ABSTRACT

This report summarizes enrollment trends at Nova Southeastern University (NSU) in Fort Lauderdale, Florida, from calendar years 1990 through 1994. Due to the January 1, 1994, merger between Nova University and Southeastern University of the Health Sciences and the incompatibility of their respective information management systems, students in the Health Professions Divisions were excluded from this study. Unduplicated, cumulative headcount increased 12.8 percent over the period, from 17,155 students in 1990 to 19,351 students in 1994. The university awarded 283,217 credits in 1994, an increase of 17.3 percent over the 241,389 credits awarded in 1990. Though the student sex ratio remained steady at 61 percent female and 39 percent male over the period, the number of White students declined from 71 percent in 1990 to 65 percent in 1994, due to sizeable increases in the percentage of African-American and Hispanic students. Although NSU is known for its distance education programs, nearly 50 percent of instruction took place on one of the university's South Florida campuses, and nearly 80 percent of all instruction took place in Florida. Enrollment data for specific NSU schools and programs are included. (MDM)

## EXECUTIVE SUMMARY

This report is a summary of analyses relating to the students of Nova Southeastern University during Calendar Years 1990 to 1994. Due to the January 1, 1994, merger between Nova University and Southeastern University of the Health Sciences and the incompatibility of their respective information management systems, students in the Health Professions Division were excluded from this study. They will, however, be included in future iterations of this study as the University's Student Information System expands to include these students.

The University has recently experienced steady growth. Unduplicated, cumulative headcount increased from 17,155 students in Calendar Year 1990 to 19,351 students in Calendar Year 1994, resulting in an increase of 12.8 percent from 1990 to 1994. Concomitantly, cumulative yearly credits have also increased. The University awarded 241,389 credits in Calendar Year 1990 and 283,217 credits in Calendar Year 1994, resulting in an increase of 17.3 percent from 1990 to 1994.

Along with enrollment trends, other criteria were also examined in this report. The University has maintained a steady student ratio of 61 percent female to 39 percent male over the last few years. However, there was wide variance among centers on the female to male ratio.

The ethnicity of the University's students is changing, with representation of White students declining from 71 percent of total enrollment in Calendar Year 1990 to 65 percent of total enrollment in Calendar Year 1994. Although differences in ethnicity are quite marked among centers, nearly all academic centers exhibited sizeable increases in percentage representation by African-American and Hispanic students.

This report also examined place of class attendance, an activity that had not been previously examined. Although the University is widely known for its distance education delivery models, it was interesting to note that nearly 50 percent of all instruction at the University is offered on one of the University's South Florida campuses. Future studies will examine this activity in greater detail, specifically focusing on the incidence of instruction in clusters within 30 miles of the main campus. These future analyses will also examine the increase of on-campus instruction at the University, since the 1994 inclusion of nearly 1,500 students in the Health Professions Division who attend classes in a traditional on-campus format.

## HIGHLIGHTS

### Enrollment

- The University's enrollment increased by 12.8 percent from Calendar Year 1990 to 1994, excluding the Health Professions Division and the sudden increase in enrollment due to the January 1994 merger.
- Enrollment in Florida's State University System increased by 11.9 percent during a comparable time period, 1989 to 1993.

### Gender

- Females represent 61 percent of all students at the University.
- In Florida's State University System, females represent 54 percent of all students.

### Ethnicity

- Representation of White students at the University declined from 71 percent in Calendar Year 1990 to 65 percent in 1994.
- In 1993, White students represented 69 percent of students in Florida's State University System.

### Place of Class Attendance

- Including students in the Health Professions Division, over 50 percent of all instruction offered by the University takes place on one of the University's South Florida campuses.
- In Calendar Year 1994, over 80 percent of all instruction offered by the University occurred in Florida, with less than 20 percent of all instruction occurring in other states or nations.
- It is estimated that over 60 percent of all University students attend class either on one of the University's South Florida campuses, or at a cluster in the local area, where campus services are readily available. This statistic will be examined in greater detail in a future report.

## INTRODUCTION

### Background

Nova Southeastern University's (NSU) charter class of 1967 consisted of 17 doctoral students (*Nova Southeastern University Fact Book*, 1995). In less than 30 years, through the development of new programs and unique delivery models, the University has grown to a Fall Term, 1994 enrollment of 15,293 students (*Research and Planning Weekly Enrollment Report*, May 15, 1995). It is anticipated that statistics from the United States Department of Education's Fall 1995 Integrated Postsecondary Education Data System (IPEDS) survey will confirm that the University is now the largest independent university in Florida, the nation's fourth largest state.

