ABS'__2ACT
The North Carolina End-of-Course ''esting Program was established to provide scudent, school, and sciool system information about achievement in high school courses. Approximately 83.4 percent of the 77,154 students who took the biology test were in the tenth grade. Students taking biology in the ninth grade ( 8.3 percent) were on an accelerated track in which chemistry or physics was taken to fulfill the physical science requirement. Eight goals and 33 objectives were identified. Each objective was measured by at least seven items within each classroom. Each hiology student took a test containing 66 common or core items and one of five different sets of 34 items during the final days of the school year. The average core score was 39.0 or 59.1 percent correct. On average, the 1988 biology students scored one raw score point higher than 1987 biology students. Average scores differed by parental education, ethnic group, grade level in school, and anticipated final course grade. The select group of students taking biology in the ninth grade had higher average scores than students at any other grade level. The appendix provides the performance in regions and school systems, and state percentile tables. (Author/YP)

## ABSTRACT

The North Carolina End-of-Course Testing Program was established to provide student, school, and school system information about achievement in high school courses. The first Algebra I End-of-Course Test wa administered in 1985-86. Algebra II and Biology were added to the testing program in 1986-87 and U.S. History was added in 1987-88. Other high school courses will be added in future years.

Most high school students take Biology to fulfill their life science requirement for graduation. Approximately 83.4 percent of the 77,154 students who took the Biology test were in the tenth grade. Students taking Piology in the ninth grade are on an accelerated track in which Chemistry or Physics is taken to fulfill the physical science requirement and three advanced science courses can be completed after the ninth grade.

Each Biology student took a test containing 66 common or core items and one of five different sets of 34 items during the final days of the school year. The average core score was 39.0 cr 59.1 percent correct. On average, the 1988 Biology students scored one raw score point higher than 1987 Biology students. Average scores differed by parental educaticn, ethnic group, grade level in school, and anticipated final course grade. The select group of students taking Biology in the ninth grade had higher average scores than students at any other grade level.

Schools and school systems can examine relative performance on the 8 Biology goals and 33 Biology objectives to identify patterns of strengths and weaknesses. Each objective was measured by at least 7 items within each classroom.

# NORTH CAROiJINA END-UF-COURSE TESTING PR()(JRAM 

## BIOLOGY - 1988

## Introduction

North Carolina is in the process of developing end-of-course tests witnin several subject areas. The purposes of the tests are twofold:

1. The tests will provide information about each individual student's performance relative to that of other students in North Carolina.
2. The tests will provide informaion about school and school system achievement on the subject area goals and objectives specified in the Standard Course of Study and the Teacher Handbook.

The development of the end-of-course tests will require many years of effort. End-of-course tests are the final product of a process which includes: curriculum development and review; statewide curriculum surveys; test specification; the writing, review, and field-testing of a large pool of test items matched to objectives in the Teacher Handbook; test construction using selected items from the pool; and review, field-testing, and equating of different forms of each test. Several forms of each end-of-course test are developed so that the same tests are not administered in subsequent years.

Based on statewide enrollment patterns and recommendations made by two commissions on education, the end-of-course tests chosen for initial development were Biology and Algebra I. Item pools for these two courses were built in the spring of 1985. The results of the item development phase indicated that the Algebra I items were sufficient in quality and quantity to merit building end-of-course tests. Additional Biology items and an item bank for Algebra II were developed during the 1985-86 school year, including field-testing in selected sites in May of 1986. In addition to Algebra I, both Biology and Algebra II End of-Course Tests were administered statewide at the end of the 1986-87 school year. U.S. History items were field tested in 1986-87 and the U.S. History End-of-Course Test was added in 1987-88. Geometry and Chemistry itens, including proofs for Geometry, were developed and field tested during 1987-88. Current plans are to add the Chemistry and Geometry End-of-Course Tests to the admi:istration of end-of-course restis at the end of the 1988-89 school year.

