## ABSTRACT

In Illinois, as in other states, minorities, Blacks and Hispanics in particular, are under-represented in higher education. The historically low rates of Black and Hispanic participation in higher education raise equity and labor supply issues. This report supplements the annual report of the Illinois Board of Higher Education and provides further detail on Black and Hispanic educational experiences at the Master's, doctoral, and first-professional levels. At each level, information is provided not only about the number and percentage of Black and Hispanic students enrolled and receiving degrees, but also about trends at individual institutions in the state and trends in academic fields such as the sciences, arts, and social sciences. The information presented shows that the increase in enrollment and degrees awarded to Black and Hispanic students in graduate and first-professional programs has occurred for all levels of advanced study, at public and private institutions, and at all types of academic programs. Black enrollment at the Master's and doctoral levels has increased by more than two-thirds and Hispanic Master's and doctoral enrollment doubled from 1986 to 1994. Significant growth was also achipved at the first professional level. However, if the state is to develop the abilities of its residents fully, further increases are necessary. (Contains 14 figures and 13 tables.) (SLD)

# STATE OF ILLINOIS BOARD OF HIGHER EDUCATION 

# MINORITY STUDENT PARTICIPATION AND ACHIEVEMENT IN GRADUATE AND FIRST-PROFESSIONAL DEGREE PROGRAMS IN ILLINOIS HIGHER EDUCATION 

## Introduction

Illinois, the sixth most populated state in the United States, has a large minority population. Blacks account for 14.6 percent ( 1.7 million) and Hispanics 7.9 percent $(904,000)$ of all state residents, according to the 1990 census. Illinois has the fourth largest Black population and the fifth largest Hispanic population in the United States. Asians comprised 2.2 percent $(95,000)$ of Illinois' population in 1990, a 59 percent increase over the preceding ten years. The Hispanic population increase was nearly as rapid, 42 percent, while the Black population remained steady (increasing by 0.7 percent) and the White population decreased by 4.1 percent from 1980 to 1990.

Minority population growth is predicted to continue into the next century. The Illinois Department of Commerce and Community Affairs has projected that in the year 2010 Hispanics will constitute 12 percent, Blacks 17 percent, and Asians nearly four percent of the state's population. Whites will account for about two-thirds of the state's population in 2010, down from about 80 percent in 1980.

In Illinois, as in other states throughout the United States, minorities, and in particular Blacks and Hispanics, are underrepresented in higher education. This means that the percentage of Black and Hispanic students attending colleges and universities is below the percentage of these groups in the general population. Minority representation falls at each successive step on the education ladder. Some decrease in Black participation is evident by the senior year in high school and this decline accelerates throughout the undergraduate and graduate years. Blacks, for example, represented 15.3 percent of all high school graduates in 1994 but received only 7.7 percent of all bachelor's degrees and 3.6 percent of all doctoral degrees awarded in that year. Similarly, Hispanics represented 7.8 percent of all high school graduates but received 3.6 percent of all bachelor's and 1.6 percent of all doctoral degrees in 1994.

The historically low rates of Black and Hispanic participation in higher education raise equity and labor supply issues. Lower enrollment at the first-professional level has resulted in fewer opportunities to enter a variety of lucrative and influential professions such as law and medicine, while the lower number of minority graduate students studying engineering, mathematics, and science has resulted in fewer individuals entering careers that are essential for the state's economic development. Even computed on a yearly basis, there is a substantial net loss to the state from. low minority representation in graduate/first-professional education. For instance, if Black and Hispanic students had received the same proportion of master's, doctoral and first-professional degrees as their representation in the general population ( 22.5 percent), they would have been awarded 6,900 advanced degrees in 1994. However, illinois colleges and universities granted just 2,600 graduate/firstprofessional degrees to Black and Hispanic students in 1994, or 4,300 below the expected number.

Board of Higher Education policy recognizes the importance of increasing minority representation in Illinois colleges and universities and helping minority students overcome the challenges and obstr $\mathrm{ci}^{2}$ s that they can face in obtaining baccalaurea. and advanced degrees. Many minority students come from disadvantaged backgrounds and enter college with inadequate elementary and secondary school preparation. Socially, the environment that minority students encounter at college can be very different from the one they experienced in high school, and there are few minority
faculty members to act as role models and to support their transition into college. . Board of Higher Education policy concerning minority student achievement was first developed by a joint committee appointed by the State Board of Education and Board of Higher Education. This committee issued its report entitled Our Future at Risk in April 1988. The report contained the following resolution that was adopted in May 1988 by the Illinois Board of Higher Education:

> There is an urgent need to change the tducational system in Lllinois to improve the achievement of minority students. Efforts to bring about such change shall include making minority student achievement a priority in lllinois; providing support programs early and throughout education; promoting change in the school/campus environment for minority students; promoting an increase in the employment of minority teaching and administrative personnel; and monitoring programs and student progress closely.

