to public awareness heightened by the women's movement. If psychology is to exert a constructive force towards the optimization of mental health of older women, it is essential for psychologists to be aware of the limits of current knowledge and the role of stereotypes in shaping both knowledge and the lives of older women. Typical myths about older women focus on those dealing with financial status, institutionalization, mental and physical health, and sexuality. Individual differences among these women reveal the need for more diversity in intervention programs and more attention to individual needs. (JAC).

AB Cleveland State University has developed a program to enroll Ohio
residents, 60 years and older, on a nontuition and noncredit basis.
Volunteers from the Project 60 Program assist in the administrative
and program planning, and act as peer advisors during group advising
sessions and at registration. A Project 60 student initiated a group
called the "Over 60's" to meet the social needs of this population.
A questionnaire given to 103 Project 60 students and the faculty
showed that a majority of the courses taken were in the arts and
sciences (62%), and that most students felt accepted in their classes
(89%). Most of the faculty (63%) learned about the program from the
students themselves and saw them as contributing positively (58%),
competent (48%), well-adjusted (53%), and actively involved in class
(48%). They also felt they demonstrated the vitality of older
persons to the younger students. (JW).

AB This quarterly journal contains abstracts of 150 of the documents
recently included in Project SHARE automated database. (Project
SHARE is a national clearinghouse for improving the management of
human services.) The journal is divided into four parts: the
abstracts themselves arranged in alphabetical order by title, a list
of personal and corporate authors, an alphabetical list of documents,
and a subject index. The index lists abstract numbers under specific
subject categories. The categories of the index are alphabetically
arranged and include cross-references between conceptually related
index terms and cross-references from synonyms to the preferred
terms. Some of the topics covered in the material abstracted include
the following: abused children, abused wives, acutely ill persons,
human services planning, linkages, agency accountability for funds,
agency accounting methods, community relations, alcohol abuse
counseling, agency evaluation, budgeting, case management, child
placement services, client advocacy, college/university research
centers, community services, computerized services, planning for the
elderly, physically disabled persons, economic development,
disadvantaged persons, employment counseling, job development
services, fund raising, group homes, health services, home assistance
services, service delivery, juvenile delinquents, management by
objectives, mental health services, minority groups, priority of
needs, personnel administration, personnel development and training,
vocational education, transportation services, and cooperative joint
planning. Information on how to order documents is provided. (KC).

AB This nine-part report reviews the activities and programs of the Division of Continuing Education and Extension Services of New York City Technical College for 1982-83. Following introductory material examining the effects of second-year resource reductions, enrollment declines, space scarcity, staff development activities, credit possibilities for continuing education courses, and urgent concerns for 1983-84, subsequent sections detail activities, enrollments, participant characteristics, outcomes, and prospects for the future for specific college programs. These sections focus on: (1) tuition courses and programs, including contract programs with local businesses; (2) the Adult Vocational Counseling Center, which offers programs in study and test-taking skills, resume writing, job interviewing, and stress management, as well as career information and evening seminars; (3) the Vocational Training Program for Deaf Students; (4) Non-Traditional Vocational Programs for Women; (5) Project STRIDE, a clerical and data entry training program; (6) Adult Literacy and Learning Programs, including the Adult Learning Center, the City University of New York General Education Development Program, and the Correction Education Program; (7) the Urban League Training Program, which offers programs in clerical skills and human services; (8) the Institute of Study for Older Adults; and (9) the Multi-Family Housing Energy Conservation Program. Finally, statistical summaries of tuition-based and grant-funded programs are provided. (LL).

 MN College-Students. Counseling. Counseling-Techniques. Higher-Education. Mental-Health. Program-Effectiveness. Volunteers.
 ID TARGET AUDIENCE: Researchers.
 AB Research on the use of paraprofessionals and trained volunteers for visitation programs with elders is limited. To determine the effects of a visitation program on nursing home residents and their college student and elder visitors, and to explore the effectiveness of special training for such visitation, nursing home residents (N=25) visited with 12 trained or 13 less trained college student visitors for 7 weeks. Of those residents, four visited with trained community elders for the next 7 weeks. Statistical analyses showed that residents' depression and self-esteem improved significantly over the

first period, and regressed to pretest levels in the next. A measure of counseling skills supported the effectiveness of training since trained students showed greater skills, and residents' increase in self-esteem correlated significantly with visitors' counseling skills. Students improved significantly in counseling skills, knowledge of aging, and attitudes toward elders. Elder visitors improved significantly in knowledge of aging. (WAS).

 AB The document presents six articles that provide a glimpse of the uniqueness of American Indian cultural conflict, focusing on aspects of the culture which warrant special attention. Since there are over 100 tribes, an effort was made to enumerate commonalities amongst the tribal cultures in looking at issues raised in the urban areas throughout the United States. The first article is a case example in social work pertaining to social development of urban Indians. The next article provides suggested techniques in grief counseling for Native Americans. The third article looks at the role Native Americans (spiritual leaders, medicine men) have in psychotherapy. The fourth article provides a brief history of the American Indian woman's role from early times to today, and then presents various roles urban American Indian women play today. The fifth article addresses sexuality and American Indians; example topics are rape, homosexuality, and sexual oppression. The last article discusses the plight of the Indian elderly in the urban areas in reference to their needs, the role of the Indian elderly, mental impairment, understanding the elderly, and the Older Americans Act.  ID Approval Needs.

AB A pathological phenomenon repeatedly observed in some families is the most desperate efforts toward the most unpleasable parents made by the most rejected middle-aged children. Counselors working with these families find the daughters compulsively seeking the affection and approval their mothers have historically withheld. The aged and even senile mothers maintain the abandoning behavior pattern while the daughters fruitlessly pursue their appreciation and validation. While the daughters' self-esteem suffers the blows of repeated insult, they resist relinquishing their one-down position as though it were an addiction. Case studies show that the only way of stopping this destructive game is through individual therapy and major change in the daughters' attitude and behavior. It is necessary that the daughters recognize the futility of their efforts, experience the loss of nurturing they never had, grieve as needed, and accept reality. They can be helped to face their terror of being in limbo alone and to free themselves from old injunctions if they are sufficiently motivated to achieve the pay-offs of autonomy with its risks and unknowns. In effect, the daughter and her therapist join in re-parenting and setting her free from the strands of doubt and hope and helplessness that bind her. (Author/WAS).

 ID Florida (Miami). Spanish Family Guidance Center FL.
 AB Two major programs of the Spanish Family Guidance Center, a facility that addresses the mental health needs of Hispanics in the Greater Miami (Florida) area, are described in this report. One program, the Spanish Drug Rehabilitation Project (completed in 1977), compared a series of activities including: (1) research on the characteristics of Hispanic drug abusers, Cuban mothers who use drugs, and dropouts from treatment programs; (2) development and application of a psychosocial model of Hispanic immigrant acculturation; (3) development and testing of a family-oriented drug abuse treatment model; (4) studies on ecological (involving client-ecosystem relationships) versus intramural (involving client-counselor

relationships) approaches for individual and family therapy; and (5) inservice staff training. A second program, the ongoing Model Project for Enhancing Meaning of Life for Hispanic Elders, has developed and is applying a model counseling approach that attempts to make life more meaningful for the Hispanic elderly through exploration of the client's life, values, and feelings by the client and counselor; a review of the client's ecological system; and the formulation of treatment interventions and new experiences based on the reviews. This journal issue discusses activities, outcomes, and research findings of the two programs, and describes the Spanish Family Guidance Center's present status and future plans. (MJL).

 AB This selective bibliography contains information on material dealing with domestic violence in the home with a special emphasis on child abuse, that may be obtained in the Robert E. Kennedy Library at California Polytechnic University. The bibliography is divided according to different forms of abuse, e.g. emotional child abuse, incest/sexual abuse and elder and wife abuse. Sections on counseling and treatment, shelters, foster homes, the role of the school, and measurement tools as well as a section on children's literature are included. Both print and non-print materials are listed, with emphasis on books and journal articles. The information dates from 1976-1982, and is organized alphabetically by author or title within each section. The bibliography also presents a list of organizations concerned with family violence and a selected list of printed abstracts, e.g. Psychological Abstracts, Sage Family Studies Abstracts, and journals which cover the issues of abuse and family violence.  AB The nine papers in this collection are directed toward aspects of family treatment in social work practice. Ranging in focus across the life span from infants to older adults and including material about minority group families in America, all of the papers discuss current practices and programs. The first paper discusses primary prevention practice with families of infants. The second considers the experience of one residential treatment center in changing from a traditional child-centered treatment approach to one more family-centered in nature. Intrafamilial child sexual abuse and the manner in which the underlying treatment assumptions of one program affected the development of that program's structure are discussed in the third paper, while the fourth offers ideas about social work practice with Asian American families. Guidelines for helping troubled teenagers in blended and single-parent families are provided in the fifth paper; the sixth describes two models for treating families who abuse children (the generic family model and the family management model). The seventh paper in the collection discusses an intervention approach utilizing social networks to assist Mexican American families, while the eighth paper discusses aspects of the work of the conciliation court of Los Angeles County. In conclusion, the ninth and final paper describes a mutual help program for widows and widowers. (RH).

