## ABSTRACT

A study examined enrollment patterns in the Texas public school system for four cohorts of students from 1993-94 to 1996-97. The 1996-97 cohort, for example, which began with students enrolled in the 9th grade for the first time in 1993-94, was followed for 4 years through expected graduation in 1996-97. The 1993-94 cohort included first-time 9th graders in 1990-91, expected to graduate in 1993-94. In 1996-97, 203,567 students from a cohort of 224,425 completed or were still completing high school in the Texas public school system--a 5 percent increase from the completion rate for 1993-94. Completion rates vary greatly by student characteristics: in the class of 1997, students who were on-grade for their age had a much greater chance of completing high school than students who were either overage for grade when they first entered the cohort or retained sometime during high school. White students were more likely to complete high school than Hispanic or African-American students. Economically disadvantaged students had markedly lower completion rates than noneconomically disadvantaged students. Three appendixes contain a synopsis of student progress through high school over a 4-year period for the class of 1996-97; a summary of completion rates by district characteristics, 1994-97; and annual district completion rates for the class of 1996-97. Contains 15 references. (DFR)

## Highlights

### *Who was included in the study?*

- ◆ The study investigated four cohorts of students who were expected to graduate in the following years: 1993-94, 1994-95, 1995-96, and 1996-97.
- ◆ Starting with first-time ninth graders in the initial year, the study examined student enrollment patterns for each cohort through expected graduation four years later.

### *How many students are completing high school?*

- ◆ In the class of 1997, 188,488 out of 224,425 students completed high school, either by graduating or earning a General Educational Development (GED) certificate. Another 15,079 were continuing to attend school in the fall following their expected graduation.
- ◆ Statewide, the completion rate was 90.7 percent, up from 85.3 percent for the class of 1994.

### *How do students complete high school?*

- ◆ 75.8 percent graduated, up from 72.2 percent in the class of 1994.
- ◆ 8.2 percent earned GED certificates, up from 5.9 percent in 1994.
- ◆ 6.7 percent remained enrolled in the fall following their expected graduation date, down from 7.1 percent in 1994.

### *Who completes high school?*

- ◆ In the class of 1997, students who were on-grade for their age (i.e., the expected age for their grade level) when they first entered the cohort were almost 19 percent more likely to complete high school than those who were overage for grade (i.e., older than expected for their grade level).
- ◆ Non-mobile students (those who did not change campus or district during high school) were slightly more likely to complete high school than those who were mobile.

---

---

## Highlights

- ◆ White students were more likely to complete high school than Hispanic or African American students. However, the gap narrowed between 1994 and 1997, with minority students improving their completion rates about twice as fast as White students.
- ◆ Economically disadvantaged students had markedly lower completion rates than non-economically disadvantaged students.
- ◆ Several key groups of students were more likely to meet the criteria for completion by earning a GED certificate or by remaining enrolled in the fall after their expected graduation:
  - students who were overage for grade in ninth grade, or who were retained in grade at any time during high school;
  - economically disadvantaged students;
  - students identified as being at risk of dropping out; and
  - second-language learners (SLLs, previously called limited English proficient, or LEP students).

## 1996-97 Report on High School Completion Rates

### Executive Summary

This study examined enrollment patterns for four cohorts of students from 1993-94 to 1996-97. The 1996-97 cohort, for example, which began with students who were enrolled in ninth grade for the first time in 1993-94, was followed for four years through expected graduation in 1996-97. The 1993-94 cohort includes first-time ninth-graders in 1990-91 who were expected to graduate in 1993-94.

In 1996-97, a total of 203,567 students (90.7%) from a cohort of 224,425, completed or were still completing high school in the Texas public school system. This represents more than a 5 percentage point increase from the 85.3 percent completion rate for the 1993-94 school year.

Students are considered to be high school completers if they have already graduated, earned a General Educational Development (GED) certificate, or are still enrolled toward completion in the fall after their expected graduation. In 1997, 75.8 percent graduated, 8.2 percent earned GED certificates, and 6.7 percent remained in enrollment in the fall.

Completion rates vary greatly by student characteristics. In the class of 1997, students who were on-grade for their age (i.e., the expected age for their grade level) had a much greater chance of completing high school than students who were either over-age for grade when they first entered the cohort (i.e., older than expected for their grade level) or retained sometime during high school. White students were more likely to complete high school than Hispanic or African American students. Economically disadvantaged students had markedly lower completion rates than non-economically disadvantaged students. Students identified as at risk of dropping out had lower completion rates than those not identified as being at risk. Non-mobile students (those who did not change campus or district during high school) were slightly more likely to complete high school than those who did move.

Many of the gaps in completion rates between student groupings narrowed between 1994 and 1997. The percentage point improvement in completion rates for minority students was about twice as large as the improvement for White students. Completion rates for at-risk students increased more than twice as much as those for students not identified as at risk. Likewise, the completion rates for economically disadvantaged students and mobile students improved faster than the rates for their non-economically disadvantaged and non-mobile counterparts, respectively. While 1997 completion rates for overage and retained students remained far behind those of on-grade students, this gap too had narrowed greatly since the class of 1994.

For some students, earning a GED appears to be an important route to high school completion. Students who began ninth grade overage for grade, students who were retained in grade during high school, second-language learners (SLLs), and students identified as at risk of dropping out all had much higher rates of completion by GED than other student groups. For students who had not completed 12th grade by the time of their expected graduation, additional time in the system also appears to be an important route to completion. Economically disadvantaged students, at-risk students, overage and retained students, and SLLs all had much higher rates of continued enrollment following their expected graduation year, and correspondingly lower rates of on-time graduation, than other student groups.

