## ABSTRACT

This report documents long-eerm trends in racial/ethnic enrollment in higher education and presents enrollment data for the fall of 1988. The first section presents overall enrollment trends for institutions of higher education by racialfethnic categories and selected student and institutional characteristics, such as sex, level of study, type of institution, and control of institution. The data for 1978 through 1984 come from the Higher Education General Information System (HEGIS) fall enrollment survey; the data for 1986 and 1988 are based on the Integrated Postsecondary Education Data System (IPEDS) fall enrollment survey. The second section presents household-based statistics fron the Current Population Survey. The information is used to derive a measure of college participation rates for 18- to 24 -year-olds and 25 - to 34 -year-olds. The report ulso includes a technical appendix and a glossary. (JDD)

This report of trends in racial/ethric bienivial enrollment in higher education is based on two sources. The data for 1978 through 1984 come from the Higher Education Generai Information System (HEGIS) fall enrollment survey; the data for 1986 and 1988 are based on the Integrated Postsecondary Education Data System (IPEDS) fall enrollment survey. The Mational Center for Education Statistics (NCES) established IPEDS in 1986 to replace HEGIS as its core postsecondary education data collection. In designing and implementing IPFDS, NCFS has made a significant effort to maintain continuity in the HEGIS data series. Without this effort, a trend report of racial/ethnic enrollment would not be possible.

The primary purpose of this report is to inform policymakers, researchers, and the posisecondary education community of long-term trends in racial/ethnic enrollment in higher education, as well as to present, for the first time, enrollment data for the fall of 1988. We hope that this report will stimulate further interest in and analysis of HEGIS and IPEDS data.

## Aclonowledgments

The authors thank Charles Anderson, American Council on Education; Susan Hill, National Science Foundation; and Lisa Avallone and Joanell Porter, NCES, for their review and comments. Appreciation also goes to William Freund and Summer Whitener, NCFS, for their technical assistance. Editorial and publication support was provided by Shirley Rosenberg of SSR, Inc. and Marc Travaglini of the Publications Branch, Office of Information Services, OERI.

Highlights

Trends in total enrollment, 1978 through 1988

- From 1978 through 1988, enrollment in institutions of higher education increased by over 1.8 million students.
- Total enrollment grew steadily over the years. Except for a 1 percent decline between 1982 and 1984, the rate of increase in total enrollment was between 2 and 8 percent biennially.
- In 1978, approximately the same proportions of males and females were enrolled in institutions of higher education. By 1988, women accounted for 54 percent of total enrollment.

Trends in racial/ethnic enrollment. 1978 through 1988

- Between 1978 and 1988, Hispanic enrollment in higher education increased about 63 percent, and Asian or Pacific Islander enrollment increased approximately 111 percent. In comparison, white enrollment in higher education increased about 12 percent and black enrollment increased about 7 percent.
- After 1978, the rate of change in higher education enrollment varied by racial/ethnic categories. For instance, Hispanic enrollment increased as much as 16 percent biennially; Asian enrollment increased, on the average, over 16 percent biennially. Increases in black and white enrollment., however., averaged less than 7 percent kionnially.
- Although enrollment increised after the early 1980s, the coilege participation rates for 18 - to 24 -year-old black and Hispanic students fluctuated, averaging 28 percent for black students and about 30 percent for Hispanic students. In contrast, the college participation rates for white 18 - to 24 -year-olds rose steadily throughout the 1980s, from about 33 percent in 1981 to about 39 percent in 1988.
- Overall male enrollment in higher education increased at a slower rate than female enrollment. In fact, black male enrollment actually dropped about 2 percent since 1978. Black female enrollment increased 14 percent during this time.
o In 1988, 2-year institutions accounted for 37 percent of total enrollment but 46 percent of total minority enroliment.

## Introduction

This report presents findings from two institutional-based postsecondary education surveys conducted by the National Center for Education Statistics: the Higher Education General Information (HEGIS) and the Integrated postsecondary Eaucation Data System (IPEDS) fall. enrollment surveys. HBGIS collected racial/ethnic enrollment data biennially from 1978 to 1984. IPEDS replaced HEGIS in 1986 and is now reporting racial/ethnic enrollment data for the second time. The report also presents selected findings from the Bureau of the Census current Population Survey.