 MJ Aging-Individuals. Group-Counseling. Group-Therapy. Interpersonal-Communication. Older-Adults.
 MN Age-Discrimination. Communication-Skills. Group-Discussion. Interaction. Self-Esteem. Social-Isolation. Social-Problems.
 AB Group settings offer the elderly a unique outlet for interpersonal communication and can alleviate social isolation and aloneness. Group cohesiveness and instillation of hope are two curative factors in the group setting. Persons working with the elderly must be aware of their special problems and also be sensitive to their own age bias. Group work with the elderly can be divided into four main levels: (1) reality orientation, which attempts to make the client aware of the present; (2) remotivation, which is highly goal oriented; (3) reminiscing, which is past oriented; and (4)

psychotherapy, conducted by a trained professional for self-awareness, self-acceptance, and a sense of personal continuity. While very little experimental research has been conducted in the area of group work with the elderly, one study did assess the interaction of group workers and members in a behavior modification group. Another study found problem solving useful in increasing social skills. Group work with the elderly will likely expand rapidly in the near future, because of its economic and interpersonal benefits. As the increasing numbers of older people gain more information about group functioning, they will probably find participation and leadership in such groups more acceptable. (HTH).

 AB A basic tenet of this paper is that the concept of crisis and crisis management has developed as a central issue within the fields of community psychiatry, psychology, and mental health, but that little systematic attention has been devoted to a particular subgroup at risk, i.e. older persons. Both theoretical background and clinical implications for crisis management, especially in long-term care settings, are discussed. Important differences for the elderly that warrant attention are examined, including the type, perception of, and number of stressful events which can precipitate crises, e.g. nursing home residents who are exposed to an alarming number of these events as a direct result of entry into the nursing home. Three levels and types of crisis intervention are proposed to help older persons in crisis situations, including preventive, clinical, and problem-solving approaches. (Author/JAC).

AB A research project was conducted to describe the curricula and teaching methods of senior peer counselor training projects in the United States. Senior peer counselor training projects were identified through contacts with state and territorial agencies on aging and with professionals in aging and mental health centers. Project directors were asked to complete a questionnaire rating the amount of emphasis various themes, skills, and attitudes received in their projects. Questionnaires were returned for 18 projects. The results of the study indicate there is general agreement among directors of senior peer counselor training projects about content and teaching methods. The skills most often stressed in the projects were one-to-one counseling, active listening, problem identification, information and referral, advocacy, and assertiveness. Themes agreed on by 67 percent of the projects were general counseling, loss of spouse, information and referral, health education, legal advocacy, consumer counseling, and chemical dependency. Attitudes receiving a strong emphasis in the projects dealt with the appreciation of caring in helping others, valuing the worth and dignity of individuals, respecting the client's right to make the final decision, valuing the role of paraprofessional peer counselors, and maintaining

confidentiality. It was concluded that educators training older adults to counsel their aged peers can use the themes, skills, and attitude objectives identified in this study as a basis for developing, conducting, and evaluating their training projects. The teaching methods identified also could be used in peer counseling training programs. (KC).

Gerontology. State-of-the-Art-Reviews. Stereotypes.

AB The 1980's may be remembered as the decade of the older woman, due in part to demographics and also to public awareness heightened by the women's movement. If psychology is to exert a constructive force towards the optimization of mental health of older women, it is essential for psychologists to be aware of the limits of current knowledge and the role of stereotypes in shaping both knowledge and the lives of older women. Typical myths about older women focus on those dealing with financial status, institutionalization, mental and physical health, and sexuality. Individual differences among these women reveal the need for more diversity in intervention programs and more attention to individual needs. (JAC).

ID Self Disclosure.

AB There is a growing recognition of the importance of counseling for the elderly. However, the effectiveness of various therapeutic techniques with a geriatric population has yet to be determined. Age of the therapist as a potential variable affecting self-disclosing behavior was assessed to determine the effect of counselor self-disclosure on client self-disclosure. Subjects were 60 female geriatric patients who viewed 1 of 6 videotapes in which the age of the counselor and amount of self-disclosure was varied. With one exception, the prediction that a subject's self-disclosing behavior would be differentially affected by the therapist's age or the level of self-disclosure was unsupported by the data. Subsequent interviews did reveal, however, that therapist age was significant when the subject was allowed to choose the topic of discussion. The findings suggest that older adults tend to disclose at a higher level when interviewed by a therapist of their relative age. (Author/JAC)

ID Gossip. Wisconsin (Waushara County).

AB The report describes a 3-day, two-part (community education and in-home counseling) rural elderly mental health project conducted in Waushara County, Wisconsin, during 1980-81. The first section details activities of the two components and the second section reports the clinician's experiences in the project. As covered in the first section, working with 36 in-home elderly and 308 elderly who attended education sessions results in these findings: (1) 86% suffered from depression (17% from loss of loved ones, 21% from marital problems, 48% from health problems); (2) accurate assessment required contact with other agencies; (3) establishing trusting relationships took longer than expected; (4) home settings promoted rapport; (5) in-home counseling was expensive, but necessary; (6) elderly were receptive to the education component; and (7) gossip was an unanticipated problem in the education component. In the second part, the clinician tells of her project experiences in working with elderly marital problems, sex counseling, parent-child relations, and chronic mild depression. The report concludes that the assignment of a particular clinician to work with the elderly strengthened the clinician's sensitivity to elderly issues and enhanced visibility within the community; however, the strain and emotional drain on the clinician were great. (AH).

 AB This paper examines some problems of aging individuals and of the families of the aged and suggests ways in which the family counselor can facilitate the adjustment of both to the aging process. The causes of an increased aged population are presented in an introductory section. Problems associated with aging such as physical changes and the emotional and psychological demands that accompany the five major losses, i.e. home, health, finances, friends and loved ones, and life, which an older person sustains are explored. Problems facing the family with elderly members including those related to economics, housing, health, mobility, and parent abuse are detailed. Six specific suggestions for the counseling interview with an aged person are given as well as a summary of the counselor's role with the aged and families of the elderly. A reference list is also included. (MCF).

 ID Minnesota (Saint Paul).
 AB A study was conducted to provide additional information for understanding the participation of older adults in educational activities. The general hypothesis was that a significant relationship exists between personality type and extent of participation in education of older adults. Questionnaires collected information from 52 volunteers from the Wilder Senior Citizen's Center and Wilder Senior Aide Program in St. Paul, Minnesota. Instruments used were the Keirsey Temperament Sorter (KTS), a 70-item

questionnaire to ascertain personal preferences of the respondent, and the Abbreviated Leisure Activities Survey (ALAS) that measures extent of participation. Findings showed that the older adult subjects were all involved in learning activities. On the KTS the majority of subjects scored high on the extroversion scale and low on the perception scale. The more extroverted and intuitive older adult was found to participate more in educational activities than persons scoring low on these variables. Implications and recommendations resulting from study findings concerned planning programs that appeal to extroverted and introverted personality types, planning educational experiences incorporating traits of intuities, focusing programs on practical hands-on learning experiences, and teacher understanding of people's personality types. (Survey instruments and data are appended.) (YLB).

 AB A part of the Adult College Career Employment Support Services (ACCESS), the minicourse entitled Emeritus Career and Vocational Exploration has been designed to facilitate the entry or reentry of older persons into the work force as paid or volunteer workers. Organized into two four-week modules, the course offers participants assistance in self-assessment and development of self-merchandising and job search skills. In the modules, participants complete self-assessment inventories to evaluate their ability, skills, education, experience, and life situations. Also explored are national and local employment problems and opportunities and current part-time and full-time employment practices (including flextime, compressed work weeks, job sharing, phased retirement, job redesign, sabbaticals, job reassign, self-employment, and volunteer opportunities). After completing these self-assessment and explorational activities, participants develop a portfolio that includes a resume, exhibits, references, and other self-merchandising instruments. (MN).