Larger, urban districts tended to have somewhat lower completion rates than smaller, rural districts, and districts with better overall performance on the Texas Assessment of Academic Skills (TAAS) had higher completion rates than those with weaker TAAS performance. District financial resources and teacher qualifications had little apparent relationship to completion rates. This is most likely a result of the contrast between the longitudinal nature of the completion rate and the point-in-time measurement of district characteristics.

Currently, Texas is the only state where completion rates are reported on a routine basis. The National Center for Educational Statistics (NCES) has begun developing a completion rate reporting process to permit state-to-state comparisons, but not all of the methodological issues have been resolved. A direct comparison of Texas' completion rates with those of other states and/or national statistics will not be possible until other states adopt similar measures or NCES begins tracking completion rates nationally.

## 1996-97 Report on High School Completion Rates

### Introduction

This is the first annual report of completion rates in Texas public schools. It describes completion rates for the cohort of students whose anticipated time of graduation was spring 1997. The report includes:

- statewide completion rates by student characteristics;
- historical completion rates for the previous three graduating cohorts, provided for comparison purposes;
- a summary of completion rates based on district characteristics; and
- a listing of completion rates (overall and for different student groups) for the current cohort and the previous three cohorts, by county and district.

### Historical Background

Since 1994, the Academic Excellence Indicator System (AEIS) has been used to determine accountability ratings for Texas public school districts and campuses. Three types of indicators are used in this system: (1) base indicators, (2) additional indicators, and (3) report-only indicators. Base indicators are used to determine district accreditation status and campus performance ratings. Additional indicators are used to determine acknowledgement ratings for districts and campuses. Report-only indicators are not statutorily required for use in accrediting districts, but are required for reporting in AEIS.

The annual dropout rate for students in Grades 7-12 has been used as a base indicator since the inception of the accountability rating system. During that time, there has been interest on the part of educators and the public in finding an alternative measure of school performance. Critics of the annual dropout rate claim that, since the indicator only captures a snapshot of a group of students at one point in time (Calderon, 1996), it does not describe a true picture of the school careers of individuals or groups of students (Arrigona, 1991; Cardenas, Robledo, & Supik, 1986; Ligon, Stewart, & Wilkinson, 1990).

In response to these concerns, the commissioner of education initiated a research study to investigate school completion rates. While replacing dropout rates with completion rates would most likely require a change in statute, a first step toward establishing the comparability of the two measures is to publish completion rates as a report-only indicator. Unlike dropout rates, completion rates are reported only at the district level, not at the campus level (see the discussion of reporting level in the Methods section), in large part because of the variations in grade levels served by public secondary schools in Texas.

## Conceptual Approach

The completion rate measure used in this report is an adaptation of the Holding Power Index (Hartzell, McKay, & Frymier, 1992). This longitudinal measure follows a cohort, or class of students, individually and determines their status at the end of Grade 12.

The original cohort consists of first-time ninth-graders in the starting year. In each subsequent year, new students who transfer into the Texas public school system in the same grade in which the original cohort members are enrolled are added to the cohort. Students who leave the system but are not classified as dropouts are removed from the cohort. Each member of the cohort is assigned a final status by the fifth year following the year of entry into ninth grade. In other words, they are grouped into completers and non-completers.

Completers are any students who, at the end of the four-year period: (1) have graduated, either on time or early; (2) have received a General Educational Development (GED) certificate; or (3) are found to be enrolled in school during the year following their anticipated graduation. At the end of four years, the completion rate is calculated as the number of completers, divided by the number of students in the cohort.

$$\frac{\text{N of completers}}{\text{N in cohort}} = \frac{(\text{On-time graduates} + \text{early graduates} + \text{GED recipients} + \text{continuing students})}{(\text{First-time ninth-graders in base year} + \text{transfers in} - \text{transfers out})}$$

(Source: Texas Education Agency [TEA] *AEIS Glossary*)

Note that students in the cohort who are retained in grade or who skip a grade (i.e., are double-promoted) are still considered members of the cohort; cohort membership does not transfer from one cohort to another over time. The course of the 1996-97 cohort over four years is illustrated in Appendix A.

In contrast to the HPI as originally specified, dropping out and leaving are not necessarily considered terminal events. School districts are being held accountable for students' educational activities over a four-year period. Many schools and districts have successful dropout recovery programs to draw students back into the public school system after they have left. Consequently, the focus of the completion rate methodology is on a student's final status at the end of the four-year period, not the interim statuses. A student may return after dropping out or leaving and will count as a completer if he or she meets any of the completion criteria. Dropping out or leaving affects the student's final status only if it is the last event recorded for that student in the Public Education Information Management System (PEIMS) database.

Previous completion rate studies have found widely disparate rates for different student groups (Hartzell et al., 1992; New York City Board of Education, 1994).

Typically, the student groupings studied have followed much the same lines as those used in reports of dropouts: ethnicity, gender, and instructional program (academic vs. career and technology), for example. Because the completion rate is being reported in AEIS and is being considered for future use as a base indicator, this report presents information on completion rates using student and district categories similar to those used in the *Annual Report on Public School Dropouts*.

It is important to note, however, that the completion rate, at any level of aggregation, is not directly comparable to the dropout rate, for several reasons.

- The completion rate applies to students in Grades 9-12; the dropout rate applies to Grades 7-12.
- The completion rate is tied positively to the public's understanding of the goals of public education.
- In contrast to the annual dropout rate, which measures dropouts as events in a single school year, the completion rate is a longitudinal measure that looks at the final dispositions of members in a cohort over a four-year period.
- Completion rates and dropout rates are affected differently by student mobility, due to the contrast between the longitudinal nature of completion rates and the event-based nature of dropout rates.
- All enrollment figures in the completion rate calculations are based on fall enrollment only. This differs from the method used to calculate the annual dropout rate, in which the denominator is cumulative membership (i.e., all students who were ever reported in attendance in a district at any time during the year).