### Purpose of this Report

The purpose of this report is to continue with the first phase of the monitoring process, established by Research and Planning, of carefully reviewing internal and external trends that may affect enrollment management at the University. Like other reports prepared by Research and Planning, this report focused on Calendar Years 1990 to 1994. These dates provide added reference to the population of graduates associated with the University's current *Self-Study (Management of Self-Study Surveys Administered by Research and Planning, 1995)*.

## METHODOLOGY

The data for this report were obtained in March 1995 by a series of special queries to the University's Student Information System (SIS). These queries were collapsed into one complete extract file which served as the database for this study. The composite database included information on the following criteria:

Enrol_Yr	"Enrollment Year"
College	"Center"
Major	"SIS Data Element Major Code"
Car_Lvl	"Career Level"
Name	"Last Name and First Name"
Sex	"Gender"
Ethnic_G	"Ethnic Group"

Clst\_Cty "Cluster City Code"  
 Clst\_St "Cluster State Code"  
 State "Permanent State"  
 ZIP "Permanent ZIP Code"  
 Cred\_Yr "Credits Earned for Enrollment Year"

Analyses were generated by the use of SPSS-X Release 4.0 for ULTRIX 4.2A on the University's host computer.

Unlike prior reports issued by Research and Planning, this report uses Calendar Year (January 1 to December 31) as the base unit for comparisons over time. This unit presents a more complete picture of center activities and demands on services than term reports, such as analyses that are typically based on end-of-term data.

**LIMITATIONS**

A noticeable limitation of this study is that it was not possible to report on students enrolled in the Health Professions Division (HPD). On January 1, 1994, Nova University merged with Southeastern University of the Health Sciences to form a new institution, Nova Southeastern University. HPD student data were not integrated into the University's Student Information System (SIS) until July 1, 1994, and there has been no known entry of historical data. Accordingly, trends among students from the University's Health Professions Division will not be included in this report until it is replicated in 1997.

**RESULTS**

Enrollment (Unduplicated, Cumulative Headcount)

The University experienced a 12.8 percent increase in enrollment (unduplicated, cumulative headcount) from Calendar Years 1990 to 1994 (Table 1). There was wide variance, however, among academic centers in percentage increase in enrollment:

<u>Academic Center</u>	<u>% Change Enrollment</u>
School of Social and Systemic Studies . . . . .	107.3
Panama . . . . .	44.3
Center for Psychological Studies . . . . .	37.1

Oceanographic Center . . . . .	31.7
School of Business and Entrepreneurship . . . . .	29.5
Shepard Broad Law Center . . . . .	18.0
School of Computer and Information Sciences . . . . .	12.0
James M. Farquhar Center for Undergraduate Studies . . . . .	8.8
Center for the Study of International Tourism . . . . .	8.0
Abraham S. Fischler Center for the Advancement of Education . . . . .	1.3

Percentage growth, however, should be coupled with actual growth (headcount) to present a composite view of University growth from Calendar Years 1990 to 1994. In that regard, growth by academic centers during these years indicated the following:

<u>Academic Center</u>	<u>Growth in Enrollment</u>
School of Business and Entrepreneurship . . . . .	N = 722
Center for Psychological Studies . . . . .	N = 422
James M. Farquhar Center for Undergraduate Studies . . . . .	N = 406
Shepard Broad Law Center . . . . .	N = 179
Panama . . . . .	N = 141
School of Social and Systemic Studies . . . . .	N = 117
School of Computer and Information Sciences . . . . .	N = 84
Abraham S. Fischler Center for the Advancement of Education . . . . .	N = 83
Oceanographic Center . . . . .	N = 26
Center for the Study of International Tourism . . . . .	N = 16

Overall enrollment trends are presented in Table 1 and Figure 1. Breakouts by academic center are presented in Figures 2 to 11.

Figure 10

Figure 11

Gender

The proportion of female students to male students from Calendar Years 1990 to 1994 remained a fairly constant ratio of 61 percent female to 39 percent male (Table 2 and Figure 12). This statistic is also nearly identical to the female to male ratio of University graduates first identified in Research and Planning Report 95-08 (*Nova Southeastern University's Graduates: July 1, 1990 to June 30, 1994, 1995*).

