＊Delaware：Vocational Dducation Amendments 1976

ABSTRACT
The Vocational．Education Amendments of 1976 mandate that sex bias and sex stereotyping be eliminated from all vocational education programs．In business and office occupations programs，the problems have been centered around increasing the number of male students in the program．encouraging women to move into management positions and other upper level supervisory jobs，and using sex－fair language in business communications．Responding to the Amendments， the state of Delaware developed a set of five sex equity modules designed（1）to focus on issues which are relalted to specific clusters of career options as defined in Delaware＇s competency－based， goal－oriented business and office occupations curriculum；（2）to provide information and materials for one to three days of activities：and（3）to focus the student＇s attention on those sex equity concerrs which will affect her／his experiences as a student in． the classroom，on－the－job，and in making career decisions．This module focuses on eliminating sex stereotyping in data prozessing and related occupations．Instructional activitfes in the module include a pre－opinion survey，case study，simulation exercise，terms describing men＇s and women＇s behavior，a slide－tape presentation，qualifications for emplcyment，and a posttest．（KC）

## PREFACE

The Vocational Education Amendments of 1976 mandate that sex bias and stereotyping be elimirated from all vocational education $p=o g r a m s$.

The amendments set aside $\$ 50,000$ of each state's Federal vocational funds for this purpose and mandate that each state employ an individual full time to work on eliminating sex bias and stereotyping from vocational programs.

Each program area has special problems which must be addressed in order to achieve sex equity. In business and office occupations programs, the problems have been centered around increasing the number of male students in the program, encouraging women to move into management positions and other upper level supervisory jobs, and using sex-fair language in business comminications.

The sex ecuity modules are designed to:
-1. Eocus on issues which are related to specific clusters of career options as defined in Delaware's competency-based goal oriented business and office occupations curriculum;
2. provide information and materials for one to three days of activities; and
3. focus the student's attention on those sex equity concerns which will affect her/his experiences as a student in the classroom, on-the-jcb, and career decisions.

Instruction in business and office occupations programs should:

1. afford both male and female students opportunities to pursue a number of career options;
2. include a sex-fair curriculum; and
3. provide students with cooperative work experiences without regard to the sex of the student.

VOLSIONAL BUSIN：MODEL
I：二s the functic of this cluster to provide students with the competencies at will enable individuals to obtain appro priate jobs in $t \quad-r$ chosen business field－－and to advance witiin an occupa－onal grouping．In．Delaware，the vocational business model censists of five sub－clusters which are illus－ traこed below：

3. SUB-CLUSTEES

The specific jobs for $\because$ hich students are prepared in the sub-clusters are indicated on Figure 2 of twis cuide. Each specific job has been identified/verified va sirvey oE the business =ommurity throughout the Delaware acion.

1. :DATA PROCتSSING OCCUPATIONS (USOE 14.0200)

This sub-claster is designed to give the stinant a working knowledge for a variety of jobs ranging Erca ajatapists to programmers. Because of the technicas nz-re of this program, competency-based modules may origiow in in the puinlic comprehensive business program or the vo=at-al-technical programs $\equiv \pm$ special training centers.

Data processing involves the collecting anc E=ocessing of information through the medium of automatec Eruipment. Raw information is collected and recorded. It $\ddot{=}$ shen processed, summarized, and sorted according to a pre-cietermined order. When all functions have been completed, the $\dot{\text { Wats }}$ can be interpreted by management and thus serve as a $上 \equiv \equiv i \equiv$ ior decisionmaking. Ti, results of the process may be ;torea for future use and re三erence.

Entrance into this area of work should inc-ude a knowledc $\equiv$ of general office procedures, accounting, mathematics, th ability to keyboard, and the capability tc think logically. The student should enjoy working with numiers and machines.
(a) Joi Descriptions

Specific tasks to be learned by students oncentrating in tiris sub-cluster relate to the following jobs:
(1) Terminal Systom Operator (D.O.T. 203.252-018)

Operates computer terminal and compiles data to produce business, scientific or technical reports, and publications in print-like format; reviews source documents, tables, correspondence, and compary records to determine computer operations required'to produce texts in requested format; clarifies instructions with document originator; arranges data input sequence; types coded commands on terminal keyboard to enter, store, retrieve, or delete data.
(2)

Data Typist (D.O.T. 203.582-022)
Operates special-purpose electric typewriter to convert alphabetic, numeric, and symbolic data into coded form on punch cards or tape; loads

FIGURE 2

punch cards, magnetic or paper tape reels into machines; types computer program from input data; proofreads and makes necessary corrections.'

