ABSTRACT

Current funds revenues and expenditures at two-year and four-year U.S. colleges and universities are reported for fiscal year (FY) 1985, based on findings from the Financial Statistics of Institutions of Higher Education survey, which is part of the Higher Education General Information Survey. Narrative summaries of the findings are presented, along with data on: current funds revenues for colleges by source and by level and control of institution; current funds expenditures and mandatory transfers of colleges by function and by type of institution; student-related current funds revenues and expenditures per full-time equivalent (FTE) student by type of institution; tuition and fees of colleges by region and state and by type of institution; local, state, and federal appropriations to colleges by region and state and by level of institution; educational and general expenditures; and scholarship and fellowship awards from restricted and unrestricted funds of colleges. It was found that both revenues and expenditures increased nearly 10% between FY 1984 and FY 1985 at all higher education institutions, despite declining FTE enrollment. Technical notes on the database and definitions of terms are appended. (SW)

Current Funds Revenues and Expenditures in Institutions of Higher Education: Fiscal Year 1985

For the 3rd consecutive year—and the 10th year out of the last 11—the growth in current funds revenues and expenditures outpaced inflation in public and private colleges and universities. Both revenues and expenditures increased nearly 10 percent between fiscal years 1984 and 1985 (FY 84 and FY 85) in all institutions of higher education, despite declining full-time-equivalent (FTE) enrollment.

These are among the findings from the "Financial Statistics of Institutions of Higher Education" surveys for FY 84 and FY 85. The Center for Education Statistics (CES) conducts this survey each fall—requesting data about the previous fiscal year—as part of the annual Higher Education General Information Survey (HEGIS), which is sent to all 4- and 2-year colleges and universities in the United States with accreditations recognized by the U.S. Department of Education. This report focuses on two parts of the finance survey for FY 85, current funds revenues and current funds expenditures. Technical notes describing the data base and definitions for the terms used are presented in the appendix.

¹To compare the FY 85 data with those from prior years, see two previous CES bulletins—"Revenues and Expenditures of Institutions of Higher Education: Fiscal Years 1983-1985" and "Higher Education Finance Trends, 1970-71 to 1983-84."

Changes in Current Funds Revenues

Total current funds revenues increased almost 10 percent between FY 84 and FY 85 in all institutions of higher education (appendix table A). In FY 85, total revenues from current funds amounted to \$94.7 billion, an increase of \$8.2 billion from FY 84. In public colleges and universities, current funds revenues increased nearly 10 percent (from \$56.0 billion in FY 84 to \$61.4 billion in FY 85), while they increased just over 9 percent (from \$30.5 billion in FY 84 to \$33.3 billion in FY 85) in private institutions (appendix table A).

Among the fastest growing sources of revenues in all institutions between FY 84 and FY 85 were independent operations—17 percent; endowment income—12 percent; and private gifts, grants, and contracts—11 percent (derived from table 1 and unpublished tabulations). Also contributing to the growth in current funds revenues were changes in tuition and fees (appendix table B), which increased 8 percent overall—despite a decrease of over 2 percent in FTE enrollment between the fall of 1983-84 and the fall of 1984-85.² Revenues from tuition and fees went up almost 7 percent in public institutions, although FTE enrollment declined 3 percent. In private institutions, tuition and fees revenues increased 9 percent, even with a decrease of almost 1 percent in FTE enrollment.

Revenues from State, Federal, and local governments also advanced appreciably between FY 84 and FY 85. Government appropriations from State, Federal, and local sources increased 12, 10, and 8 percent, respectively (appendix tables C, D, and E), while revenues from government grants and contracts from State, Federal, and local sources increased 13, 9, and 13 percent, respectively (derived from table 1 and unpublished tabulations).

Revenues by Source in Public vs. Private 4-Year Institutions

As expected, the sources of revenues differed dramatically in public and private 4-year institutions in FY 85 (figure 1 and table 1). Tuition and fees represent the major source of revenues for private institutions of higher education, while they are heavily supplemented by government appropriations in public colleges and universities. Tuition and fees composed 37 percent of total current funds revenues in private 4-year institutions in FY 85 compared with only 14 percent in public 4-year institutions (figure 1, derived from table 1).