In recent years, as noted in the Board's annual Report to the Governor and General Assembly on Underrepresented Groups in Public Institutions of Higher Education in Illinois, there has been a steady increase in enrollments and degrees awarded at the graduate and first-professional level to minority students. The cumulative effect of these changes from 1986 to 1994 is shown in Table A. Given the low number of Black and Hispanic students in advanced study in higher education and the importance of these recent representational gains, Board staff has prepared the following report which supplements information in the annual report and provides further detail on Black and Hispanic educational experiences at the master's, doctoral, and first-professional levels. At each level, information is provided not only about the number and percentage of Black and Hispanic students enrolled and receiving degrees, but also about trends at individual institutions in the state and trends in academic fields such as the sciences, arts, and social sciences. Also presented in the Board of Higher Education's agenda materials is a report, Fall 1093 Employment in Illinois Higher Education, which examines occupational trends in gender and race/ethnicity at colleges and universities.

## Compatison with National Trends

Recent trends at Illinois institutions in enroliment and degrees awarded to students by racial/ethnic group in graduate and first-professional programs generally follow trends throughout the United States, as shown in Figures A and B. One significant difference, however, is the larger rate of increase in Illinois in enrollment and degrees awarded to Black and Hispanic graduate and firstprofessional students. The variance between national and state trends is greatest for Black and Hispanic graduate/first-professional degree recipients. As shown in Figure B, in the years between 1985 and 1992, the number of Hispanic degree recipients at the graduate/first-professional level increased by 93.0 percent in Illinois compared with a 38.6 percent national increase, while the number of Black recipients increased by 57.7 percelit compared with a 26.6 percent national increase. - Degree Trend-1985 to 1992
source for the national enrollment and degree data is the most recent annual report produced by the American Council on Education entitled Minorities in Higher Education.

## Master's Level

At the master's level, as shown in Figures C to F , significant growth occurred in the enrollment and degrees awarded to Black and Hispanic students from 1986 to 1994. In 1986, there were 4,430 Black and 1,030 Hispanic master's degree students enrolled at llinois colleges and universities. Black students comprised 6.6 percent and Hispanic students 1.5 percent of total master's enrollment in that year. In 1994, in contrast, Black master's enrollment was 7,326 representing 9.3 percent of all master's students, and Hispanic master's enrollment was 2,077 or 2.6 percent of all master's students. Importantly, the increase in the Black master's degree recipients ( 83.7 percent) exceeded the growth in Black master's enrollment ( 65.4 percent). Hispanic enrollment and degrees awarded at the master's level each increased by about 100 percent. While the representation of Black and Hispanic students at the master's level is still low in comparison with the percentage of Blacks and Hispanics in the state's population, the rate of growth over the past eight years among both groups has been remarkable, nearly doubling the number of master's degree recipients that graduate each year from Illinois institutions.

The growth in Black and Hispanic master's enrollment has occurred at all types of institutions in the state. Table 1 depicts Black master's enrollment at all public universities and private institutions with the largest Black enrollment. Th. , table demonstrates that the number of Black master's students increased about equally at public and private institutions from 1986 to 1994, although private institutions had the larger percentage increase. The institutions with largest Black master's enrollment increases were: Chicago State University, National-Louis University, University of Illinois at Chicago, Concordia University, Illinois Institute of Technology, Governors State University, University of Illinois at Urbana-Champaign, and Northern Illinois University. All except two institutions shown in Table 1 reported increases in Black master's enrollment during this period.

Hispanic master's enrollment increases also occurred at all types of institutions in the state, with the greatest numerical growth and percentage increase at private institutions. Institutions with the largest growth in Hispanic master's enrollment from 1986 to 1994 were National-Louis University, University of lllinois at Chicago, Northern Illinois University, and DePaul University.

