IDENTIFIERS Education Consolidation Improvement Act Chapter 1

ABSTRACT

Conference papers and recommendations on the implementation of Chapter 1 services are reviewed. Four issues of concern emerged from the research papers. These issues were reviewed by a panel of experts, and a set of recommendations was developed for more effective and prudent application of Chapter 1 principles and funding. These recommendations are the following: (1) funds should be concentrated in schools in neighborhoods with high percentages of children living in poverty, and funds should not be cut off from these schools when achievement increases; (2) the allocation of funds should be school-based in high poverty areas; (3) families should be involved in activities that enhance the educational capacity of the home and reduce home-school dissonances; (4) Chapter 1 funds should be set aside to support projects which evaluate and add to the knowledge of educational disadvantage; (5) schools should be allowed to use Chapter 1 funds for training, technical assistance, and capacity building; (6) Chapter 1 services should enrich students' understanding of school subjects, rather than providing only remediation of basic skills. A list of the papers and the panel members is included. (VM)

Designs for Compensatory Education: A Brief Review of Conference Papers and Recommendations

Introduction

In June 1986 a group of distinguished educational researchers gathered to discuss specially prepared papers, and written responses to them, dealing with the implementation of Chapter 1 of the Education Consolidation and Improvement Act, enacted in 1981. Following the discussion, a panel of experts met to develop some recommendations for more effective application of Chapter 1 principles, and more prudent use of Chapter 1 funds. The conference was organized by Research and Evaluation Associates, Inc., under a contract awarded by the U.S. Department of Education.

Below are brief summaries of the papers, and the discussions they generated, followed by a list of the panel's points of agreement.

Selecting Students for Chapter 1 Programs and Services

Students receiving Chapter 1 services are more likely to be poor, minority, and attending public (rather than private) schools. However, because of the large demand for compensatory education resources in schools serving mostly poor students, some children in need of Chapter 1 services must do without them. Conversely, at schools with students from higher income families, and, thus, with less strain on their resources, some children receive Chapter 1 services who really don't need them. This is so because 70 percent of all U.S. elementary schools receive Chapter 1 funds and provide their lowest achieving students with compensatory educational services even if these students are not objectively very low achievers.

Program and Staffing Structures

The predominant method of delivering Chapter 1 services is *pullout instruction*, whereby students are withdrawn from their regular classes in order to receive special instruction. Though this scenario results in modest gains, it hampers students' ability to see a relationship between subjects taught in regular classes and those in Chapter 1 classes, and to learn higher-order skills. It also may encourage unintended labeling that lowers teacher expectations of their students and the students' self-esteem. Further, research has not yet shown any particular method of providing Chapter 1 services to be significantly superior.

Other ways of organizing Chapter 1 programs are *in-class instruction*, which provides services within the regular classroom and whose use is increasing; *add-on programs*, which provide instruction before or after the regular school day, or during the summer; and *replacement programs*, in which an entire class of Chapter 1 students is taught from a special curriculum for a given subject and receives no other instruction in that subject.

Earlier research on the delivery of Chapter 1 services has

added to our knowledge of how to organize instruction for disadvantaged youth. Small class size has been shown to increase instructional effectiveness, as have increased instructional and engaged time. And, while the value of compensatory summer programs has not been conclusively established, students do make some gains over the summer that would be unlikely if they did not participate in the programs.

Curriculum and Instruction

Many compensatory education programs do not teach disadvantaged youth critical, analytical, and organizational skills; they simply impart information. It is necessary, however, to teach these skills, either as a separate curriculum area or integrated into all courses.

It is also crucial to match instructional methods to student needs, although there is a danger that grouping students according to ability will result in inappropriate tracking. Generally, low achievers benefit from a teacher's actively carrying the subject content to students and working with them until they master it.

Many Chapter 1 services are split off from the regular program, because schools find it difficult to blend them. Moreover, Chapter 1 students are frequently taught in a manner different from other students. They may be taught through memorization and rote learning, have less interaction with their teachers, and use less interesting materials. In addition, Chapter 1 students may actually spend less time than regular students on reading development since they are in compensatory education classes while the others are reading in their regular social studies and science classes.