## Data Sources

**Public Education Information Management System (PEIMS).** PEIMS collects comprehensive and detailed information that reflects public education activity in over 1,000 school districts and over 6,000 campuses throughout Texas. Related to completion rates, school districts report the following data in the fall of each year: enrollment information for that year, dropout information for Grades 7-12 for the previous year, and graduate information for the previous year.

**Enrollment.** Enrollment data from 1993-94 through 1997-98 were used for this report. The members of the initial cohort were identified as students who were reported in enrollment in ninth grade in the fall of the 1993-94 academic year and were not enrolled in ninth grade in the fall of the previous year. New 10th-, 11th-, and 12th-graders were added to the cohort if their enrollment records appeared in PEIMS for the first time in the fall of the 1994-95, 1995-96, and 1996-97 academic years, respectively.

**Transfers.** The enrollment status of cohort members is tracked each year of the cohort. Students who can no longer be located in the PEIMS database and have not been reported as dropouts are treated as transfers out of the system, not as dropouts. (Until 1998-99, districts were not required to report departures of anyone other than graduates or dropouts.) Repeat dropouts who are excluded for accountability purposes are also treated as transfers out of the system. Students who transfer out, but later are reported as enrolled, graduated, or having earned a GED certificate are *not* treated as transfers out of the system. Any gaps in enrollment are noted; otherwise, these students are treated the same as other cohort members for purposes of identifying completion status. Students who move during the four-year period are assigned a final status in the last district in which they are reported.

**Dropouts.** Students who are reported as dropouts through PEIMS, are not recovered through the dropout recovery process, and have no other completion status are treated as dropouts. Students who are reported as dropouts but later are reported as enrolled, graduated, or having earned a GED certificate are counted on the basis of that last status as completers, not as dropouts.

**General Educational Development (GED).** Candidates take GED tests at over 200 centers located throughout the state in school districts, colleges and universities, and education service centers. Tests are offered year-round and may be taken in either English or Spanish. When a candidate completes testing, the answer sheets are sent to the University of Texas Scoring Center, where they are graded and transmitted electronically to TEA. Unlike the enrollment, graduation, and dropout statuses, which are reported annually, receipt of a GED certificate is reported as soon as the test is scored as passing. For purposes of identifying completers, students in the 1996-97 cohort were assigned a GED status if their certificate was recorded between January 1994 and February 28, 1998.

**Graduates.** Students are classified as graduates as of the year in which they are reported through PEIMS as having graduated.

**Continuing enrollment.** Students are classified as continuing if they are reported through PEIMS as enrolled anywhere in the state in the fall after their anticipated graduation and have not yet graduated or earned a GED certificate. Any students taking more than four years to finish high school (e.g., those ever retained in high school, or dropouts who subsequently reenroll) would fall into this category. If a student completes high school during the fifth year, he or she would still be considered to have completed in the cohort ending in the fourth year; the student would not be added to the cohort associated with the fifth year.

## Methods

Since students are tracked for several years, it is possible for a student to attain more than one status over time. For example, a student may drop out of school and then

reenroll in a later year, possibly in a different district. To resolve multiple statuses, the following rules were applied.

- A student reported as a graduate is assigned a final status of *graduate*, regardless of any other statuses attained (e.g., a dropout who returns to school and graduates is counted only as a graduate). The student is counted in the district that reported the graduation.
- If a student does not graduate, but does earn a GED certificate, the student is assigned a final status of *GED*. The student is counted in the last district that recorded him or her in the fall enrollment report.
- If a student does not graduate or earn a GED, but is reported as enrolled in the fall after anticipated graduation, then the student is assigned a final status of *continuing* in the last district that reported the enrollment.
- If a student is reported as a dropout, is not recovered for any reason, is never again reported in enrollment, and does not graduate or earn a GED certificate, then the student is assigned a final status of *dropout* and is counted in the last district that reported the dropout. If the student drops out, but later is reported as enrolled, graduated, or having earned a GED, the dropout status is replaced with the applicable final status in the appropriate district.
- Students whose last reported status is enrolled, but who are not identified in PEIMS as enrolled past the date of their anticipated graduation, are considered transfers out of the Texas public education system.

For several years, TEA has reported annual dropout rates by student and district characteristics. In these reports, both the dropout rates and the student and district characteristics are reported at the same time. Completion rates, however, represent the cumulative results of students' entire high school careers, while district characteristics are still reported one year at a time. For the sake of simplicity, the summary of completion rates by district characteristics in Appendix B uses the district characteristics for the final year of the 1996-97 cohort. Student characteristics, such as second-language learner (SLL, previously called limited English proficient, or LEP) status or participation in special education, are reported as of the first year of the student's membership in the cohort.

This report is limited to completion rates at the district level, pending the availability of additional data and an evaluation of the comparability of completion and dropout rates as indicators. An investigational study of completion rates (TEA, 1996) estimated that more districts, and more *and different* campuses, would be assessed on the basis of completion rates than would be assessed on the basis of dropout rates. The new PEIMS leaver record, implemented in fall 1998, is providing more detail on students who leave the Texas public education system. Districts are required to report

leaver information for all students who were in attendance in Grades 7-12 in the previous school year but not enrolled in the same district in the fall. This report will include all dropouts, graduates, and other school leavers from the previous year, as well as students who move to another district, home school, or private school (TEA, 1998a). This information will be entered into the completion rate computation for the class of 1998 and is expected to provide a much more complete accounting of the final status of students who left after the 1997-98 school year.

This report does not present completion rates for Texas charter schools, the first of which began operating in 1996-97. Although TEA reports annual dropout rates for charters, it is not reasonable to report a longitudinal measure such as completion rates for schools that could have had no more than one year of influence on their students. For this reason, completion rates will not be reported for charter schools until they have been in operation at least four years.