Government appropriations, in general, represented 45 percent of the current funds revenues in public 4-year institutions as contrasted with less than 2 percent in their private counterparts (figure 1, derived from table 1). Changes in State, Federal, and local government appropriations are highlighted following the discussions of revenues by source in 4- and 2-year institutions.

²U.S. Department of Education, National Center for Education Statistics, HEGIS, "Fall Enrollment in Institutions of Higher Education—1983 and 1984," unpublished tabulations.

Figure 1.--Distribution of current funds revenues of 4-year institutions, by source: Fiscal year 1985

Percent of revenues

SOURCE: HEGIS "Financial Statistics of Institutions of Higher Education for Fiscal Year 1985."

***Other sources include educational activities, endowment income, independent operations, etc.**

Government grants and contracts represented about the same proportion of current funds revenues in both public and private 4-year colleges and universities—12 and 13 percent, respectively (figure 1, derived from table 1). The Federal Government was the source of the bulk of funds from government grants and contracts in both public and private 4-year institutions—87 and 88 percent, respectively (derived from table 1).

Although private gifts, grants, and contracts formed a relatively small proportion of all current funds revenues, the 9.3 percent in private 4-year institutions was almost triple the 3.5 percent in public 4-year institutions (figure 1, derived from table 1). The majority (87 percent) of all private gifts, grants, and contracts given to public 4-year colleges and universities were restricted by the donor for particular projects. In contrast, less than half (45 percent) of the private gifts, grants, and contracts given to private 4-year institutions were restricted (derived from table 1).

Endowment income as a percent of all current funds revenues was almost eight times as high in private as in public 4-year institutions (5.4 and 0.7 percent, respectively, derived from table 1), although it represented a small proportion of the total revenues in both types of institutions. Similarly, independent operations amounted to almost 6 percent of the current funds revenues in private 4-year institutions compared with only 0.2 percent in public 4-year institutions (derived from table 1).

Revenues by Source in Public vs. Private 2-Year Institutions

Differences in the sources of revenues between public and private institutions are even more dramatic in 2-year colleges (figure 2 and table 1). Tuition and fees composed 60 percent of total current funds revenues in private 2-year institutions as contrasted with only 16 percent in public 2-year institutions (figure 2, derived from table 1). In public 2-year institutions, tuition and fees are supplemented by government appropriations to an even greater extent than in 4-year institutions.

Government appropriations represented 61 percent of the current funds revenues in public 2-year colleges compared with only 0.7 percent in their private counterparts (figure 2, derived from table 1). State appropriations amounted to over 44 percent of the total revenues in public 2-year institutions as contrasted with a mere 0.3 percent in private 2-year institutions (derived from table 1). Local appropriations composed over 16 percent of the total revenues in public 2-year colleges, although they were virtually absent in private 2-year colleges (derived from table 1).

Government grants and contracts awarded to private 2-year colleges accounted for over 16 percent of their revenues, slightly more than those awarded to their public counterparts—12 percent (figure 2, derived from table 1). The Federal Government provided the bulk of revenues received from government grants and contracts in both public and private 2-year institutions, although the percents differed: Nine-tenths (91 percent) of the revenues from all government grants and contracts awarded to private 2-year colleges came from the Federal Government compared with three-quarters (76 percent) of those awarded to public 2-year colleges (derived from table 1). State sources accounted for one-fifth (20 percent) of the

Figure 2.--Distribution of current funds revenues of 2-year institutions, by source: Fiscal year 1985

Percent of revenues

SOURCE: HEGIS "Financial Statistics of Institutions of Higher Education for Fiscal Year 1985."

***Other sources include private gifts, grants and contracts, educational activities, endowment income, independent operations, etc.**

funds from all government grants and contracts in public 2-year institutions compared with less than one-tenth (9 percent) in private 2-year institutions (derived from table 1). Although local sources composed the smallest proportion of all government grant and contract revenues, the percent in public 2-year colleges was over eight times the size of that in private 2-year colleges—4.2 percent compared with 0.5 percent (derived from table 1).

Private gifts, grants, and contracts awarded to private 2-year colleges were higher than those awarded to their public counterparts, although such funds composed a relatively small proportion of all current funds revenues—5.7 and 0.5 percent, respectively (derived from table 1). Over four-fifths (82 percent) of the revenues from private gifts, grants, and contracts in public 2-year institutions were restricted by the donor for specific projects. In contrast, only one-eighth (13 percent) of those in private 2-year institutions were restricted (derived from table 1).