The first section presents overall enrollment trends for institutions of higher education by racial/ethnic categories and selected student and institutional characteristics. The data are from HEGIS and IPEDS. The second section presents household-based statistics from Census' Current Population Survey. The information is used to derive a measure of college participation rates for 18 - to 24 -year-olds and 25 - to 34 -year-olds.

## Total Enrollment by Race/Ethnicity

Since 1978, enrollment in institutions of higher education ${ }^{1}$ increased by over 1.8 million students (table 1). All racial/ethnic groups contributed to this net: increase to varying degrees. Ranked by their proportion of the total increase, whites accounted for over one-half of the growth, followed by Asians or Pacific Islanders, Hispanics, blacks, and American Indians or Alaskan Natives. By 1988, racial/ethnic minorities constituted about 18 percent of total enroliment, up frora 16 percent in 1978 (table 2). ${ }^{2}$

Total encollment: in higher education, for the most part., grew steadily over the years. Except for a 1 percent decline between 1982 and 1984, the rate of increase was between 2 and 8 percent biennially. By racial/ethnic categories, the rate of increase in encollment has varied greatly (table 1 and figure 1). For example, Hispanic enrollment increased steadily since 1978, with increases ranging from a low of 3 percent between 1982 and 1984 to a high of over 15 percent between 1984 and 1986. Asian or Pacific Islander enrollment increased rapidly between 1978 and 1982, with biennial increases averaging over 20 percent. After 1972, the rate of increase in enrollment for Asian or Pacific Islanders slowed somewhat; however, enrollment increases remained high, ranging between ‥I and 15 percent biennially.

In contrast, the rate of change in white enrollment was much slower, ranging from a decrease of about 2 percent between 1982 and 1984 to an increase of about 7 percent between 1978 and 1980 (table 1). The rate of increase in black enrollment was even slower than the rate of increase in white enroljrent (table 1 and figure 1). In fact, black enrollment decreasw about 3 percent between 1980 and 1984. Over the 11-year period, the highest biennial increase in black enrollment ( 5 percent) occurred between 1978 and 1980.
${ }^{1}$ Institutions of higher education include institutions accredited at the college level by an agency recognized by the Secretary of Education. Changes noted in racial/ethnic data reported between 1980 and 1982 may be due to an increase in the number of private, 2 -year institutions of higher education in operation in 1982. Since 1982, the universe of institutions of higher education has remained fairly stable.
${ }^{2}$ Racial/ethnic minorities are herein defined as black (non-Hispanic), Hispanic Asian or Pacific Islander, and American Indian or Alaskan Native.

Note: Because of underreporting/nonreporting of ricial/ethnic data, data prior to 1986 were estimated witen possible. See the Technical Appendix for a discussion of imputarion procedures used for underreporte and nonreported racial/etinin data since 1984. Also, due to rounding, detail may not add to totals.

Nonresident alien enrollment showed consistent growth over the years; hovever, the most dramatic increase ( 20.5 percent) occurred between 1978 and 1980 (table 1). With the exception of a 5-percent decrease between 1982 and 1984, enrollment of American Indian or Alaskan Natives showed steady, but slow, increases over the years. The rate of increase ranged from a low of 3 percent betwesn 1986 and 1988 to a high of 8 percent between 1978 and 1980.

## Enroliment by Institutional Control

The rise in higher education enrollment was fairly consistent between public ard private institutions, with public institutions accounting for about 78 percent of total enrollment (table 1). Changes occurred, however, in the racial/ethnic makeup of both public and private institutions.

