ABSTRACT

This book provides a 1977-1978 composite state-by-state profile of higher education in states of the Southern Regional Education Board (SREB), an enlargement of information concerning the education of blacks, and a set of alternate college enrollment projections. Most of the measures include elements for the nation, the 14-state region and each of the SREB states. Selected statistics are provided on the following areas: population and economy, enrollment and institutions, enrollment projections, degrees, institutional finances, student finances, and faculty. Tables include the following information: per capita personal income, state and local tax revenues, number of postsecondary education institutions by type and control, full-time-equivalent enrollment in public institutions, total enrollment by level, graduate enrollment, part-time enrollment, medical school enrollment, full-time black undergraduate enrollment in predominantly black institutions, total black enrollment by level, black enrollment by type of institution, projections of total enrollment to 1981 and 1986 assuming no change in participation rates and assuming continuation of past trends in participation rates, degrees awarded to black students and by sex, current funds revenues for public institutions, current funds expenditures, federal obligations to universities and colleges by agency, federal financial aid programs/amounts allotted, state aid programs to students, and salaries of faculty. State agencies are listed and a bibliography is included. (SW)

FOREWORD

The Southern Regional Education Board has published fact books on higher education in the South since 1956—for the past ten years on a regular biennial basis. Mounting interest in these kinds of publications in recent years suggests that support for decisions about higher education is sought increasingly in factual information. In response to various requests, the 1977-78 edition of the *Fact Book on Higher Education in the South* includes three features to which attention is called: (a) a composite state-by-state profile of higher education, (b) an enlargement of information concerning education of blacks, and (c) a set of alternate college enrollment projections.

The state-by-state profiles (pp. 1-8) present for each state several summarizing measures of higher educational characteristics and display these measures so they may be viewed readily with those of other states. Readers are also referred to the accompanying notes which provide definitions of the measures used and cautionary remarks about their limitations.

Tables 14, 15, 16, 24, 26, 28 and 30, providing racial breakdowns of higher educational information, are meant to facilitate an understanding of the extent to which the SREB states are progressing in the provision of greater educational opportunity for blacks.

Alternate enrollment projections based on varying assumptions about the future are becoming recognized as increasingly necessary for the evaluation of needs in a period when changes over the long term will be much less constant than those of the last decade. The three alternatives presented (Tables 18, 19 and 20) emphasize how important the level of participation by the college-age population is in determining future enrollment and possible annual fluctuations.

As always, SREB staff solicit suggestions and comments about the presentation of these data.

WINFRED L. GODWIN
President

SREB STATE PROFILES 1977-1978

The state profiles which follow present data, summary statistics and indexes to highlight some of the major characteristics of SREB states and their higher education structure. Most of the measures include elements for the nation, the 14-state region and each of the SREB states. Divided into four sections—Population and Economy; Higher Education Finance; Enrollment; and Access and Participation—these profiles repeat some of the measures presented in the *Fact Book* tables and add additional ones. As with all descriptive statistics, they represent an effort to simplify complex structures into easily comparable summary measures. While the accuracy and comparability of higher education data has improved in recent years, definitional problems persist. The indexes presented should be used as general comparative measures, rather than exact expressions of a state's standing. More important, no one measure should be singled out without examining other related measures. For sources and caveats on use refer to both the related *Fact Book* table and the notes which follow.

Sample data from the U. S. Bureau of the Census (*Current Population Reports*, Series P-20, No. 314) includes estimates for only the 15 largest states.

Population and Economy (Columns 1-6)

Population figures are provisional estimates of resident population from the U.S. Bureau of the Census (*Current Population Reports*, Series P-25, No. 324). Data on personal income is from the U.S. Bureau of Economic Analysis (*Survey of Current Business*, August, 1977). Figures are preliminary 1976 data. Estimates of 1977 personal income and a revision of 1976 figures can be found in the August, 1978 issue of the *Survey of Current Business* (not available at time of publication). State and local government expenditure data is taken from the U.S. Bureau of the Census (*Governmental Finances in 1975-76*, September, 1977); state and local revenue data is from SREB's annual publication on *State and Local Revenue Potential* (1976).

Higher Education Finances (Columns 7-17)

The summary statistics and indexes in this section were derived from several different sources. They represent the latest data available on higher education financing at the time of publication.

State Appropriations as a Percent of Tax Revenues and Per Capita (Columns 7 and 8)

Data collected by M. M. Chambers and published by the National Association of State Universities and Land Grant Colleges (NASULGC) is used in these two indexes. The Chambers data excludes appropriations for capital outlay and dollars which originate from sources other than state taxes (e.g., federal revenue sharing and tuition). The figures include appropriations for medical, dental and optometry programs, agricultural experiment stations and extension services, governing or coordinating boards and regional compacts (e.g., SREB). Funds for fringe benefits are also included. Data published by Chambers are often in preliminary form and subject to change. Some states update their appropriations figures; others do not.

