ABSTRACT

This is one form of three performance checks booklets (A, B, and C) for two texts of Level III of the Intermediate Science Curriculum Study (ISCS). These two texts are Why You're You (WYY), and Investigating Variation (IV). The 12 performance checks booklets for Level III are considered one of four major subdivisions of a set of individualized evaluation materials for Level III of the ISCS. This booklet (form A), developed to assess the students' achievement of the objectives of the WYY and IV texts of Level III, contains a set of performance checks which are equivalent to the performance checks of the other two forms (B and C). Each performance check has its own code number which indicates the unit number and identifies whether it is based on core material or excursions. Directions for students' use of performance checks are also included. (HM)

Reproductions supplied by EDRS are the best that can be made from the original document.

FOREWORD

To implement an educational approach successfully, one must match the philosophy of evaluation with that of instruction. This is particularly true when individualization is the key element in the educational approach. Yet, as important as it is to achieve this match, the task is by no means simple for the teacher. In fact, without specific resource materials to help him, he is apt to find the task overwhelming. For this reason, ISCS has developed a set of individualized evaluation materials as part of its.Individualized Teacher Preparation (ITP) program. These materials are designed to assist teachers in their transition to individualized instruction and to help them tailor their assessment of students' progress to the needs of all their students.

The two modules concerned with evaluation, *Individualizing Objective Testing* and *Evaluating and Reporting Progress*, can be used by small groups of teachers in inservice settings or by individual teachers in a local school environment. Hopefully, they will do more than give each teacher an overview of individualized evaluation. These ITP modules suggest key strategies for achieving both subjective and objective evaluation of each student's progress. And to make it easier for teachers to put such strategies into practice, ISCS has produced the associated booklets entitled *Performance Objectives*, *Performance Assessment Resources*, and *Performance Checks*. Using these materials, the teacher can objectively assess the student's mastery of the processes, skills, and subject matter of the ISCS program. And the teacher can obtain, at' the moment when they are needed, specific suggestions for remedying the student's identified deficiencies.

If you are an ISCS teacher, selective use of these materials will guide you in developing an individualized evaluation program best suited to your own settings and thus further enhance the individualized character of your ISCS program.

> The Co-Directors Intermediate Science Curriculum Study Rm 415, W.H. Johnston Building

415 North Monroe Street Tallahassee, Florida 32301 A certain species of insect has nine features that show variation. They are eye color, eye shape, body color, body shape, length of antenna, size of wing, shape of wing, pattern of veins in the wing, and length of bristles. According to the two-bit model, what is the total number of bits that this insect received for all of these nine features? WYY 03-Core-1A

A type of fly receives information for eye color, eye shape, wing shape, body color, and body shape. The possible variations of these features are shown below.

	W	Y	Υ
03-Co	re	-2	Ά

			í	
		K	EY.	
FEATURE	BIT	VARIATION	BIT	VARIATION
·Eye color	R.	red	· r	brown
Eye shape	S .	round '	S	. slit shaped
Wing shape	L	long		short
Body color	В	brown	Ь	yellow
Body shape	F	fat .	f	skinny

Use the two-bit model and the key above to determine "the appearance of the fly that inherited the bits shown in the table below. List the feature number, and after the number state the variation of the feature that the fly will show. (Example: 1, red)

FEATURE NUMBER	FEATURE	BITI	BIT 2
1	eye color	R	R
2 -	eye shape	s	5
3	wing shape		Ŀ
. 4	body color	B	b
5.	body shape	f	f

Suppose you did an experiment with fruit flies and found that your results did not **WYY** agree with what the two-bit model predicts. **03-Core-3A**

- 1. What should you do to establish the value of your results?
- 2. How can your results affect the model?

Several people investigated patterns of inheritance before Mendel did. However, they were not successful in explaining the patterns they saw. State two reasons why Mendel was successful in understanding patterns of inheritance.

WYY . 03-Exc 6-1-1A

Several people unsuccessfully investigated inheritance before Mendel did. Mendel **WYY** 'used the systems approach, mathematics, and a model. Explain the importance of **03-Exc 6-1-2A** each of these to scientific problems.

