## ABSTRACT

This Commonwealth of Puerto Rico evaluation report on programs, projects, services, and activities funded in whole or in part under Elementary Secondary Education Act Title $I$, is organized into seven parts. Part 1, "Basic Information" includes subsections focusing on the puerto fico School System, Title 1 target areas, and program emphasis. Part 2 specifies the "Total Allocation for Fiscal Year 1972." Part 3 discusses the methods and procedures used in executing the "Program Evaluation." The contents of Part 4, "Test Results," are organized into two subsections detailing "Statistical Analysis" and "Summary of Tests Results" respectively. Part 5 summarizes the "Plans of Twelfth Grade Graduates." "project Profiles" are given in Part 6. Part 7 is a "Summary of Major Findings." Also included in the report are four charts--48 tables and 26 graphs. Among the latter are the following: Spanish and English Reading Tests, D.M.A.--Sixth Grade, Relative Ranking of School Districts Based on Percentage of Students Scoring at or above the Fiftieth Percentile, April 1972; Comparison of Spanish Reading Test Scores in the years 1971 and 1972--Fourth Grade Relative Ranking of School Districts Based on Percentage of Students Scoring at or above the Fiftieth Percentile, April 1972; and 24 others. ## Basic Information

## A. The Puerto Rico School System

The Department of Education in Puerto Rico functions as a single large district or Local Educational Agency. This means that the specific goals and objectives for elementary and secondary education in Puerto Rico as well as the plans to carry out these objectives are designed at the State level.

The head of the Department of Education is the Secretary of Education, who as all dires.tors of the executive agencies, is appointed by the Governor of Puerto Rico. (See Chart 1 - Organization Chart of the Commonwealth of Puerto Rico). The Constitution of the Commonwealth of Puerto Rico as well as the School Laws empower the Secretary of Education to organize, direct, finance and supervise the public school system. This system is organized into 83 school districts which are in turn grouped into six educational regions: San Jusn, Ponce, Mayaguez, Arecibo, Caguas and Humacao. (See Chart 2 - Organization Chart of the Department of Education). It is at the central level of the Department of Education, that instructional and administrative policy is established, thus determining the school curriculum, selecting, purchasing and distributing textbooks; equipment and materials, deciding construction of school buildings, appointing and paying teachers, administrators and supervisors, supervising teachers and conducting evaluation. The local aspects of these responsibilities are delegated by the Secretary of Education to the regional and, district offices.

## 11

pawaral octhemb

For fiscal year 1972 the total public and private accredited school enrollment of Puerto Rico totalled 807,438 pupils, attending regular day schools. Of this total 712,452 students or $88.0 \%$ were attending public schools while $94,986 \mathrm{cz} 12.0 \%$ were attending private accredited schools.

The number of pupils attending urban public schools was 423,614 or $61.0 \%$ of the total, while the enrollment in rural public schools was 269,875 or $39.0 \%$. \& the same date there were 23,446 teachers working in 19,218 classrooms.

In spite of increasing funds for education and our permanent interest in the betterment of the educational level of the Island's population, the Puerto Rico State Department of Education continues facing the dilemma of providing more and better educa ional experiences to an ever increasing number of students. Pupil/teacher as well as pupil/classroom ratio are too high. Consequently, a large number of students get less than six hours of daily instruction. The retention rate has been increasing but it is still low. A high percentage of teachers currently in service have not fullfilled the academic requirements for a regular certificate.

The generally poor economic condition of Puerto Rico is reflected in the funds availasle for education. Although the Commonwealth Government devotes consistently about one third of its annual budget to education, the average annual expenditure per pupil has only reached $\$ 491$ in 1971-72. This is one of the lowest among all States. Title $I$ funding thus constitutes a major thrust among effort.s to upgrade the educational system in Puerto Rico.
B. Tizle tret Area

Since : 969 Title $I$ funds have been almost exclusively assigned to projects within thirty-five school districts, identified $9 s$ the most under priviledged un the basis of per-capita income and lowest academic achievement. (See Map on next page illustrating geographical location of selected districts).

As of August 1971 the situation within the 35 Title I districts was as follows:
a. Total school enrollment

Total Public and Private School enrollment

- 234,231 ( $29 \%$ of total Islanc.)

