ABSTRACT

The field test report on the "Construction Industry Related Math" instructional unit for grade 7 is one of a series of reports on the Arizona developed Career Education Curriculum Units. Presented is specific information as to the success of the units in terms of the learner's cognitive, affective, and psychomotor behavior according to expressed performance and behavioral objectives. Cognitive and student and teacher attitudinal data were collected from six sites and projects in Arizona. Following the introduction, a brief description of the unit is given. The body of the document presents and discusses various tables showing field test results in the following areas: (1) information describing the field test, including demographic characteristics of both participating teachers and learners, (2) attitudinal data from both teachers and learners concerning the unit, (3) learner performance data on the lessons\* specific items, and (4) teacher recruitment, refinement data, analysis, and comments. Four brief conclusions and recommendations are included. The document concludes with two appendixes: statistics and tabular data on student and teacher attitudes and a sample of the field test instrument package--UNIVAL (forms and questionnaires on student and teacher attitudes and student performance). (Author/BP)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal \* reproducibility are often encountered and this affects the quality \* of the microfiche and hardcopy reproductions ERIC makes available \* via the ERIC Document Reproduction Service (EDRS), EDRS is not \* responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

### FOREWORD

So many have contributed major input to the field test processes of unit delivery, monitoring and instrument completion, that it is impossible to extract, note, and applaud individual efforts. I am sure that all those involved in this major team effort can see how much has been accomplished and have a positive view of its educational significance for the young people of Arizona. By documenting and analyzing the capabilities of the career education units tested, we all have contributed a positive boost to career education in school districts across the state.

The task of Field Test Manager has been simplified considerably by excellent staff support from the Mesa Public Schools

Department of Research and Evaluation, responsive assistance.

from the State Department of Education, and the effective management shown by the field test coordinators from the respective field test projects.

Frank Leo Vicino Field Test Manager

June, 1975

### PREFACE

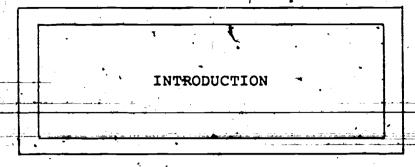

This is one of a series of field test reports on Arizona developed Career Education Curriculum Units. This report presents unit specific field test material. Another report in this series contains information concerning overall field test rationale and compilation of results for all field tested units.

The work presented and reported herein was performed pursuant to contract from the Arizona State Department of Education: 'However, the opinions expressed herein do not necessarily reflect the position or policy of the Arizona State Department of Education and no official endorsement by the Arizona State Department of Education should be inferred.

APPENDIX II -- UNIVAL .

The major purpose of most innovative programs such as career education is to affect positively learners' cognitive, affective, and psychomotor behavior according to expressed performance and behavioral objectives. The present field test of career education curriculum units is designed to examine the success of the unit in terms of the above. Cognitive and attitudinal data have been collected from sites and projects across the state of Arizona. The following projects were involved in the effort of field testing the units: Central Maricopa, Coconino, Mesa, Pima, Pinal, Roosevelt, Tri-County, WACOP, and Yavapai.

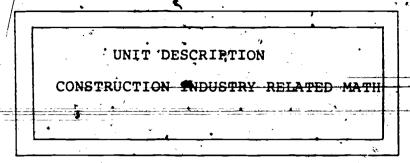

Data on the present unit, however, have been collected from the following sites:

\ Project	Classrooms Requested.	Classrooms Used In Analysis*
Coconino	4	. 1
Mesa 📫	1	0
Pinal	4	<b>; 3</b>
Roosevelt	3	3 、
Tri-County	3	3
Yavapai .	<b>3</b>	0
Total	18	10 5

<sup>\*</sup>Data received in time for analysis.

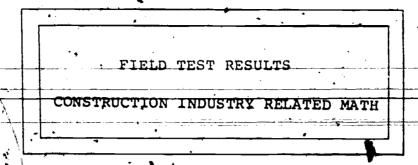

Significant statistics are presented and discussed in the Field Test Results section of this report. Other statistics and tabular data are presented in Appendix I of this report.

Grade 7: Construction Industry Related Mathematics.

This unit is intended to familiarize students with various facets of the construction industry, including the various occupations available and the skills and training necessary to pursue an occupation in the industry. The final set of activities of the unit gives students an opportunity to plan a house and to compute the approximate cost of their "dream house." Opportunity is also provided for the students to work with various construction industry related mathematics problems.

This section of the report presents the data summary and analysis for the field test of the curriculum unit. An outline of this section follows:

- A. . . description of the field test including demographic characteristics of both participating teachers and learners.
- B. Attitudinal data from both teachers and learners concerning the unit.
- C. Learner performance data on the lesson specific items.
- D. Teacher refinement data, analysis and comments.

### DESCRIPTION OF THE PARTICIPANTS

The data in this report was obtained from the projects, teachers, and learners described in the following tables.