AB This paper describes the planning and implementation of a veterans' hospital career center program that offers a comprehensive career counseling, vocational assessment, vocational rehabilitation planning, job placement, and follow-up program to inpatients and outpatients, under the direction of a counseling psychologist. Recruitment of volunteer staff and the planning of the career center, adopted from the career education model found in school settings, are discussed. The training of volunteers is described and the use of counselor educators and career education and counseling program staff from the community is reviewed. Unique problems faced in training retired volunteers with an average age of 70 are presented. Other key elements of successful program development and management using volunteers are reviewed, including: (1) the development of a community base for vocational rehabilitation; (2) documentation; (3) volunteer openness to direct supervision; (4) difficulties faced by older volunteers in comprehending the complexities of vocational and psychological assessment; and (5) the use of social activities to foster cohesiveness and group identity among volunteers.  AB This paper describes a program for memory strengthening for older adults which combines lectures by experts with small group discussions. The importance of peer counselor involvement, particularly in focusing on the concerns of older people and the most effective ways to address these concerns is emphasized. Program objectives, session topics, and format are outlined, followed by a publicity sample designed to attract participants. Outlines are provided for both lecture and small group sessions. The lecture outlines suggest topics that can be discussed by physicians, nurses, social workers, nutritionists, and pharmacists. Although the order of the lectures can be rearranged, it is suggested that the presentation on depression and stress take place after the group

becomes cohesive. The need for adequate question and answer time following the lectures is also stressed. Premises, activities, and resource materials are listed for each small group session. The order of topics for small group sessions reflects the program's efforts to build upon previous sessions and to introduce more complex concepts. The presentation of the program is described in the concluding section and participants' reactions are given. Several forms and relevant materials are included in the appendices. (NRB).

 AB This manual is intended for use by senior adult peer advisors (age 60
 and over) engaged in helping relationships in providing consumer
 education to other senior adults. The advisory procedures are based
 on a problem solving approach which incorporates the development of a
 self-help concept. Chapter 1 provides information on consumer

advising. It presents advising steps with examples and briefly discusses group sessions. Three references for additional information on the helping relationship are given. Chapters 2-16 contain information in outline form on these topics: appliances; clothing; credit; death and burial; food; frauds, gyms, and deceptive schemes; housing; insurance; health care; money management; recreation and leisure; safety in the home; shopping strategies; social services; and transportation. Since the manual is designed for use in a broad geographic area, a Local Information Supplement at the end of each chapter provides examples of what resource list is also included. At the end of the manual is a guideline chapter to aid in development, implementation, and evaluation of a Senior Citizen's Consumer Program. (YLB).

 AB A compilation of data-based literature from 1950 through 1980 on the characteristics and needs of non-traditional students is presented. Non-traditional students are defined as those older than 18-22 years of age/or individuals who, because of special characteristics and needs, have rarely in the past pursued degrees in higher education. The first part of the bibliography covers "Research Identifying Non-Traditional Students" and offers information on student characteristics and needs. Part II, "Research on Specific Types of Non-Traditional Students," focuses on the following types: graduate, special studies, older adults, women, handicapped, adults (general), and foreign students (English as a second language). Part III, "Research on Issues Related to Non-Traditional Students," covers the areas of outcomes, counseling, academic/curriculum, and access. It is suggested that colleges and universities will become more interested in the non-traditional student as traditional enrollments continue to decline. Annotations selected for this bibliography were selected from studies that used the most valid samplings for their data and presented information and/or conclusions having significant implications for collegiate educators concerned with non-traditional learners. (LC).

 AB These three papers describe a cooperative outreach program designed to counsel older rural residents about available community services through use of a door-to-door information effort. The packaging and delivery of the training conference for the outreach workers involved in the outreach project are described in the paper highlighting the work of the American Personnel and Guidance Association Division of Continuing Education. Responsibilities of the various participants, including the local community, the university community, and the Area Agency on Aging, are also outlined. Although geographically specific, these materials suggest a model for outreach services to the elderly. (JAC).

 AB Depression is the single most widespread mental health problem facing the elderly, with pharmacotherapy the most frequent standard treatment modality for these patients. A psycho-therapeutic

alternative to pharmacotherapy is Life Enhancement Counseling, a counseling approach matching therapeutic techniques to client characteristics and providing an age-appropriate and culturally sensitive treatment model for alleviating depression. Elderly subjects (N=100), mostly Hispanic Americans, completed two sets of measures of functioning pre- and post-therapy. Outcome analysis indicated that significant improvement in functioning occurred along all dimensions of psychosocial functioning. Results showed that, among this Cuban-American sample, outcome was independent of client variables; two treatment variables, extent of Life Enhancement counseling and medication, were significantly predictive of treatment outcome. In many cases, the difficulties of the elderly were amenable to psychosocial intervention both with and without pharmacotherapy. These results support the concept that many psychological difficulties of the elderly are potentially reversible rather than inevitable consequences of aging. (Author/NRB).

materials and/or articles, learning activities, exercises, and bibliography. The facilitator manual provides a detailed outline of each of the nine modules and a step-by-step description of the methods to be used in module presentation. These instructions include a sequential outline of lecture material, discussion points, large and small group exercises, and audiovisual presentations. Appendixes to the facilitator manual include Guidelines for the Clinical Practicum and Evaluation with pretests, posttests, and evaluation for module, course, teacher, and practicum. (YLB).

 MN Career-Counseling. College-Role. Community-Colleges. Counseling-Techniques. Educational-Counseling. Employment-Qualifications. Group-Counseling. Two-Year-Colleges. Volunteers.
 AB Designed as informational aids for community college practitioners, these two booklets examine the counseling and job placement needs of older adult students. The first booklet addresses itself to community college counselors. After profiling the composition of the older adult population in terms of "young-old" persons (those of 55 to 75 years old) and "old-old" persons (those 75 years or older), this booklet examines 14 false stereotypes concerning the intelligence, educational interests, personal goals, and physiology of older adults. The remainder of the booklet discusses the role of the counselor in providing academic and personal counseling to older adults; planning teaching and testing methods appropriate to their needs; managing group counseling sessions; and increasing general awareness of the educational and training needs of today's older adult. The second booklet, which is addressed to college placement officers, first notes the stereotypes that have kept older adults from successfully competing in the job market and then examines: (1) benefits to employers of hiring older workers; (2) the social and financial benefits derived by older adults from employment; (3) the unique ability of the community college to meet the training needs of older adults; (4) ways in which a college employment center can serve older adults; (5) volunteer work options for older adults; and (6)

other employment resources. (JP).

 AB This paper suggests that groups are effective modalities for meeting older persons' psychological needs and enhancing their sense of well-being. Following a review of the literature on group work with the aged, the effectiveness of group work as an intervention strategy for the treatment and prevention of mental health problems is demonstrated. Benefits of group participation are detailed, including ways in which groups assist older adults to relate effectively to family members as well as cope with the loss of family members and friends. Methods for conducting groups with older adults are described and compared with other age group methods. Avenues for expanding group work in clinical practice and directions for future research are also proposed. (Author/RC).

 MN Clinical-Diagnosis. Identification. Literature-Reviews. Measurement-Techniques. Speech. Voice-Disorders. Young-Adults.
 ID Voice Qualities.

AB Noting that the progressive aging of the American population has created a need for a body of knowledge about the vocal characteristics associated with aging, this paper provides information on geriatric voice. The first section of the paper contains a selected bibliography of materials concerning geriatric voice, including literature on the need for research on how aging affects the voice; the physiological changes that produce voice changes; the perceived characteristics of the geriatric voice, such as slow rate, imprecise articulation, hoarseness, and laryngeal tension; and the objective measurement of the aged voice. The second section briefly describes an original research project on the geriatric voice that has implications for communication specialists. This section discusses the methodology used to collect data about the vocal characteristics of 20 young adults and 20 older adults. It also reports the results of the research, indicating what speech characteristics changed over time and how the objective measures used could apply to the diagnosis of abnormalities in the geriatric voice.  ID Foster Grandparent Program. New Jersey.
 AB As caseloads and reports of child abuse and neglect increase, social service agencies have developed new and varied approaches to effectively serve troubled families. Increasingly, the volunteer and the paid paraprofessional are being used to maintain needed services and to stretch limited dollars. The New Jersey Division of Youth and Family Services (DYFS) utilized 33 participants of Federal Older Worker Employment Programs as paraprofessional aides to caseworkers. These DYFS foster grandparents provided in-home services to families suspected of abusing or neglecting their children. During the 15-month demonstration period 97 families were served. Pre- and post-test interviews and assessments of the older workers measured the effect of the foster grandparent's presence on the families. Findings revealed that significant changes in the abuse and neglect situations took place as well as measured changes in the older workers' morale and job satisfaction. (Author).

 ID Florida (Dade County).
 AB The Life Enhancement Counseling Model was developed specifically for the treatment of the problems of meaninglessness and purposelessness among depressed Cuban elders. The model is based on psychosocial development and ecological theoretical orientations. A life review approach is used to help the depressed individuals complete unfinished business and resolve regrets and self-reproachments, and to identify capabilities or interests that they are not presently using. Once these strengths have been identified, the potential for reenacting them is assessed. Depending upon the assessment, directive counseling and ecological intervention strategies are carried out that may lead to the reenactment of the past strengths. Life Enhancement Counseling, as it operated in a Dade County.

Florida, clinic, was evaluated by measuring its effect on 44 Cuban elders. Data indicated that the counseling method was highly effective with depressed older adults when meaninglessness of life was a critical target problem. (Author/MK).