Zotal Public

- 229,035 ( $98 \%$ of total enrollment)

Total Private

- $5,196(2 \%$ of total enrollment)
b. Urban Rural proportion

Total enrollment in Urban Public Schools

- 99,011 (43\% of total enrollment)

Total enrollmenc in Rural Public Schools

- 130,024 ( $57 \%$ of total enrollment)

This urban-rural proportion differs from that in the 48 remaining districts where the balance leans toward the urban zone as follows: Urban 337,130 (70.0\%) and Rural 146,287 (30.0\%)

> c. Enrollment by type of organization (Grades $1-12$ ) Single enrollment (six hours) Interlocking and Double enrollment organization
TITLE I SCHOOL DISTRICTS

d. Teachers and classrooms
Total number of classrooms

- 6,533
Total number of teachers
- 7,609
Number of teachers with provisional certificate
- 2,051 ( $27 \%$ )

This percentage reflects that the need for adequately trained teachers is still more acute within this sector than in the rest of the Island, where only $15 \%$ of the teachers hold provisional certificates.
C. Program Emphasis

The four main project areas designated as priorities and under which all Title I projects were classified since 1969 , continued through fiscal. year 1972 with slight modifications. Budgetary allocations by each of these areas as well as by specific activities within areas, are included in the next section of this report.

PROGRAM EVALTATION
$\theta$

24
ERCC

Ia herping with the functions assigned to the Division of Fvaluation of the Puerto Rico State Department of Education concerning the Title I evaluation requirement, data gathering activities continued to be designed and developed at two levels. First, to assess specific project ubjectives and second, to assess overall Title I program impact on pupils' achievement.

At the project level, both formal and informal evaluation techniques are applied depending on factors such as nature of objectives, availability of measuring instruments, etc. At this level, the Division of Evaluation functions in a supportive role. Project directors in coordination with supervisors from the Division of Evaluation compile statistical and descriptive data deemed to be essential for evaluation purposes and reporting. Technical assistance is provided through seminars, horkshops, interviews and the like. The definition of objectives in behavioral terms, the preparation of evaluation designs, test construction, and analysis and interpretation of test results, are among the most frequent topics covered. The overall program assessment continued as in previous years to encompass mainly the development of standardized testing in Spanisa and English reading in various grade levels and the analysis of the data related to school dropouts, failures and plans of twelfth grade graduates. Simultaneously, other standardized tests are being developed which are expected to be ready for administration in 1973. These are achievement tests in Mathematics, Spanish Language and Listening-Speaking Comprehension in English. Although the present report intends to focus both evaluation levelo, the latter one, because of its objcciive rature, is specially stressed.

Due to technical difficulties at the Electronic Center of the Department of Education, as well as limitations on the amount of testing materials available, a statewide testing program as extensive as that developed in 1971 was not feasible this year. For evaluation purpose a sample of 18 school districts (See Table 1) was selected on the basis of the following criteria:

1. Socio-economic level
2. Proportion of urban and rural school enrollment

- 3. Geographical distribution

4. Title I participation (6 districts from the Title I Sector - 12 districts-nonTitle I Sector)

Standardized tests administered by grade and sisbject matter are listed below:

| Test | Grades | Districts* |
| :---: | :---: | :---: |
| General Ability | $4,7,10$ | 18 district sample |
| Spanish Reading | $4,6,7,10$ | 18 district sample |
| English Reading | $5,8,11$ | 12 district sample |
|  |  | $,, 7,10$ |

The results that were obtained in each of the grades tested by district $a \operatorname{d}$ by regions as well as comparisons between the 6 Title I districts vs. the 12 Non-Title I districts are included in this report.

[^0]

TEST RESULTS
lhe statistical analysis done on the test data for this report maludes the following:

1. Comparison of mean scores by zone within each school district for 1972.
2. Comparison of mean scores by zone within each educational region for 1972.
3. Comparison of total mean scores between the Title I districts (6) and Non-Title districts (12) for 1972.
4. Comparison of total mean scores between the Title I districts and Non-Title I districts by zone for 1972.
5. Comparison of mean scores by grade for the years 1971 and 1972 by district, region, Title I and Non-Title I Sector.
6. Interquartile ranges of test scores on the basis of percentage of students achieving at or above the 50th percentile.
7. Ranking of school districts based on the percentage of students achieving at or above the 50 th percentile in the Spanish Reading test.
8. Comparison of ranking attained by school districts in Spanish Reading in relation to English Reading.
9. Cumparison of the same group of students in two consecutive grades (e.g. fourth grade (1971) vs. fifth grade 1972).
A. The analysis of mean scores obtained by students in the various grades tested by districts, zones, Title I and Non-Title I sectors, in both Spanish and English reading reveal that:
a. students from the urban zone continue to achi气ve higher mean scores in both English and Spanish reading than pupils from the rural zone. The differences observed at all levels are statistically significant. (See Tables 2, 3 and Graphs 1 - 13).
b. in general, no significant differences are observed as to achievement levels attained in both Spanish and English reading within each grade level for the years 1971 and 1972, that is, mean scores obtained by grades and by school districts in 1972 are more or less the same as those obtained the preceding year in the same grades. (See Tables 4-10).
c. higher mean scores correspond to the upper grade when results are compared for the same group of students in two consecutive years. As expected, fifth grade achievement as measured by the Spanish and English reading tests, is better than fourth grade achievement for the same group of students, eighth better than seventh and eleventh better than tentr. (Ser tables 11 - 13).
d. in general, students from the Title I sector continued to achieve slightly lower mean scores than the students from the Non-Title I sector. llowever, consistent with the situation encountered in 1971, the difference in mean scores between urban and rural zone is smaller
within the Title $I$ sector than within the Non-Title I sector (See Tables 14-23).
e. in spite of lower mean scoring within the Title $I$ sector, the amount of gain observed in Spanish reading from one year to the other, is approximately the same or better than the anount of gain observed within the Non-Title I sector. (See tables 11-13). The total mean differences for the Title $I$ sector were 4.97 from the fourth to the fifn grade; 5.65 from the seventh to the eighth and 3.35 from tenth to eleventh. For the Non Title I sector the total mean differences were 5.10 from the fourth to the fifth, 5.06 fiom the seventh to the eighth and 3.68 from tenth to eleventh grade.
B. The analysis of interquartile ranges of Spanish Reading scores, based on percentage of scores within quarters by district, reveal that:
a. as expected, approximately $25 \%$ of all cases from the 18 district sample (total) fell within each quarter. (See Tables 24-25).
b. approximately the same percentage of students from the Title I and Non-Titie I districts fell within the limits of the middle quarters (sefind and third), however in the extremes of the distribution (upper and lowest quarters), greater differences are observed. A larger percentage of scores within the Title I sector fell within the lowest range. (See Table 25).

The rank order of school districts established on the basis of percentage of scores at or above the 50 th percentile in Spanish reading in grades 4,7 and 10 is indicated on Table 26. With a few exceptions within grades, Title $I$ districts' ranking correspond to positions 13 to 18 , the lowest within
the total distribution. Rank order actained by individual districts is rather consistent not only from one year to the other (See Graphs 14 - 16) but also across subjects (English and Spanish). (See Graphs 11 - 13).

PROJECT PROFILES

108

Several activities were designed to provide compensatory education experiences to Title $I$ children who were receiving less than six hours of instruction dail $\therefore$. some instances no schooling at all due to some or all of the following reasons:

In some areas children were getting 3 or 4 hours of instruction daily due to both lack of school rooms and teacher shortage. In cthers, children were on a interlocking organization of 5 hours daily due to lack of space. Certain areas had facilities for a limited number of grades only, and beyond a certain grade students had to attend schools located in distant neighborhoods and they needed transportation services. Sany school attendance areas lacked the facilities to admit to the first grade all of their school age children. This situation left out of school many school age children who had to wait several years to siart their schooling. Furthermore, students also lacked enough schooling time due to cases of prolongued teachers' absences without the provision of substitute teachers.

The activities hereinafter described were designed to provide adequate schooling facilities, enough teachers and substitute teachers and supportive services to offer the participating needy youngster a school day of six hours daily of instruction.

: \$8,855,948.00
: 1971-72
: . project is a continuation of a project operating in Puerto Rico since 1966

4 bjectives:

1. To eliminate the double enrollment and interlocking type of school organization.
2. To increase the number of classrooms and other school fac:'ities.
3. To increase school retention.