Although end-of-course tests for different subject areas will vary in length, 110 minutes will be sufficient for administration in all subjects. The State Board of Education requires that end-of-course tests be administered during 110 -minute periods within the last 10 days of school, and recommends that the $\%$ be administered during final exam periods.

The first North Carolina Biology End-of-Course Te,t was administered at the end of the 1986-87 school year. Five forms of the Biology test were administered within each classroom. Each form consisted of 66 common items (the core test) and 34 variable items. In 1988, five new for.ns were administered within each classroom. Each form included a new, statistically equivalent, core test ( 66 items) and 34 new variable items. Comparisons of performance on the core items are appropriately made across individual students. Average core scores at the initial administration of the test in 1987 provide a baseline with which to compare subsequent performance. Statewide performance on the entire set of items (the 236 -item curriculum test) provides a standard to which school and school system achievement of goals and objectives can be compared.

## Characteristics of Biology Students

Other North Carolina testing programs assess achievement in basic subject areas of an entire cohort or ciass of stucents. End-of-course assessments are different in two ways. First, some of the courses are offered to stadents at different grade levels. Second, some courses are nct required of all students; the students who do take the courses are a subgroup of the total student population.

Table 1 compares certain characteristics of Biclogy students with the population of all enroiled students. The top portion or the tabi, provides the distribution of Biology students at various grade levels compared with the average daily membership in those grades. Most high $x$ hiwil students take Biolngy to fulfill their life science requirement for graduation. Approximately 83.4 percent of the 77,154 students who took the Biology test were in the tenth grade. Students taking Biology in the ninth grade are on an accelerated track in which Chemistry or Physics is taken to fulfill the physical science requirement and three advanced science courses can be completed after the ninth grade.

In an independent study using a random sample of eleventh-grade students, 99.6 percent of Noi. ; -nlina's students report having taken Biology. ${ }^{1}$ The percentage taking Biology does not var) $\quad$ hnic group, or parental education. The second section of Table 1 compares the ethnic compk if sioiogy classes with the ethnic composition of K-12 pupil membership. ${ }^{2}$ The ethnic disu autior in Biology is similar to the ethnic distribution in overall student membership.

The third section of Table 1 compares parental education levels of Biology students with - 4 odication levels of students in the eighth grade statewide. ${ }^{3}$

| More Than High School | 31,893 | 41.6 | 41,297 | 54.5 |
| TOTAL | 76,679 | 100.0 | 75,843 | 100.0 |

[^2]
## Student Performance on the Core Test

Summary scores for the 1988 core test, and for comparison, summary scores for the 1987 administration, are presented in Table 2. In 1988, the average score for the 77,1.54 students taking the core test was 39.0 , or 59.1 percent correct. On average, 1988 Biology students scored one raw score point higher than 1987 Biology students. See the Appendix for both the 1987 and 1988 state percentile distributions.

Group achievement on tests, whether for schools, school systems, or the state, is usually reported using summary numbers such as the average or median which indicate typical performance for the group. One number, whether it is the average or the median score, provides limited information about performance. Box and whisker plots are graphs which describe not only typical performance, but also the performance of most of the students by showing the spread of scores. Box and whisker plots allow the comparison of the high and low scores for different groups as well as the middle scores.

Figure 1 shows how to interpret the box and whisker plots using statewide Biology scores for 1988. The box represents the middle 50 percent of scores with the median represented by a horizontal line inside the box. An ' $x$ ' inside the box shows the location of the average (mean) core The whiskers extend up to the 90th percentile and down to the 10 th percentile. The entire figure shows the range of the middle 80 percent of scores. As can be seen in Figure 1, the niddle i) procent of Biology students answered between 31 and 47 items correctly. Ten percent of thre siudents soored above 53 and ten percent scored below 24.