Computer Operator (D.O.T. 213.362-010)
Monitors and controls electronic computer to process business, scientific, engineering, or other data, according to operating instructions.

Operates on-or off-line peripheral machines accordińg to written or oral instructions to transfer data from one form to another; mounts and positions materials; set guides, key and switches according, to instructions to prepare equipment for operation; observes materials for i'rregularities, printing defects or machine malfunctions.
(9) Data Control Assistant Supervisor (D.O.T. 219.367-014)

Supervises and coordinates activities of, workers engaged in keeping control records and scheduling data to be processed on keypunch or electronic data processing machines; schedules flow of data.
(10) Programme (Trainee) (D.O.T.219.367-367)

Selects symbols from coding system and codes successive steps of completed program for conversion to machine instructions, to process data, or to control industrial processes; reads and interprets. sequence of alphabetic, and numeric data for each program step to translate into machine language that can be converted by the computer processor into machine instructions.
(b) Employment Outlook

Electronic data processing is one of the most exciting occupational fields the world has to oiffer young men and women today. It is rapidly growing and is one of the most challenging and rewardinig fields.
II. DATA PROCESSING AND RELATED OCCUPATIONS -

1. FOCUSES
(a) Employer/Employee relationships.
(b). Attitudes about the behavior patterns of men and women.
(c) Simulated activities on the task of systems analyst, programmer and computer operator.
2. ACTIVITIES
(a) Pre-Test.
(b) Case study on handling conflict with subordinates.
(c) Simulation exercise on all career options in Data Processing.
(d) Conflicting terms describing men's and women's behaviors.
(e) Slide-Tape presentation.
(f) Qualifications, for employment.
(g) Post-Test.

138
3. PERFORMANCE OBJECTITVES
(a) Given an opportunity to discuss "boss-employee" relations, the student will with 100 percent accuracy list two special problems that may develop if the "boss" is a woman.
(b) Given an activity concerning the stereotyped behavioral patterns of men and women, the student will with 100 percent accuracy list two examples of these stereotypes, one adversely effecting men and one adversely effecting women.
(c) Given examples of tasks performed in the data processing field, the student will. with 100 percent accuracy list two examples of why any of the jobs could be done by p
either a man or a woman.

## III. INTRODUCTION TO DATA PROCESSING MODULE

In our age of specialization, it is not surprising to discover that a higher degree of technology is needed in the business world.
There are 70,000 to 80,000 computers in the United States today, and there are over one million people who work with computers in one way or another. Women in data processing usually are employed as keypunch operators and men have traditionally. dominated the areas of programming, sales, manufacturing; and repair.
Womén need to take the mandatory courses that lead to top-paying positions in data processing, but have been reluctant to do so until recently.

Although there is still room for improvement, the areas of data processing have been less stereotyped than other areas because it is a new field and does not carry with it the historical stereotypes of male and female jobs.

Hopefully this area will continue to provide readily available opportunities for women and men at all levels of employment.
This module focuses on the "on the job" issues in data processing
and includes:
(a) Employer/employee rela/tionships.
(b) Attitudes about the behavior patterns of men and women.
(c). Simuläted activities on the tasks of the systems analyst, programmer, and computer operator.

## OVERVIEW OF INSTRUCTIONAL ACTIVITIES

(a) Pre-test

The pre-opinion survey should be administered to measure the students attitudes toward sex role stereotyping in our society. The survey will provide the teacher with an indication of the students attitudes on sex equity.
(b) Case Study

Give each. student a copy of "Handling Conflict from Subordinators." Have the students read the case study, answer the questions, and be prepared to discuss the situation with the class.
(c) Simulation Exercise
.The instructions for this activity are found on the activity sheet.
(d) Terms Describing Men's and Women's Behavior

Display the overhead and discuss the terminology used in the "balloons" and how it applies to on-the-job situations. How do attitudes about the way men and women react in different situations effect job assignments?
(e) Slide-Tape Presentation
(E) Qualifications for Employment

Qualifications for employment are designed to:

- To expose students to the many different jobs available in an occupation and to show students that the qualifications for employment are not determined by sex.
(g) Post-test

Have the students take the pre-test again and assess themselves relative to changes in attitudes.