Chapter 1 programs may also be based on the faulty assumption that program students have different, mutually exclusive, educational needs from those of other students; and that these students can be easily categorized, separated, and served by discrete categorical programs (i.e., for limited English speaking, educationally disadvantaged). Educators need to pay more attention to the quality of educational services offered to students, and to recognize that the instructional needs of students in the various categorical programs may be similar. Focusing on the similarities of needs of students also decreases the possibility that they will be stigmatized by negative labeling and tracking.

To limit the fragmentation of programs into regular and compensatory, staff development should be provided for all who teach Chapter 1 students, not only Chapter 1 teachers. More creative interpretation of the Chapter 1 legislative framework is needed also, so that schools can more closely coordinate their various programs. Finally, it is useful to consider Chapter 1 as adaptive education, rather than as the more alienating compensatory education or even simply skills remediation.

Parent Involvement

Chapter 1 legislation requires some form of parent involvement in children's education, and, usually, this involvement is beneficial. Home-based involvement is most effective, particularly when parents are provided with specific techniques and activities to foster their children's learning, and when parents can actually function as tutors. Simpler types of parent involvement are also important, such as providing educational resources outside of school, and promoting good student characteristics (e.g., behavior in school, use of study time, values).

Consensus of the Conference Panel

The small group of education researchers who reviewed the papers presented and the discussion they generated formulated six general principles for the improvement of Chapter 1 services. (The principles, however, do not necessarily take into account Chapter 1's current legal framework or their political feasibility.)

1. *"Funds should be concentrated on schools in neighborhoods with high proportions of children living in poverty. Funds should not be cut off from those schools when an increase in achievement is demonstrated."* Studies show that the longer a child spends in poverty, the lower his or her academic achievement. Therefore, it is better to give Chapter 1 funds to fewer schools, but to assure that funding will continue for several years so they can adequately develop and implement sound programs.

2. *"In schools with high poverty concentration, the allocation of Chapter 1 funds should be school-based and could be used to benefit all students within a targeted school."* Using Chapter 1 funds to deliver better educational services to all students in a school, as opposed to only those in pullout programs, benefits all poor students, a large percentage of whom are likely to be low-achieving. Non-poverty schools should not receive Chapter 1 funds.

3. *"Chapter 1 schools should involve families in activities that enhance the educational capacity of the home and reduce the dissonance between the home and school."* Although there should be no statutory requirement for parent involvement, several approaches should be strongly encouraged: advisory councils, and parents and children working together at home and at school.

4. *"A substantial portion of Chapter 1 funds should be set aside to encourage and support projects that evaluate extant strategies of compensatory education, that develop and evaluate new strategies, that generate new knowledge about the phenomenon of educational disadvantage and how to address it, and that develop personnel to work with disadvantaged students."* High poverty schools should be allowed to conduct long-term experimental programs to determine which variable, alone and in combination, promote achievement. School-based Chapter 1 research centers, linked with teacher training departments of nearby colleges, should develop, demonstrate, and evaluate new and innovative practices for both training teachers and staffing schools. Experimental and other Chapter 1 schools should also be encouraged to conduct their own evaluations (rather than those Federally mandated) based on their needs for information, and share it in the way they deem most beneficial.

5. *"Schools should be allowed to use a portion of their Chapter 1 resources to support training, technical assistance, and capacity-building."* Decisions on the use of funds for such

educational improvements should be made at the school—rather than district, state, or federal—level, for school personnel have a better sense of what is needed than do outside agency staff. Moreover, improvements should be applied to all school programs and staff, not just those associated with Chapter 1.

6. *"Chapter 1 services should enrich students' understanding of school subjects, rather than providing only remediation of basic skills."* To solve the problems of underchallenging compensatory education children, broader definitions of mathematics and reading are needed so that students are taught higher-order thinking skills and are intellectually stimulated.