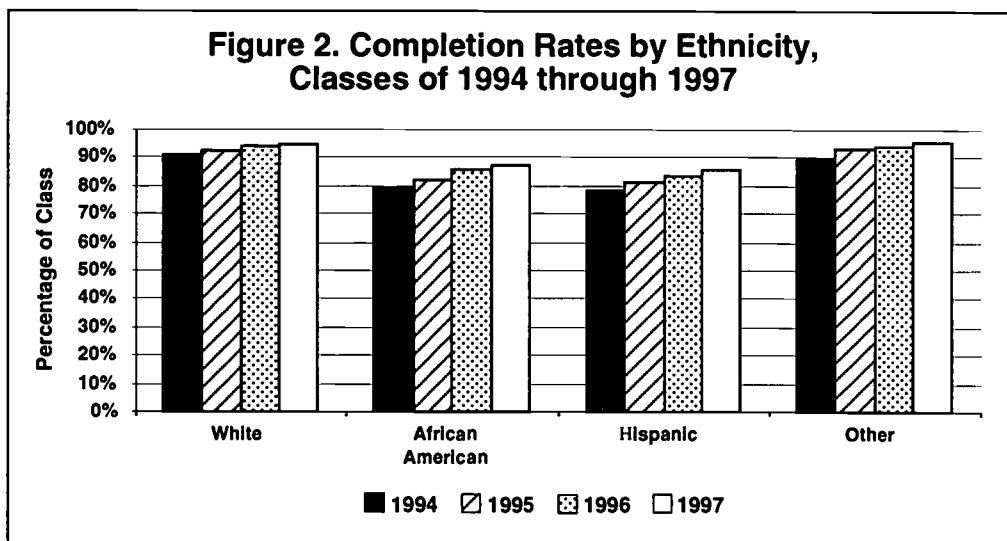

### State Completion Rate

The completion rate for the graduating class of 1997 was 90.7 percent, up from 85.3 percent for the class of 1994. As shown in Figure 1, the rate increased steadily each year by about 2 percentage points. While the absolute percentage of all students who graduated increased over the four years, the proportion of completers represented by graduating students actually decreased slightly. During the same time period, the proportion of completers represented by students earning GED certificates increased slightly.

## Student Characteristics

**Ethnicity.** While there was still a marked difference in completion rates between minority and White students in 1997, this gap had narrowed every year since 1994, as shown in Figure 2. For all ethnic groups, earning GED certificates contributed about 2 percentage points to the gains in completion rates over the four-year period.

**Gender.** Completion rates for both male and female students increased by about 6 percentage points over the four years studied, as shown in Table 1. In 1997, however, female students were still more likely to complete than males by about 2 percentage points. Of those completing, there were slight increases in the percentages completing by GED for both males and females.

**Table 1.  
Completion Rates by Gender, 1994-97**

		Total Students	Completion Rate	Graduation Rate	GED Rate	Continuation Rate
<b>Female</b>	1994	102,756	86.3	75.2	5.4	5.7
	1995	106,135	88.7	76.5	6.9	5.3
	1996	106,615	90.3	77.2	7.9	5.3
	1997	110,816	91.6	79.2	7.0	5.4
<b>Male</b>	1994	107,237	84.4	69.4	6.5	8.6
	1995	109,562	86.8	70.0	8.6	8.2
	1996	110,088	88.4	70.3	9.8	8.2
	1997	113,609	89.9	72.5	9.3	8.1

**Economically disadvantaged.** A student is identified as economically disadvantaged if he or she is eligible for free or reduced-price lunch or for other specified forms of public assistance. The percentage of students in the cohort who were economically disadvantaged increased each year from 1994 to 1997. While economically disadvantaged students experienced an improvement of 8 percentage points in their completion rate over the four years, they were still much less likely than non-economically disadvantaged students to be identified as completers in 1997 (see Table 2). In addition, economically disadvantaged students who were identified as completers were more likely to have been continuing students or to have earned a GED than were non-economically disadvantaged completers.

**Table 2.**  
**Completion Rates by Student Characteristics, 1994-97**

		Total Students	Completion Rate	Graduation Rate	GED Rate	Continuation Rate
<b>Economically Disadvantaged</b>	1994	58,024	77.3	60.3	5.8	11.2
	1995	62,426	80.5	61.4	7.9	11.2
	1996	65,235	82.5	62.0	9.4	11.1
	1997	70,525	84.7	65.1	8.4	11.2
<b>At Risk</b>	1994	48,619	73.6	54.6	8.2	10.8
	1995	58,265	77.2	55.8	10.6	10.8
	1996	82,960	82.8	61.5	11.3	10.0
	1997	107,104	86.9	67.8	9.9	9.2
<b>Second-Language Learners</b>	1994	13,540	64.8	46.7	2.8	15.3
	1995	14,319	68.6	48.8	3.9	15.9
	1996	14,248	72.7	51.9	5.0	15.8
	1997	14,871	77.3	57.6	4.2	15.6
<b>Title I</b>	1994	12,000	76.8	59.6	5.7	11.6
	1995	13,973	78.7	59.0	7.8	11.9
	1996	16,638	83.4	64.6	8.8	10.0
	1997	20,306	86.1	68.5	7.3	10.3
<b>Retained in Grades 9-12</b>	1994	33,038	67.9	23.3	15.6	29.0
	1995	35,641	72.7	25.0	19.9	27.8
	1996	37,100	75.3	26.6	21.8	26.9
	1997	36,844	77.2	29.5	20.4	27.4
<b>Overage at Beginning of Grade 9</b>	1994	66,337	67.3	48.0	9.7	9.6
	1995	64,706	70.9	49.1	12.6	9.2
	1996	64,321	74.8	50.7	14.8	9.2
	1997	61,763	77.2	53.6	14.3	9.3

Among economically disadvantaged students, there were small differences in completion rates by ethnicity in the 1997 cohort. Among non-economically disadvantaged students, ethnicity had a stronger relationship to completion rates: Hispanics had a completion rate of 88 percent; African Americans, 89 percent; and Whites, 96 percent.

