IDENTIFIERS *Wisconsin Student Assessment System

ABSTRACT

This report displays summary results from the Wisconsin Student Assessment System 1994-95 Eighth Grade Knowledge and Concepts Examinations for all Wisconsin school districts and schools with an eighth grade. Statewide data for 57,388 of Wisconsin's 58,821 eighth graders are reported; certain categories, such as limited English speaking students, are excluded. Data from the districts are reported in alphabetical order, with schools containing eighth graders listed under each district. Mean raw score, national percentile rank and stanine, and state percentile rank and stanine are listed for each multiple-choice subject area (reading, mathematics, language, science, and social studies), the multiple-choice battery total, and two types of writing (imaginative and persuasive). An average grand composite score gives an indication of overall district achievement. These results are presented in tabular form (187 pages). (SLD)

Wisconsin Student Assessment System 1994-95 Eighth Grade Knowledge and Concepts Examinations

This report displays summary results from the Wisconsin Student Assessment System (WSAS) 1994-95 *Eighth Grade Knowledge and Concepts Examinations* for all Wisconsin districts and schools. **The results of EEN, Sec. 504, and LES students are not included in data displayed on this report.**

On the first page, statewide data are followed immediately by data from the first (alphabetical order) district as well as all schools in that district. After data from all schools in the first district are reported, the second district is reported followed by all of its schools, then the third district, and so on.

The following data are reported for the state, and for each district and school:

- the total number of eligible students enrolled (not including EEN, Sec. 504, and LES students);
- number and percent (based on the number enrolled) of eligible students taking each of the multiple-choice tests as well as those with a multiple-choice Battery Total, number and percent of eligible students submitting each type of Writing essay, and number and percent of eligible students taking each of the short answer tests;
- mean raw score, national percentile rank and stanine (corresponding to the mean national NCE), and state percentile rank and stanine (corresponding to the mean state NCE) for each multiple-choice subject area, the multiple-choice Battery Total, and for each type of Writing;
- mean raw score for each short answer subject area; and

- the Average Grand Composite Score.

The Grand Composite Score has been designed by the Wisconsin Department of Public Instruction to provide an overall indication of student achievement. It is reported only for students who took ALL of the academic tests, including five multiple-choice tests, four short answer tests, and two Writing essays—results from the career component are not included. Each of the multiple-choice tests consisted of 30 items (a total of 150 items), with each item worth one point. Each of the short answer tests consisted of three items (a total of 12 items), with each item worth from zero (0) to three points for a maximum score of 36 points. Each of the Writing essays was worth a maximum of 12 points. Each student's Grand Composite Score was computed by adding the score earned on the multiple-choice tests, twice the score earned on the short answer tests, and the scores earned on the Writing essays. The maximum number of points possible was 246 (150 multiple-choice points + 72 short answer points + 24 Writing essay points = 246).

The Average Grand Composite Score displayed in this report for each group (state, district, or school) is the average of the Grand Composite Scores earned by the students in that group.

NOTES:

- 1) If there is only one eighth-grade school in the district, there will be no school data reported since the school and district results are identical.
- 2) Because the publisher's norms are applicable only to its published test forms, and because the WSAS short answer tests are *subsets* of the more lengthy published forms, norm-derived scores such as percentile ranks and stanines are not available for the short answer tests.
- 3) Please note the following in regard to entries for "Number of Eligible Students Tested": These entries represent only the number of *eligible students* (not including EEN, Sec. 504, and LES students) who took each subject area test. The corresponding mean raw scores and percentile ranks are based on the results of these students.
- 4) No results have been reported for any school or district in which 5 or fewer students were tested.

CAUTION

For groups of 25 or fewer students, the DPI cautions against overinterpretation or misinterpretation of results based on the relatively small number of participants.

Table with columns: Multiple Choice (Reading, Math, Language, Science, Social Studies, Battery Total), Writing Test (Imag- inative, Per- suasive), Short Answer (Reading, Math, Science, Social Studies), and Average Grand Composite Score. Rows include Northland Pines Dist, Northwood Dist, and Norwalk-Ontario Dist.

NOTES: "Percent of Eligible Students Tested" is based on the "Total Number of Eligible Students Enrolled."

* If a district has only one school, the school results are not reported because they are identical to the district's results.