**Table 2**  
**Gender of Nova Southeastern University Students:**  
**Calendar Years 1990 to 1994**

Gender	1990		1991		1992		1993		1994	
	N	%	N	%	N	%	N	%	N	%
Female	10416	61	10951	61	10967	60	11163	61	11774	61
Male	6739	39	7052	39	7234	40	7225	39	7577	39
TOTAL	17155		18003		18201		18388		19351	

The representation of female to male students varies widely, however, by academic center. Statistics on gender by academic center for Calendar Years 1990 to 1994 are presented in Figures 13-22. Gender-related statistics for Calendar Year 1994, the most current calendar year examined in this report, follow in rank order by percentage female representation:

<u>Academic Center</u>	<u>% Female</u>	<u>% Male</u>
Center for Psychological Studies . . . . .	76	24
School of Social and Systemic Studies . . . . .	73	27
Abraham S. Fischler Center for the Advancement of Education . . . . .	70	30
James M. Farquhar Center for Undergraduate Studies . . . . .	67	33

Center for the Study of International Tourism . . . . .	54	46
Panama . . . . .	47	53
Oceanographic Center . . . . .	46	54
Shepard Broad Law Center . . . . .	42	58
School of Business and Entrepreneurship . . . . .	40	60
School of Computer and Information Sciences . . . . .	31	69

Although four centers (the Center for Psychological Studies, the School of Social and Systemic Studies, the Abraham S. Fischler Center for the Advancement of Education, and the James M. Farquhar Center for Undergraduate Studies) are currently dominated by female representation, it is important to mention that this degree of representation by females seems to be a long-term trend for these centers. Equally, there seems to be a trend of increasing female representation in the Center for Psychological Studies.

Other trends in female and male representation, although evident in Table 3 and Figures 13 to 22, require some degree of attention. The University's long-term increase in female representation is slight, while individual centers show considerable variance from this overall trend:

Female representation in the School of Business and Entrepreneurship changed from 38 percent of total in Calendar Year 1990 to 40 percent of total in Calendar Year 1994.

Female representation in the Oceanographic Center changed from 33 percent of total in Calendar Year 1990 to 46 percent of total in Calendar Year 1994.

Female representation in the Shepard Broad Law Center declined from 45 percent of total in Calendar Year 1990 to 42 percent of total in Calendar Year 1994.

Female representation in Panama declined from 50 percent of total in Calendar Year 1990 to 47 percent of total in Calendar Year 1994.

## Ethnicity

Reflecting the changing ethnic composition of the South Florida community, the percentage of minority students at the University is increasing while the percentage of White students is decreasing. This trend is evident at the University level in Table 4 and Figure 23. Breakouts on the ethnicity of University students are provided in Table 5 and Figures 24 to 33.

**Table 4**

**Ethnicity of Nova Southeastern University Students:  
Calendar Years 1990 to 1994**

TOTAL	17155		18003		18201		18388		19351	

Among the many findings from this series of tables and figures, the following trends seem to be most noticeable in terms of their potential impact on the University:

While African-American representation in the Abraham S. Fischler Center for the Advancement of Education increased by only 2.5 percent from Calendar Years 1990 to 1994, the representation of Hispanic students in this center increased by 36.7 percent during the same time period.

The James M. Farquhar Center for Undergraduate Studies experienced a 7.0 percent decline in White students from Calendar Years 1990 to 1994. During this same time period, African-American student representation increased by 31.0

percent and Hispanic student representation increased by 42.5 percent. Asian students, however, had the greatest increase in representation, with this center experiencing a 101.9 percent increase in Asian Students.

The School of Business and Entrepreneurship, with almost 30 percent growth during Calendar Years 1990 to 1994, reflected growth among all ethnic groups. Asian students had 158.7 percent increased representation in this center during Calendar Years 1990 to 1994. African-American students experienced 100.7 percent increased representation during the same time period.

The Center for Psychological Studies equally experienced sizeable increases in Asian students (200.0 percent growth), African-American students (64.7 percent growth, and Hispanic students (52.1 percent growth) during Calendar Years 1990 to 1994. This center has also had continued overall growth, so that all identified ethnic groups experienced growth during this time period.

The Shepard Broad Law Center experienced exceptionally high growth in representation by African-American students (202.1 percent increase) during Calendar Years 1990 to 1994.