WYY 03-Exc 6-2-1A	In sweet peas, the bit for purple flowers (P) is dominant over the bit for whit flowers (p). The bit for wrinkled seeds (W) is dominant over the bit for smooth seed (w), Suppose you had a sweet pea that was pure strain for purple flowers (PP) an for smooth seeds (ww). You crossed this plant with one that was pure strain for white flowers (pp) and wrinkled seeds (WW). Predict the appearance of the firs generation offspring of this cross.
WYY 03-Exc 6-2-2A	You may refer to Excursion 6-2 to help you answer this check. In sweet peas, the bit for purple flowers (P) is dominant over the bit for white flowers (p). The bit for wrinkled seeds (W) is dominant over the bit for smooth seeds (w). Suppose yo had a sweet pea that was pure strain for purple flowers (PP) and for smooth seed (ww). You crossed that plant with one that was pure strain for white flowers (pr and for wrinkled seeds (WW). Predict the ratio of the feature variations you woul find in the second-generation offspring of this cross.
WYY 03-Exc 7-1-1A	When a white cow (WW) and a red bull (RR) are mated, the offspring are neither re nor white but a light red color called <i>roan</i> (RW). The genetic bits for color do no seem to mask each other completely. Copy the charts below. Then predict the appearance of the offspring of the two separate crosses.
•	Chart 1. Roan Roan
•.	
	Chart 2.

3.

A large family was studied to find the pattern of inheritance of blue eyes and brown eyes. Brown eyes were found to be dominant over blue eyes.

Ask your teacher for a copy of the chart below or paper to trace it. State a possible pair of bits of information that each person shown in the chart could have by writing the bit symbols in the small circles under each large symbol on your chart. Use B to represent the bit for brown eyes and b to represent the bit for blue eyes.

You have leastify that the bit for tasting PTC is dominant over the bit for not tasting it. Suppose again can taste PTC and his wife cannot. Nothing is known about their parents' ability to taste PTC. WYY 02-Core-23A

- 1. Will their first child be a taster?
- 2. Explain your answer.

-1

Construct an inheritance chart for the inheritance of the ability to taste PTC for the families described below. Use squares and circles and shading and nonshading. Near each square or circle, write the person's name and a possible pair of bits which that person may have. Use T for taster and t for nontaster.

Grandfather James Jackson is a taster, but Grandmother Rose Jackson is a montaster. Their children, George and Betty, are tasters.

Grandfather Andy Hill is a nontaster, but Grandmother Sue Hill is a taster. Two of their children, Bob and Susan, are tasters. Their other child, Lois, is a nontaster.

Betty Jackson marries Bob Hill. Their boy, Henry, is a taster, but their other child, Isabel, is a nontaster.

WYY 02-Core-24A WYY 02-Exc 4-1-1A The bit for black hair (B) is dominant over the bit for white hair (b) in guinea pigs. Suppose you crossed a black-haired guinea pig (Bb) with a white-haired guinea pig (bb).