### 1. Learners

Table I presents demographic information on the learners that were exposed to the unit in the field test. Examining Table I it can be seen that the male and female learners are fairly evenly represented. There was strong representation by the minority groups. Out of 402 learners, 50% (199) were from minority backgrounds: 34% (138) Spanish Surname, 8% (31) Black, 7% (28) American Indian, and 0.5% (2) Other.

### 2.' Teachers

Table II presents the total number and selected demographic characteristics of the teachers presenting the unit.

It can be noted from Table II that 8 of the 10 teachers that taught this unit were male. This can best be explained by the fact that this is basically an industrial arts unit.

TABLE I

NUMBER OF LEARNERS EXPOSED BY SELEÇTED DEMOGRAPHIC CHARACTERISTICS

. !			SEX		( <u>a</u>	ETHNIC COMPOSITION	OSITION		
1	PROJECT	MALE	FEMALE	AMERICAN INDIAN	BLACK	SPANISH	ANGLO	OTHER	TOTAL
	Coconino	14	15.	27	0	0	*** • • • • • • • • • • • • • • • • • •	1.	, 29
	Pinal	103	. 29	0	9.	57	3	0	132
	Roosevelt	49	29	.0	24	61	30	· ਜਾ	116
	Tri-County	<b>4</b>	. 76	<b>.</b>	<b></b>	,20	103	0	1.25
3	Total Percent	215	187	28	31 8	138 34	203 50	2.0.5	402.

The median years of experience for this group falls between 1-5 years. It should be noted that this group of teachers was quite sophisticated concerning career education. Nine of the teachers were familiar with career education; four had previously taught a career education unit or program and one had developed a career education unit or program.

### ATTITUDINAL DATA

### 1. Teacher Attitude

Included in each UNIVAL (Unit Evaluation Instrument) was an Instructor Attitudinal Data Sheet which asked two questions concerning attitudes toward career education in general and three questions concerning the teacher's attitude toward the unit (see Appendix II).

### a. Teacher Attitude Toward Career Education

Examining the teachers' general attitude toward career education (Table III) it can be seen that the mean response across questions and projects is a very high 4.20; on a scale where 5 is the highest positive response. Of the 20 possible responses, 18 (90%) are positive toward career education, and only 2 (10%) negative.

### b. Teacher Attitude Toward the Unit

Table IV summarizes the teacher attitudes toward the unit.

The teachers' high positive attitude toward career education seems to have carried over very little to the teachers' attitude toward the unit. The teachers show a slightly 3.37 positive attitude toward the unit. Of the possible 30 responses, 19(63%) are positive, 3 (10%) are of notopinion, and 8 (27%) negative.

Correlations between the Teacher Attitude
toward career education and Teacher Attitude
toward the unit were not significant (Appendix I).

### 2. Learner Attitude

When Learner Attitude toward the unit is examined (Table V), we see a moderately positive feeling toward the unit across all projects. Of the 1856 responses 53% were positive toward the unit, 33% no opinion, and 14% were negative toward the unit.

Correlations between the Teacher Attitude toward the unit and Learner Attitude were not significant (Appendix I).

Total	993	53	605	, 33	258	14	2.40

### LEARNER PERFORMANCE

In order to examine learners' performance on the unit, and to assess how well the objectives of the unit are met, cumulative scores over all the lesson items within the unit (total learner scores) were examined. Table VI presents the total learner scores in percentages by projects. This score reflects the unit's overall success concerning delivery of its objectives.

The scores from each project range from a low of 72% at Coconino to a high of 88% at Pinal. These responses appear uniform with no one-project varying far from the mean score (83%) thereby exerting a disproportionate influence.

Various other data was collected from the teachers involved in the field test of the units.

The data collected included the following information:

in jobs other than teaching and whether this information helps in teaching the unit. It was found that 8 of the 10 teachers (80%) had previous experience in a job other than teaching. Of these eight, seven indicated that the previous experience helped in teaching the unit (Tables VII and VIII).

NUMBER AND PERCENT OF CORRECT LEARNER RESPONSES
TO LESSON IMBEDDED ITEMS FOR A GIVEN UNIT

- they used. Seven of the 10 teachers (70%)

  did not use guest speakers. A total of 8

  guest speakers were used in the 10 classrooms. (Table IX)
  - 3. The teachers were also asked to indicate the amount of time devoted to the unit per week and what time of day (AM or PM) the unit was, primarily taught. The median number of hours spent per week teaching the unit fell between 2-3 hours. Four (40%) teachers taught the unit in the afternoon while 6 (60%) taught the unit in the morning. (Tables X and XI)
  - 4. The teachers were also asked what kind of classroom or method of teaching they used. Eight
    (80%) of the classrooms were self-contained,
    and two (20%) were open classrooms. (Table XII)

Correlations were calculated between the above data and Student Attitude, Teacher Attitude and Student Performance. No significant correlations were found.

### TEACHER REFINEMENT, ANALYSIS AND COMMENTS

Specific revision data was obtained by asking the field test teachers to make comments regarding each lesson taught. These comments were solicited in the UNIVAL.