**At-risk.** Under Texas Education Code (TEC) §29.081, a student in Grades 7-12 is identified as being at risk of school failure or dropping out if he or she: (1) was not advanced from one grade level to the next for two or more school years; (2) is at least two years below grade level in reading or mathematics; (3) has failed at least two courses and is not expected to graduate within four years of entering ninth grade; (4) has failed at least one section of the most recent TAAS exam; or (5) is pregnant or is a parent. The percentage of students considered to be at risk increased substantially between the classes of 1994 and 1997. At the same time, the completion rate for at-risk students improved dramatically, from 74 percent in the 1994 cohort to 87 percent in the 1997 cohort. Their completion, however, was much more likely to occur via continuation (11%) or receiving a GED certificate (11%) than that of students who were not identified as at risk (5% continuation and 7% GED recipients, respectively).

**Second-language learners (SLLs).** An SLL, or limited English proficient (LEP), student is one whose primary language is other than English and whose English language skills are such that the student has difficulty performing ordinary classwork in English (TEC §29.052). A previous report (TEA, 1998a) found that SLL students accounted for a much smaller proportion of campus enrollment in high schools (about 7%) than in middle schools (about 10%) or elementary schools (about 19%). In this study, SLL students likewise represented only about 7 percent of each high school cohort. Their 1997 completion rate of 77 percent was far lower than that of non-SLL students (92%), and SLLs were much more likely to have been continuing students than non-SLL students (20% vs. 7%). The completion rate for SLLs in 1997, however, was a great improvement over the 65 percent rate for the 1994 cohort. Of those completing, the percentage graduating increased from 72 percent to 74 percent between 1994 and 1997.

**Title I.** Title I of the Improving America's Schools Act of 1994 aims to help disadvantaged students meet high academic standards with aligned curriculum, assessment, and professional development. Between the classes of 1994 and 1997, the percentage of students receiving Title I services increased slightly. Almost 70 percent of these students also were classified as economically disadvantaged. While Title I students had somewhat lower completion rates in 1997, their rates had improved more rapidly than those of non-Title I students. During the four-year study period, completion rates for Title I students increased 9 percentage points (from 77% to 86%), compared to an increase of 5 percentage points (from 86% to 91%) for non-Title I students.

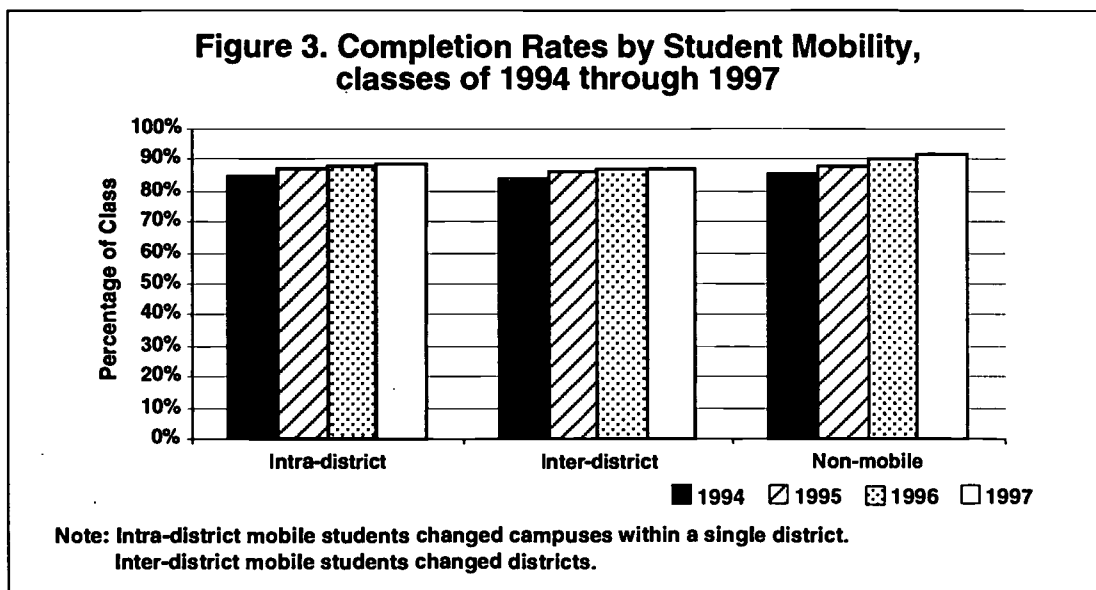

---

---

***Retained in grade / overage for grade.*** Students who were overage for grade (i.e., older than expected for their grade level) constituted about 32 percent of the 1994 cohort, declining to 28 percent of the 1997 cohort. In addition, approximately 16-17 percent of each cohort was retained at least once in high school. Historically, overage students have had much higher dropout rates than students who are on-grade for their age (i.e., the expected age for their grade level) (TEA, 1998b). It is not surprising, then, that overage students in the four cohorts studied had notably lower completion rates. Although the 77 percent completion rate for overage students in the class of 1997 represented an improvement of 10 percentage points over the class of 1994, it still was almost 20 percentage points lower than the completion rate for on-grade students (96%). Students who were identified by TEA as having been retained within the time window of the cohort had about the same completion rates as those who were identified as being overage at the beginning of the cohort. In the 1997 cohort, more than 30 percent of the overage students and more than 60 percent of the retained students who were identified as completers had either earned a GED certificate or had continued their education beyond four years.