Astivities and services provided:
A. Construction program:

Up to fiscal year 1972 a total of 2,391 classrooms and 1,064 other school facilities had been constructed with Title I funds in Puerto Rico. Specifically, for school year 1971-72 a total of 175 classrooms and 66 other school facilities were under construction. The 66 school facilities included: 6 libraries, 17 lunchrooms, 9 offices, 22 sanitary units, 6 fences and 6 athletic courts. The こonstruction program for the years 1970-71 and 1971-72 included 56 school districts, 32 of which are Title I. Of a total of 415 classrooms constructed during these two years, 79 were used to eliminate double enrollment, 184 to attend increase in enrollment, 100 to substitute buildings in poor corditions, 52 to eliminate interlocking organizations. In addition to these, 144 other schoul facilities were also completed. A total of 17,391 students had benefited during the two years.

## B. Appuinime it of additional teachers:

A toral of 7.54 teachers appointed last year to reduce or eliminate the double enrollmer. and interlocking type of organization in Title I districts continued this yeat. Thre hundred three (303) positions were added for the same purpore for a total of 1057. Approximately 90,430 students or $40 \%$ of the total enrollment of the 35 Title I districts were affected in one way or anothet as a result of the appointment of the 1,057 teachers. Sixty eight per cent $(68 \%)$ of the teaching positions appointed to lengthen the school day served that puipose, 14 per cent were used to attend increase in enrollment, 12 pet cent to reduce the number of students per group and 6 per cent were used for other purposes.

## C. Transportation !. ogram:

Of a total enrollment of 353,820 students in 48 school districts (including the 3.5 Title I) 18,602 or 5 per cent were offered transportation services. Of this total, 14,997 belonged to Title I districts. That is 6 per cent of the total enrollment in these districts.

## D. Appointment of substitute teachers:

Fifty two teachers were appointed this year in the 35 Title I districts to substitute teachers who were in leave of absence for maternity and or prolonged sickness. Approximately 4,619 students benefited from the program in both levels, elementary and secondary; 3,078 rural zone and 1,541 urban zone.

Other activities aimed at the improvement of the academic achievement and the cultural enrichment of Title I target youngsters from prekinder through grade 12 including the handicapped.

Curriculum development and teacher training activities were undertaken to offer compensatory education experiences with emphasis on the reading skills in both English and Spanish, Mathematics, Science and Social Studies. Cultural enrichment activities in art, drama and music were also offered. Vocational education and academic courses were offered te out-of-school youths.

| V. Year | $:$ | $1971-72$ |
| VI. Duration | $:$ | This project is a continuation of a <br> project operating in Puerto Rico <br> since 1969 |

## Objectives:

1. To improve pupils' academic achievement in the following areas:

Spanish
English
Science
Mathematics
Social Studies
Vocational Program
2. To enrich and expand curriculum in all instructional areas.
3. To facilitate and make more effective the transfer of students from secondary to college level and to offer students an opportunity to move 'sead at thei.r own pace.
4. To offer unemployed young dropouts between the ages of 16 to 21 from areas of high cultural deprivations, experiences for the intelfectual, vocational and social development which will enable them either to find employment or continue further studies.
5. To provide opportunity for students with artistic talent to develop their potential to a maximum and to share their artistic knowledge and experience with others.
6. To improve teachers' preparation.
7. To improve and extend school library services.
8. To continue developing in teachers and students the competencies needed for the practical use of resources available in educational technology.

## A. Curriculum Development and Enrichment

1. New curriculum continued to be designed and the existent one continued to be revised.

Specifically, the following was accomplished during fiscal year 1972:
a) the curriculum designed to meet the educational nerds in science of students in 4 th, 5 th and 6 th grades was implemented in the 35 Title I dis'ricts. A total of 14,280 students benefited. Audiovisual aids, which included pictures, puzzles, films:rips, posters and and charts, were either commercially purchased or produced by curriculum technicians or teachers.
b) the Social Studies program was reorganized so as to provide the students with laboratory periods using a variety of textbooks ( averaging 4 instead of only one within a class period).
c) classes in Engiish, Spanish and Mathematics as the university level, were offered in the 33 high schools participating in tle project, by teachers with previous training in the subject in accordance with contents, methods and evaluation system.
d) wage earning home economics courses were established in 4 academic senior high schools. A total of 216 students benefited from the program.
e) under the Business Education Program major emphasis was given to strengthening existing courses in office occupations. The office practice course was enriched with simulated office experiences. Ten teaching positions were assigned.
f) the Distribution and Marketing Program provided training in modern selling techniques in retail trades to a total of 105 students in the school districts of Morovis, Isabela and Mayaguez.
g) courses in Industrial Arts were offered to 259 students in four senior high schools in the areas of basic electronics, graphic communication, technical drawing and power mechanics.
h) forty six academic senior high schools were served with trade courses. A total of 104 vocational courses were organized. The enrollment in these courses included 6,250 students, 5,000 of which were aigh school students and 1,250 dropouts.
i) in the seven vocational programs, instructional materials were made available to the participating districts. Outlines of courses, materials with information about the curriculum, bibliographies, teaching aids and monographs with occupational information, were developed. The Vocational Industrial Education Program concentrated its efforts in the preparation and revision of teacher guides and learning modules for power sewing machine operator, outbody repairing and painting, electrical appliances repairing, electricity, refrigeration, plumbing, cosmetology, carpentry, bricklaying and automobile mechanics.

