ABSTRACT

New approaches in the junior high social studies classroom are provided in this curriculum guide framework. Emphasis is upon the use of activities to help students become informed citizens, understand and have empathy for others, and organize and analyze knowledge. Interdisciplinary social studies are organized around substantive and methodological concepts. For grade 7 the major concepts are self, culture, environment, and communication; for grade 8, change, conflict, communication, self, rights, and institutions; and for grade 9, understanding self, relationship to others, self image and character, modes of behavior, modes of communication, future goals, adolescent problems, respect, values, and standards. Each grade level section includes a framework page; a concept and skills page; unit planning sheets that stress behavioral objectives for three selected concepts; and a multi-media book list. (SJM)

PHILOSOPHY

We are faced with an explosion of knowledge, some experts estimating that our accumulation of information doubles every ten years. This trend is likely not only to continue but to accelerate.

Therefore, we recognize the futility of continuing to try to "cover" a subject and the necessity of giving thought to selecting those bodies of knowledge which justify the expense of time and effort, and, more important, to assist students in their efforts to acquire tools and processes by which they can deal with knowledge on their own.

We believe also that the function of a social studies program is to lead an individual to a greater understanding of himself and his fellow human beings.

In the light of this philosophy, we consider these to be our general objectives:

To assist the student in becoming an informed individual.

To develop an analytical student.

To encourage compassion and empathy.

During the past year the junior high social studies department chairmen met frequently in workshop sessions. A skeleton curriculum guide was put together by this group. This past summer the writing committee expanded this outline. The committee feels the resulting document will be an aid to some new approaches in the junior high social studies classrooms.

Our ultimate goal has been to benefit the individual student. We are sincere in our attempt to aid the teacher as well as the student. However we do not intend this to be a syllabus. We feel this publication can be developed more fully with the classroom teachers' input. If you have questions about interpretation please discuss them with your department chairman or contact any committee member. When you have suggestions concerning additions or deletions, please make note of this or tell your department chairman. In the spring we will have a feed-back session with your input evaluating this curriculum guide.

The following explanation might aid you in interpreting this guide:

The entire guide is built around the idea of teaching CONCEPTS through student involvement. We have defined CONCEPTS as well as BEHAVIORAL OBJECTIVES. Each grade level includes a page titled FRAMEWORK. Here are listed the CONCEPTS to be developed in that grade. When the QUESTIONS in the following column are answered, the CONCEPTS should be clear to the student. The TOOLS column lists the subject matter areas that can be used to answer the preceding QUESTIONS. The SKILLS column indicates skills which should be developed during the process of employing the TOOLS used to answer the QUESTIONS to develop understanding of the CONCEPTS.

Following the FRAMEWORK page is a list of the same CONCEPTS listed on the FRAMEWORK page. Here are listed some ideas to further develop the understanding of the CONCEPTS. These lists are not intended to be conclusive.

The SKILLS page simply articulates the desirable SKILLS to be developed at that grade level.

Following the SKILLS page are 3 Unit Planning Sheets. The committee has selected 3 CONCEPTS and has worked these pages out as guides to help teachers develop their own Planning Sheets. The committee feels the listing of BEHAVIORAL OBJECTIVES is one of the best ways to plan for the teaching of CONCEPTS.

The BOOK LISTS following the Unit Planning Sheets are not conclusive. We would appreciate your input here, also.

Our thanks goes to the Anchorage Borough School District; to Lucille Frey, Social Studies Consultant and the following department chairmen: Tom Kretzinger, Central; Andy Kirk, Chugiak; Betty Hanson, Clark; and Anne Gaffney, Mears.

APPROACH

To lend some structure to our selection of data for consideration in the social studies, we have chosen to use the conceptual approach. This enables us to establish some priorities of relevance, and subject matter can be chosen on the basis of how well it conveys the concepts which seem important enough to teach at a given level.

Student involvement stimulates relevance. An activity approach involves students.

POSSIBLE ACTIVITIES TO TEACH A CONCEPT:

The illustration above re-emphasizes our belief that the purpose of instruction is to help the individual "actively organize his own knowledge, rather than passively store the inferences and sets of data put together by someone else." (*the CALIFORNIA SOCIAL SCIENCES EDUCATION FRAMEWORK)