1. Use a chart like that shown below to determine the possible combinations . of bits that the offspring could have.

2. What is the ratio of black-haired offspring to white-haired offspring?

 	•	í		
		•	 - (

₩٣ 02-Core-12	Suppose that a scientist crossed two plants and found that the offspring were not explained by the two-bit model. He repeated the cross several times and got the
	a. Ignore the results of his experiment because they do not agree with the two-bit model.
•	b. Devise a new model that explains only the new results.c. Publish a paper giving his data and stating that the two-bit model is wrong
	and must be thrown out. d. Try to change the two-bit model so that it explains both his new data and the old data.
	e. Change his data to agree with the two-bit model.
₩Υ` 02-Core•1 3	Susan wanted to find out if a tall pea plant she had was pure strain. She knew that he bit for tallness would mask the bit for dwarfness in peas. She crossed her un- known plant with one that she knew was pure strain for tallness. All the first- generation offspring of this cross were tall.
· · · · · ·	1. Was the unknown plant pure strain for tallness? 2. Explain your answer.
WY 02-Core-14	Roland wants to determine if a tall wheat plant is pure strain for leight. He knows that the bit for tallness will mask the bit for dwarfness. He test-crosses the unknown tall wheat plant with a pure-strain dwarf wheat plant. Half of the first-generation offspring of this cross are tall and half are dwarf. 1. Is the unknown tall wheat plant pure strain for height?
• • •	2. Explain your answer. You may wish to include a diagram in your expla- nation.
WY 02-Core-15	Matt wants to find out if a tall bean plant is pure strain for tallness. He knows that the bit for tallness masks the bit for dwarfness in beans. He test-crosses the unknown tall plant with a pure-strain dwarf bean plant. The first-generation offspring of this cross
•	are all tall. 1. Is the unknown tall bean plant pure strain for tallness? 2. Explain your answer.
WY 02-Core-16	A pure-strain plant with purple flowers is crossed with a plant that is pure strain for white flowers. All the first-generation offspring of this cross have purple flowers. Explain why there are no white-flowering plants among the first-generation offspring.
WY 02-Core-17 (What does the term <i>recessive bit</i> mean as it is used in the two-bit model?
WY 02-Core-18	What does the term <i>dominant bit</i> mean as it is used in the two-bit model?

NOTES TO THE STUDENT

Now that you have completed several chapters, excursions, and self-evaluations, you are ready to help your teacher determine how well you are doing. The performance - checks in this book will provide your teacher with this information. Then your teacher can help you with things you may not understand and can keep a record of your progress.

Read the next section carefully. It explains some important things about the performance checks in this book, and it gives you specific suggestions for using them.

AM I

READY?

What You, Need To Know about Performance Checks

1. You do-performance checks when you are ready. Performance checks are somewhat like the questions in the selfevaluations you do them when you are ready, not when the whole class is ready.

2. Your teacher or both of you decide how many you do. Your teacher or you and your teacher together will decide which ones you should do. You are not expected to do all , of the performance checks.

3. There are three forms for each performance check. Every performance check is written in three forms A, B, and C. (The title of this booklet tells you whether it is Form A, B, or C.) Usually the answers for each form are different. When you do a check, you will use only one form. The A, B, and C forms are always in different booklets. Within each booklet all the performance objectives for the same unit are listed together. A unit contains two or three chapters and their related excursions. These units are in numerical order. Each unit has performance checks based on core material and performance checks based on excursions.

4. Each performance check has its own number. The number is in the outside margin of the page and will look like this: IV-03-Core-17A or WYY-02-Exc 4-2-2A. These numbers mean

$\underline{IV} = 0.3 - Core = 1.7$ A	and	$\underline{WYY} = \underline{02} = \underline{Exc}$	4-2 -2	Ā
form of the check check number based on core material unit text	9 	based on excursion material unit text	check number excursion number	form of the check
		1. J	\$	•

5. Each performance check is separated from the other. There is a line before each performance check and one after it. Some performance checks have several parts, so do everything called for between the lines. If there is no line at the bottom of a page, the check is continued onto the next page. 6. Sometimes you will need to use equipment. If special materials are needed, they will be in boxes labeled with the same number and sometimes the same letter too as the performance check for which you need them.

7. Some performance checks have two or more answers. If more than one answer is correct, you must select all the correct choices. In such cases, selecting just one answer is not enough.

8. Some performance checks have no answers. Oceasionally, you may be asked to do something that is impossible and to explain your answer. If so, say that the task is impossible and explain why.

9. You share books of performance checks and YOU DO NOT WRITE IN THEM. Write your answers on other paper. Give the number and form of the performance check for each answer you write. If you are to draw a graph, a chart, or a map, your teacher may provide you with grid paper or a copy of the map or chart.

10. Your teacher or his assistant will collect and mark your checks. And sometimes you must ask him to watch or assist you as you do a check.

11. Sometimes a review procedure will be suggested. If you can't do a performance check, you may be asked to review a part of the text or a self-evaluation question. You may then be checked on the same material, so be sure you under- π stand the material you review. Get help if you need it.