State Appropriations Per FTE Student (Columns 9 and 10)

These measures are calculated from the SREB data exchange with state agencies for higher education. Appropriations figures used in these indexes differ significantly from the Chambers data—medical, dental, optometry and training hospitals are excluded, along with appropriations for community service, cooperative extension and agricultural experiment stations. Appropriations to statewide coordinating and governing boards and SREB are also excluded. Fringe benefits are included. As with Chambers, figures represent only appropriations from state tax dollars with the exception of Texas which includes federal revenue sharing dollars. Full-time-equivalent enrollment is also provided by the state higher education agencies through the SREB data exchange. Credit hours for credit-bearing courses are reported; FTE enrollment excludes correspondence, adult education, short courses, continuing education, and community service activities as well as enrollment in medical, dental and

optometry programs. When comparing appropriations per FTE student, users should remember that differences across states and types of institutions reflect not only varying levels of support, but differences in program mix and institutional missions. Differences may also be the product of non-recurring appropriations for special programs or circumstances.

Average Faculty Salaries (Columns 12-14)

Salary data are provided through the SREB data exchange and are reported according to the Higher Education General Information Survey (HEGIS) definitions. Averages are for full-time faculty on a 9-10 month basis.

State Appropriations and Tuition and Fees as a Percent of Current Funds Revenues (Columns 11 and 15)

These measures are calculated from data in the HEGIS Finance survey. They provide an estimate of the contribution of these two sources to the total current funds revenue of institutions (which includes all current dollars received by institutions including money from auxiliary enterprises).

Tuition as a Percent of Per Capita Income (Columns 16 and 17)

Tuition data is provided through the SREB data exchange and is expressed as a percentage of per capita personal income in order to relate the level of individual tuition to the ability of a state's residents to pay. "Large Doctoral Institutions" are those which grant more than 100 doctoral degrees annually; two-year institutions include community colleges and technical institutes, but exclude, in this measure, two-year branches of four-year institutions.

Enrollment (Columns 18-28)

Total college enrollment is taken from the HEGIS survey of fall enrollment. For 1977, it is a final fall head count of all students, both full-time and part-time. Students enrolled in non-credit courses are excluded. The measures of the structure and mix of enrollment (Columns 25-28) are also derived from total enrollment as reported in HEGIS.

Access and Participation (Columns 29-36)

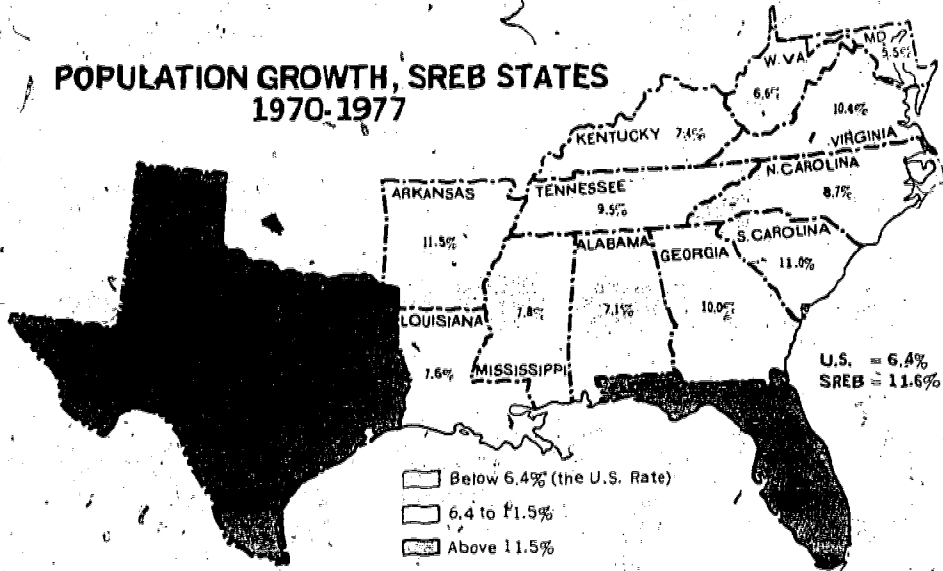

The measures in this section provide summary statistics, indexes and proxy measures of the participation rates in higher education for the population as a whole, and minority groups and women. Data on the black population of the states (Column 29) are taken from the U.S. Bureau of the Census *Current Population Reports* (Series P-23, No. 67). Enrollment data on black students (Column 30) are from the *Fall Enrollment and Compliance Report 1976* of the HEGIS survey.