$$
16
$$

ACTIVITY (a)
Pre/Post Test
Yes No

1. The way things are now, it's better to be a man than a woman.
2. Women shouldn't want to change things because they have the best deal now.
3. It's OK for a girl to play on a male team if she's a good athlete.
4. Men should make the important decisions because men think, while women act on their emotions.
5. It's OK for a woman to be assertive.
6. It's OK for a woman to be aggressive.
7. It's OK for a boy to cry.
8. It's OK for a man to cry.
9. It's important to me that a man act like a "real man" and that a woman act like a "real woman."
10. A woman should not compete with a man because this damages his ego.
11. I often act in a way that a person of my sex "isn't supposed to."
12. I get mad when people tell me that how I act isn't "right" for my sex.
13. Men should be more honest about their feelings toward other people.
14. Men should be more open with other people about their own inadequacies.
15. Women are less self-confident than men.
16. Men should pretend to know more than they realiy do, in order to appear "professional."
17. "Men should pretend to be able to do more than they really can, in order to appear successful.
18. It is hazd for women to do their best when competing with men.
19. Men like women who are followers not leaders.
20. Women like to rely on others when there are decisions to make.
21. Women need more encouragement and approval thar. men to, work effectively.
22. Women are more easily taken advantage of than men.
23. Women lose their sex appeal as they get older, whereas men don't. .
24. Women lose their good looks as they get older, whereas men don't.
25. Boys and girls should be brought up in the same way.

ACTIVITY (b)
Handi上 Conzlict From Subordinates
Arlene Themas has wo for ABS Products for eight years as a keypunch operator. : aring her tenure, she has held an excellent work record; almost erfect attendance, commendations from several of her superiors, and an ability to work well with the others in her departfent.
Approximately eight months ago, the supervisor of data entry. for the company retired and Arlene was promoted to his position. Throughout this period of time, productivity has decreased, accuracy has diminished, the keypunch operators spend more time on bxeaks than working, and there is much in-fighting in the department.
Recently, several department supervisors have complained to Arlene that reports are behind due to slow keypunching and are not correct. One even noticed that several of Arlene's girls consistently dressed below company standards.
Student Qiscussion Questions:

1. What might be some reasons for the problems mentioned above?
2. What are Arlene's alternatives with her employees?
3. What can Arlene do to alleviate the situation with the other department supervisors?

11

ACTIVITY ( C )
Spending A Day In The
DATA PROCESSING DEPARTMENT
of MARY LEE CANDY DISTRIBUTORS

1: PURPOSE AND MAJOR ACTIVITY
Students participate in activities of the systems analyst, programmer, and the computer operator in a candy distributor's business.

Because the glamorous part of computers and data processing is so prevalent in newspapers, magazines, and other literature, it is not included in detail in this unit. The first optional activity described on the next page contains suggestions for a classroom library of such material. As a teacher, you are provided here with simulation activities that will help students get the "feel" of some of the down-to-earth work of data pro-
cessing personnel.
(a) Before Class Begins:
(1) Duplicate enough copies of the simulation packet (white sheets at end of this unit) to provide each/student with a copy.
(2) Read "Background Information on Data Processors" on page 31.
(3) Read the second optional activity starting on pagè 12, entitled Tell the Computer How to Compute; and decide whether you will, conduct it. The basic advantage of using this"activity is that students will. learn how limited the computer: is in its operation, even though we have read and heard much to the contrary. It will give them a feel of what it is like to program a, computer.
(b) During Class:
(1) Distribute the simulation packets, reading and discussing the first page with students. Suggested discussion topics are given in the teacher's key to the simulation (pages 16-30).

- (2) Ask students to complete pages 2 through 14 of the simulation. You may want to conduct this unit as a group project rather than an.individualized activity.
(3) When students have finished, go through the simulation with them, checking answers and discussing the topics shown in the teacher's key.
(4) After checking the simulation exercises, have students turn to page 46 to answer and discuss the questions listed there.

```
OPTIONAL ACTIVITIES
```

(a) Set up a Library

Some ideas for a classroom library are listed below. Allow interested student's to check out books and pamphlets.
(1) Books and Pamphlets
"Opportunities in Electronic Data Processing" by Martin Nussbaum, 1972
Vocational Guidance Manuals
235 E. 45 Street
New York, New York 10017

(b) Tell the Computer How to Compute

An interesting and profitable activity would be to simulate $E$ computer. The steps for carrying out the simulation $=s$ a play are described on pages l3-15. You may wart $=0$ duplicate these pages and let students preview then $\equiv$ school or at home.
(1) Assign roles to be played
(i) Computer--someone who will act like a computer, whose input will be through the ears by voice and whose output it writes on the blackboard. Also, the perison taking the role of computer will have a large red card or flag to raise when the computer won't accept the instruction.
(ii) Systems Analyst--someone who plans when the computer will add, subtract, multiply,
divide, etc.