 ID California.
 AB After introductory material discussing the impact of an increasingly older student population on traditional higher education practices, this report examines the adaptation of college curricula to the special needs of older adult students. The report first examines the level of service to older adults provided by the California community colleges during the years 1972 through 1978 and then describes the types of adults served by the colleges: (1) self-motivated students with total self-determination and mobility; (2) self-motivated students with limited mobility; and (3) institutionalized students with no mobility. Assumptions concerning the special needs of adult students are then outlined as they relate to program planning instructional methods, admissions, and counseling. This is followed by a chart illustrating the dichotomy between the characteristics of traditional and older students and by a discussion of an ecological approach to special program planning, under which the college adapts the learning environment to the unique needs of each of the three adult learning types. Finally, the report describes the adaptive programming of an artistic dance class for the institutionalized and of a holistic physical education course for the aged. The philosophy and format of each course are discussed. Appended to the report are descriptions of model adaptive education programs. (JP).

 ID Middlesex Community College MA.
 AB Project HIRE is a special program conducted by Middlesex Community College since October 1978 to help people 55 years of age and older find paid employment. The specific goals of the project, as it was originally conceived, were to: (1) open three intake centers; (2) register clients at the centers; (3) provide career counseling; (4) offer workshops in writing resumes and job-seeking skills; (5) locate jobs for clients; (6) place clients; (7) act as an advocate for the rights of older citizens; (8) publicize the project in area media; (9) maintain records and prepare monthly reports; (10) provide the community with a bank of skilled workers; and (11) utilize interns and volunteers. After initial publicity efforts, which included media coverage and mailings to area employers and service agencies, client interview and job matching processes were developed which eventually placed 106 clients in jobs ranging in pay from \$3.10 to \$5.00 an hour. In all, 390 older adults were added to the active client file, 1,460 employers were contacted, 409 jobs were developed, and 17 people were registered in the skills bank. The project was encumbered by the occasional imbalance between job applicants and openings, the lack of jobs sufficiently interesting and remunerative, and the time-consuming nature of client follow-up. The project now operates with a greatly reduced staff and has therefore eliminated its counseling component and restricted intake, matching and follow-up activities. (JP).

AB Highlights are presented of a national conference conducted to share specific models for community college programs for older adults and to devise financial and political strategies to ensure the continuation of these programs. After discussing the conference design, the report presents a summary of Bentley Lipscomb's keynote address on the economic factors affecting the demand for education among older adults. This is followed by descriptions of program models developed at community colleges to provide: senior peer consultant training, companion health aide training, mentor-based peer counseling for re-entry women, career and educational counseling services, and a senior handicraft cooperative. In these descriptions, special emphasis is placed on the problems encountered in program implementation and on the feasibility of replicating the programs at other colleges. The second general session, focusing on the re-authorization of the Higher Education Act and the implications of Title I provisions for older adults, is then summarized. Next, the report presents the highlights of four workshops dealing with tuition policies for older adults, adult learning needs, changes in retirement patterns, and the impact of demographic and socioeconomic changes on older adult education. The final sections describe the closing general session, present a discussion of funding and policy issues, and address challenges for the future. (JP).

ID California. Extended Opportunity Programs and Services.
AB Policies, relevant enrollment data, and plans of action for recruiting and retaining minority students are presented in a student affirmative action plan for the California community colleges. After introductory material outlining the goals of student affirmative action and the legal responsibility of state and district educational authorities to achieve these goals, the Plan examines the underrepresentation of ethnic minorities, women, those with low incomes, handicapped individuals, and older adults in community college enrollments. The need to correct this underrepresentation through improved access, retention, and institutional commitment is then discussed, followed by suggested plans of action for: (1) expanded efforts in outreach, recruitment, and admissions; (2) more responsive counseling, student affairs, basic skills, and tutorial services; (3) the continued development of special programs and financial support for underrepresented students, such as the Extended Opportunity Programs and Services; and (4) improved faculty, staff, and student awareness of underrepresented students and their preferred modes of learning.  ID Higher Education Act Title I.
 AB This comprehensive volume of innovative continuing education programs
 contains complete descriptions of some 750 cross-indexed projects in
 four general areas--human resource development, natural resource
 development, economic development, and community
 development--directed at community problems that can benefit from
 adult education. It brings together summaries of recent (1979)
 continuing education activities funded by Title I, Higher Education
 Act, which were implemented in all fifty states, the District of
 Columbia, Puerto Rico, and the Virgin Islands. A table of contents
 and state index facilitate selection of community service and
 continuing education activities by program categories, clientele, and
 geographic areas. Exemplary projects, as designated by the Title I
 State Administrators, have also been identified. The format for each
 abstract is as follows: project title; duration; participants; number
 served; project summary; methods and resources; institutionalization,
 spin offs, and future plans; materials developed; project director
 and address; and Title I Higher Education Act State Administrator.

 MN Case-Studies. Cognitive-Processes. Counseling-Techniques.
 Counselor-Role. State-of-the-Art-Reviews. Therapists.
 AB Numerous studies report that depression is the most common
 psychiatric disorder of the elderly. According to the behavioral
 view, depression results from inadequate, ineffective or insufficient
 positive reinforcement. In contrast, the cognitive position sees
 depression as a result of negative thinking about oneself, one's
 experience, and the future. Both behavioral therapy and cognitive
 therapy can successfully be used as effective therapeutic tools with
 depressed elderly persons. However, it is unlikely that either of
 these treatments is adequate or sufficient to treat all depressions
 of old age. Great variability is a consistent finding in research on

the aging, which makes it necessary to remain flexible in determining the problem and selecting an intervention appropriate for the client. Additionally, it is necessary that the therapist feel that older persons can learn new behaviors and cognitions, and that they can respond to the same therapeutic principles as younger persons.  AB This three-part report summarizes the accomplishments of Illinois' Disadvantaged Student Grant Program, through which public community colleges receive special funds for aiding educationally disadvantaged students on the basis of enrollment in remedial and developmental courses. Part I presents anecdotal accounts of exemplary student achievements which describe the goals, educational levels, and personal needs of students who have benefitted from the program by, for example, passing the General Educational Development test or improving their basic skills, as well as the recruitment efforts, outreach programs, and special services made possible by the funding. Part II discusses: (1) the funds awarded to the individual college districts for fiscal year (FY) 1979; (2) the number of students in Adult Basic Education, Life Skills, English as a Second Language, Vocational, and Employer Skills courses; (3) the special student groups involved, including senior citizens, minorities, women, and veterans; (4) the number of students by race, sex, and age; and (5) the number of students served in programs other than remedial/developmental programs. The final section summarizes funding and student data and anticipates FY 1980 program allocations. The report also provides a brief history of the program and its funding since its inception in 1973. AB The West Essex Extension Center (WEEC) provides a variety of educational services to adults in an off-campus setting. The typical WEEC credit student is a white, female, non-veteran, residing in Essex County, who is attending part-time and for the first time. There is equal probability that the student is married or single. The courses offered for academic credit encompass both career and technical programs, as well as elective courses of general interest. Many courses are offered to meet the needs of continuing education (non-matriculated) students, with the major exceptions being the Criminal Justice and Pre-Nursing curricula. The non-credit offerings are in the areas of the arts, personal finance, and test preparation. Advisement and counseling are conducted at WEEC to meet both academic and personal needs. Other specialized services include those for senior citizens and those offered in conjunction with local high schools. The Title I, Project WHY (Women Help Yourselves) Grant Program is also based at WEEC and has sponsored several conferences, seminars, and events. In addition, WEEC has developed cooperative relationships with community groups such as the Chamber of Commerce, the Essex Theatre Company, and a Center for Continuing Education. Certain goals of WEEC have not yet been met or have been discarded after reevaluation of community needs, e.g. to serve as a Bilingual Counseling Center. (AYC).

Females. Job-Training. Middle-Aged-Adults. Older-Adults.

Sex-Role. Vocational-Adjustment.

AB Examining the changing patterns in adult growth which alter family, learning, and work behaviors, the presentations collected here were given at a conference in which scholars, teachers, counselors,

industrialists, and therapists met to explore the linkages between

education and work throughout the life span. The edited transcripts are organized around four topics: Individual's psychological makeup,

the adult's development as learner, the adult's development as

worker, and adjustments to changing roles. The three papers on

psychological growth focus on gender and mid-life development, the latter half of life, and intergenerational communication. One paper

on the adult as learner focuses on broad conceptual framework, the other on the particulars of current theories. Seven papers focus on

the adult worker: labor market and life cycle needs, middle-aged

worker and career change, role of the intermediary, labor market

linkages (federal manpower programs), government intervention, a

consumer's guide to labor market information, and managing your career. The final two papers examine the changing roles of women, one describing the "new" woman, the other examining some myths about working women. (JT).