On the area of Business Occupation, materials on office techniques were revised.

The distribution and marketing program produced materials with regard to personal relations, importance of distribution in the economy, life insurance, human relations in business, salesman personality and his social adaptation.

The Vocational Agriculture Program prepared curriculum guides for the teaching of units related to crops production, animal production, agricultural mechanics, fnod preservation, flower gardening and ornamental horticulture.

The Industrial Arts program continued the revision of high school courses on wood and metal manufacturing, basic electricity and visual communications.

The guidance program kept updating information on new and emerging occupations, besides monographs with occupational information for disadvantaged students.

Curriculum guides were completed for a special course dealing with home economics for the world of work.
j. A total of 335 secondary schools used the San Juan Star in the ciassroom and approximately 32,000 newspapers were discributed to the participating schools.
k. A three week seminar for forty talented ninth grade students from rural second unit schools in economically deprived areas, was held at the Inter-American University at. San Germán where they offered conferences, field trips, laboratory experiments, films and library studies on interesting and contemporary scientific aspects.

1. Twenty five students served as guides in the Museum of Art in Ponce, while other 25 entered the School of Visual Arts. Guides served during their free periods and weekends and received monthly payments from $\$ 25$ to $\$ 75$ according to the number of hours worked. Subjects taught either in the Visual Arts School or in the Museum were sculpture, painting, cerography, drawing, engraving, Rennaisance Arts, the place of the fine arts in the economic and social development of the country and art appreciation in general. Twenty five students participated in the annual Fine Arts Festival and won the first and second prize in dräing, first prize in caricature and second prize in collage.
m. The curriculum for the teaching of music was enriched through classes of musical history, musical appreciation, instrumentation and organization of bands, choral groups and rondallas.
n. A special curriculum for the Work-Study Center youths was desi.gned,
o. Diagnostic tests as well as standardized achievement tests were constricted in Spanish, English, Mathematics, Science, and Social Studies.
p. A total of 997 students from 33 high schools of the Island, 11 of which are in Title I, were enrolled in the Advanced Placement Program. 522 students took the College Board Examination to receive credit for the classes taken. (Spanish, English and Mathematics).
B. Pre and in-service training activities were provided through which:
a) teachers attendjing the 119 participating groups in the Science program as well as 6 general supervisors and 35 coordinators were trained or oriented in the implementation of the new curriculum since many of them were new in the program this year.
b) three hundred social studies teachers were trained in the development of skills such as stating instructional objectives in behavioral terms, asking questions that demand more than mere memorization, development of reflective thinking including interpretation, organization, analysis, discussing alternatives, etc.
c) The Director of the Social Studies Program, the General Supervisors and the Coordinators offered about 282 training sessions (both group and individual) to approximately 3,000 participants. .
d) A total of 12 . sessions were held with supervisors and coordinators from the Spanish program to offer them orientation in areas such as: child psychology, production and use of teaching aides, reading methods and techniques, individualized instruction and evaluation.
e) Out of a total of 2,000 applicants, 466 high school graduates who had a satisfactory command of English and were interested in teaching as a profession, were selected as trainees for the bilingual program in 1971-72. Criteria for the selection of candidates were clearly stated and defined.

Pre-service training centers were established at various institutions of higher learning throughout the Island. The training sessions lasted approximately 8 weeks and accounted for a total of 9 college credits. The purpose of the training program were to familiarize the candidate with:
a) Techniques recommended for teaching English as a second language.
b) Materials used in the primary grades.
c) Psychology of early childhood.