Programner--someone who will instruct the computer what to do, bearing in mind its limitations.

## I: structions that the Computer =an Accept

When ins ructed, it can do the following:

1. Write numbers on the blackboa-d one under another, or side by side, suci as:
345
345 128
128
2. Subtract a smaller digit from a larger one, such as, "Subtract 5 from 8."
3. Regroup or borrow after it has signalled that it can't subtract a larger digit from a smaller one, such as "Subtract 8 from 5."
4. Rearrange and regroup a subtraction problem.

$$
\begin{array}{ccc}
\text { Problem } & \because & \text { Problem Rearranged } \\
345 \\
-128
\end{array} \quad \therefore \quad \begin{aligned}
& 300+30+15 \\
& \hline
\end{aligned}
$$

5. Write answers in boxes lined up under one another such as:

6. Erase numbers that have been used.
7. Answer "yes" to such questions as, "Are you ready?" or, "Can you subtract 5 from 8?" by raising a-white card with a "yes" on it in large letters.
8. Answer "no" to such questions as, "Can you subtract: 8 from 5?" by raising a white card with "no", on it.
9. Flash red by raising a red card when asked to do something it is not supposed to do.

## Scenario

The computer stands at the blackboard and has the following:

$$
\begin{array}{ll}
\text { chalk" } & \text { white card, lettered "yes" } \\
\text { eraser } & \text { white card, lettered "no" } \\
\text { red card }
\end{array}
$$

The systems analyst and programmer sit in chairs on either side of the computer. The co-stars of the cast are the computer and the programmer. The computer will be rated very high if it performs only what it is supposed to and raises the red card when the programmer does not give sufficient instructions. The programmer will be rated high if he/she instructs the computer in sufficient detail so that it has to perform and doesn't raise the flag. The systems analyst has a minor role in this play.

## Scene 1

Systems analyst: |  | I have examined our business and |
| ---: | :--- |
|  | find that to keep inventory records |
|  | we must subtract the amounts on |
|  | shipping orders from inventory. I |
| $:$ | am requesting the programmer to |
|  | cause the computer to subtract 128. |
|  | from 345. |

Scene 2
Programmer to computer: Are you ready?
Computer: Holds up card with yes.
Programmer: Write 345 and under it the subtrahend 128.
Computer: Writes. 345
128

|  | Can you subtract 8 from 5? |
| :---: | :---: |
| Computer: | Holds up card with no. |
| Programmer: | Regroup the number 345 by writing opposite it the numbers $300+30+15$. |
| Computer: |  |

Programmer: Opposite 128 , write $100+20+8$.

Computer: Writes and now has on the board:

$$
\begin{aligned}
& 345 \\
& 128 \\
& \hline
\end{aligned} \quad \begin{aligned}
& 300+30+15 \\
& \hline
\end{aligned}
$$

Programmer: Subtract 8 from 15 and write the difference
in the box.
Computer: Writes the difference in the box.
Programmer: Erase the numbers used.
Computer: Erases 15 and leaves on the blackboard: 8

| 345 | $300+30$ |
| :--- | :--- | :--- |
| 128 | $100+20$ |

Programmer: Subtract 20 from 30 and write the diffference in the box.
Computer: Writes the difference in the box. . 10
Programmer: Erase the numbers used.

Computer: Erases 30 and leaves on the blackboard: $\begin{array}{lll}20 & 345 & 300\end{array}$ | 345 | 300 |
| :--- | :--- | :--- |
| 128 | 100 |

Programmer: Subtract 100 from 300 and write the difference in the box:
Computer: Writes the difference in the box. $\quad 200$
Programmer: Erase the numbers used.
Computer: "Erases 300 and leaves on the black-.
board: 100 . 345

Programmer: Add differences and write the answer in the box. .
Writes the answer in the box.
217

The three members of the cast take bows. The teacher may invite the class to vote which of the two, the programmer and the compouter, best played their roles according to the rules.

