ABSTRACT

The purpose of this study is to determine whether college juniors and seniors view their freshman-writing instruction as beneficial and to assess its impact on the writing they do within their specific disciplines. Although a great deal of theory surrounds the teaching of freshman writing, very little research has been done to assess its effectiveness from the students' point of view once they start writing within their disciplines. The present research, utilizing a survey which was administered to a sample of 297 juniors and seniors at three colleges/universities in the Hampton Roads area of Virginia, primarily address the following questions: (1) How do students assess the value of their freshman-writing instruction?; (2) How does a non-discipline-specific freshman-writing curriculum impact discipline-specific writing challenges?; and (3) Is the writing in a student's chosen discipline more valuable to her than the instruction and practice she found in her freshman-writing program? Results indicate that students' perceptions about the value of freshman writing vary according to their majors. Findings suggest that students in the humanities and social sciences rated the writing they do in their disciplines as being more valuable than that which they did in their freshman writing classes, and students in business, engineering, and technology thought the reverse. (Contains 7 tables of data and a sample 11-page student questionnaire.) (Author/CR)

ABSTRACT

The purpose of this study is to determine whether college juniors and seniors view their freshman-writing instruction as beneficial and to assess its impact on the writing they do within their specific disciplines. Although a great deal of theory surrounds the teaching of freshman writing, very little research has been done to assess its effectiveness from the students' point of view once they start writing within their disciplines. The present research, utilizing a survey which was randomly administered to a sample of juniors and seniors at three colleges/universities in the Hampton Roads area of Virginia, primarily addresses the following questions: 1) How do students assess the value of their freshman-writing instruction? 2) How does a non-discipline-specific freshman-writing curriculum impact discipline-specific writing challenges? 3) Is the writing in a student's chosen discipline more valuable to her than the instruction and practice she found in her freshman-writing program?

**And the Survey Says: How Students Assess the
Value of Freshman-Writing Programs**

Judith D. Mercier and Peter J. Mercier

This research originated in conversations with fellow teachers of composition. Debating whether or not we could ever evaluate what a student had *really* learned about writing, we wondered how we could measure if what we taught in non-discipline specific writing courses benefited students once they began writing in their chosen majors. For many of us, the hardest part of teaching freshman composition is grading. For me, it's never difficult writing comments and questions and suggesting ideas for revision--my creative-writing workshop classes make that sort of critical response second nature to me. It's the decision on a letter or number grade which always gives me pause. Every semester, I try new grading rubrics and go about tabulating, adding, dividing, averaging, eventually giving students some quantitative measure of what *I think* they have learned about writing.

This study attempts to reverse the teacher-student position on assessment by asking college juniors and seniors to evaluate what *they think* they learned about writing in their freshman composition classes. It also seeks to measure students' perceptions concerning what learning takes place about writing in the classes directly related to their major disciplines of study. In other words, where do students believe they best acquire the

writing skills they need for academic success? Do the skills they acquire through non-discipline specific composition classes satisfy the writing demands they face once they begin to write in their majors? What majors are best and least served by non-discipline specific composition courses?

METHODS

In an effort to answer these questions, we surveyed 297 college juniors and seniors in a cross-sectional study, sampling students from three universities in the Tidewater, VA, area--Old Dominion University, Christopher Newport University, and Norfolk State University. Our instrument is a Likert-type questionnaire, measuring responses based on a continuum of agreement. The questionnaire consists of three sections. One section measures demographics only. In another section, we ask students to assess 52 items related to skills they believe they acquired during freshman-writing classes. Finally, we ask them to assess the same 52 items, this time having to do with the skills they believe they have developed while writing in their major fields of study. For the purposes of reporting, the 52 items have been divided into four categories, a taxonomy based on four of the five classical rhetorical canons--25 items measure skills of invention, 9 items skills of arrangement, 9 items skills of style, and 9 items skills of delivery or presentation. For example, items categorized under invention include pre-writing strategies for discovering ideas; finding credible source

material; reading critically; summarizing, paraphrasing, and synthesizing source material; understanding when and how to use definition, narration, classification, comparison-contrast, cause and effect; and establishing a thesis or claim. Arrangement items include developing paragraphs with proofs, writing controlling sentences, ordering supporting material, ordering sentences within paragraphs, using transitional devices, and organizing paragraphs. Style items concern sentence clarity, word choice, conciseness, coordination and subordination, and grammatical conventions. Delivery items focus on formatting, citing sources, mechanics, and punctuation.

