AUTHOR Gjertsen, Margaret; Risley, John S.
 TITLE Educational Software for Teaching Physics: Commercial Packages.
 INSTITUTION North Carolina State Univ., Raleigh. Dept. of Physics.
 PUB DATE May 87
 NOTE 43p.
 AVAILABLE FROM Physics Courseware Laboratory, Department of Physics, North Carolina State University, Raleigh, NC 27695-8202 (\$6.00).
 PUB TYPE Reference Materials - Directories/Catalogs (132) -- Collected Works - Serials (022)
 JOURNAL CIT The Physics Teacher; May 1987

EDRS PRICE MF01 Plus Postage. PC Not Available from EDRS.
 DESCRIPTORS Astronomy; *College Science; Computer Assisted Instruction; Computer Uses in Education; *Courseware; *Elementary School Science; Elementary Secondary Education; Higher Education; Measurement; Optics; *Physics; Science Education; *Science Instruction; Science Materials; *Secondary School Science; Thermodynamics

ABSTRACT

This document was developed to help teachers locate computer software to enhance the teaching of traditional physics at all educational levels. It contains a table listing approximately 900 packages. The table is organized by type of computer (Apple II, Atari, Commodore, IBM PC, Macintosh, and TRS-80) and is alphabetized first by publisher and then by title. The title used for the software is the most recent title from the publisher's catalog. The topics listed include the traditional subjects in physics as well as some on scientific thinking, mathematics topics used in teaching physics, and astronomy. The 14 major subjects included are: (1) astronomy; (2) electricity and magnetism; (3) general science; (4) mathematical physics; (5) measurement; (6) mechanics; (7) modern physics; (8) optics; (9) physics (multiple topics); (10) physics laboratory; (11) science (deductive reasoning and the scientific method); (12) thermodynamics; (13) waves; and (14) teacher utility packages. Many entries are also identified as to minor subjects addressed. The table also lists the appropriate grade level for the package, program type (intended use, e.g., tutorial, simulation, game), and cost. (TW)

 * Reproductions supplied by EDRS are the best that can be made *
 * from the original document. *

Application of two Teaching Physics Commercial Packages

During the past several years a large number of educational software packages have become available for physics teachers to use in their classrooms. The use of computers to enhance teaching of traditional physics topics offers many exciting possibilities. Concrete simulations coupled with interactive tutorials and problem solving add a new dimension to the understanding of traditional subjects. The widespread use of microcomputers in high schools and university campuses provide new opportunities for increased learning and experimentation with new teaching and evaluation techniques.

After a cursory survey of the market, however, a physics teacher will quickly realize that there are hundreds of possible programs to choose from, offered by dozens of publishers. To help assess the status of all these offerings, the Physics Courseware Laboratory at NCSU has been compiling a database of available commercial packages for the past few years. The data base consists of the title and publisher for each package, according to the kind of microcomputer on which it will run. Included are the major and minor subject areas, the appropriate instructional level, and the intended usage or type of program.

Listed in the table are approximately 900 packages. The table is organized by computer and then is alphabetized first by publisher and then by title. Some of the different packages are virtually the same since they can run on several different types of microcomputers. The only difference may be in the resolution of the screen display and the operating speed of the microprocessor. Because most physics teachers have only one type of microcomputer available for their class (if, in fact, they have any at all!), the list is organized by the type of computer. The Apple II is, by far, the most common microcomputer in the public high schools. The IBM PC is now available in some high schools, as well as in the universities. There are certain kinds of computers that are compatible with the IBM PC, but the degree of compatibility of software and hardware is hard to determine. For instance, the Tandy 1000, a popular educational microcomputer from Radio Shack, runs perhaps as much as 80% of the educational programs written for the IBM PC. Teachers will have to experiment with the courseware package in which they are interested, to see if their IBM-PC compatible microcomputer will run it. It is also possible to run some programs for one type of computer on another type using an additional interface board, such as the Quadlink board by Quadram for the IBM PC and the Trackstar board by Diamond Computer Systems for the Tandy 1000, which will allow these microcomputers to run software written for the Apple II, using DOS 3.3.

The headings for the table are defined as follows.

Computer. Listed in the first column of the table are the major microcomputers used in education at present: Apple II, Atari, Commodore 64, Commodore Pet, IBM PC, Macintosh, TRS-80, and TRS-80 Color microcomputers. The titles appearing in the 3rd column require the microcomputer listed in the first column.

Publisher. In most cases, the publisher of the package has been listed. However, if the publisher is not known or the address of the publisher is not known, a distributor is listed. A list of addresses and telephone numbers of the publishers and distributors is provided at the end of the table.