Table 2

## Average Performance on Biology Core Test

|  | Number Tested |  | Average Percent Correct | ----------------1988- |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Number Tested | Average Score | Average Percent Correct |
| State | 82,646 | 38.0 | 57.6 | 77,154 | 39.0 | 59.1 |
| Sex |  |  |  |  |  |  |
| Male | 40.715 | 38.1 | 57.8 | 38,329 | 39.2 | 59.4 |
| Female | 41,312 | 38.0 | 57.6 | 38,534 | 38.8 | 589 |
| Ethnic Group |  |  |  |  |  |  |
| American Indian | 1,253 | 33.4 | 50.6 | 1,220 | 35.3 | 53.6 |
| Black | 23,219 | 32.8 | 49.6 | 22,270 | 33.3 | 50.4 |
| White | 56,626 | 40.3 | 61.1 | 52,185 | 41.5 | 62.9 |
| Other | 1,021 | 40.4 | 61.2 | 1,138 | 40.4 | 61.2 |
| Parental Education |  |  |  |  |  |  |
| Less than Eighth Grade | 1,137 | 31.7 | 48.1 | 1,074 | 32.1 | 48.6 |
| Eighth to Twelfth | 9,744 | 32.6 | 49.4 | 9,413 | 33.3 | 50.4 |
| High School Graduate | 25,563 | 35.7 | 54.1 | 24,055 | 36.2 | 54.9 |
| More than Twelfth | 42,218 | 41.3 | 62.6 | 41,297 | 42.3 | 64.1 |
| Grade in School |  |  |  |  |  |  |
| Nine | 6,261 | 43.5 | 65.8 | 6,431 | 45.6 | 69.1 |
| Ten | 69,888 | 37.9 | 57.5 | 64,314 | 38.9 | 58.9 |
| Eleven | 4,581 | 33.6 | 50.9 | 4,682 | 33.6 | 50.) |
| Other | 1,916 | 34.3 | 52.0 | 1,727 | 34.1 | 51.6 |
| Type of Class |  |  |  |  |  |  |
| Applied/Technical | 21,651 | 33.5 | 50.8 | 20,520 | 33.2 | 50.3 |
| Academic | 54,109 | 40.1 | 60.8 | 53,288 | 41.2 | 62.4 |

Table 2 also shows average performance on the 66 -item core test by sex, parental education, ethnic group, grade in school, and type of class. Figures 2 through 5 show the distributions of Biology scores by various groups using box and whisher plots. Average performance for males was similar to average performance for iemales, tut the range of stores for females is somewhat narrower than the range for males.

On average, white students and 'other' students scored higher than American Indian students and black students. The average score and score distribution for students who have parents educated beyond high school are higher than those for students who have less educated parents.

The largest difference in average core scores appeared among students taking Biology in different grade levels. Only 7.1 percent of the ninth-grade class took Biology; this select group of high achieving students scored higher than any oher group. The average score for ninth-grade sludents was 45.6, more than 6 points higher th:n the average score for tenth-grade students, and 12 poinis higher than the average score for eleverti-grade students. In Figure 5 it can be seen that more than 75 percent of the ninth grade Bology cudents scord 40 or more while less than 50 percent of tenth grade students scored above this point. Just over 25 percent of eleventh grade students scored above this point.

Approximatel. 72.2 percent of Biology students are in an acadenic course while 27.8 percent are in an applied/technical course. The difference between the academic and applied/tectinical Biology courses is not in curricular goals and objectives, but in depth of coverage, emphasis on mathematics, and emphasis on applications in everyday life and work. On average, students in academic Biology classes scored sirnificantly higher than students in applied/technical Biology classes.

## Anticipated Final Grades and Scores on the Core Test

Biology teachers were asked to record each student's anticipated final grade on each answer sheet after the test was adninistered. Final grades were recorded for 74,853 of 77,154 Biology students. Table 3 gives the average score for various grade groups on the core lest and the percentages of students who were to receive the various grades for both 1987 and 1988. A consistent difference of 4 to 5 raw score roints was observed between score averages for different anticipated final grades. This pattern is an. 'dication of test validity in that the results parallel the grading practices of teachers. The average fo- ' C ' students was similar to the statewide average, placing these students in the maddle of the score cistribution.

