ABSTRACT
        To measure the effectiveness of the services provided
to users of elementary school media centers, a survey instrument has
been developed to poll teachers, students, or administrators. Ratings
cover nine broad service categories: accessibility, awareness,
professional materials, utilization, planning, acquisition,
production, evaluation, and activity. Users of the guide can tailor
an evaluation instrument for their own needs by selecting only those
items which apply to the services they offer. Over 30 items are
listed in each service category. (EMH)

PURDUE SELF-EVALUATION SYSTEM

There are many facets of a media center program that can be measured These might include facilities, staffing, budget, collection, circulation, etc. But many professionals agree that one of the more effective measures is to evaluate the services provided by the media staff to the users

The Purdue Self-Evaluation System (PSES) for Media Centers, a service developed in the Media Sciences Section of Purdue University, offers media specialists an inexpensive yet thorough technique for involving teachers, students and administrators in the evaluation of media center services

The unique feature of PSES is that the media specialist may tailor-make the evaluation instrument to the service program of a specific media center It may constitute one portion of a comprehensive planning and evaluation system or it may simply be exploratory in nature

The catalog encompasses nine broad service categories. Accessibility, Awareness Professional, Utilization. Planning, Acquisition. Production. Evaluation and Activity The media specialist may wish to concentrate on a few categories or do a broad survey over all categories. The media specialist also may query one user group or several to include administrators, media staff, teachers, and students.

PSES measures the user's perception of both frequency and variety of services, offered by the media center. The technique can also be used to compare the media staff's perception of the service program with any of the user group's perceptions Media specialists are advised to select those items which match their own program objectives.

The catalog was developed originally in cooperation with the Indiana Department of Public Instruction in a survey of elementary school media centers during the 1974-75 school year It has also been used in several doctoral dissertations including two in Indiana. The on grades 10-12 and one on grades 6-9 There is a certain amount of bias represented in this instrument toward services emphasized in the *Media Programs District and School* (AASL & AECT 1975), that is, both library and audiovisual services as well as instructional development services have been included.

Once the media specialist has chosen items from the catalog individualized questionnaires will be supplied for each user group to the school School may then reproduce the questionnaires and collect the data (directions and answer sheets which can be machine scored will be provided). The data will be processed at Purdue and an item-by-item computerized comparison of the responses made by the media staff, teachers, students, and administrators will be sent to the school

Schools may wish to bypass the Purdue computer services entirely and adapt parts of the catalog to their own measurement needs. The authors encourage this type of use as long as credit is given to the authors for items used from the catalog

Item Selection

Several reasons could influence a media specialist's choice of a particular item. For example, one might wish to offer a service and would like to "educate" the user to its possible implementation The service chosen may be relatively new and the media staff wishes to check the awareness of the users as to its existence The media specialist may also want to find out what segments of the user groups are taking advantage of a particular service. (For example, what percentage within each grade level takes advantage of a particular service.)

The master catalog contains services in nine different categories (Accessibility, Awareness, etc) Three columns for media staff, teachers, and students, are beside each service statement An "x" in a column indicates which group the statement may be used for, let us look at item #7, for example

M T S

x   x   The media center is used for meetings of student organizations.

This item may be selected to be answered by *either* the media staff, the students, or both The item is not available for the teacher questionnaire.

The ITEM SELECTION SHEETS contain three columns. M = Media Staff, T = Teachers, S = Students To select your item, merely check the appropriate item number of the ITEM SELECTION SHEET in the column desired. For example, on item #1, if you wish to have this item included on *both* your questionnaires, check the appropriate blanks If you wish the item to appear only on the teacher questionnaire, check that blank.

Any item or part of an item may be selected. In like fashion, any category or part of category may be omitted Items designed for use by the students have been personalized and simplified in language (See Student Catalog) DO NOT SELECT MORE THAN 150 ITEMS FOR THE MEDIA STAFF. The recommended maximum number of items for teachers is 75, for students, 50

Please note that all items you choose will be answered by all respondents on the following scale

            A = Regularly
            B = Occasionally
            C = Rarely or never
            D = Don't know

Cost

The use of Purdue computer facilities will cost $25.00 per school plus 4¢ per respondent This amount pays for one copy of each questionnaire (media staff, teacher, and student), all op scan answer sheets, data processing and analysis, and one copy of a final report General guidelines for interpretation of the results will be provided However, if the school wishes to have further interpretation and consultation concerning the analysis and steps for program improvement as a result of the research, the authors are available for consultation both by telephone conference call or by visitation

If you want Purdue to process your data and prepare an item-by-item computerized comparison of the responses made by the media staff, teachers, and students, return only the ITEM SELECTION SHEETS to Dr. Janet G. Stroud. If comments or questions arise, contact Dr Stroud at (317) 749-2902 Address all correspondence to