Endowment income was also higher in private than in public 2-year institutions, although it represented a minute proportion of the total revenues in both types of institutions—1.5 and 0.1 percent, respectively (derived from table 1). Similarly, the percent of current funds revenues provided by the sales and services of auxiliary enterprises in private 2-year colleges was almost double the percent in public 2-year colleges—11 and 6 percent, respectively (figure 2, derived from table 1).

Revenues from Government Appropriations

Revenues from government appropriations allow public institutions to charge less for tuition. Government appropriations, in general, amounted to almost half (45 percent) of all current funds revenues in 4-year public colleges and universities compared with less than 2 percent in their private counterparts (figure 1, derived from table 1). Similarly, government appropriations amounted to more than three-fifths (61 percent) of the total revenues in 2-year public colleges as contrasted with less than 1 percent in 2-year private colleges (figure 2, derived from table 1).

State Appropriations

State appropriations account for most of the government appropriations to public institutions. For example, in 4-year public institutions, more than nine-tenths (94 percent) of all government appropriations came from State sources compared with less than three-fifths (58 percent) in 4-year private institutions (derived from table 1). In 2-year public colleges, almost three-quarters (72 percent) of all government appropriations came from State sources compared with less than half (49 percent) in private 2-year colleges (derived from table 1).

State appropriations to all institutions increased 12 percent between FY 84 and FY 85 (appendix table C). The increase was greater in 4-year colleges and universities (12 percent) than in 2-year colleges (8 percent). State appropriations to both 4- and 2-year institutions, together with the changes in percent between FY 84 and FY 85, are presented in appendix table C, by region and by State within region.

The increases in such appropriations for most States agree rather closely with the Grapevine data³ collected by Hines, Chambers, and Pruyne, despite differences in both the definitions and sources of the data (see the appendix for details). Chambers and Hines noted that the greater increases over the past two fiscal years indicate "the willingness of state lawmakers to increase support to colleges and universities."⁴ Indeed, many governors have sponsored initiatives aimed at increasing State support to higher education. However, caution should be used in interpreting these increases. As Chambers and Hines further noted:⁵

A number of states are paying close attention to the relationship between state tax support to institutions and the income from student tuition. "New money" for higher education may be appropriated primarily as a means to hold tuition at previous year levels or to the lowest increase possible. This rationale of increasing higher education appropriations in order to reduce tuition increases in meeting anticipated expenditures is a different situation from that of appropriating funds for new ventures and expanded purposes.

Federal Appropriations

In private institutions, appropriations from the Federal Government account for a significant portion of all government appropriations. In 4-year private institutions, Federal appropriations composed more than two-fifths (42 percent) of all government appropriations as contrasted with less than one-fifteenth (6 percent) in 4-year public institutions (derived from table 1). Similarly, Federal appropriations composed 50 percent of all government appropriations to 2-year private colleges but only 1 percent of the appropriations to their public counterparts (derived from table 1).

Federal appropriations to all institutions increased 10 percent between FY 84 and FY 85 (appendix table D). However, the rate of change differed dramatically, depending on the level of institution. Federal appropriations to 4-year institutions increased 11 percent, while those to 2-year colleges decreased almost 6 percent (appendix table D). Federal appropriations to both 4- and 2-year institutions, together with the changes in percent between FY 84 and FY 85, are presented in appendix table D, by region and by State within region.

³The Grapevine data showed an increase of 10 percent between FY 84 and FY 85. The 2-year gains reported for FY 76 through FY 86 were 28, 24, 20, 22, 24, 23, 20, 16, 11, 16, and 19 percent, respectively. For a list of the few States for which the HEGIS and Grapevine data differ significantly and an explanation of the possible reasons, please contact the author of this bulletin.

⁴M. M. Chambers and Edward R. Hines, Appropriations of State Tax Funds for Operating Expenses of Higher Education: 1985-86. Washington, D.C. National Association of State Universities and Land-Grant Colleges in cooperation with the Center for Higher Education, Illinois State University, 3.

⁵*Ibid.*, 5.

Local Appropriations

In 2-year institutions within the public sector, local sources provided a significant proportion of all government appropriations—over one-quarter (27 percent). But appropriations from local governments were virtually absent in private 2-year colleges—0.3 percent (derived from table 1). In 4-year institutions, local sources contributed very little regardless of sector, although the percent was slightly higher in public institutions—0.7 and 0.5 percent in public and private 4-year institutions, respectively (derived from table 1).