Educational attainment of young people is the subject of the measures in Columns 32-35. The use of the age bracket 20 to 24 for measuring the extent

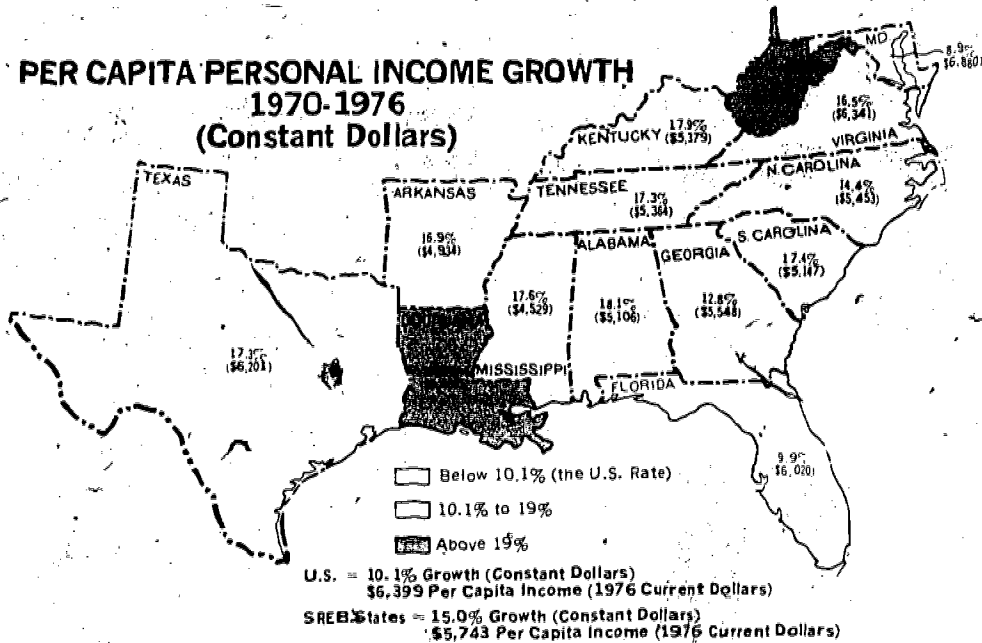

of high school completion allows for the inclusion of those who graduate late. The same age group is used for measuring the extent of college enrollment. In this case "participation" is measured by attainment of at least one year of college. Those 20 to 24 year-olds who have enrolled, but failed to complete the first year, are not counted. All of these measures are taken from data of the U.S. Bureau of the Census. The two included for 1977 (Columns 33 and 35) are taken from the sample data of the *Current Population Survey* (Series P-20, No. 314). Due to the size of the sample, estimates of educational attainment were made only for the 15 largest states in the U.S., which includes five in the SREB region.

The ratio of enrollment to population age 18 to 24 (Column 36) provides a proxy measure for participation of a state's college-age population in higher education. It is easily misunderstood and should be used with caution. The ratio represents a relationship between the state's college-age population (18 to 24) and the total enrollment of a state's collegiate institutions, which includes students outside the college-age population as well as students from outside the state. Because of these limitations, this ratio (which has been expressed in past *Fact Books* as a percentage) should not be confused with the actual level of enrollment of the 18 to 24 year-old population in higher education. Further, strict comparisons of the ratio across states would require that states have equal distributions of enrollment by age and comparable levels of out-of-state enrollment.

POPULATION AND ECONOMY

SOURCE: U.S. Bureau of the Census, *Current Population Reports*, Series P-20, No. 324 (April, 1978).

SOURCE: U.S. Bureau of Economic Analysis, *Survey of Current Business* (August, 1977).

POPULATION AND ECONOMY

Highlights

- Population in the South approached 66 million persons in 1977, as the result of a growth rate nearly twice the national rate since 1970. Population estimates for the decade of the 1980's project growth rates for the nation at 10 percent; for the South, 15 percent (see Table 1).
- College-age populations, expected to continue to increase for the remainder of the 1970's, will stabilize in the early 1980's and then decline by the end of the decade. Even when an expanded definition of college age is used (15 to 34 year-olds), this pattern of stabilization and then decline holds true. Half of the SREB states are expected to show declines in 15 to 34 year-olds during the 1980-85 period; and all but Florida are projected for stable or declining college-age populations by the end of the decade (see Table 4).
- Personal income in the South continues a long term trend of catch-up with the national average. Per capita income in SREB states was 86 percent of the national average in 1970, 90 percent in 1976. While personal income in the South has increased nearly 70 percent in current dollars since 1970, increases in constant dollars, which account for the effects of inflation, have been only 15 percent (see Table 2 and p. 9).
- State and local tax revenue relative to both population and personal income remained at lower levels in the South than for the nation in 1976. SREB states generated \$576 in tax revenue per capita compared to \$738 in the nation. These revenues were derived to a greater degree from sales taxes and a lesser degree from property and individual and corporate income taxes than was the national pattern (see Table 3).