For instance, althougn white enrollment in public institutions of higher eaucation increased after 1978 as a proportion of total enrollment in public institutions, white enrollment declined during this time, frcm 81 to 78 percent. Black enrollment in public institutions also increased but, as a proportion of total enrollment in public institutions, black envollment declined after 1978, from about 10 percent to 9 percent. Hispanics and Asian or Pacific Islaniens also showed lange increases in enmoliment since 1978. In 1988, these two grouns together accounted for about 10 percent of enrollment in public institutions, up from 6 percent in 1978. Nonresident aliens showed large increases in public school enrollment; however, in 1988, their share of total enrollment in public institutions (2 percent) remained about the same as it was in 1978.

A similar pattern of change was observed in private institutions. That is, although white enrollment increased from 1978 to 1988 as a proportion of total private school enrollment, white enrollment declined curing this time, from 84 to 80 percent. Black enrollment in private institutions also increased between 1978 and 1988; however, as a proportion of total private school enrollment, black enrollment remained fairly stable at 8 or 9 percent. As in public institutions, enrollment increases are indicated for Hispanics, Asian or Pacific Islanders and nonresident aliens after 1978. In 1988, these groups accounted for about 11 percent of enfollment in private institutions, up from 7 percent in 1978.

## Enrollment by Sex

After 1978, the distribution of men and women enrolled in higher stucation changed dramatically. In 1978, men and women accounted for equal proportions of enrollment (table 1), By 1988, there were about 1 million more women than men enrolled in institutions of higher education and women accounted for 54 percent of total enrollment.

Looking at the racial/ethnic groups separaiely, taole 1 shows that enrollment of white males accounted for cleas to 100,000 of the increase in total male enmoliment. The enrollment of biack males has actually declined since 1978 (fram 453,000 to 443,000 in 1988). This decreace, however, was offset by the dramatic rise in the enrollment oin male Hispanics, male Asian or Pacific Islanders, and male nonresident aliess. Enrollment of American Indians or Alaskan Native males fluctuated over the years, resulting in an increase of about 5 percent since 1978.

Figure 2 shows the biennial percentage change in maie enrollment by racial/ethnic category. The rate of change in male enrollment since 1978 varied by racial/ethnic category. For example, between 1982 and 1986, white and black male enrollment declined, dropping a total of 4 and 5 percent respectively. Subsequently, black male enrollment increased 2 percent, and white male enrollnent increased about 1 percent.

In contrast, Hispanics, Asians or Pacific Islanders, and nonresident alien males strowed steady-nari in some cases-dramatic increases in biemial enrollment. In particular, the rate of increase in male enrollment was quite high for the Asian or Pacific Islanders (between 11 and 25 percent biennially) and for nonresident aliens (as much as 17 percent biennially). American Indian or Alaskan Native biennial male enrollment increased steadily between 1978 and 1982, dropped 5 percent between 1982 and 1984, increased about 3 percent between 1984 and 1986, and stabilized between 1986 and 1988.

Female enrollment grew substantially, from about 6 million in 1978 to over 7 mililion in 1988 (tabie 1). There was an overall increase in female enrollment in all racial/ethnic categories during this time. The rate of charge in enrollment reflected this increase. That is, except for slight declines in white, black, and American Indian or Alaskan Native female errollment between 1982 and 1984, enrollment increased biennially after 1978 (figure 3). As with males, the increases were particularly high among female Asian or Pacific Islanders. The highest biennial increase for this group ( 23.8 percent) occurred between 1978 and 1980, and the lowest biennial increase ( 11.1 percent) cccurred between 1982 and 1984. The enrollment of nonresident alien women increased steadily over the years; however, between 1978 and 1980 the increase in enrollment was particularly high (23.7 percent). After 1980, nonresident alien female enrollment varied, from a low of 3 percent between 1982 and 1984 to a high of 12 percent between 1986 and 1988.

## Enrollment by Type of Institution

Between 1978 and 1988, biennial enrollment in 4-year institutions accounted for close to two-thirds of total enrollment in institutions of higher education (table 2). Four-year institutions accounted for about 64 percent of total encollment in 1978. After 1978, biennial enrollment in

Figure 2.--Percentage change in male enrollment, by race/ethnicity: Biennially, fall 1978 through fall 1988

Source: Blennlal HEGIS and IPEDS surveys of fall enrollment. 1978 through 1988.