Tim put 85 beans into a glass jar. He asked ten different people to estimate how many beans were in the jar. Their estimates are shown below.

IV 02-Core-14A Janice had a pair of white mice that occasionally produced offspring. She kept track of the number of baby mice in each litter. Her data are shown below.

	• _ · _ ·
LITTER •NUMBER	NUMBER OF BABY MICE
1	4
2.	3
3	6
`4	• \ • 8
5	3
6	6
Total	30
Mean	5

How is it possible for the mean litter size to be 5 although there was no litter with 5 mice in it?

IVYour text states that "Perhaps the best example of an average [normal] person is
someone whose characteristics are not average." Explain what is meant by this
statement.

IV 02-Core-16A

Dr. Jansen measured a certain worm. He found that it was 5 cm long. 1. Based only on the data above, is it possible to determine if the worm is

large, medium, or small?

2. Explain the reason for your answer.

02-Core-17A

Van tested several students for touch sensitivity. He also tested their ability to locate objects by hearing. During these tests, the students were told to keep their eyes closed.

1. Was^w necessary for them to keep their eyes closed during the tests? 2. Explain your answer. State whether each of the pairs of words below represents a continuous or an eitheror variable. 1. Tall or short

- 2. Alive or dead
- 3. Dark or light
- 4. Skinny or fat

Will's data have a very wide range. What is an operational definition for the term IV range as it is used in that sentence? 02-Core-2A

Bill measured the number of push-ups the boys in his class could do. His data are IV shown below. 02-Core-3A

		· · · · ·		
	STUDENT	NUMBER OF PUSH-UPS	STUDENT	NUMBER OF PUSH-UPS
:	Fred	. 6	Oscar	15
	Charlie	- 2	Tom	7
	Doug	12	Roger	- 4
	Henry	3	Jim	23
	Tim	. 9	Cafl · 🖒	• 18 •

What is the range of his measurements?

Give an operational definition for the mean of a set of measurements.

IV 02-Core-4A

Tom measured how long it took each of the boys in his class to run 100 meters. His UV data are shown below. 02-Core-5A

STUDENT	TIME (in sec)
Henry	15
Pierre	13
Roger	16
Rich	14
Chris	14.
Bill	19,
Fred	13
Mario	17

Calculate the mean of his measurements to the nearest whole number.

ĪV What is meant by the mode of a set of measurements? 02-Core-6A IV Barbara asked her classmates to keep track of the number of hours of television they . 02-Core-7A watched in a week. Her data are shown below. **STUDENT** TIME STUDENT TIME '(in hours) (in hours) Nick ÷ 2 Jeañ ł Wendy . 7 Doug 6 Joyce 5 Sheila 4 Bob Mike 0 23 Henry 6 Bruc∉ 11 Janice 8 Cathy 3 What is the mode of this set of measurem IV Hank measured the weight of each student in his class. His table of data is shown 02-Core-8A below. WEIGHT NUMBER OF **STUDENTS** (in pounds) 70-79 80-89 90-99 6 100-109 0 ᢆᡗᡏᡃᢆ᠐ᢑᢧ᠋ᡗ᠊᠋᠋᠀᠀ 120-129 130-139 140-149 2 Get a piece of graph paper from your teacher. On it, construct a histogram of Hank's data. IV Why are data often arranged in histograms or in other kinds of graphs? 02-Core-9A

Ro	und off the followi	ng me	asuremer	its to the near	est whole nun	nber.	n de la construcción de la constru La construcción de la construcción d		IV

	Totals •	7	22	29	

Suppose someone made the statement that girls are more likely to be left-handed than boys.

1. Could you use Sally's data to tell if the statement is correct?

2. Explain your answer.

Suppose someone else said that boys are more likely to be right-eyed than girls. 3. Could you use Sally's data to tell if this statement is correct?

4 4 Explain your answer.

Charles wanted to determine how many students in his class had driver's licenses and how many did not. Construct a table for collecting and analyzing his measurements.