The 466 candidates completed the training successfully and were appointed as provisional teachers of English. They were assigned to teach English in the primary grades in 690 schools in the six educational regions, 254 in the urban zone and 436 in the rural zone.

Bilingual teachers participated in various in-service training activities such as meetings, seminars, workshops and demonstration classes given by the local supervisors in the school districts. The type and number of inservice training activities varied from one district to the other depending on total number of teachers assigned tc local supervisors.

Arrangements were made for the teachers to take special courses during Saturdays and succeeding summer sessions in ordcr to complete the requirements for a certificate as "Teacher of English in the Elementary School". Forty teachers expect to finish their degree during 1972-73.
f) A 3 credit course in Linguistic in the Teaching of Reading (Education 385) was offered in 5 universities to a total of 130 junior high school teachers. The course content included the following aspects:
a) Principles underlying the development and teaching of an effective skill building program.
b) Selection and availability of literature for teenagers.
c) Use of electronic equipment and materials.
d) Individualized instruction.

Approximately 100 zone supervisors of English attended a 5 day seminar organized by general supervisors and the English staff at the Central office. Reading experts were invited to lecture on objectives, techniques and materials to be used in the project. The teachers participated in various inservice training activities such as meetings, seminars, workshops and demonstrations classes given by the local supervisors in the school districts. The type and number of inservice training activities varied from one district to the other depending on the number of teachers assigned to local supervisors.
g) Workshops, seminars and conferences on topics such as individualized instruction, teaching techniques, use of the skill tapes, use of audiovisual materials, evaluation in mathematics, modern mathematics, programmed instruction and use of text books were offered at the local, regional and central office levels for mathematics teachers. About 150 teachers had the opportunity to take university courses in mathematics:
Education 303-19 teachers
Mathematics $300-76$ teachers
Mathematics 151-55 teachers
h) Summer seminars were offered to participating teachers by the Advanced Placement Program during summer sessions by University professors under the direction of College Board officials.
i) In-service training for vocational education teachers and curriculum technicians was itensified in the seven vocational programs:

Guidance and Counseling, Business Education, Distribution and Marketing, Industrial Arts, Business Occupation, Vocational Agricultural.
j) In-service training was offered to 13 librarians in book-binding, reading techniques, use of audio-visual aids.
k) Three hundred secondary school teachers were offered in-service training in the use of the newspaper as an educational device. These included the use of various sections of the newspaper, current events, newspaper: terminology, skimming, editorials, etc.

1) In-service trainıng and university courses such as; Repertorio Coral, Organization of Choral Groups, Orff Mehtod, etc. were offered to 38 teachers of music in the secondary schools. Workshops dealing with areas related to sculpture, photography, use of new techniques in plastic arts were offered to 20 teachers of visual arts.
m) A total of 747 teachers attended in-service training activitics organized by audiovisual coordinators on use of educational technology, manipulation and maintenance of equipment, designing, production and use of audiovisual materials, etc.
n) In-service training activities for kindergarten teachers include seminars, conferences demostrative classes and workshops on specific teaching techniques for this level. Scholarships were provided to 18 teachers to pursue further university courses on preschool educatiou.
C. Books, newspapers, equipment and materials were purchased and used accordingly for the following purposes:
a) To improve and reinforce reading skills in the junior high school level the following books were purchased:
2) 136,172 English reading skill building text books.
3) $5,35 \%$ library books for reading corners.
4) Electronic equipment and materials for 85 participating schools in the English program.
5) Each school was provided with a tape recorder, table, chairs, 8 headphones, lighting center, 13 story books and metal cabinet.
b) Mathematics teachers were provided with overhead console, tape recorder and cassettes, sets of slides following units of study, files and pegboard screens.
c) Reference books for the high school libraries were provided and $\$ 20$ examination fee was $p=i d$ to the students who participated in the Advanced Placement Program and took the College Board examinations.
d) Twenty one audiovisual centers were organized in target areas which included establishment of 6 regional film libraries to provide circulation of 16 millimeter maion pictures to use in the classrooms.
e) Each audiovisual specialist received $\$ 3000$ in order to evaluate, select and purchase commercially prepared audiovisual material.
f) Equipment and material purchased by the Department of Education for the audiovisual program included:

$$
\begin{array}{rll}
1084 & \text {-- } & \text { motion pictures } \\
1181 & -- & \text { film strips } \\
147658 & -- & \text { slides and transparencies } \\
1462 & -- & \text { other audiovisual materials }
\end{array}
$$

g) Instructional materials and equipment were provided to Kindergaten teachers which allowed for the creation of an adequate classroom atmosphere.