Asian students were the ethnic group with the greatest increase in representation (77.1 percent growth from Calendar Years 1990 to 1994) in the School of Computer and Information Sciences.

The School of Social and Systemic Studies also experienced high rates of increased representation by Hispanic students (122.2 percent growth) and African-American students (100.0 percent growth) during Calendar Years 1990 to 1994. This center had an unduplicated, cumulative headcount enrollment of 226 students in Calendar Year 1994, so White students (84 percent of Calendar Year 1994 total) remain the majority ethnic group.

Due to the small number of students in the Oceanographic Center, even small increases or declines in enrollment can impact percentage ethnic representation. White students in this center represented 80 percent of total enrollment in Calendar Year 1994 and this statistic has remained fairly stable for the last few years.

## Place of Class Attendance

The University is widely known for the use of innovative and often ground-breaking distance education models. In the mid-1970s, the University started the use of cluster programs throughout Florida, other states, and selected foreign nations. Although the Internet is a topic currently receiving wide media coverage, the University initiated the use of educational applications of real time and delayed time instruction through computer-based telecommunications in the mid-1980s. Now, in the mid-1990s, the University continues to expand the nature of distance education, offering lecture and group collaboration through telephone-based audiobridge technology and real time compressed video lectures from the University's South Florida campuses to students in distant locations.

Although these activities receive considerable attention, Table 6 and Figure 34 provide evidence that, based on total enrollment, the University is far from being solely a distance education institution:

1. In Calendar Year 1994, 46 percent of all instruction offered by the University (excluding students in the Health Professions Division) occurred at either the Davie Campus or the East Campus. This statistic does not include instruction at local cluster sites within the 30 mile radius of the University. Instead, it refers specifically to on-campus instruction.
2. In Calendar Year 1994, over 80 percent of all instruction offered by the University took place in Florida.
3. Less than 20 percent of all instruction offered by the University in Calendar Year 1994 occurred in other states or nations.

There are obviously wide differences in place of class attendance among the University's academic centers (Figures 35-44). The Shepard Broad Law Center only offers instruction on the University's Davie campus. The School of Social and Systemic Studies conducts classes at the University's East Campus in Fort Lauderdale. Other centers, including the Abraham S. Fischler Center for the Advancement of Education, the James M. Farquhar Center for Undergraduate Studies, and the School of Business and Entrepreneurship, while known for their involvement in distance education, still have a large on-campus presence. As presented in the following figures, on-campus presence in these centers is growing:

Thus, place of class attendance can be problematic in this center. In defense of the decision to include SCIS students in TOTAL results, it should be mentioned that their numbers are fairly small compared to the composite number of students, they do not overly influence broad interpretation of place of class attendance at the University, and over 25 percent of all SCIS students are permanent residents of Broward County.

By Place of Class Attendance: Calendar Year 1990 Compared to Calendar Year 1994

Figure 43

In Calendar Year 1994, 70 percent of all instruction in the Abraham S. Fischler Center for the Advancement of Education occurred in Florida. The on-campus presence of this center has increased from 18 percent of student enrollment in Calendar Year 1990 to 26 percent in Calendar Year 1994.

The James M. Farquhar Center for Undergraduate Studies, in contrast, has remained exceptionally stable in trends relating to place of class attendance. Nearly 60 percent of all Farquhar students attend class on the University's Davie campus and 95 percent of all students attend class in Florida.

Over 70 percent of all Calendar Year 1994 instruction in the School of Business and Entrepreneurship occurred in Florida, with approximately one-third of all instruction in this center offered on the University's East Campus.

All instruction offered by the Center for Psychological Studies takes place in Florida. On-campus instruction in this center increased from 58 percent of total in Calendar Year 1990 to 62 percent in Calendar Year 1994.

#### Cumulative Yearly Credits

Unduplicated, cumulative headcount was previously used to indicate trends in student enrollment at the University. Another way to view enrollment trends is to examine cumulative yearly credits. This enrollment indicator is especially important since it is directly linked to tuition income. As presented in Table 7 and Figure 45, from Calendar Years 1990 to 1994, the University has experienced nearly 20 percent growth in cumulative yearly credits. This growth indicator is presented for each academic center in Figures 46 to 54:

The two largest academic centers, the Abraham S. Fischler Center for the Advancement of Education (8.2 percent increase in cumulative yearly credits) and the James M. Farquhar Center for Undergraduate Studies (4.6 percent increase in cumulative yearly credits) have both experienced moderate growth during Calendar Years 1990 to 1994.

