IDENTIFIERS *Johnson County Community College KS

ABSTRACT

This report describes the attrition rate at Johnson County Community College (JCCC) (Kansas). The overall attrition rate for classes starting in fall 2000 was nearly 12%--during the fall semester 4,652 students dropped classes. Useable drop surveys were completed for 93% of those classes. Findings indicated that: (1) the Science, Math, and Health Care divisions recorded nearly a 16% attrition rate, the highest of all the academic divisions; (2) the Physical Education division recorded the lowest attrition rate (9%); (3) the most frequently cited reasons for dropping a class were work schedule conflicts (24%) and personal problems (19%); (4) "course difficulty" and "poor grades" accounted for 17% of the drops, 27% in the Science, Math, and Health Care divisions; (5) "course difficulty" and "dislike of instructor" were more significant factors in students dropping a high attrition class--one with an enrollment of 10 or more students and an attrition rate of 40% or higher--than a regular class; (6) more than 33% of the students dropping a Computer Instruction and Media Resources division high attrition class cited the instructor as one of the reasons they dropped; and (7) more than half of the classes were dropped in November, the last month students were eligible to drop a class. (JCC)

INTRODUCTION

Each fall, the Office of Institutional Research conducts a survey to determine the reasons JCCC students drop classes. The survey is administered throughout the semester by the Admissions Office at the time each drop request is processed. The following report details the results of this study for the fall 2000 semester. **Only those classes that start on or before the 20th day have been considered for detailed analysis in this report.** Actual attrition rates for fall 2000 classes starting on or before the 20th day are also provided, together with tables detailing results by academic division. The comments added to the survey by the students are published separately as a supplement to this report.

Requests for the supplement of verbatim comments, as well as questions and comments pertaining to this study should be directed to:

The overall JCCC attrition rate for classes starting on or before the 20th day of the fall 2000 semester was nearly 12%. During the fall semester, 4,652 students dropped classes. Useable drop surveys were completed for 4,340 of those classes (93%).

The Science, Health Care, and Math Division recorded nearly a 16% attrition rate, the highest of all the academic divisions (see Table 1). The Physical Education Division recorded the lowest attrition rate (9%).

Figure 1
ATTRITION RATES BY DIVISION FALL 2000

REASONS FOR DROPPING A CLASS

The most frequently cited reasons by students for dropping a class continue to be *work schedule conflicts* (24%) and *personal problems* (19%). Both are factors over which JCCC has little control. With the exception of the Science, Health Care and Math Division, *work schedule conflicts* was the most frequently cited reason for dropping classes in all divisions. It was a particular problem for students dropping a Computer Instruction and Media Resources class with 33% citing this reason (see Tables 2 and 3).

Reasons over which JCCC may have some control such as course difficulty, course scheduling, and instructors appeared to contribute to decisions to drop classes in a substantial number of instances.

- *Course too hard/bad grades* was the third most frequently cited reason for dropping a class overall (17%), and the most frequently cited reason in the Science, Health Care and Math Division (27%).
- *Bad time/inconvenient* was cited by nearly 16% of the respondents as a factor in their decision to drop a class, but 24% of those dropping a Physical Education class cited this reason.
- Nearly 11% of students cited *did not like the instructor* as a contributing factor in their dropping a class. Less than 2% of students dropping a Physical Education Division class cited this as a reason.

Figure 2
REASONS FOR DROPPING A CLASS FALL 2000

HIGH ATTRITION CLASSES

A high attrition class is defined as a class with an enrollment of 10 or more and an attrition rate of 40% or higher. Of the classes offered in the fall semester, less than one percent were high attrition classes (see Table 4). The Science, Health Care and Math Division reported the largest percentage of high attrition classes (2%).

Course difficulty and not liking the instructor were more significant factors in students dropping a high attrition class than for dropping classes as a whole.

- *Too hard/bad grades* was cited by 28% of students dropping a high attrition class compared to 17% for students dropping classes as a whole.
- *Did not like the instructor* was cited by 20% of students dropping a high attrition class compared to nearly 11% for students dropping classes as a whole. Over 33% of the students dropping a Computer Instruction and Media Resources Division high attrition class cited the instructor as one of the reasons they dropped the class. (See Tables 5 and 6).

Of the 19 high attrition classes for the fall 2000 semester, 63% were taught by full-time faculty (see Table 7).

Figure 3
COMPARISON OF REASONS FOR DROPPING CLASSES FALL 2000

Month in Which Classes Were Dropped

More than half (53%) of the classes were dropped in the month of November (the last month students were eligible to drop a class). (See Table 8).