The supportive and ancillary services hereafter described were provided to help the target youngsters overcome difficulties that were hindering their academic gain and their emotional and social growth.

Instruction in health problems and drug abuse was offered. Health services were provided and activites aimed at reducing the drop out rate were conducted.

## $A$

I. Project Area : 30
II. Project Title : Supportive Services
III. Grade Level : All levels
IV. Cost : $\$ 2,501,373.00$
V. Year : 1971-72
VI. Duration

This project is a continuation of a project operating in Puerto Rico since 1969

## Obiectives:

1. To improve pupils' physical, social and emotional development.
2. To retain in school at leats $50 \%$ of students identified as potential dropouts.
3. To offer students the opportunity to develop and cultivate their potentialities and aesthetic interests in the arts of paintinĝ, music and drama.
4. To foster and incrase participation of parents and other community members in school affairs.
5. To improve guidance services to students through the use of diversified media in the identification of students' interests and needs.

Activities and services provided:
A. Health Services

Physical examinations were made to a total of 38,403 ( $74.6 \%$ ) kindergarten, first and seventh grade students of 36 districts, 35 of which are Title I. Specialists such as ophtalmalogists, dermatologists, cardiologists, orthpedists, etc. tended a total of 5,034 students in 26 districts. A total of 25,163 students in 28 Title I districts received dentai services which included extracrions, treatment for dertal cavities and surgery. A total of 959 students received hospital services at a cost of $\$ 122,315.56$.

A total of 37 positions of social worker were assigned to work in rural and urban areas in 29 Titie I districts. Of a total of 47,528 students of all levels who benefited in one way or another from the services provided by the social worker in the 29 districts, 2,751 received individual help and 2,718 participated in group sessions. A total of 2,644 students were identified as potential dropouts by means of a predictive scale and teachers observations.

In-service training activities were provided by means of which social workers were trained in several aspects such as drug addiction and group therapy. Improvement of school environment, health and economic problems of students, social and civic activities and preparation of bulletins were some of the activities developed as part of the seminars (seminario de vida estudientil) organized it various districts.

## C. Guidance Services:

The Guidance and Counselling Program utilized the service of 11 counsellors that served a total of 5,845 high school students from 8 school districts in addition to the existing 402 positions in the regular program.

## D. Fine Arts and Recreational Cultural Activities:

Formal music classes were continued with the following groups: Orquesta Juvenil de Cuerdas de Rfo Piedras, Rondalla de Yauco, Rondalla de Sabana Grande, Conjunto de Acordeones de Luquillo, Conjunto de Flautas de Sallnas, Piano Lessons of Cidra, Conjunto de Cuerdas de Juana Dfaz, Hatillo Band, Barceloneta Band and Piano Lessons of Viques. A total of 652 students participated in the program.

Seventeen teachers of drama and 3 supervisors were appointed this year to work in 17 Title I districts. A total of 925 students participated in the dramatic arts classes, 1,587 in the production of theatrical performances organized locally, 1,098 in special programs to celebrate school holidays, 290 in the Fine Arts Festival and 130 in Chcral Recitation.

A total of 42 activities dealing with various phases of Puerto Rico and Universal Culture were offered around the Island, 9,046 students benefited from them. The activities consisted of lectures, petry recitals, concerts, presentations of choral groups and theatrical performances.

The "Areyto Ballet Folklorico Puertorriqueño" offered 20 performances in Title $\boldsymbol{f}$ :istricts. A total of 18,000 students attended these porformance free of charge.

Workshops on the use of the puppet as a teaching device were offered to 110 elementary school teachers specially from the rural zone in 21 Title I districts. A total of 11,898 students from the target areas attended the 109 puppet performances offered.

 parents and other commuil: members.

A series ot 4 cencerts by the Symphonic Orchestra $0^{\circ}$ "uerto Rico, 6 by professors of the Puerto kican Conservatory of Music adi $\therefore 0 \mapsto_{i}$ Lamots lual players and singers were offered to students ot low sico-ecommit level. A total of 6,803 students benetited from both uroan and rural rones.