Figure 3.--Percentage change in female enrollment, by race/ethnicity: Biennially, fail 1978 through fall 1988

Source: Blennlal HEGIS and IPEDS surveys of fall enroliment, 1978 through 1988.

4-year schools fluctuated between 63 and 62 percent of total enrollment in nigher education.

Between 1978 and 1988, enrollment in 4-year institutions of higher education increased by 14 percent. This increase, however, was unevenly distributed among the raciai/ethnic categories. For example, although enrollment of white and black students in 4-year schools increased 9 and 7 percent, respectively, during this time the enrollment of the other racial/ethnic groups increased more dramatically. Americar. Indian or Alaskan Native enrollment in 4-year schools increased 20 percent; nonresident alien enrollment increased 50 percent; Hispanic enrollment increased 56 pcicent; and Asian or Pacific Islander enrollment increased 115 percent.

Between 1978 and 1988, enrollment in 2-year institutions increased more dramatically than enrollment in 4-year institutions (20.8 percent vs. 13.5 percent). As in 4-year institutions, enrollment increases in 2-year institutions varied by racial/ethnic categories. For instance, white enrollment in 2-year institutions increased 17 percent (nearly double the increase reported in 4-year institutions). The other racial/ethnic groups showed increases similar to those reported in 4-year schools: 7 percent for blacks, 15 percent for nonresident aliens, 16 percent for American Indians, 69 percent for Hispanics, and 105 percent for Asian or Pacific Islanders.

Two-year institutions have a disproportionate share of minority enrollment. For example, although 2-year schools accounted for 37 percent of total enrollment in higher education, they accounted for 46 percent of total minority enrollment in 1988, essentially the same percentage share (45.4 percent) reported in 1978.

## Enrollment by Level of Study

Table 3 presents racial/ethnic enrollment in institutions of higher education by level of study (undergraduate, graduate, and first-professional). The data include distributing nondegree-seeking students within either undergraduate or postbaccalaureate levels of stuay. ${ }^{3}$ (By definition, students enrolled in a first-professional degree program are seeking a postbaccalaureate degree.)

The distribution of higher education enrollment among level of study has not changed much since 1978. For example, undergraduates accounted for about 87 percent of total enrollment in both 1.978 and 1988 (derived from tables 1 and 3).

[^1]Table 3. - Total enrollment in institutans of higher education, by level of study and race/ethnicity. Biennially, fall 1978 through Eall 1938

## Note. Because of underreporting/nonceporting of sacial/ethnic data, data prior to 1986 were estimated when possible. See the Technical Appendix for a discussion of imputation procedures used for underreported and nonreported racial, ethrif data since 1984. Also, due

 to rounding, detail may not add to totals.Source. U.S. Department of Education, National Center for Education Statistics, Higher Education General Information Survey "Fall Encollment in Colleges and Universities" (1978-1984) and Integrated Postsecondary Education Data System "Fall Enroline..t" surveys (1986 and 1988).

However, for the most part, the minority proportions of enrollment at all three levels of study showed increases (table 3). For example, in fall. 1988 Hispanios accounted for 6 percent of undergraduate enroliment, up from 4 percent in 1978. The Asjan or Pacific Islander proportion of undergraduate enrollment increased from 2 percent in 1978 to 4 percent in 1988. White and black proportions of undergraduate enrollment, however, declined after 1978. As a as a proportion of total underrgraduate enrollment, white undergraduate enrollment dropped 3 percentage points after 1978, and black undergraduate enrollment dropped i percentage point.

Similar patterns occurred at the graduate leval. Of particular note is the major increase in the proportion of nonresident aliens enrolled in graduate programs. Nonresident aliens now account twi 10 percent of total gracuate enrollment; in 1978, nonresident aiiens accounted for 7 percent of graduate enrollment. At the first-professional level, enrollment of white students decreased slightly in proportion to total inirst-professional enrollment, from 90 percent in 1978 to 84 percent in 1988. In contrast, total minority enroliment increased in proportion to total first-professional enrollment, from 9 percent in 1978 to 15 percont in 1988.