Title. The title chosen is the most recent title from the publisher's catalog. Titles of courseware packages are not as permanent as those for books. The title can vary from that written in the manual to that printed on the diskette or the title listed in the sales catalog by the publisher. It may also be different from year to year. Only courseware packages that are still available for purchase are included in the table.

Major and Minor Subjects. Listed in the table are courseware packages that cover subjects of special interest to physics teachers. The topics include all the traditional subjects in physics as well as scientific thinking, mathematics topics used in teaching physics, astronomy, and teacher utilities.

Fig. 1 lists the major subject areas subdivided into minor subject areas. These subject categories were chosen to correspond to the usual topics taught at a high school or at the lower division level in a university.

Some courseware packages include several topics in physics, some even cover a whole course. If there is a predominant subject, the software package has been categorized under that subject heading. Otherwise, the package is listed as "Physics." If a package includes nonphysics subjects as well as physics, it is listed as General.

When a software package also includes hardware for interfacing, so that the microcomputer can be used to measure quantities such as light intensity, temperature, sound frequency, or voltage, it is listed as a "Physics Lab." A minor subject is given when the package is concerned primarily with a subtopic. If several subtopics are covered, such as electric fields and electric charge, only the major subject, "Electricity and Magnetism," is listed.

Level. The instructional level of a software package is determined by the topics and depth of the coverage. Many packages are aimed at several grade levels. The level listed is the lowest grade for which the software is appropriate. Level EL is for elementary, JRH for junior high school or middle school, HS for high school.

UNIV-LD for lower division classes at a university, and UNIV-UD for upper division or graduate classes at a university. Many packages have excellent simulations that may be used for a wide range of instructional levels, depending on how the teacher uses and emphasizes the material. You should not discount a software program just because the instructional level appears to be too low.

Type. Type refers to the intended use of the courseware. Programs for individual or small-group use, which provide information on a topic or show how to solve a problem, are listed as a "Tutorial." Courseware that provides a demonstration or simulation to enhance a teacher's lecture is listed as a "Demo." Programs that help either a student or teacher perform arduous tasks such as vector addition problems with up to 20 vectors, graphing up to 100 pairs of data points, or keep homework, quiz, and test grades and calculate final grades are listed as a "Tool." Software which gives a simulation of a laboratory experiment, provides a prelab lesson in reading scales, calculates a histogram of all of the data taken by the class, or converts the microcomputer into a laboratory measuring instrument is referred to as a "Lab." Some software packages contain quizzes or tests in which the questions may be printed or delivered directly to the student by computer. Testing programs may provide hints, diagnostics, and answers or only questions. Such programs are listed as a "Test." A "Game" is a program that is concerned with physics principles in which the student can "win" if he has a superior understanding of physics. Some programs have lots of action like arcade-style games, while others are just a simple competition.

Cost. The price listed for the software package is for one copy. Often there is a discount if more than one set is ordered. Various backup policies exist for archival copies. Most software is copy protected, but many publishers replace damaged diskettes at little or no charge. In purchasing courseware it may be useful to place an order through a distributor like Cambridge Development Laboratory, Carolina Biological Supply, Fisher Scientific, and Projected Learning Programs. Their catalogs contain helpful descriptions of the programs. Often publishers and distributors allow you to review software before purchasing it. Addresses and telephone numbers of the distributors are listed at the end of the table.

The Physics Courseware Laboratory is preparing a directory of commercial physics courseware for publication. The directory will include all the categories of this listing as well as a description of each package.

Subjects	
Astronomy	Modern Physics Atomic Physics Molecular Physics Nuclear Physics Particle Physics Quantum Mechanics Radioactivity Relativity

Transform your Apple II into a classroom science lab.

Eureka... It's the Science Toolkit™!

You've just discovered everything you need for performing real experiments — not mere simulations.

Does a cannon ball fall faster than a golf ball? How is a radiator like an elephant's ear? Using the Science Toolkit, you and your students will discover the answers to these and many other fascinating questions.

This versatile program lets you explore a wide range of sciences: Life and earth sciences as well as physical science (grades 4-12).

With the Science Toolkit, you get highly sensitive scientific instruments for a fraction of what you'd normally pay. So you can stretch your budget... without lowering your standards.

And that's one of the most valuable discoveries any teacher can make!

Comprehensive Teacher's Guide helps you plan specialized instruction.

Light and temperature probes are highly sensitive scientific instruments.

Start mastering science with the Master Module™

The Master Module provides accurate light and temperature probes plus four on-screen instruments — a timer, thermometer, light meter and strip chart recorder — to let your students investigate the world of science. Using common household objects, they can perform dozens of intriguing experiments.

Move into high gear with the Speed and Motion Module™

Module 1: Speed and Motion adds a second light probe and a balloon-powered car to your toolkit, plus two more software instruments: a speedometer and tachometer. Use them with the Master Module to study thrust, acceleration, wind resistance and centrifugal force. (Requires Master Module.)