Using a numerical score from one to four, students could choose a response of "strongly disagree," "disagree," "agree" or "strongly agree" for each item. After scaling this questionnaire for internal consistency, it was found to be highly reliable at 98%. The methodology for this study is detailed in Table 1.

Table 2 describes the sample's characteristics. Among those surveyed, 56% are white, 33% African-American, with the remaining 11% Hispanic, Asian-American, and other racial categories. The sample is almost equally divided between males and females and college juniors and seniors. Majors were divided into six discipline areas, our sample consisting of 1% business students; 15% humanities students; 10% education students; 15% natural science students; 43% social science students; and 17% engineering and technology students. The mean age in our sample is 25.

RESULTS

Table 3 illustrates the differences between the mean averages students gave their freshman-writing classes and the writing they do in their majors for the classical canon of invention. Scores for this canon are based on a 100-point scale. From these results, it appears that students in business and in engineering and technology scored their freshman-writing classes higher than the writing they do in their discipline when considering where they acquired skills related to invention. However, students in the discipline areas of the humanities, education, natural sciences, and social sciences place greater value on the writing they do in their discipline for acquiring skills in invention. In the humanities, natural sciences, and social sciences, these differences are statistically significant, indicating a 95% certainty that these results are not due to chance. In other words, similar results are likely to occur in repeat studies with different samples of the same population.

Table 4 shows the differences between the mean averages students gave their freshman-writing classes and the writing they do in their majors for the classical canon of arrangement. Scores for this canon are based on a 36-point scale. Like table 3, students in humanities, education, natural sciences, and social sciences placed more value on the writing they do in their majors when considering skills of arrangement. However, none of the results here are statistically significant.

Business and engineering and technology students continued to assess their freshman-writing classes as more valuable.

Table 5 depicts the differences between the mean averages students gave their freshman-writing classes and the writing they do in their majors for the classical canon of style. Scores for this canon are based on a 36-point scale. For this canon, students in the humanities, education, and social sciences rated the writing they do in their discipline as more valuable. However, students in business, natural sciences, and engineering and technology determined their freshman writing classes as more valuable. There are no statistically significant differences in this table.

Table 6 reflects the differences between the mean averages students gave their freshman-writing classes and the writing they do in their majors for the classical canon of delivery or presentation. Scores for this canon are based on a 36-point scale. When considering the canon delivery, students in business, education, natural sciences, and engineering and technology assessed their freshman writing classes as being more valuable. Only students in humanities and social sciences gave a higher rating to the writing they do in their majors for this canon. There are several statistically significant differences found in this table. The first concerns students in the business and engineering and technology disciplines who rate freshman writing classes as more valuable for skills acquired in presentation or delivery. The second statistically significant

difference involves only those students in the humanities. Here we see that they rate the writing they do in their discipline as more valuable when considering this canon.

Our last table reveals how students responded to the question "Did your freshman-writing class prepare you for the writing you do in your major?" The majority of students in education and engineering and technology did believe that their freshman-writing classes had prepared them for the writing they do in their majors. Students in business, humanities, and social sciences seem almost evenly divided in their responses. Students in the natural sciences, however, felt, by majority, that their freshman-writing classes did not prepare them for the writing they do in their major.

Conclusion

We would be remiss if we failed to mention that this study does have several limitations. First, our study used what is known as a "convenience" sample--classes with professors who readily agreed to having their students surveyed were chosen for sampling. Therefore, because we employed no random sampling methodology, the results of this study can not be generalized. We would like to see this study replicated using randomization or convenience sampling in other geographic locations. Second, students' assessments of freshman-writing classes were based on their recollections, and a small percentage of students in this sample revealed that it had been more than 4 years since they

completed their course work in freshman writing. Finally, there is no way to guarantee that students responded to survey items honestly.