 MJ Adult-Counseling. Adult-Students. Counseling. Literature-Reviews. Older-Adults. Two-Year-Colleges.
 MN Community-Colleges. Counseling-Effectiveness. Counselor-Role. Counselor-Training. Educational-Counseling. Student-Problems.
 AB Despite the growing number of older students (age 50 or over) attending two-year institutions, counseling services relevant to their needs are often overlooked. These needs are especially acute because they often stem from the disengagement of long established social roles, such as the loss of a job through retirement, the loss of loved ones through death, and the loss of self-direction through institutionalization. Students with these problems require alert counselors trained to listen attentively and to use proxemics, nonverbal communication, and object language in the counseling process. Yet surveys indicate that no special programs for counseling older students currently exist at community colleges, and research shows that there is little information about the functioning of counseling services at two-year colleges in the professional literature. Administrative action is therefore required at the college level to assure that elderly students receive psychological as well as academic counseling. When counselors provide both services, the student will feel more comfortable in discussing personal problems, because the regularly scheduled interviews incorporated into the academic process will provide for a closer relation between counselor and student. References to relevant research studies are provided throughout the document. (JP)

 AB Hospice care differs from traditional medical care in that it aims to optimize the quality of the patient's remaining life rather than to minimize its duration. The Hayward Hospice project, begun in November of 1977 as a pilot project to evaluate whether hospice

quality care could be provided within managed costs and thus be included as a health plan benefit, is presented. Several features are described such as the unique location within an acute care medical facility, patient referrals by any of the staff physicians, and high acceptance by patient, family, and physician. Psychological consultation with the Hayward Hospice project is described, focusing on requests for evaluation and differential diagnosis, staff inservice education programs, and strategies for helping staff members cope and maintain their morale under the stress of providing services for terminally ill individuals.  AB This manual, geared for mental health professionals, demonstrates that social network intervention provides an excellent framework and set of tools for working with the multiple problems of older adults. Social networks are "family" groupings of client, family members, friends and other community supports. The intervention focusses on bonding and strengthening such "family" systems into a network that helps improve the overall quality of life for the elderly. Topics and exercises include: (1) mental health service delivery problems; (2) assessment and intervention stages of the social network approach; (3) special intervention techniques helpful in working with the elderly; and (4) issues on the quality of life for the elderly.  Labor-Force-Nonparticipants. State-of-the-Art-Reviews.
 Work-Life-Expectancy.
 AB Retirement is a recent phenomenon, with accompanying financial stress
 as income drops, and psychological strain from a loss of career
 identity. However, individual differences in attitudes and
 expectations vary with age, education, income, and between retirees
 and non-retirees. Needs after retirement may remain the same as in
 pre-retirement while activities drop; or activities may remain the
 same but needs may change, or both activities and needs may change.
 Successful retirement may require professional or lay counseling
 which recommends different methods of keeping active. Additional
 advice may be obtained from various organizations and agencies.
 Experts observe individual differences among increasing numbers of
 people planning early retirement, while among workers over age 65,
 there are also differences between those from the lowest income to
 those from the highest. The value and importance of pre-retirement
 planning and counseling are heavily stressed. (LS).

Older-Adults.

MN Attitudes. Individual-Counseling. Program-Evaluation.
Psychological-Needs. Surveys.

AB The Older Person's Counseling Needs (OPCN) Survey is used as an instrument to assess counseling needs of older persons in relation to their major life concerns. Four key areas of concern have been identified. These include personal, interpersonal, activity, and environmental concerns. These four areas have been subdivided to achieve 27 basic concerns of the elderly. The 54-item OPCN Survey assesses needs for counseling and attitudes towards needs for counseling in relation to these 27 areas. The survey, administered to a representative sample of 850 older persons in North Florida, reveals that certain groups of older persons have significantly higher needs for counseling than other groups and are thus identified as being "at risk" in terms of the provision of immediate counseling services. The importance of this information is related to further development and use of the OPCN Survey in the three major areas of selection, individual counseling, and program evaluation. (The survey instrument is not included.) (Author/PJC).

ID Learned Helplessness.

AB The literature on attitudes of health workers toward the elderly suggests three variables as contributing to the elderly patient's perception of helplessness in the health care setting. First, the health worker may age-stereotype the elderly person as dependent, low in competence, and unlikely to respond to treatment. Secondly, the disparity in status between the health professional and patient leads to interpersonal distance, and the "professional-patient role" reinforces submissive behavior on the part of the patient. Lastly, in conformity to the "sick role" the older person may relinquish responsibility for his/her actions. The relative prevalence of chronic or disabling health conditions among the elderly make them most vulnerable to the helplessness-engendering conditions of the health care setting. (Author).

 AB Low rates of service to older persons in community mental health programs were investigated in 20 California county government sponsored programs. County administrative officers, mental health advisory board members, directors, clinic supervisors, and clinical staff were surveyed through a mailed questionnaire. Levels of awareness of problems of the older population, familiarity with relevant government policy, perception of the community's priority for elders, and personal priority for elderly and attitude toward them were explored. The study controlled for urban/rural locale and for the availability of alternate services. Results indicated that perception of communities' priorities for providing service was significant. Awareness of problems of elders and of relevant governmental policies, especially federal, was generally low. Attitude toward aged was highly positive among all respondents but, in contrast, personal priority for service to elders was lowest. Among policy formers, directors and advisory board members tended to be more important in developing services to elders. (Author).

 MN Counseling. Information-Services. Outreach-Programs. Referral. Training-Objectives.

AB This training manual for social action practitioners delivering direct service to older persons provides basic helping principles and concepts for carrying out such duties as giving and obtaining information, determining and evaluating various needs, locating and making use of appropriate resources, and keeping information records on older clients and worker activities. Divided into five two-hour training sessions, objectives include sensitizing workers to many aspects of the feelings of older persons, and improving interviewing and referral techniques. Objectives, procedures, and teaching notes are provided for each session along with a listing of materials needed. (Author/MBR).

 AB This manual, designed for use in training staffs of local agencies which counsel elderly clients on housing problems, is organized into five sessions dealing with the social and economic factors of finding adequate physical shelter. Sessions deal with acquainting participants with the most critical issues in housing for the elderly; developing and applying a checklist of important locational factors in elderly housing; acquaintance with the hidden costs of different housing types; introduction to the process of providing housing counseling services; and acquaintance with relocation problems for the elderly. Each session includes a list of objectives, materials, and handouts. All sessions are extensively outlined illustrating the specific procedure and the time it should take to accomplish each objective. Readings are included for copying and use as handouts in several of the sessions. (Author/MBR).

 AB To provide information on subjects of concern to those in planning, management, and delivery of human services, this journal presents 149 abstracts from literature in the human services field. The journal is divided into five parts: the abstracts themselves, arranged in alphabetical order by title, with bibliographic and availability information; an alphabetical list of authors; an index of 1978

materials; an alphabetic list of documents; and cumulative subject index. The indexes provide a guide to the abstracts by specific subject category. Categories are listed alphabetically and include cross-references between conceptually related index terms and cross-references from synonyms to the preferred terms. Specific numeric citations follow the preferred index terms. Document accession and ordering numbers appear on the left and as the last line of each citation. (Volume 3, no. 3, of this journal is available in ERIC as ED 160 770.) (CSS).

 AB The problems of the aged include: inadequate health care, insufficient income, transportation, substandard housing, crime victimization, poor nutrition, loss of home, sense of being valueless, forced retirement and apathy from the police. Survey objectives were: determination of the extent to which cities were serving senior populations and how they were easing the problems as well as identifying local civic groups in providing help to the aged. Additionally, the survey identified other pervasive problems for the service providers: lack of central direction and guidance, no central location from which to disseminate information, and complex funding problems. Recommendations included city-wide organizational planning changes in counselor training to include programs for practicing gerontology counselors. A program involving church facilities on a rotating day of the week basis was suggested. Training of seniors themselves as first-line listeners was included as a part of the program. (BN).

 MN Child-Role. Gerontology. Individual-Needs. Parents. Program-Descriptions. Self-Care-Skills.
 AB The objective of this paper is to evaluate a model of intervention which can be easily developed and implemented in agencies that deal with multi-generational families. It is based on the realization that increases in the aged population highlight the need for supportive services to adult children. A sample of 35 adult children whose aged parents were awaiting admission into a long-term care facility convened for six weekly sessions. The program was designed to blend two modes of intervention: a therapeutic component and an educational one which provided pragmatic information. Results indicated that without exception group satisfaction was high. Therapeutically, this model provided members the opportunity to ventilate feelings, explore alternatives, and assess existing attitudes. On a didactic level, the learning gained helped participants understand the aging process, and facilitated effective use of community resources. The following implications emerged: the program is a good method for disseminating information and providing support to a population faced with common problems, and can be easily implemented in a wide variety of existing community settings. Further analysis is currently in progress to determine the effect of other variables on the coping ability of this population. (Author).