Box and whisker plots for the score distribution:; for each letter grade are displayed in Figure 6. The plot illustrates the spread of score points withi, etter grades and overlap in distributions across letter grades. For example, while the typizal ' D udent scored well below the typical ' C ' student, more than 25 percent of ' $D$ ' students received an art ve average core score.

Core Scores by Grade Level .- 1988

Table 3
Average 66-Item Core Scores by Anticipated Final Grade and Percentage of St:.deras Receiving Each Grade*:

Biology End-of-Course Test: 1987-88

| Grades | ------------------1987--.-------------- |  | -----------------1988- |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Ayerage Scores | Percentages | Average Scores | Percentages |
| A | 47.7 | 10.1 | 49.2 | 10.1 |
| B | 42.7 | 22.4 | 44.0 | 22.4 |
| C | 38.2 | 30.4 | 39.1 | 30.6 |
| D | 34.2 | 24.1 | 34.5 | 24.2 |
| F | 30.5 | 13.0 | 30.6 | 12.7 |

## Average Performance on the Curriculum Test

Table 4 shows statewide average performance on the 236 -item curriculum test and the 8 goals of the Biology curriculum. Statewide performance on all yoals and objectives is presented in Table 5. All objectives were measured by at least 7 test items. Gcal and objective scores yield important information about nerformance within specific areas in the curriculum. The average percentage correct of all items measured was 58.8.

It is impurtant for students to understand the nature of biology as a science and how it relates to them as human beings. Overall goal performance was high for two of the three goals which relate biology to hum ns: Goal 1: "understand the nature and relationship of science to human endeavor" ( 60.8 per;ent correct) and Goal 6: "understand the biology of humans" (64.1 percent correct). Performanie on Goal 8, "understand how the dynamics of biology are relevant to people", was slightly lower than the average performance on all items measured. Objective performance within Goal 1 was highest for a critical area for knowing about biology as scientific endeavor: Objective 1.2, "understand the methods of science". On Geai 6, all objectives had performance above 60 percent correct. In understanding that biology changes and that these changes are relevant to people (Goal 8), performance was highest on knowledge of recent advances and dise /eries in biology.

Performance on two goals which deal with the basic structures and processes of life was lower than that of the other goal areas: Goal 2, "understand the nature of life", and Goal 3, "understand the continuity of life". Within Goal 2, scores were highest ( 70.5 percent) on understanding that biology is the science of life and lowest on knowing the difference between living and nonliving things ( 38.9 percent). Objeciive 3.1, concerning inheritance of characteristics from parent organisms, had the highest average percent correct of any objective in Goal 3.

Goal 4, "understand the nature of organisms", deals with the taxonomy of living things, including general knowledge of antomy, physiology, and major representatives of the various kingdoms. Average performance on this goal ( 57.4 percent) was slightly below the average for all biology test items.

A relatively new area in the biology curriculum presented in the Standard Course of Study and the Teacher Handbook involves understanding the behavior of living things (Goal 5). Given that this goal was not emphasized in the previous biology curriculum, the average performance of 59.4 shows that teachers are including this new area in their courses. As in 1987, performance was weakest on Objective 5.2, "have a general understanding of plant tropism."

Understanding ecology, including the nature of populations, communities, and ecosystems, and the impact of human behavior on the environment, is the focus of Goal 7. Average performance on the entire goal was 6.4 percent, or about 3.6 percentage points above the average over all biology test items.