Black and Hispanic master's degree recipients increased in most academic fields, as shown in Tables 3 and 4. The percentage increase in the number of Black master's recipients was greatest in the "all other" and education and psychology areas and smallest in the area of science, mathematics, and engineering. Business had the largest percentage increase in Hispanic master's recipients ( 193 percent). The area of science, mathematics, and engineering had little growth in Hispanic master's recipients, primarily because of the decline in the number of Hispanic students receiving degrees in the health professions.

## Doctoral Level

The doctoral level, as shown in Figures G to J, also showed growth in the enrollment and degrees awarded to Black and Hispanic students in the years 1986 to 1994. Black doctoral enrollment increased from 429 students, or 3.1 percent of total doctoral enrollment in 1986, to 796 students, or 4.5 percent of all doctoral enrollment in 1994. Hispanic doctoral enrollment increased from 207 to 415 students and from 1.5 percent to 2.3 percent of all doctoral enrollment during these years. Perhaps because the increase in Black and Hispanic doctoral enrollment has been greatest since 1990 and doctoral degrees take many years to complete, the growth in doctoral enrollment has exceeded growth in doctoral degree recipients. Black doctoral enrollment increased by 85.5 percent compared

BEST COPY available
with a 63.2 percent in Black doctoral degree recipients, and Hispanic enrollment increased by 100.5 percent compared with a 20.0 percent increase in Hispanic doctoral degree recipients. Despite these increases, Black and Hispanic representation at the doctoral level ( 6.8 percent combined) remains very low even compared with representation at the master's level ( 11.9 percent combined).

Black and Hispanic doctoral enrollment increased at most institutions between 1986 to 1994. As shown in Table 5, Black doctoral enrollment increased by 112.4 percent at private institutions and 63.9 percent at public institutions. Institutions with the largest increases in Black doctoral students were Northwestern University, Northern Illinois University, and the University of Illinois at UrbanaChampaign. Institutional trends in Hispanic doctoral enrollment were similar with the largest gains at private institutions. Hispanic doctoral enrollment increases were largest at the University of Chicago, Northwestern University, and the University of Illinois at Chicago. Many institutions greatly increased the total number of minority doctoral students in this eight-year period. Northwestern University, for example, more than tripled its combined Black and Hispanic doctoral enroliment from 40 students in 1986 to 134 students in 1994.

Many fields showed strong increases in Black and Hispanic doctoral recipients from 1986 to 1994, although some fields exhibited fluctuation because of the small number of minority students enrolled. One consistent pattern at this level was that most growth in Black and Hispanic doctoral recipients occurred outside the area of education and psychology, historically popular fields of study. For instance, education and psychology accounted for 64.9 percent of all Black doctoral recipients in 1986 but 45.2 percent of all Black doctoral recipients in 1994. Among Hispanic doctoral recipients, the proportion of degrees awarded in the area of education and psychology fell from 37.1 percent to 28.6 percent during these years. Black and Hispanic representation now more closely resembles the experience of all doctoral degree recipients of whom 23.9 percent receive their degrees in education and psychology.

## First-Professional Level

Trends in Black and H :spanic first-professional enrollment and degrees also exhibited significant growth from 1986 to 1994, as shown in Figures K to M. First-professional degrees are general degrees awarded in preparation for professional practice in fields such as law, medicine, and dentistry. Black first-professional enrollment increased from 725 students or 4.2 percent of total first-professional enrollment in 1986 to 1,070 students, or 6.2 percent of all first-professional enrollment in 1994. Hispanic first-professional enrollment increased from 517 to 699 students and from 3.0 percent to 4.1 percent of all first-professional enrollment during these years. The rate of increase in Black and Hispanic first-professional enrollment was less than the rate of increasc in enrollment at the master's and doctoral levels. For example, Black enrollment grew by 47.6 percent at the first-professional level compared with a 65.4 percent increase at the master's level and 85.5 percent increase at the doctoral level. Similarly, Hispanic first-professional enroliment grew by 35.2 percent which was less than the 101.7 percent increase in Hispanic enrollment at the master's level and the 100.5 percent increase at the doctoral level.