In contrast, two other large centers, the School of Business and Entrepreneurship (51.4 percent increase in cumulative yearly credits) and the Center for Psychological Studies (48.5 percent increase in cumulative yearly credits) have both experienced profound growth during Calendar Years 1990 to 1994.

Figure 53

Figure 54

Other academic centers had wide variance in increase of cumulative yearly credits during Calendar Years 1990 to 1994. The School of Social and Systemic Studies (71.7 percent increase), the Oceanographic Center (63.2 percent increase) and Panama (52.2 percent increase) all experienced exceptionally high growth during Calendar Years 1990 to 1994.

### SUMMARY

The University has experienced a 36 percent increase in enrollment from 1990 to 1994 (*Nova Southeastern University Fact Book*, 1995). This statistic is based on data from the United States Department of Education's Fall 1994 Integrated Postsecondary Education Data System (IPEDS) survey, which in 1994 included the addition of nearly 1,500 students in the University's Health Professions Division.

Excluding students in the Health Professions Division, the University experienced a 12.8 percent increase in unduplicated, cumulative headcount during Calendar Years 1990 to 1994 and a 17.3 percent increase in cumulative yearly credits during the same time period. Whichever statistic is used to monitor enrollment trends, it is obvious that the University is experiencing sustained growth, which is in contrast to many other colleges and universities across the nation that have instead had to deal with threats to enrollment stability.

Growth and related demographic trends, however, are not uniform across all academic centers:

1. Growth (both unduplicated, cumulative headcount and cumulative yearly credits) seems to be the greatest in the School of Business and Entrepreneurship, the Center for Psychological Studies, and the School of Social and Systemic Studies. The Abraham S. Fischler Center for the Advancement of Education and the James M. Farquhar Center for Undergraduate Studies have both retained their large student base, but growth above the base has been slight to moderate.
2. The University has been remarkably consistent in maintaining a student ratio of 61 percent female to 39 percent male. This trend could change, however, if female representation in the Center for Psychological Studies continues to increase while female representation in the Shepard Broad Law Center continues to decline.

3. During Calendar Years 1990 to 1994 there has been increased minority representation throughout the University and within each academic center. Changes, such as a 100.7 percent increase in enrollment by African-American students in the School of Business and Entrepreneurship, will certainly have a profound influence on the future of the University and consequently the impact of the University on the South Florida community.
4. Distance education and the appropriate use of technology for educational delivery are central to the University's Mission Statement. Yet, there is growing evidence that attendance in classes offered on or near the University's South Florida campuses may be the dominant means of instruction at the University.

(Due to the incompatibility of information systems at the time of the merger, Health Professions Division students have been excluded from this study. If they had been included, over 50 percent of all instruction would take place on one of the University's South Florida campuses. Additionally, cluster-based students in the local area are not coded in the Student Information System cluster code that equated to campus-based instruction. If these students had been equally included, it is currently estimated that over 60 percent of all University students attend class either on one of the University's South Florida campuses, or at a cluster in the local area, where campus services are readily available. The issue of place of class attendance will be examined in greater detail in a future report.)

Although it is immediately favorable to read in this report that the University is experiencing high growth rates, this trend needs to be put into the context of managed growth. Optimal sizing was a major theme at the University's 1995 Board Retreat (*Board of Trustees Retreat, May 19-20, 1995*). This theme has also received attention in the University's Master Plan (*Nova Southeastern University Master Plan, 1995*).

During the University's first 30 years, deans were encouraged to continually strive for growth. Now, academic centers in the University may be approaching optimal size. This change may give the University the opportunity to structure programs and recruit students based on new goals and criteria. Along with concern for managed growth, the University equally needs to consider a response to long-term trends and changes in gender, ethnicity, urbanization of South Florida, and other demographic criteria that could influence enrollment management and composition of the student body.

The University currently enjoys a strengthening fiscal base and expanding enrollment. The University maintains well-respected programs in South Florida and throughout the entire state of Florida. Through the use of distance education, the University has also been able to impact professions throughout the United States. By carefully monitoring student enrollment and the changing characteristics of students, the University should be able to plan for expected change in an orderly, systematic, and fiscally prudent manner.