ENROLLMENT AND INSTITUTIONS

DISTRIBUTION OF TOTAL COLLEGE ENROLLMENT BY AGE 1965, 1977

SOURCE: U.S. Bureau of the Census, *Current Population Reports*, Series P-20, No. 162 (March, 1967) and No. 321 (March, 1978).

ENROLLMENT AND INSTITUTIONS

Highlights

- Total college enrollment in the nation reached 11.4 million students in 1977 and surpassed 2.9 million students in the South. Enrollment in 1977 increased 3.6 percent in the South over the previous year, with the private sector growing at a slightly faster rate than the public (see Table 6 and p. 4).

- Two-year institutions continued to grow in importance, accounting for a full one-third of total enrollment in the South in 1977. The size of the two-year sector varied considerably among the SREB states, however, ranging from a high of 50 percent of total enrollment in Florida to a low of 10 percent in Louisiana (see Table 7).

- Graduate enrollment continues to encompass ever greater shares of total enrollment. While growth rates for graduate education nationwide slowed substantially in the 1970's (see Table 11), there has been little change in the South. Graduate enrollments increased by 30 percent nationwide from 1971 to 1976 (compared to 51 percent from 1966 to 1971) and 62 percent in SREB states (compared to 71 percent from 1966 to 1971).

- Part-time enrollment has also become a significant characteristic of enrollment during the 1970's. In the public sector, part-time students accounted for 43 percent of total enrollment nationwide in 1977, compared to 34 percent in 1971 (see Table 12). In the South, 38 percent of all students were enrolled part-time in 1977.

- Total black student enrollment nationwide surpassed 1 million students in 1976, accounting for 9 percent of total enrollment (see Table 14). Blacks are 11.5 percent of total population. In the South, the 426,000 black students enrolled represented 15 percent of total enrollment, compared to their 19 percent representation in the population. Black students, however, accounted for only 4.5 percent of first professional enrollments nationwide, (5.4 percent in the South) and 6 percent of graduate enrollments (10 percent in the South).

- Full-time black undergraduate enrollment (see Table 15) continued to grow at a faster rate than total enrollment, increasing nearly 40 percent in the South during the four-year period from 1972 to 1976. As black student enrollment increased during the period, the percentage of these students enrolled in the predominantly black institutions of the South decreased from 60 percent in 1972 to 50 percent in 1976.

- Measures of college participation and educational attainment are found in the state profiles section (p. 5). In 1977, 79 percent of the South's population, age 20 to 24, had completed high school, compared to 84 percent for the nation as a whole. Thirty-six percent had completed at least one year of college compared to 40 percent nationwide.

West Virginia	45,568	17,731		9,182	18,655	5,612

NOTE: Full-time-equivalent enrollments were calculated according to the following formulas:

$$\text{Undergraduate Enrollment} = \frac{\text{Credit Hours}}{15}$$

$$\text{Graduate Enrollment} = \frac{\text{Credit Hours}}{12}$$

* Enrollment excludes correspondence, adult education, short courses, continuing education, and community service as well as medical, dental and optometry enrollment.

Large doctoral granting institutions award 100 or more doctoral degrees annually.
 Smaller doctoral institutions award fewer than 100.

Master's institutions grant the master's or first professional as the highest degree.
 Other four-year institutions grant the baccalaureate as the highest degree.

^a Includes medical school enrollment.

SOURCE: SREB data exchange with state higher education agencies.

ENROLLMENT PROJECTIONS

ENROLLMENT IN HIGHER EDUCATION: U.S. TRENDS AND ALTERNATE PROJECTIONS

In Millions

SOURCE: National Center for Education Statistics, *Projections of Education Statistics to 1986-87*, advance data.