01-Core-14A

01-Core-15A

Heather wanted to measure the number of words a person can read in one minute. She had all her classmates begin reading the same story at the same time. After they had read for one minute, she told them to stop. Her data are shown in the table below. Construct another table of all her reading speed measurements from which Heather will be able to construct a histogram. (Note: You need only to construct the table, not to enter the data in the table.)

STUDENT	NUMBER OF Words Read	STUDENT	NUMBER OF WORDS READ
Jack:	170	Jake	320
Judy	120	Jơhn ,	310
Jason	. 250	Janet	140
Jody	270	Jean -	1 ⁹⁰
Jill	128	Jerry 45	190
Joan .	195 -	Joy	210
Jan 🕠	84	Jane	200 5
Joe	62	Jim	240

Faye wants to determine if there is any relationship between whether a student is right-eyed or left-eyed and whether he sits on the right-hand or left-hand or left-of the classroom. Construct a table for collecting and analyzing measurements to find out if these variables are related.

Joyce wants to find out whether a relationship exists between a person's having a driver's license and his grades in school. Construct a table for collecting these measurements.

Investigating Variation

Get from your teacher a copy of the chart below or paper to trace it. In some insects, inheritance of bristle length depends on the sex of the insect. In the males, short bristles are dominant over long bristles. In the females, long bristles are dominant over short bristles. Indicate on your chart a possible pair of bits carried by each of the insects. Use the letter B to represent the bit for long bristles and b for short bristles.

King Henry VIII divorced several wives because they bore him only daughters. He 03-Exc 7-3-1A wanted a son to be the next^{*}ruler.

- 1. Was his reasoning logical when he blamed his wives for producing only daughters?.
- 2. Explain your answer.

Get a copy of the chart labeled WYY-03-Exc 7-4-1 from your teacher. You may use Excursion 7-4 to help you answer this check. In fruit flies, the X chromosome carries the bit for the recessive variation yellow body color (X^y) . The Y chromosome carries no information for this feature. The appearance of and bits for the parents are given in the chart below. You are to predict the appearance of and the bits $(X^y, X^n, and Y)$ that will be carried by the first- and second-generation offspring of the cross by filling in the blanks on your copy of the chart. Remember that X^n represents the normal trait.

WYY 03-Exc 7-5-1A	Larry and Harry are identical twins. Like all identical twins, they inherited exactly the same genetic material from their parents. But Larry and Harry do not look exactly alike as adults. Explain what might cause these differences.
WYY 03-Exc 7-6-14	• Suppose you released one hundred green lizards and one hundred black lizards on a
C LAUX C IA	it is mostly new, black volcanic rock. Once in a while the island is visited by birds which eat lizards.
	1. Would you predict that there are more of one kind of lizard than the other

- 1 living on the island now?
 - . 2. Explain your answer.

03-Exc 7-4-1A

The people in a certain tribe in East Africa think it is beautiful to have very long carlobes. To make their earlobes longer, they hang weights on their earlobes to stretch them. Suppose they did this for hundreds of years.

1. Do you, think their children would be born with bits of information for longer earlobes?

2. Explain your answer.

Use your protractor to construct angles of 25° and 108° on your answer sheet, and IV label each of them. **IV** 02-Exc 4-1-2A

Animals with different characteristics often live in different areas, eat different food, and have different enemies. The chart below shows some of the differences between two kinds of animals.

02-Exc 4-2-1A

CHARACTERISTICS	ANIMAL A	ANIMAL B
Type of animal	large, hooved animal	large bird
Living area	open, flat plains	nests on mountain ledges
Main food	grasses	/ sinall animals
Method of feeding	grazes grass	swoops down from the sky at high speed
Enemies	large members /-	ntan
	of the cate of family	

1. Would it be advantageous for Animal A to have its eyes in the sides of its head or in the front of its head?

2. State the reason for your answer.

3. Would it be advantageous for animal B to have its eyes in the sides of its head or in the front of its head?

4. State the reason for your answer.

When you classified your fingerprints, using the standard prints shown below, you probably noticed that your fingerprints were not exactly the same as any of the standard prints. Why didn't your fingerprints match any of the sample prints?