## KEY

## Simulation Page 1

As you discuss the packet introductory page with students, supplement the discussion with information from page 31, "Background Information for Data Processors."
If some of your students are acquainted with people who work in data processing occupations, ask them to describe some of the tasks performed by these people and to tell in what types of organization they work.
Before having students begin the simulation exercise, discuss the meanings of special terms on page 1 of the simulation packet: systems analyst programmer
computer operator
flow chart
coding sheet
punched cards
program

Read this page with the students so that they understand the entire situation. Be sure they understand that Mary Lee Candy Distributors buys from a manufacturer and sells to 27 retailers.

Go over the notes taken by the systems analyst-and make certain the students recognize the need for a "perpetual" inventory record versus a "guessed" one. Ask the students whether it would likely be feasible to take an actual count, every time someone wants to know, "How much candy do" we have on hand?"

Be sure they can define "perpetual inventory." It is one which can constantly answer the question, "How much candy do we have in stock?"

## Key

## Simulation Page 3:

This activity provides an introduction to one kind of block diagram flow chart.

Have students write a short statement beginning with a verb taken. from the notes on the previous page.

Ask the students where in the business they think each event takes place. Sample answers are given below:

Block 1 - Systems analyst's office in the DP department

Block 2 :- Stock department

Block 3 - Receiving department or dock.

Block 4 - DP department
Blook 5, Sales Office
Block 6 - DP department
Block 7 - DP department
Block 8 - DP department

## Simulation Page 4:

Explain the use of the coding form. The coding form is one way to prepare data for entry into the computer. In this case, information on the Receiving Report and the Shipping Order is to be entered on the coding form.

Be sure the students can correctly answer all the questions about the Receiving Report.

Ask them which is most important for inventory, "Quantity Ordered" or "Quantity Received". Answer: Quantity Received. In this case, these quantities happen to be the same.

Roceiving 3apore: :

1. IId Mary Loe Candy Oiscributozs zeceiva something f=om ho Sweef finocolate Confaceionery Manulacturing company? yES

[^1]
## Key

## Simulation Page 5:

If possible, obtain a full... size coding form from the school business office or from a nearby industry to show the students.

Tell the students that the coding sheet is often used to punch cards on a key-punch machine.

Review the coding form with the students and make certain they can correctly answer the questions about it.

If the students ask about Fortran, COBOL, and Basic, tell them they are names for computer languages. Tell them that the computer cannot understand our English, so we must tell it what to do in another language, "Computer Talk." If students are further interested, ins-ite a programmer to explain some more to them.

Simulation Page 6:
Show the students how to enter the stock number on the coding Eorm. Have them observe that Eive columns are allowed. Since only three are used, the remaining two are filled in with , zeroes.

In a similar manner, show them how to enter the quantity on the coding form and to fill in one column with a zero. .

The kind of report (Receiving Report) is also coded since the computer must be told whether something is being "received". or "shipped."

Have the students notice that a receiving report is assigned a 10 and is so coded in columns 11 and 12 .

Check their answers to the questions at the bottom of the sheet for accuracy.

Entering the Recalving Repors on the coding form
The Recuivisg Raport is coded on the Elrst lina of the soding torm as shown below. Nove that zeroen are usad so ilil in ehe blant spacaz. Also notice how the stock number joj is writean in zoluma

saswe: the sollowing quaseions:

## Simulation Page 14:

Since the type of thinkirg required to write program instructions may be new to the students, choose one of the following two procedures.
A. Write the program similar to that done by Juan as a group activity under your direction.
B. Have students complete it in small groups. Be sure that each group has one person who is known to be logical and methodical.

As a result of these assignments, students san determine whether they have some of the qualities required to be a programmer.

## Key

## Simulation Page 15:

The purpose of the questions
on page 15 of the simulation
is to encourage students to examine their own abilities and personalities and compare these to the characteristics needed to succeed in the occupation explored in this simulataion.

Encourage students to talk about their own likes and dislikes and about the things they think they would
like and dislike about
this occupation.