AB This study presents a set of opinions on how to obtain rapport with and give preliminary counseling to individuals who have adopted distinct and different aging mannerisms. The nine mannerisms treated were abstracted from the studies of Neugarten and Reichard. The research sample was selected from the members of the Gerontological Society. Six forms of the final research instrument were created, each containing three of the nine behavioral mannerisms. Each mannerism appeared on two of the six forms. Combinations of any two stereotypes appeared only once in the six forms. The sample was asked to: (1) estimate the percentages of the elderly population that could be described by the three stereotypes, (2) recommend the best way to attain rapport with and resolve the problems of each group, and (3) suggest motivating appeals for making changes. Regardless of type of behavior senior citizens exhibited, there were three universal rules that the gerontologists laid down for the rapport and counseling process. (1) Individual people deserve individual attention. (2) Every person, irrespective of state of mind or background, must be treated with dignity and respect. (3) Listen, observe and empathize before making suggestions. Recommendations for each of the mannerisms are presented. (Author).

 AB Drawing from extensive resources in the area of retirement and gerontology, this information analysis paper, which discusses preparation for retirement and advanced age, has three primary objectives: (1) to assess the psychological effects of retirement on the individual, (2) to assess preretirement conditions and attitudes that affect the individual's adjustment to retirement, and (3) to

Identify and discuss preretirement learning experiences that further the effective and successful adjustment to retirement. Intended for adult educators, middle-aged persons, and business/industry personnel managers. Discussion centers mainly on the content (affective and cognitive) of preretirement education programs with a brief discussion of the educational needs of older adults, and appropriate educational practices. The following topics are covered: Work vs. Retirement, Adjustment to Retirement, Planning Retirement Education, and Needed: A New Approach to Planning. The terms "work" and "retirement" are defined and surveys of attitudes toward work and retirement are discussed, along with studies relating data on preretirement attitudes and preretirement planning and counseling programs. An exploration of the implications of research for planning programs of preretirement education is also provided. The need to alter stereotypes and to form favorable attitudes about aging and the aged is stressed. A partial bibliography of literature of attitudes and aging, and a partial bibliography of literature of preretirement education programs are appended. (TA).

Government Service Program (provides technical assistance to local governments establishing programs to solve community problems), (5) Working Together for Female Offenders (centered on discussion with female inmates of problems of incarcerated women (in Missouri) and solutions and alternatives for problems, including identifying resources available to assist in meeting their needs, (6) Bilingual Vocational Training of Dental Assistants (provides out-of-school unemployed persons of limited English-speaking ability with vocational training as dental assistants), and (7) Guidelines for Special Projects (designed to develop a strategy for two-way communication between a student and his or her faculty adviser). (EM).

 ID Carkhuff Training Model.
 AB While research usually emphasizes the decrements of older persons,
 increases in human relations skills may be among the observable gains
 of aging. The present study, conducted in the Counseling Center of
 the Andrus Gerontology Center, evaluates the potential of using older
 volunteers as peer counselors. Subjects were 11 persons from a
 larger pool of older adult volunteers who were enrolled in a
 counselor training program. A control group of 11 other volunteers
 were chosen randomly from the remaining group. The experimental group
 received 10 training sessions in counseling skills based on
 Carkhuff's developmental model, with modifications to include
 information on the aging process. All Ss were evaluated prior to and
 following the training course in a mock interview. Responses were
 rated on the dimensions of empathy, genuineness and non-possessive
 warmth, which have been found to be related to effective counseling.
 Results show that older adults can be trained in the kind of
 interpersonal skills needed for counseling, extending the previous
 data in the training of lay counselors into the training of older
 persons. (Author).

 AB The history, rationale and methodology of the preretirement
 preparation program in the format of a group educational experience
 is traced from its origin 30 years ago by the gerontologist W. Hunter
 to the present. The program is described and discussed in detail, in
 terms of content and theoretical dynamics. As retirement is often a
 psycho-social crisis the program is also reviewed in terms of "crisis
 intervention" theory. The psychiatrist or psychologist has several
 key roles to play in these programs; as a consultant and lecturer for
 the animator training program as well as direct participation in
 programs as the invited expert for the session on psychological
 adjustment and mental health. Possible methods of measuring and
 evaluating effectiveness as a preventive measure are also briefly
 discussed. A content summary outlining the eight sessions comprising
 the typical program is provided. (Author).

 Psychological-Evaluation. Psychological-Services. Social-Services.
 AB Traditional clinical techniques for the assessment of psychological
 functioning have proven to be highly inadequate for certain groups of
 elderly individuals, particularly in the area of differentiating
 "normal" from pathological aspects of aging. One such group is the
 population of community residents now being served by the Baer
 Consultation and Diagnostic unit of the Philadelphia Geriatric
 Center. These community residents have been referred to the Center
 primarily with problems of various degrees of organic brain syndrome.

A brief description of the three-day evaluation procedure at the Center (which includes physical, social, and psychological services), the team conference, and the family conference is included. The presentation focuses on the on-going process of evaluating available test instruments and either accepting, rejecting, or revising these for use with this particular population as well as the implementation of new, broad-range tools in the assessment package. The paper also describes the usefulness of the latter, in helping to make decisions in regard to treatment and/or alternative living arrangements for the population of elderly community residents served. (Author/JLL).

 AB This document presents a general overview of The Community College Program for Elderly Texans, a program funded through state-allocated federal funds and local contributions, and available to the elderly at no cost. The program embodies a wide variety of activities, such as classroom studies, informational lectures, transportation, counseling, and group meetings, which are intended to overcome or ameliorate the social isolation of the elderly. The majority of programs at each of the 16 participating community colleges fit into those activities classified as recreational, social, or cultural, with the most popular being those involving arts and crafts. In all areas, however interest and enthusiasm of participants are high. Several of the Texas community colleges make counseling services available to the elderly while all of the participating institutions provide some form of transportation services. In addition to serving the needs of the elderly, it is noted that the various programs have heightened the awareness of the public with regard to the activities available for the elderly. While the program was initially established as a demonstration, it has become a permanent program at many of the colleges. A brief bibliography, a statistical portrait of the elderly in Texas, and a list of participating colleges is

Program-Descriptions.

ID Massachusetts. Project Reach.

AB Project Reach is based on the assumption that youth, adults, and other target populations will be assisted to a significant degree in knowing more about occupations and in making occupational choices more effectively through the planned interaction with trained retired resource counselors. The project will address three major problem areas: The need for work-oriented counselors, realistic and current occupational information, and the need for a more meaningful student-counselor ratio through which the student can be provided with the opportunity to obtain data to make meaningful occupational

choices. The Board of Regional Community Colleges (Massachusetts) proposes to implement the concepts and methodology developed through Project Reach in a minimum of three community colleges. At each of the colleges selected, the project will function in or in close relationship with the existing guidance and counseling offices. Initial and operational phases of the project are described, and a work plan schedule and target dates are outlined for a 12-month period. Project evaluation, and results and benefits expected are also described. A listing of project director, key project staff, and advisory committee members is included. (TA).

AB This report covers Phase I of the Burn Injury Education Demonstration Project, a four-phased project designed to explore the feasibility of using educational intervention strategies to increase knowledge and appropriate behaviors and attitudes to reduce the number and severity of burns. Phase I involved a comprehensive needs assessment conducted to determine the patterns of burn accidents, profiles of burn victims, and the current state of knowledge, deficits, and misconceptions with regard to the prevention and emergency treatment of burn injuries. Two major research activities are discussed: Collection of burn data and educational diagnosis. Burn accident data are presented in two formats--(1) State Burn Incidence Data, derived solely from burn reports received from the Massachusetts Department of Public Health, and (2) Burn Victim Profile Data, derived from accident investigations and interviews with burn victims. The educational diagnosis data are based on the results of several instruments (a criterion-referenced test, a telephone survey, and home interviews) and are organized according to the nature and extent of knowledge, and the behavior and practices of the sample populations. Both burn incidence data and the results of the educational diagnosis are presented for six sample age groups: Children under 3 years of age and their parents, children aged 3 to 8, children aged 9 to 12, adolescents aged 13 to 19, adults aged 20

to 59, and elderly persons aged 60 and above. (Author).

 MN Adult-Counseling. Community-Colleges. Older-Adults.
 Participant-Satisfaction. Questionnaires. Student-Characteristics.
 Surveys. Teaching-Methods. Two-Year-College-Students.
 AB Students 22 years of age and older clearly have counseling needs and
 instructional preferences that differ from those of college-age
 students. These conclusions were reached after a survey of 6,500
 students in 27 diverse junior/community colleges. Among the major
 findings of the study were: (1) older students were less likely to
 experience academic problems than their college-age counterparts,
 tended to carry less heavy academic loads, and tended to be more
 motivated; (2) older students may need encouragement that higher
 aspirations are realistic; (3) program uncertainty seemed widespread
 among college-age students while only a few older students were
 uncertain about educational goals; (4) older students preferred
 instructor-centered instruction while college-age students preferred
 student-centered instruction; (5) college-age students were the most
 likely to feel unchallenged by their classes while students over 30
 were six times as likely as students under 22 to be satisfied with
 instruction; and (6) older students generally spent more time
 studying than college-age students. The growing numbers of older
 students appear certain to require increased emphasis on quality of
 instruction and new approaches to counseling, particularly to help
 students budget time and balance their on- and off-campus roles.