ENROLLMENT PROJECTIONS

The enrollment projections presented in Tables 18, 19 and 20 provide a range of projections based on different assumptions about participation in higher education during the next ten years. Each alternative is explicitly tied to the latest series of national projections produced by the National Center for Education Statistics (NCES). State and regional projections were developed by first calculating the individual state's share of national enrollment for the base year (1976), and then increasing or decreasing that share for the projected years (1981 and 1986) on the basis of projected changes in the 15 to 34 year-old population in the state (see Table 4). The projected "shares" of total enrollment were then applied to the three NCES national projections which made different assumptions about participation. Thus, a state's projected enrollment is the product of its historical share of total enrollment, its projected college-age population, and three different assumptions about participation used in the national projection. For example, for the region to achieve the high projections for 1981 and 1986 found in Table 19, participation rates will have to increase in the region during the projected period at the same rate of increase as experienced nationally during the 1967-76 period. The same assumption applies to each of the states.

Highlights

The Low Alternative

Assuming No Change in Participation Rates (Table 18)

- Without increases in participation, total U. S. enrollment can expect to grow at a modest 1 percent per year rate during the 1976-81 period, and then decline at about the same rate during the 1981-86 period.
- Due to greater population growth in the South, regional patterns will follow the U. S. pattern, but with somewhat larger annual growth rates from 1976 to 1981 (1.5 percent per year) and a smaller degree of decline in the 1981-86 period (0.6 percent per year).

The High Alternative

Assuming Continuation of the 1967-76 Trends in Participation (Table 19)

- With participation rates following the 1967-76 trends through 1986, total U. S. enrollment can be expected to reach 14.8 million by 1986, a 34 percent increase over 1976 levels. Much of that increase, however, will be experienced during the 1970's as the decline in the size of the college-age population reduces growth to less than 2 percent per year in the 1980's—even assuming that participation will continue to increase at its historical rate.

- The SREB region, under these assumptions, can expect to grow at a somewhat greater rate than the nation, due to the greater share of college-age population expected in the South. Annual growth rates would average 5 percent per year in the 1976-81 period and 2.3 percent per year in the 1981-86 period.

The Intermediate Alternative

Assuming Participation Rates at the Average of the Low and High Alternative (Table 20)

- Under this assumption, which implies a slowdown in the growth of participation, total U. S. enrollment will reach 12.6 million in 1981 and 12.9 million in 1986. Enrollment will grow at an average rate of about 3 percent per year from 1976 to 1981 and 0.5 percent per year during the first half of the 1980's.
- Enrollment in SREB states under the intermediate alternative will increase from its 1976 level of 2.8 million to 3.3 million in 1981 and 3.4 million in 1986. Under these assumptions of some increased participation, (albeit a lower rate than in the past), enrollments in the South will increase at an average of over 3 percent per year to 1981 and then at a rate of less than 1 percent per year to 1986.
- While projections of full-time-equivalent enrollment for SREB states have not been made, the NCES projection of FTE enrollment seen graphically on p. 31 shows a decline beginning in 1982, even under assumptions of some increase in participation. This is due to the past trends in participation which have remained relatively stable for traditional college-age men while increasing among women and older students, the latter of whom are more likely to be part-time students.

TABLE 18

**Projections of Total Enrollment to 1981 and 1986;
The Low Alternative: Assuming No Change in Participation Rates**

	Actual 1976	Projected		Percent Change	
		1981	1986	1976-81	1981-86

Alabama	156,173	162,000	147,000	+3.7	-9.3
Arkansas	67,453	70,000	66,000	+3.8	-5.7
Florida	345,745	408,000	436,000	+18.0	+6.9
Georgia	169,643	178,000	171,000	+4.9	-3.9
Kentucky	128,866	134,000	124,000	+4.0	-7.5
Louisiana	154,386	164,000	152,000	+6.2	-7.3
Maryland	209,513	229,000	222,000	+9.3	-3.1
Mississippi	97,703	104,000	96,000	+6.4	-7.7
North Carolina	248,480	261,000	248,000	+5.0	-5.0
South Carolina	121,544	122,000	112,000	+0.4	-8.2
Tennessee	181,346	192,000	184,000	+5.9	-4.2
Texas	621,155	680,000	670,000	+9.5	-1.5
Virginia	244,276	260,000	252,000	+6.4	-3.1
West Virginia	80,156	79,000	65,000	-1.4	-17.7

NOTE: The low alternative assumes that the participation rates by age and sex for the national projection will remain constant at the averages of the 1975 and 1976 participation rates. (National Center for Education Statistics, *Projections of Education Statistics to 1986-87*, advance data.) State projections were calculated by assuming that each state's share of total enrollment would change by the projected change in the 15-34 year old population (See Table 4). These projected shares of enrollment were then applied to the NCES total projection. U.S. projections are for the 50 states and the District of Columbia.

SOURCES: National Center for Education Statistics, *Projections of Education Statistics to 1986-87*, advance data. National Planning Association, *Regional Economic Projection Series 77-R-1*.