## Spending A Day

In The DATA PROCESSING DEPARTMENT
Of MARY LEE CANDY DISTRIBUTORS
In the next 14 pages, you have an opportunity to be a shadow to a systems analyst, a programer, and a computer operator. You will perform a small sample of their work for Mary Lee Candy Distributors. You will:

1. WRITE A FLOW CHART
2. PREPARE A CODING SHEET

3. PUNCH DATA CARDS
4. WRITE A PROGRAM FOR THE - COMPUTER

## Preparing a Flow Chart on Inventory Processes

You are going to spend a day as an assistant in the data processing department of Mary Lee Candy Distributors which wholesales Mary Lec boxes of chocolates to 27 , retail stores. The retail stores in turn sell to shoppers who pass by the stores. Mary Lee Candy Distributors obtain the candy from a manufacturer. You will spend some time working with the systems analyst, the programmer, and the computer operator. In each case, you will be required to perform some of the work that these employees are doing at the time you are with them.

When you arrive at the Mary Lee Candy Distributors, you are first introduced to the systems analyst who is preparing a flow chart about one operation of the Mary Lee Canḑy Distributors. This operation concerns keeping, an inventory of boxes of chocolates. The systems analyst hands you some notes to read that he has made after the president of the company directed him to set up a perpetual inventory of candy stock. Perpetual inventory is defined as a record of boxes of candy on hand at all times. Previously, the inventory was taken on the first of the month. Thus, the actual number of boxes on, hand was known only on the first of the month.

## Perpetual Inventory Notes

February 17, 19--

1. The president has directed the systems analyst to set up a system to keep a perpetual inventory.
2. In order to start the system, it will be necessary to obtain an actual count of all boxes of candy on hand.
3. Then, copies of all receiving tickets of candy from the manufacturers must be sent to the data-processing department daily.
4. The receipts-as shown on the receiving tickets must be immediately added to the inventory.
5. Copies of all shipping orders of candy going to the Mary Lee Retail Stores must be sent to the data-processing department.
6. The issue of candy as shown on shipping orders must be immediately subtracted from the inventory.
7. At any time during the business day, the data-processing department should be able to report by telephone the current inventory to other departments.
8. A report (printout) of the cur'rent inventory should be made available to the president at 8:00 a.m. each day.

The systems analyst asks you to complete the flow chart shown below. You are to fill in the empty blocks with the key ideas in each of the numbered notes. The first three blocks are already filled in. Fill in the remaining five blocks.

Take actual count of candy stock on hand

Collent receiving tickets of candy sent by manufacturers.

## Preparing a ${ }^{\text {'Coding }}$ Form

Next, you are introduced to Sharon Burns, the computer operator, who is preparing a coding form. The preparation of a coding form is only one of her many duties. A coding form is used to prepare information for the computer. She shows you two business forms and a coding form on which some information from the forms has been written. Sharon shows you how to find information on the forms and copy it on the coding form. Later, you will have the opportunity of finding out how the coding form is used to put information into the computer.

Receiving Report: Look at the Receiving Report above and answer

1. Did Mary Lee Candy Distributors receive something from the Sweet Chocolate Confectionery Manufacturing Company?
2. What was received?
3. What is the stock number of the "thing" received? $\qquad$
4. How mucn was received? $\qquad$
5. When was it received?
6. Was the quantity checked to see whether the correct amount was received?

Coding Form: Look at the coding form shown below and answer the

Coding Form: This form usually has 80 columns instead of the 43 shown. It usually has 25 rows. The terms Fortran, COBOL, and Basic refer to computer languages which are studied,in computer training programs.
Answer the following questions:

1. How many columns does a complete coding form usually have? (Hint: See the note beneath the coding Form.)
2. How many rows does a complete coding form usually have?
3. How many spaces are available for the Stock Number? (Hint: See middle left of the Coding Form.)
4. How many spaces are available for the quantity?
5. What does the $R$ in $R / S$ mean and what is its code? $\qquad$
6. What does the $S$ in $R / S$ mean and, what is its code? $\square$
7. How many spaces are available for an $R$ or an $S$ ?
(Simulation Page 5)

Entering the Receiving Report on the Coding Form
The Receiving Report is coded on the first line of the coding form as shown below. Note that zeroes are used to fill in the blank spases. Also notice how the stock number 305 is written in columns l-5 and that two zeroes are written in front of 305 to fill up all five columns.

1. How much candy was received? (See the Receiving Report.)
2. In which columns of the coding Form. was the quantity written? How many zeroes were needed to fill up the spaces in front of the quantity?
3. In which columns of the coding Form was the stock number

How many zeroes were needed to fill up the spaces in front. of the stock number?
4: What number is used to show the kind of report that is being
put on the coding form?
5. In which columns is the Receiving Report code number written'?