The results of this study suggest that students' perceptions about the value of freshman writing vary according to their majors. Consistently, sample students in the humanities and social sciences rated the writing they do in their discipline as being more valuable than that which they did in freshman writing classes. On the other hand, students in business and engineering and technology consistently assessed their freshman writing classes as more beneficial than the writing they do in their disciplines. This study also reveals that students, regardless of major, more often viewed their freshman writing classes as helping them acquire skills related to style and delivery--those canons which focus on items concerning sentence structure, grammatical conventions, mechanics, and punctuation. However, in relationship to developing skills in invention and arrangement, students from four discipline areas rated the writing they do in their disciplines as more valuable. This, as we have seen, is particularly true with invention, an indication, perhaps, that discipline-specific writing may, in fact, stimulate students to think more critically, to seek out information, to feel more confident about having something to say.

As writing teachers, this study may encourage us to redesign our courses to more satisfactorily meet the needs of students from a variety of discipline areas. This, of course, means

tailoring assignments to each student according to his or her chosen major. It also involves exposing students to examples of quality writing in subjects outside our own areas of expertise and helping them analyze how they work and why they are effective. It means forging stronger links between our freshman-writing programs and other departments. For some of us, it may mean changing the ways we typically evaluate writing and developing a greater appreciation for the written discourse of social scientists, historians, mathematicians, and botanists. Though many of us feel we already have plenty on our "teaching plates," this study motivates us to believe that these extra efforts may increase the odds of what we all already desire and oftentimes accomplish--teaching students to write well in every discipline.

Table 1. Methods

N = 297

Instrument: Likert-type questionnaire (3 sections)

Response categories: 1 = Strongly Disagree
 2 = Disagree
 3 = Agree
 4 = Strongly Agree

Section 1 - Demographics

Section 2 - What students learned in their freshman-writing class

Rhetorical Canons

Invention: 25 items (Scale = 25 to 100)
 Arrangement: 9 items (Scale = 9 to 36)
 Style: 9 items (Scale = 9 to 36)
 Delivery: 9 items (Scale = 9 to 36)

Section 3 - What students learn in the writing they do for their majors/disciplines

Rhetorical Canons

Invention: 25 items (Scale = 25 to 100)
 Arrangement: 9 items (Scale = 9 to 36)
 Style: 9 items (Scale = 9 to 36)
 Delivery: 9 items (Scale = 9 to 36)

Part 3. ABOUT YOU: Check the appropriate response that best describes your answer to each item or fill in the blanks where appropriate.

What is your age? _____

What is your sex? _____

What is your class standing?

_____ Junior _____ Senior

What is your race?

_____Asian/Pacific Islander _____Native American
_____Hispanic _____African-American _____White
_____Other

What is your marital status?

_____Single, never married _____Living with partner
_____Married _____Separated _____Divorced
_____Widowed

Which best describes the place where you live?

_____A house _____An apartment _____Dormitory
_____Other (please specify)

What salary range best describes your personal income?

_____Less than \$10,000 _____\$10,001 to \$20,000
_____ \$20,001 to \$30,000 _____\$30,001 to \$40,000
_____ \$40,001 to \$50,000 _____More than \$50,000

In what college or university are you currently enrolled?

_____Old Dominion University
_____Norfolk State University
_____Christopher Newport University

From which college or university do you intend to graduate?

Do you use word processors/computers to draft essays and research papers?

_____Yes _____No

If no, what method do you use to draft essays and research papers? _____

Do you use word processors/computers for your final revisions of essays and research papers?

_____Yes _____No

If no, what method do you use to finalize your essays and research papers? _____

To the best of your recollection, what were the most valuable things you learned in your freshman-writing (composition) class.

In your opinion, did your freshman-writing (composition) class prepare you for the writing you do in your major?

_____Yes _____No

In other college level classes? _____Yes _____No

If so, which classes? _____

In what college or university did you take your freshman writing (composition) class?

- _____Old Dominion University
- _____Norfolk State University
- _____Christopher Newport University
- _____Thomas Nelson Community College
- _____Tidewater Community College
- _____Other (please specify _____)

What is your current GPA? _____

What is your major?

Level 1

Level 2A

Level 2B

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