Maryland	209,513	266,000	297,000	+27.0	+11.7
Mississippi	97,703	120,000	128,000	+22.8	+6.7
North Carolina	248,480	303,000	332,000	+21.9	+9.6
South Carolina	121,544	142,000	149,000	+16.8	+4.9
Tennessee	181,346	223,000	247,000	+23.0	+10.8
Texas	621,155	789,000	896,000	+27.0	+13.6
Virginia	244,276	301,000	337,000	+23.2	+12.0
West Virginia	80,156	92,000	87,000	+14.8	-5.4

NOTE: The high alternative assumes that through 1986 the participation rates by age and sex of students for the national projection will follow the 1967 to 1976 trends. (NCES, *Projections of Education Statistics to 1986-87*, advance data.) State projections were calculated by assuming that each state's share of total enrollment would change by the projected change in the 15-34 year old population (See Table 4). The projected shares of enrollment were then applied to the NCE's total projection. U.S. projections are for the 50 states and the District of Columbia.

West Virginia.....	80,156	86,000	76,000	+7.3	-11.6

NOTE: The intermediate alternative assumes that the participation rates by age and sex of students for the national projection will equal the average of the rate for the low and high alternative projections. State projections were calculated by assuming that each state's share of total enrollment would change by the projected change in the 15-34 year old population (See Table 4). These projected shares of enrollment were then applied to the NCES total projection. U.S. projections are for the 50 states and the District of Columbia.

DEGREES

TRENDS IN DEGREES AWARDED U.S. AND SREB STATES 1951-1976

SOURCES: U.S. Office of Education, *Earned Degrees Conferred*, 1951; 1956; 1961; 1971. National Center for Education Statistics, *Degrees Awarded Between July 1, 1975 and June 30, 1976*, unpublished data.

DEGREES Highlights

- Measured in terms of percentage increase, the growth of first professional and master's degrees in the 1970's has been the most significant statistical change in the outcomes of higher education in the South during the decade. Master's degrees granted in 1975-76 increased 71 percent over their 1970-71 levels; first professional degrees, 62 percent. Master's and first professional degrees now account for more than one of every four degrees granted in senior institutions in the South. In 1966, only one of every seven degrees granted was at the master's or first professional level.
- As the graphic on p. 37 illustrates, the annual production of doctorates in the South has increased elevenfold over its 1951 levels, as compared to less than a fivefold increase nationwide. While doctoral degree production nationwide has stabilized in recent years, the South's production continues to increase. The growth rate in annual production during the 1970's has been nearly four times that of the nation (see Table 29).
- In 1975-76, for the first time, the Higher Education General Information Survey (HEGIS) on degrees awarded has collected data by race. Tables 24, 26, 28 and 30 include racial breakdowns. A few highlights:
 - 59,297 bachelor's degrees were granted to blacks nationwide in 1976; 24 percent of these were in the field of education (compared to 17 percent for all students); 2.3 percent in engineering (compared to 5 percent for all students).
 - Black students in the South represented 3.6 percent of all first professional degrees granted in dentistry; 5.4 percent in medicine; and 4.5 percent in law.
 - Of the 8,903 master's degrees awarded blacks in SREB states in 1975-76, 75 percent were awarded in the field of education (compared to 52 percent for all students earning the master's). Four percent of the black students earning a master's in the South did so in the field of business and management (compared to 10 percent for all students).
 - The doctorate was awarded to 320 black students in the SREB states in 1975-76, accounting for 4.3 percent of the doctorates awarded that year. Black graduates, however, represented 10 percent of all recipients of the doctorate in the field of education, and less than 2 percent of the graduates in the biological and social sciences (see Table 30).

INSTITUTIONAL FINANCES

PERCENTAGE DISTRIBUTION OF CURRENT FUNDS REVENUES PUBLIC UNIVERSITIES IN THE SOUTH 1975-76

CURRENT FUNDS EXPENDITURES PUBLIC UNIVERSITIES IN THE SOUTH 1975-76

SOURCE: *Current Funds Revenues and Expenditures in Public Institutions of Postsecondary Education, SREB States, 1975-76* (Atlanta: Southern Regional Education Board, 1978).

INSTITUTIONAL FINANCES

Highlights

- Operational appropriations to higher education from state tax funds surpassed \$15 billion in the United States in 1977-78 (see Table 31). SREB states appropriated \$4.6 billion, a 24 percent increase over levels two years earlier. Two-year increases ranged from a low of 11 percent in South Carolina to a high of 32 percent in Kentucky. (For other indexes of financial support see the state profiles on pp. 2 and 3.) Appropriations per capita in the SREB states (\$70) showed no significant difference compared with the U. S. rate (\$71).