Local appropriations to all institutions increased the least of all government appropriations between FY 84 and FY 85—8 percent (appendix table E). The increase was about the same in 4- and 2-year institutions—7 and 8 percent, respectively. Local appropriations to both 4- and 2-year institutions, together with the changes in percent between FY 84 and FY 85, are presented in appendix table E, by region and by State within region.

Changes in Current Funds Expenditures

In FY 85, current funds expenditures and mandatory transfers equaled \$92.2 billion, \$2.5 billion less than current funds revenues (appendix tables F and A, respectively). Nationally, current funds expenditures and mandatory transfers increased nearly 10 percent between FY 84 and FY 85 (appendix table F). The increase in the Higher Education Price Index between FY 84 and FY 85 was only 6.7 percent; thus, if inflation had been the only factor operating, total expenditures would have amounted to \$89.7 billion instead of \$92.2 billion. Therefore, \$2.5 billion represented a real increase in purchasing power.

In public institutions, current funds expenditures and mandatory transfers for FY 85 amounted to \$59.9 billion, an increase of almost 10 percent from the FY 84 figure of \$54.6 billion (appendix table F). In private institutions, expenditures and mandatory transfers increased 9 percent, from \$29.5 billion in FY 84 to \$32.3 billion in FY 85.

Educational and general (E&G) expenditures and mandatory transfers amounted to almost four-fifths (78 percent) of the current funds expenditures of all institutions in FY 85—81 and 74 percent in public and private institutions, respectively (derived from table 2). In all institutions of higher education, total E&G expenditures and mandatory transfers increased almost 10 percent between FY 84 and FY 85 (appendix table G). Public institutions increased 10 percent in E&G expenditures and mandatory transfers, while private institutions increased more than 9 percent.

Among the E&G expenditures which increased the most from FY 84 to FY 85 were public service—14 percent, research—12 percent, and institutional support—11 percent (derived from table 2 and unpublished tabulations). Also contributing to the overall growth in current funds expenditures and mandatory transfers were independent operations, which grew 15 percent in all institutions of higher education (derived from table 2 and unpublished tabulations).

SOURCE: HEFYS "Financial Statistics of Institutions of Higher Education for Fiscal Year 1985."

Expenditures for scholarships and fellowships increased over 9 percent between FY 84 and FY 85 in all institutions of higher education, although the rate of increase differed by control of institution and whether restrictions were placed on their usage (derived from table 2 and unpublished tabulations). Unrestricted scholarship and fellowship awards increased 13 percent across all institutions—10 and 14 percent in public and private institutions, respectively (appendix table H). Restricted scholarship and fellowship awards increased almost 8 percent across all institutions—8 percent in public institutions and over 7 percent in private institutions (appendix table I).

Expenditures by Function in Public vs. Private 4-Year Institutions

Public and private 4-year institutions are very similar in the distribution of their expenditures. The proportions of the budget spent in FY 85 for instruction, research, academic support, student services, institutional support, operation and maintenance of physical plant, E&G mandatory transfers, auxiliary enterprises, and hospitals corresponded closely in public and private 4-year institutions (figure 3 and table 2).

The few distinct differences between public and private 4-year institutions occurred in categories which represented relatively small proportions of all current funds expenditures and mandatory transfers. For example, the percent spent for public service was two-and-one-half times as high in public as in private 4-year colleges and universities—4.3 and 1.7 percent, respectively (derived from table 2). However, the proportion expended for independent operations was much larger in private than in public 4-year institutions—5.7 and 0.2 percent, respectively (derived from table 2).

More significantly, scholarship and fellowship awards composed almost 9 percent of all current funds expended by private 4-year institutions, almost twice the proportion spent by their public counterparts—4.5 percent (figure 3, derived from table 2). Among all scholarships and fellowships awarded by private 4-year institutions, half (50 percent) were restricted by the donor, while more than three-quarters (76 percent) of all awards given by public 4-year institutions were restricted (derived from table 2).

Expenditures by Function in Public vs. Private 2-Year Institutions

As in 4-year institutions, there are far more similarities than differences in the distribution of expenditures in 2-year public and private institutions. For example, the costs for research, academic support, student services, operation and maintenance of physical plant, E&G mandatory transfers, and independent operations represented essentially the same proportions of the total current funds expenditures and mandatory transfers in all 2-year institutions, regardless of control (figure 4 and table 2).