Shake, rattle and roll with the Earthquake Module™

Add Module 2: Earthquake Lab to explore the phenomena of harmonic and wave motion — including earthquakes (both real and simulated). The module includes a highly sensitive seismoscope and on-screen seismograph. A plotter lets you print your results in graph form. (Requires Master Module.)

To order or for more information, see your software retailer or call Broderbund Software-Direct at (415) 479-1165.

Science Toolkit	\$99.95
Master Module	\$99.95
Speed and Motion Module	\$99.95
Earthquake Module	\$79.95

Award of Excellence

— Classroom Computer Learning, Feb. 1987

"...an educational bargain for the science classroom."

— Science and Children Nov./Dec. '86

"...you are addressing the needs of thousands of science teachers at the elementary, junior high and senior high levels who know they should incorporate technology into their science curricula but are not quite certain how to do it."

— M. Elaine Anderson

Wisconsin State Department of Public Instruction

WHETHER YOU'RE INTO APPLES OR BIG BLUE,

the
Nucleus INC

WE CAN MAKE A MULTICHANNEL ANALYZER FOR YOU

MODEL 811 MICRO ADC

If you have an Apple® II or IIe, microcomputer in your lab, our Model 811 micro-ADC card (with conversion gains from 256 to 2048) can turn it into a multichannel pulse height analyzer. The 811 card plugs directly into an empty computer slot, and with the software we provide, you have the capability to acquire data, preset times, ROI, overlap, save spectra on disk, move a cursor, and many more features normally offered on a full-blown multichannel analyzer.

**New Software Available.
Write For Free Copy
Listing Model and
Serial Number.**

MODEL IBM-PCA

Turn your IBM personal computer into a full feature, multichannel pulse height analyzer simply by adding our PCA plug-in card.

Available in 1K to 8K channel versions, standard hardware features include a 100 MHz ADC, Single Channel Analyzer with upper and lower level discriminators, 16 million counts per channel on board memory, built-in delay line for coincidence counting and a 10 MHz multichannel scaler. Standard software offers either color or monochrome live time graphics display, smoothing, stripping, auto peak search, and programmable conversion gains. A complete Nuclide Identification Package with custom libraries and decay correction is optional.

**EXCELLENCE IN NUCLEAR INSTRUMENTATION

STRUCTURED SCIENTIFIC SOFTWARE, INC.

INTRODUCES-

Powerful scientific and engineering software that :

- HAS A POWERFUL ON SCREEN RPN CALCULATOR WITH OVER 200 PROGRAMMABLE FUNCTIONS
- SOLVES ALGEBRA, TRIGONOMETRY, MATRIX, AND CALCULUS PROBLEMS
- INTEGRATES, DIFFERENTIATES, FINDS ROOTS, AND SKETCHES FUNCTIONS
- ANALYZES DATA, GIVES STATISTICS, AND PERFORMS REGRESSION
- SOLVES DIFFERENTIAL EQUATIONS
- OPERATES IN REAL OR COMPLEX MODE
- HAS CONTINUOUS MEMORY
- EXCHANGES ASCII FILES
- HAS AUTOMATIC 8087 COPROCESSOR SUPPORT AT NO EXTRA COST

IT'S STELLAR SOFTWARE
FOR STATE-OF-THE-ART EASY-TO-USE
OPTICAL RAY TRACERS
FOR THE
CLASSROOM AND LABORATORY

Our products run on graphics-equipped IBM PC/XT/AT's and compatibles. These programs are fully compiled from thoroughly tested high level code, and are ready to run. Versions are available for every kind of graphics display, and for both numeric coprocessor and non-coprocessor machines. Each program comes with a set of fully worked examples and tutorials on disk. Each also has a concise user manual that includes background theory, operation, interpretation, and references. Our software converts each of your PC's into a fully equipped optics workbench!

BEAM TWO handles coaxial systems:

- lenses, mirrors, irises
- exact three dimensional trace
- convenient built-in table editor
- all functions are menu driven
- all files are DOS compatible
- 2-D system and ray layout graphics
- diagnostic plots
- Monte-Carlo spot diagrams
- least-squares optimizer
- specify CGA/EGA or Hercules graphics

\$89 postpaid if prepaid, quantity 1-9
CA add 7% sales tax

BEAM THREE is for advanced applications:

- all the above functions
- 3-D optics placement
- tilts
- decenters
- 3-D layout viewpoints
- polynomial aspherics
- toric surfaces
- diffraction gratings
- refractive index tables
- specify CGA, EGA, or Hercules graphics

\$289 postpaid if prepaid, quantity 1-9
CA add 7% sales tax