 AB An innovative program known as "ASTW", a system that works, was
 designed to assist the non-traditional student in a university
 setting. The program goal is retention of the non-traditional
 student through counseling and learning assistance. Peer Counselors
 play a key role in the total program operation. They are the
 paraprofessionals who participate directly with the professional
 staff in determining program needs, the deliverers of services to
 students, the evaluators of the program, and often times, the
 creators of innovative techniques and projects to better serve the
 non-traditional student. These two papers describe the program and
 present the model used in its implementation. (Author/CKJ).

 MN Geriatrics. Measurement-Techniques. Methods. Q-Methodology. Research-Projects. Speeches.
 AB This paper explores Q-Factor Analysis as a method of organizing data on a large array of variables to describe a group of aged Ss. Forty-seven males, specially selected for their good health (Mean Age: 71.5; SD: 4.8) were measured on 550 biological and behavioral variables. A Q-Factor Analysis was calculated, using a S by variable matrix, which is the transpose of the common R-Factor Analysis. Sixteen Q-Factors resulted which were then correlated with the original variables so as to give content meaning to each factor. Seven of the 16 derived O's were associated with verbal intelligence performance. The content of the factors offered a means of describing each S's characteristic functioning. Since the results are extensive, only results on the first Q-Factor were reported. An analysis showed the Ss to be distributed between "haves" and "have nots" in relation to physical and mental well-being. Thus, the "haves" were more intelligent, better adjusted, younger, happier, faster reacting, with better hearing, and healthier. The "have nots" showed evidence of early CNS deterioration. It was concluded that Q-Factor Analysis provides factors through which the individual in a group of aged Ss can be described, thus condensing a large body of data. Analysis of the first factor showed how the Ss can be grouped with specific differentiating characteristics. (Author).

MN Adult-Education. Career-Counseling. Career-Education.

Economic-Factors. Employed-Women. Human-Resources. Job-Training. Legislation. Minority-Groups. Older-Adults. Political-Influences. Unemployment. Vocational-Education. Work-Experience-Programs. Youth.

AB Representing a group effort by the author and the National Manpower Institute, the prospectus focuses on ways to improve the integration of the traditionally separate world of work and education--ways to break up the "time traps" of education for youth, and work for adults. It especially speaks for the 16-19 year old population, working women, workers needing training or retraining, minority group members, and people over 60. Part 1, Youth, discusses the 20 percent youth unemployment rate, the mismatch of competency development and available jobs, and the necessity of "infusing" liberal arts and vocational education. Part 2, The Career Years, explores work in light of improving the quality of life, not merely expanding the Gross National Product, and perceives the imminence of the revolution against the injustices toward older people. Part 3, The Prospect, grapples with the economic and political questions involved in instituting education-work policy. Some features of the proposed change strategy include: establishment of Community Education-Work Councils and a Work Institute, an Occupational Outlook and Career Information reporting system of national/local information, increased career counseling, youth community work/service programs, unemployment insurance law revision, and elimination of age structures on public education. ID Pensacola Junior College FL.

AB This report recommends three general categories of involvement in the development of educational programs for the aging and aged at Pensacola Junior College (Florida). (1) Pre-retirement Education: courses should include the psychology of aging, family structures,

estate planning, federal laws that affect the elderly, employment opportunities, and leisure time activities. Pre-retirement counseling programs should be developed. (2) Continuing Education: a comprehensive campus-based education program for the aged should involve free transportation, convenient locations, and flexible hours; similar courses should be offered at nursing homes, senior citizens centers, and community schools. Enrollment should be increased in vocational education programs which could lead to rewarding second careers or part-time jobs. (3) Para-professional Gerontology Programs: existing nursing courses should place greater emphasis on dealing with older people, special seminars on dealing with the aged should be offered, and an in-service training program should be developed in nursing homes. A two-year associate degree and certificated programs in geriatric care should be established. The report concludes with a discussion of possible federal, state, local, private, and public funding sources. (N-M).

MN Adjustment-to-Environment. Family-Counseling. Social-Adjustment.
 State-of-the-Art-Reviews.

AB The focus of this monograph is on three areas of counseling with older clients: career counseling, retirement counseling, and counseling regarding death and dying. The portion on career counseling includes reasons older persons change careers, obstacles they are likely to face when seeking employment, myths surrounding the employability of older persons, and suggestions on the use of testing in career counseling older persons. Retirement counseling examines the social image and role of the retired person, plus work, volunteer, and leisure time activities. Retirement counseling emphasizes retirement as a positive developmental stage. Included is a brief discussion of practical lifestyle concerns specific to retired persons. Counseling surrounding death and dying, including Kubler-Ross' five stages of dying, potential suicides, and death survivors is examined. Trends and issues regarding problems of aging, a bibliography of readings related to older women, and appendixes of periodicals and organizations concerned with older persons are included. (JS).

 AB The study, a literature review, examines the critical factors affecting re-entry women's access to jobs and their chances of obtaining and retaining work at a level appropriate to their capacities. An examination of the re-entry woman deals with socialization and self-concept, changing attitudes, and new expectations. Bias against women among the professionals to whom they turn for aid is documented, and the potential danger of placing a sex-fair interest inventory in the hands of a sex-biased counselor is pointed out. New concepts concerning the re-entry woman as student, in the work force, as family member, and as achiever are cited and recommended to counselors interpreting interest inventories. The discrimination against women desiring training for a second career is discussed. The paper examines selected material from various inventories as examples that are seen to affect the usefulness of an interest inventory in relation to the reentering woman. Language, items, instructions, and interpretive materials are discussed, and recommendations are made for each area, as well as for counselor education and for research. (AJ).

AB The paper examines that phenomenon of widowhood, which has become a natural attribute of a woman's old age because of her greater life expectancy when compared with her husband. Researchers have discovered that, although problems of widowhood have attracted little serious inquiry, one of every five women who face conjugal bereavement need outside help to return to a state of physical and mental well-being. New patterns of health care for this ever-increasing number of women include "widow-to-widow programs" wherein trained widow aides give direct help to the recently bereaved, voluntary organizations sponsored by religious orders, and widow consultation services provided by private and government agencies. The author feels that further scientific inquiry is needed to identify those variables associated with high morale and those which correlate with low life satisfaction following bereavement. References are included. (Author/SES).

ID Hawaii.
 AB The Third Annual Report of the Hawaii State Senior Center is presented. It depicts a story of continued expansion of diversified services to the senior citizens of Oahu. Each month, on the average, 209 persons visited the Center for an annual total of 62,034 visits. Regular membership is 1,040. Discussions have been held concerning the need for additional centers, exploring also the nature of their operation and funding. New patterns of health education and services, educational programs, outreach to the confined elderly, and instruction of workers have been explored. Counseling and leisure time activities for the pre-retirement group, preparing them for creative and rewarding retirement, seem to be emergent needs. Present estimates are that 10% of the population is between 50 and 65 in Hawaii. This annual report includes the Center Chairman's Report, an Analysis of Program Changes, Statistics to Assess Attainment of Project Objectives, Findings of the Third Participation Evaluation Survey, and Report of Pre and Post Evaluation of participants. (For Second Annual Report, see ED 065 120.) (Author/CK).

 AB Many needy elderly residents of New York City are unable to secure help of one kind or another, because of the lack of awareness of existing services, inability to complete the application process, or hesitancy in accepting assistance from others. Significant unmet needs exist in the areas of housing, health, finances, home services, transportation, loneliness and personal adjustment. During a 40-month period, experiences with 2520 needy elderly residents of four different neighborhoods showed that volunteers from the communities to be served could effectively be trained as 'middlemen' to seek out the hidden older person, determine his needs and help him reach services.  AB This follow-up study of participants in the Career Workshop of the Pacific Heights Adult School is based on 117 responses to 453 questionnaires mailed in the Spring of 1971. Responses were analyzed by categories and numerical responses to the questions asked. The categories were: age, education, employment, occupations, occupations and education, years on job, different jobs, student use of other services, and positive and negative statements. Results of the study show: (1) more women than men seek counseling; (2) the Career Workshop is the only counseling available to many adults; (3) there is a movement from job to job by those of high school and college experience, with both seemingly working in the same occupations; (4) the Career Workshop is of great value to adults of all educational levels. Three appendixes contain: A. Statement of the Problem; Questionnaire Schedule; B. Tables of participants' responses; C. Evaluation--Career Workshop 1971. The schedule for the eight meetings of the workshop concludes the report. (DB).