In 1988, undergraduate enrollment reached $11 .:$ million, an all-time high since 1982. After 1978, scowth in undergraduate enrollment varied by racial/ethnic group: The undergraduate enrollment of Hispanics and Asian or Pacific Islanders increased steadily betiveein 1978 and 1988 ( 62.6 percent and 112.1 percent, respectively), but black undergraduate enrollment dropped 3 percent between 1982 and 1984. Black undergraduate enrollment then inched up to the 1 million mark first: reported in 1980. Nonresident alien undergraduate enrollment showed biennial declines between 1982 and 1986, but stabilized between 1986 and 1983.

In 1988, graduate enrollment reached 1.5 million. Whites and nonresident aliens continued to account for the largest proportions of graduate enrollment, 78 and 10 percent, respectively; however, all racial/ethnic groups reported all-time highs-or nearly all-time highs-for graduate-level enrollment in 1988. On the other hand, first-professional enrollment ( 267,000 in 1988) continued to decline aiter the mid-1980s. While whites are the predominant racial/ethic group across all levels of study, their share of first-professional enrollment (83.6 percent) is larger than their share of undergraduate or raduate enrollment (78.8 percent and 78.4 percent, respectively).

## Participation Rates in Higher Eaucation

By using data drawn from the Bureau of the Census Current Population Surveys (CPS), one can compare CPS estimates of enrollment and population to detemmine participation rates for three racial/ethnic categories (white, non-Hispanic; black, non-Hispanic; and Hispanic). The population used in this analysis was the traditional college-age cohort (i.e., 18- to 24-year-olds), and the older college-going cohort (i.e., 25- to 34-year-olds). These two cohorts account for most college participants. Results are shown in table 4. It should be noted, however, that CPS population data and HEGIS and IPEDS enrollment data are not directly comparable because CPS information is derived from samples of households, and HDGIS and IPEDS data are collected from institucions of higher education. There are some additional limitations when using cis numbers. The CPS survey uses the 1980 Census as its base year; as a result, the true representation of these racial/ethnic grouns may be underestimated for groups that grew faster than the average throughout the 1980s, but overestimated for the other groups. Also, the participation rates are affected by a growth or decline of the population within the age cohorts. Thus, CPS data only provides a rough measure of adult participation in higher education and must be used with caution. ${ }^{4}$

In the October 1978 current Population Survey, about 31 percent of all 18- to 24-year-old high school graduates indicated that they were enrolled in a college or university (table 4 and figure 4). By the early 1980s, this percentage had increased slightly, averaging 32 percent from 1980 to 1983. During the mid- and late-1980s, college participation rates continued to rise gradually. By 1988, college participation rates for 18to 24 -year-old high school graduates reached 37 percent. 5

After 1978, the participation rates for white 18- to 24 -year-olds were slightly higher than those for the population as a whole (averaging about 0.5 to 1 percent higher throughout the 1980s). By 1988, the college participation rate for white 18- to 24 -year-olds was 39 percent. However, during most of the 1980s, the participation rates for black and Hispanic
${ }^{4}$ The reader is also cautioned that participation rates presented are a measure of current enrollment, rather than a measure of college attaimment.
${ }^{5}$ Note that the increase in college participation rates of 18- to 24-year-olds could be due, in part, to the fact that this cohort may be taking longer to complete their education (for instance, they may be attending as part-time students).

Table 4.- Participation rates of 18- to 34 -year-old high school graduates in institutions of higher education, by selected raciai/ethnic categories: United States, October 1978 through October 1988

[^2]Note: Totals differ from those shown in other tables. This table represents data collected in sumple surveys of housoholds rather than surveys of institutions of higher education. The Current population survey samples are derived fron the decennial censuses of populations. Also, the deta for whites and blecks differ from Eureau of the Census reports because Hispanic data have been removed from these groups to allon comparisons of all three racial/ethnic categories.