In all four cohorts, minorities were disproportionately represented among overage students, accounting for about 60 percent of the overage group, but only about 45 percent of the cohort. Being overage for grade appears to have had a much stronger relationship to the completion rates of minority students than White students. Overage White students had a completion rate of 84 percent in the class of 1997, while overage Hispanic and African American students had completion rates of 72 and 73 percent, respectively. For on-grade students, by contrast, the completion rates for minorities were much closer to those of White students: 94 percent versus 97 percent. Moreover, on-grade, non-economically disadvantaged students had relatively high completion rates, regardless of ethnicity (95%-98%), as did on-grade economically disadvantaged students (92% for each ethnic group).

***Student mobility.*** Previous research (TEA, 1997) has found that mobile students (those who move to a different campus or district) tend to have lower academic performance than non-mobile students. Between 1994 and 1997, mobile students represented about 28-29 percent of each cohort. In the class of 1994, there was little difference between the completion rates of mobile and non-mobile students (see Figure 3). Although completion rates for both groups showed continued improvement over the next three graduating classes, the gap between mobile and non-mobile students increased slightly. Non-mobile African American and Hispanic students experienced an increase of 9-10 percentage points in completion rates between the classes of 1994 and 1997; economically disadvantaged students, an increase of 9 percentage points; and overage and retained students, an increase of 12 percentage points. During the same period, mobile students in these groups showed increases of only 3-8 percentage points.

### Students Receiving Special Services

**Special education.** The percentage of students receiving special education services increased from 8 percent in the 1994 cohort to 10 percent in the 1997 cohort. As shown in Table 3 on page 14, the completion rate for these students also increased over the four years, from 78 percent to 84 percent. This improvement kept pace with the improvement in overall completion rates from year to year, but remained about 8 percentage points behind the completion rate for students not receiving special education services.

**English as a second language (ESL) / bilingual education.** Students participating in ESL and/or bilingual education programs represented about 5 percent of the class of 1997. The completion rate for these students rose by 12 percentage points over the four cohorts studied, but at 76 percent in 1997, was still much lower than the 92 percent completion rate achieved the same year by students not participating in ESL or bilingual programs.

**Career and technology (C/T).** Students participating in C/T programs represented about 30 percent of the class of 1997. The 88 percent completion rate for C/T students in the class of 1997 was about 4 percentage points lower than the rate for non-C/T students. Between the classes of 1994 and 1997, however, the completion rate for C/T students improved 7 percentage points, versus 5 percentage points for non-C/T students. African American and Hispanic C/T students experienced improvements in their completion rates of 9 and 10 percentage points, respectively, compared with 7 percentage points for non-C/T minority students.

**Table 3.  
Completion Rates by Type of Service Received, 1994-97**

		Total Students	Completion Rate	Graduation Rate	GED Rate	Continuation Rate
<b>Special Education</b>	1994	17,274	77.7	59.8	3.5	14.4
	1995	18,417	79.7	61.1	4.8	13.9
	1996	19,961	81.6	62.4	5.7	13.5

	1995	67,226	84.0	67.9	9.2	7.0
	1996	68,590	86.5	69.1	10.4	7.0
	1997	72,568	88.2	72.1	9.5	6.7

### District Characteristics

Because dropout rates have been shown to vary considerably according to district characteristics (TEA, 1998b), it is reasonable to expect that completion rates also would vary by district characteristics, but in an inverse manner. That is, district characteristics associated with lower dropout rates should be associated with higher completion rates. The results must be interpreted with caution, however, as the two measures differ in their basic natures: the completion rate is longitudinal in nature, while the dropout rate is annual.

While annual dropout rates are associated with district characteristics that are measured in the same year the dropouts occurred, completion rates are measured over four years, but associated with district characteristics that are measured in the last year of the cohort. Any apparent relationship between district characteristics in the final year of the cohort and completion rates may be mitigated by the longitudinal nature of the rate. In fact, there are few clear patterns of linkage between completion rates and district characteristics (see Appendix B for a summary of completion rates by district characteristics).

**Enrollment and location.** The largest urban districts had the lowest completion rates, while rural and fast-growing non-metropolitan districts had the highest, exactly the reverse of the pattern found with dropout rates. Major urban districts, however, showed the greatest improvement in completion rates between the classes of 1994 and 1997. Major urban districts, and those with enrollments of over 50,000, recorded an improvement of 9 percentage points in completion rates over the four-year period.

**Wealth and finance.** The breakdown of completion rates by various categories of district wealth, tax effort, and operating costs revealed little systematic relationship between wealth and school completion.

**Student demographics.** The slight tendency toward lower completion rates in districts with higher student density and lower student growth is not unexpected, considering the location of many of these districts in urban areas with large populations of at-risk students. For the most part, the completion rates for minority students were not systematically higher or lower in districts with higher or lower concentrations of minority students. Overall completion rates, however, were clearly lowest in those school districts with the highest concentrations of minority or of poor students.

**Student performance.** Not surprisingly, districts with higher student performance on the TAAS had higher completion rates. In districts where fewer than 67 percent of all students in the district passed all TAAS tests taken, the overall completion rate was 87 percent for the class of 1997. In districts where over 84 percent of all students passed all TAAS tests taken, the overall completion rate was 96 percent. Previous studies have shown that dropouts tend to have lower academic performance than students who remain in school (Gruskin, Campbell, & Paulu, 1987; Hahn, 1987; Natriello, McDill, & Pallas, 1990).

**Teacher resources.** There appears to be little consistent relationship between completion rates and background, experience, and salaries of teachers in the district. There was a slight tendency toward lower completion rates in districts with higher teacher salaries and higher levels of minority teacher representation. Districts in which fewer than 5 percent of the teachers were minorities had an overall completion rate of 94 percent for the class of 1997, compared with an 86 percent completion rate for districts where 50 percent or more of the teachers were minorities. Further analysis revealed that the districts with higher teacher salaries and larger minority representation among teachers were predominantly large urban and central city districts with larger populations of economically disadvantaged, SLL, and at-risk students, who tend to have lower completion rates.