Unlike their 4-year counterparts, 2-year public and private colleges differed primarily in expenditures which represented a larger share of the budget. For example, the percent of all current funds spent for instruction by public 2-year institutions—44 percent—was almost double that spent by private 2-year institutions—25 percent (derived from table 2). However, the proportion of the budget devoted to institutional support was one-and-one-half times as high in private 2-year colleges—20 percent—as in public 2-year colleges—13 percent.

SOURCE: HEGIS "Financial Statistics of Institutions of Higher Education for Fiscal Year 1985."

*And mandatory transfers.
 **Includes research, public service, E&G mandatory transfers, and independent operations.

Similarly, scholarships and fellowships awarded by private 2-year colleges composed 17 percent of their current funds expenditures, almost two-and-one-half times the 7 percent awarded by public 2-year colleges (derived from table 2). Finally, the portion of the budget spent on auxiliary enterprises by private 2-year institutions--11 percent--was almost double that spent by their public counterparts--6.5 percent (derived from table 2).

Student-Related Revenues and Expenditures per FTE Student

Educators and researchers alike are interested in the amounts of funds which come from students and which are used specifically on their behalf. On the average, how much student-related revenue is generated? How much is spent on student-related expenditures? Do the answers differ depending on the control of institution? By examining selected revenues and expenditures per FTE student, these questions may be explored.

Selected Current Funds Revenues per FTE Student

As expected, average tuition and fees per FTE student were almost four times as great in private as in public 4-year institutions--\$5,822 vs. \$1,616 (table 3). Similarly, average tuition and fees amounted to \$3,169 per FTE student in private 2-year colleges, more than four times the average of \$735 in public 2-year colleges (table 3). In addition, the revenues from auxiliary enterprises per FTE student were greater in both 4- and 2-year private institutions than in their public counterparts (table 3).

Selected Current Funds Expenditures per FTE Student

Virtually all expenditures of a college or university benefit students in some way; however, certain expenditures benefit students more specifically. These include the funds spent for instruction, academic support, student services, scholarships and fellowships, and auxiliary enterprises.

In 4-year institutions, average expenditures per FTE student were almost the same in public and private institutions, except for student services and scholarship and fellowship awards (table 4). For example, private 4-year institutions spent over one-and-one-half times as much per FTE student on student services as their public counterparts--\$675 vs. \$435. This ratio was even greater with scholarships and fellowships, particularly unrestricted awards. Overall, private 4-year institutions spent over two-and-one-half times as much per FTE student on scholarships and fellowships as their public counterparts--\$1,347 vs. \$524 (table 4).

The average unrestricted scholarship and fellowship award was more than five times as large in private as in public 4-year institutions--\$669 vs. \$124 (table 4). However, average Pell grants per FTE student were about equal in 4-year institutions, regardless of control--\$253 and \$248 for private and public institutions, respectively. Other awards restricted by the donor were almost three times as great in private as in public 4-year institutions--\$425 vs. \$151 (table 4).

Table 3.--Student-related current funds revenues per FTE student of institutions of higher education, by source, and by level and control of institution: Fiscal year 1985

Note.--Details may not add to totals due to rounding.

SOURCE: HEGIS "Financial Statistics of Institutions of Higher Education for Fiscal Year 1985."

Between public and private 2-year institutions, even more differences were apparent in expenditures per FTE student. Private 2-year colleges spent almost triple the amount per FTE student on scholarships and fellowships that their public counterparts spent—\$848 vs. \$312 (table 4). This difference was particularly evident with unrestricted scholarship and fellowship awards, which were almost five times as great per FTE student in private as in public 2-year colleges—\$88 vs. \$18. Even the average Pell grant per FTE student was significantly higher (almost triple) in private than public 2-year institutions—\$618 vs. \$227, as were other restricted scholarship and fellowship awards—\$111 vs. \$68 (table 4).

Private 2-year institutions spent almost one-and-one-half times the amount on student services per FTE student as their public counterparts—\$505 vs. \$344 (table 4). Similarly, in private 2-year colleges, the expenditures for auxiliary enterprises per FTE student were almost double those in public 2-year colleges—\$542 vs. \$289. Conversely, expenditures for instruction and academic support per FTE student were close to one-and-one-half times as high in public as in private 2-year colleges—\$1,969 vs. \$1,209 for instruction and \$330 vs. \$244 for academic support (table 4). Some of these differences may be attributable to higher salaries for instructional staff in public 2-year institutions.