Snurce: Department of Comerce, Bureau of the Census, "Current Population Reports," Series p.20, various years.

Figure 4.--Participation rates in higher education of 18- to 24-year-old high school graduates, by selected racial/ethnic categories: : October 1981 through October 1988

- Total <br> * Black, non-Hispanic
}
- White, non-HIspanlc
- Hispanic

Source: Bureau of the Census, "Current Population Reports", Series P-20.

18- to 24-year-olds were generally slightly below 30 percent. In 1988, the college participation rate for black 18- to 24 -year-olds was 28 percent; the rate for Hispanics was 31 percent, the highest the Hispanic college participation rate has been since 1983.

The participation rates of 25 - to 34 -year-old high school graduates showed a different pattern than those of 18-• to 24-year-old graduates. For example, the participation rates for the 18- to 24 -year-old population increased gradually during the late 1970s and the 1980s; during this same period, however, the participation rates for the population of 24- to 35-year-olds showed a slightly downwand trend after 1978, averaging just under 10 percent throughout the 1980s. (The college participation rates for the 18- to 24 -year-olds averaged about 34 percent during the same time period). 6

It also is interesting to note that participation rates of Hispanic 25to 34-year-olds consistently exceeded the participation rates of white 25to 34 -year-olds. Through the late 1970s and early 1980s, black participation rates for this age group also exceeded those of the white 25 - to 34 -year-olds. However, after 1984, the participation rates for black students, aged 25 to 34 , dropped below that of their white counterparts. Furthermore, in contrast to the slightly rising participation rates for younger students, the participation rates for the 25- to 34 -year-olds, with few exceptions, aecreased slightly after the early 1980s.
${ }^{6}$ One should keep in mind that many high school graduates (aged 25-34) have completed 2 or 4 years of college and satisfied their educational goals. The downward trend reported for this cohort hay be a result of the increasing participation rates of the yourger cohort. That is, the older group's participation rate may be dropping because they completed their ectucation earlier.

Technical Appendix

## Data Sources

The biennial racial/ethnic enrollment statistics in this bulletin are derived from two data sources. The information for 1978 through 1984 comes from data reported by institutions of higher education to the Figher Eulucation General Information Systen (HEGIS) survey, "Fall Enrollnent and Compliance Report of Institution of Higher Education." The 1986 and 1988 data for institutions of higher education were collected through the new Integrated Postsecondary Education Data System (IPEDS) "Fall Enrollment" survey.

## Imputations

Although the HEGIS and IPEDS data reported here are historically comparable in terms of the reporting institutions (i.e., those accredited at the college level by agencies recognized by the Secretary of Education), there are some differences in the imputation procedures used in the two surveys. ${ }^{7}$

In the case of totally nonresponding institutions (i.e., those that did not return an enrollment survey form), HEGIS data ware imputed whenever possible by using previously reported information. In a few cases, imputations could not be performed; thus, enrollment by racial/ethnic category was slightly less than total enrollment reported by the institutions. However, this was not a major problem because racial/ethnic totals were always within 0.3 percent of the actual totals. In IPEDS, a similar procedure was followed except that "hot-dsck" imputations (computer matching with a similar institution of higher education) were performed when previously reported data were unavailable. ${ }^{8}$

[^3]For responding institutions with incomplete or missing racial/ethnic data, the imputation procedures were as follows:
o For both the HEGIS and IPEDS surveys, for institutions that underreported students by race/ethnicity (i.e., when the sum of enrollment by racial/ethnic categories did not equal total enrollment), the race-unknown category was redistributed in proportion to the institution's reported racial/ethnic enrollment.

- For institutions that did not report racial/ethnic data (under IPELS), data were imputed using the same proportions of racial/ethnic data reported at the state level for a given type and control of inscitution. Prior to 1986 (when the HEGIS survey was in place), racial/ethnic data were not imputed for these institutions.