The following list represents a composite of teacher comments regarding the various aspects of the unit, as well as a lesson by lesson critique of the unit. These comments have been analyzed and recommendations for revision presented.

### TEACHER COMMENTS

when reading the teacher comments it should be noted that not all teachers respond to the open emded items. Therefore, some of the responses seem inconsistent with the teacher responses to the closed items. The closed items, it is felt, reflect a true attitude toward the unit over the teachers sampled. The teacher comments are from selected teachers that felt strongly enough to take the opportunity to respond. The comments are, therefore, more for curriculum refinement than for overall evaluation of the unit.

doconino:

Teacher and students enjoyed the unit.

The only problem was the students were weak in math fundamentals.

Pinal:

Geared to students on 7th grade level.

Didn't really show the need for math.

Metric unit needs to be taught first.

Roosevelt:

Need more time for metrics. Enjoyed unit. Well received by students.

Introduction to metric system needed.

Probably would be more relevant on 8th grade level.

Tri-County:

Good unit -- indicates importance of math. Doesn't really relate to those 'not interested in construction.

SUMMARY

The relevant data collected during the field test is summarized below:

- 1. A total of 402 learners were exposed to this unit in 4 of the 9 participating projects. Fifty-three percent of the learners were male and 50% representatives of minority backgrounds.
- 2. Of the 10 teachers that presented the unit 8 were male, the median years of experience was between 1-5 years, and 5 had taught or developed career education material.
- 3. Teachers expressed a very positive attitude toward career education in general (4.20 on a scale where 5 was the highest positive response). Though still positive, the teachers' attitude toward this particular unit was quite a bit lower (3.37).
- 4. The learners also exhibited a slightly positive attitude toward the unit with 53% of the 1856 responses positive, 33% no opinion, and 14% negative.

- 5. The learners' overall performance was high (83% correct). There was very little variability across lessons and units.
- 6. A list of the teachers critical comments and recommendations was presented in the body of this report.

CONCLUSIONS AND RECOMMENDATIONS

- 1. Future users of this unit should review the unit in its entirety paying particular attention to the content of each activity noting when during their teaching year it is best to be taught.
- During installation the teachers, while not constrained by field testing, should be made aware that the lessons as presented are only suggestions and may be modified, resequenced, augmented or reduced as desired.
- 3. This unit presents a wide range of activity suggestions, many of which may be extracted to constitute an enrichment program in addition to the unit.
- 4. Learner Attitude (2.40) and Teacher Attitude (3.37) are quite low for this unit. However, Student Performance is a moderately high 83%. It is recommended, however, that this unit be included in the implementation phase of curriculum development. Even though teacher and learner attitudes are low, they are still positive.

c. 6-10 years	
Which of the following would Career Education (to date)?	best describe your exposure to
a. Developed a Career Ed	ucation unit or program
b. Taught a Career Educa	tion unit or program
c. Read a Career Educati	on unit or program
d. Had some exposure to	Career Education
e. Had no exposure to Ca	reer Education

What is	your sex?	
a.	Male	
<b>b.</b> .	Pemale	
Is you	r classroom: (more than	one answer may be applicable
a.	Open	
<b>b.</b>	Self-contained	
c.	Team taught	
What t	ime of day were the lesso	ns taught (predominantly)?
à.	AM	
b.	PM	
How mue	ch time did you devote to	the unit each 'week?
<b>a.</b>	Less than 1 hour	
<b>b.</b>	1-2 hours	
<b>c.</b> .	2-3 hours	A Committee of the second
đ.	3-5 hours	
e.	More than 5 hours	
How manunit?	ny guest speakers were us	ed in conjunction with the
a.	. 0	
. b.	•	•
c c.	2	en e
đ.	3	
. e.	4 or more	
Have yo	ou had another occupation	other than teaching?
7 A.	Social sciences	e. Technical
, <b>b.</b>	Physical sciences	f. Construction
· c.	Chémical sciences	g. Industry
đ.	Business	<b>h</b> .

Did this experience help in teaching the Career Education unit?

- a. Yes
- b. No

#### PART II

#### Learner Performance Data

Directions:

Please provide an indication of how well the lessons delivered the performance objectives. The lesson numbers and methods of evaluation for each have been indicated. Page numbers, objective specifications, and item numbers are indicated as appropriate. Please indicate the total number of learners responding. Then record the number that responded correctly. Complete this form as you teach each lesson of the unit.

### Learner Attitudinal Data

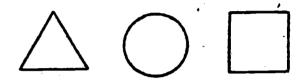

On the following page is an attitudinal survey which we would like your learners to respond to. Please remove that page from this instrument and reproduce enough copies for each of your learners. We feel that it would be best if your learners responded to this survey at the completion, of the unit. If your learners do not have the needed reading ability to complete the survey, please read and explain the items to them. After the learners have completed the survey, please tally their responses and record the total number of learners responding in each manner of the form provided below.

	YES		I DON'T		NO NO