Auxiliary Enterprises Revenues and Expenditures per FTE Student

Both the revenues and expenditures per FTE student for auxiliary enterprises were almost identical in 4- and 2-year institutions, particularly in those publicly controlled (tables 3 and 4). This indicates that auxiliary enterprises—such as residence halls, food services, student health services, college unions, college stores, barber shops, and inter-collegiate athletics—are basically self-supporting.

In private institutions, although they were very similar, the revenues per FTE student from auxiliary enterprises exceeded the expenditures slightly (tables 3 and 4, respectively). In public institutions, the reverse was true.

For More Information

Appendix

Technical Notes

The HEGIS finance survey form was sent to every 4- and 2-year institution of higher education in the aggregate United States with accreditations recognized by the U.S. Department of Education. This report, however, covers the 50 States and the District of Columbia and excludes the outlying areas (American Samoa, Guam, Northern Mariana Islands, Puerto Rico, the Virgin Islands, and the Trust Territory of the Pacific Islands). Details about the HEGIS finance survey universe for FY 84 and FY 85 are presented below.

Fiscal year	Size of universe	Number of respondents	Response rate	Number imputed	Number on file	Percent on file
1984	3,330	2,880	86.5	422 ¹	3,302	99.2
1985	3,379	2,959	87.6	370 ²	3,329	98.5

¹In FY 84, two methods of imputation (estimation) were used to handle non-response. If FY 83 data were available for a nonrespondent (N=409), the current funds revenues and expenditures were inflated using the Higher Education Price Index. If no FY 83 data were available (N=13), current data were used from peer institutions selected for similarity of enrollment (within 25 percent), control (public or private), type and level of enrollment (university, other 4-year, 2-year, or 4- or 2-year branch of a multicampus university or other 4-year institution), location (region), academic programs, and highest level of offering of institution. No data were imputed for small institutions new to the finance survey universe in FY 83 that had been nonrespondents in both FY 83 and FY 84 (N=28).

²In FY 85, two strategies were used to handle nonresponse. If FY 84 data were available for a nonrespondent (N=370), the current funds revenues and expenditures were inflated using the Higher Education Price Index. If no FY 84 data were available (N=50), the institution's name and FICE code were entered on the file, together with a zero for the first data element. No data were entered for the remaining data elements.

Since this bulletin includes a duplicate count of Pell grants in both current funds revenues and expenditures, these statistics must be adjusted if the user (1) wants to conduct trend analyses using data from years prior to FY 83 or (2) wants to compare these data to those in other CES publications from which the duplicate Pell grants have been removed. Prior to FY 83, HEGIS finance survey respondents were specifically instructed not to report Pell grants, a form of agency funds, in restricted Federal grants and contracts (under current funds revenues) and in restricted scholarships and fellowships (under current funds expenditures and mandatory transfers) because institutions have no control over the selection of recipients. However, Pell grants were already included in revenues (under tuition, and to some extent, under auxiliary enterprises) and in expenditures (under the category in which they were used by the institution). Beginning in FY 83, the HEGIS finance survey included a

separate item requesting the amount of Pell grants disbursed and also instructed respondents to include Pell grants in restricted Federal grants and contracts and in restricted scholarships and fellowships. In other CES publications--"Higher Education Finance Trends, 1970-71 to 1983-84" and the Digest of Education Statistics--the duplicate Pell grants reported in FY 83 and subsequent years were removed from these categories, as well as from the totals for current funds revenues and expenditures. Thus, in order to compare the FY 85 data with the data reported in these publications, the Pell grant figures presented below must be subtracted from the FY 85 data.

(Amounts in thousands)

	All institutions	4-Year institutions	2-Year institutions
Total	\$2,259,538	\$1,572,708	\$686,830
Public	1,607,965	1,052,350	555,615
Private	651,573	520,358	131,215

SOURCE: HEGIS "Financial Statistics of Institutions of Higher Education for Fiscal Year 1985."