## Nondegree-Seeking Students

Table 3 presents data by level of stuxdy (undergraduate, graduate, and first-professional). The reader is cautioned that the level of stuky data presented here may differ from other NCES publications. HEGIS data, which appear in publications prior to 1986, generally do not include nondegree-seeking students in level of study breakouts because, under HEGIS, nondegree-seeking students were not classified by level of study. For the punposes of this report, however, nondegree-seeking students reported under HEGIS were redistributed across the undergraduate/graduate categories based on the proportions of reported data.

This redistribution procedure is not necessary under IPEDS because institutions are asked to report nondegree-seeking students by level of study. The 1978 timough 1984 data have been adjusted to allow comparisons with IPEDS information.

## Glossary

American Indian or Alaskan Native. A person having origins in any of the original peoples of North America or who maintains cultural identification through tribal affiliation or comemity recognition.

Asian or Pacific Islander. A person having origins in any of the original peoples of the Far East, Sortheast Asia, the Indian Suboontinent, or the Pacific Islands. This category includes people from Crina, Japan, Korea, the Fhilippine Islands, Samoa, India, and Vietnam.

Black, non-Hispanic. A person having origins in any of the black racial groups of Africa (except those of Hispanic origin).

First-professional students. A student enrolled in any of the following postbaccalaureate degree programs:

```
Chiropractic (D.C. or D.C.M.) Pharmacy (D. Phar.)
Dentistry (D.D.S or D.M.D.) Podiatry (Pod. D. or D.P.)
Medicine (M.D.)
Optometry (O.D.)
Gstegpathic Medicine (D.O.)
Veterinary Medicine (D.V.M.)
Law (L.L.B., J.D.)
Theology (M.Div., M.H.L., or B.D.)
```

Graduate student. A student who holds a bachelor's or first-professional degree, or equivalent, and is taking courses at the postbaccalaureate level. These students may or may not be seeking a degree.

Hispanic. A person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race.

Nonresident alien. A person who is not a citizen or national of the United States and who is in this country on a visa or temporary basis and does not have the right to remain indefinitely.

Race/ethnicity. Categories used to describe grouns that individuals belong to, identify with, or belong to in the eyes of the ornmmity. The categories do not denote scientific definitions of anthropological origins. A perison maiy le countea in oniy one group. The groups used to categorize U.S. citizens and resident aliens (holders of Form I-551/155) are:

Black, non-Hispanic
American Irdian or Alaskan Native
Asian or Pacific Islander
Hispanic
White, non-Hispanic

Undergraduate. A student enrolled in a course in a 4- or 5-year degree program, associate's degree program, or vocational or technical program below the baccalaureate level. This category includes unclassified and nondegree-seeking students.

White, non-fispanic. A person having origins in any of the original peoples of Europe, North Africa, or the Niddle East.

Hote: Because of underreporting/nonreporting of racial/ethnic data, data prior to 1986 were estimated when possible. See the Technical Appendix for a discussion of imputation procedures used for underreported and nonreporced racial/ethnic data since 1984 . Also, due to rounding, detail may not add to totals.

Source: U.S. Departmant of Education, National Center for Education Statistics, Bigher Education General Information Survey "Fall Enrollment in Colleges and Universities" (1978-1984) and Integrated Postsecondary Education Data System "Fall Enrollment" survegs (1986 and 1988).

[^0]:    * Reproductions supplied by EDRS are the best that can be made from the original document.

[^1]:    ${ }^{3}$ See Technical Appendix for a discussion of the redistribution procedures.

[^2]:    1/ Totals reflected here represent all possible racial/ethnic categories, not just those displayed in table.
    2/ Unoublished data from the Burcau of the Census.

[^3]:    7 The use of different imputation procedures prior to 1984 for missing and incomplete racial/ethnic data should have no significant impact on the reporting of trend data between 1978 and 1988, because less than 1 percent of total enrollment was affected by the imputation strategies used in 1986 and 1988.

    8 In the fall of 1988, the overall response rate for HEGIS institutions was 92 percent. Imputed enrollment data (for nomresponaing institutions and cases with incomplete data) accounted for, on average, less than 5 percent of the HEGIS data.