Fiv groups of 25 students were organized in the Hivaruez an! Ponce Regaons, to which 23 classes in the plastic arts were offered on Saturdays. Activities offered consisced of the study of plastic arts, analvsis ot pictures, filmstrips, sculptures, and masterpieces.

The lobile Art Exposition with 29 masterpieces visited 21 of the 35 Title $i$ school districts and other low socio-economic areas. Approximately 33,390 students visited it. Printed materials with pictures and biographical notes about the artists were distributed among visitors.

## SURAREY OF MAJOR FJNDINCS

## Sumnary of Major Findings:

## A. Background:

Over the years of Title I funds in our educationa، system, the Division of Evaluation has faced serious limitations whil: trying to comply with the Title I evaluation requirement. One major cons-raint has been the lack of initial data base against winich to compare annual results.

The need to develop standardized tests, being as it is a very slow process, plus the unsuccessful attempts to develop an effective data processing capabiiity at the State Departiment of Education along with changes in the Title. I program itself, have contributed to conceal very significant efforts expended toward a more comprehensive and objective assessment of the title I program impact in the educational system.

The following is a summary of the mator findings for this fiscal year including both objective and descriptive data.

## B. Highlights of the findings:

In terms of stated goals, Title I projects were in general successful. However, in most cases, goals were stater: in terms of services to be provided rather than in terms of change of beharior expecied in the students.

Project I - Lengthening of tie school day.
Results:
A comparison of enroilment figures by type of school organization for the years 1971 and 1972 indicates that within the Title I sector there was a $3 \%$ decrease in the double enrollment (3 hours) type of school organization and $1 \%$ decrease in the double enrollmen. (4 hours) type of school organization.

Project Area IL - Curriculum Enrichment and Improvement of Pupils' Academic Achievement

## Academic Achievement

a. Reading

## Results:

Test results indicate that although, in general, Title I districts are still achieving mean scores below is Landwide norms, in Spanish and English reading, the amount of gain attained from 1971 to 1972 was the same or in some cases slightly better than that attained by the Non-Title I districts included in the testing sample.

The difference betwean urban and rural zone students within the Title $I$ sector is also smaller than in the Non-Title $I$ sector.
b. Mathematics

Results:

The results indicate there was no significant difference betweer Title $I$ and Non-Title $I$ groups in the seventh grade, however, significant differences in favor of the Title $I$ groups were observed in the results of the Algebra test administered in the ninth grade.
c. Science

## Results:

In the opinion of teachers and on the basis of attendance records, participation in class and science activities such as fairs, field trips, supplementary
readings, etc. there was increased interest in science.

## d. Sočal Studies

Results:
According to scale used by coordinators, asout $89 \%$ of the 300 teachers stated objectives in behavioral terms by the end of the school ytar.

Direct observation in 15 classrooms as well as reports from two Regional Supervisors lead to conclude that toward the end of the school year about $87 \%$ of the teachers showed satisfactory progress in the use of questions to encourage reflective thinking.
e. Pre-School Education

Results:
In the opinion of teachers, supervisors and Evaluation coordinators, the Kindergarten program succeeded in the development of positive attitudes, skills and social habits of students.
f. Special Education for Handicapped Children

## Results

Although educable mentally retarded and traingble mentally retarded students seem to have improved in the academic, social, health and manual skills, the project did not reach its full development because of need of special techniques, guides for teachers, adequate materials and equipment.

## Project Area III - Supportive Services

Results
Services designed to meet the physical, social and emotional needs of students within the Title I Area were continued and in most cases extended or increased:
a) Health services offered were highly increased including in 1972 approximately 38,403 students, that is $74.06 \%$ of all Kindergarten, first and seventh grade children in 34 districts, 33 of which are within the Title I sector.
b) Reports of Social Workers reveal that out of a total of 2,644 students identified as potential dropouts, 2,145 ( $81 \%$ ) were retained in school.
c) Opportunities for pupils' development of their recreational and artistic talent continued to include among other activities the following: School theatre, music classes, musical concerts, puppet theatre, plastic arts workshops, art expositions, school bands, visual arts seminar, ballet performances and dramatic arts.

## Aspiration Level of Students

Results:
The percentage of twelfth grade graduates indicating plans to study after graduation is the same within the Title I sector as in the rest of the Island. The percentage indicating plans to continue studying at the University level is higher than that from the remaining districts.