State Appropriation Data Collected by Chambers, Hines, and Pruyne

Data on State appropriations are also collected by Edward R. Hines and Gwen B. Pruyne (and formerly by M. M. Chambers) at Illinois State University. Each month, they present the data for selected States in Grapevine, a publication of the University's Center for Higher Education. The data for all States are then compiled in Appropriations of State Tax Funds for Operating Expenses of Higher Education, published annually since 1959-60 by the National Association of State Universities and Land-Grant Colleges.

The Grapevine data are not strictly comparable to the HEGIS data, however. While the HEGIS data are collected strictly from the institutions, the Grapevine data are collected primarily from the State Higher Education Finance Officers and also from a few State officials (e.g., budget officers) and the presidents of a few major universities. The Grapevine data include funds which are excluded from State appropriations in the HEGIS data, such as:

- o Funds appropriated for State scholarships and other student financial aid;
- o Funds destined for higher education, but which may be appropriated to and disbursed by other State agencies (e.g., funds for faculty salaries or fringe benefits appropriated to the State comptroller or treasurer, funds for medical and health education appropriated to a State health department); and
- o Funds appropriated to statewide coordinating or governing boards either for board expenses or for allocation by the board to institutions or both.

Definitions

Academic support. Expenditures for the support services that are an integral part of the institution's primary missions of instruction, research, or public service. Includes expenditures for libraries, museums, galleries, audio/visual services, academic computing support, academic administration, personnel development, and course and curriculum development.

Auxiliary enterprises, expenditures. Expenditures for those essentially self-supporting operations which exist to furnish a service to students, faculty, or staff, and which charge a fee that is directly related to, although not necessarily equal to, the cost of the service. Examples are residence halls, food services, college stores, and intercollegiate athletics.

Auxiliary enterprises, sales and services of. Revenues generated by the auxiliary enterprise operations of the institution, which are managed as essentially self-supporting activities, such as residence halls, food services, student health services, college unions, college stores, barber shops, etc.

Current funds expenditures and mandatory transfers. The costs incurred for expenditures for goods and services used in the conduct of the institution's operations. They include the acquisition cost of capital assets, such as equipment and library books, to the extent current funds are budgeted for and used by operating departments for such purposes.

Current funds revenues. All unrestricted gifts and other unrestricted revenues earned during the fiscal year and restricted current funds to the extent that such funds were expended for current operating purposes.

Educational activities, sales and services of. Revenues derived from the sales of goods or services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products.

Educational and general (E&G) expenditures and mandatory transfers. E&G expenditures include funds for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and E&G mandatory transfers. Excludes expenditures and mandatory transfers for auxiliary enterprises, hospitals, and independent operations.

Endowment income. Revenues from the unrestricted income of endowment and similar funds; restricted income of endowment and similar funds to the extent expended for current operating purposes; and income from funds held in trust by others under irrevocable trusts. Excludes capital gains or losses, which are treated as transfers, not revenues.

Four-year institutions. Higher education institutions offering at least a 4-year program of college-level studies wholly or principally creditable toward a baccalaureate degree. This category also includes postsecondary institutions which typically comprise one or more graduate or professional schools.

Full-time equivalent (FTE) enrollment. Enrollment of full-time and the full-time equivalent of part-time students as reported by the institution or as computed by adding one-third of part-time enrollment to full-time enrollment.

Government appropriations. All amounts received from or made available to the institution through acts of a legislative body, except grants or contracts. These funds are for meeting current operating expenses and not for specific projects or programs. Examples are Federal land-grant appropriations and Federal revenue sharing funds. Federal appropriations received through State channels are a subset of this category.

Government grants and contracts. Revenues from governmental agencies which are for specific research projects or other types of programs. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Direct costs incurred are reported as restricted revenues; related indirect costs recovered are reported as unrestricted revenues. Pell grants are included.

Higher Education Price Index (HEPI).⁶ This index is designed to measure average changes in the prices of goods and services purchased by colleges and universities. To estimate changes in inflation versus real purchasing power over time, the percent increases in the HEPI may be compared with the percent increases in current funds expenditures.

Hospitals, expenditures. All expenditures, except depreciation, associated with the operation of the hospital, including nursing expenses, other professional services, general services, administrative services, fiscal services, and charges for physical plant operations.

Hospitals, sales and services of. Revenues (net of discounts and allowances) of a hospital operated by the institution, including revenues of health clinics that are part of the hospital unless such clinics are part of the student health services program. Excludes gifts, grants, contracts, appropriations, research revenues, and endowment income.