As shown in Tables 9 and 10, both public and private sectors had roughly comparable percentage increases in Black first-professional enrollment, while Hispanic first-professional enroliment increases were mainly at private institutions. As occurred at the master's and doctoral levels, most institutions reported increases in enrollment. Increases in Black first-professional enrollment were greatest at the University of Illinois at Urbana-Champaign, lllinois Institute of Technology, and Finch University of the Health Sciences/Chicago Medical School. Hispanic firstprofessional enrollment growth was greatest at DePaul University, Northwestern University, and Illinois Institute of © echnology. In contrast, Hispanic enroliment at the University of llinois at Chicago fell by 59 students or 25.7 percent, although the university continues to attract the largest number of Hispanic first-professional students and its enrollment increased in fall 1994. Many institutions more than doubled the number of Black or Hispanic students in first-professional
programs during this period. For instance, the University of Illinois at Urbana-Champaign increased its combined Black and Hispanic first-professional enrollment from 31 students in 1986 to 109 students in 1994.

Tables 11 and 12 show that most first-professional fields had an increase in degree recipients from 1986 to 1994. There was a significant increase in the number of students earning law degrees. Black students receiving first-professional degrees in medicine increased by 45.9 percent, but Hispanic degree recipients in this field declined by 10 percent. Dentistry was the only field that exhibited a decline for both groups, although the 56 percent decrease in Black and Hispanic students completing first-professional degrees in dentistry was comparable to the 60 percent decline in total degrees awarded in dentistry during this period.

## Summary

The information presented in this report shows that the increase in enrollment and degrees awarded to Black and Hispanic students in graduate and first-professional programs has occurred in all levels of advanced study, types of institutions, and types of academic programs. These enrollment and degree gains are particularly significant because of the historically low level of minority representation in graduate education and because of the magnitude of the change that has occurred. For instance, Black enrollment at the master's and doctoral level increased by more than two thirds and Hispanic master's and doctoral enrollment doubled from 1986 to 1994. At the first-professional level, significant growth was also achieved, with Black enrollment increasing by nearly one half and Hispanic enrollment by one third. The fact that at many levels increases in degrees awarded to Black or Hispanic students have exceeded enrollment increases further emphasizes the progress that has occurred.

Both public and private institutions have experienced strong growth in Black and Hispanic enrollment. Major research universities, such as the University of Illinois at Urbana-Champaign, the University of Chicago, and Northwestern University, as well as smaller and more specialized institutions, have had large enrollment increases. Most fields of study at the master's, doctoral, and first-professional levels have also exhibited increases in the number of Black and Hispanic degree recipients. Increases in many fields have exceeded 50 percent, and in some areas--such as the 193 percent increase in Hispanic master's degree recipients in business-growth has been extraordinary. A few fields have shown little growth, such as education and psychology at the doctoral level, with a decline also occurring in Hispanic students earning first-professional degrees in the field of medicine.

This report has examined the nature of the increase in Black and Hispanic representation that has occurred in recent years in graduate/first-professional education at Illinois colleges and universities. The report has not addressed directly the reasons for this improvement, although it has shown that increases in Black and Hispanic enrollment and degrees awarded are significantly greater in Illinois than national increases. Since the gains in Illinois have occurred at all types of institutions, it seems likely that state-level policies and programs are in part responsible for this improvement. Financial aid programs for minority graduate students such as the Illinois Consortium for Educational Opportunity Program (ICEOP) and the Illinois Minority Graduate Incentive Program (IMGIP), which originated in the 1980's, have facilitated access to advanced study in Illinois colleges and universities. Projects funded through Higher Education Cooperation Act (HECA) have also supported the cooperative efforts of colleges and universities to enhance minority participation and achievement at precollegiate, baccalaureate, and graduate levels. Of course, all higher education institutions that encouraged minority achievement and that started or enhanced their own programs to increase representation are ultimately responsible for the success that has been achieved. Many institutional initiatives have been described in the Board of Higher Education's annual Report to the Governor and General Assembly on Underrepresented Groups in Public Institutions of Higher Education in Illinois.

While representational improvement has occurred in graduate and first-professional programs, the number and proportion of students from minority populations remains significantly below their proportion in the general population. If the state of llinois is to fully develop the abilities of all of its residents, further progress must be achieved. Board of Higher Education policy stresses that improvements in minority representation, in part, depend on having sufficient numbers of minority faculty and administrators to act as role models to undergraduate and graduate students. The enrollment and degree data included in this report show that greater opportunities now exist for Illinois colleges and universities to hire qualified minority faculty. Greater numbers of Black and Hispanic students are graduating with advanced degrees in a wide range of academic fields. These graduates have received their degrees from all types of universities in this state and are prepared for employment opportunities in a broad array of educational and noneducational settings.