- Appropriations per FTE student are presented in Table 32. In large public doctoral granting institutions (those which grant 100 or more doctoral degrees annually) they averaged \$2,434 for the region, with a range from a low of \$1,714 per FTE student in Louisiana to a high of \$2,819 in North Carolina. Appropriations per FTE student in other public four-year institutions were lower, averaging \$2,051 in smaller doctoral institutions, \$1,994 in four-year institutions with the master's or first professional degree as the highest offering; and \$1,919 in institutions with the bachelor's degree as the highest offering.

- Appropriations to higher education consumed a larger percentage of state tax funds in SREB states (16 percent) than in the nation as a whole (14 percent) in 1976 (see profiles p. 2). The percent of state tax funds consumed by higher education ranged from a high of 22 percent in Alabama to a low of 11 percent in Maryland.

- While state appropriations are the single largest contributor to the current funds available to public institutions, they nevertheless accounted for only 44 percent of the total nationwide (46 percent in the region) in 1976. Tuition and fees was the next largest contributor, at 13 percent (12 percent in the region). As for expenditures of current funds, instruction consumed 36 percent of current funds; research, 8 percent; and public service, 4 percent (see Tables 33 and 34).

NOTE: Appropriations exclude dollars for capital outlay and funds which originate from sources other than state tax funds. The figures include appropriations for medical, dental and optometry programs, agricultural experiment stations and extension services as well as sums appropriated to state scholarships and governing or coordinating boards. Funds for fringe benefits are also included. Data for some SREB states have been updated from that published by M. M. Chambers.

STUDENT FINANCES

COLLEGE ENROLLMENT RATES OF DEPENDENT FAMILY MEMBERS 18 TO 24 YEARS OLD BY FAMILY INCOME OCTOBER 1976 (in 1967 Dollars)

SOURCE: U.S. Bureau of the Census, *Current Population Reports*, "School Enrollment—Social and Economic Characteristics of Students, October, 1976," Series P-20, No. 319 (February, 1978).

STUDENT FINANCES

Highlights

- Tuition and fees for undergraduates in 1977-78 were highest in doctoral granting institutions, lowest in community colleges and technical institutes. The range of average tuition in large public doctoral granting institutions was from a low of \$425 per academic year in West Virginia to a high of \$805 in Maryland (see Table 27).
- Tuition relative to personal income is another way of analyzing costs and the student's ability to pay. The profiles on p. 3 show tuition and fees as a percentage of personal income. The SREB average in large public doctoral granting institutions was 10 percent, with a range from a low of 6 percent in Texas to a high of 15 percent in Mississippi.
- The data on federal financial aid programs displayed in Tables 38, 39 and 40 reveal the change which has occurred in these programs in the past several years. Institutionally based programs (National Direct Student Loans, College Work Study, Supplemental Educational Opportunity Grants) continued to decrease, as funds awarded directly to students have increased. The Basic Educational Opportunity Grant Program (BEOG) first funded in 1973, now awards grants to students at all undergraduate levels. Grants in the South in 1976-77 totaled nearly \$436 million, awarded to 574,000 students.
- State financial aid programs showed substantial growth from 1976 to 1977, increasing by one-third in dollars awarded. Southern states paid out over \$56 million in grants to nearly 100,000 students. Despite this increase, the region accounted for only 7.5 percent of the dollars awarded through state aid programs nationwide. The average grant in SREB states in 1977-78 was \$562, compared to \$627 in the nation as a whole.

FACULTY

**DEMAND FOR NEW FACULTY IN THE SOUTH,
PROJECTED TO 1986
HIGH, INTERMEDIATE, LOW SERIES**

SOURCE: David S. Spence, "The Demand for New Faculty in the South, 1976-1986 in *The Closing System of Academic Employment* (Atlanta: Southern Regional Education Board, 1978).

FACULTY Highlights

• The percentage of faculty members holding tenure in 1977-78 increased in both public and private institutions over 1975-76 levels, with the increase coming among women while levels of tenure among men remained stable (see Table 42 and the *Fact Book on Higher Education in the South, 1975-76*). Sixty-two percent of the male faculty members in public institutions held tenure; 45 percent of the women. Tenure levels in SREB states ranged from a low of 30 percent in Mississippi to a high of 67 percent in Florida.