 AB This paper on Spiritual Well-Being provides information for leaders concerned with the problems of older people. The first four sections of the paper discuss: the need for religious organizations and society to develop and promote services and programs that will contribute to the spiritual needs of the elderly; goals proposed by previous groups and conferences; information on knowledge available in this area; and vital gaps in meeting such needs. The fifth section identifies several major issues relevant to the spiritual well-being of older people. The purpose of the issues is to focus discussion on the development of recommendations toward the adoption of national policies. A bibliography is provided. (Author/DB).

 AB This booklet gives detailed accounts of mental health programs in
 operation around the nation. A total of nine different types of
 activities is included. "Helping Children" describes a program
 whereby students from nearby colleges give troubled children, at
 home, an experience in friendship by serving as big brothers or
 sisters. "Helping the Troubled" gives an account of various projects
 conducted at clinics to give patients counseling and other
 individually tailored instruction. "Helping Young Adults and
 Families" describes projects in which citizens serve as probation
 aides to a court, which assigns a counselor to each minor offender,
 and as substitute parents for troubled youngsters. "Helping the
 Elderly" relates how volunteers help elderly neighbors by visiting
 them in their homes and in nursing homes and by running a sheltered
 workshop. In "Senior Citizens Volunteer," an account is given of
 projects involving elderly and retired volunteers in community
 service. "Emergency Telephone Services" discusses these 24-hour
 services that are manned in more than 150 areas in the United States
 as part of suicide prevention programs. "Community Involvement
 Programs," "Citizen Action on Drug Abuse," and "Helping Alcoholics"
 describe various community service programs. (CK).

 YR 71.
 MJ Adult-Counseling. Geriatrics. Human-Services. Older-Adults.

Social-Problems.

MN Personnel-Needs. Research.

AB The Social Sciences, as they relate to the aged and the aging, are
 discussed. Social gerontology seeks to discover the role of the
 social environment as a determinant of aging and of the behavior and
 position of older people in society. In the United States, some 20
 million people are over 65 years of age, and the median age of the
 elderly has risen to age 73. There are suggestions that there may be
 a direct relationship between successful adjustment in old age and
 educational attainment. It is estimated that about one-sixth of the
 elderly are functionally illiterate and only five percent are college
 graduates. It is believed that the solutions to the complex problems
 in gerontology will require the application of research techniques of
 practically every scientific discipline. A program in Cleveland,
 Ohio, utilizes retirees as "Gatekeepers" who act as liaison between
 health personnel and the elderly in the neighborhood. Communities
 need to offer a variety of alternatives to match the variety of
 individual needs among our aged and aging population. Services
 should include prevention, early diagnosis, and treatment of health
 problems, and rehabilitation services. Each individual should be
 offered education tailored to his needs. (DB).

MN Counseling. Job-Placement. On-the-Job-Training. Tables-Data. ID Maryland (Baltimore). Massachusetts (Boston). North Carolina. North Carolina (Buncombe County). Wisconsin (Milwaukee).

AB The major objective of this study was to examine the experience of four projects in Baltimore, Boston, Milwaukee, and Buncombe County, North Carolina in counseling and placing in jobs older hard-core unemployed workers. Originally the programs were designed to train the hard-core unemployed over 50 years of age. Generally the emphasis was changed from on-the-job training to counseling, job development and placement, and from selecting the most disadvantaged to selecting the least disadvantaged in the over-50 age group. There was little evidence that the program provided significant economic gains in employment or income, even though the participants expressed the opinion that they were pleased with the various programs. (BC).

MN Adult-Counseling. Adult-Development. Bibliographies. Church-Role. Community-Programs. Community-Resources. Fine-Arts. Information-Utilization. Libraries. Motivation. Program-Administration. Recreational-Activities. Teaching-Methods.

AB The major objectives of the Education for Senior Adults Leadership Development Institute were: (1) to give a deeper understanding of the characteristics of senior adults; (2) to give a sense of the richness and variety of activities that could be built into a program for the aging; (3) to provide help in problems of organizing and administering educational programs for the aging; and (4) to motivate participants to use what they learn when they return to their communities. Addresses covered: an overview of education on aging; sociological aspects of aging; recreation's contribution to education of older adults; physiology of aging; the role of the arts in the education of the aging; the place of the church in the continuing education of the aging; what it means to teach older adults; counseling of older adults; a comprehensive and coordinated community approach in planning education program for older persons; and use of the library and other community resources. A general section given on evaluation, emphasizes the relationship between evaluation and goals. This is followed by a copy of three evaluation forms used during the institute and a bibliography.  ID Organisation for Economic Cooperation and Development.
 AB Many older job seekers are victims of prejudice, workers in declining industries or areas, workers with out-of-date skills, poorly educated, or handicapped by attitudinal problems. Careful publicity helps make jobs available and aids in adjustment for older workers. The older worker should be offered special employment services only when he cannot find a job through normal channels; special counseling should remotivate the client, while rebuilding his self respect; and special services such as tests and vocational rehabilitation should supplement counseling. Followup of the client's vocational plan should see if it was carried out and if the client and employer are satisfied with the client's progress and work. Older workers can be retrained for new skills especially if speed of training progresses at an appropriate level. Employment offices should be told of any developments affecting older workers' employment as soon as possible; regular visits to employers by an employment counselor also help develop job opportunities. A national employment service should become the chief source of aid for both worker and employer. (References are included.) (jf).

GENERAL INFORMATION

1. PRICE LIST

The prices set forth herein may be changed without notice, however, any price change will be subject to the approval of the National Institute of Education Contracting Officer

2. PAYMENT

The prices set forth herein do not include any sales, use, excise, or similar taxes which may apply to the sale of microfiche or hard copy to the Customer. The cost of such taxes, if any, shall be borne by the Customer.

Payment shall be made net thirty (30) days from date of invoice. Payment shall be without expense to CMIC.

3. REPRODUCTION

Express permission to reproduce a copyrighted document provided hereunder must be obtained in writing from the copyright holder noted on the title page of such copyrighted document.

4. CONTINGENCIES

CMIC shall not be liable to Customer or any other person for any failure or delay in the performance of any obligation if such failure or delay (a) is due to events beyond the control of CMIC including, but not limited to, fire, storm, flood, earthquake, explosion, accident, acts of the public enemy, strikes, lockouts, labor disputes, labor shortage, work stoppages, transportation embargoes or delays, failure or shortage of materials, supplies or machinery, acts of God, or acts or regulations or priorities of the federal, state, or local governments; (b) is due to failures of performance of subcontractors beyond CMIC's control and without negligence on the part of CMIC, or (c) is due to erroneous or incomplete information furnished by Customer.

5. LIABILITY

CMIC's liability, if any, arising hereunder shall not exceed restitution of charges.

In no event shall CMIC be liable for special, consequential, or liquidated damages arising from the provision of services hereunder.

6. WARRANTY

CMIC MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO ANY MATTER WHATSOEVER, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

7. QUALITY

CMIC will replace products returned because of reproduction defects or incompleteness. The quality of the input document is not the responsibility of CMIC. Best available copy will be supplied.

8. CHANGES

No waiver, alteration, or modification of any of the provisions hereof shall be binding unless in writing and signed by an officer of CMIC.

9. DEFAULT AND WAIVER

a. If Customer fails with respect to this or any other agreement with CMIC to pay any invoice when due or to accept any shipment as ordered, CMIC may without prejudice to other remedies defer any further shipments until the default is corrected, or cancel this Purchase Order.

b. No course of conduct nor any delay of CMIC in exercising any right hereunder shall waive any rights of CMIC or modify this Agreement.

10. GOVERNING LAW

This Agreement shall be construed to be between merchants. Any question concerning its validity, construction, or performance shall be governed by the laws of the State of New York.

11. DEPOSIT ACCOUNTS

Customers who have a continuing need for ERIC documents may open a Deposit account by depositing a minimum of \$200.00. Once a deposit account is opened, ERIC documents will be sent upon request, and the account charged for the actual cost and postage. A monthly statement of the account will be furnished.

12. STANDING ORDER ACCOUNTS

Customers who desire to receive microfiche copies of all ERIC reports announced in each issue of Resources in Education may do so by depositing \$2000.00 or submitting an executed purchase order. The cost of each issue and postage will be charged against the account. A monthly statement of the account will be furnished.

13. PAPER COPY (PC)

A paper copy (PC) is xerographic reproduction, on paper, of the original document. Each paper copy has a Vellum Bristol cover to identify and protect the document.

14. FOREIGN POSTAGE

Postage for all countries other than the United States is based on the international Postal Rates in effect at the time the order is shipped. To determine postage allow 75 microfiche or 75 PC pages per pound. Customers must specify the exact classification of mail desired, and include the postage for that classification with their order. Payment must be in United States funds.

OTHER ERIC COLLECTIONS AVAILABLE FROM EDRS

STANDING ORDERS

Subscription orders of microfiche copies of all ERIC reports announced in each issue of Resources in Education average \$160.00 per month.