## Shipping order

Look at the Shipping order above and answer the following questions:

1. What is the name of the store that Mary Lee Candy Distributors
sent some candy to?
2. How many boxes were sent?
3. What is the stock number of the candy sent?

## Entering the Shipping Order on the Coding Form

The Shipping order is coded on the second line of the coding form as shown below:

Answer the following questions:

1. In which columns of the coding Form was the quantity shipped.
written?
$\qquad$
2. How many zeroes were needed to fill up the empty spaces? $\qquad$
3. In which columns of the Coding Form was the stock number written?
4. How many zeroes were needed to fill up the empty spaces?
5. What number is used to show the kind of report that is being
put on the Coding Form?
6. In which columns is the Shipping, Order code number written?

## Your Job Assignment

Copy the necessary information from these two forms on the Coding Form on page 41. Sharon has put you on your own.

| Mary Lee Candy Distributors 4120 . Peach Street Atlanta, Georgia |  |  | SHIPPING ORDER <br> No. A750 <br> Date $1 / 6 /--$ |  |  |

> Reading and Punching Cards

Next, you are introduced to Loren LaFave, the computer operator, who is checking a punched card for accuracy. The computer has a reader that can read holes in a punched card. A punched card is shown below. You can read print by means of your eyes and hear words by means of your ears. The computer only reads by means of holes in a card or by magnetic spots on a tape, such as found in a tape recorder.
1234567890
ABCDEFGHI JKLMNOPQR STUVWXYZ

## HHABMA

 888888889888888888188888898898888868888889818888889888888888888888888838838888888

Loren shows you a card with punches in it that are supposed to correspond with the first line on the coding form that you just learned about. He says that each number on the first line has been punched in the card. Notice that the first number on the coding form is 003050100010 . Notice that it has been punched into the card below. Also, notice that the first two zeroes have been punched in the card. Now compare number by number to determine whether the rest of the numbers on the card are correct. Did you find any errors? If so, what are they?

$$
\begin{aligned}
& \text { Ilolo! } 1 / 11000000000000000000000000000000000000090000000000000000000000000000000
\end{aligned}
$$

 .

The first line of the coding form has been "punched" on the card illustrated on the previous page. Now, you must punch the numbers from the remaining three lines onto separate cards. Remember that there were two lines on the coding form and you wrote two more. There should be a card for each line on the coding form. Use the cards below and your pencil to "punch" them. -If a card punch is available in your school, you can observe a machine that actually punches. cards.

00000000000000000000000000000000000000000000000000000000000000000000000000000000

## Preparing A Program for the Computer

Next, "you are introduced to Juan Garcia, a computer programmer, who shows you some instructions he is writing for the computer. He tells you that later these instructions have to be re-written in computer language, which he will show you when he is ready to do that step. He tells you that when you want to solve a problem such as adding and subtracting numerous items from the inventory, you can't just hand the computer the problem. You must prepare detailed instructions, which are put into the computer memory so that it can compute inventory. Suppose that you wanted the computer to do this problem: Subtract 173 from 432.

Below is shown what Juan has been writing.

| Instructions | Mathematics | Answer Space |
| :---: | :---: | :---: |
| 1. Read $A$ and $B$. | 1. |  |
| 2. A is 432. | 2. 432 |  |
| 3. B is 173. | 3. 173 | - |
| 4. Start at the right. Can 3 be subtracted from 2? If so, subtract. If not, go to the next step. | 4. No |  |
| 5. Regroup 432 las 420 and 12. | 5. $420+12$ |  |
| 6. Under $420+1,2$, rearrange 173 as 170 and 3. | 6. $170+3$ |  |
| 7. Subtract 3 from 12. Write 9 in the answer space. | 7. $\begin{array}{r}12 \\ -\quad 3 \\ \hline\end{array}$ | 9 |
| 8. Can 70 be subtracted from 20? If so, do it. If not, go to the next step. | 8. No |  |
| 9. Regroup 420 as 300 and 120. | 9. $320+120$ |  |
| ì. Beneath $300+120$, rearrange 170 as 100 and 70. | 70. $100+70$ | : |
| 11. Subtract 70 from 120 . Put 50 in the answer space: | $\begin{array}{rr} 120 \\ \hdashline & -70 \\ \hline \end{array}$ | 5.0 |
| 12. Can 100 be subtractéd from 300? If so, do it. | 12. $\begin{array}{r}300 \\ -100 \\ \hline 200 \\ \hline\end{array}$ |  |
| 13. Pu't 200 in the answer space. | " | 200 |
| 14. Add all the numbers in the answer spaces. | 14. | 259 |

Juan says that programmers have to be able to write instructions for computers before they rewrite them in computer language. He tells you to write instructions for this problem: Subtract 48 from 235. Use the space below. You may or may not need 14 steps. Use as many as needed.