• Salaries in SREB states for full-time faculty in public doctoral granting institutions averaged \$19,370 in 1977-78—a 17 percent increase over the *All Ranks* average in 1975-76. The *All Ranks* average in non-doctoral granting four-year institutions increased 14 percent in two years to its 1977-78 level of \$16,557. Average salaries in public community colleges and technical institutes—at \$14,509 in 1977-78—were also up 14 percent in the two-year period (see Tables 43, 44 and 45 and the *Fact Book on Higher Education in the South, 1975-76*).

AGENCIES RESPONSIBLE FOR COORDINATION OF POSTSECONDARY EDUCATION

This list includes for each state, (1) the state agency responsible for the coordination of collegiate institutions, including agencies responsible for community college systems where this function is a separate responsibility, and (2) the postsecondary education (1202) commission (*), in states where such a commission has been established.

Alabama

Dr. John F. Porter, Jr., Executive Director
Commission on Higher Education*
Suite 221, One Court Square
Montgomery, Alabama 36104
205-832-6555

Arkansas

Dr. M. Olin Cook, Director
Arkansas Department of Higher Education*
1301 West Seventh Street
Little Rock, Arkansas 72201
501-371-1441

Florida

Mr. Charles B. Reed, Director
Florida Postsecondary Education
Commission*
Florida Department of Education
Tallahassee, Florida 32304
904-488-7561

Dr. E. T. York, Jr., Chancellor
Florida Board of Regents
State University System of Florida
107 West Gaines Street, Suite 210
Tallahassee, Florida, 32304
904-488-4234

Dr. Lee Henderson, Director
Division of Community Colleges
Department of Education
Tallahassee, Florida 32304
904-488-1721

Georgia

Dr. David M. Morgan, Staff Director
Governor's Committee on Postsecondary
Education*
66 Luckie St., N. W., Suite 808
Atlanta, Georgia 30303
404-656-2526

Dr. George L. Simpson, Jr., Chancellor
Board of Regents of the University System
of Georgia
244 Washington Street, S. W.
Atlanta, Georgia 30334
404-656-2204

Kentucky

Dr. Lyman Ginger, Executive Director
Kentucky Commission for Postsecondary
Education*
Fort Boone Plaza
Frankfort, Kentucky 40601
502-564-2100

Mr. Harry M. Snyder, Jr., Executive
Director
Kentucky Council on Higher Education
West Frankfort Office Complex
U. S. 127, South
Frankfort, Kentucky 40601
502-564-3553

Louisiana

Dr. William Arceneaux, Commissioner
Louisiana Board of Regents*
Suite 1530, One American Place
Baton Rouge, Louisiana 70825
504-342-4253

Maryland

Dr. Sheldon H. Knorr, Commissioner
Maryland State Board for Higher
Education*
The Jeffrey Building
16 Francis Street
Annapolis, Maryland 21401
301-269-2971

Mississippi

Dr. E. R. Jobe, Executive Director
Postsecondary Education Planning Board*
Suite 116, Universities Center
1855 Eastover Drive
Jackson, Mississippi 39211
601-354-7523

Dr. E. E. Thrash, Executive Secretary
and Director
Board of Trustees of State Institutions
of Higher Learning
P. O. Box 2336
Jackson, Mississippi 39205
601-982-6611

Dr. George V. Moody, Director
Division of Junior Colleges
State Department of Education
P. O. Box 771
Jackson, Mississippi 39205
601-354-6962

North Carolina

Mr. William C. Friday, President
University of North Carolina
P. O. Box 2688
Chapel Hill, North Carolina 27514
919-933-6981

Dr. Ben E. Fountain, State President
Department of Community Colleges
Education Building
State Board of Education
Raleigh, North Carolina 27611
919-733-7051

South Carolina

Dr. Howard R. Boozer, Executive Director
South Carolina Commission on Higher
Education*
1104 Rutledge Building
1429 Senate Street
Columbia, South Carolina 29201
803-758-2407

Tennessee

Dr. G. Wayne Brown, Executive Director
Tennessee Higher Education Commission
501 Union Building, Suite 300
Nashville, Tennessee 37219
615-741-3605

Texas

Dr. Kenneth H. Ashworth, Commissioner
Coordinating Board, Texas College and
University System*
P. O. Box 12788 - Capitol Station
Austin, Texas 78711
512-475-4361

Virginia

Dr. Gordon K. Davies, Director
State Council of Higher Education
for Virginia*
700 Fidelity Building
9th and Main Streets
Richmond, Virginia 23219
804-786-2143

West Virginia

Dr. Ben L. Morton, Chancellor
West Virginia Board of Regents*
950 Kanawha Boulevard, East
Charleston, West Virginia 25501
304-348-2101

NOTE: *Serves as postsecondary education (1202) commission.