Independent operations, expenditures. All funds expended for operations that are independent of or unrelated to the primary missions of the institution, although they may indirectly contribute to the enhancement of these programs. This category is generally limited to expenditures of a major federally funded research and development center. Excludes expenditures of operations owned and managed as investments of the institution's endowment funds.

Independent operations, revenues. Funds associated with operations independent of or unrelated to the primary missions of the institution (i.e., instruction, research, public service), although they may

⁶Compiled by Kent Halstead and presented in U.S. Department of Education, National Institute of Education, Inflation Measures for Schools and Colleges. Washington, D.C. U.S. Government Printing Office, 1983. Updated yearly by Research Associates of Washington, 2605 Klinger Road NW., Washington, D.C. 20008.

indirectly contribute to the enhancement of these programs. This category generally includes only those revenues associated with major federally funded research and development centers.

Institutional support. Expenditures for the day-to day operational support of the institution, excluding expenditures for physical plant operations. Includes general administrative services, executive direction and planning, legal and fiscal operations, and community relations.

Instruction. Expenditures of the colleges, schools, departments, and other instructional divisions of the institution and expenditures for departmental research and public service, which are not separately budgeted, for both credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (e.g., academic deans).

Mandatory transfers. Those transfers from current funds that must be made in order to fulfill a binding legal obligation of the institution. Includes mandatory debt-service provisions relating to academic and administrative buildings, including (1) amounts set aside for debt retirement and interest and (2) required provisions for renewal and replacements to the extent not financed from other sources.

Operation and maintenance of plant. All expenditures for operations established to provide service and maintenance related to campus grounds and facilities used for educational and general purposes. Excludes expenditures made from the institutional plant funds accounts.

Other sources, revenues. All items or revenues not covered by other definitions. Examples are interest income and gains (net of losses) from investments of unrestricted current funds. Includes revenues resulting from the sales and services of internal service departments to persons or agencies external to the institution (e.g., the sale of computer time).

Pell Grants. Restricted Federal student financial aid received but only to the extent disbursed. (Authorized by Public Law 92-318, as amended, Public Law 94-482, Education Amendments of 1972, Title IV; 20 U.S. Code, sec. 1070a-176.) Formerly Basic Equal Opportunity Grants (BEOG's).

Private gifts, grants, and contracts. Revenues from private donors for which no legal consideration is involved, including those funds for which specific goods and services must be provided to the funder as stipulation for receipt of the funds. Includes only those gifts, grants, and contracts that are directly related to instruction, research, or public service. Moneys received from a foreign government and the estimated dollar amount of contributed services are reported here.

Public service. All funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services beneficial to groups external to the institution. Includes expenditures for community services and cooperative extension services.

Research. All funds expended for activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution.

Scholarships and fellowships. Moneys given in the form of outright grants and trainee stipends to individuals enrolled in formal coursework, either for credit or not. Includes aid to students in the form of tuition or fee remissions. Excludes those remissions which are granted because of faculty or staff status (charged to staff benefits). Excludes College Work-Study Program expenses, which are reported where the student served (e.g., dining halls, auxiliary enterprises; for a professor, instruction; etc.). Includes Pell grants.

Student services. Funds expended for admissions, registrar activities, and activities whose primary purpose is to contribute to students' emotional and physical well-being and to the intellectual, cultural, and social development outside the context of the formal instruction program. Examples are career guidance, counseling, financial aid administration, student health services (except when operated as a self-supporting auxiliary enterprise). Includes the administrative allowance for Pell grants.

Restricted revenues. Those funds available for financing operations but which are limited by donors and other external agencies to specific purposes, programs, departments, or schools. Externally imposed restrictions are to be contrasted with internal designations imposed by the governing board on unrestricted funds.

Tuition and fees. Charges assessed against students for current operating purposes, even if there is no intention of collecting from the student (i.e., tuition and fee remissions), including those tuitions and fees which are remitted to the State as an offset to the State appropriation. Excludes charges for room, board, and other services rendered by auxiliary enterprises.

Two-year institutions. Higher education institutions that offer degrees and awards for work below the bachelor's level.

Unrestricted revenues. Funds received, including institutional funds, for which no stipulation was made by the donor or other external agency as to the purpose for which they should be expended.