(Simulation Page 14)

WOULD I LIKE TO WORK WITH COMPUTERS

1. Would you like to plan with others in a business YES which activities will be handled by the data processing department?
2. Would you ifre to prepare flow charts that show how a business activity will be handled by the DP department?
3. Would you like to plan and prepare coding forms? YES
4. Would you'like to enter information from business yES No
papers on a coding form?
5. Would you like to punch cards?

Y゙ES NO
6. Would you like to write programs for the computer? YES NO
7. Do you like to solve crossword puzzles? YO

If you answered most of the above questions yes you may want to find out more about data processing jobs and how to prepare for

## BACKGROUND INFORUATION FOR DATA PROCESSORS

There are 70,000 to 80,000 computers in the United States today, and there are over one million people working with them in one way or another. Some people operate equipment that prepares data for the computer. Some people, work with the output of the computer. Some people feed data to and operate the computer. Some people prepare instructions for the computer that "tell" the computer what to do. Others plan what the computer wili do. Of course, there are those who manufacture, repair, service, and seii computers.

Belcw is a list of duties and the job titles of those people marnly responsible.

How do you prepare for a data-processing job? There are many routes. You can take recordkeeping, accounting, business math, and data-processing courses in high school that will be helpful in some of the beginning jobs. Colleges have computer science departments. Also, you can sometimes, as a beginning employee in business and industry, enroll in company training progroms offered while you work.
iñat kind of personal traits should you have? Here is a list of some of them:

Like to workurith data and information
like to solve puzzles, such as cross-word puzzles
like to be extremely accurate and make things prove out

## ACTIVITY (f)

QUALIFICATIONS FOR EMPLOYMENT

1. PURPOSE
(a) To expose students to the many different jobs available in. Datą Processing Occupations.
(b) To show:students that the qualifications for employment are not determined by sex.
2. PROCEDURE
(a) The teacher should decide which occupation to focus on and discuss the many jobs available within the module. The teacher might make a list on the board like the one below and have students add to the list.
Examples of Job Opportunities in the Data Processing Field:

(b) When the list is fairly complete, distribute the student activity sheet and have the students decide independently which job or'jobs this person is qualified for. Discuss after they have decided.

- How did you cicide upon a position?
- What qualities do you see necessary for all areas of employment?
- What characteristics are not at all necessary for
- Do you think this person is a male or a female?
Why?
- If you learned that the person currently filling the position was a male, how would this influence your choice of position?
- In looking at the qualifications of the applicant, is this person over qualified for the job? Underqualified?
- Suppose you learn the sex of the applicant. Would you change your job offer? Why?
- What jobs are you interested in?
- How are you qualified for these jobs?
- VARIATION OR FOLLOW-UP
- 

Have students research any job in which they have an interest. From the research, have them list the requirements they feel are necessary for the job. Do they see this job as being exclusively for a male or a female? What requirements would limit the job to one sex? Has their perception of the job changed any after researching it? Have scudents share their results with the class. Use the "Financial Facts of Life" Activity.

- Smith has just graduated from high school and is applying for job. In the interview and from the references, the personnel irector finds that the candidate has the following qualities:
(a) A knowledge of the company through summer jobs.
(b) A good grade average in high school.
(c) A gord attendance record in high school.
(d) Business and math skills.
(e) A pleasant personality.
(f) A desire to move up in the company.
(g) Recommendations that indicate the candidate is dependable and has an ability to get along with other people.
(h) A knowledge of safety precautions: an awareness of the importance of following instructions.
(i) A driver's license.
(j) Good health and neat appearance.

What jobs would you offer M. Smith?

## A Riddle

While driving to the store, a young boy and father were involved in a serious car accident. The father was killed and the boy was injured and taken to a hospital. At the hospital, the boy was examined and an emergency operation was needed. The resident surgeon had scrubbed up, put on a gauze mask, and was waiting in the operating room when the boy was wheeled into surgery. The surgeon took one look at the boy and cried, "I can't operate. This is my son.".

Who was the surgeon?
-- source unknown