Statewide periormance across all Biology goals and objectives shows areas of strength and areas in which improvement is needed. However, given the broad scope of the biology curriculum, average performance on the goals is consistent, indicating that, in general, teachers are covering all curricular areas and are not concentrating on a few areas at the expense of others. As schools and school systems examine their own performance on these goals arid objectives, they can identify patterns of strengths and weaknesses relative to statewide performance.

## Table 4

## 1988 Summary Results for Biology: 66-Item Core Test and 236-Item Curriculum Test

state report

## GOALS

```
GOAL 1: UNDERSTAND THE NATURE AND RELATIONSHIP
            OF SCIENCE TO HUMAN ENDEAVOR
GOAL 2: UNDERSTAND THE NATURE OF LIFE
GOAL 3: UNDERSTAND THE CONTINUITY OF LIFE
GOAL 4: UNDERSTAND THE NATURE OF ORGANISMS
```

GOAL 5: UNDERSTAND THE BEHAVIOR OF LIVING THINGS GOAL 6: UNDERETAND THE BIOLOGY OF HUMANS
GOAL 7: UNDERSTAND ECOLOGY
GOAL 8: UNDERSTAND HON THE DYNAMICS OF BIOLOGY ARE RELEVANT TO PEOPLE

7.2: UNDERSTAND THE NATURE OF COMMUNITIES (7) ..... 57.2
7.3: UNDERSTAND THE NATURE OF ECOSYSTEMS (7) ..... 64.6
7.4: HAVE $\AA$ GENERAL KNOWLEDGE OF THE INFLUENCES OF HUMAN ACTIVITY ON THE ENVIRONMENT (7) ..... 60.1
GOAL 8: [INDERSTAND HOW THE DYNAMICS OF BIOLOGY ARE RELEVANT TO PEOPLE (21) ..... 56.1
8.1: KNOW ABOUT ADVANCES AND DISCOVERIES IN BIOLOGY (7) ..... 59.7
8.2: KNOW THAT MANY CURRENT SOCIETAL ISSUES ARE RELATED TO BIOLOGY (7) ..... 55.3
8.3: KNOW THAT MANY CAREERS ARE AVAILABLE IN THE BIOLOGICAL SCIENCES (7) ..... 53.2
PERCENT CORRECT ALL ITEMS (236) ..... b8. 8
AVERAGE SCORE ALL ITEMS (236) ..... 138.7
NUNBER OF STUDENTS TESTED ..... 17154
NOTE: THE NUMBER OF ITEMS IN EACH GOAL AREA IS DIRECTLY PROPORTIONAL TO THE NUMBER OF JBJECTIVI'S FOR THE GOAL. FIVE FORMS OF A 100-ITEM TEST WERE ADMINISTERED IN EVERY CLASSROOM. SIXTY-ミIX OF THE 100 ITEMS WERE COMNON ACROSS THE FIVE FORMS (CORE). THE REMAINING 34 ITEMS VARIED BY FORM, SO THAT 236 ITEMS WERE MEASURED IN EVERY CLASSROOM. GOAL AREAS INCLUDE BOTH CORE AVD VARIABLE ITEMS.

## APPIENDIX

## Biology Core and Goal Performance in Educational Regions and Public School Systems

Table 6 presents average performance on the 66 -item core test, the 236 -item curriculum test, and the 8 goals of Biology for the eight educational regions. Average core scores between educational regions differed by no more than 2.6 raw score points.

Average performance on the Biology test for the public school systems is listed in Table 7. School systems are arranged by educational region.

## Biology Box and Whisker Plots of Core Scores for Educational Regions and Public School Systems

Figure 7 displays the distributions of core scores for eight educational regions using box and whisker plots. Public school system box and whisker plots are presented in Figures 8 through 15. See the interpretive legend in Figure 1 on page 4.

## State Percentile Tables for 1987 and 1988

Tables 8 and 9 give summary statistics, the score distributions, and state percentiles for 1987 and 1988. The 1987 percentiles provide a bassline to which subsequent performance on the equivalent core tests can be compared.