## Conclusions

As expected, the relationships between student and district characteristics and high school completion rates for the class of 1997 appear to be somewhat the inverse of the relationships between those characteristics and dropout rates. The broad categories of students found to have higher dropout rates – the economically disadvantaged, minorities, and mobile students, for example – tended to have lower completion rates. The types of districts with historically higher dropout rates – large, urban, and those with higher instructional costs and higher concentrations of at-risk students – tended to have lower, sometimes markedly lower, completion rates. It is clear that there is still room for further effort to keep students in school.

A look at historical completion rates reveals some positive trends. The types of students and districts with the lowest completion rates in the 1994 cohort showed the greatest improvement over four years. Between the classes of 1994 and 1997, completion rates improved:

- 9 percentage points for the largest districts and for major urban districts, compared to a state average of 6 percentage points;
- 8 percentage points for Hispanic and African American students, compared to 4 percentage points for White students;
- 8 percentage points for economically disadvantaged students, compared to 5 percentage points for non-economically disadvantaged students;
- 13 percentage points for at-risk students, compared to 5 percentage points for students not considered at risk; and
- 7 percentage points for students in the career and technology program, compared to 5 percentage points for other students.

Also worth noting is the finding that for some student groups, especially those historically shown to be at high risk of dropping out, earning a GED certificate can be an important route to high school completion. This is consistent with reported national trends in status completion rates, which indicate that the percentage of young adults 18-24 years of age not currently enrolled in high school or below who completed by GED more than doubled between 1988 and 1996, from 4.2 percent to 9.8 percent (National Center for Educational Statistics [NCES], 1997). The same national report, however, noted that there are questions concerning the relationships of the GED credential to employment, earnings, postsecondary program participation, and other long-term objectives of secondary education.

As of this writing, Texas is the only state where completion rates are computed and reported systematically, and this is the first year of such reporting. Some other states report annual graduation and dropout rates. NCES reports status completion rates and dropout rates, but these are not directly comparable with the cohort completion rate described in this report. NCES has begun developing a cohort completion rate reporting process to permit state-to-state comparisons, but there are methodological issues to be resolved before any findings can be released. It is likely that the comparison of Texas' completion rates with those of other states and/or any national average is still at least a year away.

**TEXAS EDUCATION AGENCY  
1996-97 DISTRICT ANALYZE CATEGORY DESCRIPTIONS**

**ENROLLMENT**

A nine-category grouping based on the total number of students enrolled by district as of the Public Education Information Management System (PEIMS) fall collection date (late October of each year). Enrollment excludes students who are served but not enrolled by districts.

**DISTRICT TYPE**

Classification of school districts based on factors such as size, growth rates, and proximity to urban areas is listed below. The charter school districts are in a separate category.

**Major Urban.** The state's largest metropolitan districts serving the Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso areas.

**Major Suburban.** Other districts in and around the major urban areas.

**Other Central City.** Major districts in other large Texas cities.

**Other Central City Suburban.** Other districts in and around the other large, but not major, Texas cities.

**Independent Town.** Largest districts in counties with populations of 25,000 to 100,000.

**Non-Metro: Fast Growing.** Districts not fitting in any of the preceding categories but exhibiting a five-year growth rate of at least 20 percent with at least 300 students enrolled.

**Non-Metro: Stable.** Districts not fitting in any of the preceding categories but with an enrollment exceeding the state median.

**Rural.** Districts not fitting in any of the preceding categories; districts either with an enrollment between 300 and the state median and a growth rate less than 20 percent, or with an enrollment less than 300.

**Charter Schools.** The 16 open-enrollment schools chartered by the State Board of Education for operation during 1996-97. Charter schools operate in facilities of commercial or nonprofit entities or districts.

### **PROPERTY WEALTH**

Total taxable property value divided by enrollment, which indicates district ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year (i.e., 1996) as determined by the Comptroller's Property Tax Division (CPTD). Enrollment is for the 1996-97 school year. The first wealth grouping shows 10 categories; the second simply shows districts above and below state average wealth; the third is a 20-category grouping, with each category representing about 5 percent of the state's students. The six special statutory and 16 charter school districts without taxable property wealth form a separate group in all three wealth groupings.

### **TOTAL TAX EFFORT**

A five-category tax effort grouping of districts defined by the total effective tax rate, which was determined by dividing the last completed calendar year's total levy amount by that year's CPTD total taxable property value. The total effective rate is the sum of the school district maintenance and operations (M&O) rate, and the interest and sinking fund standardized rate. Rates are expressed per \$100 of taxable value. The fifth category is reserved for the six special statutory and 16 charter school districts without property tax levies.

### **MAINTENANCE AND OPERATIONS EFFECTIVE TAX RATES**

A five-category tax effort grouping of districts showing the M&O effective tax rate, which was determined by dividing the last completed calendar year's M&O levy amount by that year's CPTD total taxable property value. The M&O rates shown include the local standardized rate and money generated by districts for equalizing wealth. The fifth category is reserved for the six special statutory and 16 charter school districts without property tax levies.

### **HIGHEST PROPERTY VALUE CATEGORY**

A CPTD classification based on property use. Thirteen CPTD categories are aggregated into four categories as follows.

**Residential.** Single-family, multi-family, and residential inventory.

**Land.** Vacant lots and rural real property (taxable).

**Oil and Gas.** Oil, gas, and minerals.

**Business.** Commercial and industrial real property, commercial and industrial personal property, and utilities.

A district is placed into one of the four preceding categories that represents its greatest total property value. The six special statutory and 16 charter school districts without taxable property wealth form a separate group.

**SMALL/SPARSE ADJUSTMENT**

A five-category grouping of districts based on the small/sparse adjustment amount as a percentage of the total adjusted basic allotment amount. This percentage represents the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts. The fifth category is reserved for districts receiving no small/sparse adjustment.