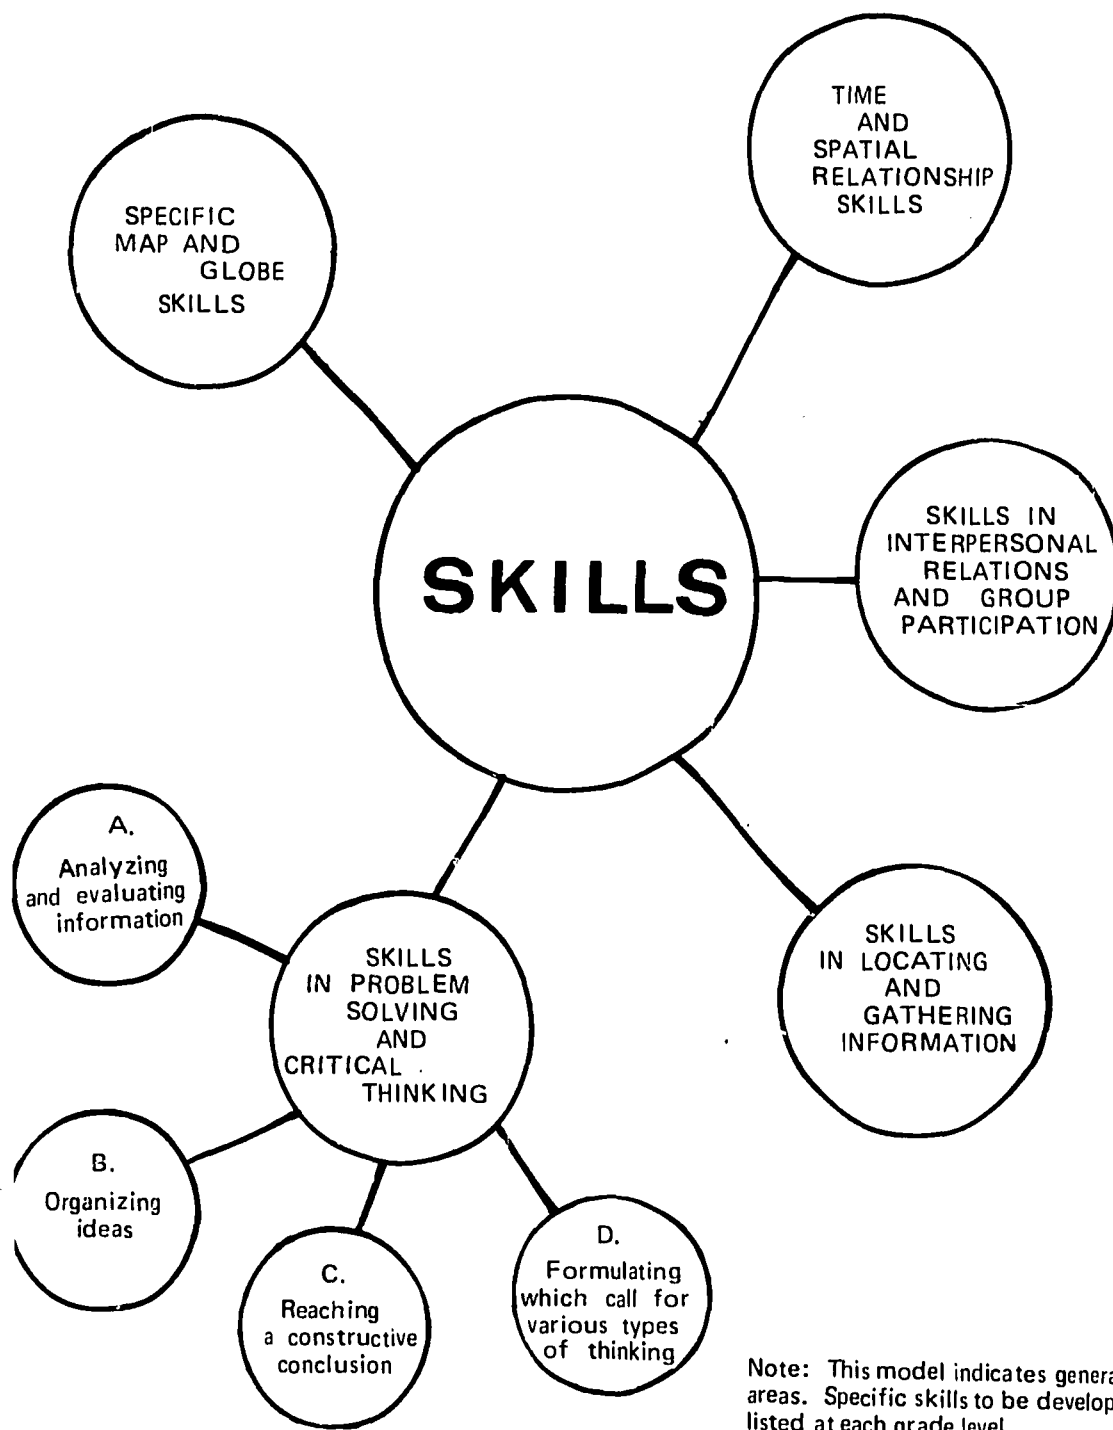

CONCEPT

"A concept is an abstract idea, usually expressed in a word or phrase, which organizes or classifies phenomena according to common characteristics. A concept therefore becomes a tool for use in studying human behavior. There are two major types of concepts. The first type, substantive concepts, deal with the content of the discipline (s). Examples are: change, scarcity, power, culture, institution, environment, nationalism, westward movement, etc. The second type, methodological concepts, deal with the process, procedures, and skills which are included in a particular discipline. Examples are: proof, frame of reference, openness, observation, objectivity, skepticism, interpretation, evidence, etc." Price, Roy A., et. al., MAJOR CONCEPTS FOR THE SOCIAL STUDIES, Curriculum Center, Syracuse University, 1965.

Social Studies in the Anchorage Borough School District should be an inter-disciplinary approach including the following disciplines:

1. Anthropology = man and his relationship to culture
2. Economics = man and his relationship to supply and demand
3. Ecology = man and his relationship to environment
4. Geography = man and his relationship to the physical world
5. History = man and his relationship to the past
6. Political Science = man and his relationship to government
7. Psychology = man and his relationship to himself
8. Sociology = man and his relationship to society

Learning in the junior high school should be an integrated social studies approach drawing from all disciplines rather than teaching within a specific discipline. Learning should be a system of investigation. This system should include an understanding of key concepts, generalizations and themes; competence in using methods of inquiry; basic skills needed for understanding the system. Thus the curriculum is organized around concepts and key questions.

Note: This model indicates general skill areas. Specific skills to be developed are listed at each grade level.

BEHAVIORAL OBJECTIVES:

A behavioral objective is a specific and observable student behavior which is performed in such a way as to be measurable. A behavioral objective, therefore, specifies what a student will be able to do so that a teacher can measure learning achievement. Some examples of behavioral objectives are:

1. The student should list, in writing, three ways in which man has changed his physical environment.
2. The student should be able, in writing, to distinguish between conformity and dissent based on the use of selected materials.