**COST OF EDUCATION INDEX LEVEL**

A five-category grouping of districts based on the Cost of Education Index (CEI) level. It reflects geographic variations in costs and prices outside district control. The current index, which has a minimum value of 1.0 and a maximum of 1.2, was implemented in 1991-92.

**OPERATING COST PER STUDENT**

A five-category grouping of districts based on operating cost per student. Operating costs are the sum of all expenditures budgeted for the operation of the district for all funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the current school year expenditures divided by enrollment. The source for budgeted expenditures is the fall PEIMS submission.

**EDUCATION SERVICE CENTER REGION**

The state is divided into 20 geographic regions; districts within each region are served by an education service center.

**TAAS: PERCENT PASSING ALL TESTS TAKEN**

A six-category grouping of districts based on the percentage of students passing the Texas Assessment of Academic Skills (TAAS). For Grades 3-8 and 10, the total number of students passing all sections taken of the TAAS is expressed as a percentage of the total number of students taking one or more tests. This percentage (a) excludes students taking the test in Spanish and special education students; and (b) includes only those students in the district in October of the school year, which is the percentage used for accountability purposes. The sixth category is reserved for districts not administering the test.

**SAT I/ACT: PERCENT TAKING**

A four-category grouping based on the percentage of 1995-96 graduates taking the SAT I and/or the ACT Assessment. The fourth category is reserved for districts that had no graduates.

**SAT I/ACT: PERCENT SCORING AT OR ABOVE CRITERION**

A six-category grouping based on the percentage of 1995-96 examinees who scored at or above the criterion (1110 on the SAT I Total and/or 24 on the ACT Composite) on the SAT I and/or ACT. The number meeting the criterion is divided by the number of examinees. The sixth category is reserved for districts that had no examinees.

### **STUDENT DENSITY**

A five-category grouping based on density, or the number of students enrolled per square mile. District square miles were determined through a joint effort by the State Property Tax Board (SPTB, now the CPTD), the Texas Education Agency (TEA), and the Texas Water Commission (TWC). Maps provided by districts to the SPTB were digitized by TWC to determine acreage. The fifth category is reserved for the six special statutory and 16 charter school districts without available mileage information.

### **ENROLLMENT CHANGE FROM PRIOR YEAR**

A five-category grouping based on the growth or decline in district student population over a one-year period. Districts with declining enrollment represent one category, while the remaining categories show one-year growth rates ranging from "0%-3%" to "10% and over."

### **PERCENT AFRICAN AMERICAN, HISPANIC, AND MINORITY STUDENTS**

Three six-category sets of groupings based on the ethnic composition of district student populations, as reported on PEIMS. Minority percent is calculated as the sum of all non-White populations expressed as a percentage of the total. Non-White populations include American Indian or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic.

### **PERCENT ECONOMICALLY DISADVANTAGED STUDENTS**

A six-category grouping based on the percentage of students enrolled in the district who are classified as economically disadvantaged on PEIMS as follows:

- a) eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
- b) from a family with an annual income at/below the federal poverty line;
- c) eligible for Aid to Families with Dependent Children (AFDC) or other public assistance;
- d) recipient of a Pell Grant or comparable state need-based financial assistance program; or
- e) eligible for programs assisted under Title II of the Job Training Partnership Act.

### **AVERAGE TEACHER EXPERIENCE**

A four-category grouping of average teacher experience years computed as the total professional experience years for each district teacher multiplied by each teacher's full-time-equivalent (FTE) count, followed by summing these products for the whole district, and dividing by the total teacher FTE count.

**AVERAGE TEACHER SALARY**

A four-category grouping by average district teacher salary computed as the total salary of teachers divided by the total teacher FTE count. Total salary amount does not include any other supplement.

**PERCENT MINORITY TEACHERS**

A six-category grouping based on the minority composition of district teaching populations. Minority percentage is calculated by summing all non-White teacher FTEs and dividing by the total teacher FTEs.

**PERCENT TEACHERS WITH ADVANCED DEGREES**

A four-category grouping by district percentage of teachers with advanced degrees computed as the FTE count of teachers with master's or doctoral degrees divided by the total teacher FTE count.

Austin, Texas 78711-3817

Make check or money order payable to:  
Texas Education Agency

## COMPLIANCE STATEMENT

### **TITLE VI, CIVIL RIGHTS ACT OF 1964; THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION**

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

- (1) acceptance policies on student transfers from other school districts;
- (2) operation of school bus routes or runs on a nonsegregated basis;
- (3) nondiscrimination in extracurricular activities and the use of school facilities;
- (4) nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
- (5) enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
- (6) nondiscriminatory practices relating to the use of a student's first language; and
- (7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

### **TITLE VII, CIVIL RIGHTS ACT OF 1964 AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT OF 1972; EXECUTIVE ORDERS 11246 AND 11375; EQUAL PAY ACT OF 1964; TITLE IX, EDUCATION AMENDMENTS; REHABILITATION ACT OF 1973 AS AMENDED; 1974 AMENDMENTS TO THE WAGE-HOUR LAW EXPANDING THE AGE DISCRIMINATION IN EMPLOYMENT ACT OF 1967; VIETNAM ERA VETERANS READJUSTMENT ASSISTANCE ACT OF 1972 AS AMENDED; IMMIGRATION REFORM AND CONTROL ACT OF 1986; AMERICANS WITH DISABILITIES ACT OF 1990; AND THE CIVIL RIGHTS ACT OF 1991.**

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.

### REPRODUCTION BASIS

This document is covered by a signed "Reproduction Release (Blanket)" form (on file within the ERIC system), encompassing all or classes of documents from its source organization and, therefore, does not require a "Specific Document" Release form.

This document is Federally-funded, or carries its own permission to reproduce, or is otherwise in the public domain and, therefore, may be reproduced by ERIC without a signed Reproduction Release form (either "Specific Document" or "Blanket").
